"Captain Dacres, commander of his Britannic majesty's frigate *Guerriere*, of 44 guns, presents his compliments to Commodore Rodgers, of the United States frigate *President*, and will be very happy to meet him, or any other American frigate of equal force to the *President*, off Sandy Hook, for the purpose of having a few minutes' *tête-à-tête*."

To this fact a poet of the day, an American gentleman then living at St. Bartholomew's, thus alluded:

"This Briton oft had made his boast
He'd with his crew, a chosen host,
Pour fell destruction round our coast,
And work a revolution;
Urged by his pride, a challenge sent
Bold Rodgers, in the *President*,
Wishing to meet
Him *tête-à-tête*,
Or one his equal from our fleet—
Such was the *Constitution*."

Tributes of Honor by Citizens and Public Bodies.

Congress presents Hull with a Gold Medal.

services.¹ The citizens of New York raised money for the purchase of swords to be presented to Captain Hull and his officers; and the Corporation offered the gallant victor the freedom of the city in a gold box,² with an appropriate inscription.² Hull was also requested by the same Corporation to sit for his portrait, to be hung in the picture-gallery of the City Hall.³ In Philadelphia the citizens, at a general meeting, resolved to present to Captain Hull "a piece of plate of the most elegant workmanship, with appropriate emblems, devices, and inscriptions," and that "a like piece of plate be presented to Lieutenant Morris, in the name of the citizens of Philadelphia." They also resolved to present tokens of their gratitude to the other officers of the *Constitution*. The Congress of the United States, by resolution, voted a gold medal to Captain Hull,⁴ and fifty thousand dollars to be dis-

¹ A stirring ode was sung at the table. It was written for the occasion by the late L. M. Sargent, Esq., then an eminent and highly esteemed citizen of Boston. The victory of Hull, so complete, and obtained over a foe so nearly equal in strength, gave promise of future successes on the ocean, and inspired the most doubting heart with hope. This hope was expressed in the following closing stanza of Mr. Sargent's ode:

"Hence be our floating bulwarks
Those oaks our mountains yield;
'Tis mighty Heaven's plain decree—
Then take the watery field!
To ocean's farthest barriers, then,
Your whitening sails shall pour;
Safe they'll ride o'er the tide
While Columbia's thunders roar;
While her cannon's fire is flashing fast,
And her Yankee thunders roar."

² This is a merely complimentary act, by which a person, for gallant or useful services, is honored with the nominal right to all the privileges and immunities of a citizen by the government of a city. When Andrew Hamilton, of Philadelphia, nobly defended the liberty of the press, and procured the acquittal of John Peter Zenger, a New York printer, who was accused of libel by the governor in 1733, the Corporation of New York presented that able lawyer the freedom of the city in a gold box for his noble advocacy of popular rights. When Washington Irving returned to New York, after twenty years' absence in Europe, the freedom of the city was given to him as a compliment for his distinction as an American author when successful ones were rare.

The ceremony of presentation to Captain Hull took place in the Common Council Chamber of the City Hall. A committee, consisting of Aldermen Fish and Mesler, and General Morton, introduced Hull to the Common Council, when De Witt Clinton, the mayor, arose and addressed him. He then presented him with the diploma, elegantly executed in vellum,⁴ and a richly-embossed gold box, with a representation of the battle between the *Constitution* and *Guerriere* painted in enamel. Hull responded in a few low and modest words, after which the mayor administered to him the freedom's oath.

³ In that gallery hang the portraits of the successive governors of the State of New York. On that account it is known as the Governors' Room.

⁴ On one side of this medal, represented of the exact size of the original in the above engraving, is seen the likeness of Captain Hull in profile, with the legend ISACUS HULL PERITUS AETE SUPERAT JUL. MDCCCXL. ANG. CERTAMINE FORTE. This legend (and date) seems to refer to the skill of Hull in escaping from the British fleet the previous month, for it asserts that his stratagem overmatched the experienced English. On the reverse of the medal is seen a naval engagement, in which the *Guerriere* is represented as receiving the deadly shots that cut away her mizen-mast. The legend is HONOR. MEMENTO VICTORIA, and the exergue INTER CONST. NAV. AMER. ET GUER. NAV. ANGL.—the abbreviation of words indicating action "between the American ship *Constitution* and the English ship *Guerriere*."

⁵ The form of words in which this instrument is expressed will be found in another part of this work, where an account is given of a similar honor conferred on General Jacob Brown.

Effect of the Victory on the British.

Estimates of its Importance.

Remarks of the London *Times*.

tributed as prize-money among the officers and crew of the victor, whose example was "highly honorable to the American character and instructive to our rising navy."¹

It is difficult to comprehend at this time the feeling which this victory of the Americans created on both sides of the Atlantic. The British, as we have observed, looked with contempt upon the American navy, while the Americans looked upon that of England with dread. The naval flag of England had seldom been lowered to an enemy during the lapse of a century, and the people had come to believe her "wooden walls" to be impregnable. Dacres himself, though less a boaster than most of his countrymen in command, had similar faith. He believed that an easy victory awaited him whenever he should be so fortunate as to meet *any* American vessel in conflict; and he constantly expressed a desire to show how quickly he would make the "striped bunting" trail in his presence. Very great, then, was the disappointment of the commander of the *Guerriere*, the service, and the British people, when Hull's victory was accomplished. The Americans, on the other hand, as we have observed, had little confidence in the power of their navy, and at that time they were cast down by the heavy blow to their hopes in the misfortunes of the Army of the Northwest at Detroit. This victory, therefore, so unexpected and so complete, was like the sudden bursting forth of the morning sun, without preceding twilight, after a night of tempest, and the joy of the whole people was unbounded. It was natural for them to indulge in many extravagances, yet these were only the mere demonstrative evidences of a new-born faith that had taken hold of the American mind. This victory was, therefore, of immense importance, inasmuch as it gave the Americans confidence, and dispelled the idea of the absolute omnipotence of the British navy. Its momentous bearing upon the future of the war was at once perceived by statesmen and publicists on both sides, and zealous discussions at once arose concerning the relative strength, and force, and armament of the two vessels, and the comparative merits of the two commanders as exhibited in their conduct before and during the action.

There was a tendency on the part of the Americans to overestimate the importance of the victory and the powers of their seamen, and there was an equal tendency of the organs of British opinion to underestimate it, and to detract from the merits of the conqueror by disparaging the strength and condition of the *Guerriere*. The very writers who had spoken of the *Constitution* as "a bundle of pine-boards" now called her one of the stanchest vessels afloat; and the *Guerriere*, which they had praised as a frigate worthy of the exhibition of British valor when she was captured from the French, and able to drive "the insolent striped bunting from the seas," was now spoken of as "an old worn-out frigate," with damaged masts, a reduced complement, and "in absolute need of thorough refit," for which "she was then on her way to Halifax." Yet the London *Times*, then, as now, the leading journal in England, and then, as now, the bitter enemy of the United States, and implacable foe of every supposed rival or competitor of England, was compelled, in deep mortification, to view the affair as a severe blow struck at Britain's boasted supremacy of the seas. "We have been accused of sentiments unworthy of Englishmen," it said, "because we described what we saw and felt on the occasion of the capture of the *Guerriere*. We witnessed the gloom which that event cast over high and honorable minds; we participated in the vexation and regret; and it is the first time we have ever heard that *the striking of the English flag on the high seas to any thing like an equal force* should be regarded by Englishmen with complacency and satisfaction. . . . It is not merely that an English frigate has been taken, after, what we are free to confess, may be called a brave resistance, but that it has been taken by a *new enemy*, an enemy unaccustomed to such triumphs, and likely to be rendered insolent and confident by them. He must

¹ Resolutions of the House of Representatives, November 5, 1812.

be a weak politician who does not see how important the first triumph is in giving a tone and character to the war. *Never before in the history of the world did an English frigate strike to an American*; and though we can not say that Captain Dacres, under all circumstances, is punishable for this act, yet we do say that there are commanders in the English navy who would a thousand times rather have gone down with their colors flying than have set their brother-officers so fatal an example." William James, one of the most bitterly partisan and unscrupulous historians of the war, was constrained to say, "There is no question that our vanity received a wound in the loss of the *Guerriere*. But, poignant as were the national feelings, reflecting men hailed the 19th of August, 1812, as the commencement of an era of renovation to the navy of England."¹

The advantage in the action, in guns, men, and staunchness, was undoubtedly on the side of the *Constitution*, yet not so much as to make the contest really an unequal one. The vessels rated respectively 44 and 38, while the *Constitution* actually carried in the action 56, and the *Guerriere* 49. The latter was pierced for 54 and carried 50 when she was captured from the French.² Her gun-deck metal was lighter than that of the *Constitution*, but the rest of her armament was the same. Notwithstanding this disparity, the weight of the respective broadsides, according to the most authentic account, could not have varied very materially.³ The crew of the *Constitution* greatly outnumbered that of the *Guerriere*, being 468 against 253. That of the latter had a great advantage in experience and discipline; for they had been long in naval service, while the crew of the *Constitution* was newly shipped for this cruise, and mostly from the merchant service.

According to the official report of Captain Hull, the action lasted thirty minutes, while Dacres said its duration was two hours and twelve minutes. This discrepancy may be reconciled by the consideration that the British commander probably counted from the time when the *Guerriere* fired her first gun, which the *Constitution* did not respond to, and the American commander computed from the moment when he poured in his first broadside. The *Guerriere* was made a wreck—the *Constitution* was severely wounded in spars and rigging. The American loss was seven killed and seven wounded. The British loss was fifteen killed, forty-four wounded, and twenty-four (including two officers) missing. Dacres was severely wounded in the back.

At that time there were more captains in the navy than vessels for them to command; and Captain Hull, with noble generosity and rare contentment with the laurels already won, gave up the command of his frigate for the sole purpose of giving others a chance to distinguish themselves. Captain Bainbridge, one of the oldest officers in the service, and then in command of the *Constellation*, 38, which was fitting out for sea at Washington, was appointed Hull's successor. He was made a flag officer, and the *Essex*, 32, and *Hornet*, 28, was placed under his command. He hoisted his broad pennant on board the *Constitution*, and sailed from Boston on a cruise on the 15th of September. Captain Charles Stewart was assigned to the command of the *Constellation*; and not long afterward, Lieutenant Morris, Hull's second in command, who was severely wounded when gallantly attempting to lead a boarding-party to the decks of the *Guerriere*, was promoted to captain. Of Bainbridge's cruise I shall write presently. Let us now consider a most gallant exploit of the *Wasp*, an inferior member of the United States Navy.

The sloop-of-war *Wasp*, 18, was considered one of the finest and fastest sailers of her class. She was built immediately after the close of the war with Tripoli, and was thor-

¹ *Naval Occurrences*, page 116.

² Captain Lavie's Letter to Lord Keith, July 26, 1806. "*Le Guerriere*," he said, "is of the largest class of frigates, mounting fifty guns, with a complement of 817 men."

³ By actual weighing of the balls of both ships by an officer of the *Constitution*, it was found that the American 24's were only three pounds heavier than the English 18's on that occasion, and that there was nearly the same difference in favor of the latter's 32's.—Cooper's *Naval History*, etc., ii., 178, Note *.

Cruise of the *Wasp*.

She encounters a Gale.

Chases a Vessel.

Captain Jones.

Jac Jones

oroughly manned and equipped. She mounted sixteen 32-pound carronades and two long 12's, and also carried, usually, two small brass cannon in her tops. Her officers were always proud of her, as an admirable specimen of their country's naval architecture. At the kindling of the war she was on the European coast, the only government vessel, excepting the *Constitution*, then abroad; and at the time of the declaration of hostilities by the American Congress, she was on her way home as bearer of dispatches from the diplomatic representatives of the United States in Europe. Her commander was Captain Jacob Jones, a brave officer, in whose veins ran much pure, indomitable Welsh blood.¹

On the thirteenth of October, 1812, the *Wasp* left the Delaware on a cruise, with a full complement of men, about one hundred and thirty-five in number. She ran off south-easterly to clear the coast and strike the tracks of vessels that might be steering north

for the West Indies, and on the sixteenth encountered a heavy gale, which carried away her jib-boom, and with it two of her crew. The storm abated on the following day;² and toward midnight, when in latitude thirty-seven north, and longitude sixty-five west, his watch discovered several sail, two of them appearing to be large vessels. Ignorant of the true character of the strangers, Captain Jones thought it prudent to keep at a respectful distance until the morning light should give him better information. All night the *Wasp* kept a course parallel with that of the stranger vessels. At dawn she gave chase, and it was soon discovered that the strangers were a fleet of armed merchant vessels under the protection of the British sloop-of-war *Frolic*, mounting sixteen thirty-two-pound carronades, two long six-pounders, and two twelve-pound carronades on her fore-castle. She was manned with a crew of one hundred and eight persons, under Captain Thomas Whinyates,³ who had been her commander for more than five years. She was con-

¹ October 18, 1812.

¹ Jacob Jones was born in the year 1770, near the village of Smyrna, Kent County, Delaware. His father was a farmer, and the maiden name of his mother was likewise Jones. He received a good academic education, and at the age of eighteen years commenced the study of medicine and surgery. He began the practice of his profession at Dover, in his native state, but did not pursue it long. He found the field well occupied, and, being active and ambitious, resolved to abandon his profession for one more lucrative. He received the appointment of clerk of the Supreme Court for Kent County. Of this business he became wearied, and entered the service of his country as a midshipman in the year 1799. He made his first cruise under Commodore Barry, and was on board the frigate *United States* when she bore Ellsworth and Davis to France as envoys extraordinary of the United States to the government of that country. He was promoted to Lieutenant in February, 1801. When the war with Tripoli broke out he sailed in the *Philadelphia* under Bainbridge, and after the disaster that befell that vessel he was twenty months a captive among the semi-barbarians of Northern Africa. He was commissioned master commandant in April, 1810, and was appointed to the command of the brig *Argus*, which was stationed for the protection of our commerce on our southern maritime frontier. In 1811 he was transferred to the command of the *Wasp*, and in the spring of 1812 was dispatched with communications from the United States government to its ambassadors in France and England. While on that duty war between the United States and Great Britain was declared by the former. Soon after his return, he went on the cruise which resulted in his capture of the *Frolic*, and the recapture of his own and the prize vessel by a British frigate. In March, 1813, he was promoted to captain, and ever afterward bore the title of Commodore. After the peace he was employed alternately at home and abroad; and, finally, in his declining years, he retired to his farm in his native state, where he enjoyed a serene old age. He died at Philadelphia in July, 1850, at the age of eighty years. The likeness is copied from an engraving by Edwin, from a portrait painted by the late Rembrandt Peale.

² Thomas Whinyates entered the British navy in 1798, and obtained his first commission in September, 1799. He was promoted to the rank of commander in May, 1806, and, after having commanded the bomb *Zebra* almost two years, he was promoted to the command of the *Frolic* in

Thos Whinyates

Flight between the *Wasp* and the *Frolic*.

The *Frolic* boarded.

Terrible Scenes on her Deck.

voying six merchantmen from Honduras. Four of these vessels were large, and mounted from sixteen to eighteen guns each.¹

It was Sunday morning. The sky was cloudless, the atmosphere balmy, and a stiff and increasing breeze from the northwest was giving white crests to the billows.

Jones soon perceived that the hostile sloop was disposed to fight, and was taking position so as to allow the merchantmen to escape by flight during the engagement. The top-gallant yards of the *Wasp* were immediately sent down, her top-sails were close-reefed, and she was otherwise brought under short fighting canvas. The *Frolic* also carried very little sail, and in this condition they commenced a severe engagement at half past ten o'clock in the morning. The *Wasp* ranged close up on the starboard side of the *Frolic*, after receiving a broadside from her at the distance of fifty or sixty yards, and then instantly delivered her own broadside, when the fire of the Englishman became so accelerated that the *Frolic* appeared to fire three guns to the *Wasp's* two. The breeze had increased, and the sea was rolling heavily.

Within five minutes after the action commenced the main-top-mast of the *Wasp* was shot away. It fell, with the main-top-sail yard, and lodged across the larboard and fore and fore-top-sail braces, rendering the head yards unmanageable during the remainder of the action. In the course of three minutes more her gaff and main-top-gallant-mast was shot away, and fell heavily to the deck; and at the end of twenty minutes from the opening of the engagement, every brace and most of the rigging was disabled. She was in a forlorn condition indeed, and had few promises of victory.

But, while the *Wasp* was receiving these serious damages in her rigging and tops, the *Frolic* was more seriously injured in her hull. The latter generally fired when on the crest of the wave, while the former fired from the trough of the sea, and sent her missiles through the hull of her antagonist with destructive force. The two vessels gradually approached each other until the bends of the *Wasp* rubbed against the *Frolic's* bows; and, in loading for the last broadside, the rammers of the *Wasp's* gunners were shoved against the sides of the *Frolic*.² Finally, the combatants ran foul of each other, the bowsprit of the *Frolic* passing in over the quarter-deck of the *Wasp*, and forcing her bows up into the wind. This enabled the latter to throw in a close raking broadside that produced dreadful havoc.

The crew of the *Wasp* was now in a state of the highest excitement, and could no longer be restrained. With wild shouts they leaped into the tangled rigging before Captain Jones could throw in another broadside, as he intended before boarding his enemy, and made their way to the decks of the *Frolic*, with Lieutenants Biddle and Rodgers, who, with Lieutenants Booth, Claxton,³ and Rapp, had exhibited the most undaunted courage throughout the action.⁴ But there was no one to oppose them. The last broadside had carried death and dismay into the *Frolic*, and almost cleared her decks of active men. The wounded, dying, and dead were strewn in every di-

March, 1867. He was commissioned a post-captain in August, 1813, and in 1846 was placed on the list of retired rear admirals.

¹ The *Frolic* had left the Bay of Honduras with about fourteen sail under convoy. When off Havana her commander first heard of the declaration of war. The British vessels experienced the same gale which the *Frolic* encountered, and they were separated. The *Frolic* sustained quite serious damage, having had her main yard broken in two places, and her main-top-mast badly sprung, besides other injuries. In this condition she entered upon the engagement. During the engagement the merchant vessels with the *Frolic* escaped. See James's *Naval Occurrences*.

² Captain Jones's Report to the Secretary of the Navy, November 24, 1812.

³ "Lieutenant Claxton," says Captain Jones, in his report to the Secretary of the Navy, "who was confined by sickness, left his bed a little previous to the engagement, and, though too indisposed to be at his division, remained upon deck, and showed, by his composed manner of noticing its incidents, that we had lost by his illness the services of a brave officer."

⁴ John (or, as he was familiarly called, Jack) Lang, a seaman of the *Wasp*, who had once been impressed into the British service, and was hot with the fire of retaliation, jumped on a gun with his cutlass, and was springing on board the *Frolic*, when Captain Jones, wishing to give the enemy another broadside, called him down. But his impetuosity overcame his sense of obedience, and in a moment he leaped upon the bowsprit of the *Frolic*. The crew were all alive with excitement. Seeing this, Lieutenant Biddle mounted the hammock-cloth to board. The crew caught the signal, and followed with the greatest enthusiasm. Lang was from New Brunswick, New Jersey.

Surrender of the *Frolic*.

Both Vessels captured by the *Poictiers*.

Captain Jones applauded.

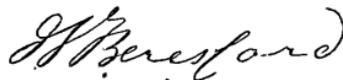

rection. Several surviving officers were standing aft, the most of them bleeding, and not a common seaman or marine was at his station, except an old tar at the wheel, who had kept his post throughout the terrible encounter. All who were able had rushed below to escape the raking fire of the *Wasp*.

The English officers cast down their swords in submission, and Lieutenant Biddle, who led the boarding-party, springing into the main rigging, struck the colors of the *Frolic* with his own hand, not one of the enemy being able to do so. The prize passed into the possession of the conquerors after a contest of three quarters of an hour, when every one of her officers were wounded, and a greater part of her men were either killed or severely injured. Not twenty persons on board of her remained unhurt.¹ Her aggregate loss in killed and wounded was estimated at ninety men. The *Wasp* had only five killed and five wounded.

The *Frolic* was so injured that when the two vessels separated both her masts fell, and with tattered sails and broken rigging covered the dead on her decks. She had been hulled at almost every discharge from the *Wasp*, and was virtually a wreck before her colors were struck.

The heat of the battle was scarcely over when Captain Jones prepared to continue his cruise in his victorious little vessel. He had placed Lieutenant Biddle in command of the shattered *Frolic*, with orders to take her into Charleston, or some other Southern port, and was about to part company with his prize, when a strange vessel was seen bearing down upon them. Neither the *Wasp* nor her prize was in a condition to resist or flee. The rigging of the latter was so cut, and her top-sails so nearly in ribbons, that it would have been folly to attempt either.

The strange sail drew near, and heaving a shot over the *Frolic*, and ranging up near the *Wasp*, convinced them both that the most prudent course would be to submit at once. Within two hours after the gallant Jones had gained his victory he was compelled to surrender his own noble vessel and her prize. The captor was the British ship-of-war *Poictiers*, of seventy-four guns, commanded by Captain John Poo Beresford.² She proceeded to Bermuda with her prizes, where the American prisoners were exchanged, and departed for home. From New York Captain Jones sent his account of the occurrences to the Secretary of the Navy—a report that was received with the greatest satisfaction.³

The victory of the *Wasp* over the *Frolic*—the result of the first combat between the vessels of the two nations of a force nearly equal—occasioned much exultation in the United States. The press teemed with laudations of Captain Jones and his gallant companions, and a stirring song commemorative of the event was soon upon the lips of singers at public gatherings, in bar-rooms, workshops, and even by ragged urchins in the streets. The name of the author, if ever known, has been long forgotten, but the following lines are remembered by many a gray-haired survivor of the War:

"The foe bravely fought, but his arms were all broken,
And he fled from his death-wound aghast and affrighted;
But the *Wasp* darted forward her death-doing sting,
And full on his bosom, like lightning, alighted.
She pierced through his entrails, she maddened his brain,
And he writhed and he groan'd as if torn with the colic;
And long shall John Bull rue the terrible day
He met the American *Wasp* on a *Frolic*."

¹ Captain Whinyates's dispatch to Admiral Sir J. Borlase Warren, from the ship *Poictiers*, October 23, 1812. The loss of the *Frolic* must have been about one hundred.

² Report of Captain Jones to the Secretary of the Navy, November 24, 1812; Whinyates's dispatch to Admiral Warren, October 23, 1812.

³ According to general usage, a court of inquiry was held on the conduct of Captain Jones in giving up the *Wasp* and her prize. The opinion of the court was, "That the conduct of the officers and crew of the *Wasp* was eminently distinguished for firmness and gallantry in making every preparation and exertion of which their situation would admit."

Caricature of "A Wasp on a Frolic."

Honors to Captain Jones.

A Medal presented to him by Congress.

A WASP ON A FROLIC.

Charles, the Philadelphia caricaturist, materialized the idea, and sent forth a colored picture, called A WASP ON A FROLIC, OR A STING FOR JOHN BULL, that sold by hundreds during the excitement in the public mind.¹

Captain Jones was every where received with demonstrations of gratitude and admiration on his return to the United States. In the cities through which he had occasion to pass, brilliant entertainments were given in his honor. The Legislature of Delaware, his native state, appointed a committee to wait on him with their thanks, and to express "the pride and pleasure" they felt in recognizing him as a native of their state, and at the same time voted him thanks, an elegant sword, and a piece of silver plate with appropriate engravings. The Common Council of New York, on motion of Alderman Lawrence, voted him a sword, and also the

"freedom of the city." The Congress of the United States, on motion of James A. Bayard, of Delaware, appropriated twenty-five thousand dollars as a compensation to Captain Jones and his companions for their loss of prize-money occasioned by the recapture of the *Frolic*. They also ordered a gold medal to be presented to the cap-

GOLD MEDAL AWARDED BY CONGRESS TO CAPTAIN JONES.

tain, and a silver one to each of his officers. The captain also received a more substantial token of his country's approbation by being promoted by Congress to the command of the frigate *Macedonian*, which had lately been captured from the British and taken into the service.²

¹ Under the picture were the following lines:

"A Wasp took a Frolic, and met Johnny Bull,
Who always fights best when his belly is full.
The Wasp thought him hungry by his mouth open wide,
So, his belly to fill, put a sting in his side."

² The following are the names of the officers of the *Wasp* at the time of the action: Jacob Jones, *Commander*; George W. Rodgers, James Biddle, Benjamin Booth, Alexander Claxton, and Henry B. Rapp, *Lieutenants*; William Kulght, *Sailing-master*; Thomas Harris, *Surgeon*; George S. Wiae, *Purser*; John McCloud, *Boatswain*; George Jackson, *Gunner*; George Van Cleave, A. S. Ten Eyck, Richard Brashear, John Holcomb, William J. M'Cluney, C. J. Baker, and Charles Gaunt, *Midskipmen*; Walter W. New, *Surgeon's Mate*.

The engraving is a representation of the medal, full size. On one side is a bust of Captain Jones. Legend—JANUARIUS JONES VIRIUS IN ARDUA VENIIT. On the reverse are seen two ships closely engaged, the bowsprit of the *Wasp* between

Lieutenant Biddle honored and rewarded.

Lieutenant Biddle shared in the honors. The Legislature of Pennsylvania voted him thanks and a sword, and a number of leading men in Philadelphia presented him with a silver urn, bearing an appropriate inscription, and a representation of the action between the *Wasp* and the *Frolic*.¹ He was shortly afterward promoted to the

THE BIDDLE URN.

rank of master commandant, and received command of the *Hornet* sloop-of-war. Poetry wreathed coronals for the brows of all the braves of that fight, and in the *Portfolio* for January, 1813, a rather doleful poem appeared in commemoration of the gallantry of Biddle, of which the following is a specimen:

"Nor shall thy merits, Biddle, pass untold,
When covered with the cannon's flaming breath,
Onward he pressed, unconquerably bold;
He feared dishonor, but he spurned at death."

the masts of the *Frolic*. Men on the bow of the *Wasp* in the act of boarding the *Frolic*. The main-top-mast of the *Wasp* shot away. Legend—VICTORIAM HOSTI MAJORI CELEBRISSE BAVIT. EXERGUE—INTER WASP. NAV. AMERI. ET FROLIC NAV. ANG. DIE XVIII OCT. MDCCCXII.

¹ This urn and the silver medal presented to Lieutenant Biddle for his share in the capture of the *Frolic* are in possession of Lieutenant James S. Biddle, of Philadelphia. Also the gold medal afterward presented to the hero in acknowledgment of his services in capturing the *Penguin*. The following is the inscription on the urn:

"To Lieutenant James Biddle, United States Navy, from the early friends and companions of his youth, who, while their country rewards his public services, present this testimonial of their esteem for his private worth. Philadelphia, 1813."

CHAPTER XXII.

"The chiefs who our freedom sustained on the land,
Fame's far-spreading voice has eternized in story;
By the roar of our cannon now called to the strand,
She beholds on the ocean their rivals in glory.
Her sons there she owns,
And her clarion's bold tones
Tell of Hull and Decatur, of Bainbridge and Jones;
For the tars of Columbia are lords of the wave,
And have sworn that old Ocean's their throne or their grave."

THE victory won by the *Wasp* was followed, precisely a week later,^a by another more important. Commodore Rodgers sailed in the *President* from Boston on a second ^{October 25,} 1812. cruise, after refitting, accompanied by the *United States*, 44, Captain Decatur, and *Argus*, 16, Lieutenant Commanding Sinclair, leaving the *Hornet* in port. The *President* parted company with her companions on the 12th of October, and on the 17th fell in with and captured the British packet *Swallow*. The *United States* and *Argus*, meanwhile, had also parted company with each other, and the former had sailed to the southward and eastward, hoping

to intercept British West Indiamen. Decatur was soon gratified by better fortune in the estimation of a soldier. At dawn on Sunday morning, the 25th,^b

^a October. when in latitude 29° and west longitude 29° 30', not far from the island of Madeira, the watch at the main-top discovered a sail to windward. There was a stiff breeze and a heavy sea on at the time. It was soon discovered that the stranger was an English ship-of-war, under a heavy press of sail. Decatur resolved to overtake and engage her, and for that purpose he spread all his canvas. The *United States* was a good sailer, and she rapidly reduced the distance between herself and the fugitive she was pursuing. The enthusiasm of her officers and men was unbounded; and as the gallant ship drew nearer and nearer to the enemy, shouts went up from the decks of the *United States* loud enough to be heard by the British before the American vessel was near enough to bring her guns to bear.

At about nine in the morning Decatur had so nearly overtaken his prospective antagonist that he opened a broadside upon her. The balls fell short. The *United States* was soon much nearer, when she opened another broadside with effect. This was responded to in kind. Both vessels were now on the same tack, and continued the action with a heavy and steady cannonade with the long guns of both, the distance between them being so great that carronades and muskets were of no avail for some time. Almost every shot of the *United States* fell fearfully on the enemy, who finally perceived that safety from utter destruction might only be found in closer quarters. When the contest had lasted about half an hour, the stranger, with mutilated spars and riddled sails, bore up gallantly for close action. The *United States* readily accepted the challenge, and very soon afterward her shot, sent by the direction of splendid gunnery, cut the enemy's mizzen-mast so that it fell overboard. Not long afterward the main yard of the foe was seen hanging in two pieces, her main and fore top-masts were gone, her fore-mast was tottering, no colors were seen floating over her deck, and her main-mast and bowsprit were severely wounded, while the *United States* remained almost unhurt. The stranger's fire had become feeble,

Capture of the *Macedonian*.

Incidents of the Battle.

Comparison of the *United States* and *Macedonian*.

and Decatur filled his mizzen-top-sail, gathered fresh way, tacked, and came up under the lee of the English ship, to the utter discomfiture of her commander, who, when he saw the American frigate bear away, supposed she was severely injured and about to flee from him. With that impression her crew gave three cheers;¹ but when the *United States* tacked and brought up in a position for more effectual action than before, the British commander, perceiving farther resistance to be vain, struck her colors and surrendered. As the *United States* crossed the stem of the vanquished vessel, Decatur hailed and demanded her name. "His majesty's frigate *Macedonian*, 38, Captain John S. Carden," was the response. An officer was immediately sent on board. She had suffered terribly in every part during a combat of almost two hours. She had received no less than one hundred round shot in her hull alone, many of them between wind and water. She had nothing standing but her fore and main masts and fore yard. All her boats were rendered useless except one. Of her officers and crew, three hundred in number, thirty-six were killed and sixty-eight were wounded.² The loss of the *United States* was only five killed and six wounded.³ The *Macedonian* was a very fine vessel of her class, only two years old, and, though rated at 36, she carried forty-nine guns—eighteen on her gun-deck and thirty-two pound carronades above. The *United States* mounted thirty long 24's on her main deck, and twenty-two 42-pound carronades and two long 24's on her quarter-deck and fore-castle. She

¹ The cannonade by the *United States* was so incessant that her side toward the enemy seemed to be in a blaze. Carden supposed she was on fire, and this belief caused the exultation on his ship. A contemporary rhymér wrote as follows:

"For Carden thought he had us tight,
Just so did Dacres too, sirs,
But brave Decatur put him right
With Yankee doodle doo, sirs.
They thought they saw our ship in flame,
Which made them all huzza, sirs,
But when the second broadside came,
It made them hold their jaws, sirs."

See an allusion to this battle in Note 1, page 140, quoted from Cobbett's *Register*.

² Captain Carden thus stated his casualties: "Killed: 1 master's mate, the school-master, 23 petty officers and seamen, 2 boys, 1 sergeant, and 7 privates of marines—total, 36. Wounded dangerously: 7 petty officers and seamen. Severely: 1 lieutenant, 1 midshipman, 18 petty officers and seamen, 4 boys, and 5 private marines—total, dangerously and severely, 36. Wounded slightly: 1 lieutenant, 1 master's mate, 26 petty officers and seamen, and 4 private marines—total, 32. According to the muster-roll found on board of the *Macedonian*, she had seven impressed American seamen among her crew, two of whom were killed in the action. Another had been drowned at sea, while compelled to assist in boarding an American vessel. Their names were Christopher Dodge, Peter Johnson, John Alexander, C. Dolphin, Mayer Cook, William Thompson, John Wallis, and John Card. During the whole war, American seamen, similarly situated, were compelled to fight against their countrymen. When the fact became known that there were impressed Americans on the *Macedonian*, the exasperation of the people against Great Britain, because of her nefarious practice, was intensified.

³ Killed: Boatswain's mate, 1 seaman, and 3 marines. Wounded: 1 lieutenant, 4 seamen, and 1 marine. The lieutenant (John M. Fnunk) and one seaman (John Archibald) died of their wounds.

The following is a list of the officers of the *United States*: Commander, Stephen Decatur. Lieutenants, William H. Allen, John Gallagher, John M. Funk, George C. Read, Walter Wooster, John B. Nicholson. Sailing-master, John D. Sloat. Surgeon, Samuel R. Trevitt. Surgeon's Mate, Samuel Vernon. Purser, John B. Timberlake. Midshipmen, John Stansbury, Joseph Cassin, Philip Voorhees, John P. Zantzinger, Richard Delphy, Dugan Taylor, Richard S. Heath, Edward F. Howell, Archibald Hamilton, John M'Can, H. Z. W. Harrington, William Jameson, Lewis Hinckman, Benjamin S. Williams. Gunner, Thomas Barry. Lieutenants of Marines, William Anderson, James L. Edwards.

There was a boy only twelve years of age on board the *United States*, the son of a brave seaman, whose death had left the lad's mother in poverty. When the crew were clearing the ship for action, the boy stepped up to Decatur and said, "I wish my name may be put down on the roll, sir." "Why so, my lad?" asked the commander. "So that I may have a share of the prize-money," was the earnest reply. Pleased with the spirit of the boy, Decatur granted his request. The boy behaved gallantly throughout the contest. At the close of the action Decatur said to him, "Well, Bill, we have taken the ship, and your share of the prize-money may be about two hundred dollars; what will you do with it?" "I will send half to my mother, and the other half shall send me to school." The commander was so pleased with the right spirit of the boy that he took him under his protection, procured a midshipman's berth for him, and superintended his education.—Putnam's *Life of Decatur*, page 138.

* Congress decreed that in the distribution of prize-money arising from capture by national vessels, one half should go to the United States, and the other half, divided into twenty equal parts, should be distributed in the following manner: to captains, 3 parts; to the sea lieutenants and sailing-masters, 2 parts; to the marine officers, surgeons, pursers, boatswains, gunners, carpenters, master's mates, and chaplains, 2 parts; to midshipmen, surgeon's mates, captain's clerks, school-master, boatswain's mates, gunner's mates, carpenter's mates, steward, sail-makers, master at arms, armors, and coxswains, 3 parts; to gunner's yeomen, boatswain's yeomen, quarter-masters, quarter-gunners, coopers, sail-maker's mates, sergeants and corporals of marines, drummers and fifers, and extra petty officers, 3 parts; to seamen, ordinary seamen, marines, and boys, 7 parts.

Decatur's Courtesy.

His Arrival with his Prize.

The *Macedonian* at New York.

was manned with a crew of four hundred and seventy-eight. In men and metal the *United States* was heavier than the *Macedonian*, "but," says Cooper, "the disproportion between the force of the two vessels was much less than that between the execution."¹

Captain Carden fought his ship skillfully and bravely, and when he came on board the *United States*, and offered his sword to Captain Decatur, the latter generously remarked, "Sir, I can not receive the sword of a man who has so bravely defended his ship, but I will receive your hand." Suiting the action to the word, Decatur took the gallant Carden's hand, and led him to his cabin, where refreshments were set out and partaken of in a friendly spirit by the two commanders.²

When he took possession of his prize, Decatur found her not fatally injured, and he determined to abandon his cruise and take her into an American port. His own vessel was speedily repaired. The *Macedonian* was placed in the charge of Lieutenant Allen, who, with much ingenuity, so rigged her as to convert her into a barque, when captor and captive sailed for the United States. Decatur arrived off New London on the 4th of December,³ and at about the same time his prize entered Newport Harbor,

"Then quickly met our nation's eyes
The noblest sight in nature—
A first-rate frigate as a prize
Brought home by brave DECATUR."—OLD SONG.

Both vessels made their way through Long Island Sound, the East River, and Hell Gate, at the close of the month, and on the 1st of January, 1813, the *Macedonian* anchored in the harbor of New York, where she was greeted with great joy as a "New-year's gift." "A more acceptable compliment could not have been presented to a joyous people," said one of the newspapers. "She comes with the compliments of the season from Old Neptune," said another. "Janus, the peace-loving, smiled," said a third, more classical. The excitement of a feast had then scarcely died away,

¹ *Naval History of the United States*, ii., 179. See the official dispatches of Decatur and Carden; Clark's *Naval History*; Waldo's *Life of Stephen Decatur*; *The War*; Niles's *Register*; Memoir of Decatur, in the *Analectic Magazine*, i., 502.

² All of the private property of the officers and men of the *Macedonian* was given up to them. Among other things claimed and received by Captain Carden was a band of music and several casks of wine, the whole valued at eight hundred dollars. Of this generous conduct Captain Carden spoke in the highest terms. Hull's generosity to Captain Dacres, as we have seen, elicited the praise of that officer. The American newspapers called attention to the fact that the British commander of the *Poitiers*, when he captured the *Wasp* and her prize from Jones, would not permit officers or men to retain any thing except the clothes on their backs. See *The War*, i., 115.

Decatur and Carden had met before. It was in the harbor of Norfolk, just before the beginning of the war, that they were introduced to each other. Before they parted Carden said to Decatur, "We now meet as friends; God grant we may never meet as enemies; but we are subject to the orders of our governments, and must obey them." "I heartily reciprocate the sentiment," replied Decatur. "But what, sir," said Carden, "would be the consequence to yourself and the force you command if we should meet as enemies?" "Why, sir," responded Decatur, in the same playful spirit, "if we meet with forces that might be fairly called equal, the conflict would be severe, but the flag of my country on the ship I command shall never leave the staff on which it waves as long as there is a hull to support it." They parted, and their next meeting was on the deck of the *United States*, under the circumstances recorded in the text.

John Surman Carden was born on the 15th of August, 1771, at Templemore, Ireland. His father, Major Carden, of the British army, perished in the war of the American Revolution. This, his eldest son, entered the British navy as captain's servant in 1788 in the ship *Edgar*. In 1790 he became midshipman in the *Perseverance* frigate. He was made lieutenant in 1794. He received the cities of Worcester and Gloucester, and the borough of Tewksbury, honored him with their "freedom." He was made a rear admiral in 1840, and died at Bonnycastle, Antrim, Ireland, in May, 1858, at the age of eighty-seven years.

³ Decatur's official dispatch to the Secretary of the Navy was dated "At Sea, October 30, 1812. Lieutenant Hamilton, a son of the Secretary of the Navy, was sent with it to his father, at Washington, immediately after the arrival of the *United States* at New London. He bore the flag of the *Macedonian* to the seat of government, where he arrived on the evening of the 8th of December, at which time a ball was in progress which had been given in honor of the naval officers. The Secretary of the Navy (Paul Hamilton) and his wife and daughter were present. The first intimation of the arrival of their son and brother was his entrance into the hall of the brilliant assembly, bearing the trophy. Captains Hull and Stewart received it, and bore it to the accomplished wife of President Madison, who was present. The pleasure of the occasion was changed to patriotic joy, and at the supper one of the managers offered as a toast, "Commodore Decatur, and the officers and crew of the frigate *United States*."

Decatur's arrival at New London was hailed with joyful demonstrations. The city authorities presented him the public thanks, and a ball was given in his honor.

Celebration of Decatur's Victory.

Banquets in the City of New York.

Public Honors given to Decatur.

for only three days before^a a splendid banquet had been given, at Gib-^a December 29,
son's City Hotel, to Hull, Jones, and Decatur, by the Corporation and 1812.
citizens of New York,¹ and the newspapers of the land speedily became the vehicles
of the "effusions" of a score of poets, who caught inspiration from the shouts of tri-
umph that filled the air. Woodworth, the printer-poet, and author of *The Old Oaken*
Bucket, "threw together, on the spur of the moment," as he said, a dozen stirring
stanzas, of which the following is the first :

"The banner of Freedom high floated unfurl'd,
While the silver-tipp'd surges in low homage curl'd,
Flashing bright round the bow of Decatur's brave bark,
In contest an eagle—in chasing, a lark."

And J. R. Calvert wrote a banquet-song, which became immensely popular, of which
the following is the closing stanza :

"Now charge all your glasses with pure sparkling wine,
And toast our brave tars who so bravely defend us ;
While our naval commanders so nobly combine,
We defy all the illa haughty foes e'er can send us !
While our goblets do flow,
The praises we owe
To Valor and Skill we will gladly bestow.
And may grateful the sons of Columbia be
To DECATUR, whom Neptune crowns *Lord of the Sea!*"

Decatur's victory, following so closely upon others equally brilliant, produced the
most profound sensations in the United States and in England. In the former they
were impressions of encouragement and joy ; in the latter, of disappointment and
sorrow. The victor was highly applauded for his soldierly qualities and generosity
by each service ; and he was spoken of with the greatest enthusiasm by his country-
men. Public bodies, and the Legislatures of Massachusetts, New York, Maryland,
Pennsylvania, and Virginia gave him thanks, and to these each of the two latter ad-
ded a sword. The same kind of weapon was presented to him by the city of Phila-
delphia ; and the city of New York voted^a him the freedom of the city^a December 17.
in addition to the honor of a banquet jointly with Hull and Jones, and
requested his portrait for the picture gallery in the City Hall. The Corporation of
New York also gave the gallant crew of the *United States* a banquet at the City
Hotel.² The national Congress, by unanimous vote, thanked Decatur, and gave him

¹ This banquet was given on the day after the freedom of the city was presented to Captain Hull. He and Decatur were present, but Jones was absent. At five o'clock about five hundred gentlemen sat down at the tables. De Witt Clinton, the mayor, presided. The room "had the appearance of a marine palace," said an eye-witness. It was "colonnaded round with the masts of ships, entwined with laurels, and bearing the national flags of all the world. Every table had upon it a ship in miniature, with the American flag displayed. In front, where the President sat, with the officers of the navy and other guests, and which was raised about three feet, there appeared an area of about twenty feet by ten covered with green sward, and in the midst of it was a real lake of water, in which floated a miniature frigate. Back of all this hung a main-sail of a ship thirty-three by sixteen feet."—*The War*, I., 119. Decatur sat on the right of the President, and Hull on the left. When the third toast—"Our Navy"—was given with three cheers, the great main-sail was furled, and revealed an immense transparent painting, representing the three naval battles in which Hull, Jones, and Decatur were respectively engaged. Other surprises of a similar nature were vouchsafed to the guests, and the whole affair was one long to be remembered by the participants.

² This banquet was given on Thursday, the 7th of January, 1813, at two o'clock in the afternoon, under the direction of Aldermen Van Der Bilt, Buckmaster, and King. The room had the same decoration as at the time of the banquet given to Hull, Jones, and Decatur, a few days before. The sailors, numbering about four hundred, marched to the hotel in pairs, and were greeted by crowds of men and women in the streets, loud cheers from the multitude, and the waving of handkerchiefs from the windows. The band of the 11th Regiment, among whom was an old trumpeter who had served under Washington, received them with music at the door. At the table they were addressed by Alderman Van Der Bilt, who was responded to by the boatwain of the *United States*. In the evening they went to the theatre by invitation of the manager, which was communicated to them in person by Decatur. The whole pit was reserved for them. The orchestra opened with *Yankee Doodle*. The drop curtain, in the form of a transparency, had on it a representation of the fight between the *United States* and *Macedonian*. Children danced on the stage. They bore large letters of the alphabet in their hands, which, being joined in the course of the dance, produced in transparency the names of HULL, JONES, and DECATUR. Then Mr. M'Farland, as an Irish clown, came forward and sang a comic song of seven stanzas, written for this occasion, beginning,

"No more of your blathering nonsense
'Bout Nelsons of Old Johnny Bull :
I'll sing you a song, by my conscience,
'Bout JONES, and DECATUR, and HULL."

Gold Medal presented to Decatur by Congress. Bainbridge in Command of a Squadron. Biographical Sketch.

a splendid gold medal, with appropriate devices and inscriptions.¹ From that time until now that commander's name is the synonym of honor and gallantry in the es-

GOLD MEDAL AWARDED TO DECATUR.

timation of his countrymen. His subsequent career added lustre to his renown as the conqueror of the *Macedonian*.

We have already observed that Hull generously retired from the command of the *Constitution* for the purpose of giving some brother-officer an opportunity for gallant achievements in her, and that Captain Bainbridge was his appointed successor. A small squadron, consisting of the *Constitution*, 44; *Essex*, 32; and *Hornet*, 18, were placed in his charge. When Bainbridge entered upon his duty in the new sphere of flag-officer, the *Constitution* and *Hornet* were lying in Boston Harbor, and the *Essex*, Captain Porter, was in the Delaware. Orders were sent to the latter to cruise in the track of the English West Indiamen, and at a specified time to rendezvous at certain ports, when, if he should not fall in with the flag-ship of the squadron, he would be at liberty to follow the dictates of his own judgment. Such contingency occurred, and the *Essex* sailed on a very long and most eventful cruise in the South Atlantic and Pacific Oceans. That cruise will form the subject of a portion of a future chapter.

Bainbridge² sailed from Boston with the *Constitution* and *Hornet* on the 26th of

Dad Neptune has long, with vexation,
Beheld with what insolent pride
The turbulent, billow-washed nation
Has aimed to control the salt tide,
Chorus—Sing lather away, Jontee! and aisy,
By my soul, at the game bob-or-nob,
In a very few minutes we'll please ye,
Because we take work by the job."

¹ On one side of the medal is a profile of Decatur's bust, with the legend STEPHANUS DECATURUS NAVARCHUS, P. M. ST. PAULI. On the reverse is a representation of a naval engagement, one of the vessels representing the *Macedonian* much injured in spars and rigging. Over them is the legend MORS MORS HOSTILE SIDERA. ACRUENT. EX-GRUO—INTER STA. UNI. NAV. AMERL. ET MAREM. NAV. ANG. DIE XXV OCTOBRIIS MDCCXCIII.

² William Bainbridge was born at Princeton, New Jersey, on the 7th of May, 1774, and at the age of fifteen years went to sea as a common sailor. He was promoted to mate in the course of three years, and became a captain at the age of nineteen. When war with the French became probable, he entered the navy with the commission of a lieutenant but the position of a commander, his first cruise being in the *Retaliation*, which was captured. He was promoted to post-captain for good service in the year 1800, and took command of the frigate *Washington*. His career in the Mediterranean has been already mentioned in preceding chapters of this work. Between the war with Tripoli and that of 1812 Captain Bainbridge was employed alternately in the naval and merchant service. After the successful cruise of the *Constitution* in 1812, he took command of the navy yard at Charlestown, Massachusetts. After the war he went twice to the Mediterranean in command of squadrons to protect American commerce there. For three years he was president of the Board of Navy Commissioners, and he prepared the signals which were in use in our navy until lately. For several years Commodore Bainbridge suffered severely from bodily ill health, and finally died at his residence in Philadelphia, on the 27th of July, 1833, at the age of fifty-nine years. His funeral was celebrated on the 31st. The Cincinnati Society attended, with a large concourse of citizens, and his body was laid in the earth with military honors by the United States Marines and a fine brigade of infantry, under the command of the late Colonel J. G. Walmough. His remains rest

tain Lawrence, with the *Hornet*, to communicate with the American consul there, when that commander discovered in the port the English sloop-of-war *Bonne Citoyenne*, 18, Captain Greene, about to sail for England with a very large amount of specie. Lawrence invited Greene to go out upon the open sea with his vessel and fight, pledging himself that the *Constitution* should take no part in the combat, but the British commander prudently declined the invitation. The *Hornet* then took a position to blockade the English sloop, and the

Constitution departed^b for a
^a December 26.
cruise down the coast of Brazil, keeping the land aboard. Three days afterward, at about nine o'clock in the morning, when in latitude 13° 6' south and longitude 38° west, or about thirty miles from shore, southeasterly of San Salvador, Bainbridge discovered two vessels in shore and to the windward. The larger one was seen to alter her course, with an evident desire for a meeting with the *Constitution*. The latter was willing to gratify her, and for that purpose tacked and stood toward the stranger. At meridian they both showed their colors and displayed signals, but

Wm Bainbridge

BAINBRIDGE'S MONUMENT.

beneath a plain white marble obelisk in Christ Churchyard in Philadelphia, and near it is a modest monument to mark the resting-place of his wife, Susan Heyleger. The following is the inscription on Bainbridge's monument: "WILLIAM BAINBRIDGE, United States Navy. Born in Princeton, New Jersey, 7th of May, 1774. Died in Philadelphia 28th of July, 1833. PATRIA VIOTISQUE LAUDATUS." See the Medal, page 463.

Bainbridge was about six feet in height, and well built. His complexion was fair, his eyes black and very expressive, and his hair and whiskers very dark. He was considered a model as an officer and a man in the navy.

¹ The places specified were Port Prays, in the island of St. Jago, and Fernando de Noronha, an island in the Atlantic 126 miles from the extreme eastern cape of Brazil. It is now used as a place of banishment by the Brazilian government. The *Constitution* and *Hornet* appeared in the character of British vessels, and at both places letters were left, directed to Sir James L. Yeo, of the *Southampton*. They contained commonplace remarks, and also orders, in sympathetic ink, for Captain Porter, should they fall into his hands, he having been informed that letters at those places for him would be directed to Yeo. The stratagem succeeded. The whole transaction was in accordance with the privileges of war, and yet a writer in the *London Quarterly Review* charged Porter with being guilty of an improper act in opening a letter directed to another person!

² This is one of the most important places in South America, and until 1763 was the seat of the viceroyalty of Brazil, when it was transferred to Rio de Janeiro. It contains a population of 100,000, of whom one third are white, one third mulattoes, and the remainder negroes.

the latter were mutually unintelligible. The stranger was seen to be an English frigate. Bainbridge at once prepared for action, when the Englishman hauled down his colors, but left a jack flying. Both ships ran upon the same tack, about a mile apart, when, at almost two o'clock, the British frigate bore down upon the *Constitution* with the intention of raking her. The latter wore and avoided the calamity, and at two o'clock, both ships being on the same tack, the *Constitution* fired a single gun across the enemy's bow to draw out her ensign again. A general cannonade from both vessels immediately ensued, and a furious battle was commenced. When it had raged half an hour the wheel of the *Constitution* was shot away, and her antagonist, being the better sailer, had a great advantage for a time. But Bainbridge managed his crippled ship with such skill that she was the first in coming to the wind on the other tack, and speedily obtained a position for giving her opponent a terrible raking fire. The combatants now ran free with the wind on their quarter, the stranger being to the windward of the *Constitution*. At about three o'clock the stranger attempted to close by running down on the *Constitution's* quarter. Her jib-boom penetrated the latter's mizzen rigging, but suffered most severely without receiving the least advantage. She lost her jib-boom and the head of her bowsprit by shots from the *Constitution*, and in a few minutes the latter poured a heavy raking broadside into the stern of her antagonist. This was followed by another, when the fore-mast of the English frigate went by the board, crashing through the fore-castle and main deck in its passage. At that moment the *Constitution* shot ahead, keeping away to avoid being raked, and finally, after manœuvring for the greater part of an hour, she forereached her antagonist, wore, passed her, and luffed up under her quarter. Then the two vessels lay broadside to broadside, engaged in deadly conflict, yard-arm to yard-arm. Very soon the enemy's mizzen-mast was shot away, leaving nothing standing but the main-mast, whose yard had been carried away near the slings. The stranger's fire now ceased, and the *Constitution* passed out of the combat of almost two hours' duration at a few minutes past four o'clock, with the impression on the mind of her commander that the colors of the English frigate had been struck. Being in a favorable weatherly position, Bainbridge occupied an hour in repairing damages and securing his masts, when he observed an ensign still fluttering on board of his antagonist. He immediately ordered the *Constitution* to wear round and renew the conflict. Perceiving this movement, the Englishman hauled down his colors, and at six o'clock in the evening First Lieutenant George Parker¹ was sent on board to inquire her name and to take possession of her as a prize.² She proved to be the *Java*, 38, Captain Henry Lambert, and "one of the finest frigates in the British navy. She was bearing, as passenger to the East Indies, Lieutenant General Hyslop (just appointed governor general of Bombay), and his staff, Captain Marshall and Lieutenant Saunders, of the Royal Navy, and more than one hundred other officers and men destined for service in the East Indies.

The *Java* was a wreck. Her main-mast had gone overboard during the hour that Bainbridge was repairing. Her mizzen-mast was shot out of the ship close by the deck, and the fore-mast was carried away about twenty-five feet above it. The bowsprit was cut off near the cap, and she was found to be leaking badly on account of wounds in her hull by round shot. The *Constitution* was very much cut in her sails

¹ The officers of the *Constitution* in this action were—Captain, William Bainbridge. Lieutenants, George Parker, Beekman T. Hoffman, John T. Shubrick, Charles W. Morgan. Sailing-masters, John C. Alwin, John Nichols. Chaplain, John Carleton. Lieutenants of Marines, William H. Freeman, John Contee. Surgeon, Amos A. Evans. Surgeon's Mate, John D. Armstrong, Donaldson Yeates. Purser, Robert C. Ludlow. Midshipmen, Thomas Beatty, Lewis Germain, William L. Gordon, Ambrose L. Fields, Frederick Barry, Joseph Cross, Alexander Belcher, William Taylor, Alexander Eskridge, James W. Delancy, James Greenleaf, William D. McCarty, Z. W. Nixon, John A. Wish, Dulaney Forest, George Leverett, Henry Ward, John C. Long, John Packett, Richard Winter. Boatswain, Peter Adams. Gunner, Ezekiel Darling. Acting Midshipman, John C. Cumings.

² On this very day, and at that very hour, Hull and Decatur were at the public banquet given them in the city of New York. See page 457.

The Losses of the *Java*.

Comparison of the two Vessels.

Arrival of the *Constitution* at Boston.

and rigging. Many of her spars were injured, but not one was lost. She went into the action with her royal yards across, and came out of it with all three of them in their proper places. There are conflicting accounts concerning the loss of the *Java* in men. Her commander, Captain Lambert, was mortally wounded, and her other officers were cautious about the number of her men and her casualties. According to a muster-roll found on board of her, made out five days after she sailed, her officers and crew numbered four hundred and forty-six. These were exclusive of the more than one hundred passengers, many of whom assisted in the engagement, and of whom thirteen were killed. The British published account states the loss of men on the *Java* to have been twenty-two killed, and one hundred and one wounded, while Bainbridge reported her loss, as nearly as he could ascertain from the British officers at the time, at sixty killed, and one hundred and one wounded. This was, doubtless, below the real number. Indeed, Bainbridge inclosed to the Secretary of the Navy evidences of a much larger loss in wounded. It was a letter, written by one of the officers of the *Java* to a friend, and accidentally dropped on the deck of the *Constitution*, where it was found and handed to Bainbridge. The writer, who had no motive of public policy for concealing any thing from his friend, stated the loss to be sixty-five killed, and one hundred and seventy wounded.¹ The *Constitution* lost only nine killed and twenty-five wounded. Bainbridge was slightly hurt in the hip by a musket-ball; and the shot that carried away the wheel of the *Constitution* drove a small copper bolt into his thigh, which inflicted a dangerous wound, but did not cause him to leave the deck before midnight.

The *Java*, as has been observed, was a superior frigate of her class. She was rated at thirty-eight, but carried forty-nine. The *Constitution* carried at that time forty-five guns, and had one man less at each than the *Java*. On the whole, the preponderance of strength was with the latter. Bainbridge might have saved the hull of his prize by taking it into San Salvador, but, having proof that the Brazilian government was favorable to that of Great Britain, he would not trust the captured frigate there. He was too far from home to think of conducting her to an American port; so, after lying by the *Java* for two days, until the wounded and prisoners, with their baggage, could all be transferred to the *Constitution*, he ordered the battered frigate to be fired. She blew up on the 31st, when Bainbridge proceeded to San Salvador with his prisoners, and found the *Bonne Citoyenne* about to attempt passing the *Hornet* and putting to sea. His arrival frustrated the plan. Having landed and paroled his prisoners,² Bainbridge sailed for the United States on the 6th of January, * January 3,
1813.

The *Constitution* arrived at Boston on Monday, the 15th of February, and Bainbridge immediately dispatched Lieutenant Ludlow with a letter to the Secretary of the Navy. When Bainbridge landed he was greeted with the roar of artillery and the acclamations of thousands of citizens. A procession was formed, and he was escorted to the Exchange Coffee-house, the bands playing Yankee Doodle, and the throngs in

¹ Letter from H. D. Corneck to Lieutenant Peter V. Wood, in the Isle of France, dated on board the *Constitution*, January 1, 1813. After speaking of the death of a friend in the battle, he said, "Four other of his messmates shared the same fate, together with sixty men killed, and one hundred and seventy wounded."

² The following is a list of the British military and naval officers paroled: *Military*, one Lieutenant general, one major, one captain. *Naval*, one post captain, one master and commander, five lieutenants, three lieutenants of marine, one surgeon, two assistant surgeons, one purser, fifteen midshipmen, one gunner, one boatswain, one ship carpenter, two captain's clerks—total, thirty-eight. Captain Lambert died on the day after the landing (January 4). Bainbridge treated all of his prisoners with the greatest tenderness and consideration. Silver plate to a large amount, presented to General Hyslop by the colony of Demarara, and which would have been lawful prize, was returned to that gentleman, who thanked Bainbridge for his kind courtesy, and presented him his sword (which Bainbridge would not receive when it was offered in token of surrender) in farther testimony of his gratitude. And yet, in the face of all this, James, the earliest, as he was the most mendacious of the British historians of the war, and one most quoted by British writers now, says (*Naval Occurrences, etc.*, page 188), "The manner in which the *Java's* men were treated by the American officers reflects upon the latter the highest disgrace." In a letter to a friend, written when homeward bound, Bainbridge exhibited his goodness of heart in thus speaking of the death of his antagonist: "Poor Lambert, whose death I sincerely regret, was a distinguished, gallant, and worthy man. He has left a widow and two helpless children! But his country makes provision for such sad events."

Honors given to Bainbridge.

Public Banquet in Boston.

Gifts of the Cities of New York and Albany.

the streets, balconies, and windows cheering loudly, the ladies waving their handkerchiefs. The streets were strung with banners and streamers, and Commodores Rodgers and Hull, who walked with Bainbridge in the procession, received a share of the popular honors. The victory was announced at the theatre that night, and produced the wildest enthusiasm. The Legislature of Massachusetts being in session, they passed a resolution of thanks to Bainbridge and his officers and crew,¹ and on the 2d of March a splendid banquet was given at the Exchange Coffee-house to Bainbridge and the officers of the *Constitution*.²

The capture of the *Java*, the fourth brilliant naval victory in a brief space of time, caused great exultation throughout the United States, and the *Constitution* was popularly called from that time *Old Ironsides*. Orators and rhymers, the pulpit and the press, made the gallant exploits of Bainbridge the theme of many words in verse and prose.³ The Common Council of New York presented to him the freedom of the city in a gold box,⁴ and ordered his portrait painted for the picture-gallery in the City Hall.⁵ The city of Albany did the same;⁶ and the citizens of Philadelphia pre-

ALBANY GOLD BOX.

sented him with an elegant service of silver plate, the most costly piece of which was a massive urn, elegantly wrought.⁷ The Congress of the United States voted their

¹ By the Senate on the 19th of February, and by the House of Representatives on the 20th.

² The procession was formed in Faneuil Hall by Major Tilden, and was escorted by the *Boston Light Infantry* and the *Winslow Blues*, under Colonel Sargent. The Honorable Christopher Gore presided at the table, assisted by Harrison Grey Otis, Israel Thorndike, Arnold Willis, Thomas L. Winthrop, Peter C. Brooks, and William Sullivan as vice-presidents. Intelligence had just come that the British Orders in Council had been repealed, and that peace might be soon expected. Elated by this news, the Honorable Timothy Dexter offered the following toast: "The British Orders in Council revoked, and our national honor gallantly retrieved. Now let us shut the temple of Janus till his double face goes out of fashion." An ode was sung at the banquet, written, on request of the committee of arrangements, by the late L. M. Sargent, Esq.

³ One of the most popular songs of the day was composed in honor of the capture of the *Java*, and called "Bainbridge's Tid re I," in which, after every verse, the singer gives a sentence in prose, winding up with the chorus "Tid re I, Tid re I, Tid re I, Tid re I do." The following is a specimen of that kind of song, once so popular:

"Come, lads, draw near, and you shall hear,
In truth as chaste as Dian, O!
How Bainbridge true, and his bold crew,
Again have tamed the lion, O!
'Twas off Brazil he got the pill
Which made him cry *procurat*, O
But hours two, the *Java* new,
Maintained the battle bravely, O!

"But our gallant tars, as soon as they were piped to quarters, gave three cheers, and boldly swore, by the blood of the heroes of Tripoli, that, sooner than strike, they'd go the bottom staving

Tid re I, Tid re I, Tid re I, Tid re I do."

⁴ This box is three inches in diameter and one inch in depth. On the inside of the lid is the following inscription: "The Corporation of the City of New York to Commodore William Bainbridge, of the United States frigate *Constitution*, in testimony of the high sense they entertain of his gallantry and skill in the capture of his Britannic Majesty's ship *Java* on the 29th of December, 1812."

⁵ The portrait was painted by John Wesley Jarvis. The engraving on page 459 is from a copy of that picture.

⁶ The box presented by the city of Albany is of oblong form, and is faithfully delineated in the engraving. It is three inches and a half long and three fourths of an inch deep. On the inside of the lid is the following inscription: "A tribute of respect by the Common Council of the City of Albany to Commodore William Bainbridge for his gallant naval services in the late war with Great Britain." This box is in the possession of the gallant commander's daughter, Mrs. (Mary Bainbridge) Charles Joudon, of Philadelphia.

⁷ This urn is eighteen inches in height. The lid is surmounted by an eagle about to soar. Below each massive base

thanks to Bainbridge and his companions in arms, and also fifty thousand dollars in money, because of the necessary destruction of their prize. They also ordered a gold medal to be struck in honor of the commander,¹ and silver ones for each of his officers, in token of the national approbation of their conduct.

BAINBRIDGE MEDAL.

The conflict between the *Constitution* and *Java* was the closing naval engagement of the year, and, with the previous victories won by the Americans, made the deepest impressions upon the public mind in both hemispheres. The United States cruisers, public and private, had captured about three hundred prizes from the British during that first six months of war. The American war-party—indeed, the whole American people, excepting a few Submissionists, were made exultant by these events, and the gloom caused by the failure of the land forces was dispelled. The views of the Federalists, who had always favored a navy, were justified, and the opposition to it, on the part of the Democrats, ceased. The British people were astounded by these heavy and ominous blows dealt at their supremacy of the seas, and some of the leading newspapers scattered curses broadcast. One of them, a leading London paper, with that vulgarity which too often disgraced journalism on both sides of the Atlantic at that time, petulantly expressed its apprehensions that England might be stripped of her maritime superiority "by a piece of striped bunting flying at the mast-head of a few fir-built frigates, manned by a handful of bastards and outlaws!"

But this impotent rage soon subsided, and British writers and speakers, compelled to acknowledge the equality of the American people in all that constitutes the true

die is a head of Neptune. On one side of the urn is the representation of the wrecked *Java* and the triumphant *Constitution*, and on the other the following inscription: "Presented by the citizens of Philadelphia to Commodore William Bainbridge, of the U. S. frigate *Constitution*, as a testimonial of the high sense they entertain of his skill and gallantry in the capture of the British frigate *Java*, of 40 guns and 500 men, and of their admiration of his generous and magnanimous conduct toward the vanquished foe. Lost in the action of 29th December, 1812—C., 9 killed, 25 wounded; J., 60 killed, 101 wounded."

After the death of Bainbridge's widow, his plate was distributed among his surviving children. The urn and other silver pieces, and the New York gold box, belong to Mrs. Susan (Bain-

BAINBRIDGE URN.

bridge) Hayes, widow of Captain Thomas Hayes, of the United States Navy, a resident of Philadelphia. To her kind courtesy I am indebted for the privilege of making sketches of the urn and boxes. She also has in her possession the sword presented to Bainbridge by Hyslop (see Note 2, page 461). It is a straight dress sword, in a black leather scabbard. Also another sword, with basket guard and elegant gilt mountings. Also a Turkish cimeter.

¹ On one side of the medal is a bust of Bainbridge, and the legend "GULIELMUS BAINBRIDGE PATRIA VICTORISQUE LACIATYUS." Reverse, a ship, the stumps of her three masts standing, and her conqueror with only a few shot-holes in her sails. Legend—"PUGNANDO." Exergue—"INTER CONST. NAV. AMER. ET JAV. NAV. ANGL. DIE XXIX. DECEM. MDCCCXII."

greatness of a nation, labored hard to show that in all cases the American vessels, in force of men and metal, were greatly superior to those of the British encountered. They even went so far as to assert that the American frigates were all "seventy-fours in disguise!" These assertions were iterated and reiterated long after the war had ceased, to the amusement of thoughtful men, who clearly perceived the truth when the smoke had cleared away. The most notable exhibition of this folly is seen in three volumes, one on the naval and two on the military occurrences of that war, written by William James. These, as we have observed, were among the earliest of the elaborate writings concerning that war, and have, ever since their appearance, been the most frequently quoted by those British and British-American writers and speakers who delight in abusing the government and people of the United States. The spirit manifested on every page bears evidence of the poverty of the author in all that constitutes a candid and veracious historian.¹

Having now considered in groups the military and naval events of the war during the first year of the contest, excepting those in the extreme southern boundaries of the Republic, which will be noticed hereafter, let us glance at the civil affairs of the United States, having relation to the subject in question, before entering upon a description of the stirring campaign of 1813.

The second session of the Twelfth Congress commenced on the 2d day of November.² It was the eve of the popular election of Presidential electors.

^a 1812. President Madison had been nominated for the office for a second term by a Congressional caucus, as we have already observed,² as the Democratic candidate; and the Legislature of New York had nominated De Witt Clinton, a nephew of the late Vice-president, and of the same political faith, for the same office. The Federalists, conscious of their inability to elect a candidate of their own, coalesced with the Clintonian Democrats. This course was decided upon in a Convention of Federalist leaders from all the states north of the Potomac, held in secret session, in the city of

^b 1812. New York, in September.³ If the war must go on, they regarded Clinton as the possessor of greater executive ability than Madison, and better able to conduct it vigorously; but their chief desire and hope was to bring about an early peace by the defeat of Madison, the repeal of the British Orders in Council³ having opened a door for that consummation so devoutly wished for. Jared Ingersoll, of Pennsylvania, a moderate Federalist, was nominated by the Convention for Vice-president. George Clinton having died, Elbridge Gerry, as we have seen,⁴ was nominated for Vice-president by the Madisonians.

When the elections occurred, nearly all the Federalists and a fraction of the Democratic party voted for the Clintonian electors. All of the New England States, excepting Vermont, chose such electors.⁵ New York did the same, in consequence of the adroit management of Martin Van Buren, a politician thirty years of age, who then appeared prominently for the first time.⁶ There was a similar result in New Jersey,

¹ William James was an English emigrant to the United States early in the present century. He was a veterinary surgeon (or "horse doctor," as they are called in this country) in Philadelphia, but was unsuccessful in his profession. He left that city for his native country, thoroughly disgusted with every thing American, because the people had not appreciated his talents. His chief employment after his return seems to have been abuse of the Americans, their public men, their government, and their writers. He wrote angry reviews of some American books on the naval and military history of the War of 1812, and these were published, in 1817 and 1818, in three volumes. The first was entitled "A Full and Correct Account of the NAVAL OCCURRENCES of the Late War, etc.," and the other two, "A Full and Correct Account of the MILITARY OCCURRENCES of the Late War, etc." They are not histories, but violent tirades, and manifest, as the *Edinburg Review* remarked, "bitter and persevering antipathy" to the Americans. "Almost every original remark made by the author upon them," said the *Review*, "bears traces of the unworthy feeling we have just mentioned." In considering his performance in the light of two generations of thought and investigation, the truth of the motto on the title-page of his volume on the *Naval Occurrences*, quoted from Murphy's *Tactics*, is very manifest. "Truth is always brought to light by time and reflection, while the lie of the day lives by bustle, noise, and precipitation." James died in 1827.

⁴ See page 226.

⁵ In Massachusetts, so strongly Democratic, only a few months before, the "peace electors," as the Clintonians were called, obtained a majority of 24,000.

⁶ Owing to the dissonance in the Democratic party in New York, caused by the dissensions between the Madisonians and Clintonians, the Federalists chose nineteen out of the twenty-three members of Congress. Those of New Hamp-

Madison re-elected.

Threats of Josiah Quincy in Congress.

and for a time the re-election of Madison appeared doubtful. But before Congress had been in session six weeks it was definitely ascertained, from the official canvass, that Madison had one hundred and twenty-eight out of the two hundred and eighteen electors chosen, and that a large majority of the Congressmen elect were friends of the administration. This result was regarded, under the circumstances, as a very strong expression of the public in favor of the war; and the war-party in and out of Congress were greatly strengthened. They were also encouraged by the aspect of affairs abroad. Intelligence of apparent disasters to the English in Spain, the triumph of Bonaparte in the terrible battle of Borodino, and his victorious march upon Moscow, filled them with the hope that England, struggling with all Europe against her, must speedily be compelled to withdraw her soldiers and seamen from America, and give up the contest here, or else fall a prey to the conquering Corsican. But they were doomed to an early disappointment of their hopes by disasters that fell thick and fast upon the French army, exposed to Russian snows and Russian cohorts. It was evident, too, from the returns of the late elections, that the Opposition were growing stronger every day.

Among the earliest national measures proposed in Congress was a plan for increasing the army twenty thousand men, making the whole establishment fifty-six thousand. The President, in his fourth annual message,^a after giving a general statement of the position of affairs in relation to the war, called the attention of the national Legislature to the necessity of measures for the vigorous prosecution of it. A bill was introduced into the House of Representatives to raise the pay of private soldiers from six to eight dollars a month, to guarantee recruits against arrest for debt, and to give them their option to enlist for five years or for the war. In the same bill was a clause allowing the enlistment of minors without the consent of their parents or masters. This elicited a very spirited debate, in which Josiah Quincy engaged with his usual vigor. He declared it to be an interference with the rights of parents and masters, and warned the House that if the bill passed with that "atrocious principle" contained in it, it would be met in New England by the state laws against kidnapping and man-stealing. He opposed it as bearing particularly hard upon the North, where the laborers are the yeomanry and the minors, while at the South the laborers were slaves, and exempted by law from military duty. The planter of the South, he said, can look around upon his fifty, his hundred, and his thousand human beings, and say, "These are my *property*"—property tilling the land, and enriching the owner in war as well as in peace; while the farmer of the North has "only one or two *ewe lambs*—his children, of which he can say, and say with pride, like the Roman matron, 'These are my ornaments.'" These, by the proposed law, might be taken from him, and his land must remain untilled.¹

Williams, of South Carolina, the chairman of the Military Committee, retorted fiercely. In reply to Quincy's assertion that the bill contained an "atrocious principle," he charged the great Federal leader with uttering an "atrocious falsehood." His language was so offensively supercilious that it drew admonitions even from John Randolph. He argued well in favor of an increase of the army. "The British regular force in the Canadas," he said, "could not be estimated less than twelve thousand men. In addition to these were the Canadian militia, amounting to several thousands, and three thousand regulars at Halifax. To drive this force from the field, the St. Lawrence must be crossed with a well-appointed army of twenty thousand men, supported by an army of reserve of ten thousand. Peace is not to be expected

shire were all Federalists, and that party carried the Legislature of New Jersey and more than half of its Congressional delegation.

¹ A question upon similar premises arose in the Convention of 1787, when it was proposed to make three out of every five slaves count as persons in determining the representation of the states in Congress. It was observed that while the slaves were called *persons* for a political purpose, they were only *chattels* at other times, and could not be called into the military service of the country. This was a grievous wrong toward the non-slaveholding states.

but at the expense of a vigorous and successful war. Administrations have in vain sued for it, even at the expense of the sarcastic sneers of the British minister. The campaign of 1813 must open in a style and vigor calculated to inspire confidence in ourselves and awe in the enemy. Nothing must be left to chance; our movements must every where be in concert. At the same moment we move on Canada, a corps of ten thousand men must threaten Halifax from the province of Maine. The honor and character of the nation require that the British power on our borders should be annihilated the next campaign. Her American provinces once wrested from her, every attempt to recover them will be chimerical, except by negotiation. The road to peace thus lies through Canada." The bill passed the House of Representatives, but the objectionable clause received only four votes in the Senate.

The expensive volunteer system was taken up in Congress, and the law authorizing the employment of that species of soldiers was repealed. Another was substituted, which authorized the enlistment of twenty regiments of regulars to serve twelve months, to whom a bounty of sixteen dollars should be given. It also provided for the appointment of six major generals and six brigadier generals, and a corresponding increase of subordinate officers. Party spirit was aroused in the debate that ensued, and the discussion took a range so wide as to include the whole policy and

January 5, 1813. conduct of the war. Mr. Quincy led off^a with great bitterness and the keenest sarcasm. "He denounced the invasion of Canada," says Hildreth,¹

"as a cruel, wanton, senseless, and wicked attack, in which neither plunder nor glory was to be gained, upon an offending people, bound to us by ties of blood and good neighborhood; undertaken for the punishment, over their shoulders, of another people three thousand miles off, by young politicians fluttering and cackling on the floor of that house, half hatched, the shell still on their heads, and their pin-feathers not yet shed—politicians to whom reason, justice, pity, were nothing, revenge every thing; bad policy, too, since the display of such a grasping spirit only tended to alienate from us that large minority of the British people anxious to compel their ministers to respect our maritime rights. So thought the people of New England, and hence the difficulty of getting recruits. The toad-eaters of the palace—party men in pursuit of commissions, fat contracts, judgeships, and offices for themselves, their fathers, sons, brothers, uncles, and cousins—might assert otherwise, but the people had spoken in the late elections. There were in New England multitudes of judicious, patriotic, honest, sober men, who, if their judgments and their consciences went with the war, would rush to the standard of their country at the winding of a horn, but to whom the present call sounded rather as a jewsharp or a banjo. . . . If the government would confine itself to a war of defense, it should have his support; but for a war of conquest and annexation, whether in East Florida² or Canada, he would not contribute a single dollar. Nor was he to be frightened from this ground by the old state cry of British connection, raised anew by a pack of mangy, mongrel blood-hounds, for the most part of very recent importation, their necks still marked with the collar, and their backs sore with the stripes of European castigation, kept in pay by the administration to hunt down all who opposed the court."

This contemptuous speech drew a most vigorous reply from Mr. Clay, the Speaker of the House, who felt himself specially aimed at by the expression "unfledged politicians." He charged the Federalists, says Hildreth, "with always, throughout the whole controversy with Great Britain, thwarting the plans of their own government; clamoring alike against the embargo, against the non-intercourse, against the non-importation; when the government were at peace, crying out for war; and, now the government were at war, crying out for peace; falsely charging the President with

¹ *History of the United States*, second series, iii., 381.

² The revolutionary and military operations in that quarter will be noticed hereafter.

Clay's Speech in Opposition to Quincy. Measures for strengthening the Army and Navy. Government Expenses.

being under French influence;¹ heaping all kinds of abuse on Bonaparte; assailing Jefferson with impotent rage; spiring up chimeras of Southern influence and Virginia dictation, as if the people did not choose their own presidents; going even so far as to plot the dissolution of the Union." Mr. Clay then presented a most pathetic picture of the wrongs inflicted upon, and miseries endured by, American seamen under the operations of the impressment system, to which Great Britain clung tenaciously. "As to the gentleman's sentimental protest against the invasion of Canada," he said in substance, "was Canada so innocent, after all? Was it not in Canada that the Indian tomahawks were whetted? Was it not from Malden and other Canadian magazines that the supplies had issued which had enabled the savage bands to butcher the garrison of Chicago? Was it not by a joint attack of Canadians and Indians that Michillimackinac had been reduced? What does a state of war present? The combined energies of one people arrayed against the combined energies of another, each aiming to inflict all the injury it can, whether by sea or land, upon the territories, property, and persons of the other, subject only to those mitigated usages practiced among civilized nations. The gentleman would not touch the British Continental possessions, nor, for the same reason, it was supposed, her West India islands. By the same rule, her innocent soldiers and sailors ought to be protected; and as, according to a well-known maxim, the king could do no wrong, there would seem to be nobody left whom, on the gentleman's principles, we could attack, unless it were Mr. Stephen,² the reputed author of the Orders in Council, or the Board of Admiralty, under whose authority our seamen were impressed." . . . Mr. Clay's "plan was," he said, "to call out the ample resources of the country to the fullest extent, to strike wherever the enemy could be reached, by sea or land, and to negotiate a peace at Quebec or Halifax."

Measures were adopted for strengthening both the army and navy, and the more perfect organization of each. The President was authorized to cause the construction of four ships of seventy-four guns each, and six frigates and six sloops-of-war;³ to issue treasury notes to the amount of five millions of dollars, and to create a new stock for a loan of sixteen millions of dollars.⁴ A bill was also passed, chiefly through the untiring efforts of Langdon Cheves and John C. Calhoun, representatives from South Carolina, by which the bonds of merchants given for goods imported from Great Britain and Ireland after the declaration of war, and seized under the provisions of the Non-importation Act, were canceled. For six weeks after the news of war reached England exportations had been allowed to go on;⁵ and the goods to which the law in question would apply were valued, at invoice prices, at more than

¹ Quincy had said, in the speech just quoted from, that the "administration, under French influence and dictation, had for twelve years ruled the country with authority little short of despotic;" and then referred to the continuous rule of "a narrow Virginia clique, to the exclusion from office and influence of all men of talents, even of their own party, not connected with that clique."

² Author of *War in Disguise*. See page 140.

³ According to a careful estimate made by the Secretary of the Navy, the force of three frigates would not be more than equal to one 74-gun ship. The expense of building and equipping a frigate of 44 guns, estimated from the actual cost of the *President*, was \$220,910; the cost of a 74, \$333,000. The annual expense of keeping a frigate of that size in service was estimated at \$110,000, and that of a 74 at \$210,110. The result from these calculations was, that while the expenses of a 74 were something less than those of two frigates of 44 guns each, her value in service was equal to three frigates.—See Perkins's *History of the Political and Military Events of the Late War*, page 150. This estimate determined Congress to build 74's.

⁴ The following were the Treasury estimates of expenditures for the year 1813:

For the civil list, and interest and reimbursement of a part of the principal of the public debt. . . .	\$8,500,000
For the army, not including the new levies.	17,000,000
For the navy, not including the proposed increase.	4,925,000
Total.	\$30,425,000

The total appropriations made for the service of the year amounted to \$39,975,000. Such was the amount necessary to meet the entire expenses of the government of the United States fifty years ago, when it was waging a war with Great Britain. The expenditures of the government for a year (1863) during the late civil war was \$565,234,000.

⁵ This was under a false impression made by Mr. Russell, the American *Charge d'Affaires*, that in consequence of the repeal of the Orders in Council the Non-intercourse Act would be suspended. Immediately after the repeal (June 23d, 1812), all the American ships then in British ports commenced loading with British goods.

eighteen millions of dollars, and were worth double that amount in the American market. This act conciliated the mercantile interest.

Cheves, who was chairman of the Committee of Ways and Means, endeavored to procure a partial repeal of the Non-importation Act, but failed. The restrictive system was regarded with great favor as a powerful weapon in the hands of the Americans, and its friends adhered to it with the greatest tenacity, believing it to be a policy potent in hastening the ruin of England. The Federalists failed to support the measure because the repeal was not complete, and on account of the provision in it for the more strict enforcement of what was left.

We have already observed that a retaliatory law, first suggested by Colonel Scott on account of some prisoners taken at Queenston, and who had been sent to England as deserters because they were Irishmen, was passed.¹ It was so framed as not only to meet the special case of those persons, but such Indian outrages under British sanction as had been committed at the River Raisin.² Happily, there was no occasion for enforcing the law.

On the 13th of January, Mr. Calhoun, from the Committee on Foreign Relations, made an able report. It had been looked for with great interest. In that report the subject of *impressment* held a conspicuous place. The President, as we have observed, only a week after the declaration of war,³ proposed an immediate armistice, on conditions at once just and honorable to both nations. It was rejected by the British in terms of peculiar reproach and insult. At about the same time the British Orders in Council were repealed conditionally, but the practice of impressment was defended as just and expedient, and would not be allowed to become a subject for negotiation by the British authorities. Thus matters stood when the Report on Foreign Relations was presented. After alluding to the above facts, the committee proceeded to say that "the impressment of our seamen, being deservedly considered a principal cause of the war, the war ought to be prosecuted until that cause be removed. To appeal to arms in defense of a right, and to lay them down without securing it, or a satisfactory evidence of a good disposition in the opposite party to secure it, would be considered in no other light than a relinquishment of it. . . . The manner in which the friendly advances and liberal propositions of the Executive have been received by the British government has, in a great measure, extinguished the hope of amicable accommodations. . . . War having been declared, and the case of impressment being necessarily included as one of the most important causes, it is evident it must be provided for in the pacification. The omission of it in a treaty of peace would not leave it on its former ground; it would, in effect, be an absolute relinquishment, an idea at which the feelings of every American must revolt. The seamen of the United States have a claim on their country for protection, and they must be protected. If a single ship is taken at sea, and the property of an American citizen wrested from him unjustly, it rouses the indignation of the country. . . . How much more deeply, then, ought we to be excited when we behold so many of this gallant and highly meritorious class of our fellow-citizens snatched from their families and country, and carried into a cruel and afflicting bondage? It is an evil which ought not, which can not be longer tolerated. Without dwelling on the sufferings of the victims, or on that wide scene of distress which it spreads among their relatives through the country, the practice is, in itself, in the highest degree degrading to the United States as a nation. It is incompatible with their sovereignty; it is subversive of the main pillars of their independence. The forbearance of the United States under it has been mistaken for pusillanimity."

To effect a change in the British policy respecting impressments, the committee

¹ See page 408.

² The British authorities excused themselves on the plea that they could not restrain the Indians. This was no justification. The root of the iniquity was in the employment of the savages as allies.

Manifesto of the Prince Regent.

Charges against the Government of the United States.

recommended the passage of an act, which was appended to their report, similar to one proposed by Mr. Russell to Lord Castlereagh several months before, prohibiting, after the close of the present war, the employment, in public or private vessels, of any persons except American citizens, this prohibition to extend only to the subjects or citizens of such states as should make reciprocal regulations. An act to that effect, which passed the House on the 12th of February, was adopted by the Senate on the last day of the session,^a against very warm opposition of some of the war-party, who considered it as a humiliating concession.

^a March 3, 1813.

Only four days before the presentation of their report^b by the Committee on Foreign Relations, the Prince Regent, acting sovereign of Great Britain, issued a manifesto^c concerning the causes of the war, and the subjects of blockade and impressment. He declared that the war was not the consequence of any fault of Great Britain, but that it had been brought on by the partial conduct of the American government in overlooking the aggressions of the French, and in their negotiations with them. He alleged that a quarrel with Great Britain had been sought because she had adopted measures solely as retaliative as toward France; and that, as those measures had been abandoned by a repeal of the Orders in Council, the war was now continued on the question of impressment and search. On this point the Prince Regent took such a decisive position, that the door for negotiation which the recommendation of the Committee on Foreign Affairs proposed to open seemed irrevocably shut. "His royal highness," said the manifesto from his palace at Westminster, "can never admit that in the exercise of the undoubted and hitherto undisputed¹ right of searching neutral merchant vessels in time of war, and the impressment of British seamen when found therein, can be deemed any violation of a neutral flag, neither can he admit the taking of such seamen from on board such vessels can be considered by any neutral state as a hostile measure or a justifiable cause of war." After reaffirming the old English doctrine of the impossibility of self-expatriation of a British subject, the manifesto continued: "But if, to the practice of the United States to harbor British seamen, be added their assumed right to transfer the allegiance of British subjects, and thus to cancel the jurisdiction of their legitimate sovereign by acts of naturalization and certificates of citizenship, which they pretend to be as valid out of their own territory as within it,² it is obvious that to abandon this ancient right of Great Britain, and to admit these naval pretensions of the United States, would be to expose the very foundations of our maritime strength."

^b January 13.

^c January 9.

The manifesto charged the United States government with systematic efforts to inflame their people against Great Britain, of ungenerous conduct toward Spain, Great Britain's ally, and of deserting the cause of neutrality. "This disposition of the government of the United States—this complete subserviency to the ruler of France—this hostile temper toward Great Britain," said the prince, "are evident in almost every page of the official correspondence of the American with the French government. Against this course of conduct, the real cause of the present war, the Prince Regent solemnly protests. While contending against France in defense not only of the liberties of Great Britain, but of the world, his Royal Highness was entitled to look for a far different result. From their common origin—from their common interest—from their professed principles of freedom and independence, the United States was the last power in which Great Britain could have expected to find a willing instrument and abettor of French tyranny."³

¹ For a refutation of this erroneous assertion, see Chapter VII.

² This right of citizenship, acquired by naturalization and the transfer of allegiance, has long ago been tacitly acknowledged by the British authorities. Indeed, the claim set up by the Prince Regent was practically abandoned during the War of 1812, for, excepting in the case of the Irishmen made prisoners with Colonel Scott, the British never claimed British-born prisoners as subjects. See page 406.

³ In the manifesto the Prince Regent also solemnly declared that "the charge of exciting the Indians to offensive

This manifesto, adroitly framed for effect in the United States as well as at home, was approved by both houses of Parliament, and sustained in an address to the throne. It reached America at about the close of the twelfth Congress, and its avowals of the intended adherence of the British government to the practice of impressment stood before the people side by side with the declarations of the report of their Committee on Foreign Affairs, in which it was declared that it was against that practice the war was waging, and that it ought to be waged until the nefarious business was abandoned by the enemy.

While pondering these documents, the Americans were suddenly called by the march of events to contemplate other most important subjects in connection with the war. John Quincy Adams was then the American minister at the Russian court. His relations with the Emperor Alexander were intimate and cordial. When intelligence of the declaration of war reached St. Petersburg the Czar expressed his regret. On account of the French invasion of his territory he was on friendly terms with Great Britain, and his prime minister, Romanzoff, suggested to Mr. Adams^a the expediency of tendering the mediation of Russia for the purpose of effecting a reconciliation. Mr. Adams favored it, but for a while the victorious march of Bonaparte toward Moscow, the heart of the Russian empire, delayed the measure. The final defeat of the invader secured present tranquillity to the Czar, and he sent instructions to M. Daschkoff, his representative at Washington, to offer to the United States his friendly services in bringing about a peace. This was formally done on the 8th of March, 1813, only four days after President Madison, in his second inaugural address, had laudably endeavored to excite anew the enthusiasm of the people in the vigorous prosecution of the war.

At about this time official intelligence had been received by the government of the result of Napoleon's invasion of Russia. He had indeed reached Moscow after fearful sufferings and losses, but when he rode into that ancient capital of the Muscovites at the head of his staff, on the 15th of September, it was as silent as the Petrified City of the Eastern tale. The inhabitants had withdrawn, and the great Kremlin in which he slept that night was as cheerless as a magnificent mausoleum. His slumbers were soon disturbed. The Russians had not *all* left. For hours a hundred unlighted torches had been held by the hands of Russian incendiaries. When the great bell of the metropolitan cathedral tolled out the hour of midnight, these were kindled by flint and steel, and instantly a hundred fires glared fearfully from every direction upon the couch of the great Corsican. The city was every where in flames, and the wearied French army were compelled to seek shelter in the desolate country around the blackened ruins of that splendid town.

On that fearful night the star of Napoleon's destiny had reached its meridian. Ever afterward it was seen slowly descending, in waning splendor, the paths of the western sky. He perceived in the destruction of Moscow the fearful perils of his situation, and sought to avert them. He proposed terms of peaceful adjustment, but the emperor flung them back with scorn. Retreat or destruction was the alternative. He chose the former; and late in October, with one hundred and twenty thousand men, he turned his face toward France. For a few days the sky was clear and the atmosphere was genial. Then came biting frosts and blinding snow-storms, while clouds of fiery Cossacks smote his legions on flank and rear with deadly blows. Suf-

measures against the United States is equally void of foundation." This denial was iterated and reiterated by British statesmen and publicists, and has been ever since. It is very natural for a civilized and Christian people to repel the charge of complicity with savage pagans in the practices of merciless and barbarous warfare. It is commendable, and evinces a proper sense of the heinousness of the offense against civilization; but the official declarations of even a prince, were he many times more virtuous than that libertine regent of England, can not set aside the indelible records of history or the verdict of mankind. There are too many positive statements concerning such complicity to doubt it. In addition to those given in the preceding pages of this work, many more may be found in Niles's *Weekly Register*, ii. 342.

Napoleon's Disasters in Russia.

Rejoicings of the American Peace-party.

Commissioners to treat for Peace.

fering and death held high carnival among the fugitives. Bonaparte saw that all was lost, and he hastened to France, bearing almost the first intelligence of the terrible disaster. He lost during the campaign one hundred and twenty-five thousand slain in battle, one hundred and thirty-two thousand by fatigue, hunger, disease, and cold, and one hundred and ninety-three thousand made prisoners; in all, *four hundred and fifty thousand men!* Notwithstanding this fearful loss of life, he had scarcely reached Paris when he issued an order for a general conscription, in number sufficient to take the places of the dead. At the same time Russia, Sweden, Denmark, Prussia, and Spain coalesced for the purpose of striking the crippled conqueror a crushing blow, and early in 1813 they sent large armies toward the Elbe to oppose him. His conscripts were already in the field, and with three hundred and fifty thousand men he invaded Germany, fought and won the great battle of Lutzen,^a and, after ^{May 2,} other conflicts, seated himself in Dresden, agreeably to an armistice, and listened to offers of mediation on the part of Austria, with a view to closing the war. 1813.

The intelligence from Europe was disheartening to the war-party, for it was evident that the coalition of the great powers of Europe against the French would so relieve England that she might prosecute the war in America with great vigor. The President had been at all times anxious for peace on honorable terms. He perceived a chance for its accomplishment through Russian mediation, and he at once accepted the offer of M. Daschkoff. That acceptance was followed by the nomination of Albert Gallatin, the Secretary of the Treasury, and James A. Bayard, a representative of Delaware in the Senate of the United States, as commissioners or envoys extraordinary, to act jointly with Mr. Adams to negotiate a treaty of peace with Great Britain at St. Petersburg. At the same time, William H. Crawford, of Georgia, a Peace Democrat, was appointed to succeed the lately deceased Joel Barlow¹ as minister at the French court. Of the result of the efforts for peace through Russian mediation I shall hereafter write.

The reverses of Napoleon, as we have observed, discouraged the war-party, and gave corresponding joy to the Federalists, especially to the wing of that organization known as the Peace-party, whose head-quarters were at Boston. There they celebrated the Russian triumphs with public rejoicings.² In other places, too, these vic-

¹ Mr. Barlow, as we have seen, was an ardent Republican (see page 94). In October, 1812, the Duke de Bassano, at Napoleon's request, invited Barlow to meet the emperor at Wilna, in Poland, the nominal object of which was to complete a commercial treaty with the United States, for which the American minister had long importuned. It was believed by some that the real object was to make an arrangement by which French ships, manned by American sailors, might be brought into play against Great Britain. Whatever was the object remains a mystery. Barlow obeyed the royal summons immediately, and traveled day and night. The weather was very inclement. The country had been wasted by war, and he suffered many privations. In consequence of these and exposure to the weather, he was attacked with inflammation of the lungs, which caused his death in the cottage of a Jew at Zarnowice, near Cracow, on the 22d of December, 1812. Of course, the object of his mission was not accomplished. His last poem, dictated, it is said, from his death-bed, was a withering expression of resentment against Napoleon for the hopes which he had disappointed.

² Services were held in Kjug's Chapel, on the 26th of March, 1813, in commemoration of the victories of the Russians over Napoleon, who aimed, it was said, "at the empire of the world." One hundred and fifty amateurs and professional gentlemen assisted in the performance of sacred music. Among other pieces sung was the following recitative, composed for the occasion: "For the hosts of Gallia went in with their chariots and with their horsemen into the North, and the Lord chased them with fierce warriors, winter blasts, and famine; but the children of Slavonia, safe and unhurt, through all the danger passed." The closing prayer was made by the Reverend Mr. Chauncey.

The services in the church were held in the forenoon. In the afternoon many hundreds of the citizens of Boston and the neighboring country sat down to a public dinner. M. Eustaphie, the Russian consul for New England, was a guest. The room was appropriately decorated. Among the ornaments was a portrait of the Russian emperor, with the words, "*Alexander, the deliverer of Europe.*" Harrison Gray Otis made a speech on the occasion, in which he declared his conviction that the check given to Napoleon by Russia had rescued our country from its greatest danger—the influence of the French policy. Several songs were sung. One of them contained the following verse:

"Hail, Russia! may thy conq'ring bands
Sad Europe from her chains release;
Exalt the hopes of farthest lands,
And give us back an exiled PEACE!"

An ode was sung, to the air of "Ye Mariners of England," which concluded thus:

"Then fill to Alexander!
For him a garland twine,
While shaded by our oaks, we taste
The virtues of the vine."

ories were hailed with joy, and became the themes for song and oratory,¹ to the great disgust of the war-party and their newspaper organs, who censured the President for his haste in snatching at Russian mediation.

During the session of Congress which closed on the 3d of March, 1813, there had been some important changes in President Madison's Cabinet. Public clamor against him had caused Dr. Eustis to resign the War bureau, and the affairs of that department were conducted for several weeks by Mr. Monroe, the Secretary of State. John Armstrong, who had been appointed a brigadier general in the army of the United States, and succeeded General Bloomfield in command at New York, was appointed Secretary of War,^a and Paul Hamilton was dismissed from the Navy Department to make way for William Jones,^b who had been a ship-master in earlier life, was an active Philadelphia politician of the Democratic school, and at the time was Commissary of Purchases for the army. Madison's Cabinet, at the opening of the campaign of 1813, was composed as follows: James Monroe, Secretary of State; John Armstrong, Secretary of War; William Jones, Secretary of the Navy; Albert Gallatin, Secretary of the Treasury; and William Pinkney, Attorney General.

^a January 13, 1813.
^b January 12.

And when those oaks adorn our hills,
Or bear our thunders far,
Let each soul
Fill his bowl
To vict'ry and the Czar—
And give a long and loud huzza
To vict'ry and the Czar."

¹ On the 5th of June, 1813, the late G. W. P. Custis, the adopted son of Washington, addressed a large audience at Georgetown, in the District of Columbia, on the Russian victories. That address drew from the Russian minister at Washington a very complimentary letter, and a request for a copy to be transmitted to Russia. That letter, dated "June 21, 1813," was accompanied by a small medal containing a likeness of the Emperor Alexander. "Permit me to express to you my gratitude," said M. Daschkoff, "that of my family, and of all my countrymen who shall peruse your oration, for the zeal and interest you have displayed in our cause; and allow me to send you a small medal, with the likeness of Alexander the First, the only one which is now in my possession."—*MS. Letter.*

CHAPTER XXIII.

"Oh, lonely is our old green fort,
Where oft, in days of old,
Our gallant soldiers bravely fought
'Gainst savage albes bold;
But with the change of years have passed
That unrelenting foe,
Since we fought here with Harrison,
A long time ago." Sosa—Old Fort Mtns.

NOTHING of importance in military movements occurred during the dead of winter, in 1813, excepting the terrible affair at Frenchtown, on the River Raisin, already described,¹ and some hostile demonstrations on the St. Lawrence frontier at Elizabethtown and Ogdensburg by the opposing parties. The campaign of that year opened almost simultaneously on the shores of Lake Ontario, in the Valley of the Maumee, and on the coasts of Virginia.

Let us first consider the military events in the Northwest, where we left General Harrison, with a portion of his gallant little army, encamped amid the snows in the dark forests that skirted the Rapids of the Maumee.²

The position chosen by Harrison for a strong advanced post, which would give him facilities for keeping open a communication with Ohio and Kentucky, allow him to afford protection to the inhabitants on the borders of Lake Erie, and to operate against Detroit and Malden, was one of the most eligible in the Northwest, and its possession gave the British much uneasiness. Harrison's plan was to form simply a fortified camp, and to prosecute the winter campaign with vigor. For this purpose he endeavored to concentrate troops there, and prepared to push on to the vicinity of Brownstown, for the purpose of operating directly against Malden while the Detroit River was bridged with ice. Considering the destruction of the enemy's vessels, frozen up in the vicinity of Malden, of great importance, he sent a small force, under Captain Langham,³ to perform that service. On the 2d of March³ they set off in sleighs, with six days' provisions, and well equipped with combustibles. The party was one hundred and seventy strong. The particular incendiaries were under the immediate command of M. Madis, a Frenchman of European military experience, then conductor of artillery. They were instructed to leave the sleighs at Middle Bass Island, and, with their feet muffled in moccasins, proceed noiselessly, under cover of night, to the work of destruction. Harrison advanced with a supporting detachment, but on his arrival at Maumee Bay,^b not far below the present city of Toledo, he met Langham and his party returning. They had found the lake open, and of course the plan of the expedition was frustrated. The mildness of the winter had been remarkable; the roads were consequently almost impassable. There was no ice competent to bear troops and munitions of war.

Harrison now abandoned all hopes of moving forward until spring, and continued the work of fortifying his camp with great vigor, for the preservation of his stores,

¹ See Chapter XX.

² See page 364.

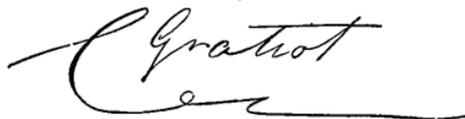

³ Augustus L. Langham, of Ohio, was an ensign in a rifle corps in 1808. He resigned in 1809, and in March, 1812, was commissioned a captain in the Nineteenth Regiment of Infantry. He distinguished himself at Fort Meigs. In August following he was promoted to major, was retained in 1815, and resigned in October, 1816.

Fortified Camp at the Maumee Rapids.

Remissness of the commanding Officer.

A weak Garrison.

collected there in great quantity. His troops were then about eighteen hundred in number, and were employed on the works under the skillful direction of that competent officer, Captain Wood, the chief engineer of Harrison's army, Captain Gratiot,¹ then lying prostrate with illness that long continued. "The camp,"

said Captain Wood, was about twenty-

five hundred yards in circumference, the whole of which, with the exception of several small intervals left for batteries and block-houses, was to be picketed with timber fifteen feet long, from ten to twelve inches in diameter, and set three feet in the ground. Such were the instructions of the engineer; and so soon as the lines of the camp were designated, large portions of the labor were assigned to each corps in the army, by which means a very laudable emulation was easily excited. To complete the picketing, to put up eight block-houses of double timbers, to elevate four large batteries, to build all the store-houses and magazines required to contain the supplies of the army, together with the ordinary fatigues of the camp, was an undertaking of no small magnitude. Besides, an immense deal of labor was likewise required in excavating ditches, making *abatis*, and clearing away the wood about the camp; and all this was to be done, too, at a time when the weather was inclement, and the ground so hard that it could scarcely be opened with the mattock and pickaxe. But in the use of the axe, mattock, and spade consisted the chief military knowledge of our army; and even that knowledge, however trifling it may be supposed by some, is of the utmost importance in many situations, and in ours was the salvation of the army. So we fell to work, heard nothing of the enemy, and endeavored to bury ourselves as soon as possible."²

But the work so vigorously commenced was abandoned soon afterward, when the general and the engineer left the camp—the former to visit his sick family at Cincinnati, and to urge forward troops and supplies for his army; the latter to superintend the erection of defensive works at Sandusky. The camp at the Rapids was left in charge of Colonel Leftwich, of the Virginia militia, who appears to have resolved to desert the post as soon as possible. Regardless of the danger to the stores, and comfort and safety of those he might leave behind, he not only allowed all work upon the fortifications to cease, but permitted the soldiers to burn the collected picketings for fuel, instead of getting it from the woods within pistol-shot of the camp. On his return from Sandusky on the 20th of February, Captain Wood, to his great mortification, perceived the utter neglect of Leftwich, and the destruction of the works on the lines commenced before he left. The consequence of this conduct of Leftwich, whom Wood called "an old phlegmatic Dutchman, who was not even fit for a pack-horse master, much less to be intrusted with such an important command," was great exposure of the garrison to the inclement weather, and the stores to imminent peril from the enemy. When, on the expiration of their term of enlistment, the Virginia troops under Leftwich, and others from Pennsylvania, left for home, only about five hundred men remained at the Rapids under Major Stoddard, with which to maintain possession of an unfinished line of circumvallation calculated to contain an army of two thousand men.

Harrison's greatest concern during the winter of 1813 was the possibility of not keeping soldiers enough in the field for the spring campaign, as the terms of the en-

¹ Charles Gratiot was a native of Missouri, and was appointed second lieutenant of Engineers in October, 1806, and captain in 1808. Harrison appointed him his chief engineer in 1812. He was promoted to major in 1815, lieutenant colonel in 1819, colonel and principal engineer in 1828, and on the same day (May 24) was breveted brigadier general. He left the service in December, 1838.

² The lines of the camp, inclosing about eight acres, were very irregular. They were upon a high bank, about one hundred feet above the river and three hundred yards from it. On the land side, commencing at the run, was a deep ravine that swept in a crescent form quite round to the rear.

A Call for Volunteers nobly answered. Armstrong's Interference with Harrison's Plans. Harrison's Protest.

listment of different corps would soon expire. To provide for such contingency, he called for volunteers from Kentucky and Ohio, and met with cordial responses.¹ He was preparing to collect about four thousand men at the Rapids for an early movement against Malden, when he received instructions from General Armstrong, the new Secretary of War, which deranged all his plans. By these he was directed to continue his demonstrations against Malden, but only as a diversion in favor of attempts to be made upon Canada farther down. He was enjoined not to make an actual attack upon the enemy until the consummation of measures for securing the command of Lake Erie, then just inaugurated, and to be completed at Presque Isle (now Erie, Pennsylvania) by the middle of the ensuing May. Much to his mortification and alarm, he was directed to dispense with militia as much as possible, and to fill up the 17th, 19th, and 24th Regiments of Regulars for service in the ensuing campaign. He was informed that two other regiments of regulars had been ordered to be raised, one in Kentucky and the other in Ohio. Should the old regiments not be filled in time, he was permitted to make up the deficiencies from the militia. With these he was to garrison the different posts, hold the position at the Rapids, and amuse the enemy by feints.

This interference with his plans annoyed Harrison exceedingly, and he ventured to remonstrate with the Secretary of War. He gave him his views^a very
* March 18,
1813.
 freely, and with them some valuable and much-needed information concerning the country to be defended and the Indian tribes in alliance with the British. He explained the causes of apprehended danger in attempting to carry out the new programme, and assured the Secretary of War that the regular force to be relied on could not be raised in time for needed service, and that, even if it should, it would be too small for the required duty—so evidently inadequate that enlistments would be discouraged.² Armstrong, who seldom bore opposition patiently, did not like to be remonstrated with, but he prudently forbore farther interference in the conduct of the campaign in the Northwest at that time.³

General Harrison was yet at Cincinnati late in March, actively engaged in endeavors to forward troops and supplies to the Rapids. Informed that the lake was almost free of ice, that the Virginia and most of the Pennsylvania troops would leave at the ex-

¹ Harrison requested that a corps of fifteen hundred men might be raised in Kentucky immediately, and marched to his head-quarters without delay. The Legislature of Kentucky was then in session, and Harrison's request was submitted to them in a confidential message by Governor Shelby. A law was immediately passed offering additional pay of seven dollars a month to any fifteen hundred Kentuckians who would remain in the service till a corps could be sent to relieve them. This offer was accompanied by an appeal to their patriotism from the Legislature, which reached them on the 8th of February. They had suffered much, and were very anxious to return home, so they would only promise to remain an indefinite time, but said that if the general was ready to lead them against the enemy they would follow him without additional pay. Similar appeal to the Ohio and Pennsylvania troops met with similar success, but the Virginians would not remain. Meanwhile the Legislature of Kentucky passed an act for detaching three thousand men from the militia, of which fifteen hundred were to march for Harrison's camp, and Governor Meigs ordered two regiments to be organized for the same service.

² In a letter to Governor Shelby, at about this time, Harrison said: "Last night's mail brought me a letter from the Secretary of War in which I am restricted to the employment of the regular troops raised in this state to re-enforce the post at the Rapids. There are scattered through this state about one hundred and forty recruits of the 19th Regiment, and with these I am to supply the place of the brigades from Pennsylvania and Virginia, whose time of service will now be daily expiring. By a letter from Governor Meigs I am informed that the Secretary of War disapproved the call for militia which I had made on this state and Kentucky, and was on the point of countermanding the orders. I will just mention one fact, which will show the consequences of such a countermand. There are upon the Au Glaise and St. Mary's Rivers eight forts, which contain within their walls property to the amount of half a million of dollars from actual cost, and worth now to the United States four times that sum. The whole force which would have had charge of all these forts and property would have amounted to less than twenty invalid soldiers."—Autograph Letter, March 21, 1813.

³ Armstrong attempted to arrange the military force of the country on the plan adopted by General Washington in the Revolution. On the 19th of March he promulgated a general order, dividing the whole United States into nine military districts, as follows: 1, Massachusetts, with Maine and New Hampshire; 2, Rhode Island and Connecticut; 3, New York below the Highlands and New Jersey; 4, Pennsylvania and Delaware; 5, Maryland and Virginia; 6, Georgia; 7, Louisiana. The rest of the States and Territories being divided between the 8th and 9th, the first embraced the seat of war at the west end of Lake Ontario, and the other the Niagara portion, Lake Ontario, and the St. Lawrence and Lake Champlain.

On the 12th of March commissions were issued for eight new brigadiers, namely, Cushing, Parker, Izard, and Pike, of the old army, and Winder, M'Arthur, Cass, Howard, and Swartwout. The latter succeeded Morgan Lewis as quarter-master with the rank of brigadier.

Green Clay

piration of their term on the 2d of April, and that the enemy were doubtless informed of the situation of affairs at the Rapids by a soldier who had been made a prisoner by them, he anticipated an early attack upon his camp there. It was, therefore, with the greatest anxiety that he awaited promised re-enforcements from Kentucky. The governor had ordered a draft of three thousand militia (fifteen hundred of them for Harrison's army) as early as the middle of February, to be organized into four regiments, under Colonels Boswell, Dudley, Cox, and Caldwell, forming a brigade to be commanded by Brigadier General Green Clay.¹ The regiments under the first two named officers rendezvoused at Newport, opposite to Cincinnati, at about the first of April. Those companies which had arrived there earlier had been sent forward to the Rapids on forced marches, by the way of Urbana and "Hull's Trace," and the commander-in-chief followed soon afterward, leaving the remainder of the Kentuckians designed for his command to be forwarded as quickly as possible.

He arrived at camp on the 12th of April, and was gratified by finding more than two

VIEW OF CINCINNATI FROM NEWPORT IN 1812.²

¹ In a letter dated at "Frankfort, March 5, 1813," Governor Shelby invited Mr. Clay to accept the command of the brigade as brigadier general. Clay accepted the office, and in a letter, dated on the 16th of the same month, the governor sent him his commission. In the first letter, now before me, the governor said that, had it been designed to cross into Canada at once, he should have taken command of the Kentucky troops in person.

² This view of Cincinnati in 1812 is from an old print. It then contained about two thousand inhabitants.

Fort Meigs and its Vicinity. Harrison assumes Responsibility. Proctor's Preparations to invade the Maumee Valley.

hundred patriotic Pennsylvanians remaining, who had been persuaded to do so by their chaplain, Dr. Hersey.¹

Under the direction of Captain Wood, the fortified camp, which had been named in honor of the governor of Ohio, had assumed many of the features of a regular fortification, and was dignified with the name of Fort Meigs. It was evident that its defense would be the chief event in the opening of the campaign. Harrison had been informed while on his way of the frequent appearance of Indian scouts in the neighborhood of the Rapids, and of little skirmishes with what he supposed to be the advance of a more powerful force. Alarmed by these demonstrations, he dispatched a messenger from Fort Amanda with a letter to Governor Shelby, urging him to send to the Maumee the whole of the three thousand militia drafted in Kentucky. This was in violation of his instructions from the War Department respecting the employment of militia, but the seeming peril demanding such violation, he did not hesitate for a moment. Expecting to find Fort Meigs invested by the British and Indians, he took with him from Fort Amanda all the troops that could be spared from the posts on the St. Mary and the Au Glaize, about three hundred in all, and descended by water from his point of departure with the intention of storming any British batteries which he might find employed against his camp. He was agreeably disappointed on his arrival by the discovery that the enemy was not near in great force. But that enemy, vigilant and determined, was preparing to strike at Fort Meigs a destructive blow.

When the ice began to move in the Detroit River and the lake, Proctor formed his plans for an early invasion of the Maumee Valley. Ever since his sanguinary operations at Frenchtown he had been using every art and appliance in his power to concentrate at Amherstburg a large Indian force for the purpose. He fired the zeal of Tecumtha and the Prophet by promises of future success in all their schemes for confederating the savage tribes, and by boasting of his ample power to place in the hands of his Indian allies Fort Meigs, its garrison, and immense stores. So stimulative were his promises that, at the beginning of April, Tecumtha was at Fort Malden with almost fifteen hundred Indians. Full six hundred of them were drawn from the country between

¹ These patriotic men informed the general that they were very anxious to go home to put in their spring seeds, but that they would never leave him until he thought that their services could be spared without danger to the cause. On the arrival of the three Kentucky companies he discharged the Pennsylvanians.

Lake Michigan and the Wabash, much to the satisfaction of Harrison when he discovered the fact, for it so relieved him of apprehensions of peril to his posts from that direction that he countermanded his requisition on Governor Shelby for *all* the drafted men from Kentucky.

Proctor was delighted with the response of the savages to his call, and visions of speedy victory, personal glory, and official promotion filled his mind. He became more boastful than ever, and more supercilious toward the Americans at Detroit.

^a 1813. He ordered the Canadian militia to assemble at Sandwich on the 7th of April,^a

when he assured them that the campaign would be short, decisive, successful, and profitable. On the 23^d his army and that of his savage allies, more than two thousand in number,¹ were in readiness at Amherstburg; and on that day they embarked on a brig and several smaller vessels, accompanied by two gunboats and some artillery. On the 26th they appeared at the mouth of the Maumee, about twelve miles below Fort Meigs; and on the 28th they landed on the left bank of the river, near old Fort Miami, and established their main camp there.² From that point Proctor and Tecumtha, who were well mounted, rode up the river to a point opposite Fort Meigs to reconnoitre. They were discovered at the fort, when a shot from one of the batteries sent them back in haste.³ Captain Dixon, of the Royal Engineers, was immediately sent up with a fatigue party to construct batteries upon a commanding elevation nearly opposite the fort, in front of the present Maumee City, but incessant rains, and the wretched condition of the roads, so retarded the progress of the work that they were not ready for operations until the first day of May.

The approach of the enemy in force had been discovered by Captain Hamilton, of the Ohio troops, on the 28th, while reconnoitring down the river with a small force. Peter Navarre, one of Harrison's most trustworthy scouts, yet (1867) living in Ohio, first saw them. Hamilton sent him in haste to Fort Meigs with the intelligence, when Harrison instantly dispatched him with three letters, one for Upper Sandusky, one for Lower Sandusky, and one for Governor Meigs, at Urbana.⁴ Although Fort Meigs was quite strong, several block-houses having been erected in connection with the lines of intrenchment and pickets, and a good supply of field-pieces had been mounted, Harrison was convinced, from the character and strength of the enemy, that his post was in imminent peril. He knew that General Green Clay was on his march with Kentuckians; and as soon as Navarre was furnished with his letters, he dispatched Captain William Oliver, the commissary to the fort, an intelligent, brave, and judicious officer (who had performed similar service for him), with an oral message to Clay, urging him to press forward by forced marches. Oliver bore to Clay the following simple note of introduction:⁵

"Head-quarters, Camp Meigs, 28th April, 1813.

"DEAR SIR,—I send Mr. Oliver to you, to give you an account of what is passing here. You may rely implicitly upon him. Yours,

"WILLIAM HENRY HARRISON."

Oliver was accompanied by a single white man and an Indian. He was escorted

¹ The combined force under Proctor consisted of 522 regulars, 461 militia, and about 1500 Indians; total, 2482. The Americans at Fort Meigs did not exceed 1100 effective men.

² See the map on the preceding page, which covers the entire historic ground at and around the Maumee Rapids from Roche de Bout—perpendicular rock—where the river has a considerable fall, and where Wayne was encamped in 1794 (see page 54), to Proctor's encampment near Fort Miami at the time we are considering. It shows the place of Hull's encampment in 1812 (see page 257), and Wayne's battle-ground in 1794 (see page 53), with the site of Fort Meigs, and of incidents connected with the siege about to be described in the text; also the present Maumee City on one side of the river, Perryville on the other, and the rail and wagon bridges across. Between Fort Meigs and Perryville is seen a stream. It courses through the ravine mentioned in Note 2, page 474.

Combs commissioned a Captain of Spies. He goes on a perilous Expedition. Biographical Sketch of Combs.

April 7, 1813. nati early in April, after issuing a stirring address¹ to his troops^a in General Orders, and followed Winchester's route to the Maumee.² At Dayton he was overtaken by Leslie Combs, of Kentucky, a bold and ardent young man of nineteen years, whose services as scout and messenger in the late campaign, which ended so disastrously at the Raisin, were well known to General Clay. He at once commissioned Combs captain of a company of riflemen as spies or scouts, to be selected by him from Dudley's corps.

At St. Mary's block-house Clay divided his brigade. He sent Dudley to the Au Glaize, while he descended the St. Mary himself with Colonel Boswell's corps. Both divisions were to meet at Defiance. While on their way down the Au Glaize, intelligence reached Dudley of the perilous condition of Harrison at Fort Meigs. At a council of officers it was resolved to apprise the commander-in-chief of the near approach of succor. Who shall undertake the perilous mission? was the important question. It required some person acquainted with the country. Young Combs, eager for patriotic duty and distinction, volunteered to go. "When we reach Fort Defiance," he said, "if you will furnish me a good canoe, I will carry your dispatches to General Harrison, and return with his orders. I shall only require four or five volunteers from my own company, and one of my Indian guides to accompany me." A murmur of approbation ran through the company, and his offer was joyfully accepted by Dudley with words of compliment and gratitude.³ They reached Defiance the following morning. It was the first of May. As soon as a canoe could be procured Combs embarked on his perilous mission, accompanied by two brothers named Walker, and two others named respectively Paxton and John-

Leslie Combs
Q " —————

¹ "Kentuckians," he said, "stand high in the estimation of our common country. Our brothers in arms who have gone before us to the scene of action have acquired a fame which should never be forgotten by you—a fame worthy your emulation. . . . Should we encounter the enemy, remember the fate of your UNFORTUNATE BROTHERS at the River Raisin—that British treachery produced their slaughter!"

² As it may be interesting to the reader to know what constituted the private outfit of an officer of the army at that time for service in the field, I subjoin the following "list of articles for camp" prepared for General Clay:

³ Trunk, portmanteau and fixtures, flat-iron, coffee-mill, razor-strop, box, etc., inkstand and bundle of quills, ream of paper, three hatters, shoe-brushes, blacking, saddle and bridle, tortoise-shell comb and case, box of mercerial ointment, silver spoon, mattress and pillow, three blankets, three sheets, two towels, linen for a cot, two volumes M'Kenzie's Travels, two maps, spy-glass, gold watch, brace of silver-mounted pistols, umbrella, sword, two pairs of spurs—one of silver. **Colors:** Hat, one pair of shoes, one pair of boots, regimental coat, great-coat, bottle-green coat, scarlet waist-coat, blue cassimere and buff cassimere waistcoat, striped jean waistcoat, two pair cotton colored pantaloons, one pair bottle-green pantaloons, one pair queen-cord pantaloons, one pair buff short breeches, one pair red flannel drawers, one red flannel waistcoat, red flannel shirt, five white linen shirts, two check shirts, nine cravats, six chamois, two pair thread stockings, three pair of thread socks, hunting shirt, one pair of woolen gloves, one pair of leather gloves.

"A complete ration" at that time was estimated at fifteen cents, and was composed and charged as follows: meat five cents; flour, six cents; whisky, three cents; salt, soap, candles, and vinegar, one fourth of a cent each.

³ Captain Combs is yet (1867) living in his native state of Kentucky, vigorous in mind and body, and bearing the title of general by virtue of his commission as such in the militia of his state. He is descended, on his mother's side, from a Quaker family of Maryland. His father, a Virginian, was a "Revolutionary Officer and a Hunter of Kentucky." So says a simple inscription on his tomb-stone. Leslie was the youngest of twelve children. He joined the army in 1812, when just past eighteen years of age, and was at once distinguished for his energy and bravery. He was employed, as we have seen (page 356), on perilous duty, and never disappointed those who relied upon him. He was made a captain and wounded near Fort Meigs, and narrowly escaped death. He was paroled, and late in May, 1812, returned home. He commenced the study of law, and was not again in the field until 1836, when he raised a regiment for the southwestern frontier at the time of the revolution in Texas. He became very active in political life. His home was Lex-

Combs's Voyage down the Maumee River.

Greeting of the Flag at Fort Meigs.

Combs attacked by Indians.

son; also by young *Black Fish*, a Shawnoese warrior.¹ With the latter at the helm, the other four engaged with the rowing, and himself at the bow in charge of the rifles and ammunition of the party, Combs pushed off from Defiance, amid cheers and sad adieus (for few expected to see them again), determined to reach Fort Meigs before daylight the next morning. The voyage was full of danger. Rain was falling heavily, and the night was intensely black. They passed the Rapids in safety, but not until quite late in the morning, when heavy cannonading was heard in the direction of the fort. It was evident that the expected siege had commenced, and that the perils of the mission were increased manifold. For a moment Combs was perplexed. To return would be prudent, but would expose his courage to doubts; to remain until the next night, or proceed at once, seemed equally hazardous. A decision was soon made by the brave youth. "We must go on, boys," he said; "and if you expect the honor of taking coffee with General Harrison this morning, you must work hard for it." He went forward with many misgivings, for he knew the weakness of the garrison, and doubted its ability to hold out long. Great was his satisfaction, therefore, when, on sweeping around Turkey Point,² at the last bend in the river by which the fort was hidden from his view, he saw the stripes and stars waving over the beleaguered

BY THE MAUMEE VALLEY.

camp. Their joy was evinced by a suppressed shout. Suddenly a solitary Indian appeared in the edge of the woods, and a moment afterward a large body of them were observed in the gray shadows of the forest, running eagerly to a point below to cut off Combs and his party from the fort. The gallant captain attempted to dart by them on the swift current, when a volley of bullets from the savages severely wounded Johnson and Paxton—the former mortally. The fire was returned with effect, when the Shawnoese at the helm turned the prow toward the opposite shore.³ There the voyagers abandoned the canoe, and, with their faces toward Defiance, sought safety in flight. After vainly attempting to take Johnson and Paxton with them, Combs and *Black Fish* left them to become captives, and at the end of two days and two nights the captain reached Defiance, whereat General Clay had just arrived. The Walkers were also there, having fled more swiftly, because unencumbered. Combs and his dusky companion had suffered terribly.⁴ The former was unable to assume

ington, and he was a neighbor and warm personal friend of Henry Clay throughout the long public career of that great man. The friendship was mutual, and Clay always felt and acknowledged the power of General Combs. He was always a fluent, eloquent, and most effective speaker, and now, when he has passed the goal of "threescore and ten years," he never fails to charm any audience by his words of power, his apt illustrations, and genial humor.

¹ He was a grandson of *Black Fish*, a noted warrior who led the Indians in the attack on Boonsboro', in Kentucky, in 1773.

² In the above picture, a view of a portion of the Maumee Valley, as seen from the northwest angle of Fort Meigs, looking up the river, Turkey Point is seen near the centre, behind the head of Hollister's Island, that divides the river. A clump of trees, a little to the right of the three small trees in a row near the bank of the river, marks the place. The Maumee is seen flowing to the right, and to the left the plain, when I made the sketch in the autumn of 1860, was covered with Indian corn, some standing and some in the shocks. A canal for hydraulic purposes is seen in the foreground. It flows immediately below the ruins of Fort Meigs.

³ It was first thought that the Indians were friendly Shawnoese. So thought *Black Fish*; but when he discovered his mistake, he exclaimed, "Pottawatomi, God damn!"

⁴ Paxton was shot through the body, but recovered. During the political campaign of 1840, when General Harrison

the command of his company, but he went down the river with the re-enforcements, and took an active part in the conflict in the vicinity of Fort Meigs. There we shall meet him again presently.¹

The British had completed two batteries nearly opposite to Fort Meigs on the

SITE OF THE BRITISH BATTERIES FROM FORT MEIGS.²

morning of the 30th,³ and had mounted their ordnance. One of them bore two twenty-four-pounders, and the other three howitzers—one eight inches, and the other two five and a half inches calibre. In this labor they had lost some men by well-directed round shot from the fort, but neither these missiles nor the drenching rain drove them away. Harrison had not been idle in the mean time. His force was much inferior to that of the enemy in numbers, but was animated by the best spirit. On the morning after the British made their appearance near, he addressed his soldiers eloquently in a General Order;⁴ and when he discovered the foe busy in erecting batteries on the opposite shore that would command his works, he began the construction of a *traverse*, or wall of earth, on the most elevated ground through the middle of his camp, twelve feet in height, on a base of twenty feet, and three hundred yards in length. During its construction it was concealed by the tents. When these were suddenly removed to the rear of the traverse, the British engineer, to his great mortification, perceived that his labor had been almost in vain. Instead of an exposed camp, from which Proctor had boasted he would soon "smoke

was elected President of the United States, General Combs spoke to scores of vast assemblies in his favor. On one occasion he was in the neighborhood of Paxton's residence, who took a seat on the platform by the side of the speaker. Combs related the incident of the voyage down the Maumee and their joy at the sight of the old flag on that morning. "Here," said he, "is the man who was shot through the body. Stand up, Joe, and tell me how many bullets it would have taken to have killed you at that measure." "More than a peck!" exclaimed Paxton.

¹ I met General Combs at Sandusky City in the autumn of 1860, when he gave me an interesting account of his operations in the Maumee Valley at that time. Speaking of his return to Defiance, he said, "Black Fish made his way to his native village, while I pushed on toward Defiance. It rained incessantly. I was compelled to swim several swollen tributaries to the Maumee, and was dreadfully chafed by walking in wet clothes. My feet were lacerated by traveling in moccasins over burnt prairies, and my mouth and throat were excoriated by eating bitter hickory-buds, the only food that I tasted for forty-eight hours. For days afterward I could not eat any solid food. I was placed on a cot in a boat, and in that manner descended the river with my gallant Kentucky friends."

² The above little picture, sketched in the autumn of 1860 from the ruins of Croghan Battery (so named in honor of the gallant defender of Fort Stephenson), Fort Meigs, looking northwest, shows the scattered village of Maumee City in the distance, with the site of the British batteries in front of it. This is indicated in the picture by the distant bluff with two houses upon it, immediately beyond the two little figures at the end of the railway-bridge in the middle-ground. When I visited the spot in 1860, the ridge on which the cannon were planted, lower than the plain on which the village stands, was very prominent. Behind it was a deep hollow, in which the British artillerymen were securely posted. On the brow of the plain, just back of the British batteries, indicated by the second bluff with one house upon it, was afterward the place of encampment of Colonel Johnson. The railway-bridge, seen in the middle-ground of this picture, has a common passenger-bridge by the side of it. Between the extreme foreground and the railway embankment is the ravine mentioned in a description of Fort Meigs on page 414, and indicated in the map on page 468 by a stream of water.

³ "Can the citizens of a free country," he said, "who have taken arms to defend its rights, think of submitting to an army composed of mercenary soldiers, reluctant Canadians, goaded to the field by the bayonet, and of wretched, naked savages? Can the breast of an American soldier, when he casts his eyes to the opposite shore, the scene of his country's triumphs over the same foe, be influenced by any other feelings than the hope of glory? Is not this army composed of the same materials with that which fought and conquered under the immortal Wayne? Yes, fellow-soldiers, your general sees your countenances beam with the same fire that he witnessed on that glorious occasion; and, although it would be the height of presumption to compare himself with that hero, he boasts of being that hero's pupil." To your posts, then, fellow-citizens, and remember that the eyes of your country are upon you!"

⁴ Wayne's battle-ground in 1794, and the theatre of his victory, were in sight of the soldiers thus addressed. Harrison was Wayne's *sic-de-camp* on that occasion, and, as we have observed on page 53, was one of his most useful officers.

British and Indians cross the River.

A Gun-boat.

Fort Meigs attacked.

Colonel Christy.

out the Yankees"—in other words, speedily destroy it with shot and shell, he saw nothing but an immense shield of earth, behind which the Americans were invisible and thoroughly sheltered. Proctor accordingly modified his plans, and sent a considerable force of white men under Captain Muir, and Indians under Tecumtha, to the eastern side of the river, under cover of the gun-boats, with the evident intention of preparing for an attack on the fort in the rear. When night fell the British batteries were yet silent, and remained so; but a gun-boat, towed up the river near the fort under cover of the darkness, fired thirty shots without making any other impression than increasing the vigilance of the Americans, who reposed on their arms. Early in the morning the gun-boat went down the river barren of all honor.

Late in the morning on the 1st of May,³ notwithstanding heavy rain-clouds were driving down the Maumee Valley, and drenching every thing with fitful discharges, the British opened a severe cannonade and bombardment upon Fort Meigs, and continued the assault, with slight intermissions, for about five days,⁴ but without much injury to the fort and garrison. The fire was returned occasionally by eighteen-pounders. The supply of shot for these and the twelve-pounders was very small, there not being more than three hundred and sixty of each. They were used with judicious parsimony, for it was not known how long the siege might last. The British, on the contrary, appeared to have powder, balls, and shells in great abundance, and they poured a perfect storm of missiles—not less than five hundred—upon the

³ A survivor of the War of 1812, and one of the most active and remarkable men of the day when the late civil war

broke out, was Colonel William Christy. He was acting quarter-master at Fort Meigs, and had charge of all the stores and flags there at that time. He was only twenty-two years of age, yet he had, by his energy and patriotism, secured the love and confidence of General Harrison in a remarkable degree. When the first gun was fired upon Fort Meigs, Harrison called him to his side, and said, "Sir, go and nail a banner on every battery, where they shall wave so long as an enemy is in view." Christy obeyed, and there the flags remained during the entire siege.

Mr. Christy was born in Georgetown, Kentucky, on the 2d of December, 1791. At an early age he went with his father to reside near the Ohio, not far distant from Cincinnati. He was left an orphan at the age of fourteen years. He studied law, and entered upon the duties of that profession in 1811. When war was declared he joined the army under Harrison. That officer knew his father, and kindly gave the son of his old friend a place in his military family as aid-de-camp, and, as we have just observed, he was made acting quarter-master at Fort Meigs. He behaved gallantly there in the sortie in which Captain Silver was engaged, and in which his company suffered terribly. Christy was in subordinate command in that fight, and received the commendations of his general. He was promoted to lieutenant in the old First Regiment of United States Infantry. After the close of the Harrison campaign, which resulted in victory at the Thames, he was ordered to join his regiment, then at Sackett's Harbor. There General Brown appointed him adjutant, and he was in active service in Northern New York for some time. When the army was disbanded, Christy was retained, and was stationed for a while in New Orleans. He left the army in 1816, and commenced the career of a commission merchant in New Orleans. He married there, and soon amassed a fortune, which he lost, however, by the dishonesty of a partner. He resumed the practice of the law, and in 1826 published his "Digest of the Decisions of the Supreme Court of the State of Louisiana. Again he amassed a large fortune. He espoused the cause of Texas, and soon afterward lost his property, but gained the praise of being "the first filibuster in the United States."

His nature was impulsive, and during his residence of more than forty years in New Orleans he had several "affairs of honor," growing out of political quarrels chiefly. He was a ready and fluent speaker, and during the campaign when Harrison was candidate for the Presidency, Colonel Christy accompanied his chief in person throughout Ohio, and made more than one hundred speeches in his behalf. His kindness of heart and ungrudging hospitality ever gained him hosts of warm friends.

Wm Christy

fort all of the first day, and until eleven o'clock at night.¹ One or two of the garrison were killed, and Major Stoddard, of the First Regiment, a soldier of the Revolution, who commanded the fort when Leftwich retired, was so badly wounded by a fragment of a shell that he died ten days afterward.²

On the morning of the 2d the British opened a third battery of three twelve-pounders upon the fort from the opposite side of the river, which they had completed during the night, and all that day the cannonade was kept up briskly. Within the next twenty-four hours a fourth battery was opened.³ That night a detachment of artillerymen and engineers crossed the river, and mounted guns and mortars upon two mounds for batteries already constructed in the thickets by the party that crossed on the 30th, within two hundred and fifty yards of the rear angles of the fort. One of these, nearest the ravine already mentioned, was a mortar battery; the other, a few rods farther southward, was a three-gun battery. Expecting an operation of this kind, the Americans had constructed traverses in time to foil the enemy; and when, toward noon of the 3d, the three cannon and the howitzer opened suddenly upon the rear angles of the fort, their fire was almost harmless. A few shots from eighteen-

pounders, directed by Gratio, who was convalescing, soon silenced the gun-battery, and the pieces were hastily drawn off and placed in position near the ravine.

Shot and shell were hurled upon the fort more thickly and steadily on the 3d than at any other time, but with very little effect. This seemed to discourage the besiegers, and on the 4th the fire was materially

PLAN OF FORT MEIGS.⁴

slackened. Then Proctor sent Major Chambers with a demand for the surrender of the post. "Tell General Proctor," responded Harrison, promptly, "that if he shall take the fort it will be under circumstances that will do him more honor than a thousand surrenders." Meanwhile the cannonading from the fort was feeble, because of the scarcity of ammunition. "With plenty of it," wrote Captain Wood, "we should have blown John Bull from the Miami." The guns were admirably managed, and did good execution at every discharge. The Americans were well supplied with food and water⁵ for a long siege, and could well afford to spend time and weary the assailants by merely defensive warfare sufficient to keep the foe at bay. They exhibited their confidence and spirit by frequently mounting the ramparts, swinging their hats, and shouting defiance to their besiegers. Nevertheless, Harrison was anxious. Hull and Winchester had failed and suffered. The foe was strong, wily, and confident. So he looked hourly and anxiously up the Maumee for the hoped-for reinforcements. Since Navarro and Oliver went out, he had heard nothing from

¹ As the enemy were throwing large numbers of cannon-balls into the fort from their batteries, Harrison offered a gill of whiskey for every one delivered to the magazine-keeper, Thomas L. Hawkins. Over one thousand gills were thus earned by the soldiers.—Howe's *Historical Collections of Ohio*, page 532. An eyewitness (Reverend A. M. Lorrain) relates that one of the militia took his station on the embankment, watched every shot, and forewarned the garrison thus: "Shot," or "bomb," as the case might be; sometimes "Block-house No. 1," or "Look out, main battery," "Now for the main-house," "Good-by, if you will pass." At last a shot hit him and killed him instantly.

² Amos Stoddard was a native of Massachusetts, and was commissioned a captain of artillery in 1798. He was retained in 1802. In 1804 and '05 he was governor of the Missouri Territory. He was promoted to major in 1807. He was deputy quarter-master in 1812, but left the staff in December of that year. He died of tetanus, or lockjaw, on the 31st of May, 1813. He was the author of "Sketches of Louisiana," published in 1810.

³ These were named as follows, as indicated on the above map: a, Mortar; b, Queen's; c, Sallor's; and d, King's. This plan is from a sketch made by Joseph H. Larwell, on the 10th of July, 1812. All the dotted lines represent the traverses. a a a a indicate the block-houses; b b, the magazines; c c c c, minor batteries. The grand and mortar batteries and the well are indicated by name.

⁴ During the first three days of the siege the Americans were wholly dependent upon the rain for water. Those who were sent to fetch it were exposed to the fire of the enemy. On the fourth they had completed a well within the fort which gave them an ample supply.

General Clay moving down the Maumee.

Harrison's Plans developed.

Movements near Fort Meigs.

abroad. His suspense was ended at near midnight on the 4th, when Captain Oliver, with Major David Trimble and fifteen men who had come down the river in a boat, made their way into the fort as bearers of the glad tidings that General Clay and eleven hundred Kentuckians were only eighteen miles distant, and would probably reach the post before morning.

Captain Oliver had found Clay at Fort Winchester on the 3d. The cannonading at Fort Meigs was distinctly heard there, and Clay pressed forward as speedily as possible with eighteen large flat scows, whose sides were furnished with shields against the bullets of Indians who might infest the shores of the river. It was late in the evening when the flotilla reached the head of the Rapids, eighteen miles from the scene of conflict. The moon had gone down, and the overcast sky made the night so intensely dark that the pilot refused to proceed before daylight. It was then that Trimble and his brave fifteen volunteered to accompany Captain Oliver to the fort, to cheer the hearts of Harrison and his men by the tidings of success near. It did cheer them. Harrison immediately conceived a plan of operations for Clay, and dispatched Captain Hamilton and a subaltern in a canoe to meet the general, and say to him with delegated authority, "You must detach about eight hundred men from your brigade, and land them at a point I will show you, about a mile or a mile and a half above Camp Meigs. I will then conduct the detachment to the British batteries on the left bank of the river. The batteries must be taken, the cannon spiked, and carriages cut down, and the troops must then return to the boats and cross over to the fort. The balance of your men must land on the fort side of the river, opposite the first landing, and fight their way into the fort through the Indians. The route they must take will be pointed out by a subaltern officer now with me, who will land the canoe on the right bank of the river, to point out the landing for the boats."

This explicit order reveals much of Harrison's well-devised plan. He knew that the British force at the batteries was inconsiderable, for the main body were still near old Fort Miami, and the bulk of the Indians with Tecumtha were on the eastern side of the river. His object was to strike simultaneous and effectual blows on both banks of the stream. While Dudley was demolishing the British batteries on the left bank, and Clay was fighting the Indians on the right, he intended to make a general sally from the fort, destroy the batteries in the rear, and disperse or capture the whole British force on that side of the river.

It was almost sunrise when Clay left the head of the Rapids. He descended the river with his boats arranged in solid column, as in a line of march, each officer having position according to rank. Dudley, being the senior colonel, led the van. Hamilton met them, in this order, about five miles above the fort. Clay was in the thirteenth boat from the front. When Harrison's orders were delivered, he directed Dudley to take the twelve front boats and execute the commands of the chief concerning the British batteries, while he should press forward and perform the part assigned to himself.

Colonel Dudley executed his prescribed task most gallantly and successfully. The current was swift, and the shores were rough, but his detachment effected a landing in fair order. They ascended to the plain on which Maumee City stands unobserved by the enemy, and were there formed for marching in three parallel columns, the right led by Dudley, the left by Major Shelby, and the centre, as a reserve, by Acting Major Morrison. Captain Combs, with thirty riflemen, including seven friendly Indians, flanked in front full a hundred yards distant.¹ In this order they moved through the woods a mile and a half toward the British batteries, which were playing briskly upon Fort Meigs, when the columns were so disposed as to inclose the enemy in a

¹ At the request of General Clay, Captain Combs furnished him with minute information respecting the operations under Dudley, in a letter dated May 6, 1815. The writer has kindly furnished me with a copy of that letter, from which the main facts of this portion of the narrative have been drawn.

Dudley half wins Victory, and loses it. Sad Result of Zeal and Humanity. Americans defeated and made Prisoners.

creasant, with every prospect of capturing the whole force. Dudley had failed to inform his subalterns of his exact plans, and that remissness was a fatal mistake. Shelby's column, by his order, penetrated to a point between the batteries and the British camp below, when the right column, led by Dudley in person, raised the horrid Indian yell, rushed forward, charged upon the enemy with wild vehemence, captured the heavy guns and spiked eleven of them without losing a man. The riflemen, meanwhile, had been attacked by the Indians, and, not aware of Dudley's designs, thought it their duty to fight instead of falling back upon the main body. This was the fatal mistake. The main object of the expedition was fully accomplished, although the batteries were not destroyed. The British flag was pulled down, and as it trailed to earth loud huzzas went up from the beleaguered fort.

Harrison had watched the moment with intense interest from his chief battery, and when he saw the British flag lowered, he signaled Dudley to fall back to his boats and cross the river, according to explicit orders. Yet the victors lingered, and sharp firing was heard in the woods in the rear of the captured batteries. Harrison was indignant because of the disobedience. Lieutenant Campbell volunteered to carry a peremptory order across to Dudley to retreat, but when he arrived the victory so gloriously won was changed into a sad defeat. Humanity had caused disobedience, and terrible was the penalty. At the moment when the batteries were taken, as we have just observed, Indians in ambush attacked Combs and his riflemen. With quick and generous impulse, Dudley ordered them to be re-enforced. A greater part of the right and centre columns instantly rushed into the woods in considerable disorder, accompanied by their colonel. Thirty days in camp had given them very little discipline. It was of little account at the outset, for, disorderly as they were, they soon put the Indians to flight, and relieved Combs and his little party. That work accomplished, discipline should have ruled. It did not. Impelled by the enthusiasm and confidence which is born of victory, and forgetful of all the maxims of prudence, they pursued the flying savages almost to the British camp. Shelby's column still held possession of the batteries when this pursuit commenced, but the British artillerymen, largely re-enforced, and led by the gallant Captain Dixon, soon returned and recaptured them, taking some of the Kentuckians prisoners, and driving the others toward their boats.¹ Meanwhile the Indians had been re-enforced, and had turned fiercely upon Dudley. His men were in utter confusion, and all attempts at command were futile. Shelby had rallied the remnant of his column and marched to the aid of Dudley, but he only participated in the confusion and flight. The Kentuckians were scattered in every direction through the woods back of where Maumee City now stands, making but feeble resistance, and exposed to the deadly fire of the skulking savages. The flight became a rout, precipitate and disorderly, and a greater part of Dudley's command were killed or captured, after a contest of about three hours. Dudley, who was a heavy, fleshy man, was overtaken, tomahawked, and scalped, and his captive companions, including Captain Combs and his spies, were marched to old Fort Miami as prisoners of war. Of the eight hundred² who followed him from the boats, only one hundred and seventy escaped to Fort Meigs.³

¹ When Proctor was apprised of the approach of the detachment under Dudley, he supposed it to be the advance of the main American army, and he immediately recalled a large portion of his force on the eastern side of the river. About seven hundred Indians were among them, led by Tecumtha. They did not arrive in time to participate in the battle, but they allowed Proctor to send large re-enforcements from his camp.

² The exact number of officers and private soldiers were, of Dudley's regiment, 761; Boswell's, 60, and regulars, 45—total, 866.—Manuscript Reports among the Clay papers.

³ General Harrison censured Colonel Dudley's men in General Orders on the 9th of May, signed by John O'Fallon, his acting assistant adjutant general. "It rarely occurs," he said, "that a general has to complain of the excessive ardor of his men, yet such appears always to be the case whenever the Kentucky militia are engaged. Indeed, it is the source of all their misfortunes." After speaking of the rash act in pursuing the enemy, he remarked, "Such temerity, although not so disgraceful, is scarcely less fatal than cowardice." In a letter to Governor Shelby on the 18th, General Harrison censured Colonel Dudley. "Had he retreated," he said, "after taking the batteries, or had he made a disposition to retreat in case of defeat, all would have been well. He could have crossed the river, and even if he had

Clay's Encounter with the Indians.

A Sallying-party and their Perils.

A gallant Messenger.

While these tragic scenes were transpiring on the left bank of the river, others equally stirring were in progression in the vicinity of Fort Meigs. General Clay had attempted to land the six remaining boats under his command nearly opposite the place of Dudley's debarkation, but the swiftness of the current, swollen by the heavy rains, drove five of them ashore. The other, containing General Clay, with Captain Peter Dudley and fifty men, kept the stream, separated from the rest, and finally landed on the eastern bank of the river opposite to Hollister's Island. There they were assailed by musketry from a cloud of Indians on the left flank of the fort, and by round shot from the batteries opposite. Notwithstanding the great peril, Clay and his party returned the Indians' attack with spirit, and reached the fort without the loss of a man.

Colonel Boswell's command in the other boats, consisting of a part of the battalions of Kentucky militia under Major William Johnson, and two other companies of Kentucky levies, landed near Turkey Point. He was immediately ordered by Captain Hamilton, General Harrison's representative, to fight his way into the fort. The same Indians who assailed Clay disputed his passage. Boswell arranged his men in open order, marched boldly over the low plain,¹ engaged the savages on the slopes and brow of the high plateau most gallantly, and reached the fort without suffering very serious loss. There he was greeted by thanks and shouts of applause, and met by a sallying-party² coming out to join him in an immediate attack upon that portion of the enemy with whom he had just been engaged, pursuant to Harrison's original plan of assailing the foe on both sides of the river at the same time. There was but a moment's delay. Boswell on the right, Major Alexander and his volunteers on the left, and Major Johnson in the centre, was the order in which the party advanced against their dusky foe. They fell upon the savages furiously, drove them half a mile into the woods at the point of the bayonet, and utterly routed them. In their zeal the victors were pursuing with a recklessness that, if continued, would have resulted in disaster like that which overwhelmed Dudley. Fortunately, General Harrison, always on the alert, had taken a stand, with a spy-glass, on one of his batteries, from which he could survey the whole field of operations. He discovered a body of British and Indians gliding swiftly along the borders of the woods to cut off the retreat of the pursuers, when he dispatched a volunteer aid (John T. Johnson, Esq.) to recall his troops. It was a perilous undertaking. The gallant aid-de-camp had a horse shot under him, but he succeeded in communicating the general's orders in time to allow the imperiled detachment to return without much loss.

M. W. E. Boswell

General Harrison now ordered a sortie from the fort against the enemy's works on the right, near the deep ravine. For this purpose three hundred and fifty men were

lost one or two hundred men, he would have brought over a re-enforcement of six hundred, which would have enabled me to take the whole British force on this side of the river." Harrison did not then know that Dudley had sacrificed the greater portion of his little army and his own life in the humane attempt to save Combs and his party from destruction. Combs afterward called General Harrison's attention to the injustice of his censure. It was too late; it had passed into history, and has been perpetuated by the pens of successive chroniclers.

William Dudley was a citizen of Fayette County, Kentucky, at that time, but was a native of Spottsylvania County, Virginia. He was a magistrate in Kentucky for many years, and was highly esteemed. He was overtaken, as we have observed in the text, by the Indians, and shot in the body and thigh. When last seen he was sitting on a stump in a swamp, defending himself against a swarm of savages. He was finally killed, and his body was dreadfully mutilated. I was informed by Abraham Miley, of Batavia, Ohio, who was in Fort Meigs at the time of the siege, that when the body of Dudley was found a large piece had been cut from the fleshy part of his thigh by the savages, which they doubtless ate.

¹ See picture on page 481, and note 2 on the same page.

² Composed of Pennsylvania and Virginia Volunteers (the former, except a small company, known as the *Pittsburg Blues*, and the latter the *Petersburg Volunteers*), a company of the Nineteenth United States Regiment under Captain Waring, and Captain Dudley's company, who had followed Clay into the fort. The *Pittsburg Blues* were commanded by Captain James Butler, son of the General Butler who fell at St. Clair's defeat in 1791. See pages 47 and 48. The Virginians were under Captain M'Crea.

Sortie from Fort Meigs.

Proctor disheartened.

He is deserted by his Fellow-savages.

detailed, and placed under the command of Colonel John Miller,¹ of the regular service. They consisted of the companies of United States troops under Captains Langham, Croghan, Bradford, Nearing,² Elliott,³ and Gwynne,⁴ and Lieutenant Campbell; Major Alexander's⁵ volunteers, and a company of Kentucky militia under Captain Sebree.⁶ Miller was accompanied by Major George Todd, of the Nineteenth Infantry, and led his command with the greatest bravery. They charged with the fiercest impetuosity upon the motley foe, eight hundred and fifty strong, drove them from their batteries at the point of the bayonet, spiked their guns, and scattered them in confusion in the woods beyond the ravine toward the site of the present village of Perrysburg. The enemy fought desperately, and Miller lost several of his brave men. At one moment the utter destruction of Sebree's company seemed inevitable. They were surrounded by four times their number of Indians, when Gwynne, of the Nineteenth, perceiving their peril, rushed to their rescue with a part of Elliott's company. They were saved. The object of the sortie was accomplished, and the victors returned to the fort with forty-three prisoners, followed by the enemy, who had rallied in considerable force.⁷

After these sorties on the 5th the siege of Fort Meigs was virtually abandoned by

SIEGE OF FORT MEIGS.

Proctor. The result of that day's fighting, combined with the ill success of all preceding efforts to reduce the fort, were so disheartening that his Indian allies deserted him, and the Canadian militia turned their faces homeward.⁸ The splendid Territory of Michigan had been promised to the Prophet as a reward for his services in the capture of Fort Meigs, and Tecumtha was to have the person of General Harrison, whom he had hated intensely since the battle of Tippecanoe in 1811, as his peculiar trophy. These prom-

¹ Colonel of the Nineteenth Regiment of Regulars. He was a native of Ohio, and was commissioned colonel on the 6th of July, 1812. He was transferred to the Seventeenth Infantry in May, 1814. In 1818 he left the army. He was governor of Missouri from 1828 to 1832, and a representative in Congress from 1837 to 1843. He died at Florissant, Missouri, on the 18th of March, 1846.

² Abel Nearing was from Connecticut. He survived the siege, but died on the 13th of September following from the effects of fever.

³ Captain Elliott was a nephew of the notorious Colonel Elliott in the British service, and then with Proctor, and of Captain Jesse Elliott, of the United States Navy, on Lake Erie at that time.

⁴ David Gwynne, as first lieutenant and regimental paymaster, had accompanied Colonel J. B. Campbell against the Mississinawa Towns (see page 346). He was made captain in March, 1812. In August he was made brigade major to General M'Arthur, and in 1814 was raised to major of riflemen. He left the army in 1816, and died near St. Louis in 1865.

⁵ Major Alexander was a brave officer. He commanded a rifle company, Pennsylvania Volunteers, in Campbell's expedition against the Mississinawa towns in December, 1812.

⁶ Uriel Sebree was a captain in Scott's Kentucky Volunteers in August, 1812, and was with Major Madison at Frenchtown, under Winchester. He was a gallant officer.

⁷ The Americans lost in this sortie 28 killed and 25 wounded.—MS. Report.

⁸ "I had not the option of retaining my position on the Miami. Half of the militia had left us. . . . Before the ordnance could be withdrawn from the batteries I was left with Tecumtha and less than twenty chiefs and warriors—a circumstance which strongly proves that, under present circumstances at least, our Indian force is not a disposable one, or permanent, though occasionally a most powerful aid."—Proctor's Dispatch to Governor Prevost.

In his dispatch to Sir George Prevost from Sandwich on the 14th of May Proctor fairly acknowledged himself defeated, and admitting that he had no data for judging how many the Americans had lost in killed, "conceived" the number to have been between a thousand and twelve hundred: whereupon Sir George deceived the Canadians and falsified history by asserting, in a General Order, he had "great satisfaction in announcing to the troops the brilliant result of an action which took place on the banks of the Miami River," and "which terminated in the complete defeat of the enemy, and capture, dispersion, or destruction of thirteen hundred men!" By a comparison of the most reliable accounts

Flight of the British and Indians.

Massacre of Prisoners at Fort Miami.

Tecumtha's Rebuke of Proctor.

ises were all unfulfilled. The Indians left in disgust, and probably nothing but Tecumtha's commission and pay as brigadier in the British army secured his farther services in the cause.

Proctor's eyes saw his savage allies leaving him and his Canadian militia discontented, and his ears heard the startling intelligence that Fort George, on the Niagara frontier, was in the hands of the Americans, and that re-enforcements were coming from Ohio for the little army at Fort Meigs.¹ He saw nothing before him, if he remained, but the capture or dispersion of his troops, and he resolved to flee. With the design of concealing this fact that he might move off with safety, he again sent Captain Chambers to demand the surrender of the fort. Harrison regarded the absurd message as an intended insult, and requested that it should not be repeated. It was the last friendly communication between the belligerents.²

Proctor attempted to bear away from his batteries his unharmed cannon, but a few shots from Fort Meigs made him withdraw speedily. A parting response in kind from one of his gun-boats, in return, slew several, among them Lieutenant Robert Walker, of the Pittsburg Blues, whose grave may yet be identified within the remains of the fort by a plain, rough stone, with a simple inscription, that stands at its head.³ This was the last life lost in the siege. In the same vessels that brought him to the Maumee, Proctor of the Engineers, and others.⁴ On the surrender of Dudley's command the prisoners were marched down to Fort Miami with an escort, and there, under the eye of Proctor and his officers, the Indians, who had already plundered them and murdered many on the way,⁵ were allowed to shoot, tomahawk, and scalp more than twenty of them. This butchery was stopped by Tecumtha, who proved himself to be more humane than his British ally and brother officer, Henry Proctor.⁷

REMAINS OF WALKER'S MONUMENT.

on both sides, the loss of the Americans during the siege may fairly, it seems, be put down at about 80 killed, 270 wounded, and 470 prisoners. The British loss was 15 killed, 47 wounded, and 44 made prisoners.

¹ We have observed (page 478) that Peter Navarre was sent from Fort Meigs with a letter to the Governor of Ohio. That energetic man immediately sent messengers in all directions for volunteers, and he was very soon on his way to the relief of the beleaguered garrison. His march was arrested by the flight of the besiegers.

² Harrison's dispatches to the Secretary of War, May 9, 1813; Proctor's dispatch to Sir George Prevost, May 11, 1813; M'Alce's *History of the Late War*; Perkins's and Thomson's *Sketches, etc.*; Captain Wood's Narrative, cited by M'Alce; Major Richardson's Narrative; Auchinleck's *History of the War of 1812*. General Clay's Letter to General Harrison, May 13, 1812; Captain Combs's Letter to General Clay, May 5, 1813; General Harrison to Governor Shelby, May 18, 1813; Armstrong's *Notices of the War of 1812*; Onderdonk's MS. *Life of Tecumseh*; Speech of Eleutherus Cook, Esq., of Sandusky City, at Fort Meigs, June 11, 1840; Narratives of Rev. A. M. Lorraine and Joseph R. Underwood, eyewitnesses, quoted by Howe; Hosmer's *Early History of the Maumee Valley*; oral statements to the Author by Peter Navarre.

³ The little monument, which contained only the words, Lieutenant Walker, May 9, 1813, had been greatly mutilated, when I visited the spot in the autumn of 1860, by relic-seekers, those modern iconoclasts whose business, when thus pursued, is simply infamous. The remains of the stone, as delineated in the picture, was only about five inches above the ground. It is of limestone, and was wrought by a stone-cutter in the garrison not long after his burial. A few rods east of it is the grave of Lieutenant M'ulloch, who was killed during the summer by Indians while out hunting.

⁴ See the close of Chapter XVII.

⁵ In Howe's *Historical Collections of Ohio*, page 533, may be found a very interesting narrative of the horrid events at Fort Miami, by Joseph R. Underwood, who was present. It is more circumstantial than the letter of Captain Combs to General Clay, mentioned below.

⁶ Major Richardson, of the British army, who wrote an account of events under Brock and Proctor in the West, says that the Indians who made the attack, in spite of the efforts of the guard, were some who had taken no part in the battle. "An old and excellent soldier," he says, "of the name of Russell, of the Forty-first, was shot through the heart while endeavoring to wrest a victim from the grasp of his assailant."

⁷ Major Richardson, just quoted, says, in speaking of the massacre: "More than forty of these unhappy men had fallen beneath the steel of the infuriated party, when Tecumtha, apprised of what was doing, rode up at full speed, and, raising his tomahawk, threatened to destroy the first man who resisted his injunction to desist.

General Leslie Combs, then, as we have seen, a captain of spies, and one of the prisoners, in a letter to General Clay, already alluded to, gave a very particular account of the affair. A copy of that letter, furnished by General Combs in 1861, is before me. He says that the prisoners, on their march toward Fort Meigs, met a body of Indians, who, in the

I visited the theatre of events just described, on the 24th of September, 1860, and had the singular good fortune to be accompanied by L. H. Hosmer, Esq., of Toledo, author of *The Early History of the Maumee Valley*, and the venerable Peter Navarre (a Canadian Frenchman), General Harrison's trusty scout, already mentioned.¹ Navarre resided about twenty miles from Toledo, and had come into the city on business two or three days before. Mr. Hosmer, aware of my intended visit at that time, had kindly detained him until my arrival. Only two days before, I had enjoyed a long conversation at the "West House," in Sandusky City, with General Leslie Combs, who had just visited Fort Meigs for the first time since he was there as a soldier and prisoner in 1813. That visit had recalled the incidents of the campaign most vividly to his mind, and he related them to me with his usual enthusiasm and perspicuity. With the soldier's description in my memory, and the historian and scout at my side, I visited Fort Meigs and its historical surroundings under the most favorable circumstances.

The night of my arrival at Toledo had been a tempestuous one—wind, lightning, rain, and a sprinkle of hail. The following morning was clear and cool, with a blustering wind from the southwest. We left the city for our ride up the Maumee Valley at nine o'clock, in a light carriage and a strong team of horses. Mr. Hosmer volunteered to be coachman. Our road lay on the right side of the river; and when nearly seven miles from Toledo we came to the site of Proctor's encampment, on a level plateau a short distance from the Maumee, upon land owned, when we visited

PETER NAVARRE.

presence and without the interference of General Proctor, Colonel Elliott, and other officers, as well as the British guard, commenced robbing the captives of clothes, money, watches, etc. Combs showed his wound as a plea for consideration, but without effect. He too was stripped. As they passed on, the prisoners saw ten or twelve dead men, naked and scalped, and near them two lines of Indians were formed from the entrance of a triangular ditch in front to the old gate of the fort, a distance of forty or fifty feet. Between these the prisoners were compelled to run the gauntlet, and in that race many were killed or maimed with pistols, war-clubs, scalping-knives, and tomahawks. The number of prisoners thus slaughtered, without Proctor's attempt at interference, was estimated at a number nearly, if not quite equal to those slain in battle.

When the surviving prisoners were all lulled, the savages raised the war-whoop and commenced loading their guns. The massacre already accomplished, and this preparation for a renewal of it, were made known to Tecumtha, who hastened to the fort with all the rapidity of his horse's speed, and, more humane than his white ally, instantly interposed and saved the lives of the remainder. Elliott then rode in, waved his sword, and the savages retired.

Drake, in his *Life of Tecumtha*, says that the warrior authoritatively demanded, "Where is General Proctor?" Being him near, he sternly inquired of him why he had not put a stop to the massacre. "Your Indians can not be commanded," replied Proctor, who trembled with fear in the presence of the enraged chief. "Begone!" retorted Tecumtha, in perfect disdain. "You are unfit to command; go and put on petticoats!"

The half-naked prisoners were taken in a cold rain-storm that night, in open boats, to the mouth of Swan Creek, and thence to Malden. After a brief confinement there they were sent across the river, and at the mouth of the Barou were left to find their way to the nearest settlement in Ohio, fifty miles distant.

¹ Peter Navarre was a grandson of Robert Navarre, a French officer who came to America in 1745. He settled at Detroit, and there Peter was born about the year 1796, and, with his father and family, settled at the mouth of the Maumee in 1807. At that time *Kan-tuck-ee-son*, the widow of Pontiac, was living there with her son, *Ottawas*. She was very old, and was held in great reverence. Navarre was at the Prophet's Town, on the Wabash, with a French trader, when Harrison arrived there just before the battle of Tipperanoe, but escaped. He joined Hull's army at the Itapida, was with him at Detroit, and, after the surrender, returned to the Raisin and enlisted in Colonel Anderson's regiment. He was there when Brock was ordered to surrender (see page 291), but was afterward compelled to accompany the British as a guide up the Maumee, where, as we have seen, he deserted and fled to Winchester's camp. He was an eyewitness of the massacre at the River Raisin. After that, Navarre and his brothers were employed as scouts, and performed excellent service. He is a stout-built man, of dark complexion, and is now [1867] about eighty years of age. He speaks English (imperfectly, as the Canadian French usually do). The above portrait is from a daguerreotype taken in Toledo when he was about seventy years of age, and kindly presented to me by Mr. Hosmer.

Remains of Fort Miami.

Maumee City and its historical Elm-tree.

Prosque Isle Hill.

it, by Henry W. Horton. Across a small ravine, a few rods farther southward, were the remains of old Fort Miami, famous, as we have seen, in Wayne's time, as one of the outposts of the British, impudently erected in the Indian country within the acknowledged territory of the United States.¹ It was upon the land of Benjamin Starbird, whose dwelling was just beyond the southern side of the fort. It was a regular work, and covered about two acres of land. The embankments were from fifteen to twenty feet in height. They were covered with heavy sward, and fine honey-locust and hickory trees were growing upon them. These were in full leaf, and the grass was very green,

RUINS OF FORT MIAMI.

when we were there. From the northwest angle of the fort I made the accompanying sketch, which includes the general appearance of the mounds. On the right is seen a barn, which stands within the triangular outwork, at the sally-port mentioned by Captain Combs in his narrative, substantially given in Note 7, page 489, where he was compelled to run the gauntlet for his life; and on the left a glimpse of the Maumee. All about the old fort is now quiet. For more than fifty years peace has smiled upon the Maumee Valley; and Proctor and Tecumtha, Elliott and The Prophet, and the other savages of the war, white and red, are almost forgotten, except by those families who suffered from their cruelty.

From Fort Miami we rode up to Maumee City, opposite Fort Meigs, a pleasant little village of about two thousand inhabitants, situated at the head of river navigation, eight miles from Toledo. It is the capital of Lucas County, Ohio, and was laid out in 1817 by Major William Oliver and others, within a reservation of twelve miles square. The bank of the river, curving gracefully inward here, is almost one hundred feet in height. Nearly opposite lies the little village of Perrysburg, and between them is a fertile, cultivated island of two hundred acres, with smaller islands around it. Directly in front are seen the mounds of Fort Meigs and a forest back of them; and up the Maumee are the considerable islands known respectively as Hollister's and Buttonwood, or Peninsula. The latter view is delineated in the sketch on the next page, taken from the main road along the brow of the river bank in front of the village. In it is seen the magnificent elm-tree that stood near the old "Jefferson Tavern;" and in the middle, in the distance, over Hollister's Island, is seen "Turkey Point, memorable in connection with the adventures of Combs and the landing of Boswell. That elm is famous. We have observed that, at the beginning of the siege, the water used by the garrison was taken from the river at great risk. From the thick foliage of this elm several bullets from rifles in the hands of Indians went on death-errands across the river to the water-carriers. These were returned by Kentucky riflemen, and tradition says that not less than six savages were brought to the ground out of that tree by those sharp-shooters.

From Maumee City we rode three miles up to Prosque Isle Hill² (the scene of Wayne's operations), wandered over the battle-ground of The Fallen Timber,³ and

¹ See page 54.

² See page 55.

³ See Map on page 55.

sketched Turkey-Foot's Rock, given on page 55. We then returned to the bridges (common carriage and railway bridge), and crossed to Fort Meigs, the form of which we found distinctly marked by the mounds of earth. That of the Grand Traverse¹ was from four to six feet in height, and all were covered with green sward. The fort originally included about ten acres, but was somewhat reduced in size before the second siege, which we shall notice presently. The places of the block-houses were visible, and the situation of the well, near the most easterly angle of the fort, was marked by a shallow pit, and a log in an upright position, seven or eight feet in height.²

BY THE MAUMEE, FROM MAUMEE CITY.

On leaving the fort we strolled along the ravine on its right and rear to the site of the British battery captured by Colonel Miller. There yet stood the primeval forest-trees—the very woods in which Tecumtha and his Indians were concealed. A little brook was flowing peacefully through the shallow glen, and the high wind that

¹ See Plan of Fort Meigs on page 484.

WELL AT FORT MEIGS.

² That log has a history. In 1840, General Harrison, then living at North Bend, on the Ohio, was nominated for President of the United States. It was said that the hero lived in a log cabin, was very hospitable, and was ever ready to give the traveler a draught of hard cider. Politicians, who are always anxious to find something to charm the popular mind, took the hint, and when the partisans of the general, during the political canvass that ensued, held large meetings, they erected a log cabin, and had a barrel of cider for the refreshment of all comers. In a short time there were log cabins in every city and village in the land. The partisans of the general made a capital "hit," and he was elected by an overwhelming majority. During that canvass a mass meeting of his partisans in Northern Ohio was appointed to be held at Fort Meigs, and, on the day previous to the time appointed for it, logs were taken there for the purpose of building a cabin. On that night some political opponents in the neighborhood spoiled the logs by sawing them in two. The cabin-building was abandoned. One of the logs was placed in an upright position in the nearly-filled old well, a large hole was bored in the end, a small pole was inserted, and upon it was raised a banner before the eyes of the assembled multitude,* having on it a rude picture of a man sawing a log, and the words "LOCO FOCO ZEAL." In those days the Dem-

ocratic party were called *Loco Focos*, the origin of which name was as follows: A faction of the Democratic party met to organize in the city of New York, when some opponents suddenly turned off the gas. This trick had been played before, and they were prepared. In an instant loco foco matches were produced from their pockets, and the gas-lamp relighted. From that time they were called the *Loco Foco Party*, and it became the general name, in derision, of the whole Democratic party.

* This meeting was held on the 11th day of June. It was estimated that forty thousand persons were present. The orator of the day was Eleutheros Cooke, Esq., of Sandusky City. The Reverend Mr. Badeau, the clergyman who officiated, was the chaplain of Harrison's army, and in the fort at the siege.

Visit to Fort Meigs and its Vicinity.

Journey back to Toledo.

Adieu to the Guide and Historian.

made the great trees rock was scarcely felt in the quiet nook. There we three—historian, scout, and traveler—had a “picnic” on food brought from Toledo, and clear water from the brook, and at one o'clock we departed for the city, passing down the right bank of the Maumee. Just after leaving the fort we rode through Perrysburg, a pleasant village about the size of Maumee City, and the capital of Wood County, Ohio. It was laid out in 1816, and named in honor of the gallant victor on Lake Erie three years before.

When we arrived at the ferry station opposite Toledo, the boat had ceased running because of low water. The wind had been blowing stiffly toward the lake all day, and expelled so much water from the river that the boat grounded in attempting to cross, so we left our team to be sent for, were borne over in a skiff at the moderate price of three cents apiece, and were at the “Oliver House” in time for a late dinner, and a stroll about the really fine little city of Toledo¹ before sunset. At that hour I parted company with Mr. Navarre, with heartfelt thanks for his services, for he had been an authentic and intelligent guide to every place of interest at and around Fort Meigs. I spent a portion of the evening with General John E. Hunt (a brother-in-law of General Cass), who was born in Fort Wayne in 1798. His father was an officer under General Wayne at the capture of Stony Point, on the Hudson, in 1779, and composed one of the “forlorn hope” on that occasion. Although General Hunt was only a boy at the time, he was attached to General Hull’s military family during the entire campaign which ended so disastrously at Detroit at midsummer.

At ten o'clock in the evening I bade good-by to kind Mr. Hosmer, and went up the Maumee Valley by railway to Defiance, where I landed at midnight, as already mentioned,² in a chilling fog.

¹ Toledo is on the left bank of the Maumee River, near its entrance into Maumee Bay, at the lake terminus of the Wabash and Erie Canal. It covers the site of Fort Industry, a stockade erected there about the year 1800, near what is now Summit Street. It stretches along the river for nearly a mile and a half, and the business was originally concentrated at two points, which were two distinct settlements, known respectively as Port Lawrence and Vistula. Toledo was incorporated as a city in 1836, and has now (1867) almost twenty thousand inhabitants. Little more than thirty years ago Ohio and Michigan disputed firmly for the possession of Toledo—a prize worth contending for, for it is a port of great importance. They armed, and an inter-state war seemed inevitable for a while. It was finally settled by Congress, and Toledo is within the boundaries of Ohio. For a full account of this “war,” see Howe’s *Historical Collections of Ohio*, and Major Stickney’s narrative in Hosmer’s *Early History of the Maumee Valley*.

² See page 332.

CHAPTER XXIV.

"Sound, oh sound Columbia's shell!
High the thundering paean raise!
Let the echoing bugle's swell,
Loudly answering, sound his praise!
'Tis Sandusky's warlike boy,
Crowned with Victory's trophies, comes!
High arise, ye shouts of joy,
Sound the loud triumphant sound,
And beat the drums."
C. L. S. JONES.

So soon as General Harrison was certain that Proctor had abandoned the attempt to gain possession of the Maumee Valley and had returned to Malden, he placed the command of the troops at Fort Meigs in charge of the competent General Clay, and started for Lower Sandusky and the interior, to make provision for the defense of the Erie frontier against the exasperated foe. He left the fort under an escort of cavalry commanded by Major Ball, whose horses had been sheltered by the traverses during the siege. He arrived at Lower Sandusky on the 12th of May, where he met Governor Meigs with a large body of Ohio volunteers pressing forward to his relief. Believing that their services would not be needed immediately, he thanked them cordially for their promptness and zeal, and directed them to be disbanded. He then hastened toward Cleveland, and ordered the country along the shores of Lake Erie, from the Maumee to the Cuyahoga, to be thoroughly reconnoitred. Having thus provided for the immediate safety of the frontier settlements, he took up his quarters again at Franklinton, and inaugurated measures for meeting the future exigencies of the service in that region by the establishment of military posts not far from the lake, one of the most important of which was at Lower Sandusky. The general was delighted with the evidences of spirit, courage, and patriotism that appeared on every side. The Ohio settlements were alive with enthusiasm. The advance of Proctor had spread general alarm throughout the state, and hundreds, discerning the peril that menaced their homes, had hastened to the field at the call of the patriotic Governor Meigs. These revelations of strength and will assured Harrison that when he should call for aid, the sons of Ohio would immediately appear in power.

While these events were occurring in the extreme Northwest, the naval preparations were going on vigorously at Presque Isle (Erie), and another and efficient arm of the service had been created, or rather materially strengthened. Richard M. Johnson, a representative of Kentucky in Congress, who had been with Harrison the previous autumn, had proposed to the Secretary of War the raising of a regiment of mounted men in his state, to traverse the Indian country from Fort Wayne along the upper end of Lake Michigan, round by the Illinois River, and back to the Ohio near

Louisville. The secretary approved the plan, and early in January* laid it before Harrison. The general perceived its utter impracticability in winter. Campbell's expedition to the Mississiniwa Towns¹ had taught him that. "Such an expedition in the summer and fall," he said, "would be highly advantageous, because the Indians are then at their towns, and their corn can be destroyed. An attack upon

¹ See page 347.

a particular town in the winter, when the inhabitants are at it, as we know they are at Mississiniwa, and which is so near as to enable the detachment to reach it without killing their horses, is not only practicable, but, if the snow is on the ground, is perhaps the most favorable. But the expedition is impracticable to the extent proposed."¹

The projected incursion was abandoned, but Johnson was authorized^a to raise a full regiment of mounted men in Kentucky, to serve under General Harrison. As soon as Congress adjourned, he hastened homeward and entered zealously upon the business of recruiting. He published his authority with a stirring address.^b The regiment was soon raised; and toward the close of May, Johnson was at the head of several companies, on their way to the appointed general rendezvous at Newport, opposite Cincinnati, when a note from one of General Harrison's aids was handed to him. It had already been read to the commanders of the advanced companies, and produced the greatest dissatisfaction among the troops. After thanking all patriotic citizens who had taken up arms in defense of the country in general terms, the note assured them that as the enemy had "fled with precipitancy from Camp Meigs," there was no "present necessity for their longer continuance in the field." Disappointment, chagrin, anger, and depression took the place of patriotic zeal, for a moment; but Johnson soon allayed these feelings. He did not choose to regard the note as an order for disbanding *his* troops, and he pressed forward to Newport. There he met General Harrison, when arrangements were made for the regiment to enter the United States service, to traverse a portion of the Indian country according to Johnson's original plan, and to rendezvous at Fort Winchester on the 18th of June. It was believed that the fleet on Lake Erie, designed to co-operate with the army, would be ready at that time for a movement against Malden and Detroit. The regiment arrived at Dayton on the 28th of May, and there the final organization was completed.² Under the brave Johnson that regiment performed important service.³

Proctor appears to have been disheartened, for the moment, by his failure before Fort Meigs, and on his return to Malden he disbanded the Canadian militia, and cantoned the Indians at different places in the neighborhood. Some of them were employed as scouts, others hunted, but the most of them lived upon rations furnished by the British commissariat. Meanwhile British emissaries, white and red, were busy among the tribes of the Northwest, stirring them up to make war on the Americans. A Scotchman and Indian trader, named Dickson, was one of the most efficient of these agents. He was sent, before Proctor moved for the invasion of the Maumee Valley,

¹ General Harrison's Letter to the War Department, January 4, 1813.

² Richard M. Johnson was appointed Colonel; James Johnson, Lieutenant Colonel; Duval Payne and David Thompson, Majors; R. B. M'Affee (the author of a *History of the War in the West*, already quoted frequently), Richard Matson, Jacob Elliston, Benjamin Warfield, John Payne, Elijah Craig, Jacob Stucker, James Davidson, S. R. Combs, W. M. Price, and James Coleman, Captains; Jeremiah Kertly, Adjutant; B. S. Chambers, Quarter-master; Samuel Theobalds, Judge Advocate; L. Dickinson, Sergeant-major; James Suggett, Captain and Major of the Spies; L. Sandford, Quarter-master general; Doctors Ewing, Coburn, and Richardson, Surgeons.

³ Richard Mentor Johnson was born at Bryant's Station, five miles northeast of Lexington, Kentucky, on the 17th of October, 1781. At the age of fifteen years he acquired the rudiments of the Latin language, and then entered Transylvania University as a student. His mental and physical energies were remarkable. He chose the law for a profession, and he soon took a conspicuous place in that avocation. During the excitement in the Southwest at the beginning of the present century, when hostilities between the Spaniards at New Orleans and the settlers of the Mississippi Valley seemed imminent, young Johnson took an active part, and volunteered, with others, to make an armed descent on New Orleans. Before he was twenty-two years of age he was elected to a seat in the Kentucky Legislature, where he served two years. He was elected to Congress in 1807, and took his seat when he was just twenty-five years of age. He took a prominent position from the beginning. He held that seat by continued re-election until 1819. In the debates in Congress and movements in the field he was very active during the Second War for Independence. These will find proper notice in the text.

When, in 1819, Colonel Johnson retired from Congress, he was immediately elected to a seat in the Kentucky Legislature. He was chosen a representative of his state in the Senate of the United States, where he served his country faithfully

Dickson and his Savages.

Tecumtha restive in Inaction.

Fort Meigs to be again attacked.

to visit all the tribes for that purpose on the Illinois and Mississippi Rivers, from Prairie du Chien to Green Bay, making desolated Chicago the grand rendezvous for his savage recruits. There he had collected more than one thousand of them early in June.³ He marched them across Michigan to Detroit, and barely missed falling in with Colonel Johnson and his mounted men at White Pigeon's Town on the way.¹ His influence had been such that the Indians were incited to many acts of violence in the Territories of Illinois and Missouri. They were even so bold as to invest Fort Madison, and at one time it was apprehended that the powerful Osage nation would rise in open war against the Western frontier. But that calamity was arrested by prompt measures in Illinois and Missouri.

Tecumtha had not ceased, since their return to Malden, to urge Proctor to renew the attempt to take Fort Meigs. Proctor was reluctant; but, toward the close of June, he consented, and an expedition was organized for the purpose. At about that time, a Frenchman, taken prisoner on the field of Dudley's defeat, and kept at Malden ever since, escaped. As the enemy suspected, he fled to Fort Meigs, and informed General Clay of the preparations to attack him. Clay immediately communicated the fact to Harrison at Franklinton, and Governor Meigs at Chillicothe. It was rumored that the expected invading force was composed of nearly four thousand Indians and some regulars from the Niagara frontier. The vigilant Harrison was quickly in the saddle. He did not believe Fort Meigs to be the object of attack, but the weaker posts of Lower Sandusky, Cleveland, or Erie. He ordered the Twenty-fourth Regiment of United States Infantry, under Colonel Anderson, then at Upper Sandusky, to proceed immediately to Lower Sandusky. Major Croghan, with a part of the Seventeenth, was ordered to the same post, and also Colonel Ball with his squadron of cavalry.² Harrison followed, and on the evening of the 26th he over-

ten years. Then [1829] he again took a seat in the Lower House, and held that position until 1837, when, having been elected Vice-president of the United States, he took his place as President of the Senate. At the end of his official term he retired from public life, and passed the remainder of his days on his farm in Scott County, Kentucky, excepting a brief period, when he was again in the Legislature of that state. While engaged in that service at Frankfort, he was prostrated by paralysis, and expired on the 16th of November, 1850. In the cemetery near Frankfort, Kentucky, is a splendid monument erected to the memory of soldiers of the Commonwealth who had fallen in battle. Within its inclosure is a beautiful monument, made of slightly clouded Italian marble, to the memory of Colonel Johnson, bearing the following inscriptions: on one side of the pedestal, "RICHARD MEXTON JOHNSON, born at Bryant's Station, Kentucky, on the 17th day of October, 1781; died in Frankfort, Kentucky, on the 16th of

JOHNSON'S MONUMENT.

November, 1850." On the opposite side: "To the memory of Colonel Richard M. Johnson, a faithful public servant for nearly half a century, as a member of the Kentucky Legislature, and Representative and Senator in Congress; author of the Sunday Mail Report, and of the laws for abolishing imprisonment for debt in Kentucky and in the United States. Distinguished by his valor as colonel of a Kentucky regiment at the battle of the Thames. For four years Vice-president of the United States, Kentucky, his native state, to mark her sense of his eminent services in the cabinet and in the field, has erected this monument in the resting-place of her illustrious dead."

On the northeast side of the pedestal is a bust of Johnson in low relief; and on the southwest side an historical group, in the same style, in which he is represented as shooting Tecumtha at the battle of the Thames. Some remarks on that subject will be found in our account of that battle.

¹ Dickson's recruits are represented as being the most savage and cruel in their nature. The principal chief among them was *Me-fo-ock*, whose girdle was covered with human scalps as trophies of his prowess. "It is remarkable," says *M'Ac*, "that after the savages joined the British standard to combat for 'the Defenders of the Faith,' victory never again declared for the allies in the Northwest. For the cruelties they had already committed, and those which were threatened by this inhuman association, a just God frowned indignant on all their subsequent operations."—*History of the Late War*, page 298.

² General Harrison had just held an important council with the Shawnoese, Delaware, Wyandot, and Seneca Indians

Johnson's Reconnoissance to the Raisin. At Fort Stephenson. Departure for the Wilderness, and Recall.

took Colonel Anderson. Scouts had reported the appearance of numerous Indians on the Lower Maumee, and the general selected three hundred men to make a forced march to Fort Meigs. He arrived there himself on the 28th, and then ordered Colonel Johnson, who had come down from Fort Winchester with his seven hundred men after forty days of hard service in traversing the Wilderness, to make a reconnoissance toward the Raisin to procure intelligence. Obedience followed command. The movement was successful. Johnson ascertained that there was no immediate danger of an invasion from Malden in force. Satisfied of this, Harrison left Fort Meigs on the 1st of July, escorted by seventy mounted men under Captain M'Afee as far as Lower Sandusky. From there he went to Cleveland, escorted by Colonel Ball, to make farther defensive provisions. There he left Ball and his cavalry in charge, and returned to his head-quarters after ordering Colonel Johnson, with his mounted men, to take post at the Huron River. That efficient officer again promptly obeyed. He arrived at Lower Sandusky on the 4th of July. Flags were flying, and music filled the air. The garrison of Fort Stephenson,¹ under Major Croghan, were about to celebrate the day with appropriate ceremonies, and, at their request, Colonel Johnson delivered a patriotic oration. Toasts were given, and good cheer abounded. But duty called from pleasure, and the mounted men resumed their saddles to press onward to the Huron. An order from the War Department arrested them. Johnson was directed to turn back, and hasten to the defense of the Illinois and Missouri Territories, then, in the opinion of the authorities there, seriously menaced by Dickson and his savage followers. He was disappointed and mortified; but, after writing to Harrison expressing his strong desire to remain in the army destined for Detroit and Malden, he turned his horse's head again toward the Wilderness. The commander-in-chief urged the Department to comply with Johnson's wishes, assuring the Secretary that Dickson's savages were on the Detroit. The order was countermanded, and, when far on his way toward the Mississippi as an obedient soldier, Johnson was recalled. It was well for the country that he was left to serve under the direct command of General Harrison at that time.

Late in July the British had collected on the banks of the Detroit nearly all of the warriors of the Northwest, full twenty-five hundred in number. These, with Proctor's motley force already there, made an army of about five thousand men. Early in the month bands of Indians began to appear in the vicinity of Fort Meigs, killing and plundering whenever opportunity offered. Tecumtha, meanwhile, had become

at his head-quarters at Franklinton. Circumstances had made him suspect their fidelity to their promises of strict neutrality. It was a crisis when all should be made plain. He required them to take a decided stand for or against the Americans; to remove their families into the interior, or the warriors must accompany him in the ensuing campaign, and fight for the United States. The venerable *Ta-he*, who was the acknowledged representative of them all, assured the general of their unflinching friendship, and that the chiefs and warriors were anxious to take part in the campaign. He accepted their assurances as true, and told them he would let them know when he wanted them. "But," he said, "you must conform to our mode of warfare. You are not to kill defenseless prisoners, old men, women, or children. By your good conduct I shall be able to tell whether the British can restrain their Indians if they wish to do so." He then told them that he had heard of Proctor's promise to deliver him into the hands of Tecumtha. "Now," he said, jocularly, "if I can succeed in taking Proctor, you shall have him for your prisoner, provided you will treat him as a squaw, and only put petticoats upon him, for he must be a coward who would kill a defenseless prisoner."

¹ Fort Stephenson was erected in the summer of 1812. Lower Sandusky (now the village of Fremont) was a mere trading-post, the only buildings being a government store and a Roman Catholic mission-house in charge of two priests. Thomas Butler, who had been in Wayne's army, was charged with the duty of selecting the site and superintending the construction of a stockade at that place. He drew the lines of the fort around the store-house, about one hundred yards in one direction, and about fifty yards in the other. The men employed in the work were a company under Captain Norton, of Connecticut, who were ordered to Lower Sandusky by Governor Meigs for the purpose. Sergeant Erastus Bowe, of Tiffin, Ohio, one of the three known survivors of the detachment in 1860, was the first to break ground, saying, "Captain, I don't think there will be much fighting here, but I believe I will make a hole here." His remark was caused by the general belief that the British would never be able to penetrate so far. The pickets for the fort were cut near the present railway station, and in the course of twenty-five days they were all set. A block-house was constructed on the northeast corner, and another in the middle of the north side of the fort. Croghan strengthened the fort in the summer of 1813 by the erection of two more block-houses, one of which was built against the middle block-fort on the north side, and the other on the southwest corner. He also constructed an embankment and ditch, and in house on the northeast angle placed his six-pounder.—*Statement of Erastus Bowe in the "Sandusky Democrat," July 27, 1860.* The other two known survivors of the constructors of the fort at that time were Samuel Scribner, of Marion, and Ira Carpenter, of Delaware, Ohio.

very restive under the restraints of inaction, especially when he saw so large a body of his countrymen ready for the war-path, and he at last demanded that another attempt should be made to capture Fort Meigs. He submitted to Proctor an ingenious plan by which to take the garrison by stratagem and surprise. He proposed to land the Indians several miles below the fort, march through the woods, unobserved by the garrison, to the road leading from the Maumee to Lower Sandusky in the rear, and there engage in a sham-fight. This would give Clay an idea that some approaching re-enforcements had been attacked, and he would immediately sally out with the garrison to their aid. The Indians would form an ambuscade, rise, and attack the unsuspecting Americans in their rear, cut off their retreat, and, rushing to the fort, gain an entrance before the gates could be closed.¹ Proctor accepted the plan and arranged for the expedition, but the vigilance and firmness of General Clay defeated the well-devised scheme and saved the fort.

On the 20th of July Proctor and Tecumtha appeared with their combined forces, about five thousand strong, at the mouth of the Maumee.² General Clay immediately dispatched a messenger to Harrison, at Lower Sandusky, with the information. The commander-in-chief, doubtful what post the enemy intended to attack, sent the messenger (Captain M'Cune) back with an assurance for General Clay that he should have re-enforcements if needed, and a warning to beware of a surprise. He then removed his head-quarters to Seneca Town,³ nine miles farther up the Sandusky River, from which point he might co-operate with Fort Meigs or Fort Stephenson, as circumstances should require. There, with one hundred and forty regulars, he commenced fortifying his camp, and was speedily joined by four hundred and fifty more United States troops under Lieutenant Colonel Paul,⁴ of the infantry, and Ball, of the dragoons; also by M'Arthur and Cass, of Ohio, who had each been promoted to brigadier general. Colonel Theodore Deye Owings was also approaching with five hundred regulars from Fort Massac, on the Ohio River.

Tecumtha attempted to execute his strategic plan. On the afternoon of the 25th,^a while the British were concealed in the ravine already described, just below Fort Meigs, the Indians took their prescribed station on the Sandusky road, and at sunset commenced their sham-fight. It was so spirited, and the yells of the savages were so powerful, that the garrison had no doubt that the commander-in-chief, with re-enforcements, had been attacked. They were exceedingly anxious to go out to their aid. Fortunately, General Clay was better informed. Captain M'Cune had just returned from a second errand to General Harrison, after many hair-breadth escapes in penetrating the lines of the Indians swarming in the woods. Although Clay could not account for the firing, yet he was so certain that no Americans were engaged in the contest, whatever it might be, that he remained firm, even when officers of high rank demanded permission to lead their men to the succor of their friends, and the troops were almost mutinous because of the restraint. Clay's firmness saved them from utter destruction. A heavy shower of rain, and a few cannon-

¹ Statement of Major Richardson, of the British army.

² Proctor commanded the white troops in person. Dixon, of the Royal Artillery, commanded the Mackinaw and other Northern tribes; Tecumtha those of the Wabash, Illinois, and St. Joseph; and Round-Head (see page 291) those of the Chippewas, Ottawas, and Pottawatomies of Michigan.—Harrison's Letter to the Secretary of War, Seneca Town, August 4, 1813.

³ The Indians who occupied this region were called "the Senecas of Sandusky"—why does not appear, for they were composed of Cayugas chiefly, with a few Oneidas, Mohawks, Onondagas, Tuscaroras, and Wyandots. They numbered about four hundred souls at the close of the war, and were the remnant of the tribe of Logan, the chief immortalized by Mr. Jefferson. In 1817 and 1818 forty thousand acres of land lying on the east side of the Sandusky River were granted to them. In 1831 they ceded their lands to the United States, and went west of the Mississippi. Seneca County, of which Tiffin is the county seat, derived its name from these so-called Seneca Indians. The fortified camp of Harrison assumed the form of a regular work known as Fort Seneca, having a stockade and ditch, and occupied several acres of a plain on the bank of the Sandusky. Slight remains of the work were yet visible in 1860.

⁴ George Paul was a major of Pennsylvania militia under General Harrison. He afterward resided in Ohio, and entered the service again early in the war. He was commissioned a lieutenant colonel in April, 1813, and colonel at the close of June following. He resigned in October, 1814.

Fort Stephenson to be attacked.

Major Croghan's Instructions.

A Council of War.

shot hurled from the fort in the direction of the supposed fight, put an end to the firing, and that night was as quiet at Fort Meigs as in a time of peace. The strategy of Tecumtha had failed, to the great mortification of the enemy. Ignorant of the strength of the fort and garrison,¹ they did not attempt an assault. After lingering around their coveted prize about thirty hours, the besiegers withdrew² to Proctor's old encampment, near Fort Miami, and on the 28th the British embarked with their stores and sailed for Sandusky Bay, with the intention of attacking Fort Stephenson. A large number of their savage allies marched across the country for the purpose of co-operating with Proctor in the siege. Intelligence of this movement was promptly communicated to Harrison by General Clay.

Fort Stephenson was garrisoned by one hundred and sixty men, under the command, as we have observed, of a gallant young Kentuckian, Major George Croghan, of the Regular Army, then only twenty-one years of age. Their only ordnance was an iron six-pounder cannon, and their chief defenses were three block-houses, circumvallating pickets from fourteen to sixteen feet in height, and a ditch about eight feet in width and of equal depth.

Already an examination of Fort Stephenson by General Harrison had convinced him that it would be untenable against heavy artillery, and, in orders left with Major Croghan, he said, "Should the British troops approach you in force with cannon, and you can discover them in time to effect a retreat, you will do so immediately, destroying all the public stores. You must be aware that to attempt to retreat in the face of an Indian force would be vain. Against such an enemy your garrison would be safe, however great the number."

G. Croghan

On the receipt of the intelligence from General Clay, General Harrison called around him in council³ M^r Arthur, Cass, Ball, Wood, Hukill, Paul, Holmes, and Graham, and it was unanimously agreed that Fort Stephenson was untenable, and that, as the approaching enemy had cannon, Major Croghan ought immediately to comply with the standing order of his general. Believing that the innate bravery of Croghan would make him hesitate, General Harrison immediately dispatched to him an order to abandon the fort.⁴ The bearers started at midnight, and lost their way in the dark. They did not arrive at Fort Stephenson before eleven o'clock the next day, when the forest around was swarming with Indians.

Major Croghan consulted his officers concerning a retreat, when a majority agreed with him that such a step would be disastrous, and that the post might be maintained. A few moments after the conference, he placed in the hands of the messengers from General Harrison the following answer to his chief:⁵ "SIR,—

¹ The garrison numbered, in rank and file, only about eighteen hundred men. There were a little over two thousand at the close of May, but full two hundred had died of camp fever.

² The order was sent by a white man (Conner) and two Indians, who found some difficulty in the performance of their mission. The following is a copy of the order: "SIR,—Immediately on receiving this letter you will abandon Fort Stephenson, set fire to it, and repair with your command this night to head-quarters. Cross the river and come up on the opposite side. If you should deem and find it impracticable to make good your march to this place, take the road to Huron, and pursue it with the utmost circumspection." The order was dated 29th July.

Croghan disobeys Orders.

His Explanations justify the Act.

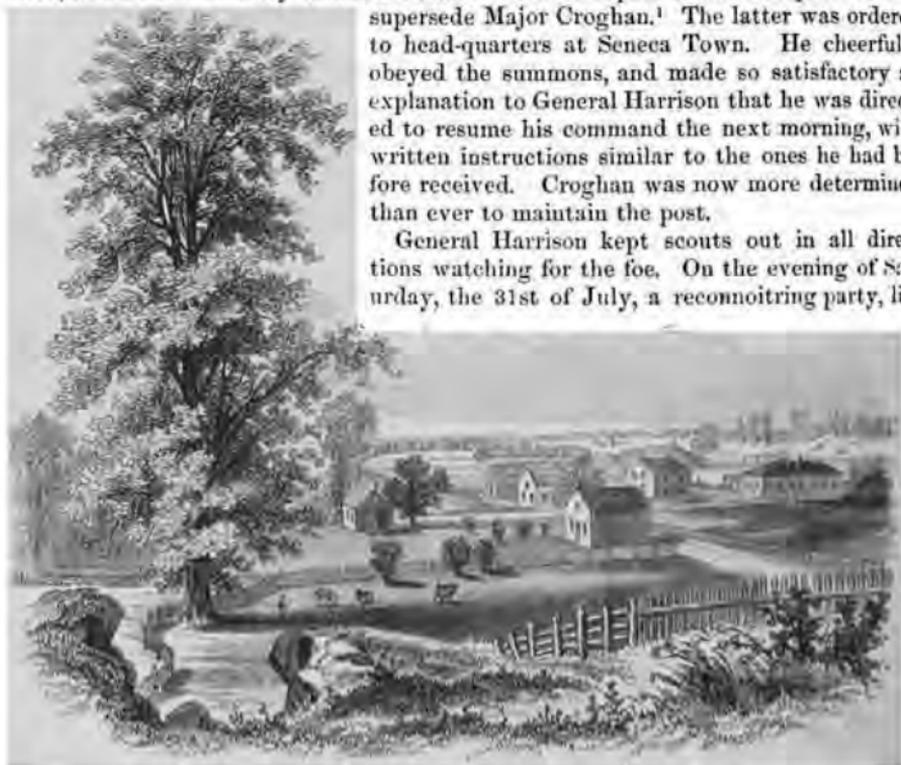

Colonel Ball's Fight with Indians.

I have just received yours of yesterday, ten o'clock P.M., ordering me to destroy this place and make good my retreat, which was received too late to be carried into execution. We have determined to maintain this place, and, by heavens! we can.¹

This positive disobedience of orders was not intended as such. The gallant young Kentuckian gladly perceived sufficient latitude given him in the clause of the earlier order, in which the danger of a retreat in the face of an Indian force was mentioned, to justify him in remaining, especially as the later order did not reach him until such force was apparent. But the general could not permit disobedience to pass unnoticed, and he immediately ordered Colonel Wells to repair to Fort Stephenson and

supersede Major Croghan.¹ The latter was ordered to head-quarters at Seneca Town. He cheerfully obeyed the summons, and made so satisfactory an explanation to General Harrison that he was directed to resume his command the next morning, with written instructions similar to the ones he had before received. Croghan was now more determined than ever to maintain the post.

General Harrison kept scouts out in all directions watching for the foe. On the evening of Saturday, the 31st of July, a reconnoitring party, lin-

VIEW AT FREMONT, OR LOWER SANDUSKY.²

¹ Colonel Wells was escorted by Colonel Ball, with his corps of dragoons, and bore the following letter to Major Croghan: "Sir.—The general has just received your letter of this date informing him that you had thought proper to disobey the order issued from this office, and delivered to you this morning. It appears that the information which dictated the order was incorrect, and as you did not receive it in the night, as was expected, it might have been proper that you should have reported the circumstances and your situation before you proceeded to its execution. This might have been passed over, but I am directed to say to you that an officer who presumes to aver that he has made his resolution, and that he will act in direct opposition to the orders of his general, can no longer be intrusted with a separate command. Colonel Wells is sent to relieve you. You will deliver the command to him, and repair, with Colonel Ball's squadron, to this place. By command, etc., A. H. HOLMES, Assistant Adjutant General."

On the way, about half a mile southwest of the present village of Balleville, Colonel Ball's detachment were attacked by about twenty Indians, and quite a severe skirmish ensued. Seventeen of the Indians were killed; and, until within a few years, an oak-tree stood on the site of the contest, bearing seventeen marks of a hatchet, to indicate the number of Indians slain.

² This view was taken from the verge of the hill, near where the howitzer, or mortar, of the British was planted after landing, so as to be brought to bear upon the fort. In the front is seen a magnificent elm-tree, of large growth at the time of the invasion. Tradition avers that an Indian, who climbed into its top to reconnoitre Fort Stephenson, was shot by one of the Kentucky riflemen in the garrison. In this view we are looking down the Sandusky River. In the little cove, seen nearly over the roof of the small building nearest the left of the picture, is the place where the British landed. The island opposite is seen more to the left. In the extreme distance are store-houses, at which point the British gun-boats were first discovered by the garrison. On the extreme right is the gas-house, and over it, on the east side of the river, is the elevated plain where Croghanville was laid out, and where the Indians were first seen.

Fort Stephenson summoned to surrender.

Incidents under a Flag of Truce.

The Surrender refused.

gering upon the shores of Sandusky Bay, about twenty miles from Fort Stephenson, discovered the approach of Proctor by water. They hastened back, stopping at the fort on the way at about noon the next day.^a Croghan was on the alert. Already many Indians had appeared upon the eminence on the eastern side of the Sandusky River (where Croghanville was laid out in 1817), and had scamp-^a August 1. ered away after a few discharges of the six-pounder in the fort.

At four o'clock that afternoon the British gun-boats, with Proctor and his men, appeared at a turn in the river more than a mile distant. In the face of shots from the six-pounder they advanced, and, in a cove not quite a mile from the fort, the British landed, with a five-and-a-half-inch howitzer, opposite a small island in the stream. At the same time the Indians displayed themselves in the woods in all directions, to cut off a retreat of the garrison.

General Proctor entered immediately upon the business of his errand. His attacking force consisted of a portion of the Forty-first Regiment, four hundred strong, and several hundred Indians. Tecumtha, with almost two thousand more, was stationed upon the roads leading from Fort Meigs and Seneca Town, to intercept apprehended re-enforcements from those directions.

Having disposed of his forces so as to cut off Croghan's retreat, General Proctor sent Colonel Elliott, accompanied by Captain Chambers with a flag of truce, to demand the instant surrender of the fort. These officers were accompanied by Captain Dixon, of the Royal Engineers, who was in command of the Indian allies.

Major Croghan sent out Second Lieutenant Shipp,¹ as his representative, to meet the flag. After the usual salutations, Colonel Elliott said: "I am instructed to demand the instant surrender of the fort, to spare the effusion of blood, which we can not do should we be under the necessity of reducing it by our powerful force of regulars, Indians, and artillery."

"My commandant and the garrison," replied Shipp, "are determined to defend the post to the last extremity, and bury themselves in its ruins, rather than surrender it to any force whatever."

"Look at our immense body of Indians," interposed Dixon. "They can not be restrained from massacring the whole garrison, in the event of our undoubted success."

"Our success is certain," eagerly added Chambers.

"It is a great pity," said Dixon, in a beseeching tone, "that so fine a young man as you, and as your commander is represented to be, should fall into the hands of the savages. Sir, for God's sake, surrender, and prevent the dreadful massacre that will be caused by your resistance."

Shipp, who had lately dealt with the same foe at Fort Meigs, coolly replied: "When the fort shall be taken, there will be none to massacre. It will not be given up while a man is able to resist."

Shipp was just turning to go back to the fort, when an Indian sprung from a bushy ravine near and attempted to snatch his sword from him. The indignant American was about to dispatch the savage, when Dixon interfered. Croghan, who had stood upon the ramparts during the conference, observed the insult, and shouted, "Shipp, come in, and we will blow them all to hell!" The ensign hastened into the fort, the flag returned, and the British opened a fire immediately from their gun-boats, and from the five-and-a-half-inch howitzer which they had landed. For some reason, never

¹ Edmund Shipp, Jr., was a native of Kentucky, and was appointed ensign of the 17th regiment of infantry in May, 1812. He was promoted to second lieutenant in March, 1813, and distinguished himself in the defense of Fort Meigs the following year. After the affair at Fort Stephenson he became General M'Arthur's brigade major. In March, 1814, he was promoted to first lieutenant, and to captain in May, and at the close of the war was retained in the service. He died at Bellefontaine, Ohio, on the 22d of April, 1817. On the 13th of February, 1835, the Congress of the United States voted a sword, to be received by his nearest male relative, in testimony of their sense of his services at Fort Stephenson.—Gardner's *Dictionary of the Army*.

until recently explained, they commenced the attack in great haste, before proper arrangements were made.¹

All night long, five six-pounders, which had been landed from the British gun-boats, and the howitzer upon the land, played upon the stockade without serious effect. They were answered occasionally by the solitary cannon in the fort, which was shifted from one block-house to another, so as to give the impression that the garrison had several heavy guns. But their supply of ammunition was small, and Major Croghan determined to use his powder and ball to better advantage than firing at random in the dark. He silenced the gun, and ordered Captain Hunter,² his second in command, to place it in the block-house at the middle of the north side of the fort, so as to rake the ditch in the direction of the northwest angle, the point where the foe would doubtless make the assault, it being the weakest part. This was accomplished before daylight, and the gun, loaded with a half charge of powder and a double charge of slugs and grapeshot, was completely masked.

During the night the British had dragged three six-pounders to a point of woods on ground higher than the fort, and about two hundred and fifty yards from it (near the spot where the court-house in Fremont now stands, westward of Croghan Street), and early in the morning they opened a brisk fire upon the stockade from these and the howitzer. Their cannonade produced but little effect, and for many hours the little garrison made no reply. Proctor became impatient. That long day in August was rapidly passing away, and he saw before him only a dreary night of futile effort in his present position. His Indians were becoming uneasy, and at length he resolved to storm the fort. At four o'clock in the afternoon he concentrated the fire of all his guns upon the weak northwest angle. His suspected purpose was now apparent. Toward that weak point Croghan directed his strengthening efforts. Bags of sand and sacks of flour were piled against the pickets there, and the force of the cannonade was materially broken.

At five o'clock, while the bellowing of distant thunder in the western horizon, where a dark storm-cloud was brooding, seemed like the echo of the great guns of the foe, the British, in two close columns, led by Brevet Lieutenant Colonel Short and Lieutenant Gordon, advanced to assail the works. At the same time a party of grenadiers, about two hundred strong, under Lieutenant Colonel Warburton, took a wide circuit through the woods to make a feigned attack upon the southern front of the fort, where Captain Hunter and his party were stationed. Private Brown, of the Petersburg Volunteers, with half a dozen of his corps and Pittsburgh Blues, happened to be in the fort at the time. Brown was skilled in gunnery, and to him and his companions was intrusted the management of the six-pounder in the fort.

As the British storming-party under Lieutenant Colonel Short advanced, their artillery played incessantly upon the northwestern angle of the fort, and, under cover of the dense smoke, they approached to within fifteen or twenty paces of the out-works before they were discovered by the garrison. Every man within the fort was at his post, and these were Kentucky "sharp-shooters!" They instantly poured upon the assailants such a shower of rifle-balls, sent with fatal precision, that the British line was thrown into momentary confusion. They quickly rallied. The axe-men

¹ The late Hon. Elisha Whittlesey, in his address at Fremont (Lower Sandusky), on the forty-fifth anniversary of the defense of Fort Stephenson, explained the cause. Aaron Norton, of Portage County, Ohio, told him that on that Sunday afternoon, in total ignorance of the proximity of the British and Indians, he was approaching the fort on the opposite side of the Sandusky, when he discovered quite a large body of Indians scattered along the bank of the river, half concealed by bushes. He wheeled his horse and fled in the direction of Seneca. The startled Indians fired several shots at him, but without effect. This occurrence was doubtless communicated to the British commander. He knew Harrison was near, and feared that he might sally forth from his fortified camp with re-enforcements from Cleveland or Mansfield, beat back Tecumtha, and fall upon him at Sandusky; hence his haste in assailing the fort.

² James Hunter was a native of Kentucky, and was adjutant of the Kentucky mounted riflemen in the battle of Tippecanoe. He was wounded there. He was promoted to captain in the 17th regiment of infantry in March, 1812. He left the army in May, 1814. On the 18th of February, 1835, the Congress of the United States voted him a sword because of his distinguished services at Fort Stephenson.—Gardner's *Dictionary of the Army*.

Storming of Fort Stephenson.

Slaughter of the Assaulters.

The British and Indians repulsed.

PLAN OF FORT STEPHENSON.¹

bravely pushed forward over the glacis, and leaped into the ditch to assail the pickets. Lieutenant Colonel Short was at the head of the gallant party, and when a sufficient number of men were in the ditch behind him, he shouted, "Cut away the pickets, my brave boys, and show the damned Yankees no quarter!" Now was the moment for the voice of the unsuspected six-pounder to be heard. The masked port flew open instantly. The gun spoke with terrible effect. Slugs and grapeshot streamed along that ditch overflowing with human life, and spread terrible havoc there. Few escaped. A similar attempt was made by the second column of the storming-party, when another discharge from the six-pounder and a destructive volley of rifle-balls ended the contest. Brevet Lieutenant Colonel Short and Lieutenant Gordon, of the Forty-first Regiment, Laussaussiege, of the Indian department, and twenty-five privates, were left dead in the ditch,² and twenty-six of the wounded were made prisoners. Captain Dixon and Captain Muir, and Lieutenant M'Intyre, of the Forty-first Regiment, were slightly wounded and escaped. A precipitate and confused retreat immediately followed this repulse. Warburton and his grenadiers did not reach the south front of the fort until after the disaster. They were assailed with a destructive volley from Hunter's corps, and fled for shelter to the adjacent woods.

The whole loss of the garrison was one man killed and seven slightly wounded. The loss of the British in killed and wounded, according to the most careful estimates, was one hundred and twenty. The cowardly Indians, as usual when there was open

¹ EXPLANATION OF THE PLAN.—1, line of pickets; 2, embankment from the ditch to and against the pickets; 3, dry ditch; 4, outward embankment or glacis; A, block-house first attacked by cannon; B, bastion or block-house from which the ditch was raked by the six-pounder in the fort; C, guard block-house; D, hospital while attacked; E E E, military store-houses; F, commissary's store-house; G, magazine; H, fort gate; K K K, wicker gates; L, partition gate; M, position of the five six-pounders of the British on the night of the 2d of August; P, the graves of Lieutenant Colonel Short and Lieutenant Gordon, who were killed in the ditch. The mortar or howitzer shifted position, as indicated on the plan. In the first assault there were four six-pounders in battery, only one being left in the first position near the river. This Plan was first published, from the official drawing, in the *Port Folio* for March, 1815, and soon afterward in Thomson's carefully prepared *Historical Sketches of the Late War*. The graves of the two British officers are a few yards northeastward from the junction of High and Market Streets.

² It is said that Lieutenant Colonel Short, when he fell, twisted a white handkerchief on the end of his sword as a supplication for that mercy which his battle-cry a moment before denied to his foe.

Dead and Wounded borne away.

The Night succeeding the Struggle.

fighting or great guns to face, kept themselves out of harm's way in a ravine near by, and the whole battle was fought by the small British force, who behaved most gallantly. During the night Proctor sent Indians to gather up the dead and wounded, and at three o'clock in the morning^a the invaders sailed down the Sandusky, leaving behind them a vessel containing clothing and military stores.

At about the same hour the gallant Major Croghan wrote a hurried note to General Harrison, informing him of his victory and the retreat of Proctor.

The assault lasted only about half an hour. The dark storm-cloud in the west passed northward, the setting sun beamed out with peculiar splendor, a gentle breeze from the southwest bore the smoke of battle far away over the forest toward Lake Erie, and in the lovely twilight of that memorable Sabbath evening the brave young Croghan addressed his gallant little band with eloquent words of praise and grateful thanksgiving. As the night and the silence deepened, and the groans of the wounded in the ditch fell upon his ears, his generous heart beat with sympathy. Buckets filled with water were let down by ropes from the outside of the pickets; and as the gates of the fort could not be opened with safety during the night, he made a communication with the ditch by means of a trench, through which the wounded were borne into the little fortress and their necessities supplied.¹

Intelligence of this gallant defense caused the liveliest sentiments of admiration throughout the country, and congratulations were sent to Major Croghan from every quarter. His general, in his official report, spoke of him in words of highest praise.² The ladies of Chillicothe, Ohio, purchased and presented to him an elegant sword;³ and the Congress of the United States voted him the thanks of the nation.⁴ Twenty-two years later the Congress gave him a gold medal, in commemoration of his signal service on that day. Posterity will ever regard his name with honor.⁵

¹ Major Croghan's Report to General Harrison, August 5, 1813; General Harrison's Report to the Secretary of War, August 5, 1813; M'Afee's *History of the Late War*, pages 322 to 328; Auchinleck's *History of the War of 1812*, pages 184 to 187; James's *Military Occurrences, etc.*, pages 262 to 266; *Niles's Register*, August 14, 1813; *The Port Folio*, March, 1815; *The War*, volume ii., pages 39, 43, 47, 49, 51, 61; Address of Colonel Elisha Whittlesey at Fremont, August 2, 1838; Address of Homer Everett, Esq., at Fremont, February 24th and 25th, 1860; Perkins's *History of the Late War*, pages 228, 224; *Sketches of the War* (Rutland, 1815), pages 166 to 168; Atwater's *History of Ohio*, pages 226 to 229; Dawson's *Life of General Harrison*, pages 249 to 251; MS. of Dr. Brainerd, quoted by Homer Everett, Esq.

² "I am sorry," wrote General Harrison to the Secretary of War on the 4th of August, "that I can not transmit you Major Croghan's official report. He was to have sent it to me this morning, but I have just heard that he was so much exhausted by thirty-six hours of continued exertion as to be unable to make it. It will not be among the least of General Proctor's mortifications to find that he has been baffled by a youth who has just passed his twenty-first year. He is, however, a hero worthy of his gallant uncle, General George Rogers Clarke."

³ This gift, at their request, was presented to him by Samuel Finley and Joseph Wheaton, with the following letter bearing the signatures of the donors:

"CHILICOTHE, August 13, 1813.

"SIR,—In consequence of the gallant defense which, under Divine Providence, was effected by you and the troops under your command, of Fort Stephenson, at Lower Sandusky, on the evening of the 2d inst., the ladies of the town of Chillicothe, whose names are undersigned, impressed with a high sense of your merits as a soldier and a gentleman, and with great confidence in your patriotism and valor, present you with a sword. Mary Finley, Mary Sterret, Ann Creighton, Eliza Creighton, Eleanor Lamb, Nancy Waddle, Eliza Carlisle, Mary A. Southard, Susan D. Wheaton, of Washington City, Richamah Irwin, Judith Delano, Margaret M'Langburg, Margaret Miller, Elizabeth Martin, Nancy M'Arthur, Jane M'Coy, Lavina Fulton, Catharine Fullerton, Rebecca M. Orr, Susan Wake, Ann M. Dunn, Margaret Keys, Charlotte James, Esther Doolittle, Eleanor Buchanan, Margaret M'Farland, Deborah Ferree, Jane M. Evans, Frances Brush, Mary Curtis, Mary P. Brown, Jane Heylin, Nancy Kerr, Catharine Hough, Eleanor Worthington, Martha Scott, Sally M'Lean."

To this letter Major Croghan replied at Lower Sandusky on the 25th of August:

"LADIES OF CHILICOTHE,—I have received the sword which you have been pleased to present to me as a testimonial of your approbation of my conduct on the 2d instant. A mark of distinction so flattering and unexpected has excited feelings which I can not express. Yet, while I return you thanks for the unmerited gift you have thus bestowed, I feel well aware that my good fortune (which was bought by the activity of the brave soldiers under my command), has raised in you expectations from my future efforts which must, I fear, be sooner or later disappointed. Still, I pledge myself (even though fortune should not be again propitious) that my exertions shall be such as never to cause you in the least to regret the honors you have been pleased to confer on your 'youthful soldier.'"

⁴ On the 8th of February, 1814, the Committee on Military Affairs reported a resolution, among others similar, to request the President to present an elegant sword to Colonel Croghan. This resolution was passed by at the time, and never called up again.

⁵ George Croghan was a son of Major William Croghan, of the Revolutionary army. His father was a native of Ireland; his mother was a sister of General George Rogers Clarke, sometimes called the Father of the Northwest. He was born at Locust Grove, near the Falls of the Ohio (now Louisville), in Kentucky, on the 15th of November, 1751. He

Medal presented to Croghan.

A Visit to Sandusky.

A Ride to Castalian Springs.

GOLD MEDAL AWARDED TO GENERAL CROGHAN.¹

It was a soft, hazy, half sunny day, late in September,² when I visited the site of Fort Stephenson and the places of events that made it famous. I had come up by railway during the early hours of the morning from pleasant Sandusky City, where I had spent two or three days with friends, vainly endeavoring to visit Put-in-Bay, where Perry's fleet rendezvoused before the battle which gave him victory and immortality. The excursion steam-boat to that and other places had been withdrawn for the season, and the wind was too high to make a voyage thither in a sail-boat safe or pleasant. I was less disappointed than I should otherwise have been, by the discovery that an artist (Miss C. L. Ransom), then in Sandusky City, had made careful drawings of the historical points about Put-in-Bay. I had the pleasure of meeting her, and availing myself of her courteous permission to copy such of her drawings as I desired. Of these more will be said when giving an account of the naval battle near there.

²September 24, 1850.

In company with Mr. Barney, with whom I was staying, I visited the famous Castalian Springs, at the village of Castalia, five or six miles south from Sandusky City. They flow up from subterranean fountains, almost as limpid as air, and in volume so great that along the outlet, which is called Cold Creek, in its course of three miles through a beautiful prairie of three thousand acres to Sandusky Bay, no less than

was graduated at William and Mary College, in Virginia, in the summer of 1810; entered its law school, and remained there until the fall of 1811, when he joined the army under Harrison at Vincennes. He was volunteer aid to Colonel Boyd at the battle of Tippecanoe. On account of his services in the Wabash expedition, he was appointed a captain of infantry in the spring of 1812, and in August he marched with the forces under General Winchester to the relief of General Hull in Canada. In March, 1813, he was promoted to major, and became aid-de-camp to General Harrison. In that capacity he distinguished himself in the defense of Fort Meigs, and the sortie on the 5th of May under the gallant Colonel Miller. For his gallantry at Fort Stephenson he was breveted a lieutenant colonel, and was appointed colonel of a rifle corps in February, 1814. At the close of the war he was retained in service, but married in 1817 and resigned. In 1824 he was appointed postmaster at New Orleans, and returned to the service in 1825 as inspector general, with the rank of colonel. In 1835 Congress awarded him a gold medal for his gallantry at Fort Stephenson. He died at New Orleans on the 8th of January, 1849.

¹ On Tuesday, the 27th of January, 1835, a joint resolution passed the House of Representatives, authorizing the President of the United States to "present a gold medal to General Croghan" (he was then inspector general of the army), and awards to several officers under his command. These were Captain James Hunter, and Lieutenants Benjamin Johnson and Cyrus A. Baylor, of the Seventeenth Regiment, Lieutenant John Meek, of the Seventh Regiment, and Ensigns Edward Shipp and Joseph Duncan. The latter was afterward Governor of Illinois.

Lieutenant Johnson was promoted to captain of a rifle corps in March, 1814, and left the service at the close of the war. Lieutenant Baylor also left the service at the close of the war. Lieutenant Meek resigned in May, 1814. He was appointed military store-keeper at Little Rock, Arkansas, in the summer of 1808, and was removed, on a change of administration, in 1841. Ensign Duncan was promoted to first lieutenant of infantry in July, 1814, and was disbanded in 1815. He was a representative in Congress from Illinois from 1827 to 1833, Governor of Illinois from 1834 to 1838, and died at Jacksonville on the 15th of January, 1844.

It is proper to observe that the representation of the fort and its surroundings, on this medal, presented to General Croghan, is incorrect. It was not a regular fort, but a picketed inclosure, with rudely-built block-houses. The Sandusky River is here a narrow stream, and not such an expanse of water as the place of the vessels represent. It may have been intended for Sandusky Bay.

fourteen sets of mill-stones were kept in motion by it. In a rough scow we hovered

LOWER CASTALIAN SPRING.

over the centre of the spring, and, peering down into its clear, mysterious depths, saw logs, and plants, and earth in grotto form, made iridescent by the light in the aqueous prism.¹ We intended to visit the somewhat marvelous cave in the range of limestone about two

miles from the springs, but the day was too far spent when I had completed my sketch of the fountains to allow us to do so. We returned to the town by the way of Mr. Barney's fine vineyard, and arrived at sunset. I spent the evening with General Leslie Combs at the "West House," and in a public meeting.² The next day was the Sabbath, and on Monday morning I started by railway for Lower Sandusky with impressions which have crystallized into pleasant memories of a delightful little city on a slope overlooking one of the finest bays that indent the southern shores of Lake Erie.³ On our way we stopped a few minutes at the little village of Clyde, where the railways from Cleveland and Toledo and from Cincinnati and Sandusky City cross each other. There a crowd had collected to see and hear the late Judge Douglas, then one of the candidates for the presidency of the United States, who was traveling for his political health, weary and wayworn. Eager eyes, vociferous shouts, loud huzzas, and the swaying of a little multitude, is the picture of a few minutes of time impressed upon the memory. An hour later I was in Fremont, as the old village of Lower Sandusky was named a few years ago in honor of the accomplished explorer in earlier years, and general in the army of the republic during a portion of the late Civil War.

Very soon after my arrival I was favored with the company of Messrs. Sardis Birchard and Homer Everett (residents of the village, and familiar with its history) in a pilgrimage to places of interest in and around that shire-town of Sandusky County.⁴

¹ The Castalian Springs are great natural curiosities, and are much visited. There are two, known respectively as Upper and Lower. They are about one fourth of a mile apart, and are connected by a race. At the lower one, where Messrs. Cochrane and Weston had a flouring-mill, a dike had been raised (seen in the above sketch) to give more fall to the water. The two springs are of about equal dimensions. That of the lower one, which I visited, is about sixty feet in depth. The water is so limpid that a white object an inch in diameter may be plainly seen lying on the bottom. The temperature of the water is about 46° Fahrenheit, and holds in solution lime, soda, magnesia, and iron. It petrifies every thing with which it comes in contact. This process makes the mill-wheels indestructible. About a mile and a half from the springs is a limestone ridge covered with alluvium. From beneath this these springs appear to flow, and are doubtless the first appearance on the earth of a little subterranean river, like that of the Etnaw in South Carolina. See page 406.

² Sandusky City is the capital of Erie County, Ohio. It was named Portland when it was first laid out in 1817, when there were only two log houses there, one on the site of the "Veranda Hotel," and the other about sixty rods east of it. The town stands upon an inexhaustible quarry of the finest limestone. It was a favorite resort of the Indians, and previous to the War of 1812 it was known as Ogontz's Place, Ogontz being the name of a Wyandot chief who resided there. A writer in the *American Pioneer*, l. 199, says the name of Sandusky is derived from that of a Polish trader who was with the French when they were establishing their line of trading-posts on the Maumee and Wabash Rivers. His name was Sanduski, and established himself near the present village of Fremont. His trading operations were confined to the river and bay there, and these became known to both Indians and Europeans as Sanduski's River and Sanduski's Bay. Sanduski quarreled with the Indians, fled to Virginia, and was there killed by some of those who followed him.

On the peninsula, across the bay opposite Sandusky, is a rough monument, erected there by the order and at the expense of the late Honorable Joshua H. Giddings, to perpetuate the memory of the spot where he and twenty-one others had a skirmish with the Indians on the 29th of September, 1812. He was a substitute for an older brother, and was only fourteen years of age. The regiment to which he belonged was commanded by Colonel Richard Hayes, and the little company, who had been ordered on duty on the peninsula after the defeat of General Hull, was led by Captain Collier. They had two skirmishes with the savages, in which, of the twenty-two soldiers, six were killed, and an equal number were wounded. Mr. Giddings was the youngest soldier of the regiment.

⁴ This town stands at the head of the navigation of Sandusky River, eighteen or twenty miles from Sandusky Bay

Site of Fort Stephenson.

Its Locality and Appearance.

The Six-pounder "Good Bess,"

The site of Fort Stephenson is in the bosom of the village of Fremont. It occupies about two thirds of the square bounded by Croghan, High, Market, and Arch

SITE OF FORT STEPHENSON.

Streets. The dwelling of the late Honorable Jacques Hurlburt stands within the area of the old stockade, and a few yards south of the block-house in which was placed the cannon that swept the ditch. The northwest angle, where the British made their chief assault, is at the junction of High and Croghan Streets. Near the house of Dr. J. W. Wilson, on Croghan Street, was the head of the ravine and small stream of water (see Plan of Fort Stephenson on page 503) between the stockade and the British battery. It was to the shelter of that ravine that the affrighted Indians fled after the first discharge of rifle-balls from the garrison.

From the site of the fort we went to the brow of the hill overlooking the landing-place of the British. When I had finished my sketch (printed on page 500) we visited the *Good Bess*, the iron six-pound cannon that performed such fearful service in the defense of the fort.² I then rode, in company with Mr. Birchard, to old Cro-

ghan by its course. Here, at the Lower Rapids of the Sandusky, the Indians were granted a reservation by the treaty of Greenville. The French had a trading-station here at an early day. Here was the residence of a band of Wyandot Indians, called the Neutral Nation. They had two villages. They were "cities of refuge" for all. Whoever sought safety in them found it. During the bloody wars between the Iroquois and the Europeans, this band of Indians were always peace-makers. Their two towns were walled, and remains of their works may yet be seen. Indian tribes at war recognized them as neutral. Those coming from the West might enter the Western City, and those from the East the Eastern City. The inhabitants of one city might inform those of the other that war-parties had been there, but who they were, or where from, must never be mentioned. At length the inhabitants of the two cities quarreled, and one destroyed or dispersed the other.—Stickney's *Lecture at Toledo, 1845*, quoted by Howe.

¹ This view is from the northern side of Croghan Street, opposite the residence of Dr. J. W. Wilson. The building seen in the centre is the late residence of Honorable Jacques Hurlburt. Croghan Street descends to the left, to the business part of the village, and High Street passes to the right. On the extreme left, on High Street, is seen a barn. This is just beyond the southwest angle of the fort, where Croghan placed a block-house. At the foot of the bank on Croghan Street is the site of the ditch swept by the six-pounder, and a little way eastward from the corner of High Street is the place, that it may be converted into a public square, and the site kept free from buildings.

PART OF SHORT'S SWORD-SCABBARD.

where the body of Lieutenant Colonel Short was found. In 1850, when the street and side-walk were being regulated, the brass piece at the top of a sword-scabbard was found upon that spot, supposed to have belonged to Lieutenant Colonel Short. It is now in the possession of Sardis Birchard, Esq., of Fremont.

The ground occupied by Fort Stephenson belongs to Chester Edgerton, Esq. The citizens have manifested a laudable desire to purchase the property from buildings.

² The garrison named the piece the *Good Bess*. It was taken to Pittsburg, where it remained until it was presented to the Corporation of Lower Sandusky (Fremont) in 1850. It was then nicely mounted as a field-piece, and is used on the anniversary of the battle for salutes, and sometimes by political parties. The breech is somewhat mutilated, it having been spiked by contending political parties at different times. It was carefully preserved in a small building on Croghan Street, between Forest Street and the site of the fort.

ghanville, on the eastern side of the Sandusky, and afterward to the place of Ball's skirmish with the Indians, mentioned in Note 1, page 500. It was between the dwelling of Mr. Villetti (the residence of Mr. Birchard) and Mr. Platt Brush, on the road from Fremont to Tiffin and Columbus. The oak-tree, with the hatchet-marks, stood on the west side of the road, near Mr. Brush's house.

At Mr. Villetti's I enjoyed the pleasure of seeing some valuable paintings belonging to Mr. Birchard, among them the fine picture of *The Dog and Dead Duck*, a work of art of the Dusseldorf school that attracted much attention during the exhibition in the Crystal Palace in New York in 1854. Leaving his attractive gallery, we returned to the village, stopping on the way in the "Spiegel Wood," a lovely spot not far from the banks of the winding Sandusky, where he was erecting an elegant summer mansion.

The day was now far spent. Dark clouds were gathering in the western sky, and in that direction I was soon moving swiftly over the railway toward Toledo, thirty miles distant. I arrived at the "Oliver House," in that city, a few minutes before a heavy thunder-storm burst upon it and the surrounding country. On the following day I made the visit to Fort Meigs, up the Maumee Valley, already described on pages 490 to 493 inclusive.

After the repulse of the British at Fort Stephenson, very little of importance occurred in the Northwest until the battle on Lake Erie, at near the middle of September, when the aspect of affairs in that quarter was entirely changed. Harrison's regular force in the field did not exceed two thousand men, yet he considered them sufficient for all present purposes. The din of a second invasion of the state had again aroused the people, and hundreds of volunteers had flocked to the field only to be again disbanded. These volunteers were offended. They regarded the action of the general as an indication that he believed them to be, as soldiers, unworthy of his confidence; and their indignant officers, in published resolutions, attacked the military character of General Harrison, and declared that they would never again rally to his flag. His personal and political enemies joined in the hue and cry; and men sitting at home in ease, utterly ignorant of military affairs, assailed him with jeers as an imbecile or a coward, because he did not, with his handful of regulars and a mass of raw troops, push forward against Malden and Detroit, before the tardily-building navy was completed. Misrepresentation followed misrepresentation, for the purpose of poisoning the public mind. Fearing their effects, his general, field, and staff officers, ^{August 14,} ^{1813.} fourteen in number,¹ held a meeting at head-quarters, Lower Seneca Town,² and in an address to the public, drawn up by General Cass, they expressed their entire confidence in the military abilities of their chief, and their belief that his course "was such as was dictated by military wisdom, and by a due regard to our circumstances and to the situation of the enemy."

Up to this time General Harrison's efforts had been mainly directed to defensive measures; now, the fleet at Erie being nearly ready, and Captain Perry, who was to command it, having received orders to co-operate with Harrison, the latter bent all his energies to the creation of a well-appointed army for another invasion of Canada. Let us leave General Harrison for a while at his head-quarters at "Camp Seneca," and consider the naval preparations to co-operate with him.

We have observed that General Hull's advice respecting the creation of a fleet on Lake Erie, before attempting an invasion of Canada, was unheeded,³ and that the army of the Northwest was involved in disaster, and its commander was covered with a cloud of disgrace. The event taught the rulers wisdom, and they profited by

¹ General Cass; Colonels Wells, Owings, Paul, and Bartlett; Lieutenant Colonels Ball and Morrison; Majors Todd, Trigg, Smiley, Graham, Croghan, Hukill, and Wood. The gallant Croghan, in a special letter on the 27th, silenced the slanderers who were making political capital of Harrison's order for him to evacuate Fort Stephenson, and his disobedience. "The measures recently adopted by him," wrote Croghan, "so far from deserving censure, are the clearest proofs of his keen penetration and able generalship."

² See page 251.

Captain Perry ordered to Lake Erie.

His Journey thither.

Presqu' Isle and Captain Dobbins.

the lesson. They resolved to dispute the supremacy of the lakes with the British, and to Commodore Chauncey was intrusted the necessary preparations.

During the summer and autumn of 1812, Captain Oliver H. Perry, of Rhode Island, a zealous naval officer twenty-seven years of age, was in command of a flotilla of gun-boats on the Newport station. He was very anxious for service in a wider field of action—on the lakes or the broad ocean—where he might encounter the enemy and win distinction. In November¹ he offered his services for the lakes; and on the first of February following² he received a cordial letter from Chauncey, in which that gentleman said, "You are the very person that I want for a particular service, in which you may gain reputation for yourself and honor for your country." This service was the command of a naval force on Lake Erie. Perry was delighted; and his joy was complete when, on the 17th of the same month, he received orders from the Secretary of the Navy to report to Commodore Chauncey, at Sackett's Harbor, with all of the best men of his flotilla in Narraganset Bay. Before sunset that day he had dispatched Sailing-master Almy, with fifty men and officers, for the eastern shore of Lake Ontario. Two days afterward another company of fifty men were sent to the same destination, under Sailing-master Champlin; and on the 21st fifty more, under Sailing-master Taylor, left Providence and followed their companions. Twenty hours later Perry left his pleasant home in Newport, with his little brother Alexander, then only thirteen years of age, and was on his way in a sleigh. He stopped part of a day at Lebanon, in Connecticut, to visit his parents, and on the 28th he met Chauncey at Albany. They journeyed together northwardly through the Wilderness, and arrived at Sackett's Harbor on the evening of the 3d of March. There Perry remained a fortnight on account of an expected attack by the British. The menaces of danger ceased, and the young commander was ordered to proceed to Presqu' Isle (now Erie), and hasten the equipment of a little squadron then in process of construction there.³ He arrived at Buffalo on the 24th,

PERRY'S RESIDENCE.¹

Daniel Dobbins

¹ Perry's house, a well-preserved mansion, stood, when the writer sketched it in 1848, on the south side of Washington Square, Newport, a few doors from Thance Street. It was a spacious, square building, and was erected almost a century ago by Mr. Levi, a Jew. To that house Perry took his bride, a daughter of Dr. Mason, of Newport, and there she lived a widow almost forty years. She died in February, 1856.

² Erie was chosen for this purpose on the recommendation of Captain Daniel Dobbins, one of the most experienced navigators on Lake Erie. He suggested its advantages as a place for building gun-boats early in the autumn of 1812. The bay being completely land-locked, and its only entrance too shallow for large vessels to enter, but deep enough for the egress of gun-boats, he regarded it as the safest place on the lake for the construction of small vessels. He was appointed sailing-master in the navy at the middle of September, 1812,* and received instructions from the government to commence the construction of gun-boats at Erie. On the 12th of December he informed the Department that, under the lead of Ebenezer Crosby, a good shipwright, and such house-carpenters as he could supply, he had two of the gun-boats—50 feet keel, 17 feet beam, and 5 feet hold—on the stocks, and would engage to have them all ready by the time the ice was out of the lake.

* On his return from Detroit he was sent by General David Mead with dispatches to Washington. There he was summoned to a Cabinet council, and was fully interrogated concerning the lakes. His opinions were received with deference; and such was the confidence of the Cabinet in his judgment that he was appointed sailing-master, and directed to construct gun-boats at Erie.

spent the next day in examining vessels on the stocks at the navy yard at Black Rock, then superintended by Lieutenant Pettigru, and made arrangements for having stores forwarded to him. He pressed onward by land, and at an inn on the way he was informed by the keeper, who had just returned from Canada, that the British were acquainted with the movements at Erie, and would doubtless soon attempt to penetrate the harbor, and destroy the naval materials collected there.

The harbor of Erie is a large bay, within the embrace of a low, sandy peninsula that juts five miles into the lake, and a bluff of main land on which the pleasant village of Erie, the capital of Erie County, Pennsylvania, stands. The peninsula has sometimes been an island when its neck has been cleft by storms, and the harbor has been entered from the west by small vessels. Within the memory of living men Presqu' Isle (the peninsula) has been a barren sand-bank; now it is covered by a growth of young timber. It is deeply indented toward its extremity by an estuary called Little Bay. The harbor is one of the finest on the lake when gained, but at the period in question, and until lately, its entrance was by a shallow channel, tortuous and difficult on account of sand-bars and shoals. Although Presqu' Isle was a place of historic interest in colonial times,¹ it was an insignificant village in 1812, and less than twenty years of age.² Many miles of wilderness, or a very sparsely-populated country, lay between it and the thick settlements; and the supplies of every

Captain Dobbins was an efficient man and faithful officer. He was duly appointed a sailing-master in the navy, and was highly esteemed by Commodore Perry. He was born in Mifflin County, Pennsylvania, on the 6th of July, 1776, and first visited Erie, with a party of surveyors, in 1796. It was then a wilderness. He was there with General Wayne at the time of his death. He settled there, and became a navigator on the lakes. He was at Mackinaw with his vessel, the *Saltina*, when that place was captured by the British in 1812, and, with K. S. and William Reid, of Erie, he was paroled. At Detroit he was again made prisoner, and paroled unconditionally. He was very efficient in fitting out the squadron at Erie, and in the expedition, under Commodore Sinclair, that attempted to retake Mackinaw. After the war he was in command of the *Washington*, and in 1816 he conveyed troops in her to Green Bay. She was the first vessel, except a canoe, that ever entered that harbor. A group of islands in that vicinity were named Dobbins's Islands in honor of him. He was ordered to sea in 1826, when he resigned his commission in the navy, but remained in the government employment. In 1829 President Jackson appointed him commander of the revenue cutter *Rush*. He left active service in 1849, and died at the age of almost eighty-one, February 29, 1856. The likeness of Captain Dobbins, given on the preceding page, is from a portrait painted by Moses Billings, of Erie, when he was seventy-five years of age.

¹ Here was erected one of the chain of French forts in the wilderness which first excited the alarm and jealousy of the English colonies in America and the government at home. The remains of the ramparts and ditches, seen in the sketch on the opposite page, are very prominent upon a point overlooking the entrance to the harbor, which it commands, and a deep ravine, through which Mill Creek flows, within the eastern limits of the borough of Erie. The fort is supposed to have been erected early in 1749, that being the year when the French sent armed emissaries throughout the Ohio Valley to drive off the English traders. It was constructed under the direction of Jean Cœur (commonly written Joncaire in history), an influential Indian agent of the French governor general of Canada. This was intended

by the French for an important entrepôt of supplies for the interior forts; but when Canada passed into the possession of the English, a hundred years ago, the fort was abandoned, and fell into decay. General Wayne established a small garrison there in 1794, and caused a block-house to be built on the bluff part of Mill Creek, at the lake shore of Garrison Hill. On his return as victor over the Indians in the Maumee Valley, he occupied a log house near the block-house. There he died of gonorrhea, and, at his own request, was buried at the foot of the flag-staff. His remains were removed to Rodnor Church-yard, Pennsylvania, in 1809. The block-house fell into decay, and, in the winter of 1813-'14, another was built on its site: also one on the Point of the Peninsula of Presqu' Isle. The former remained until 1833, when some miscreant burnt it. It was the last relic of the War of 1812 in that vicinity. I am indebted to B. F. Sloan, Esq., editor of the *Erie Observer*, for the accompanying sketch of the block-house, made by Mr. Chevalier, of Erie. The view is from the ridge

WAYNE'S BLOCK-HOUSE AT ERIE.

of the water at the mouth of Mill Creek, just below the old mill. On the left is seen the open lake, and on the right of the block-house, where a small building is seen, was the place of the flag-staff and Wayne's grave.

² It was laid out in 1795, when reservations were made of certain lots for the use of the United States. The first white settler there was Colonel John Reid, from Rhode Island, who built a log cabin, enlarged it, and called it the *Presqu' Isle Hotel*, entertained travelers, soldiers, traders, speculators, and Indians, and laid the foundation of a large fortune. His son built the "Reid House," in Erie, one of the finest hotels in the country out of the large cities.

Perry's Arrival at Erie.

Construction of a Fleet begun.

kind, but timber, for naval preparations, had to be brought from far-away places with great labor. Zeal and energy overcame all difficulties.

Perry arrived at Erie, as we have observed, on the 27th of March. He established his quarters at Duncan's "Erie Hotel," and entered upon the duties of his important errand by calling around him the employés of the government there. Much preliminary work had already been done under the direction of the energetic Sailing-master Dobbins and Noah Brown, a shipwright from New York. Forest-trees around Erie had been felled and hewn; the keels of two twenty-gun brigs and a clipper schooner had been laid at the mouth of Cascade Creek; two gun-boats were nearly planked up at the mouth of Lee's Run, between the present Peach and Sassafras Streets; and a third, afterward call-

MOUTH OF CASCADE CREEK.²

BLOCK-HOUSE.

¹ This view of the entrance to Erie Harbor was taken from the site of the old French Fort de la Presqu' Isle, mentioned in the note on the preceding page. The mounds indicating the remains of the fort are seen on the right, and near them, in the centre of the picture, is a small building used as a powder-house. On the bluff on the extreme right is seen a little structure, indicating the site of the block-house mentioned in the note on the preceding page, which is not far from the present light-house. On the left, in the extreme distance, is Presqu' Isle Point, and in the water, piers that have been constructed for the improvement of the entrance channel, and a light-house.

² This is a view of the site of the navy yard at the mouth of the Cascade Creek, and of a portion of the harbor of Erie, made by the author early in September, 1860. The creek and the gentle cascade, which gives its appropriate name, are seen in the foreground. Beyond it, and the small boats seen in its waters, is the beach where the *Lawrence*, *Niagara*, and *Ariel* were built. On the clay and gravel bluff at the extreme right, the fence marks the site of a block-house built to protect the ship-yard, whose stout flag-staff, with cross-pieces for steps, served as an observatory. From its top a full view of the lake over Presqu' Isle could be seen. The lower part of the block-house was heavy, rough logs; the upper, or battery part, was made of hewn timber.

In the distance, in the centre of the picture, is seen the landing at Erie, and on the left the pier and light-house at the entrance to the harbor. Just behind the bluff, in the distance, is the mouth of Lee's Run, where the *Porcupine* and *Tigress* were built. The cascade is about fifteen feet in perpendicular fall in its passage over a ledge of slate rock, and is about one mile from the public square in Erie.

ed *Scorpion*, was just commenced. To guard against surprise and the destruction of the vessels by the British, a volunteer company of sixty men, under Captain Foster, had been organized. Captain Dobbins had also formed a guard of the ship-carpenters and other mechanics engaged on the vessels.

On the arrival of Sailing-master Taylor, on the 3d of March, with officers and men, Perry hastened to Pittsburg to urge forward supplies of every kind for the completion and equipment of his little squadron. He had already ordered Dobbins to Buffalo for men and munitions; and on his return^a he was gratified to find that faithful officer back and in possession of a twelve-pound cannon, four chests of small arms, and ammunition. The vessels, too, were in a satisfactory state of forwardness. They were soon off the stocks. Early in May the three smaller ones were launched, and on the 24th of the same month the two brigs were put afloat.¹

At sunset of the day before the launching of the brigs,^b Perry left Erie in an open four-oared boat, to join Chauncey in an attack upon Fort George, at the mouth of the Niagara River. The commodore had promised him the command of the marines in the enterprise. All night he buffeted the angry waves of Lake Erie, and arrived at Buffalo the next day. Perry was accompanied from Erie as far as Lewiston by his faithful coadjutor, Captain Dobbins. From that point the latter was sent back to Schlosser, to prepare boats for seamen who were to be sent up after the reduction of Fort George, and to the Black Rock navy yard, to hasten the equipment of some government vessels that were to join the growing squadron at Erie.

Fort George fell,^c Fort Erie was evacuated and burnt, and the British abandoned the entire line of the Niagara River. This enabled Perry to take safely from that stream into Lake Erie and the sheltering arms of Presqu' Isle five vessels which Henry Eckford had prepared for warlike service, and which had been detained below Buffalo by the Canadian batteries. They were loaded with stores at the Black Rock navy yard; and on the morning of the 6th of June, oxen, seamen, and two hundred soldiers, under Captains Brevoort and Younge, who had been detailed to accompany Perry to Erie, with strong ropes over willing shoulders commenced warping or "tracking" them up the swift current. It was a task of incredible labor, and occupied full six days.

The little flotilla² sailed from Buffalo on the 13th. Perry was in the *Caledonia*, sick with symptoms of bilious remittent fever. Head winds prevailed. "We made twenty-five miles in twenty-four hours," wrote Doctor Usher Parsons, Perry's surgeon, in his diary.³ It was not until the 19th that they entered the harbor of Erie, just in time to avoid the little cruising squadron of the enemy under the gallant Captain Finnis, of the Royal Navy, which had been on the look-out for them. Of this Perry had been informed, on his way, by men in a small boat that shot out from the southern shore of the lake, and he had prepared to fight. When the last vessel of the flotilla had crossed the bar at Erie, the squadron of the enemy hove in sight off Presqu' Isle Point.⁴ Three or four days afterward the flotilla went up to the mouth of the Cascade Creek, where the two brigs and a gun-boat lay.

Perry's fleet was completed and finished on the 10th of July; but, alas! he had

¹ The timber for the vessels was found on the spot. Their frames were made of white and black oak and chestnut, the outside planking of oak, and the decks of pine. Many trees found their places as timber in the vessels on the very day when they were felled in the forest.

² It consisted of the prize brig *Caledonia* (see page 886); the schooner *Somers* (formerly *Catharine*), carrying one long 24; schooner *Amelia* (formerly *Tigress*), carrying one long 18; and schooner *Ohio*, carrying one long 24; the sloop *Contractor* (now called *Trippe*), carrying one long 18. The commanders of this flotilla from Buffalo to Erie were Perry, Almy, Holdup, Darling, and Dobbins.

³ Doctor Usher Parsons, of Providence, Rhode Island, is the last surviving commissioned officer of Perry's fleet. I am greatly indebted to him for many valuable contributions to this portion of my work, both oral and written, especially for the use of his diary kept during the campaign of 1813. We shall meet him presently as the surgeon of the *Lance-rence*, Perry's flag-ship, in the battle of the 10th of September.

⁴ This cruising squadron consisted of the ship *Queen Charlotte*, mounting 17 guns; the fine schooner *Lady Prevost*, mounting 13 guns; the brig *Hunter*, a smaller vessel of 10 guns; the schooner *Little Belt*, of 8 guns; and the *Chippewa*, of 1 gun.

Brig *Lawrence* to be the Flag-ship.

Lack of Men.

Perry's Earnestness and Unselfishness.

only men enough to officer and man one of the brigs, and he was compelled to lie idle in the harbor of Erie, an unwilling witness of the insolent menaces of the enemy on the open lake. The brig that was to bear his broad pennant was named (by order of the Secretary of the Navy, received on the 12th) *Lawrence*, in honor of the gallant captain of the *Chesapeake*, who had just given his life to his country.^a The other brig was named *Niagara*, and the smaller vessels constructed at Erie were called respectively *Ariel* (the clipper schooner), *Porcupine*, and *Tigris*.^b But what availed these vessels without officers and crews? The two hundred soldiers lent as a guard for the flotilla on its voyage from Buffalo had been ordered back. Only Captain Brevoort, who was familiar with the navigation of the lake, remained, and he was assigned to the command of the marines of the *Niagara*. Perry was sick, and almost one fifth of his men were subjects for the hospital in the court-house, under Doctor Horsley, or the one near the site of Wayne's block-house, under Doctor Roberts. And yet the government, remiss itself in furnishing Perry with men, was calling loudly upon him to co-operate with Harrison. Twice within four days he received orders to that effect from the Secretary of the Treasury.^b Harrison, too, was sending messages to him recounting the perils of the situation of his little army, and intelligence came that a new and powerful vessel, called *Detroit*, was nearly ready for service at Malden. This was coupled with the assurance that the veteran Captain Robert H. Barclay, who had served with Nelson at Trafalgar, had arrived with experienced officers and men, and was in chief command of the hostile squadron seen off Presqu' Isle. In the bitterness of a mortified spirit Perry wrote to Chauncey,^c his chief, saying, "The enemy's fleet of six sail are now off the bar of this harbor. What a golden opportunity, if we had men! Their object is, no doubt, either to blockade or attack us, or to carry provisions and re-enforcements to Malden. Should it be to attack us, we are ready to meet them. I am constantly looking to the eastward; every mail and every traveler from that quarter is looked to as the harbinger of the glad tidings of our men being on the way. . . . Give me men, sir, and I will acquire both for *you* and myself honor and glory on this lake, or perish in the attempt. Conceive my feelings: an enemy within striking distance, my vessels ready, and not men enough to man them. Going out with those I now have is out of the question. You would not suffer it were you here. Think of my situation: the enemy in sight, the vessels under my command more than sufficient and ready to make sail, and yet obliged to bite my fingers with vexation for want of men."^d Again, on the 23d of July, when Sailing-master Champlin had arrived with seventy men, Perry wrote to Chauncey: "For God's sake, and *yours*, and mine, send me men and officers, and I will have them all [the British squadron] in a day or two. Commodore Barclay keeps just out of the reach of our gun-boats. . . . The vessels are all ready to meet the enemy the moment they are officered and manned. Our sails are bent, provisions on board, and, in fact, every thing is ready. Barclay has been bearding me for several days; I long to be at him." Then, with the most generous patriotism, he added, "However anxious I am to reap the reward of the labor and anxiety I have had on this station, I shall rejoice, whoever commands, to see this force on the lake, and surely I had rather be commanded by my friend than by any other. Come, then, and the business is decided in a few hours."

Perry's importunities were almost in vain. Few and mostly inferior men came to him from Lake Ontario, and, so far as the government was concerned, he was left to call them from the forest or the deep. When he gave Harrison the true reason for failing to co-operate with him, the Secretary of the Navy reproved him for exposing

¹ Two days afterward [July 21] the enemy were becalmed off the harbor, when Perry went out with three gun-boats from Cascade Creek to attack him. Only a few shots were exchanged, at the distance of a mile. One of Perry's shots struck the mizzen-mast of the *Queen Charlotte*. A breeze sprung up, and the enemy's squadron bore away to the open lake.

his weakness; and when he complained to Chauncey of the inferiority of the men sent to him—"a motley set, blacks, soldiers, and boys"—he received from the irritated commodore a letter so filled with caustic but half-concealed irony, that he felt constrained to ask for a removal from the station, because, as he alleged, he "could not serve longer under an officer who had been so totally regardless of his feelings."¹ A manly, generous letter from Chauncey soon afterward restored the kindness of feeling between them.

In the mean time the post of Erie had been seriously menaced. General Porter, at Black Rock, sent word that the enemy were concentrating at Long Point, on the Canada shore of the lake, opposite Erie. At about the same time a hostile movement was made toward Fort Meigs, and the British fleet mysteriously disappeared. No doubt was entertained of a design to attempt the capture of Erie, with the vessels and stores, by a combined land and naval force. A panic was the consequence. The families of many citizens fled with their valuables to the interior. Already a block-

house had been erected on the bluff east of Cascade Creek to protect the ship-yard,² and a redoubt mounting three long twelve-pounders had been planted on the heights (now called Garrison Hill), near the present light-house, and named Fort Wayne. Barracks had been erected in the village,³ and a regiment of Pennsylvania militia were encamped near Fort Wayne. The vessels were as well manned as possible, and boats rowed guard at the entrance to the harbor. But these means of defense were not considered sufficient, and Perry called on Major General David Mead, of Meadville, to re-enforce the troops with his militia. This was done,⁴ and in the course of a few days upward of fifteen hundred soldiers were concentrated at a rendezvous near. But an invasion from the lake was not attempted, owing, as was afterward ascertained, to the difficulty of collecting a sufficient number of troops in time at Long Point.

At the close of July Perry had about three hundred effective officers and men at

¹ Letter to the Secretary of the Navy, dated on board the *Lawrence*, at Erie, August 10, 1813.

² See note 2, page 511.

³ These occupied a portion of the space now bounded by Third and Fifth and State and Sassafras Streets. These objects and localities, and others, are indicated on the above map, in the construction of which I acknowledge and kindly afforded me by Giles Sanford, Esq., of Erie. The public square is indicated by the white space on the village plan, and the court-house by the shaded square within it.

⁴ Doctor Parsons wrote in his diary, under date of August 1, 1813, "General Mead, of Meadville, arrived two or three days ago, and, with his suite, came on board the *Lawrence* under a salute of thirty-two guns."

Erie, with which to man two 20-gun brigs and eight smaller vessels. The enemy disappeared and the lake was calm. He was so restive under the bearding of Barclay and the chafing from superiors, that he resolved with these to go out upon the lake and try the fortune of war. On Sunday, the first of August, he moved his flotilla down to the entrance of the harbor, intending to cross early the next morning. The lake was lower than usual, and the squadron would not float over the bar. Even the smaller vessels had to be lightened for the purpose, and at one time it was considered doubtful whether the *Lawrence* and *Niagara* could be taken out of the harbor at all. The flag-ship was tried first. Her cannon, not "loaded and shotted," as the historians have said (for they had been discharged in saluting General Mead), were taken out and placed on timbers on the beach, while the *Niagara* and smaller vessels lay with their broadsides toward the lake for her protection, in the event of the reappearance of Barclay.¹

By means of "camels"² the *Lawrence* was floated over on the morning of the 4th, and by two o'clock that day her armament was all on board of her, mounted and prepared for action. The *Niagara* was taken over in the same way with very little trouble, and the smaller vessels reached the deep water outside^a without much difficulty. The labor of this movement had been exciting and ex-^{a August 5, 1813.}hausting, and the young commander scarcely slept or partook of food during the four days. The enemy was expected every moment. Should he appear while the flotilla was on the bar, all might be lost. Fortunately, Commodore Barclay's social weakness—the inordinate love of public festivities—prolonged his absence, and his squadron did not leave in sight until the 5th, just as the *Niagara* was safely moving into deep water.³ The *Ariel*, Lieutenant Packet, and *Scorpion*, Sailing-master Champlin, were sent out boldly to engage and detain the squadron. Barclay was surprised at this movement, and perceiving that his golden opportunity was lost, he bore away toward Long Point. The whole of Perry's flotilla was in perfect preparation before night. That evening it weighed anchor,^b and stood toward Long Point^{b August 5.} on its first cruise. Perceiving no farther use for the militia, who were anxious to get into their harvest-fields, General Mead discharged them, and the armed citizens of Erie resumed their accustomed avocations.

Perry cruised between Erie and the Canada shore for two or three days, vainly searching for the enemy, who had gone to Malden to await the completion of the *Detroit*, a ship that would make the British force superior to that of the Americans. But the latter now received accessions of strength. On the 9th the squadron was joined at Erie by Captain Jesse D. Elliott,⁴ who brought with him about one hundred officers and superior men. With these he manned the *Niagara* and assumed command of her. Thus re-enforced, Perry resolved to sail up the lake and report himself ready to co-operate with Harrison.

The squadron left Erie on the 12th^c in double column, one line in regular^{c August.} battle order,⁵ and rendezvoused in an excellent harbor called Put-in-Bay,^d ^{d August 15.}

¹ Manuscript corrections of the text of M'Kenzie's *Life of Perry*, by Captain Daniel Dobbins, who assisted in the movement. I am indebted for the use of these notes to his son, Captain W. W. Dobbins, of Erie, Pennsylvania.

² A "camel" is a machine invented by the Dutch for carrying vessels over shallow places, as bars at the entrance of harbors. It is a huge box or kind of scow, so arranged that water may be let in or pumped out at pleasure. One of them is placed on each side of a vessel, the water let in, and the camels so sunken that, by means of ropes under the keel and windlasses, the vessel may be placed so that beams may bear it, resting on the camels. The water in the camels is then pumped out, they float, and the vessel, raised by them, is carried over the shallow place.

³ Captain Dobbins, in his MS. notes on M'Kenzie's *Life of Commodore Perry*, says that the citizens of Port Dover, a small village on Ryason's Creek, a little below Long Point, in Canada, offered Commodore Barclay and his officers a public dinner. The invitation was accepted. While that dinner was being attended Perry was getting his vessels over the bar, and thereby acquired power to successfully dispute the supremacy of Lake Erie with the British. At the dinner Captain Barclay remarked, in response to a complimentary toast, "I expect to find the Yankee brigs hard and fast on the bar at Erie when I return, in which predicament it will be but a small job to destroy them." Had Barclay been more mindful of duty, his expectations might have been realized. Captain Dobbins makes this statement on the authority of an old lake acquaintance, Mr. Ryason, who was at the dinner. ⁴ See page 388.

⁵ Perry's aggregate force of officers and men was less than four hundred. His squadron was composed as follows:

Islands around Put-in-Bay.

Harrison visits Perry on his Flag-ship.

Sickness in the Fleet.

formed by a group of islands known as the North, Middle, and South Bass, Put-in-Bay, Sugar, Gibraltar, and Strontian,¹ and numerous small islets, some of them containing not more than half an acre. These lie off Port Clinton, the capital of Ottawa County, Ohio. Nothing was seen of the enemy; and on the following day, toward evening, the squadron weighed anchor and sailed for Sandusky Bay, when a strange sail was discovered off Cunningham (now Kelly) Island by Champlin, of the *Scorpion*, who had been sent out as a sort of scout. He signaled and gave chase, followed for a short time by the whole squadron. It was a British schooner reconnoitring. She eluded her pursuers by darting among the islands that form Put-in-Bay, under cover of the night. A heavy storm of wind and rain came with the darkness. The *Scorpion* partly grounded, the schooner ran ashore in the gale, and the squadron lay at anchor all night.² On the following morning the point of the peninsula off Sandusky Bay was reached, when Perry fired signal-guns, according to agreement, to apprise Harrison at his quarters at Camp Seneca of his presence. That evening Colonel E. P. Gaines, with a few officers and a guard of Indians, appeared on board the *Lawrence*, and informed Perry that Harrison, with eight thousand men—militia, regulars, and Indians—was only twenty-seven miles distant. Boats were immediately dispatched to bring the general and his suite on board. He arrived late in the evening of the 19th, during a heavy rain, accompanied by his aids, M'Arthur and Cass, and other officers composing his staff, and a large number of soldiers and Indians, twenty-six of the latter being chiefs of the neighboring tribes, whose friendship it was thought important to maintain. The plan of the campaign was then arranged by the two commanders. The 20th,³ a bright and beautiful day, was spent in reconnoitring Put-in-Bay, with the view of concentrating the army there for transportation to Malden, and on the 21st the general returned to his camp.

¹ August, 1813.

Usher Parsons

As Harrison was not quite ready for the forward movement, Perry⁴ sailed^b on a reconnoitring expedition toward Malden, first ordering the ever-trusty Captain Dobbins to hasten with the *Ohio* to Erie on the important errand of procuring additional stores. He found the enemy within the mouth of the Detroit River. The new vessel had not yet joined the squadron, and he resolved to strike a bold blow. Unfavorable winds made the measure very perilous; and before the elements were propitious he was prostrated by an attack of bilious remittent fever, then very prevalent in the squadron. His surgeon and chaplain, and his young brother Alexander, who had accompanied him from Rhode Island, were also severely ill, and the assistant surgeon, Doctor Parsons, was too weak from a similar attack to walk.⁵ The enterprise was abandoned for the time, and

Lawrence, commanded by Commodore Perry; *Niagara*, Captain Elliott; *Caledonia*, Purser M'Orath; *Ariel*, Lieutenant Packet; *Somers*, Sailing-master Almy; *Tigress*, Master's-mate M'Donald; *Scorpion*, Sailing-master Champlin; *Percussive*, Midshipman Senat; *Ohio*, Sailing-master Dobbins; *Tripple*, Lieutenant Smith.

¹ So named because of the quantity of that mineral found there.
² Parsons's Diary. MS. statement of Captain Champlin, communicated to the Author.
³ "Though so ill as to be incapable of walking," says M'Kenzie, "with a humane self-devotion most honorable to him, he continued to attend at the bedside of the sick, to which he was carried, and to prescribe for them, not only as

PUT-IN-BAY.

forcement of thirty-six men, to act as marines and supply the places of some of the sick.

At the end of a week's confinement Perry gave orders for another cruise, and on the first of September the squadron weighed anchor and sailed again for Malden, where he challenged Borelay, who did not then choose to respond, but, under shore batteries, lay securely and unmoved. On the following morning Perry sailed for Sandusky Bay, to communicate with General Harrison, and then, with his whole squadron, returned to anchorage in Put-in-Bay.¹

board of the *Lawrence*, but of the smaller vessels, being lifted for the purpose in his cot, and the sick brought on deck for his prescriptions."—*Life of Perry*, i., 203.

Usher Parsons was born at Alfred, Maine, on the 18th of August, 1788. He chose the medical profession as a life-pursuit, and studied with Dr. John Warren, of Cambridge, Massachusetts. On the promulgation of the declaration of war he entered the navy as surgeon's mate. He volunteered to accompany Perry to Lake Erie with the crew of the *John Adams*. In the battle on Lake Erie, described in the next chapter, he was on the flag-ship *Lawrence* as acting surgeon, his superior being too ill to attend to his duties. Indeed, the duties of both Dr. Barton and Dr. Horseley devolved on Dr. Parsons when the battle was over. Speaking of him in a letter to the Secretary of the Navy, Perry said: "I can only say that in the event of my having another command, I should consider myself particularly fortunate in having him with me as a surgeon." In 1814 he served on the upper lakes under Commodore Sinclair. At the request of Perry, Parsons became the surgeon of the new frigate *Jara*, 44, commanded by the hero of Lake Erie. After ten years' service in the navy he retired, settled as a physician and surgeon in Providence, Rhode Island, was professor in Brown University and other colleges, president of the Rhode Island Medical Society, and first vice-president of the National Medical Society. In 1822 he married a daughter of Rev. Dr. Holmes, of Cambridge, the author of the *Annals of America*. She died three years afterward, bearing one son, Dr. Charles W. Parsons, now (1867) president of the Rhode Island Medical Society. Dr. Parsons is the author of several medical works and historical discourses, and a well-written *Life of Sir William Pepperell, Bart.* Dr. Parsons is still (1867) in the enjoyment of perfect physical and mental health, at the age of seventy-nine years.

¹ Put-in-Bay Harbor is on the north side of Put-in-Bay Island, one of the largest of the group of about twenty in that neighborhood. The view of the harbor from Put-in-Bay Island, given above, is from a drawing made on the spot, in September, 1809, by Captain Van Cleave, a veteran Lake Ontario steam-boat commander, who kindly presented it to me. Directly in front is seen Gibraltar Island, and the place of "Perry's Look-out," delineated in the little picture at the beginning of the next chapter, is indicated by the flag. The smoke in the distance points out the place of the battle, ten miles in a northwesterly direction from Put-in-Bay. The Bass Islands are seen on the right, and Rattlesnake Island on the left. The beaches of all are chiefly of white pebbles. The view is from Put-in-Bay Island, near the landing.

CHAPTER XXV.

"September the tenth, full well I ween,
In eighteen hundred and thirteen,
The weather mild, the sky serene,
Commanded by bold Perry,
Our saucy fleet at anchor lay
In safety, moor'd at Put-in-Bay;
'Twi'xt sunrise and the break of day,
The British fleet
We chanced to meet;
Our admiral thought he would them greet
With a welcome on Lake Erie."—OLD SONG.

"ALL ho!" were the stirring words that rang out loud and clear from the mast-head of the *Laurence* on the warm and pleasant morning of the 10th of September, 1813. That herald's proclamation was not unexpected to Perry. Five days before he had received direct and positive information from Malden that Proctor's army were so short of provisions that Barclay was preparing to go out upon the lake, at all hazards, to open a communication with Long Point, the chief deposit of supplies for

the enemy on the banks of the Detroit River. Perry had made preparations accordingly; and, day after day, from the rocky heights of Gibraltar Island, now known as

PERRY'S LOOK-OUT, GIBRALTAR ISLAND, PUT-IN-BAY.¹

"Perry's Look-out," he had pointed his glass anxiously in the direction of Malden.¹ On the evening of the 9th he called around him the officers of his squadron, and gave instructions to each in writing, for he was determined to attack the enemy at his anchorage the next day if he did not come out. His plan was to bring on a close action at once, so as not to lose the advantage of his short carronades. To each vessel its antagonist on the British side was assigned, the size and character of them having been communi-

¹ Perry also kept two of the smaller vessels as look-outs in the vicinity of the Sisters Islands.
² This little picture is from a painting made on the spot by Miss C. L. Ransom, who kindly permitted me to copy it (see page 565). "Perry's Look-out" is on the left, and is composed of limestone piled about fifty feet above the water. In front is a natural arch. On the summit is a representation of a monument proposed to be erected there, of which the corner-stone was laid several years ago with imposing ceremonies. On the left are seen the graves of some sailors who died of cholera. In the middle is seen Rattlesnake Island. On the right, in the extreme distance, is North Bass Island, and between the two is the passage toward Detroit. The Middle Bass is also seen on the right. This is a faithful copy of Miss Ransom's picture, with the exception of time. It has been made a moonlight scene, for effect, instead of a daylight one.

Near the site of the proposed monument, Jay Cooke, an eminent banker, has a fine dwelling, and on the foundations

ated to him by Captain Brevoort,¹ whose family lived in Detroit. The *Lawrence* was assigned to the *Detroit*; the *Niagara*, to the *Queen Charlotte*, and so on; and to each officer he said, in substance, Engage your antagonist in close action, keeping on the line at half-cable length from the vessel of our squadron ahead of you.

It was about ten o'clock when the conference ended. The moon was at its full, and it was a splendid autumn night. Just before they parted, Perry brought out a large square battle-flag, which, at his request, Mr. Hambleton,² the purser, had caused to be privately prepared at Erie. It was blue, and bore, in large letters, made of white muslin, the alleged dying words of the gallant commander of the *Chesapeake*, "DON'T GIVE UP THE SHIP!" "When this flag shall be hoisted to the main-royal mast-head," said the commodore, "it shall be your signal for going into action." As the officers were leaving, he said, "Gentlemen, remember your instructions. Nelson has expressed my idea in the words, 'If you lay your enemy close alongside, you can not be out of your place.' Good-night."

PERRY'S BATTLE-FLAG.³

The cry of "Sail ho!" was soon followed by signals to the fleet of "Enemy in sight;" "Get underweigh;" and the voices of the boatswains sounding through the squadron and echoing from the shores the command, "All hands up anchor, ahoy!" At sunrise the British vessels were all seen upon the northwestern horizon—

"Six barques trained for battle, the red flag displaying,
By Barclay commanded, their wings wide outspread,
Forsake their strong-hold, on broad Erie essaying
To meet with that foe they so lately did dread."—OLD BALLAD.

A light wind was blowing from the southwest. Clouds came upon it from over the Ohio wilderness, and in passing dropped a light shower of rain. Soon the sky became serene, and before ten o'clock, when, by the aid of the gentle breeze in beat-

¹ prepared for that monument he caused to be erected, in 1866, a small one, composed of yellowish limestone. It is about ten feet in height, and surmounted by a bronze vase for flowers. On its sides are naval devices of the same metal.

² Henry Brevoort, of New York, was commissioned Second Lieutenant in Third Infantry in 1801. He commanded transports on Lake Erie, and in May, 1811, was promoted to captain. He distinguished himself in the battle of Magna (see page 279), and also as commander of marines in the *Niagara* in the battle of Lake Erie. He received a silver medal for his gallantry there. He was promoted to major in 1814, and was disbanded in 1815. In 1822 he was made United States Indian Agent at Green Bay.—*Gardner's Dictionary of the Army*.

³ Samuel Hambleton was a native of Talbot County, Maryland, where he was born in 1777. He was first a merchant, then a clerk in the Navy Department, and in 1806 was appointed purser in the navy. After the battle of Lake Erie, the officers and crews of the American squadron appointed him prize agent, and more than \$200,000 passed through his hands. He left the lake in 1814, and performed good service afloat and ashore for many years. He died at his residence in Maryland, near St. Michael's, called "Perry's Cabin," January 17, 1851.

⁴ This is a picture of the flag as seen in the Trophy Room of the Sanitary Fair in the City of New York in the month of April, 1864. It is between eight and nine feet square. The form of the letters is preserved in the engraving. They are about a foot in length, and might be seen at a considerable distance.

The following lines, in allusion to this flag, are from a fine poem on *The Hero of Lake Erie*, by Henry T. Tuckerman, Esq.:

"Behold the chieftain's glad, prophetic smile,
As a new banner he unrolls the while;
Hear the gay shout of his clated crew
When the dear watchword hovers to their view,
And Lawrence, silent in the arms of death,
Bequeaths defiance with his latest breath!"

Perry's Determination to fight.	Names and Character of the opposing Vessels.	Signal for Battle.
---------------------------------	--	--------------------

ing and strong arms with oars, the squadron had passed out from the labyrinth of islands into the open lake, within five or six miles of the enemy, not a cloud was hanging in the firmament, nor a fleck of mist was upon the waters. It was a splendid September day.

Perry was yet weak from illness when the cry of "Sail ho!" was repeated to him by Lieutenant Dulaney Forrest. That announcement gave him strength, and the excitement of the hour was a tonic of rare virtue. The wind was variable, and he tried in vain to gain the weather-gage of the enemy by beating around to the windward of some of the islands. He was too impatient to fight to long brook the waste of precious time in securing an advantage so small with a wind so light. "Run to the leeward of the islands," he said to Taylor, his sailing-master.¹ "Then you will have to engage the enemy to leeward," said that officer, in a slightly remonstrant manner. "I don't care," quickly responded Perry; "to windward or to leeward, they shall fight to-day." The signal to wear ship followed immediately, when the wind shifted suddenly to the southeast, and enabled the squadron to clear the islands, and to keep the weather-gage. Perceiving this, Barclay hove to, in close order, and awaited Perry's attack. His vessels, newly painted and with colors flying, made an imposing appearance. They were six in number,² and bore sixty-three carriage-guns, one on a pivot, two swivels, and four howitzers. Perry's squadron numbered nine vessels, and bore fifty-four carriage-guns and two swivels.³ Barclay had *thirty-five* long guns to Perry's *fifteen*, and possessed greatly the advantage in action at a distance. In close action, the weight of metal was with the Americans, and for that reason Perry had resolved to close upon the enemy at once. The British commander had one hundred and fifty men from the royal navy, eighty Canadian sailors, two hundred and forty soldiers, mostly regulars, and some Indians. His whole force, officers and men, was a little more than five hundred. The American commander had upon his muster-roll four hundred and ninety names. Of these the bearers of one hundred and sixteen were sick, and most of them too weak to go upon deck. About one fourth of Perry's crew were from Rhode Island; one fourth were regular seamen, American and foreign; about one fourth were raw volunteers, chiefly from Kentucky; and about another fourth were negroes.

At a little past ten o'clock Perry's line was formed according to the plan arranged the previous evening, the *Niagara* in the van. The *Lawrence* was cleared for action, and the battle-flag, bearing the words "DON'T GIVE UP THE SHIP," in letters large enough, as we have observed, to be seen by the whole squadron, was brought out and displayed. The commodore then addressed his officers and crew a few stirring words, and concluded by saying, "My brave lads! this flag contains the last words of Captain Lawrence. Shall I hoist it?" "Ay, ay, sir!" they all shouted, as with one voice, and in a moment it was run up to the main-royal mast-head of the flag-ship, amid cheer after cheer, not only from the *Lawrence*, but the whole squadron. It was the signal for battle.

¹ William Vigeron Taylor was of French descent. He was a captain in the merchant service, and entered that of the navy under Perry as sailing-master. Perry esteemed him highly, and made him sailing-master of his flag-ship on Lake Erie. He rendered efficient service in the fitting out of the squadron. In the battle on the 10th of September he received a wound in the thigh, but kept the deck until the close. On the return of the *Lawrence* to Erie, Mr. Taylor was sent with dispatches to Chauncey. In 1814 he was commissioned a lieutenant in the navy. He was promoted to commander in 1831, and to post captain in 1841. He commanded the sloop *Warren* and *Erie* in the Gulf of Mexico. After his promotion to post captain he was placed in command of the ship-of-the-line *Ohio*, and took her around Cape Horn to the Pacific. He was then sixty-eight years of age. On the 11th of February, 1851, he died of apoplexy, in the seventy-eighth year of his age.

It is proper here to mention that most of the biographical sketches of the officers of Perry's squadron contained in this chapter are compiled from a paper on the subject from the pen of Dr. Usher Parsons, published in the *New England Historical and Genealogical Register for January, 1863*.

² These were as follows: Ship *Detroit*, 19 guns, 1 in pivot, and 2 howitzers; ship *Queen Charlotte*, 17, and 1 howitzer; schooner *Lady Prevost*, 13, and 1 howitzer; brig *Hunter*, 10; sloop *Little Bell*, 3; and schooner *Chippewa*, 1, and 2 swivels.

³ These were as follows: Brig *Lawrence*, 20 guns; brig *Niagara*, 20; brig *Caledonia*, 8; schooner *Ariel*, 4; schooner *Scorpion*, 2, and 2 swivels; sloop *Tripp*, 1; schooner *Tigress*, 1; and schooner *Porcupine*, 1. The *Ohio*, Captain Dobbins, had gone to Erie for supplies, and was not in the action.

Perry's Care for his Men.

Change in the Order of Battle.

Biographical Sketch of Perry.

OLIVER H. PERRY.

As the dinner-hour would occur at the probable time of action, the thoughtful Perry ordered refreshments to be distributed. The decks were then wetted and sprinkled with sand so that feet should not slip when blood should begin to flow. Then every man was placed in proper position. As the squadron moved slowly and silently toward the enemy, with a gentle breeze, at the rate of less than three knots, the *Niagara*, Captain Elliott, leading the van, it was discovered that Barclay had made a disposition of his force that required a change in Perry's prescribed order of battle. It was instantly made, and the American squadron moved to the attack in the order best calculated to cope with the enemy. Barclay's vessels were near together. The flag-ship *Detroit*,

Oliver Hazard Perry was born in South Kingston, Rhode Island, on the 23d of August, 1785. His father was then in the naval service of the United States. He entered the navy as midshipman at the age of fifteen years, on board the sloop-of-war *General Greene*, when war with France seemed inevitable. He first saw active service before Tripoli, in the squadron of Commodore Preble. He was commissioned a lieutenant in 1810, and placed in command of the schooner *Revenge*, attached to Commodore Rodgers's squadron in Long Island Sound. She was wrecked, but his conduct in saving public property was highly applauded. Early in 1813 he was placed in command of a flotilla of gun-boats in Newport Harbor. After his victorious battle on Lake Erie in 1813, he was promoted to post-captain, and at the close of the war he was placed in command of the *Java*, 44, a first-class frigate, and sailed with Decatur for the Mediterranean Sea.

VIEW OF PERRY'S BIRTH-PLACE.

On his return, while his vessel was lying in Newport Harbor, in mid-winter, a fearful storm arose. He heard of the wreck of a merchant vessel upon a reef six miles distant. He immediately manned his barge and said to his crew, "Come, my boys, we are going to the relief of shipwrecked seamen; pull away!" He rescued eleven almost exhausted seamen from death.

On account of piracies in the West Indies, the United States government determined to send a little squadron there for the protection of American commerce. Perry was assigned to the command of it, and in 1819 he sailed in the *John Adams*, accompanied by the *Non-such*. In August he was attacked by the yellow fever, and on his

birthday (August 23d) he expired, at the age of thirty-four years. He was buried at Port Spain, Trinidad, with military honors. His death produced a most profound sensation throughout the United States, for it was regarded as a great public calamity. Tributes of national grief were displayed, and the Congress of the United States made a liberal provision for his family, and his mother, who was dependent on him for support. In 1826 his remains were conveyed from Trinidad to Newport in the sloop-of-war *Lexington*, and landed on the 27th of November. On Monday (December 4th) following he was interred with funeral honors due to his rank. His coffin rested in a sort of *catfalco*, the lower part being in the form of a boat. The canopy was decorated with stars and

CATAFALCO.

PERRY'S MONUMENT.

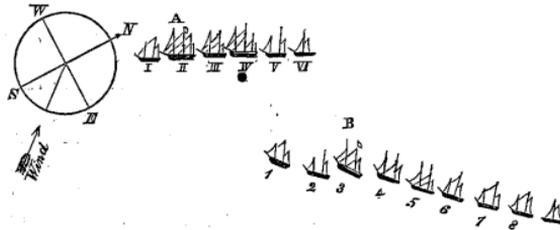

trimmed with black curtains, and at each corner were black plumes. The State of Rhode Island afterward caused to be erected a substantial granite monument to his memory. It stands upon a grassy mound on the west side of the Island Cemetery, and at the base rest the remains of the commodore and the deceased of his family. The monument bears the following inscriptions. *East side*: "OLIVER HAZARD PERRY. At the age of 27 years he achieved the victory of Lake

Relative Position of the two Squadrons.

Opening of the Battle.

Choice of Antagonists.

19, was in the van supported by the schooner *Chippewa*, with one long 18 on a pivot, and two swivels. Next was the brig *Hunter*, 10; then the *Queen Charlotte*, 17, commanded by Finnis. The latter was flanked by the schooner *Lady Prevost*, 13, and the *Little Belt*, 3. Perry, in the brig *Lawrence*, 20, moved forward, flanked on the left by the schooner *Scorpion*, under Champlin, bearing two long guns (32 and 12), and the schooner *Ariel*, Lieutenant Packet, which carried four short 12's. On the right

THE TWO SQUADRONS JUST BEFORE THE BATTLE.

of the *Lawrence* was the brig *Caledonia*, Captain Turner, with three long 24's. These were intended to encounter the *Chippewa*, *Detroit*, and *Hunter*. Captain Elliott, in the fine brig *Niagara*, 20, followed, with instructions to fight the *Queen Charlotte*; while Almy, in the *Somers*, with two long

32's and two swivels, Senat, in the *Porcupine*, with one long 32, Conklin, in the *Tigress*, with one long 24, and Holdup, in the *Trippie*, one long 32, were left in the rear to engage the *Lady Prevost* and *Little Belt*.¹

The sun was within fifteen minutes of meridian when a bugle sounded on board the *Detroit* as a signal for action, and the bands of the British squadron struck up "Rule Britannia." A shout went up from that little squadron, and a 24-pound shot from the enemy's flag-ship was sent booming over the water toward the *Lawrence*, then a mile and a half distant. It was evident that Barclay appreciated the advantage of his long guns, and wished to fight at a distance, while Perry resolved to press to close quarters before opening his fire.

That first shot from the enemy fell short. Another, five minutes later, went crashing through the bulwarks of the *Lawrence*. It stirred the blood of her gallant men, but, at the command of Perry, she remained silent. "Steady, boys! steady!" he said, while his dark eye flashed with the excitement of the moment—an excitement which was half smothered by his judgment. Slowly the American line, with the light wind abeam, moved toward that of the enemy, the two forming an acute angle of about fifteen degrees.

"Sublime the pause, when down the gleaming tide
The virgin galleys to the conflict glide;
The very wind, as if in awe or grief,
Scarce makes a ripple or disturbs a leaf."—H. T. TUCKERMAN.

Signals were given for each vessel to engage its prescribed antagonist. At five minutes before twelve the *Lawrence* had reached only the third one in the enemy's line, and was almost as near the *Queen Charlotte* as the *Detroit*, with the *Caledonia* half-length behind, and the *Niagara* abaft the beam of the *Charlotte* and opposite the *Lady Prevost*.

The battle now began on the part of the Americans. The gallant young Champlin,

Erie, September 10, 1818." *North side*: "Born in South Kingston, R. I., August 23, 1785. Died at Port Spain, Trinidad, August 23, 1819, aged 34 years." *West side*: "His remains were conveyed to his native land in a ship-of-war, according to a resolution of Congress, and were here interred December 4, 1826." *South side*: "Erected by the State of Rhode Island."

In person Commodore Perry was tall and well-proportioned, of exquisite symmetry, and graceful in every movement. He was every inch a man. He possessed splendid talents; was prudent and brave in the highest degree. In private life he was gentle, and his conjugal love and faithfulness were perfect. His respect for his wife amounted to reverence, and he was ever ready to acknowledge her salutary influence. Doctor Parsons relates that his first remark on regaining the *Lawrence*, after the battle, was addressed to his friend Hambleton, the purser. He said, "The prayers of my wife have prevailed in saving me."

¹ The above diagram shows the position of the two squadrons when the American was approaching that of the British in battle order. A is the British squadron, and its vessels are designated by Roman numerals. 1, *Chippewa*; 2, *Detroit*; 3, *Hunter*; 4, *Queen Charlotte*; 5, *Lady Prevost*; 6, *Little Belt*. B is the American squadron, and the vessels are designated by Arabic numerals. 1, *Scorpion*; 2, *Ariel*; 3, *Lawrence*; 4, *Caledonia*; 5, *Niagara*; 6, *Somers*; 7, *Porcupine*; 8, *Tigress*; 9, *Tripps*. I have been furnished with these diagrams by Commodore Stephen Champlin, of the U. S. Navy, the commander of the *Scorpion* in the battle.

The first Shot fired by the Americans. -Sailing-master Champlin. First Position of the Vessels in the Fight.

then less than twenty-four years of age, who still (1867) lives to enjoy a well-earned reputation,¹ had already fired the first (as he did the last) shot of the battle from the guns of the *Scorpion*.

"But see that silver wreath of curling smoke—
'Tis Barclay's gun! The silence now is broke.
Champlin, with rapid move and steady eye,
Sends back in thunder-tones a bold reply."

This was followed by a cannonade from Packet,² of the *Ariel*; and then the *Lawrence*, which had begun to suffer considerably from the enemy's missiles, opened fire upon the *Detroit* with her long bow-gun, a twelve-pounder. The action soon became general. The smaller, slow-sailing vessels had fallen in the rear, and when the battle began the *Trippe* was more than two miles from the enemy.

The *Scorpion* and *Ariel*, both without bulwarks, fought bravely, and kept their places with the *Lawrence* throughout the entire action. They did not suffer much, for the enemy concentrated his destructive energies upon the *Lawrence* and neglected the others.

From the *Detroit*, the *Hunter*, the *Queen Charlotte*, and even from the *Lady Prevost*, shots were hurled upon the American flag-ship, with the determination to destroy her and her gallant commander, and then to cut up the squadron in detail. No less than thirty-four heavy guns were brought to bear upon her. The *Caledonia*, with her long guns, was enabled to do good ex-

Stephen Champlin

FIRST POSITION IN THE ACTION.³

¹ Stephen Champlin was born in South Kingston, Rhode Island, on the 17th of November, 1789. His father was a volunteer soldier in the Revolution. His mother was a sister of Commodore Perry's father, making the two commanders first cousins. He went to sea as a sailor at the age of sixteen years, and at the age of twenty-two, having passed through all grades, he was captain of a ship that sailed from Norwich, Connecticut. On the 23d of May, 1812, he was appointed sailing-master in the navy, and commanded a gun-boat, under Perry, at Newport. As we have seen, he was sent to Lake Erie. On his arrival he was appointed to the command of the *Scorpion*, which he gallantly managed throughout the battle. Subsequently to the battle he was placed in command of the *Queen Charlotte* and *Detroit*, two private-ships taken from the enemy. In the spring of 1814 he was placed in command of the *Tygres*, under Commander Sinclair, and, with Captain Turner, he blockaded the port of Mackinaw. His services on the Upper Lake will be noticed in the future text. Suffice it to say here that he was severely wounded in the thigh while in that service by a causter-shot, and taken prisoner. That wound has been troublesome to him until this hour. In 1816 he was appointed to the command of the *Porcupine*, and conveyed a party of topographical engineers to the Upper Lakes, who were to consider the boundary-line between the United States and Great Britain. His wound prevented his doing much active service. He was ordered to the steam-ship *Fulton* at New York, and had left her but a short time when she blew up. In 1842 he was placed in command of the naval rendezvous at Buffalo, and was successful in shipping apprentices for the service. In 1845 he was ordered to the command of the *Nichigan* at Erie, and continued there about four years and a half. A few years ago he was placed on the reserve list, with full pay, and remains so. He now bears the title of commodore. He resides at Buffalo, and, with the exception of the sufferings caused by his wound, he is in the enjoyment of fair health, at the age of seventy-eight years. He is a stout, thick-set man, of middle size. He is the last survivor of the nine commanders in Perry's squadron in the great battle in 1813.

² John R. Packet was a native of Virginia. He received his warrant as midshipman in 1809, and was commissioned a lieutenant a few days before this battle. He was with Bainbridge when the *Constitution* captured the *Jaca*. He served at Erie some years after the battle, and died there of fever.

³ The acting sailing-master of the *Ariel* in the battle, Thomas Brownell, was from Rhode Island, and went to Erie as master's-mate, where he was promoted. He was commissioned a lieutenant in 1845, when he was placed on the retired list. He now (1867) resides at Newport, Rhode Island. He was always an active and esteemed officer.

⁴ This diagram shows the position of the vessels at the beginning of the action. The British vessels, A, are indicated by Roman numerals, and the American vessels, B, by Arabic. I., *Chippewa*; II., *Detroit*; III., *Hunter*; IV., *Queen*

ecution from the beginning, but the shot of the carronades from the *Niagara* fell short of her antagonist. Of her twenty guns, only a long 12 was serviceable for a while. Shifting another, Elliott brought two to bear with effect, and these were served so vigorously that nearly all of the shot of that calibre were exhausted. The smaller vessels meanwhile were too far astern to be of much service.

Perry soon perceived that he was yet too far distant to damage the enemy materially, so he ordered word to be sent from vessel to vessel by trumpet for all to make sail, bear down upon Barclay, and engage in close combat. The order was transmitted by Captain Elliott, who was the second in command, but he failed to obey it himself.¹ His vessel was a fast sailer, and his men were the best in the squadron, but he kept at a distance from the enemy, and continued firing his long guns. Perry meanwhile pressed on with the *Lawrence*, accompanied by the *Scorpion*, *Ariel*, and *Caledonia*, and at meridian exactly, when he supposed he was near enough for execution with his carronades, he opened the first division of his battery on the starboard side on the *Detroit*. His balls fell short, while his antagonist and her consorts poured upon the *Lawrence* a heavy storm of round shot from their long guns, still leaving the *Scorpion* and *Ariel* almost unnoticed. The *Caledonia* meanwhile engaged with the *Hunter*, but the *Niagara* kept a respectful distance from the *Queen Charlotte*, and gave that vessel an opportunity to go to the assistance of the *Detroit*. She passed the *Hunter*, and, placing herself astern of the *Detroit*, opened heavily upon the *Lawrence*, now, at a quarter past twelve, only musket-shot distance from her chief antagonist. For two hours the gallant Perry and his devoted ship bore the brunt of the battle with twice his force, aided only by the schooners on his weather-bow and some feeble shots from the distant *Caledonia* when she could spare them from her adversary the *Hunter*. During that tempest of war his vessel was terribly shattered. Her rigging was nearly all shot away; her sails were torn into shreds; her spars were battered into splinters; her guns were dismounted; and, like the *Guerriere* when disabled by the *Constitution*, she lay upon the waters almost a helpless wreck. The carnage on her deck had been terrible. Out of one hundred and three sound men that composed her officers and crew when she went into action, twenty-two were slain and sixty-one were wounded. Perry's little brother had been struck down by a splinter at his side, but soon recovered.² Yarnall,³ his first lieutenant, had come to him bleeding, his nose swelled to an enormous size, it having been perforated by a splinter, and his whole appearance the impersonation of carnage and ill luck, and said, "All the officers in my division are cut down; can I have others?" They were sent; but Yarnall soon returned, again wounded and bleeding profusely, with the same sad story. "I have no more officers to furnish you," replied Perry; "you must endeavor to make out by yourself." The brave lieutenant did so. Thrice wounded, he kept the deck, and directed every shot from his battery in person. Forest, the second lieutenant, fell stunned at Perry's feet;⁴ and the gallant Brooks,

Charlotte; V., *Lady Prevost*; VI., *Little Belt*. 1, *Scorpion*; 2, *Ariel*; 3, *Lawrence*; 4, *Caledonia*; 5, *Niagara*; 6, *Somers*; 7, *Porcupine*; 8, *Tigress*; 9, *Tripple*.

¹ Dr. Usher Parsons's *Discourse on the Battle of Lake Erie*, delivered before the Rhode Island Historical Society, February 16, 1852, page 10.

² Two musket-balls had already passed through his hat, and his clothes had been torn by splinters.

³ John J. Yarnall was a native of Pennsylvania, and was commissioned a lieutenant in July, 1813, having been in the service as midshipman since 1809.

Ten days after the battle on Lake Erie he was sent to Erie with the *Lawrence*, and soon afterward was ordered to the *John Adams*. He was appointed commander of the *Epervier* in 1815. She was

the dedication of the statue of Perry in that city in September, 1860. I copied the following inscription from the blade: "In testimony of the undaunted gallantry of Lieutenant John J. Yarnall, of the United States ship *Lawrence*, under Commodore Perry, in the capture of the whole English fleet on Lake Erie, September 10, 1813, the State of Virginia bestows this sword." It was brought from Wheeling to Cleveland by Mr. Fleming, of the former place.

⁴ He was struck in the breast by a spent grape-shot. Perry raised him up, assured him that he was not hurt, as there

John J. Yarnall

lost at sea with all on board. The State of Virginia presented Lieutenant Yarnall with a sword soon after the battle of Lake Erie. It was exhibited at the head-quarters of the Old Soldiers at Cleveland, on the occasion of

Death of Lieutenant Brooks.

Terrible Scenes on board the *Lawrence*.

Strange Conduct of Captain Elliott.

so remarkable for his personal beauty,¹ a son of an honored soldier of the old war for independence, and once governor of Massachusetts, was carried in a dying state to the cockpit, where balls were crashing through, his mind more exercised about his beloved commander and the fortunes of the day than himself. When the good surgeon, Parsons, who had hastened to the deck on hearing a shout of victory, returned to cheer the youth with the glorious tidings, the young hero's ears were closed—the doors of the earthly dwelling of his spirit were shut forever.²

While the *Lawrence* was being thus terribly smitten, officers and crew were anxiously wondering why the *Niagara*—the swift, stanch, well-manned *Niagara*—kept aloof, not only from her prescribed antagonist the *Queen Charlotte*, now battling the *Lawrence*, but the other assailants of the flag-ship. Her commander himself had passed the order for close conflict, yet he kept far away; and when afterward censured, he pleaded in justification of his course his perfect obedience to the original order to keep at "half-cable length behind the *Caledonia* on the line." It may be said that his orders to fight the *Queen Charlotte*, who had left her line and gone into the thickest of the fight with the *Lawrence* and her supporting schooners, were quite as imperative, and that it was his duty to follow. This he did not do until the guns of the *Lawrence* became silent, and no signals were displayed by, nor special orders came from Perry. These significant tokens of dissolution doubtless made Elliott believe that the commodore was slain, and himself had become the chief commander of the squadron. He then hailed the *Caledonia*, and ordered Lieutenant Turner³ to

were no signs of a wound, and, thus encouraged, he soon recovered from the shock. The ball had lodged in his clothes. "I am not hurt, sir," he said to the commander, "but this is my shot," and coolly put it in his pocket.

¹ John Brooks was a native of Massachusetts. He studied medicine with his father. Having a military taste, he obtained the appointment of lieutenant of marines, and was stationed at Washington when the war broke out. He was sent to Lake Erie under Perry; and at Erie, while the squadron was a-building, he was engaged in recruiting for the service. There he raised a company of marines for the squadron. He was an excellent drill officer, and gave great promise of future distinction. So intense was his agony when he fell, his hip having been shattered by a cannon-ball, that he begged Perry to shoot him. He died in the course of an hour. "Mr. Brooks," says Doctor Parsons, "was probably surpassed by no officer in the navy for manly beauty, polished manners, and elegant personal appearance."

² The scenes on board the *Lawrence*, as described to me by Doctor Parsons, must have been extremely terrible. The vessel was shallow, and the ward-room, used as a cockpit, to which the wounded were taken, was mostly above water, and exposed to the shots of the enemy; while nothing but the deck-planks separated it from the terrible tumult above, caused by the groans and shrieks of the wounded and dying, the deep rumbling of the gun-carriages, the awful explosions of the cannon, the crash of round-shot as they splintered spars, stove the bulwarks, dismounted the heavy ordnance, and cut the rigging, while through the seams of the deck blood streamed into the surgeon's room in many a crimson rill. When the battle had raged half an hour, and the crew of the *Lawrence* were falling one by one, the commodore called from the small skylight for the doctor to send up one of his six assistants. In five minutes the call was repeated and obeyed, and again repeated and obeyed, until Parsons was left alone. "Can any of the wounded pull a rope?" inquired Perry. The question was answered by two or three crawling upon deck to lend a feeble hand in pulling at the last guns in position.

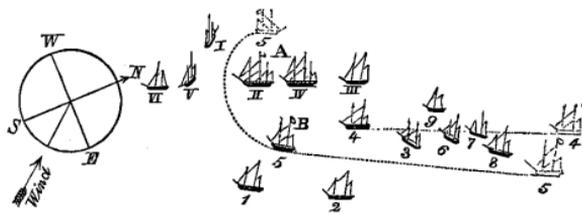

Midshipman Lamb had his arm badly shattered. While moving forward to lie down, after the doctor had dressed the wound, a round-shot came crashing through the side of the vessel, struck the young man in the side, dashed him across the room, and killed him instantly. Pohig, a Narraganset Indian, badly wounded, was released from his sufferings in the same way by another ball that passed through the cockpit. No less than six round-shot entered the surgeon's room during the action.

Some of the incidents witnessed by the doctor were not so painful. A cannon-ball passed through a closet containing all the brig's crockery, dashing a greater portion of it in pieces. It was an illustration—that ball from John Bull—of "a bull in a china-shop." The commodore's dog had secreted himself in that closet when the war of battle commenced, and when the destructive intruder came he set up a furious barking—"a protest," said the doctor, "against the right of such an invasion of his chosen retirement."

We have observed that Lieutenant Yarnall was wounded, yet kept the deck. He had his scalp badly torn, and "came below," said the doctor, "with the blood streaming over his face." Some lint was applied to the wound and confined by a handkerchief, and the lieutenant was then directed to come for better dressing after the battle, as he insisted upon returning to the deck. It was not long before he again made his appearance, having received a second wound. On the deck were stowed some hammocks stuffed with reed-tops, or "cat-tails," as they are popularly called. These filled the air like down, and had settled like snow upon the blood-wet head and face of Yarnall. When he made his appearance below, his visage was ludicrous beyond description; his head appeared like that of a huge owl. The wounded roared with laughter, and cried out, "The devil has come among us!"

³ Daniel Turner was a native of New York. He was appointed a midshipman in 1808, and in 1813 was commissioned a lieutenant. He was efficient in getting the little lake squadron ready for service. In its first cruise across the lake, young Turner, less than twenty-one years of age, commanded the *Niagara*. On the arrival of Captain Elliott, he was ordered to the third ship, the *Caledonia*, and managed her gallantly during the action. He continued in the lake service the following year, and was made a prisoner and sent to Montreal. He was exchanged, and accompanied Perry in the *Java* to the Mediterranean. For his services in the battle of Lake Erie his native state presented him with an elegant sword. He was at one time commander of the naval station at Portsmouth; at another of the Pacific squadron, and always performed his duties with the greatest promptness. He was temperate, brave, generous, and genial. He was

leave the line and bear down upon the *Hunter* for close conflict, giving the *Niagara* a chance to pass for the relief of the *Lawrence*. The gallant Turner instantly obeyed, and the *Caledonia* fought her adversary nobly. The *Niagara* spread her canvas before a freshening breeze that had just sprung up, but, instead of going to the relief of the *Lawrence*, thus silently pleading for protection, she bore away toward the head

SECOND POSITION IN THE BATTLE.¹

squadrons had caught the breeze and moved forward, and left the crippled vessel floating astern. Elliott seemed to notice her only by sending a boat to bring round shot from her to replenish his own scanty store.

As the *Niagara* bore down she was assailed by shots from the *Queen Charlotte*, *Lady Prevost*, and *Hunter*, and returned them with spirit. It was while she was abreast of the *Lawrence's* larboard beam, and nearly half a mile distant, that Perry performed the gallant feat of transferring his broad pennant from one vessel to the other. He had fought as long as possible. More than two hours had worn away in the conflict. His vessel lay helpless and silent upon the almost unruffled bosom of the lake, utterly incapable of farther defense. His last effective heavy gun had been fired by himself, assisted by his purser and chaplain. Only fourteen unhurt persons remained on his deck, and only nine of these were seamen. A less hopeful man would have pulled down his flag in despair; but Perry's spirit was too lofty to be touched by common misfortunes. From his mast-head floated the admonition, as if audibly spoken by the gallant Lawrence, DON'T GIVE UP THE SHIP. In the dash of the *Caledonia* and the approach of the long-lagging *Niagara* he felt the inspiration of hope; and when he saw the latter, like the priest or the Levite, about to "pass by on the other side," unmindful of his wounds, resolutions like swift intuitions filled his mind, and were as quickly acted upon. The *Niagara* was stanch, swift, and apparently unhurt, for she had kept far away from great danger. He determined to fly to her deck, spread all needful sail to catch the stiffening breeze, bear down swiftly upon the crippled enemy, break his line, and make a bold stroke for victory.

With the calmness of perfect assurance, Perry laid aside his blue nankeen sailor's jacket which he had worn all day, and put on the uniform of his rank, as if conscious that he should secure a victory, and have occasion to receive as guests the conquered commander and officers of the British squadron.² "Yarnall," he said, "I leave the *Lawrence* in your charge, with discretionary powers. You may hold out or surrender, as your judgment and the circumstances shall dictate." He had already ordered his boat to be lowered, his broad pennant, and the banner with its glorious words, to be taken down,³ but leaving the Stars and Stripes floating defiantly over the battered

made master commander in 1825, and post-captain in 1835. He died on the 4th of February, 1850, leaving a widow and one daughter, who still survive him.

¹ This shows the relative position of the two squadrons at the time when the *Niagara* bore down upon the head of the British line, the change of her course after Perry took command of her, and the penetration of that line by her. One dotted line, from 4 to 4, shows the attack of the *Caledonia* on the *Hunter*, and the other, from 5 to 5, the course of the *Niagara* as described on this and the next page. The vessels of the British squadron, A, are designated by Roman numerals, thus: I., *Chippewa*; II., *Detroit*; III., *Hunter*; IV., *Queen Charlotte*; V., *Lady Prevost*; VI., *Little Belt*. Those of the American squadron, B, are designated by Arabic numerals, thus: 1, *Scorpion*; 2, *Ariel*; 3, *Lawrence*; 4, *Caledonia*; 5, *Niagara*; 6, *Somers*; 7, *Porcupine*; 8, *Tigress*; 9, *Trippie*.

² Letter of Rev. Francis Vinton, D.D., son-in-law of Commodore Perry, to the Author.

³ This was rolled up and cast to him, after he had entered his barge, by Hosea Sargent, now [1867] living at Cambridge, Massachusetts.

Perry's Voyage from the *Lawrence* to the *Niagara*. Its Perils and its Success. A British Survivor of the Battle.

hulk. With these, his little brother, and four stout seamen for the oars,¹ he started upon his perilous voyage, anxiously watched by Yarnall and his companions.

"A soul like his no danger fears:
His pendant from the mast he tears,
And in his gallant bosom bears,
To grace the bold *Niagara*.
See! he quits the *Lawrence's* side,
And trusts him to the foaming tide,
Where thundering navies round him ride,
And flash their red artillery."—OLD SOSE.

He stood upright in his boat, the pennant and the banner half folded around him, a mark for the anxious eyes of his own men and for the guns of the enemy.² The latter discovered the movement. Barclay, who was badly wounded, and whose flagship was almost dismantled, well knew that if Perry, who had fought the *Lawrence* so gallantly, should tread the quarter-deck of the fresh *Niagara* as commander, his squadron would be in great danger of defeat. He therefore ordered great and little guns to be brought to bear upon the frail but richly-laden vessel—laden with a hero of purest mould. Cannon-balls, grape, canister, and musket-shot were hurled in showers toward the little boat during the fifteen minutes that it was making its way from the *Lawrence* to the *Niagara*.³ The oars were splintered, bullets traversed the boat, and the crew were covered with spray caused by the falling of heavy round and grape-shot in the water near. Perry stood erect, unmindful of danger. His men entreated him to be seated, for his life at that critical moment seemed too precious to be needlessly exposed to peril. It was not foolhardiness nor thoughtlessness, but the innately brave spirit of the man, that kept him on his feet. At length, when his oarsmen threatened to cease labor if he did not sit down, he consented to do so. A few minutes later they were all climbing to the deck of the *Niagara*, entirely unharmed, and greeted with the loud cheers of the Americans, who had watched the movement

¹ One of these was Thomas Penny, who died in the Naval Asylum, near Philadelphia, in 1863, at the age of eighty-one years.

² Perry's portrait belonging to the city of New York, and hanging in the Governor's Room, from which ours on page 321 was copied, is what artists call a kit-kat, or three-quarters length. It was painted by John Wesley Jarvis, and represents Perry standing, with the banner floating like a huge scarf from his shoulders.

³ Among the survivors of the Battle of Lake Erie whom I have met was John Chapman, a resident of Hudson, Ohio, a small, energetic man, who related his past experience in an attractive, dramatic style. He was in the British fleet as gunner, maintop-man, and boarder in the *Queen Charlotte*, and claimed the distinction of having fired the first shot at the *Lawrence* from a 24-pounder. He also said that he aimed a shot at Commodore Perry when making his perilous passage from the *Lawrence* to the *Niagara*. Mr. Chapman was a native of England. He came from there in the transport *Justwick* early in 1812, and landed at Quebec. From that city he went up the St. Lawrence in May, and took post in Fort George, on the Niagara River. He afterward went up to assist in the erection of Fort Erie. He was present at the surrender of Hull, and participated in the battle of Queenston Heights. In the summer of 1813 he was placed on board the schooner *Lady Prevost*, at Long Point, and arrived at Malden about three weeks before the battle of Lake Erie. He was with Proctor at the attack on Fort Stephenson. He was one of the survivors in the fatal ditch (see page 563), and escaped to the woods under cover of the darkness. On the return of Proctor to Malden he went on board the *Queen Charlotte*, and was with her in the battle. He was sent to Ohio with other prisoners, and was one of those who were held as hostages for the safety of the Irishmen under Scott who were sent to England, as mentioned on page 406. He was released on the 20th of October, at Cleveland. He went immediately to Hudson, a few miles distant, where he resided until his death in 1866. I am indebted to the Rev. T. B. Fairchild, of Hudson, for the substance of the above brief sketch of the public career of Mr. Chapman, and to the soldier himself for his likeness, taken in the spring of 1862.

John Chapman

Meeting of Perry and Elliott.

Surrender of the helpless *Lawrence*.

Perry strikes the British Line.

with breathless anxiety. Perry was met at the gangway by the astonished Elliott. There stood the hero of the fight, blackened with the smoke of battle, but unharmed in person and unflinching in his determination to win victory—he whom the commander of the *Niagara* thought to be dead. There were hurried questions and answers. "How goes the day?" asked Elliott. "Bad enough," responded Perry; "why are the gun-boats so far astern?" "I'll bring them up," said Elliott. "Do so," responded Perry. Such is the reported substance of the brief conversation of the two commanders,¹ at the close of which Elliott pushed off in a small boat to hurry up the lagging vessels. Having given his orders to each to use sails and oars with the greatest vigor, he went on board the *Somers*, and behaved gallantly until the close of the action.

At a glance Perry comprehended the condition and capabilities of the *Niagara*. There had been few casualties on board of her, and she was in perfect order for conflict. He immediately ran up his pennant, displayed the blue banner, hoisted the signal for close action, and received quick responses and cheers from the whole squadron; hove to, altered the course of the vessel, set the proper sails, and bore down upon the British line, which lay half a mile distant. Meanwhile the gallant Yarnall, after consulting Lieutenant Forrest and Sailing-master Taylor, had struck the flag of the *Lawrence*, for she was utterly helpless, and humanity required that firing upon her should cease. As the starry flag trailed to the deck a triumphant shout went up from the British. It was heard by the wounded on the *Lawrence*. When informed of the cause, their hearts grew almost still, and in the anguish of chagrin they refused to be attended by the surgeon, and cried out, "Sink the ship! sink the ship! Let us all sink together!"² Noble fellows! they were worthy of their commander. In less than thirty minutes after they had offered themselves a willing sacrifice for the honor of their country's flag, they were made joyful by hearing the step and voice of their beloved commander again upon the deck of the *Lawrence*.

Perry's movement against the British line was successful. He broke it; passed at half pistol-shot distance between the *Lady Prevost*³ and *Chippewa* on his larboard, and the *Detroit*, *Queen Charlotte*, and *Hunter* on his starboard, and poured in tremendous broadsides right and left from double-shotted guns. Ranging ahead of the vessels on his starboard, he rounded to and raked the *Detroit* and *Queen Charlotte*, which had got foul of each other.⁴ Close and deadly was his fire upon them with great guns and musketry. Meanwhile, the *Lawrence* having drifted out of her place in the line, her position against the *Detroit* was taken by the *Caledonia*, Captain Turner; the latter's place in line, as opposed to the *Hunter*, was occupied by the *Trippe*, commanded by Lieutenant Holdup.⁵ These gallant young officers had exchanged signals

¹ Mr. Hambleton, the purser of the *Lawrence*, has left on record an account of this interview between Perry and Elliott. "As Perry reached the deck of the *Niagara*," he says, "he was met at the gangway by Captain Elliott, who inquired how the day was going. Captain Perry replied, Badly; that he had lost almost all of his men, and that his ship was a wreck, and asked what the gun-boats were doing so far astern. Captain Elliott offered to go and bring them up; and, Captain Perry consenting, he sprang into the boat and went off on that duty.—Hambleton's *Journal*, cited by M'Kenzie.

² Oration by George H. Calvert, at Newport, Rhode Island, on the 10th of September, 1858, on the occasion of the celebration of the fortieth anniversary of the Battle of Lake Erie.

³ Lieutenant Buchan, the commander of the *Lady Prevost*, was shot through the face by a musket-ball from Perry's marines. Perry saw him standing alone, leaning on the companion-way, his face resting on his hand, and looking with fixed gaze toward the *Niagara*. His companions, unable to endure the terrible fire, had all fled below. Perry immediately silenced the marines on the quarter-deck. He afterward learned that the strange conduct of Buchan was owing to sudden derangement caused by his wound. Poor fellow! he was a brave officer, and had distinguished himself under Nelson.

⁴ The position of the *Detroit* and *Queen Charlotte* at this time may be seen by reference to II. and IV. in the diagram on page 526. In the same diagram the course of the *Niagara* in breaking the British line may be seen along the dotted line from 5 to 5.

⁵ Thomas Holdup was a native of South Carolina, and was an inmate and pupil of the Orphan Asylum in Charleston. He became a protégé of General Stevens, of that city, who obtained a midshipman's warrant for him in 1809. He was on board the *John Adams*, at Brooklyn, in 1812,

Perry breaks the British line.

British Vessels attempt to escape.

Perry's Victory complete.

to board the *Detroit*, when they saw the *Niagara* with the commodore's pennant bearing down to break the British line. Turner followed her closely with the *Caladonia*; and the freshened breeze having brought up the *Somers*, Mr. Almy,¹ the *Tigress*, Lieutenant Coneclin,² and the *Porcupine*, Acting Master Senat,³ the whole American squadron except the *Lawrence* was, for the first time, engaged in the conflict. The fight was terrible for a few minutes, and the combatants were completely enveloped in smoke.

Eight minutes after Perry dashed through the British line the colors of the *Detroit* were struck, and her example was speedily followed by all the other vessels of

POSITION OF THE SQUADRONS AT THE CLOSE OF THE BATTLE.*

Barclay's squadron, excepting the *Little Belt* and *Chippewa* (I. and IV. in the annexed diagram), which attempted to escape to leeward. Champlin with the *Scorpion*, and Holdup with the *Trippe*, made chase after the fugitives, and both were overtaken and brought back to grace the triumph of the victor, the *Little Belt* by the former, and the *Chippewa* by the latter. It was in this chase that Champlin fired the last gun in that memorable battle. "So near were they to making their escape," says Champlin in a letter to the author, "that it was 10 o'clock in the evening before I came to an anchor under the stern of the *Lawrence* with the *Little Belt* in tow."

It was three o'clock in the afternoon when the flag of the *Detroit* was lowered. The roar of cannon ceased; and as the blue vapor of battle was borne away by the breeze, it was discovered that the two squadrons were intermingled.⁵ The victory was complete. The flag of the *Lawrence* had indeed been struck to the enemy, but she had not been taken possession of. She was yet free, and, with a feeble shout

and, with others, volunteered for the lake service. He performed gallant service near Buffalo toward the close of the year, and was commissioned a lieutenant. In April, 1813, he went to Erie with men, and assisted in fitting out the squadron there. He fought his vessel bravely in the action of the 10th of September, and he and Champlin pursued the two fugitives of the British squadron. He was in service on the upper lakes the following year, and there was invited to the *Jaco* by Perry. He had married, and declined the offer of a good post on that vessel. He subsequently commanded several different vessels, and was promoted to master commandant in 1825. He was commissioned post-captain in 1836. He died suddenly while in command of the Washington Navy Yard, in January, 1841. His widow, who was a Miss Sage, died soon afterward. By act of the Legislature of South Carolina he assumed the name of his benefactor, with a promise that he should inherit his fortune. From that time (1818) he is known as Thomas Holdup Stevens. He was possessed of a high order of literary ability, and was beloved by all. His son, Thomas Holdup Stevens, behaved gallantly in the naval action off Milton Head in the late civil war.

¹ Thomas C. Almy was a native of Rhode Island, of Quaker parentage. He became a sailor in early life, and at the age of twenty-one years he was commander of a ship. He was in the *Scorpion* at Newport, went to Lake and young Senat was killed. They fought at what is now the corner of Third and Cassadaga Streets, Erie.

² In this, as in the preceding diagrams, furnished by Commodore Champlin, the British vessels are designated by Roman numerals, and the American vessels by Arabic numerals. This diagram shows the relative position of the vessels of the two squadrons at the close of the battle. The respective numbers indicate the same vessels as in the other diagrams.

to grace the triumph of the victor, the *Little Belt* by the former, and the *Chippewa* by the latter. It was in this chase that Champlin fired the last gun in that memorable battle. "So near were they to making their escape," says Champlin in a letter to the author, "that it was 10 o'clock in the evening before I came to an anchor under the stern of the *Lawrence* with the *Little Belt* in tow."

It was three o'clock in the afternoon when the flag of the *Detroit* was lowered. The flag of the *Lawrence* had indeed been struck to the enemy, but she had not been taken possession of. She was yet free, and, with a feeble shout

ALMY'S SWORD.

The annexed engraving is a picture of the hilt of the sword awarded to Almy, and which was given to his next of kin. On one side of the blade are the words "THOMAS C. ALMY, Sailing-master commanding, Lake Erie, 10th September, 1813." On the other side the words "ALMY WENT OFF AT SUMMER MEETING," with a little view of ships-of-war.

² Augustus H. M. Coneclin was a native of Virginia. He was appointed midshipman in 1800, and lieutenant in 1813. He followed Elliott to Erie. On a dark night in 1814 his vessel was captured by a party in boats off Fort Erie. He left the service in 1820, while stationed at Portsmouth, New Hampshire.

³ George Senat was a native of New Orleans, of French extraction. He commenced active life as a sailor, but of his career previous to his joining the squadron at Erie nothing appears on record. He served on the upper lakes in 1814. On his return to Erie he became involved in a quarrel with Sailing-master McInnis. A duel ensued, and young Senat was killed. They fought at what is now the corner of Third and Cassadaga Streets, Erie.

⁵ See the above diagram and note of explanation.

Perry's Triumph a remarkable one.

His famous Dispatch to Harrison.

His Dispatch to his Government.

that floated not far over the waters, her exhausted crew flung out the flag of their country from her mast-head.¹

This triumph was a remarkable one in American and British history. Never before had an American fleet or squadron encountered an enemy in regular line of battle, and never before, since England created a navy, and boasted that

"Britannia rules the wave,"

had a whole British fleet or squadron been captured. It was a proud moment for Perry and his companions.

"As lifts the smoke, what tongue can fitly tell
The transports which those manly bosoms swell,
When Britain's ensign down the reeling mast
Sinks to proclaim the desperate struggle past!
Electric cheers along the shattered fleet,
With rapturous hail, her youthful hero greet;
Meek in his triumph, as in danger calm,
With reverent hands he takes the victor's palm;
His wreath of conquest on Faith's altar lays,²
To his brave comrades yields the meed of praise."—H. T. TUOKERMAN.

When Perry's eye perceived at a glance that victory was secure, he wrote, in pencil, on the back of an old letter, resting it upon his navy cap, that remarkable dispatch to General Harrison whose first clause has been so often quoted—

"We have met the enemy, and they are ours: two ships, two brigs, one schooner, and one sloop. Yours, with great respect and esteem,

O. H. PERRY."

*We have met the enemy and they are ours.
Two Ships, two Brigs one
Schooner & one Sloop.*

Yours, with great respect and esteem

O. H. Perry.

FAO-SIMILE OF PERRY'S DISPATCH.

A few minutes afterward, when, as Bancroft says, "a religious awe seemed to come over him at his wonderful preservation in the midst of great and long-continued danger,"³ he wrote to the Secretary of the Navy as follows:

"U. S. Brig *Niagara*, off the Western Sister,⁴ Head of Lake Erie, September 10, 1813, 4 P.M.

"SIR,—It has pleased the Almighty to give to the arms of the United States a signal victory over their enemies on this lake. The British squadron, consisting of two ships, two brigs, one schooner, and one sloop, have this moment surrendered to the force under my command after a sharp conflict.

"I have the honor to be, sir, very respectfully, your obedient servant,

O. H. PERRY.

"Honorable William Jones, Secretary of the Navy."

¹ "The shattered *Lawrence*," says Dr. Parsons, "lying to the windward, was once more able to hoist her flag, which was cheered by a few feeble voices on board, making a melancholy sound compared with the boisterous cheering that preceded the battle."—*Discourse*, page 13.

² See Perry's Dispatch to the Secretary of the Navy, printed above.

³ *New York Ledger*.

⁴ This is the most southwardly of three islands near the western end of Lake Erie, named respectively Eastern Sister, Middle Sister, and Western Sister, lying in a line from the southwest to the northeast. It was a little westward of the island named in the dispatch that the battle occurred.

Perry returns to the *Lawrence*.

Surrender of the British Officers.

Burial of the Dead in the Lake.

These hurried but admirably-worded dispatches were sent by the same express to both Harrison and the Secretary of the Navy.¹ Then the ceremony of taking possession of the conquered vessels, and receiving the formal submission of the vanquished, was performed. Perry gave the signal to anchor, and started for his battered flag-ship, determined, on her deck, and in the presence of her surviving officers and crew, to receive the commanders of the captured squadron. "It was a time of conflicting emotions," says Dr. Parsons, "when he stepped upon deck. The battle was won and he was safe, but the deck was slippery with blood, and strewn with the bodies of twenty officers and men, seven of whom had sat at table with us at our last meal, and the ship resounded every where with the groans of the wounded. Those of us who were spared and able to walk met him at the gangway to welcome him on board, but the salutation was a silent one on both sides; not a word could find utterance."²

The next movement in the solemn drama was the reception of the British officers, one from each of the captured vessels. Perry stood on the after-part of the deck, and his sad visitors were compelled to pick their way to him among the slain. He received them with solemn dignity and unaffected kindness. As they presented their swords, with the hilts toward the victor, he spoke in a low but firm tone, without the betrayal of the least exultation, and requested them to retain their weapons. He inquired, with real concern, about Commodore Barclay and his fellow-sufferers from severe wounds; and he made every captive feel, at that sad and solemn moment, the thrill of pleasure excited by the conduct of a Christian gentleman in the moment of the adversity of the recipient of his kindness.

"A chastened rapture, Perry, fills thy breast;
Thy sacred tear embalms the heroes slain;
The gem of pity shines in glory's crest
More brilliant than the diamond wreath of fame."

When this sad ceremony was over, the conqueror, exhausted by the day's work upon which he had entered with fever-enfeebled body, lay down upon the deck in the midst of his dead companions, and, surrounded by prisoners, and with his hands folded over his breast, and his drawn sword held in one of them, he slept as sweetly as a wearied child.³

There was yet another sad service to be performed. The dead of the two squadrons were yet unburied. When twilight—the rich, glowing twilight at the end of a gorgeous September day—lay upon the bosom of the lake like a luminous, deepening mist, the bodies of all the slain, excepting those of the officers, wrapped in rude shrouds, and with a cannon-ball at the feet of each, were dropped, one by one, into the bosom of the clear lake, at the close of the beautiful and impressive burial service of the Anglican Church.

"Neath the dark waves of Erie now slumber the brave,
In the bed of its waters forever they rest;
The flag of their glory floats over their grave;
The souls of the heroes in memory are blessed."—W. B. TAPPAN.

¹ The gallant Lieutenant Dulaney Forrest was Perry's chosen courier. He was a native of the District of Columbia, and had been in the service since 1809, when he was appointed midshipman. He was with Bainbridge when the *Constitution* captured the *Jawa*. He was acting lieutenant on board Perry's flag-ship, and was chief signal officer. His conduct was brave, and he was greatly beloved by his companions. He bore to Washington not only the dispatches of his commander, but the flags captured from the British. Forrest also took with him the blue banner with the words of Lawrence, mentioned on page 520. Forrest accompanied Perry to the Mediterranean in the *Jawa*. He was commissioned a lieutenant at that time. He died of fever in 1825.

Colonel Peter Force, of Washington City, has a piece of every flag captured in this battle, and of nearly every trophy-flag of the war. They were all taken to Washington, where, in course of time, through neglect, they fell into decay. The pieces in the possession of Mr. Force are carefully preserved in a scrap-book, with the place and date of their capture recorded, and make an interesting collection of bits of bunting.

The intelligence of the victory on Lake Erie was carried to Pennsylvania from Detroit by Samuel Doche, Samuel Burnett, and Cyrus Bosworth. The first was a mail-carrier from Detroit to Cleveland; the second from Cleveland to Warren, Ohio, and the third from Warren to Pittsburg. They were all three living at the time of the inauguration of Perry's statue at Cleveland in September, 1860. Mr. Bosworth participated in that celebration.

² *Discourse*, page 14.

* September 21, 1813. The moon soon spread her silver sheen over their common grave, and all but the suffering wounded slumbered until the dawn.^a

The two squadrons weighed anchor at nine o'clock and sailed into Put-in-Bay Harbor, and there, twenty-four hours afterward, on the margin of South Bass Island,

THE BURIAL-PLACE.

from which, on the right, may be seen the channel leading out toward Canada, and on the left the open way toward Detroit, where now willow, hickory, and maple-trees cast a pleasant shade in summer, three American and three British officers¹ were buried^b with the same

solemn funeral rites, in the presence of their respective countrymen.²

The light of the morning of the 11th revealed sad sights to the eyes of the belligerents. Vessels of both squadrons were dreadfully shattered, especially the two flag-ships. Sixty-eight persons had been killed and one hundred and ninety wounded during the three hours that the battle lasted. Of these, the Americans lost one hundred and twenty-three, twenty-seven

of whom were killed; the British lost one hundred and thirty-five, forty-one of whom were killed.³ Barclay, of the *Detroit* (the British commander), who had lost an arm at Trafalgar, was first wounded in the thigh, and then so severely injured in the shoulder as to deprive him of the use of the other arm. Pinnis, of the *Queen Charlotte*, the second in command, was mortally wounded, and died that evening. Both were gallant men; and justice to all demands the acknowledgment that the Americans and British carried on that terrible conflict with the greatest courage, fortitude, and skill. It is also just to say that the British experienced what is called "ill luck" from the beginning. First, the wind suddenly turned in favor of the Americans at the commencement of the action, giving them the weather-gage; then the two principal British commanders were struck down early in the action; then the rudder of the *Lady Prevost* was disabled, which caused her to drift out of the line; the entanglement of the *Detroit* and *Queen Charlotte* gave the *Niagara*, under Perry, an opportunity to rake them severely; and, lastly, the men of the British squadron had not, with the exception of those from the Royal Navy, received the training with guns

¹ These were Lieutenant Brooks and Midshipmen Lum and Clarke, of the American service, and Captain Flints and Lieutenants Stokoe and Garland, of the British service. The view here given of the burial-place of these officers I copied, by permission, from one of the paintings of Miss C. L. Ransom, already mentioned.

² Samuel R. Brown, who arrived at Put-in-Bay Island on the evening of the 9th, and from the head of it was a witness of the battle at about ten miles distant, was present at the burial. "An opening on the margin of the bay," he says, "was selected for the interment of the bodies. The crews of both fleets attended. The weather was fine; the elements seemed to participate in the solemnities of the day, for every breeze was hushed, and not a wave ruffled the surface of the water. The procession of boats—the neat appearance of the officers and men—the music—the slow and regulated motion of the oars, striking in exact time with the notes of the solemn dirge—the mournful waving of the flags—the sound of the minute-guns from the different ships in the harbor—the wild and solitary aspect of the place—the stillness of nature—gave to the scene an air of melancholy grandeur better felt than described. All acknowledged its influence, all were sensibly affected."—*Fleets on Lake Erie*, printed in Albany in 1814.

³ The American loss was distributed as follows: On the *Lawrence*, 88; *Nausar*, 27; *Calistonia*, 3; *Somers*, 2; *Arct*, 4; *Trypse* and *Scorpion*, 2 each. Besides the officers mentioned in Note 1, above, the British lost in wounded Midshipman Foster, of the *Queen Charlotte*; Lieutenant Commanding Buchan and First Lieutenant Roulette, of the *Lady Prevost*; Lieutenant Commandant Brignall and Master's Mate Gateshill, of the *Hunter*; Master's Mate Campbell, commanding the *Chippewa*; and Purser Hoffmeister, of the *Detroit*.

Doctor Horseley, the surgeon of the squadron, being ill, the duties devolved wholly upon his young assistant, Doctor Usher Parsons, then only twenty-five years of age. During the action he removed six legs, which were nearly divided by cannon-balls. On the morning of the 11th he went on board the *Niagara* to attend to her wounded, and then those of the other vessels requiring surgical attention were sent to the *Lawrence*. The skill of Doctor Parsons is attested by the fact that of the whole ninety-six wounded only three died. He modestly attributed the result to fresh air, good spirits caused by the victory, and the "devoted attention of the commodore."

Importance of Perry's Victory.

Its Effects.

How his Cannon were afterward used.

that most of the Americans had just experienced, for they came out of port the morning of the battle.¹

Perry's victory proved to be one of the most important events of the war. At that moment two armies, one on the north and the other on the south of the warring squadrons, were waiting for the result most anxiously. Should the victory remain with the British, Proctor and Tecumtha were ready at Malden, with their motley army five thousand strong, to rush forward and lay waste the entire frontier. Should the victory rest with the Americans, Harrison, with his army in the vicinity of Sandusky Bay, was prepared to press forward by land or water for the seizure of Malden and Detroit, the recovery of Michigan, and the invasion of Canada. All along the borders of the lake within sound of the cannon in the battle (and they were heard from Cleveland to Malden²), women with terrified children, and decrepit old men, sat listening with the deepest anxiety; for they knew not but with the setting sun they would be compelled to flee to the interior, to escape the fangs of the red blood-hounds who were ready to be let loose upon helpless innocency by the approved servants of a government that boasted of its civilization and Christianity. Happily for America—happily for the fair fame of Great Britain—happily for the cause of humanity—the victory was left with the Americans, and the savage allies of the British were not allowed to repeat the tragedies in which they had already been permitted to engage. Joy spread over the northwestern frontier as the glad tidings went from lip to lip. That whole region was instantly relieved of the most gloomy forebodings of coming evil. That victory led to the destruction of the Indian confederacy, and wiped out the stigma of the surrender at Detroit thirteen months before. It opened the way for Harrison's army to repossess the territory then surrendered, and to penetrate Canada. It was speedily followed by the overthrow of British power in the Canadian peninsula and the country bordering on the upper lakes, and the absolute security forever of the whole northwestern frontier from British invasion and Indian depredations. From that moment no one doubted the ability of the Americans to maintain the mastery of our great inland seas, and the faith of the people in this ability was well expressed by a poet of the time, who concluded an epic with the following lines:

"And though Britons may brag of their ruling the ocean,
And that sort of thing—by the Lord I've a notion—
I'll bet all I'm worth—who takes it?—who takes?—
Though they're lords of the sea, we'll be lords of the lakes."³

The effect of this victory upon the whole country was electric and amazingly in-

¹ The great guns used by Perry, and those captured by him from the British, remained in the United States Naval Depot at Erie until the autumn of 1825, when they were transferred to the Naval Station at Brooklyn. They were about to be removed through the agency of Dows, Cary, and Meech, who had prepared a line of boats for the just completed Erie Canal. The happy thought occurred to some one that these cannon might be used for telegraphic purposes in connection with the celebration of the first opening of the canal. They were accordingly placed at intervals of about ten miles along the whole line of the canal. When the first fleet of boats left Buffalo on that occasion, the fact was announced to the citizens of New York in one hour and twenty minutes by the serial discharges of these cannon. This announcement, literally conveyed in "thunder-tones" from the lake to the sea-board, was responded to in like manner and in the same space of time.—Statement of Orlando Allen to the Buffalo Historical Society, April, 1863.

The authorities consulted in the preparation of the foregoing account of the Battle of Lake Erie are the official dispatches of Perry and Barclay: Niles's Register; The War: Port Folio; Analectic Magazine; Political Register; M'Kenzie's Life of Perry; Life of Elliott, by a citizen of New York; Cooper's Naval History; Discourses by Parsons, Burges, and Calvert; oral and written statements communicated to the author by the survivors; Brown's *Views on Lake Erie*, and Log-book of the *Lawrence*, kept by Sailing-master Taylor.

² I was informed by Captain Levi Johnson, whom I met at Cleveland in the autumn of 1860, that he and others were engaged in the last work upon the new court-house, which stood in front of the present First Presbyterian Church, on the day of the battle. They thought they heard thunder, but, seeing no clouds, concluded that the two squadrons had met. He and several others went down to the lake bank, near the present residence of Mr. Whittaker, on Water Street. Nearly all the villagers assembled there, numbering about thirty. They waited until the firing ceased. Although the distance in a straight line was full seventy miles, they could easily distinguish the sounds of the heavier and lighter guns. The last five reports were from the heavy guns. Knowing that the Americans had the heaviest ordnance, they concluded that victory remained with them, and with that conviction they gave three cheers for Perry. Miss Reynolds, sister of the venerable Robert Reynolds, of the British army, whom I also visited in the autumn of 1860, told me that she listened to the firing during the whole battle. The distance was less than forty miles.

A letter dated at Erie, September 24, 1813, says that a gentleman from the New York state line heard at his house the cannoning on the lake one hundred and sixty miles distant! It was heard at Erie, and at first was supposed to be distant thunder.

³ *Analectic Magazine*, iii., 84.

spiriting. There had been a prevailing apprehension that the failures of 1812 were to be repeated in 1813. This victory dissipated those forebodings, and kindled hope and joy all over the land.

"O'er the mountains the sun of our fame was declining,
And on Thetis' billowy breast
The cold orb had reposed, all his splendor resigning,
Bedimmed by the mists of the West.
The prospect that rose to the patriot's sight
Was cheerless, and hopeless, and dreary;
But a bolt burst the cloud, and illumined the night
That enveloped the waters of Erie."—OLD SONG.

It is difficult at this time to imagine the exultation then felt and exhibited every where. Illuminations,¹ bonfires, salvos of artillery, public dinners, orations, and songs were the visible indications of the popular satisfaction in almost every city, village, and hamlet within the bounds of the republic. The newspapers teemed with eulogies of the victor and his companions, and the pulpit and rostrum were resonant with words of thanksgiving and praise. The lyre² and the pencil³ made many con-

¹ The City Hall and other buildings in New York were splendidly illuminated on the evening of Saturday, October 23, 1813. There was a band of music in the gallery of the portico, and transparencies were exhibited showing naval battles; also the words of Lawrence, "DON'T GIVE UP THE SHIP," and those of Perry's dispatch, "WE HAVE MET THE ENEMY, AND THEY ARE OURS." The last-named transparency was exhibited at the theatre, with a picture of the fight between the *Hornet* and *Peacock*.

² Many songs were written and sung in commemoration of Perry's victory. One of the most popular of these was *American Perry*, which commences thus:

"Bold Barclay one day to Proctor did say,
I'm tired of Jamaica and Cherry;
So let us go down to that new floating town,
And get some American Perry.*
Oh, cheap American Perry!
Most pleasant American Perry!
We need only all bear down, knock, and call,
And we'll have the American Perry."

³ Among the caricatures of the day was one by Charles, of Philadelphia, representing John Bull, in the person of the king, seated, with his hand pressed upon his stomach, indicating pain, which the fresh juice of the pear, called perry,

Queen Charlotte and Johnny Bull got their dose of Perry.

will produce. *Queen Charlotte*, the king's wife (a fair likeness of whom is given), enters with a bottle labeled PERRY, out of which the cork has flown, and in the foam is seen the names of the vessels composing the American squadron. She says, "Johnny, won't you have some more Perry?" John Bull replies, while writhing in pain produced by perry, "Oh! Perry!!! Curse that Perry! One disaster after another—I have not half recovered the bloody nose I got at the Boxing-match." This last expression refers to the capture of the *Essex* by the American schooner *Enterprise*. This caricature is entitled "*Queen Charlotte and Johnny Bull got their dose of Perry*." This will be better per-

² See note 1, page 634.

¹ *The War*, page 127.

² On one side of Perry's medal is a bust of the commodore, surrounded by the following words: "OLIVERUS H. PERRY PRINCEPS STAGNO ERIENSE CLASSAM TOTAM CONTENDIT." On the reverse a squadron of vessels closely engaged, and the legend "VLAM INVENIT VIRTUS AUT FACIT." Exergue: "INTER CLASS. AMERL. ET BRIT. DIE X. SEP. MDCCXIII."

On one side of Elliott's medal is a bust of the commander, and the words "JESSE D. ELLIOTT NIL ACTUM REPUTANS SE QUID SUPRESSET AGENDUM." On the reverse a squadron engaged, and the legend "VLAM INVENIT VIRTUS AUT FACIT." The exergue the same as on Perry's.

each of the midshipmen and sailing-masters "who so nobly distinguished themselves on that memorable occasion."¹ In after years, when the dead body of Perry was buried in the soil of his native state, her Legislature caused a monument to be erected to his memory,² for she claimed, with much justice, a large share of the glory of the battle of Lake Erie for her sons.³

The effect of this victory was deeply impressive on the British mind, and the newspapers in the provinces and the mother country indulged in lamentations over the want of vigor in the prosecution of the war manifested by the ministry. "We have been conquered on Lake Erie," said a Halifax paper,^a "and so we shall be on every other lake, if we take as little care to protect them. Their success is less owing to their prowess than to our neglect." A London paper consoled the people by saying,^b "It may, however, serve to diminish our vexation at the occurrence to learn that the flotilla in question was not any branch of the British Navy. . . . It was not the Royal Navy, but a local force—a kind of mercantile military." Others, conscious of the inability of the British force in Canada to cope with the Americans, urged the necessity of extending the alliance with the Indians. "We dare assert," said a writer in one of the leading British Reviews,^c "and recent events have gone far in establishing the truth of the proposition, that the Canadas can not be effectually and durably defended without the friendship of the Indians, and command of the lakes and the River St. Lawrence." He urged his countrymen to consider the interests of the Indians as their own; "for men," he said, "whose very name is so very formidable to an American, and whose friendship has recently been shown to be of such great importance to us, we can not do too much."

The name of Perry is cherished with increasing reverence by successive generations; and the vast population that now swarm along the southern borders of Lake Erie regard the battle that has made its name immortal in history as a classical possession of rare value. Only a few weeks after the victory, Washington Irving, in a chaste biographical sketch of Commodore Perry,^d said: "The last roar of cannon that died along her shores was the expiring note of British domination. Those vast internal seas will perhaps never again be the separating space between contending nations, but will be embosomed within a mighty empire;^e and this victory, which decided their fate, will stand unrivaled and alone, deriving lustre and perpetuity from its singleness. In future times, when the shores of Erie shall hum with busy population; when towns and cities shall brighten where now extend the dark and tangled forests; when ports shall spread their arms, and lofty barks shall ride where now the canoe is fastened to the stake; when the present age shall have grown into venerable antiquity, and the mists of fable begin to gather round its history, then will the inhabitants look back to this battle we record as one of the romantic achievements of the days of yore. It will stand first on the page of their local legends and in the marvelous tales of the borders."

This prophecy of the beloved Irving has been fulfilled. The archipelago that embraces Put-in-Bay has become a classic region. At Erie, and Cleveland, and Sandusky, and Toledo, where the Indian then "fastened his canoe to a stake," "ports

¹ We have observed in Note 2, page 519, that Mr. Hambleton, purser of the *Lawrence*, was chosen prize agent. A board of officers from Lake Ontario, assisted by Henry Eckford, naval constructor, prized the captured squadron at \$225,000. Commodore Chauncey, the commander-in-chief on the lakes, received one twentieth of the whole sum, or \$12,750. Perry and Elliott each drew \$7140. The Congress voted Perry \$5000 in addition. Each commander of a gun-boat, sailing-master, lieutenant, and captain of marines, received \$2295; each midshipman, \$811; each petty officer, \$447; and each marine and sailor, \$209.—Miss Laura G. Sanford's *History of Erie*, page 278.

² Perry took with him from Rhode Island, as we have seen (page 509), a large number of men and officers. It was by them chiefly that the vessels built at Erie were constructed. The commodore and three of his commanders—Champlin, Almy, and Turner, and five other officers—Taylor, Brownell, Breese, Dunham, and Alexander Perry, were from Rhode Island. In the fight forty-seven of the fifty-five guns of the squadron were commanded by Rhode Islanders.

⁴ *Analectic Magazine*, December, 1813.

⁵ He had just heard of Harrison's victorious invasion of Canada, and it was believed at that time that the upper province would assuredly become a portion of the United States.

spread their arms;" and every year the anniversary of the battle is somewhere celebrated with appropriate ceremonies. Already the corner-stone of a monumental shaft in commemoration of the battle has been laid upon Perry's Look-out on Gibraltar Island;¹ and in the beautiful city of Cleveland—an insignificant hamlet on the bleak lake shore in 1813, now [1867] a mart of commerce with about fifty thousand inhabitants—a noble statue of Perry, wrought of the purest Parian marble by a resident artist, has been erected by the city authorities.²

I was present, as an invited guest, at the inauguration of that statue of Perry on the 10th of September, 1860. Never will the impressive spectacles of that day, and the influence of the associations connected with them, be effaced from memory. The journey thither, the mementoes of history seen on the way, and the meeting of scores of veterans of the War of 1812 at the great gathering, made a deep impression on the mind. I left my home on the Hudson, with my family, on the morning of the 6th,^a with the intention of stopping at Erie (where a portion of Perry's squadron was built) on my way to Cleveland. It was a day like one in midsummer—sultry and showery; yet in the railway carriage, whose steeds never grow weary, and wherein shelter from sun and rain are ever afforded, we traversed during the day, with very little fatigue or inconvenience, more than the entire length of the State of New York, through the Hudson and Mohawk valleys and the great levels westward, to Buffalo, a distance of three hundred and seventy miles. There I left my family in charge of the veteran Captain Champlin, one of the heroes of the fight, to accompany him by water to Cleveland; and early the next morning^b I pushed on by railway to Erie, where I had the good fortune to meet Captain W. W. Dobbins, son of the gallant officer of that name already mentioned. He kindly accompanied me to the places of interest about Erie—the site of Fort Presqu' Isle³—of Wayne's block-house—of Fort Wayne, on Garrison Hill, by the light-house⁴—of the navy yard at the mouth of Cascade Creek,⁵ and the old tavern where Perry made his head-quarters before and after the battle. When, at the close of the day, we returned to the village, heavy black clouds were brooding over the lake in the direction of the great conflict, and the deep bellowing of the distant thunder gave a vivid idea of the tumult of the battle heard from that very spot almost half a century before. I had completed my sketches and observations, and I spent the evening pleasantly and profitably with Captain Dobbins and his venerable mother, to whom I am indebted for kind courtesies and valuable information.⁶ At almost two o'clock in the morning^c I left Erie in the railway cars for Cleveland, just after a heavy thunder-shower had passed over that region, making the night intensely dark, and drenching the country. ^a September 7.

We arrived at Cleveland at six o'clock in the morning. Heavy mists were scurrying over the lake upon the wings of fitful gusts, and dashes of rain came down frequently like sudden shower-baths. For almost three hours I waited at the wharf where the passengers on the boat from Buffalo were to land. She was *The Western Metropolis*—a magnificent vessel—one of the finest ever built on the lakes. All night ^b September 8.

¹ See picture on page 518. On the 4th of July, 1852, the national anniversary was celebrated on Put-in-Bay Island by five companies of Ohio volunteer militia. Their encampment was the first ever seen there since Harrison left it with his troops in the autumn of 1813. At that time it was agreed to take measures for erecting a monument in commemoration of the victory, and *The Battle of Lake Erie Monument Association* was formed. A Constitution was adopted, and General Lewis Cass, of Detroit, was appointed president of the association. J. G. Camp, E. Cooke, E. Bill, A. P. Edwards, and J. A. Harris, were appointed a provisional executive committee.

² The project of erecting a statue of Perry at Cleveland originated with the Hon. Harvey Rice, of that city, who, as member of the Common Council, brought the subject before that body in June, 1857, in a series of resolutions. A committee was appointed to take the matter in hand, composed of Harvey Rice, O. M. Oviatt, J. M. Coffinberry, J. Kirkpatrick, and C. D. Williams. They contracted with T. Jones and Sons, of Cleveland, to erect a monument surmounted by a statue of Perry, for the sum of eight thousand dollars. The designs of monument and statue were made by William Walcutt, the sculptor, of Cleveland, and the figures were executed by him.

Crowds fill Cleveland.

"Camp Perry" on Sunday.

long she had battled with the storm, yet she was so staunch that her passengers had slept securely and soundly. A fine state-room had been assigned to Captain Champ-
lin. Among the survivors of the war who accompanied him was Captain Asel Wil-
kinson, of Colden, Erie County, New York, who was the pilot of the *Ariel*—a tall,
slender man, seventy-two years of age. He stood at the helm of his vessel all through

Asel Wilkinson

the battle of the 10th of Sep-
tember. His cartridge-box
was shot from his side by a
cannon-ball, and the thunder

of the great guns brought the blood from his ears and nose, and permanently impaired his hearing. I received many reminiscences of the fight from his lips during a brief hour that I spent with him. His vigor of mind and body gave promise of years of future usefulness, but his days were nearly numbered. On the 4th of July, 1861, he was in Buffalo with his wife to participate in the celebration of the day. When they were passing the corner of Pearl and Mohawk Streets he suddenly fell to the pavement and expired.

In the midst of a furious thunder-storm we rode to the residence of a gentleman on Euclid Street, to the hospitalities of which we had been invited, and there we found a pleasant home during our brief sojourn in Cleveland. It was the last day of the week. On Monday the appointed ceremonies were to be performed, and visitors were pouring into the "Forest City" by thousands from every direction. That evening the hotels and large numbers of private houses were filled with guests. Mr. Bancroft (the historian), who was one of the chosen orators for the occasion, had arrived; also a large delegation from Rhode Island, including Governor Sprague, Mr. Bartlett, the Secretary of State, Dr. Parsons, Bishop Clarke, and Captain Thomas Brownell, who was the acting sailing-master of the *Ariel* in the battle. Members of the Perry family and scores of the survivors of the war were also there, and the bright and beautiful Sabbath found Cleveland full of strangers.

It was indeed a bright and beautiful Sabbath. The storm-clouds were gone, and

BENJAMIN FLEMING.

the first cool breath of autumn came from the lake and gave warning of the approaching season of hoar-frost. At an early hour Euclid Street—magnificent Euclid Street—was full of animation. Crowds were making their way to "Camp Perry," on the county fair-grounds, the head-quarters of the military, who were under the command of Brigadier General J. W. Fitch. In the spacious marquee of that officer we met, just before the hour for morning religious services (in which Bishop Clarke led), most of the Rhode Island delegation, Governor Dennison, of Ohio, and his staff, and Benjamin Fleming, of Erie, a lively little man, then seventy-eight years of age, who was a maintopman in the *Niagara* during the battle. He was yet living in 1863, and was one of three survivors of the battle who are

residents of Erie,¹ Fleming was a native of Delaware.² He was dressed in full sail-

¹ The other two were John Murray, a marine from Pennsylvania, aged about seventy-three, and Jesse Wall, a colored man, aged about seventy-four years, who was a fier on board the *Niagara*.

² Benjamin Fleming was born in Lewiston, Delaware, on the 20th of July, 1782. He entered the naval service on

or's costume, and on his right breast, in the form of a shield, on which was inscribed his name and the occasion, was the silver medal presented by the State of Pennsylvania.¹ There we also met Dr. Nathan Eastman, of Medina, Ohio, who, as volunteer surgeon, assisted in dressing the wounds of those injured in the battle who were taken to the marine hospital at Erie. He was afterward appointed assistant surgeon, and spent the dreary winter of 1813-14 in that capacity on board the prize-ships *Detroit* and *Queen Charlotte*, of the "Wayne Guards" of Erie, who were present.

PERRY'S LANTERN.

It was made of tin, with windows of scraped horn, and had a venerable appearance.

Monday dawned gloomily. The sky was lowering with heavy clouds, the temperature was chilling, and as the time approached for the commencement of the public ceremonies there were indications of early rain. But these hindered nothing. At an early hour I went to the City Hall, the head-quarters of the "soldiers of 1812," and assisted in the interesting task of making a register of the names and ages of those who were present, about three hundred in number.² The air was full of martial music, the streets and buildings were gay with banners, and as the appointed time for uncovering the statue drew near, the public square of ten acres, in the centre of which it stood, began to fill with people. I had made my way with difficulty through the crowd from the old soldiers' head-quarters to the stage erected for the conductors of the pageant and invited guests. Mr. Bancroft soon arrived, alone, but was followed almost immediately by the mayor of the city, the committee of arrangements, Dr. Parsons (the associate orator), the Perry family, and other invited guests. Very soon the immense military and civic procession came filing into the square in gay and sombre costumes, accompanied by a miniature brig *Lawrence*, on wheels, drawn by four horses. The inclosure was filled with the living sea, and broad Ontario and Superior Streets were crowded with people as far as the eye could reach. "All Cleveland is out!" exclaimed a gentleman at my elbow. "All creation, you had better say," responded another. It was estimated that fifty thousand strangers were present.

The ceremonies before the statue were opened by prayer from the lips of the Reverend Dr. Perry, of Natchez, Mississippi. Then Mr. Walcutt, the sculptor, unveiled the statue. There it stood, upon a green mound, surrounded by an iron railing, imposing, beautiful, and remarkable because of its extreme whiteness.³ Tens of thousands of voices sent up loud cheers as that chaste work of art was clearly revealed, for, just as the covering was removed, rays of sunlight, that had struggled through

board the frigate *Essex* in 1811, and at New York volunteered for the lake service. He was with Elliott at the capture of the *Catalonia* and *Adams*. See list of names in Note 5, page 386. He had lived in Erie ever since the war. Two of his sons were in a Pennsylvania regiment during the late Civil War, and both were wounded in the battles before Richmond. 1 See page 535.

² Among these were Benjamin Le Reaux, aged seventy-seven years. He was from La Salle City, Illinois. He was a small, lively, sparkling-faced man, and was dressed in the same military suit of gray in which, as orderly sergeant, he fought under General Scott in the battle of Niagara, or Lundy's Lane. He was in Jesup's command. A history of that gray uniform will be given hereafter. Mr. Le Reaux's father was a Frenchman, and served as captain under Lafayette.

³ The monument and statue, represented on the following page, present to the eye one of the most chaste memorials of greatness to be found in the country. Indeed, it is believed that nothing equals it. The pedestal is of Rhode Island granite, twelve feet in height, on one side of which is sculptured, in low relief, the scene of Perry's passage from the *Lawrence* to the *Niagara*. On one side of it is a small statue of a *Sailor-boy*, bareheaded, and on the other one of a *Midshipman*, with his cap on, in the attitude of listening. The statue is of Parian marble, and remarkable for its purity. It is eight feet in height, but at the altitude of the top of the pedestal or monument it appears life-size. The entire height of the monument, including the base, is twenty-five feet.

The Statue unveiled.

Orations by Bancroft and Parsons.

A remarkable Dinner Party.

PERRY'S STATUE.

twenty thousand years!

When I left the banquet-hall a spectacle of rare beauty met the eye. The high banks of the lake in front of the city were covered with men, women, and children, thousands in number, who had come out to be witnesses of a promised sham-fight on the lake, in nearly exact imitation of the real one forty-seven years before. I climbed the steep bank, up a long flight of stairs at the foot of Warren Street, to a good position for observation, and found myself by the side of Mr. Fleming, the jolly little maintop-man of the *Niagara*, with his sailor's dress and silver medal. The clouds had dispersed, and the afternoon was almost as bright and serene as when the old battle was waged. One by one the vessels representing the belligerent squadrons of Perry and Barclay went out from the mouth of the Cuyahoga, not "with a light breeze" alone, but by the more certain power of steam-tugs. Captain Champlin commanded the mock-American squadron, and Mr. Chapman¹ that of the mock-British.

the clouds, fell full upon it. Mr. Walcutt made a brief address, which was responded to by Mayor Senter. Then followed Mr. Bancroft's oration,¹ and an historical discourse by Dr. Parsons.² Oliver Hazard Perry, the only surviving son of the commodore, addressed the people briefly, when the masonic ceremonies of dedication were performed. The proceedings closed with a song, written by E. G. Knowlton, of Cleveland, and sung by Ossian E. Dodge.

I had been invited to dine with the veterans of 1812, and when the ceremonies before the statue were ended, I hastened from the crowded city to the old soldiers' banquet-hall in the railway buildings on the margin of the lake. The scene was a most interesting and remarkable one. Almost three hundred survivors of the war, who had been participants in its military events, were seated at the table, with their commander for the day (General J. M. Hughes), and Deacon Benjamin Rouse, the president of the Old Soldiers' Association, at their head. There were very few among them of feeble step. Upon every head not disfigured by a wig lay the snows that never melt. It was a dinner-party, I venture to say, that has no parallel in history. The ages of the guests (excepting a few younger men, like myself, who were permitted by courtesy to be present) ranged from *fifty-seven* to *ninety years*.³ The average was about *seventy years*; and the aggregate age of the company was about

¹ Immediately after the conclusion of Mr. Bancroft's address, he was presented with a cane, made of the timber of the *Lawrence*, by the "Wayne Guards," of Erie. The head is of gold, and the ferule a spike from the *Lawrence*.

² During the delivery of Dr. Parsons's discourse, an intelligent old man, named Quinn, from Pittsburg, Pennsylvania, came upon the stand, and reported himself as the man who made the cordage used in rigging the vessels of Perry's squadron. He had with him, in a box, the identical tools that were used in that service.

³ The oldest man among them was a colored soldier named Abraham Chase. He was ninety. Two of them (S. F. Whitney and Richard McCready) were only fifty-seven. They were boys in the service.

4 See page 521.

Sham Battle on Lake Erie.

Visit to early Residents of Cleveland.

Captain Stanton Sholes.

A singular coincidence occurred. As in the real battle, so in this, there was a light breeze at first, which freshened before the close. It was an exciting scene, and little Fleming fairly danced with exhilaration as he observed the flashes—the booming of great guns—the fleet enveloped in smoke—Champlin, like Perry, leaving the *Lacorence* and going to the *Niagara*, and the latter sweeping down, breaking the Chapman-Barclay's line and winning victory. With this extraordinary pageant closed the public ceremonies of the day.¹

On the following day, accompanied by the Rev. T. B. Fairchild, of Hudson, Ohio, I visited several persons and places in Cleveland connected with its history. Among the former were Judge Barr, to whose kind courtesy, through the medium of letters, I was under many obligations, and the widow of Dr. David Long, a daughter of John Wadsworth, one of the earliest settlers in that region. She was a resident of Cleveland at the time of the battle.² When I visited her she and Levi John-
son and his wife were the only survivors of the inhabitants of that place

*September, 1866.

At the time of Hull's surrender there was great alarm at Cleveland, and Mrs. Long was the only woman who remained. Her husband would not desert the sick there, and she would not desert her husband. At that time they had no military protection, but in the spring of 1813 Major Jesup was stationed there with two companies of Ohio militia. These were joined in May by Captain Stanton Sholes, now [1867] a resident of Columbus, Ohio,³ with a company of United States Artillery from Pennsylvania. He was cordially welcomed by Governor Meigs, and made his quarters at Major Carter's tavern. He immediately set about felling the timber on the site of the present city of Cleveland, with which to build a small stockade fort. This was erected near the present light-house, about fifty yards from the lake.

Stanton, Sholes.

¹ At the close of the public proceedings the members of the Masonic Order who were present dined together at the Weddell House. H. L. Hosmer, Deputy Grand Master of Ohio, presided. The banqueters were entertained by toasts and speeches, and the festivities closed with a song written for the occasion by William Ross Wallace, and sung by Ossian E. Dodge—a song of three stanzas, of which the following string one in the conclusion:

“Roll, roll, ye waves! eternal roll!
For ye are holy from his might!
Oh, Banner, that his valor wreathed,
Forever keep thy victor-light!
And if upon this sacred lake
Should ever come invading powers,
Like him may we exulting cry,
WE’VE MET THE FOE, AND THEY ARE Ours!”

² Dr. Long's dwelling was on the site of the present light-house at Cleveland. It still exists, but at some distance from the place where it was built. It now stands on the north side of Franklin Street, between Bank and Water Streets. It is a small building, one story, about 20 by 25 feet square.

³ Mr. Sholes is a native of Connecticut, born before the breaking out of the Revolutionary War, and is now (1867) about ninety-six years of age. His father was a British soldier at the capture of Quebec from the French, and served four years in our old war for independence. In early life Captain Sholes engaged in the business of a sailor, and visited many parts of the world. He quit the ocean in 1803, and settled in the State of New York. After a few years he took up his abode on the banks of the Ohio River, about twenty miles below Pittsburg. In May, 1812, he received from President Madison a captain's commission in the second division United States Artillery, with orders to recruit a company of one hundred men for five years. This he accomplished, and in May, 1813, arrived with them at Cleveland, as we have observed. He served faithfully in the Northwest, during the hostilities in that region, under Harrison. I am indebted to Captain Sholes for much valuable information concerning operations there. He is an honored hero of two wars, for before the close of the Revolution he ran away from home, and entered the service of his country as a boy-soldier.

Perry and his Captives.

Terrible Storm on Lake Erie.

Fate of the chief Vessels in the Battle.

He also erected a comfortable hospital. During that summer he was on active duty there, but two days before the battle on the lake he received orders from General Harrison to break up his encampment, and, with his company and all the government boats at Cleveland, move on to the mouth of the Maumee, preparatory to a speedy invasion of Canada.

I left Cleveland on the morning of the 12th of September^a for Southern Ohio, and the residence and tomb of General Harrison. Of the incidents of that journey I shall hereafter write. Let us occupy a few moments in considering the farther movements of the lake squadron so lately in battle. We left them in Put-in-

Bay on the morning of the 12th,^b after the sad task of burying the slain officers had been performed.

In the course of the day after the battle Perry visited the wounded Barclay on board the battered *Detroit*. They met there for the first time face to face, and it was the beginning of a lasting personal friendship. His kindness to Barclay and his men on this occasion elicited the praises of that officer in his official dispatch. Every thing that friend could do for friend was performed by the victor toward the captive.¹

Perry now prepared for the transportation of Harrison's army to Canada. For that purpose he placed all the wounded Americans on board the *Lawrence*, and the wounded *British* on board the *Detroit* and *Queen Charlotte*,² and arranged the *Niagara* and the lighter vessels of both squadrons as transports. He made the *Niagara* his flag-ship; and on board of her, on the 13th, while a furious gale from the southwest was sweeping over the lake, he wrote a detailed account of the battle for the Secretary of the Navy.³ The shattered British vessels were made to suffer by that storm. It drove heavy swells into the harbor, which so shook the *Detroit* that her masts fell upon her decks with a terrible crash, wrecking every thing near them. The main and mizzen masts of the *Queen Charlotte* also fell; and there lay the three vessels helpless hulks. They were converted into hospital ships. The crippled *Law-*

rence, devoted to the same uses, sailed sluggishly for Erie on the 21st,⁴ and was soon followed by the *Detroit* and *Queen Charlotte*.⁴ She arrived

^a Captain Sholes is the subject of an extraordinary physiological change. For fifty years he was bald and wore a wig. Then he was afflicted with severe headache, for the relief of which cloths dipped in warm water and wrung out were applied. The pain ceased and a new growth of hair commenced. In the summer of 1864, as I was informed by his pastor, Rev. Mr. Byers, his head was thickly covered with glossy, snowy-white hair, so long that it was combed back from the forehead and tied with a ribbon at his neck. His face, also, which was formerly much wrinkled, had become smooth, "with much of the restored fairness of youth."

¹ While Perry was on the *Detroit*, two savages, who had been concealed in the hold of the vessel, were brought to him. They were Indian chiefs, and had been taken on board clothed in sailors' suits, and, with others, were placed in the tops as sharpshooters. The noise of great guns and the dangers of the fight unnerfed them, and they had fled to the hold in terror. When brought before Perry they expected torture or scalping. Their astonishment was great when he spoke kindly to them, directed them to be fed, and sent them on shore with assurances of protection from the Indians friendly to the Americans.

² The prisoners conveyed to Erie were sent to Pittsburg, in the interior, for greater security. The wounded were well cared for.

³ In this dispatch Perry spoke in terms of praise of all his officers who were conspicuous in the battle. Captain Elliott received a bountiful share, contrary to the judgment and wishes of many of Perry's officers. They expressed their opinions freely in disparagement of Elliott. A quarrel between the two commanders and their friends ensued. The controversy was revived in after years by Mr. Cooper, the historian of the United States Navy, and old animosities were awakened to un wonted vigor. They have now slept for many years, and I do not choose to disturb them by any remarks here. The public verdict has determined the relative position of the two commanders in the history of the country. So let it be.

⁴ The *Lawrence*, *Detroit*, and *Queen Charlotte* were afterward sunk in Little Bay (see map on page 614), on the northerly side of the harbor of Erie. The *Niagara* was kept at Erie as a receiving ship for a long time. She was finally abandoned, and also sunk in Little Bay. Here her bottom, partly covered by sand, may still be seen. In 1887 the *Detroit* and *Queen Charlotte* were purchased of the government, and raised by

relies by the curious, and many cases and

Execution of Bird.

at Erie on the 23d, and was greeted by a salute of seventeen guns on shore. A month later,² when Canada had been successfully invaded by Harrison, and Perry, as his volunteer aid, had shared in the honors of victory, the *Ariel* sailed into Erie with these commanders, who were accompanied by Commodore Barclay, then admitted to his parole, and Colonel E. P. Gaines. These officers took lodgings at Duncan's, Perry's old headquarters, yet standing (glorious because of its associations, though in ruins), on the corner of Third and French Streets.¹ They were received with the booming of cannon, the shouts of the people, and the kindly greeting of every loyal heart. The town was illuminated in the evening, and the streets were enlivened by a torch-light procession, bearing transparencies, made at the suggestion and under the direction of the accomplished Lieutenant Thomas Holdup.² On one of these were the words "Commodore Perry, 10th of September, 1813;" on another, "General Harrison, 5th of October, 1813;" on another, "Free Trade and Sailors' Rights;" and on a fourth, "Erie." The *Niagara* arrived the same afternoon, and other vessels soon followed.³

PERRY'S QUARTERS.

THOMAS HOLDUP STEVENS.

The succeeding winter was passed in much anxiety by the inhabitants of Erie on account of an expected attack by the British and Indians, who, it was reported, were preparing to cross the lake on the ice from the Canada shore. False alarms were frequent, and midnight packings of valuables preparatory to an exodus were quite common. The summer brought guaranties of repose, and during the last half of the year 1814 only a company of volunteers were stationed there, most of them at the block-house at Cascade Creek.⁴

other articles have been made of the wood. Captain Champlin and Dr. Parsons, survivors of the battle, both have chairs made from the oak wood of the flag-ship. Our little engraving on the opposite page shows the form of Champlin's chair. I saw the stern-post of the *Lawrence* in possession of Captain W. W. Dobbins, at Erie.

¹ This is known as the "Erie Hotel." The above picture shows its appearance when I sketched it in September, 1860. The most distant window of the second story, seen in the gable of the main building, and boarded up, was pointed out to me as the one that lighted the room occupied by Perry.

² See Note 5, page 528.

³ Doctor Parsons's Diary. Miss Laura G. Sanford's *History of Erie*.

⁴ Three men were executed at Erie for desertion in the autumn of 1814. One of them was a young man of some standing, named Bird, who had fought gallantly on the *Niagara* in the battle on Lake Erie. His offense could not be overlooked, and he was shot. It was thought by some that his pardon, under the circumstances, might not have been detrimental to the public good. A doleful ballad, called *The mournful Tragedy of James Bird*, was written, and became very popular throughout the country, drawing tears from unrefined and sensitive listeners. Older readers will doubtless remember with what pathos the singers would chant the following, which was the last of the eleven verses of the ballad:

"See, he kneels upon his coffin! sure his death can do no good.
Spare him! Hark! Oh God! they've shot him; his bosom streams with blood.
Farewell, Bird! farewell forever! Friends and home he'll see no more!
But his mangled corpse lies buried on Lake Erie's distant shore."

CHAPTER XXVI.

" 'Twas on La Tranche's fertile banks
A gallant host appeared:
But fourteen hundred formed their ranks—
No chance of war they feared.
Their country's cause had called them forth
To battle's stormy field:
They deemed the man of little worth
Whose mind but thought to yield.
There our Columbia's warrior bands
The star-stud ensign bear,
And General Harrison commands
The men to valor dear."

IF EN Perry's victory gave the sovereignty of Lake Erie to the Americans, General Harrison had completed his arrangements for invading Canada. He had called on Governor Shelby, of Kentucky, for fifteen hundred men, and, with the generosity of an unselfish patriot as he was, invited that veteran to the field and to the chief command, saying, "Why not, my dear sir, come in person? You would not object to a command that would be nominal only. I have such confidence in your wisdom, that you, in fact, should 'be the guiding head and I the hand.' The situation you would be placed in would not be without its parallel. Scipio, the conqueror of Carthage, did not disdain to act as the lieutenant of his younger and less experienced brother, Lucius."

This invitation roused the martial spirit of Shelby, and he resolved to *lead*, not to *send* his people against the foe. He called for mounted volunteers to assemble at Newport, opposite Cincinnati, at the close of July.¹ "I will meet you there in person," he said; "I will lead you to the field of battle, and share with you the dangers and honors of the campaign." His words were electrical; Kentucky instantly blazed with enthusiasm. "Come," said the young men and veterans, "let us rally round the eagle of our country, for *Old King's Mountain*² will certainly lead us to victory and conquest." Twice the required number flocked to his standard; and with Major John Adair,² and the late venerable United States senator John J. Crittenden,³ as his aids, and wearing upon his thigh a sword just presented to

¹ Governor Shelby was one of the leaders of the militia who defeated the banded Tories under Major Ferguson on King's Mountain, on the upper borders of South Carolina, on the 7th of October, 1781. Shelby's valor on that occasion was conspicuous, and he was known in later years by the familiar name of *Old King's Mountain*.

² John Adair was a North Carolinian, and emigrated to Kentucky in 1784, at the age of thirty-one years. He was an active officer in the Indian wars on the Northwestern frontier. He held the commission of major in 1792. He was popular in his adopted state until 1807, when his unfortunate connection with Burr obscured his reputation for a while. He seems not to have been aware (like other of Burr's dupes) of the traitor's real designs. In politics he was a Federalist. His conduct during the campaign of 1812 was every way praiseworthy. He was afterward appointed adjutant general of the Kentucky troops, with the brevet rank of brigadier general. In that capacity he commanded the Kentuckians in the battle of New Orleans. In 1820 he was elected Governor of Kentucky, and was often a member of the State Legislature. He had been United States senator in 1805; in 1831 he was elected a member of the lower house of Congress. He died on the 19th of May, 1840, at the age of eighty-three years.

³ John J. Crittenden was born in Woodford County, Kentucky, in September, 1786. His father was an early settler in that state. Young Crittenden studied law, and commenced its practice in Russellville, Logan County. He was among the first volunteers raised by Governor Shelby for Harrison in 1812. He accompanied General Hopkins in his expedition on the Wabash (see page 336), and the next year was with Harrison on the Northwestern frontier. He performed gallant service in the battle on the Thames, after which he resumed his profession at Russellville. He was several times a member of the State Legislature, and was elected United States senator in 1817. He afterward removed to Frankfort, where he practiced his profession until 1835, serving his constituents as legislator occasionally. That year

Its Embarkation for Canada.

him by Henry Clay, in the name of the State of North Carolina, in testimony of appreciation of his services in the old war for independence,¹ he led thirty-five hundred mounted men, including Colonel R. M. Johnson's troop, in the direction of Lake Erie. At Urbana he organized his volunteers into eleven regiments,² and on the 12th of September reached Upper Sandusky. From that post Shelby pushed forward with his staff, and at Fort Ball (Tiffin) he heard of Perry's victory. He dispatched a courier to Major General Henry, whom he had left in command at Lower Sandusky, giving him the glorious news, and directing him to press forward with the troops as fast as possible. The intelligence of success nerved them to more vigorous action; and on the 15th and 16th^a the whole army of the Northwest, excepting the troops at Fort Meigs and minor posts, were on the borders of Lake Erie, on the pleasant peninsula between Sandusky Bay and the lake below the mouth of the Portage River, now Port Clinton.³ Shelby arrived there on the 14th, a few minutes before a part of Perry's squadron appeared bearing three hundred British prisoners. These were landed at the mouth of the Portage, placed in charge of the infantry, and a few days afterward were marched to Franklinton and Chillicothe, escorted by a guard of Kentucky militia under Quartermaster Payne.

^a September, 1813.

Preparations were now made for the embarkation of the army. Harrison had been joined at Seneca by about two hundred and sixty friendly Wyandot, Shawnoese, and Seneca Indians under chiefs Lewis, Black Hoof,⁴ and Blacksnake. General M^cArthur, Clay's successor in command of Fort Meigs, was ordered to embark artillery, provisions, and stores from that now reduced post, and to march the regulars there, with Clay's Kentuckians, to the Portage. Colonel Johnson was directed to remain at Fort Meigs with his mounted regiment until the expedition should sail, and then march toward Detroit, keeping abreast of the army on the transports, as nearly as possible.

The embarkation of the army commenced on the 20th.^b The weather was delightful. On the 24th the troops rendezvoused on Put-in-Bay Isl-

^b September.

he was elected to the United States Senate. He was called to the cabinet of President Harrison, in 1841, as attorney general. He was again elected to the Senate, and in 1848 was chosen Governor of Kentucky. President Fillmore called him to his cabinet in July, 1850, as attorney general. He entered the United States Senate again as a member in 1854, and held his seat there until 1861, when his term of office expired. He took an active part, as a Union man, in legislative measures pertaining to the Great Rebellion, and his proposition for conciliation will ever be known in history as *The Crittenden Compromise*. In 1861 he was elected a representative of the lower house of the Thirty-seventh Congress, which position he occupied until the close of the session on the 3d of March, 1863, when he was again put in nomination for the same office. But he did not live until the time for the election. His physical powers had been gradually giving way for some time, and at half past three o'clock on Sunday morning, July 26, 1863, he died at his residence at Frankfort, without a struggle, at the age of almost seventy-seven years.

¹ I have before me Mr. Clay's autograph letter to Governor Shelby on the subject. The following is a copy:

"LEXINGTON, 22d August, 1813.

"MY DEAR SIR,—I have seen by the public prints that you intend leading a detachment from this State. As you will want a sword, I have the pleasure to inform you that I am charged by Governor Turner and Mr. Macon with delivering to you that which the State of North Carolina voted you in testimony of the sense it entertained of your conduct at King's Mountain. I would take it with me to Frankfort, in order that I might personally execute the commission, and at the same time have the gratification of seeing you, if I were not excessively oppressed with fatigue. I shall not fail, however, to avail myself of the first safe conveyance, and if any should offer to you I will thank you to inform me. May it acquire additional lustre to the patriotic and hazardous enterprise in which you are embarking!

"Your friend,
H. CLAY."

The sword was placed in the hands of Mr. W. T. Barry, a mutual friend, on the day when the letter was written, who conveyed it to Governor Shelby, at Frankfort.

² The regiments were officered respectively as follows: Lieutenant Colonels Trotter, Donaldson, Poague, Mountjoy, Reinick, Davenport, Paul, Calloway, Simrall, Barbour, and Williams. They were formed into five brigades, under Brigadiers Calmes, Chiles, King, Allen, and Caldwell. The whole were formed into two divisions, under Major Generals William Henry and Joseph Desha. W. T. Barry was appointed the governor's secretary, Thomas T. Barr judge advocate general, and Doctor A. J. Mitchell hospital surgeon.

³ The Portage is a deep, sluggish stream. It rises in the Black Swamp, and flows between thirty and forty miles. There is a good harbor at Port Clinton.

⁴ Black Hoof was a famous Shawnoese chief. He was born in Florida, and remembered his tribe moving from there to Pennsylvania and Ohio. He was prominent in the fight against Braddock in 1756, and was in all the Indian wars with the Americans in the Northwest toward the close of the last century, until the treaty of Greenville in 1795. Up to that time he had been the bitter enemy of the white man; afterward he remained faithful to that treaty. Tecumtha tried to seduce him, but failed, and by his influence he kept a greater portion of his tribe from joining the British in the War of 1812. He became the ally of the United States, but bodily infirmity kept him from active service. In the instance of his friendship just mentioned, he simply brought his people to camp, and left younger chiefs to conduct them in the campaign.

The Army crosses Lake Erie. It lands without Opposition. Vengeance of the Kentuckians and Fears of Proctor.

and, and on the 25th they were upon the Middle Sister, an island containing six or seven acres. Upon that small space almost five thousand men were encamped. The Kentuckians had left their horses on the peninsula, and were acting as infantry.¹ The elements were favoring. There was a fresh breeze from the south, and General Harrison and Commodore Perry sailed in the *Ariel* to reconnoitre the enemy at Malden. They accomplished their object fully and returned at sunset. Directions were at once given for the embarkation of the troops the next morning, and in a general order issued that evening, the place and manner of landing, the arrangement of the order of march, the attack on the foe, and other particulars, were prescribed with great minuteness. It was believed that the enemy would meet them at the landing-place. This order was signed by E. P. Gaines, the adjutant general, and contained the following exhortation: "The general entreats his brave troops to remember that they are the sons of sires whose fame is immortal; that they are to fight for the rights of their insulted *country*, while their opponents combat for the unjust pretensions of a master. Kentuckians! remember the River Raisin! but remember it *only* while victory is suspended. The revenge of a soldier can not be gratified upon a fallen enemy."²

¹ September, 1813. The final embarkation took place on the morning of the 27th.² No lovelier autumnal day ever dawned upon the earth. The sky was cloudless, the atmosphere balmy, and a gentle breeze from the southwest lightly rippled the waters. In sixteen armed vessels and almost one hundred boats that little army was put afloat. All was in motion at nine o'clock, and as the great flotilla moved northward toward the hostile shore, Harrison's stirring address was read to the men on each vessel. From these went up a hearty shout of *Harrison and Victory*, and then all moved on silently into the Detroit River. The spectacle was beautiful and sublime.

Hartley's Point, three or four miles below Amherstburg (Malden), and opposite the lower end of Bois Blanc Island, had been selected by Harrison and Perry as the landing-place. The debarkation took place at about four o'clock, on a low, sandy beach there, which stretched out in front of high sand-drifts, behind which it was believed the enemy lay concealed. The army landed in perfect battle order, the Kentucky Volunteers on the right, the regulars on the left, and Ball's Legion and the friendly Indians in the centre. But no enemy was there. Proctor, who was in command at Malden, taking counsel of Prudence and Fear,³ and contrary to the solemn advice, earnest entreaties, and indignant remonstrances of his more courageous brother officer Tecumtha,⁴ had fled northward with his army, and all that he could take

¹ There were not vessels enough to transport the horses with forage, and they were left behind. A strong fence of brush and fallen timber was constructed across the isthmus from near Port Clinton, a distance of not more than two miles, making the whole peninsula an inclosure for the horses to pasture in. One of every twenty Kentuckians were drafted to form a guard for the horses, and these were placed under the command of Colonel Christopher Rife.

² The terrible massacre at the River Raisin, and the circumstances attending it, inspired the Kentuckians with almost savage desires for vengeance. One of their songs sung around camp-fires recounted the cruelties of the Indians and the inhumanity of Proctor on that occasion. The following is one of the stanzas:

"Freemen! no longer bear such slaughters;
Avenge your country's cruel woe;
Arouse, and save your wives and daughters!
Arouse, and smite the faithless foe!
Chorus.—Scalps are bought at stated prices,
Malden pays the price in gold."

³ Proctor, like the Kentuckians, remembered the River Raisin, and was afraid of falling into the hands of those whose sons and brothers had been butchered a few months before by his permission. His scouts had seen the Americans on the Sandusky Peninsula, and had reported their number at fifteen thousand, at least ten thousand of whom were Kentuckians burning with revenge. The fear of these gave fleetness to his feet.

⁴ The defeat and capture of the British squadron had been foolishly concealed from Tecumtha for fear of its demoralising effect on his savage followers. The Indian leader was therefore greatly astonished when he observed Proctor preparing to flee. He had been delighted when the British vessels went out to fight. He crossed over to Bois Blanc Island to watch the first appearance of them returning with the vanquished American squadron—an apparition which Proctor's boasting had made him believe would certainly be revealed. He was disappointed, bewildered, and perplexed: and, with great vehemence of manner, he addressed Proctor, saying,

"Father, listen! Our fleet has gone out; we know they have fought; we have heard the great guns; but we know

Tecumtha's scornful Rebuke of Proctor. The British and Indians fly toward the Thames. The Americans pursue.

with him, leaving Fort Malden, the navy buildings, and the store-houses smoking ruins. As the Americans approached the town, with Governor Shelby in advance, they met, not valiant British regulars nor painted savages, but a troop of modest, well-dressed women, who came to implore mercy and protection. The kind-hearted veteran soon calmed their fears. The army entered Amherstburg with the bands playing *Yankee Doodle*. The loyal inhabitants had fled with the army. The ruins of Fort Malden, the dock-yard, and the public stores were sending up huge volumes of smoke.

Proctor had impressed into his service all the horses of the inhabitants to facilitate his flight, yet Harrison wrote courageously to the Secretary of War, on the evening after his arrival at Amherstburg,^a saying, "I will pursue the enemy to-
morrow, although there is no probability of overtaking him, as he has
upward of a thousand horses, and we have not one in the army. I shall think myself fortunate to collect a sufficiency to mount the general officers." Only one, and that a Canadian pony, was procured, and on that the venerable Shelby was mounted.

^a September 27,
1813.

When Harrison's vanguard arrived at Amherstburg, the rear-guard of the enemy had not been gone an hour. Colonel Ball immediately sent an officer and twenty of his cavalry after them, to prevent them destroying the bridge over the Aux Canards, or Ta-ron-tee. They had just fired it when the Americans appeared. A single volley scattered the incendiaries, and the bridge was saved. The next morning Harrison's army, excepting a regiment of riflemen under Colonel Smith left at Amherstburg, crossed it, and encamped in the Petit Côte Settlement,¹ and at two o'clock on the 29th they entered Sandwich. At the same time the American flotilla reached Detroit; and on the following day, Colonel Johnson and his mounted regiment arrived there. M^rArthur, with seven hundred effective men, had already crossed over, driven off a body of Indians who were hovering around the place, and retaken the town. General Harrison had also declared the martial law enforced by Proctor at an end, and the civil government of Michigan re-established, to the great joy of the inhabitants.²

On the arrival of Johnson the general-in-chief sent on one of his aids-de-camp, Captain C. S. Todd,³ to order the colonel to cross immediately with his troops, for he

nothing of what has happened to our father with one arm [Captain Barclay]. Our ships have gone one way, and we are much astonished to see our father tying up every thing, and preparing to run the other way, without letting his red children know what his intentions are. You always told us to remain here and take care of our lands. You always told us you would never draw your foot off British ground; but now, father, we see you are drawing back, and we are sorry to see our father doing so without seeing the enemy. We must compare our father's conduct to a fat dog that carries its tail upon its back, but when affrighted it drops it between its legs and runs off.

"Father, listen! The Americans have not yet defeated us by land, neither are we sure that they have done so by water; we therefore wish to remain here and fight our enemy, should they make their appearance. If they defeat us we will then retreat with our father. . . . You have got the arms and ammunition which our great father, the king, sent for his red children. If you have an idea of going away, give them to us, and you may go and welcome for us. Our lives are in the hands of the Great Spirit. We are determined to defend our lands, and, if it be his will, we wish to leave our bones upon them."

This speech was addressed to Proctor at a council held on the 18th of September in one of the store-houses at Amherstburg. Its effect was powerful. The Indians all started to their feet, and brandished their tomahawks in a menacing manner. Proctor had resolved to flee to the Niagara frontier, but this demonstration made him hesitate. He finally quieted Tecumtha and his followers by promising to fall back only to the Moravian Towns, on the Thames, and there make a stand. These were about half way between Amherstburg and the outposts of the centre division of the British army, on the western borders of Lake Ontario. On the day of the council Proctor left Amherstburg with a large portion of his force. Major Warburton remained, charged with destroying the public property on the appearance of the Americans.

¹ See Map on page 266.

² Before the Americans landed, the joyous inhabitants ran up the United States flag. They had suffered dreadfully. For months the insolent savages had made their dwellings free quarters. When they fled the Indians fired the fort. The flames were soon extinguished.

³ Harrison's gallant aid-de-camp, Charles Scott Todd, is yet [1867] living in his native state, Kentucky, where he was born on the 22d of January, 1791. I met him in Washington City at near the close of 1861, when he was almost seventy-one years of age. His mental and physical vigor seemed equal to those of most men at fifty. He was there to offer his services in the field to his government in its war against the Great Rebellion. Colonel Todd is one of the most eminent of the public servants of this country. He was educated at the College of William and Mary, in Virginia, where he was graduated with distinction in 1809. Law became his profession, but on the breaking out of the war he entered the military service as ensign of a company of volunteers raised for Harrison at Lexington, where he was engaged in his profession. He became acting quarter-master and judge advocate of Winchester's wing of the Northwestern Army, and was exceedingly active in the wilderness. "He combined," said Harrison at that time, "the ardor of youth with

Johnson and his Horsemen cross Detroit River. Vigorous Pursuit of the British. Perry's Squadron in the Thames.

C. S. Todd

three thousand five hundred in number, left Sandwich, and pressed on toward Chatham, on the Thames,¹ near which, it was alleged, Proctor was encamped. General Marquis Calmes, and Adjutant General Gaines were compelled by illness to remain at Sandwich; and General Cass accompanied Harrison as volunteer aid.

Information had been received two days before^b that some small vessels, with the enemy's artillery and baggage, were escaping up Lake St. Clair toward the Thames, when Commodore Perry dispatched a portion of his squadron, consisting of the *Niagara*, *Lady Prevost*, *Scorpion*, and *Tigress*, under Captain Elliott, in pursuit. Perry soon followed in the *Ariel*, accompanied by the *Caledonia*; and on the day when Harrison left Sandwich^c the little squadron appeared off the mouth of the Thames, having in charge the baggage, provisions, and ammunition-wagons of the American army. The enemy's vessels, having much the start, escaped up the Thames.²

Proctor seems not to have expected pursuit by land, and the Americans found all the bridges over the streams that fall into Lake St. Clair uninjured. Harrison pressed

the maturity of age." In May, 1813, he was commissioned a captain in the United States army, and Harrison appointed him his aid. His conduct in the campaign in the autumn of that year was highly commended, especially at the battle on the Thames. He succeeded Major Rakill as deputy inspector general of the Eighth Military District, and was adjutant general of the district the following year, when he served with General M'Arthur with great acceptance. He became inspector general in March, 1815, with the rank of colonel, but left the army in June following; and after the war Harrison said that "Colonel Todd was equal to bravery and superior in intelligence to any officer of his rank in the army." He resumed his practice of the law at Frankfort, where he married a daughter of Governor Shelby. He soon became secretary of state, then a member of the Legislature, and was finally sent by President Monroe on a confidential mission to Colombia, South America. His services there were very important. In the spring of 1840 he assisted, by request, in the preparation of a Life of General Harrison, and, as editor of a Cincinnati paper, he warmly advocated the general's election to the presidency. In the summer of 1841 he was appointed United States minister to Russia, and served his country in that capacity to the perfect satisfaction of both governments. It was while he was there that the portrait from which the above likeness was taken was painted. In private, as in public life, Colonel Todd is a model of a Christian gentleman.

¹ This considerable stream was called *La Tranche* by the French. It is sometimes called the *Trent*, but now is known only by the name of *Thames*. In the poetic epigraph to this chapter it is called *La Tranche*.

² M'Afee (page 383) says that when the American army arrived at the mouth of the Thames, an eagle was seen hovering over it. "That," said Harrison, "is a presage of success." Perry, who had landed and was with the general, remarked that an eagle hovered over his squadron on the morning of the 10th of September.

was resolved to push on in pursuit of the enemy as quickly as possible. He called a council of his general officers, informed them of his intention, and consulted with them concerning the best route to pursue, only two being feasible, namely, by land in rear of the British, or by Lake Erie to Long Point, where the Americans might make a rapid march across the country, and intercept the fugitives. The land route was chosen.

Johnson and his mounted men crossed the river to Sandwich on the evening of the 1st,^a and on the following morning the pursuit was commenced. M'Arthur and his brigade were left to hold Detroit; Cass's brigade and Ball's regiment were left at Sandwich; and about one hundred and forty regulars, Johnson's mounted corps, and such of Shelby's Kentucky Volunteers as were fit for long and rapid marches, the whole

Pursuit up the Thames.

A Halt at Dolsen's.

The American Troops at Chatham.

forward rapidly along the good road by the borders of the lake for twenty miles, when seven British deserters informed him that Proctor, with seven hundred white men and twelve hundred Indians, was encamped at Dolsen's farm, about fifteen miles from the mouth of the Thames, on its right or northern bank, and fifty-six miles from Detroit by water. This information stimulated the Americans to greater exertions, and when they halted at night on the banks of the Ruscom, they had marched twenty-five miles from Sandwich. At dawn the next morning the pursuit was renewed, and near the mouth of the Thames Johnson's regiment captured a lieutenant of dragoons and eleven privates, who had just commenced the destruction of a bridge over a small tributary of the river. This was the first intimation to Harrison that Proctor was aware of the pursuit. The capture of this little party was considered a good omen. The pursuit was continued, and that night the Americans encamped on Drake's farm, on the left bank of the Thames, about four miles below Dolsen's. The *Scorpion*, commanded by the gallant Champlin, the *Tigress*, and the *Porcupine*, had followed the army up the river as convoys to the transports, and to cover the passage of the troops over the mouths of the tributaries of the Thames, or of the river itself. At this point the character of the stream and its banks changed. Below, the channel

was broad, the current sluggish, and the shores were extended flat prairies; here the country became hilly, the banks high and precipitous, the channel narrow, and the current rapid. On these accounts, and because of the exposure of the decks to Indian sharpshooters from the lofty wooded banks, it was concluded not to take the vessels higher than Dolsen's. Perry now left the vessels, offered his services as volunteer aid to General Harrison, and joined the army in the exciting pursuit of the fugitives.

DOLSEN'S.

Harrison pressed forward on the morning of the 4th. Proctor fled up the Thames from Dolsen's, cursed by Tecumtha for his cowardice, to Chatham, two and a half miles, where an impassable stream, called M'Gregor's Creek, flows into the Thames between steep banks. There Proctor promised Tecumtha he would make a final stand. "Here," he said on his arrival, "we will defeat Harrison or lay our bones." These words pleased the warrior, and he regarded the position as a most favorable one. "When I look on these two streams," he said, "I shall think of the Wabash and the Tippecanoe." A bridge at the mouth of the creek, and another at M'Gregor's mill, a mile above, had been partially destroyed, and a considerable body of Indians

¹ The above sketch is a view of Dolsen's house, made when I visited the spot in the autumn of 1860. It is a hewn log structure, and stands very near the right or north bank of the Thames. It is about two miles and a half below Chatham. The owner and resident there in 1813, Isaac Dolsen, Esq., was then living in Chatham, but was absent at the time of my visit. He was then about eighty years of age. He and his brother John were natives of the Mohawk Valley, of Dutch descent. On their return, after the battle some miles above, the American army encamped on the farm of John, half a mile below Isaac's. The Thames is here sluggish, and about three hundred yards wide.

VIEW AT JUNCTION OF THE THAMES AND M'GREGOR'S CREEK.¹

were about to push forward, when Walk-in-the-water, the Wyandot chief already mentioned, who had left the banner of Proctor with sixty warriors, came to Harrison and offered to join his army conditionally. The general had no time to treat with the savage, so he told him that if he left Tecumtha he must keep out of the way of the American army. He did so, and returned to the Detroit River.

The enemy spread destruction in their flight. Near Chatham they fired a house containing almost a thousand muskets. The flames were quenched and the arms were saved. Half a mile farther up the river they burned one of their own vessels laden with ordnance and military stores; and opposite Bowles's farm, where Harrison encamped, two more vessels and a distillery, containing ordnance, naval and military stores, and other property of great value, were in flames. The Americans secured two 24-pounders and a quantity of shot and shell. Certain intelligence was received that the enemy were only a few miles distant, and that night Harrison intrenched his camp and set a double guard. At midnight Proctor and Tecumtha reconnoitred the camp, but prudently refrained from attacking it.

were at each, to dispute the passage of the pursuers or their attempts to make repairs. Two six-pound cannons, under the direction of Major Wood, soon drove the savages from the bridge at Chatham, and a dash of Colonel Johnson and his horsemen upon the dusky foe at M'Gregor's also sent them flying after Proctor. Johnson lost two men killed and six or seven wounded. The Indians had thirteen killed and a large number wounded.

Both bridges were speedily repaired, and the troops

M'GREGOR'S MILL.²

¹ This sketch is a view of the junction of the Thames and M'Gregor's Creek, from the present bridge at Chatham, looking up the river. The Thames is seen on the left, and M'Gregor's Creek on the right. The upper termination of the bridge, mentioned in the text, was between the two clumps of trees on the bluff. In the distance is seen the courthouse and jail of Chatham. On the flat between it and the creek the British built two or three gun-boats, under the superintendance of Captain Baker, the same person who constructed the barge that bore Washington from Elizabethtown to New York in 1789, when going there to be inaugurated President of the United States. Looking beyond the point of the bluff, up the Thames, is seen the residence of Henry Jones. It is upon the site of the building, mentioned in the text, in which were a large quantity of muskets saved from the flames by the Americans. Farther up the stream lay a sunken steam-boat, that craft being in the habit of plying between Detroit and Chatham. On the opposite side of the Thames is seen a tannery. The plain on which the gun-boats were built is now a military reserve.

² This little sketch shows the appearance of the ruins of M'Gregor's mill when I visited it in the autumn of 1860. The timbers of the ends of the dam are seen on the shores. The bridge carried by Johnson crossed the stream very near the mill. In this view we are looking east from the southwest side of the creek. A beautifully shaded ravine, with a small creek, is seen here.

The fugitive British and Indians discovered.

The chosen Battle-ground.

Tecumtha's chief Lieutenant.

The Americans were in motion at dawn, the mounted regiments in front, led by General Harrison and his staff. The Kentuckians, under Shelby, followed. They soon captured two of the enemy's gun-boats and several bateaux, with army supplies and ammunition, and several prisoners. At nine o'clock they reached Arnold's Mill, at the foot of rapids, where the Thames was fordable by horses. There Harrison determined to cross the river and follow directly in the rear of Proctor. The mounted men each took one of the infantry behind him, and at meridian, by this means and the bateaux, the whole American army was on the north side of the Thames, and pressing on vigorously after the fugitives. Every where on the way evidences of the precipitation of the retreat were seen in property abandoned.

At two o'clock, when eight miles from the crossing place, the Americans discovered the smouldering embers of the recently-occupied camp of the enemy's rear-guard, under Colonel Warburton. It was evident that the fugitives were nearly overtaken. Colonel Johnson dashed forward to gain intelligence. Within about three miles of the Moravian Town¹ he captured a British wagoner, and from him learned that Proctor had halted across the pathway of the pursuers, only three hundred yards farther on. Johnson, with Major James Suggett and his spies, immediately advanced cautiously, and found the enemy awaiting the arrival of the Americans in battle order. He obtained sufficient information respecting their position to enable General Harrison and a council of officers, held on horseback, to determine the proper order for attack. His force was now little more than three thousand in number, consisting of one hundred and twenty regulars of the 27th Regiment, five brigades of Kentucky volunteers under Governor Shelby, and Colonel Johnson's regiment of mounted infantry.

The ground chosen by the enemy to make a stand was well selected. On his left was the River Thames, with a high and precipitous bank, and on his right a marsh running almost parallel with the river for about two miles. Between these, and two and three hundred yards from the river, was a small swamp, quite narrow, with a strip of solid ground between it and the large marsh. The ground over which the road lay, and indeed the whole space between the river and the great swamp, was covered with beech, sugar-maple, and oak trees, with very little undergrowth. The British regulars (a part of the Forty-first Regiment) were formed in two lines, between the small swamp and the river, their artillery being planted in the road near the bank of the stream. The Indians were posted between the two swamps, where the undergrowth was thicker, their right, commanded by the brave Oshawahnah,² a Chippewa chief, extending some distance along and just within the borders of the larger marsh, and so disposed as to easily flank Harrison's left. Their left, command-

¹ This village is in the township of Oxford, Canada West, on the right bank of the Thames. The settlers were Indians converted to Christianity by the Moravians, who fled to Canada from the Muskingum, in Ohio, in 1792. By an order of the Provincial Council in 1793, a large tract of land, comprising about fifty thousand acres, was granted for their use, on which they proceeded to build a church and village. The Rev. John Scott, of Bethlehem, ministered there for some time. At the period we are considering this Christian-Indian village had nearly one hundred houses, mostly well built. Many of the Indians spoke English. They had a school-house and a chapel, and very fine gardens. Village and crops were destroyed by the American troops, it having been alleged that some of the Indians residing there had been foremost in the massacre on the Raisin. In 1836 the Indians surrendered a large portion of their lands to the Canadian government, for an annuity of one hundred and fifty pounds sterling. The present Moravian Town is back from the Thames, about a mile and a half from the original site.

² The likeness on the next page of this chief, Tecumtha's lieutenant, or second in command, in the battle on the Thames, is from a daguerreotype taken from life at Brantford, in Canada, in September, 1863, and presented to me by G. H. M. Johnson, chief of the Six Nations on the Grand River (see page 421), in the summer of 1860. The old chief attended a grand council of all the Indians in Canada, at Brantford, and was the guest of Mr. Johnson. In the council he appeared with all his testimonials of bravery—his "stars and garters"—as seen in the picture. Around his hat was a silver band. He also displayed a silver gorget, medals, etc., a sash of bead-work, strings of wampum, and an ornamented tomahawk pipe, like the one on page 421. He was then about ninety years of age. He had been a famous warrior—the hero of fifteen battles. He was a mild-spoken, pleasant man, very vigorous in mind and body. He was yet living in 1861, the principal of seven or eight chiefs, on Walpole Island, in Lake St. Clair, opposite the town of Algoma, Michigan, fifty miles above Detroit. Walpole Island is about ten miles in length. The Indians are Chippewas, Pottawatomes, and Ottawas. They were settled here by the Indian Agent of the British government at the close of the War of 1812. They were placed in charge of a superintendent in 1839. The number now (1867) is about one thousand. Their principal business is hunting in the country around the Canadian borders of Lake St. Clair.

ISHAM WARREN.

ed in person by Tecumtha, occupied the isthmus, or narrowest point between the two swamps.

In the disposition of his army for battle, General Harrison made arrangements for the horsemen to fall back, allow the infantry to make the attack, and then charge upon the British lines. For this purpose General Calmes's brigade, five hundred strong, under Colonel Trotter,¹ was placed in the front line, which extended from the road on the right toward the greater marsh. Parallel with these, one hundred and fifty yards in the rear, was General John E. King's brigade, and in the rear of this was General David Chiles's brigade, posted as a reserve. These three brigades were under the command of Major General Henry. Two others (James Allen's and Caldwell's²) and Simrall's regiment, forming General Desha's³ division, were formed upon the left of the front line, so as to hold the Indians in check and

prevent a serious flank movement by them. At the *crochet* formed by Desha's corps and the front line of Henry's division (see map on page 554), the venerable Governor Shelby, then sixty-six years of age, took his position. In front of all these was Johnson's mounted regiment in two columns (one under the colonel, and the other commanded by his brother James, the lieutenant colonel⁴), its right extending to within fifty yards of the road, and its left resting on the smaller swamp. A small corps of regulars, under Colonel Paul, about one hundred and twenty in number, were posted between the road and the river for the purpose of advancing in concert with some Indians under the wooded bank, to attempt the capture of the enemy's cannon. These Indians, forty in number, were to stealthily gain the British rear, fire upon them, and give them the fearful impression that their own savage allies had turned upon them. The defection of Walk-in-the-water would be instantly remembered.

When every preparation for attack was completed, Major Wood, who had just been reconnoitring the enemy's position, informed General Harrison that the British lines were drawn up in open order. This information induced the general, contrary

¹ George Trotter was then lieutenant colonel. He was a captain in Simrall's regiment, and was distinguished and wounded in the action of Colonel Campbell at the Mississinewa Towns in December, 1812. He was acting brigadier general in the battle on the Thames. He was a native of Kentucky, and died at Lexington, in that state, on the 13th of October, 1815.

² Samuel Caldwell was a distinguished Kentuckian. He was a major of Kentucky levies in 1791, and distinguished himself with Wilkinson in the Wabash country in August of that year. He was lieutenant colonel commanding volunteers in the autumn of 1812, and was in General Green Clay's brigade the following year. He was made brigadier general of volunteers in August, 1813, and as such commanded in the battle on the Thames.

³ Joseph Desha was a descendant of a Huguenot family. He was born in Western Pennsylvania in December, 1768, and emigrated to Kentucky, with his father, in 1781. In 1790 he settled permanently in Mason County, Kentucky. He performed military service under Wayne in 1794 and '95, having, at the early age of fifteen, been engaged in conflicts with the Indians. He represented Mason County in the State Legislature, and in 1816 was chosen a member of Congress. His only military service in the War of 1812 was under Harrison in the campaign in Canada. In 1824 he was elected governor of Kentucky, and held the office four years. He then retired to private life. He died at Georgetown, Scott County, on the 11th of October, 1842.

⁴ The spirit of the Kentuckians who formed that corps may be inferred by the fact that Lieutenant Colonel James Johnson had with him his two sons, Edward P. and William, the one seventeen and the other only fifteen years of age. James Johnson was a representative in Congress in 1825 and '26. He died in August, 1826.

to all precedent, to incur the peril of changing the prescribed mode of attack at the last moment. Instead of having Henry's division fall upon the British front, he ordered Johnson to charge their line with his mounted riflemen.¹ That gallant officer made immediate preparations for the bold movement, but found the space between the river and the small swamp too limited for his men to act efficiently. In the exercise of discretion given him, he led his second battalion across the little swamp to attack the Indian left, leaving the first battalion, under his brother James and Major Payne, to fall upon the British regulars. The latter were immediately formed in four columns of double files, with Major Suggett and his two hundred spies in front. Colonel Johnson formed the second battalion in two columns, in front of Shelby, with a company of footmen before him, the right column being headed by himself, and the left by Major David Thompson. Harrison, accompanied by Acting Adjutant General Butler,² Commodore Perry, and General Cass, took position on the extreme right, near the bank of the river, where he could observe and direct all movements.

A bugle sounded, and the Americans immediately moved forward with coolness and precision in the prescribed order, among huge trees, some undergrowth, and over fallen timber. They were compelled to move slowly. When at some distance from the front line of the British regulars, the latter opened a severe fire. The horses of the mounted Kentuckians were frightened, recoiled, and produced some confusion at the head of the columns. Before order was restored, another volley came from the enemy. With a tremendous shout the American cavalry now boldly dashed upon the British line, broke it, and scattered it in all directions. The second line, thirty paces in the rear, was broken and confused in the same way. The horsemen now wheeled right and left, and poured a destructive fire upon the rear of the broken columns.

VIEW ON THE THAMES.

The terrified foe surrendered as fast as they could throw down their arms, and in less than five minutes after the first shot of the battle was fired, the whole British force, more than eight hundred strong, were totally vanquished, and most of them made prisoners. Only about fifty men and a single officer (Lieutenant Bullock), of the Forty-first Regiment, escaped. Proctor fled in his carriage, with his personal staff, a few dragoons, and some mounted Indians, hotly pursued by a part of Johnson's corps under Major Payne.

"When Proctor saw lost was the day,
He fled La Tranche's plain;
A carriage bore the chief away,
Who ne'er returned again."—OLD SONG.

The battle on the right was over before the advancing columns of General Henry were fairly in sight of the combatants.

When the bugle sounded for attack on the right, the notes of another on the left rang out on the clear autumn air. Colonel Johnson and the second battalion of his

¹ "The measure," said General Harrison, in his report to the Secretary of War on the 9th of October, "was not sanctioned by any thing that I had seen or heard of, but I was fully convinced that it would succeed. The American backwoodsmen ride better in the woods than any other people. A musket or rifle is no impediment, they being accustomed to carrying them on horseback from their earliest youth. I was persuaded, too, that the enemy would be quite unprepared for the shock, and that they could not resist it."

² We shall meet Adjutant Robert Butler hereafter in the battle of New Orleans.

³ This view is from the road-side, on the high river bank, at the point where the British left rested on the Thames, and a few rods from the residence occupied by Mr. Watts.

The Contest with the Indians.

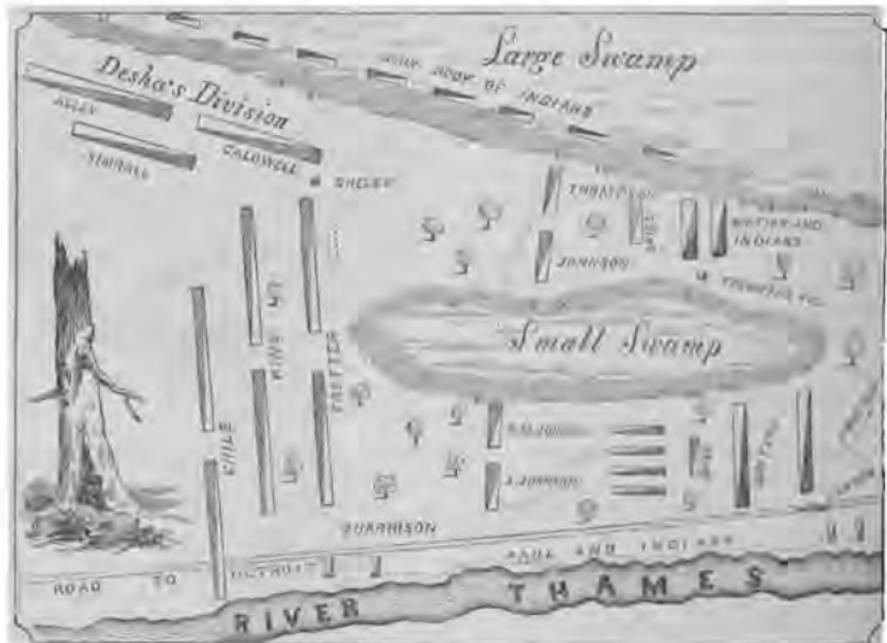

The Fight a fierce one.

The Savages defeated.

troops moved against the Indians almost simultaneously with the attack on the British line. The savages, under the immediate command of Tecumtha, reserved their fire until the Americans were within a few paces of them, when they hurled a most deadly shower of bullets upon them, prostrating a greater portion of the vanguard, or forlorn hope, and wounding Colonel Johnson very severely.

"Sudden, from tree and thicket green,
From trunk, and mound, and bushy screen,
Sharp lightning flashed with instant sheen,
A thousand death-bolts sung!
Like ripen'd fruit before the blast,
Rider and horse to earth were cast,
Its miry roots among;
Then wild, as if that earth were riven,
And, poured beneath the cope of heaven,
All hell to upper air was given,
One fearful whoop was rung;
And, bounding each from covert forth,
Burst on their front the demon birth."

The branches of the trees and the undergrowth in this part of the field were too thick to allow the mounted riflemen to do much service on horseback. Perceiving this, Johnson ordered them to dismount, and carry on the conflict on foot at close

BATTLE OF THE THAMES.

quarters. For seven or eight minutes the battle raged furiously, and there were many hand-to-hand fights between the Kentuckians and savages, while the former raised the fearful cry, at times, "Remember the River Raisin!" Victory was poised for a while. Perceiving this, Shelby ordered Lieutenant Colonel John Donaldson's regiment to the support of Johnson, and directed General King to press forward to the front with his brigade. The Indians had already recoiled from the shock of the Kentucky rifles, and only a part of Donaldson's regiment participated in the fight. The savages fled, and a scattering, running fire was kept up for some time along the swamp in front of Desha's division, and by the fugitives pursued by Major Thompson and his men. Other movements were ordered by Governor Shelby, but the Indians had given up the contest, and the battle was over before they could be effected. The

Escape of Proctor.

Death of Tecumtha.

Who killed Tecumtha?

pagan allies of the British scattered through the forest in rear of the greater swamp, while Proctor and his few followers were flying like hunted deer before Payne and his horsemen, who pursued him far beyond the Moravian Town, killing some Indians, capturing some prisoners, and securing valuable spoils. Among the latter were six brass cannon, three of which were taken from the British in the War of the Revolution, and were retaken from Hull at Detroit. Majors John Payne, E. D. Wood, C. S. Todd, John Chambers, and A. L. Langham, and Lieutenants Scroggin and Bell, with three privates, continued the pursuit of the fugitive general until dark, but could not overtake him. He abandoned his carriage, left the road, and escaped by some by-path. Within twenty-four hours he was sixty-five miles from the battle-ground! His carriage, sword, and valuable papers were captured by Major Wood,¹ and the party returned to Moravian Town, taking with them sixty-three prisoners. They found the little village deserted. So panic-stricken were some of the women that, when they left, being unable to carry their children in their flight, they threw them into the Thames to prevent their being butchered by the Americans!²

The loss in this short, sharp, and decisive battle was not large. The exact number was not ascertained. That of the Americans was probably about fifteen killed and thirty wounded. The British lost about eighteen killed, twenty-six wounded, and six hundred made prisoners; of these, twenty-five were officers. Harrison estimated the number of small-arms taken from the enemy during the pursuit and the battle, with those destroyed by them, at more than five thousand, nearly all of which had been captured from the Americans at Detroit, Frenchtown, and Dudley's defeat on the Maumee. The Indians left thirty-three of their dead on the field. How many they lost by death and wounds in the contest was never ascertained. Tecumtha, their great leader, and really great and noble man, all things considered, was among the slain. He was much superior to Proctor in manhood, military genius, and courage, and is worthy to be remembered with profound respect. He was killed early in the action, while inspiring his men by words and deeds. Tradition and History relate that he had just wounded Colonel Johnson with a rifle-bullet, and was springing forward to dispatch him with his tomahawk, when that officer drew a pistol from his belt and shot the Indian through the head.

"The moment was fearful; a mightier foe
Had ne'er swung his battle-axe o'er him;
But hope nerved his arm for a desperate blow,
And Tecumtha fell prostrate before him.
He fought in defense of his kindred and king,
With a spirit most loving and loyal,
And long shall the Indian warrior sing
The deeds of Tecumtha the royal."

The statement of tradition and history has been made in enduring marble by the sculptor on Johnson's monument in the cemetery at Frankfort, Kentucky.³ It has been questioned, and positively denied; and during the political campaign when Johnson was a candidate for the chair of Vice-President of the United States, the question caused much warm discussion. Johnson, it is said, never affirmed or denied the story. He killed an Indian under the circumstances and in the manner just related, on the spot where two red warriors, stripped naked, were found after the battle, one of whom it was believed was Tecumtha.⁴

¹ In a letter to the author, Captain Stanton Sholes (see page 541), who was in the battle of the Thames, says, "I had a very pleasant ride back to Detroit in Proctor's beautiful carriage. I found in it a hat, a sword, and a trunk. The latter contained many letters, mostly written in the handsomest writing I ever saw, by Proctor's wife to her dear Henry."

² "I had this fact," says Samuel R. Brown, in his *Views on Lake Erie*, page 68, "from an American gentleman who was at Oxford when Proctor and the Indians passed through there. The squaws were lamenting the loss of their children."

³ See page 496.

⁴ The solution of the question, "Who killed Tecumtha?" is of no historic importance, yet, it having been the subject of much discussion, a few facts bearing upon it may be appropriately introduced here. These facts have been drawn chiefly from a very interesting written communication made to me in January, 1861, by Dr. Samuel Theobald, who was Johnson's judge advocate, and with him in the battle. When Dr. Theobald (see a sketch of him in note 2, page 850)

The Gallantry of Colonel Johnson in the Battle.

His Wounds.

Samuel Theobald.

S. Theobald

Johnson behaved most gallantly in the action. He was mounted on a white pony that his servant had ridden, his own horse having been disabled. This made him a conspicuous mark for the enemy. At the sound of the bugle charge he dashed forward at the head of his Forlorn Hope, and attacked the Indian left, where Tecumtha was stationed.¹ The first volley of bullets from the foe wounded him in the hip and thigh. He almost immediately received another bullet in his hand from the Indian that he shot, which traversed his arm for some distance. He was disabled, and said to Dr. Theobald,² one of his staff, who was dismounted, and fighting near him, "I am severely wounded; where shall I go?" "Follow me," answered Theobald. He did not know where to find the surgeon of the regiment, so he led him across the smaller swamp to the road, and about three hundred rods in the rear, to the stand of Dr. Mitchell, Governor Shelby's surgeon general. The colonel, faint with the loss of blood, was taken from his horse, when

the little animal, having performed its duty to the last, fell dead, having been wounded in seven places. Theobald ran to the Thames for water, which revived the colonel. His wounds were dressed, and he was conveyed to a vessel a few miles below,

wrote to me he was residing near Greenville, Washington County, Mississippi. He says that, early in the campaign, Johnson organized a small corps, composed of the staff of his regiment, which he denominated the Forlorn Hope. It was designed to accompany him immediately in the event of a battle. One of these was the venerable Colonel William Whitely, who had been distinguished in conflicts with the Indians in the early years of settlements in Kentucky, and then over seventy years of age. He had volunteered as a private in Captain Davidson's company. The others who composed the Forlorn Hope, and charged upon the enemy at the opening of the battle, were Benjamin S. Chambers, Robert Payne (a nephew of Colonel Johnson), Joseph Taylor, William Webb, Garrett Wall, Eli Short, and Dr. S. Theobald. Whitely was killed, and was found lying near the two Indians mentioned in the text by Theobald and Wall, after the battle. They found the bodies of the two Indians lying a little way apart. On the following morning the news spread that the body of Tecumtha had been found. One of the Indians alluded to was designated as the fallen chief. Theobald felt a desire to identify the body of the chief, and took Anthony Shane, a half-breed Shawanoe, who knew Tecumtha well, to view it. The body was entirely naked, and several strips of skin had been taken from the thighs by some of the Kentuckians, who had reason to remember the *River Raisin*, and, as I was informed by a soldier who was in the battle, these strips were used for making razor-strops! Shane did not recognize the body as that of Tecumtha. The late Colonel John Johnston, of Dayton, Ohio, who, as Indian agent, often employed Shane, informed me that he told him that Tecumtha once had his thigh-bone broken, and that a sort of ridge had been formed around the fracture that might be easily felt. No such ridge was observed in the thigh of the Indian claimed to be Tecumtha, found on the ground where the charge of the Forlorn Hope was made and Johnson was wounded. Dr. Theobald further informs me that his friend, Captain Benjamin Warfield, commander of a company in Johnson's regiment, told him that he was directed to search the battle-field for wounded soldiers. He found a British soldier, named Clarke, lying there mortally wounded. He was the Indian interpreter for Proctor, and asserted positively that Tecumtha was killed, and his body was carried off by the Indians. I have since been informed by Colonel C. S. Todd, one of Harrison's aids at that time (see page 547), that he was told by the celebrated chief Black Hawk that he was present at that battle, and that Tecumtha's body was certainly carried off by his followers. These facts show that, while Colonel Johnson may have shot Tecumtha, the body supposed to be his, and so barbarously mutilated by the exasperated Kentuckians, was that of another warrior.

¹ Tecumtha, as we have seen, had reason to doubt the word and courage of Proctor. He doubtless took his position at the junction of the British and Indian lines, so as to have a near and direct communication between himself and Proctor. He knew that Proctor was flying through fear. The Canadians on the route of the retreat had told him that Proctor would not fight if he could help it. Proctor knew that Tecumtha would compel him to fight here, or feel the force of savage resentment, so he fled at the commencement of the battle; and no doubt the haste of his white troops to surrender was to secure themselves from the vengeance of Tecumtha and his followers.

² Samuel Theobald was born near Paris, Bourbon County, Kentucky, on the 23d of December, 1790. He was "graduated in medicine" at Transylvania University, at Lexington, and in that borough practiced medicine for twenty years. For the last thirty years he has been engaged in cotton-planting, most of the time residing near Greenville, Mississippi. His ancestors, paternal and maternal, were Kentucky pioneers. His younger brother, James, was with him in the battle of the Thames, and another brother, Thomas S., was in the military service on the frontier for twelve months as a lieutenant of rangers.

Johnson conveyed Homeward. Rejoicings because of the Victory. Harrison and Proctor properly rewarded.

under charge of Captain Champlin, of the *Scorpion*, which that gallant officer had captured from the British. In that vessel he was conveyed to the *Scorpion*, at Dolson's, and in her to Détroit. There he remained a short time, and then, with much suffering, he made his way homeward.¹ He reached Frankfort early in November, and in February, after kind and skillful nursing by Major C. S. Todd, although unable to walk, he resumed his seat in Congress, at Washington. His journey thither was a continued ovation, for his gallantry on the Thames was known to the nation.²

Harrison's successes, and the annihilation of the allied armies of the foe westward of Lake Ontario, produced great rejoicing throughout the United States.³ All that Hull had lost had now been recovered, and more. The hopes of the Americans were stimulated. They felt that a really able general was in the field, and all the arts of Harrison's political and personal enemies could not blind them to the fact that, by the exercise of military genius, indomitable perseverance, and unflinching courage, he had accomplished more than all the other leaders, and had fully vindicated his country's honor. His praises were on every honest lip. In the chief cities, from Maine to Georgia, bonfires and illuminations attested the public satisfaction, and in many places joint honors were paid to the heroes of Lake Erie and the Thames—Perry and Harrison.⁴ As usual, songs written for the occasion were heard in theatres and in the streets, and at every festive table Harrison was toasted as The Hero of Tippecanoe and of the Thames. The Congress of the United States, in testimony of their appreciation of his services, afterward gave him their cordial thanks, and voted him a gold medal.⁵

Proctor received his reward in the form of the censure of his superiors, the severe rebuke of his sovereign, and the scorn of all honorable men. He had the meanness to shift the disgrace of defeat from his own cowardly shoulders to those of his gallant regulars, and there it remained for more than twelve months. Upon his misrepresentations Sir George Prevost severely censured the detachment of the Forty-first Regiment that were in the battle, in a general order issued at Montreal on the 24th of November.⁶ But they were vindicated by the trial of Proctor in December the next year,⁷ when the cause of his defeat and the loss of the Western province were found to be in his own demerits as a soldier. He was found guilty of misconduct in not providing measures for a retreat, while the court, with singular inconsistency, acquitted him of any lack of personal bravery or indiscretion at the

¹ He remained several days under a surgeon's care at Urbana, in a commissary office near Doolittle's tavern, then the head-quarters of Governor Meigs.

² The authorities from which I have drawn the chief materials for the foregoing narrative in this chapter are the official reports of General Harrison to the Secretary of War; the several histories of the period already cited; written and oral statements of survivors; official reports of the British officers; the newspapers of the day, and biographies of Harrison, Johnson, Cass, and Tecumtha, etc.

³ Harrison, in his official letter to the War Department, spoke in the highest terms of his officers and troops. "I am at a loss," he said, "how to mention the conduct of Governor Shelby." After paying a well-merited compliment to the veteran, and the major generals and brigadiers, he said, "Of Governor Shelby's staff, his adjutant general, Colonel McDowell, and his quarter-master general, Colonel Walker, rendered great services; as did his aids-de-camp, General Adair, and Majors Barry and Crittenden. The military skill of the former was of great service to us, and the activity of the two latter gentlemen could not be surpassed." He highly commended Acting Adjutant General Butler, and said, "My aids-de-camp, Lieutenant O'Fallon and Captain Todd, of the line, and my volunteer aids, John S. Smith and John Chambers, Esquires, have rendered me most important service from the opening of the campaign. I have already stated that General Cass and Commodore Perry assisted me in forming the troops for action. The former is an officer of the highest merit, and the appearance of the brave commodore cheered and animated every breast." He highly complimented the officers and men of the mounted regiment, and Major Wood, of the Engineers.

⁴ On the 23d of October the new City Hall in New York was splendidly illuminated in honor of these two victories. Also Tammany, Washington, and Mechanics' Halls, the theatre, the City Hotel, and hundreds of private residences, were illuminated. In the windows of the City Hall were several transparencies. One of them represented the battle on Lake Erie, and the words "DON'T GIVE UP THE SHIP!" In front of Tammany Hall was a superb painting exhibiting a full-length portrait of Harrison, and the figures of several Indian warriors, the chief of whom was on his bended knees suing for peace, and offering at the same time a squaw, and her papoose on her back, as hostages for their fidelity. On it was also represented the naval engagement on Lake Erie.

⁵ On one side is a bust of General Harrison, and the words MAJOR GENERAL WILLIAM H. HARRISON. On the reverse is seen a woman placing a wreath around two bayonets fixed on muskets, and a color-staff, stacked over a drum and cannon, bow and quiver. Her right hand rests upon the Union shield, and holds a halbert. From the point of union of the staff hangs a banner, on which is inscribed FORT MEIGS—BATTLE OF THE THAMES. Over these, in a semicircle, are the words, RESOLUTION OF CONGRESS, APRIL 4, 1813. Beneath, BATTLE OF THE THAMES, OCTOBER 5, 1813.

THE HARRISON MEDAL.

time of the battle. He was sentenced to be "publicly reprimanded, and suspended from rank and pay for six months." So notorious was the fact of his cowardly abandonment of his army at the very beginning of the battle that the Prince Regent se-

THE SHELLEY MEDAL.

verely reprimanded the court for its "mistaken leniency," expressed his "regret that any officer of the length of service and the exalted rank" attained by General Proctor "should be so extremely wanting in professional knowledge, and deficient in those active, energetic qualities which must be required of every officer," and that the charges and finding of the court should "be entered in the general order-book, and read at the head of every regiment in his majesty's service." General Proctor is represented as a stout, thick-set, fine-looking man. He died in Liverpool in 1858 or 1859.

The few British regulars and militia who escaped after the battle of the 5th of October fled in confusion through an almost unbroken wilderness toward Lake Ontario. They rendezvoused at Ancaster, seven miles westward of Hamilton and the head of the lake, on the 17th, when their numbers, inclusive of seventeen officers, amounted to two hundred and fifty-six. Their flight spread consternation over all that region.

The victory in itself and its subsequent effects was most complete. It broke up the Indian confederacy of the Northwest, and caused the disheartened warriors to

forsake their white allies, and sue humbly for peace and pardon at the feet of the Americans. Their very personal existence compelled them to endure this humiliation. The winter was approaching, and they and their families were destitute of provisions and clothing, without the means of procuring either. Their prayers were heard and heeded; and those whom they had fought against at the instigation of a professed Christian government, became their saviors from the deadly fangs of hunger and frost.¹ The base conduct of Proctor, and the kindness of Harrison, gave a fatal blow to British influence among the Indians of the Northwest.

The American troops occupied the battle-ground on the Thames, and on the 7thth General Harrison departed for Detroit, leaving Governor Shelby in ^{October,} command. The army commenced moving that day in the same direction, ^{1813.} taking with them the property they had captured and the prisoners. On the 10th they arrived at Sandwich in the midst of a furious storm of wind and snow, during which several of the vessels from the Thames were injured, and much of the captured property was lost. Harrison and Perry had planned an immediate attack on Mackinack, and Captain Elliott had volunteered to command the naval force, but the extreme cold and the blinding storm warned them of the near approach of winter and the dangers that might be encountered, and they prudently abandoned the enterprise. Rumors came that the enemy had fled from Mackinack; so, after concluding an armistice with the chiefs of several of the hostile tribes, among whom was Maipock, the fierce and implacable Pottawatomie, and receiving hostages for their faithfulness,² Harrison prepared to go down the lake with M'Arthur's brigade, a battalion of regular riflemen under Colonel Wells, and mounted men under Colonel Ball, to join the American forces on the Niagara frontier. The Kentuckians returned home, after stopping at the Raisin to bury the whitened bones of their massacred countrymen, and on the Sandusky peninsula to recover their horses,³ suffering much from fatigue, hunger, and cold on the way.

General Harrison appointed General Cass military and civil governor of Michigan, and directed him to retain his brigade (about one thousand in number) to keep the Indians in check, and hold possession of that portion of Canada lately conquered by the Americans west of Lake Ontario. Harrison arrived at Buffalo on the 24th of October, with about thirteen hundred men, only one thousand of them effective soldiers. There he joined General M'Clure in active preparations against the enemy.

I visited the battle-ground on the Thames on a cold, blustering day in October,^b 1860, accompanied by Miles Miller, Esq., of Chatham, Canada West, ^{October 11,} formerly editor of *The Western Planet* newspaper. I left Detroit in the ^{1860.} morning with my family, crossed the river, took seats in a carriage on the Great Western Railway, and, after a swift journey of an hour and a half, over a space of fifty-four miles along the borders of Lake St. Clair, through oozy swamps, broad prairies, tangled forests, and wealthy farms to the Thames, following the route of Harrison's pursuing army, we alighted at Chatham, a pleasant village of six thousand inhabitants, on the left or south bank of the Thames, and the capital of the county of Kent. It lies upon a plain in the midst of a fine agricultural country, at the head of steam-boat navigation on the Thames. It was originally laid out by

¹ An eye-witness says: "A few days after Proctor's defeat, Detroit was so full of famished savages that the issue of rations to them did not keep pace with their hunger. I have seen the women and children searching about the ground for bones and rinds of pork which had been thrown away by the soldiers. Meat in a high state of putrefaction, which had been thrown into the river, was carefully picked up and devoured. The feet, heads, and entrails of the cattle slaughtered by the public butchers were collected and sent off to the neighboring villages. I have counted twenty horses in a drove fancifully decorated with the offals of the slaughter-yard."—*Views on Lake Erie*, by Samuel R. Brown, page 95.

² We have already observed that Walk-in-the-water, and many of his followers, deserted Proctor at Chatham. While Harrison was in pursuit of the enemy up the Thames, chiefs of the Miamis, Ottawas, Pottawatomes, Chippewas, and Kickapoos proposed to General M'Arthur, at Detroit, a suspension of hostilities, and agreed to "take hold of the same tomahawk with the Americans, and to strike all who are, or may be enemies of the United States, whether British or Indians." They brought in their women and children, and offered them as hostages for their own good behavior."

³ See page 546.

Governor Simcoe, who reserved six hundred acres for a town plot. On the opposite side of the river, in the township of Dover, is the little suburban village of North Chatham, connected with the main town by a toll-bridge.

We took rooms at the *Royal Exchange* Hotel, and, as soon as a vehicle could be procured, I started with Mr. Miller for the Thames battle-ground, about eighteen miles distant. The sky was overcast by broken masses of clouds, and a biting north wind came from the great Canadian wilderness, with Winter Tales upon every blast. We followed the route of the American army, sketching the ruins of M'Gregor's mill (see page 550) on the way, and at about one o'clock in the afternoon were at the little village of Tecumseh (Thamesville Station), within a mile and a half of the historic ground. There we dined, and had the pleasure of seeing David Sherman, Esq., a life-long resident of that spot, who was a lad nine or ten years of age when the battle occurred, and had a clear recollection of the events of the day which came under his observation. He informed us that the Americans encamped on his father's farm, where the village of Tecumseh now stands, on the night before the battle. His father was a soldier with Proctor, and left home twenty-four hours before. During the forenoon of the day of the battle, young Sherman went up to within half a mile of the place where Johnson discovered the British line, and saw Tecumtha sitting on a log near where a white cow that belonged to a neighbor had been killed and was then a-roasting. Tecumtha asked him whose boy he was. He told him, when the chief, who was acquainted with his father, said, "Don't let the Americans know that your father is in the army, or they'll burn your house. Go back, and stay home, for there will be a fight here soon."

Mr. Sherman said he scanned the great chief with the wide-open eyes of wonder and curiosity of a boy of his age, and, among other things, saw two pistols in the warrior's belt, unlike the English ones he had been accustomed to. Having satisfied his curiosity, he took Tecumtha's advice, and hastened homeward. He saw the Americans passing rapidly onward toward the place where he left the chief, and heard the din of battle during the afternoon. All was quiet before sunset and during the night; and early the next morning he ventured to go upon the battle-ground,

TECUMTHA'S PISTOL.

where he saw the two Indians, one of whom was supposed to be General Tecumtha. On that spot a pistol precisely like one of those that he saw in Tecumtha's belt was found by a neighbor, and was in his possession. He has no doubt of its being one of the great leader's weapons, and cherishes it as such. It is of American manufacture, fourteen inches in length, has a flint-lock, is rifled, and bears the name of "IL Albright," maker. I made a sketch of it, and, upon the circumstantial evidence of Mr. Sherman, present it to the reader as a picture of one of the pistols of the great Shawnoese chief.

From Mr. Sherman we learned some interesting facts concerning the locality of the battle-ground, but he refused to indicate the exact place where Tecumtha fell, giving as a reason for his reticence on that point that he had been making efforts to induce the provincial government to erect a monument on the spot, and, until that should be accomplished, he should keep the secret in his own bosom. I think the place designated on the map on page 554 is the correct one.

After dinner we rode up to the dwelling of the old Watts Farm, on which most of the battle was fought, while the troops under Shelby occupied a portion of the lands

Appearance of the Battle-field of the Thames.

Moravian Town.

Return to Chatham.

owned by James Dixon at the time of our visit. We had very little trouble in finding the places sought. The forest had disappeared, and nothing remained of the grand old trees except a few ravaged and mostly dead stems, many of them blackened by fire. The smaller swamp had also disappeared, but its place was distinctly marked by deep black mould. In the rear is the great swamp still, and in front, between lofty wooded banks, flows the beautiful La Tranche or Thames, near which are graves of the slain. From a corn-field between the smaller and larger swamps, near the spot where Johnson and Tecumtha met, I made a sketch of the battle-field.

THAMES BATTLE-GROUND.¹

Around us were golden pumpkins and wealthy shocks of Indian corn, and in the recently-cleared field, where the small swamp lay, cattle were quietly grazing on the frost-nipped grass. It is an attractive spot for the historical student, and our visit was an item in the fulfillment of the poet's prophecy, that

“Oft to La Tranche's battle-field
In future times shall traveler come,
To mute reflection's power to yield,
And gaze on lowly warriors' tomb.
'Here,' shall he say, 'our soldiers stood;
There were the Indians' numerous host;
Here flowed the gallant Johnson's blood:
There died the Shawnoan boast.”

We intended to visit the Moravian town,² but, after sketching the battle-ground, and the little view of the Thames printed on page 553, the day was so far spent that we felt compelled to turn back toward Tecumseh, where we partook of refreshments, and at twilight started on our return to Chatham. We arrived at the “Royal Exchange” at nine in the evening, cold and weary, but full of satisfaction.

Before sunrise on the following morning I sketched the view at the mouth of Mc'Gregor's Creek, printed on page 550, and after an early breakfast, again accompa-

¹ In this sketch the spectator is looking southward, toward the Thames. Its line is marked by the distant trees. The fence seen along the edge of those trees indicates the position of the road that leads to Detroit, across which stood Proctor's regulars, and on which were his cannon. The line of Proctor's army was north and south, across the upper edge of the smaller swamp, near where the cattle are seen.

² I was informed that the Moravians there were all Indians except their minister, the Rev. Mr. Vogler. There were about fifty families, mostly Delawares, and descendants of the early settlers. Each family had a plank house and forty acres of land, furnished by the government. The houses appeared very much like those of the pensioners at Amherstburg, mentioned on page 220. They had a neat church. Some of the log houses of the original town, a mile and a half from the present village, not destroyed in 1812, were yet standing. The chief or military leader of the Indians was Philip Jacobs, who lived on the site of the old town. He was about sixty years of age at the time of my visit.

nied by the courteous Mr. Miller, crossed the river, and rode down to Dolsen's to procure a drawing of his residence, made famous by the events of the campaign of Harrison against Proctor. We returned in time for myself and party to take the cars for the East at half past nine o'clock. We passed through London (a flourishing town of about seven thousand inhabitants, pleasantly situated at the confluence of the north and east branches of the Thames) at noon, and arrived at Paris, forty-seven miles farther eastward, in time for dinner. There we left the railway, and traveled in a private carriage to Norwichville, twenty-five miles southward, where we were received at twilight by relatives—descendants of the first settlers of that region, who built log huts, and felled the primeval forest there only a little more than fifty years ago. Now it is a fertile, well-cultivated, and highly-picturesque country, bearing few traces of a settlement so new that many of the inhabitants remember its beginning. We tarried there a few days, and then returned to our home on the Hudson by way of the Niagara Suspension Bridge, after an absence of more than five weeks, bearing rich treasures from the historic fields of the Northwest.

As the campaign that closed on the banks of the Thames was the last in which General Harrison was engaged, we will here consider a brief outline of his career from his arrival on the Niagara frontier until he left the service in the spring of 1814.

Harrison, as we have observed, arrived at Buffalo on the 24th of October. He went immediately down to Newark, the head-quarters of General M'Clure, of the New York Militia, and soon afterward commenced active operations, by order of the Secretary of War, for an expedition against the British at Burlington Heights, at the west end of Lake Ontario, the "capture or destruction of which," the Secretary said in his letter, "would be a glorious *finale* to his campaign." While in the midst of these preparations, another letter came from the same functionary, written only four days later than the former, requiring General Harrison to send M'Arthur's brigade to Sackett's Harbor, as Montreal, not Kingston, would be the point of attack on the enemy by Wilkinson's army, by which the country eastward of Lake Ontario might be exposed to the incursions of the British from the latter place. There were valuable stores at Sackett's Harbor, and it was thought to be more important to save these than to assail the enemy farther west. Like an obedient soldier, Harrison obeyed. His troops were embarked on Chauncey's fleet at the middle of November. The programme having been changed, the Secretary of War gave General Harrison permission to visit his family near Cincinnati. The general accompanied his troops to Sackett's Harbor, and then journeyed homeward by the way of New York, Philadelphia, Baltimore, and Washington, every where receiving the plaudits of his countrymen.

The campaign under the old generals (Dearborn, Hampton, and Wilkinson) on the northern frontier in 1813 having been fruitless of much good to the American cause, the eyes of the people were turned in expectation toward General Harrison, the successful leader, as the future acting commander-in-chief of the American army, or at least of that portion of it on the northern frontier. Such was the expectation of his companions in arms. "Yes, my dear friend," Perry wrote to him, "I expect to hail you as the chief who is to redeem the honor of our arms in the North." "You, sir," wrote M'Arthur to him from Albany, in New York,¹ "stand the highest with the militia of this state of *any* general in the service, and I am confident that no man can fight them to so great an advantage, and I think their extreme solicitude may be the means of calling you to this promotion."

These expectations were not realized. For reasons unexplained, the feelings of General Armstrong, the Secretary of War, appear to have been suddenly and greatly changed toward General Harrison, and his treatment of that officer deprived the country of his military services at a most critical time. He persistently interfered

¹ M'Arthur was then in attendance as a witness upon the court-martial for the trial of Brigadier General Hull. See page 294.

with Harrison's prerogatives as commander-in-chief of the Eighth Military District, and the general became convinced, by circumstances not necessary to detail here, that the secretary disliked him, and was determined to deprive him of all active command. He remembered Armstrong's unasked permission to visit his family at Cincinnati, and he now construed it as a deliberate hint that he might retire from the army a while. These suspicions were fostered and confirmed by subsequent events, and on the 11th of May, 1814, Harrison, in a letter to the Secretary of War, and another to the President of the United States, offered to resign his commission. When Governor Shelby heard of the movement he wrote an earnest letter to the President, urging him not to accept the resignation, and saying, "Having served in a campaign with General Harrison, by which I have been enabled to form some opinion of his military talents and capacity to command, I feel no hesitation to declare to you that I believe him to be one of the first military characters I ever knew, and, in addition to this, he is capable of making greater personal exertions than any officer with whom I have ever served."¹ Harrison was then forty years of age.

Unfortunately for the country, the President was absent from Washington, at his home in Virginia, when the letters of Harrison and Shelby reached the capital. They were both forwarded to Madison. Meanwhile the Secretary of War, without consulting the President, accepted the general's resignation. This was an assumption of authority never exercised before nor since. In a letter to Governor Shelby, the President expressed his sincere regret that the valuable services of General Harrison could not have been secured to the government for the approaching campaign. Harrison left the army, and during the ensuing summer he was appointed, in conjunction with Governors Shelby and Cass, to treat with the Indians of the Northwest concerning all things in dispute between the tribes and the United States.

As we shall not meet General Harrison again in active military service, nor mention his name except incidentally, I will take this occasion to notice a short journey in Ohio, in the autumn of 1860, while collecting materials for this work, in which was included a visit to the home and grave of that faithful public servant at North Bend, on the banks of the Ohio.

In a former chapter (see page 542) I have mentioned my departure from Cleveland after the inauguration of Perry's statue, for Columbus, the capital of Ohio. The railway between the two places lies, much of the distance from Cleveland to Delaware, through a flat, not very fertile, and a newly-cleared country, the latter fact being attested by a profusion of stumps of trees in most of the clearings. On the summit of the water-shed between Lake Erie and the Ohio River, the country is more rolling and fertile. We journeyed one hundred and thirty-five miles in the course of five hours and forty minutes, and reached Columbus at about two o'clock in the afternoon of a delightful September day.^a At three I left for Newark, the capital of Licking County, thirty-three miles eastward of Columbus, for the twofold purpose of visiting an old and highly-esteemed friend,² and viewing, in the neighborhood, one of the most remarkable of the tumuli, or ancient mounds, with which the Ohio country abounds. I found my friend very ill—too ill to endure more than a few minutes' conversation. During the evening, in company with his son, I visited Mr. David Wyrick, a resident of the village, an engineer by profession, and an enthusiastic antiquary, who had lately been made famous as the discoverer of a stone, with Hebrew inscriptions, in a portion of the ancient earth-works that abound in the neighborhood of Newark. I found him a plain, earnest man, and bearing, among those who know him best, a character above reproach for truth and sincerity. He showed me a large number of curious things taken from mounds in the neighbor-

Ancient Mounds and Relics at Newark, Ohio.

Ancient Coffin and inscribed Stones.

REMAINS OF AN ANCIENT COFFIN.

hood. Among them was a portion of a coffin, made of a hollowed oak log, found beneath a truncated circular pyramid forty feet in height, with a base one hundred and eighty-two feet in diameter, evidently constructed by a people ignorant of metal-edged tools.¹ But the most curious of

all the relics was the stone upon the four sides of which are words in Hebrew letters. Mr. Wyrick found them while searching for human remains in the centre of a small depression of the earth connected with the system of ancient earth-works in that region. The stone is in the form of a truncated cone, five inches in length, with two sides broader than the other two sides, and a neck and knob, evidently formed for suspending it by a cord or chain. It has the appearance, in texture and color, of a novaculite, or "hone-stone," and is finely polished. The letters (said by those who are competent to decide to be ancient Hebrew) are neatly made in intaglio upon each of the four sides. How, and when, and for what practical or symbolical purpose that stone was deposited in the earth there, may forever remain a mystery.²

THE FOUR SIDES OF THE HOLY STONE.

¹ This coffin is quite shallow, and more like the hollowed platform of a scaffolding. It bears evidence of having been hollowed by the processes employed by the aborigines when Europeans first visited America, namely, by fire and stone axes. With these they felled trees and hollowed out logs for canoes. They first burnt the timber, and then removed the charred part with the blunt stone axe, for these could not be made sharp enough to cut, and endure. These processes were repeated until the requisite depth was obtained. Every part of the hollowed portions of the ancient coffin that I saw bore clear marks of these operations.

STONE AXES.

beautiful black hair, and ten copper rings lying near where the hands might have been folded over the breast. The whole were imbedded in clay, over which was an arch of small and large stones. Over this was a mound of clay, making the whole structure inclosing the coffin about seven feet in height. The remainder of the pyramid was composed of stone. These the State of Ohio purchased for constructing the "Licking Summit Reservoir" for the use of the Ohio Canal, and removed about fifty thousand wagon-loads. The sepulchre was found when these stones were removed, and was explored by Mr. Wyrick. The clay was brought from a distance, for there is none like it in the vicinity.

The coffin, when found, was in a concavity of earth lined with clay made impervious to water. It lay in water twelve inches in depth, resting upon seven pieces of small timber, these resting upon two larger pieces, as seen in the above sketch. These, like the coffin, were completely "water-sogged." The coffin was lined with a fabric resembling old carpeting, so fragile that it crumbled at the slightest touch. On this the body of the deceased had been laid; and thereon was found the skeleton in fragments, locks of

SECTIONAL VIEW OF THE PYRAMID.

The annexed diagram, kindly drawn for me by Mr. Wyrick, shows a sectional view of the clay mounds, the small stone arch, and the position of the coffin. A the upper part of the clay mound, and B the lower portion. In these the open dots indicate the places where it was evident timbers had been placed, and had rotted away. C the arch of stone, 1111 indicating two layers of small stones from six to ten inches in diameter, and 2 a layer of broad flat stones. D the coffin and skeleton, and E the concavity filled with water, in which they rested. The clay had evidently been formed into a kind of mortar, and was as hard as sun-dried brick. The pyramid was on an en-

fluence seven miles south of Newark, and five hundred feet above the level of any stream of water near.

² The evening in which Mr. Wyrick found this stone was about twenty feet in circumference, and about two feet in depth at the centre. When he had excavated through dark and rich alluvium about fourteen inches, he came to a lighter soil of a clayey nature, in which were pebbles. One of these, of oblong form, composed of reddish quartz, first attracted his attention. Soon afterward he found the inscribed stone imbedded in the clay. Gentlemen of learning examined it, and proved the letters to be obsolete Hebraic. The Reverend J. W. McCarty, of Newark, a Hebrew scholar, translated the words on three of the four sides as follows: "Holy of Holies;" "The Word of the Law;" and "The Word of the Lord." At a meeting of some of the leading citizens of Newark, held at the Court-house about two months after my visit there, to consider the character and the circumstances of the finding of the "Holy Stone," General Dille presided, and Mr. McCarty gave an interesting account of the whole matter. It was stated that only four or five of the

An ancient stone Box and its Contents.

An immense ancient Earth-work near Newark visited and described.

Early the following morning, accompanied by my young friend, I visited the "Old Fort," as the people there call one of the most magnificent of the ancient earth-works that abound in that section of Ohio. It is a mile and a half from Newark, in the midst of a primeval forest, and forms a pleasant resort in summer. It is composed of a continuous mound, that sweeps in a perfect circle a mile in circumference, broken only by the entrance to it, where the banks, higher than any where else, turn outward for fifty feet or more, and form a magnificent gateway. The embankment averages

GREAT EARTH-WORK NEAR NEWARK.

from fifteen to twenty feet in height, and is covered with maple, beech, and hickory trees of every size, from the huge Anak of the forest to the lithe sapling—the former indicating the origin of the structure to be far more remote than the advent of Europeans in the New World. These also cover the area inclosed by the mound. The ditch from which the earth was thrown is within the embankment, and is visible around the entire line of the work, proving it not to have been a fortification. In the centre of the area (which is perfectly level) is a slight elevation, in the form of a spread eagle, covering many yards, and is called the Eagle Mound.¹

characters correspond to those now in use in the Hebrew books, but these furnished a key to the translation. It had already been stated by a gentleman familiar with the history and practice of the Freemasons, and who was a member of the fraternity, that the stone was of the kind used by masons of a certain grade in the East soon after the building of the first temple by Solomon. It has in their system, he said, a well-known meaning, its principal use in ancient times being for deposit beneath whatever structure the master mason might superintend. This symbol, he said, was not necessarily furnished with inscriptions, but masons entitled to use it might put such sentences upon it as that one has. It would be placed in the northeastern part of the foundation, and if it stood on its point would indicate that something more was deposited beneath. If it lay on its broadest face, the point or small end would indicate the direction where other deposits would be found. These, if found, would disclose facts connected with the building. Was not the cavity in which the stone was found the foundation of a structure never erected?

A few weeks subsequent to my visit, Mr. Wyrick found, in one of the mounds in that vicinity, a stone box, nearly egg-shaped, the two halves fitting together by a joint which runs around the stone lengthwise. Within this box was a stone seven inches long and three wide, on a smooth surface of which is a figure, in *bas relief*, well cut, and surrounded by characters thus described by the Rev. Mr. M'Carty: "The words over the head of the human figure contain three letters. Two of them are Hebrew, *Sheir* and *He* (or *Beth*). The third I inferred to be *Mem*—a conjecture most readily suggested by its form, it being exactly that of the old Gaelic *Mulu* (M), and afterward fully borne out by its always answering thereto. This gave the word *Mosheh* (Moses) or *Moshiach* (Messiah)." Of the characters Mr. M'Carty said "some looked like the Hebrew coin character, some like the Phœnician alphabet, a few bore resemblance to those on the Grave Creek stone," and some I could not identify with any known alphabet." He at last found that the language was really Hebrew, much like that found in the Bibles of the German Jews, and, after great and patient labor, he discovered that the whole constituted an abridged form of the Ten Commandments.

This is not the place, nor has the writer the knowledge requisite for a discussion of the matter. I have simply stated the curious facts—facts well worthy of the earnest investigation of archaeologists, for they raise the ethnological and historical question whether the mound-builders of this continent were of Asiatic origin, or were related to the Indian tribes whose remnants still exist.

¹ Other mounds in this vicinity are in the shape of animals. One of the most curious and extensive of these is about four miles from Newark, on the road to Granville. It is in the shape of a lizard, and covers the whole summit of a hill. Its dimensions, in feet, are as follows: Length of the head and neck, 32; of the body, 73; of the tail, 100; width from the ends of the fore feet over the shoulders, 100; from the ends of the hind feet over the hips, 92; between the legs, across the body, 32; across the tail, close to the body, 18; height at the highest point, 7; whole length, 210. It appears to be mainly composed of clay, and is overgrown with grass. Visitors have made a path from the nose, along the back, to where the tail begins to curl, at which point stands a large black walnut-tree.—See *Howe's Historical Collections of Ohio*, page 298.

* A small stone tablet, found in a large mound near Grave Creek, in the vicinity of Winchester, Virginia, having an inscription in cuneiform characters like the ancient Phœnician.

The ground covered by this ancient work is owned by the Licking County Agricultural Society, and within the earth-walled inclosure their annual fairs are held, for the accommodation of which some buildings have been erected. These, with the general appearance of the work, and the trees upon the banks, as seen from the entrance, may be observed in the picture on page 565. After finishing that sketch, and exploring every part of this strange old structure by an unknown people in an unknown age, I returned to Newark, the quickened imagination filling the mind with wondrous visions of the earlier ages of our continent, while Memory recalled those suggestive lines of Bryant in his "Prairie," in which, turning to the Past, he soliloquizes concerning the mound-builders, saying, as introductory,

"And did the dust
Of these fair solitudes once stir with life
And burn with passion? Let the mighty mounds
That overlook the rivers, or that rise
In the dim forest, crowded with old oaks,
Answer. A race that long has passed away
Built them; a disciplined and populous race
Heaped with long toil the earth, while yet the Greek
Was hewing the Pentelicus to forms
Of symmetry, and rearing on its rock
The glittering Parthenon."

I returned to Columbus in time to visit the magnificent State-house, dine, and leave in the stage-coach at two o'clock for Chillicothe, forty-five miles down the Scioto Valley, toward the Ohio River. Columbus is a beautiful city, of almost twenty thousand inhabitants, standing upon a gently-rolling plain on the eastern side of the Scioto River,¹ about half a mile below its confluence with the Olentangy. The streets are broad, its public buildings are attractive, and many private mansions display great elegance. It is pleasant in every feature as the political capital of a great state. Where it now stands was a dark forest when Harrison had his head-quarters at Franklinton, on the opposite side of the Scioto, in 1812 and 1813. Then a settlement was commenced there, and in 1816 it was made the seat of the state government. The county seat of Franklin was removed to Columbus from Franklinton in 1824, and the present city was chartered in 1834.

The journey from Columbus to Chillicothe, in an old-fashioned elliptical stage-coach drawn by four horses, was a very delightful one. The day was perfect in purity of air and in temperature; the sky was unflecked by the smallest cloud, and the whole country was green with verdure. I was granted the privilege of a seat by the side of the driver, and thus I secured uninterrupted views of the country, which exhibited all the picturesque beauty possible without the charms of mountains or high hills. Our route lay along the gentle slopes on the eastern side of the Scioto until we reached Shadeville, a pleasant little embowered village, where we first struck the bottom of the Scioto Valley, nine miles from Columbus. There we changed horses, and, eight miles farther on, stopped at Bloomfield, another little village, where fresh horses were waiting our arrival. A little before sunset we rode into Circleville, a large town at the head of the great Pickaway Plains.² Our route had been through one of the most beautiful regions of Ohio, and would increase in interest, we were told, as we advanced toward Chillicothe. But the night was near. We had passed broad fields of Indian corn, plants full twelve feet in height, heavily laden with ears, beneath which droves of swine were frequently seen. The streams were fringed with heavy-foliaged trees and shrubbery, interspersed with magnificent sycamores, while the little forests

¹ According to a statement of Rev. David Jones in his Journal in 1774, Scioto, in the Shawnoese language, signifies *hairy river*, so called because that stream in the spring was filled with hairs, from the immense number of deer that came to it to drink when shedding their coats.

² Circleville is the capital of Pickaway County, situated on the Ohio Canal and Scioto River. It stands upon the site of one of the ancient earth-works that abound in that region, which was of circular form, and gave the name to the village. The court-house stood in the centre of the circle, and the town grew up around it. For an interesting account of the mounds in that vicinity, the reader is referred to Howe's *Historical Collections of Ohio*, page 410.

Circleville.

Arrival at Chillicothe.

Its Site and early Buildings.

and pleasant groves through which we rode presented to the eye timber-giants of a size seldom seen eastward of the Alleghany Mountains.

We found Circleville crowded with people of every sex, color, and condition, in attendance upon a county fair—so crowded that our most earnest endeavors to procure some supper at the tavern where the coach stopped failed. We tarried there but a short time, and at sunset resumed our journey with fresh horses. To avoid the heavy dew and chilly night air, I took a seat inside the coach, with eight other adults and two children, and enjoyed a delightful ride across the Pickaway Plains¹ during the strangely luminous twilight that lingered long at the close of that lovely September day. Just as night fell upon the landscape, we diverged from the Plains to pass through the village of Kingston, and at ten o'clock in the evening we sat down to an excellent supper, with keen appetites, at the "Valley Hotel" in Chillicothe.

Chillicothe, the capital of Ross County, and centre of the trade of the Scioto region, is delightfully situated on a perfectly level plain, at a narrow and picturesque part of the valley, with lofty and rugged hills rising around it. In ancient times it was a place of great attraction for the inhabitants, and was one of the principal rendezvous of the Shawnoese when the white man began to seat himself in the Ohio country. It was early settled, and in the year 1800 the seat of government of the Northwestern Territory was removed from Cincinnati to Chillicothe. The building of a state-house there was commenced the same year, and was completed early enough in 1801 for the Territorial Legislature to meet in it.² In the same room, the Convention that framed the Constitution for the State of Ohio met in the autumn of 1802. It was built of stone, and was the first public edifice made of that material in the Territory. That venerable and venerated structure was demolished about the year 1850, and on its site was erected the present court-house for the county, of light brown freestone, and remarkable as one of the most beautiful public buildings west of the Alleghanies. The old jail, also built in 1801, was yet standing when I visited Chillicothe. The above sketch of the state-house is copied, by permission, from Howe's *Historical Collections of Ohio*, page 436.

THE OLD STATE-HOUSE.

Chillicothe was an important rendezvous of United States soldiers during the War of 1812, as we have already incidentally observed. They were stationed at Camp Bull, about a mile north of the town, on the west side of the Scioto. There several hundred British prisoners, captured by Perry and Harrison, were confined for some time.

On the morning after my arrival I rode out to "Fruit Hill," the residence of General Duncan McArthur during a greater portion of his life, and then (1860) the property and dwelling of his son-in-law, Honorable William Allen, late member of Congress. It was about two and a half miles from the court-house in Chillicothe, upon the lofty plain between the Scioto and Paint Creek Valleys, and was so situated as to com-

¹ These plains lie south of Circleville, on the east side of the Scioto, and are said to contain the richest body of land in Ohio. They are called respectively upper and lower plains. The black soil is the result of vegetable decomposition during many ages. Beneath it is a bed of pebbles and gravel, and the surface of the Plains is from forty to fifty feet above the Scioto. These plains were the resort not only of the mound-builders, but of the Indians before the European came. There they had a general council-fire for all the associated tribes in that region; there it was that the warriors assembled to confront the army of Lord Dunmore in 1774, and there the horrid rites of torturing prisoners were frequently performed. There, on that classic Indian ground, Logan, the bereaved Mingo chief, made the famous speech preserved by Mr. Jefferson; and there was "Camp Charlotte," on Scippo Creek, seven miles southwest from Circleville, where, by treaty, Dunmore's campaign was brought to a close. For a full account of Dunmore's expedition, and Logan and his famous speech, the reader is referred to Lossing's *Pictorial Field-book of the Revolution*, ii., 281 and 284 inclusive.

² The first two sessions of the Territorial Legislature were held in a small, two-storied log house that stood on the corner of Second and Walnut Streets. This had a wing, in which were public offices. This building was used for barracks during the War of 1812.

mand a fine view of the town and the surrounding country. It was reached from the valley by a winding road among the hills. The mansion was of hewn sandstone, spacious and elegant in finish within and without. It was erected in 1802, and stood in the midst of a pleasant grassy lawn, dotted with a variety of ornamental trees and fruit-bearing Osage orange-trees. I was disappointed in not finding the proprietor at home, but this was lessened by the kind hospitalities of a young woman, a member of the family, who led me to the observatory on the top of the house, from which may be

FRUIT HILL, GENERAL M'ARTHUR'S RESIDENCE.

obtained charming views of the Scioto and Paint Creek Valleys.

Having sketched the "Fruit Hill" mansion,¹ I rode to "Adena," the fine old residence of Governor Thomas Worthington, chief magistrate of Ohio from 1814 to 1818. It is situated upon the same ridge, two hundred feet above the Scioto, and half a mile north from M'Arthur's mansion. It overlooks the same valleys, and, because of the beauty of its situation, it was called "Adena," or Paradise. The building is of hewn sandstone, and was erected in 1805, at great expense, under the supervision of the elder Latrobe, of Washington City. Its elegance and novelty were such, in its form, its large panes of glass, its papered rooms, and marble fireplaces, that persons came from long distances to see it, and considered its name appropriate. It was the finest mansion in all that region; and, so much was Worthington respected, that all agreed that man and dwelling were worthy of each other.

Worthington

He was an early settler in the vicinity. In 1768 he built the first frame house, with glazed windows, erected in Chillicothe, oiled paper being then the substitute for glass.² He erected a saw and grist mill for the accommodation of the inhabitants, and in every way was a very public-spirited man.³

¹ This view is from the lawn, looking toward Chillicothe, a glimpse of which is seen on the extreme left of the picture.
² The first dwelling for a white man on the site of Chillicothe was a bark cabin erected by General M'Arthur.
³ Thomas Worthington was born in Jefferson County (then Berkeley), Virginia, about the year 1769. He took with him to the Ohio country quite a number of slaves, whom he emancipated. He was one of the most energetic of the pioneers to that region, and soon became a leading man among the settlers. He was a member of the Convention that formed the Constitution of the State of Ohio in 1803. Soon after that he was chosen to represent the new state in the

Description of "Adena."

M'Arthur's Portrait.

A Visit to Cincinnati and its Vicinity.

Adena was then owned by Governor Worthington's son, General James Worthington. The court in front of the mansion was filled with trees, shrubbery, and flowers. On the right was an enormous cherry-tree, planted in 1798 by the side of the log cabin in which Governor Worthington and his family lived until the house in Chillicothe was completed. There was a fine garden attached to the mansion, and from various points in the vicinity most charming views of the Scioto Valley may be obtained. The proprietor was not at home at the time of my visit, but I have very pleasant recollections of the kind courtesy I received from his family in showing me works of art and curiosities, and imparting information. Among the relics of the past which I saw there was a hatchet-pipe, almost precisely like the one shown me at Brantford, in Canada, and delineated on page 421. It was presented to Governor Worthington by Tecumtha, and is highly valued by the family.

ADENA, GOVERNOR WORTHINGTON'S RESIDENCE.

Leaving "Adena," I passed down the winding road through the hills to the plain, by a beautiful little lake at the foot of the wooded acclivity, and, on reaching Chillicothe, called at the residence of the Honorable C. A. Trimble, member of Congress, and son-in-law of M'Arthur, who owns the fine portrait of the general from which the engraving on page 267 was copied. He, too, was absent, but, through the kind offices of his brother, I was permitted to have a daguerreotype of the painting made. This was completed just in time to allow me to take the cars on the Marietta and Cincinnati Railway for the latter place at about three o'clock in the afternoon. We reached the "Queen City" at seven in the evening, having journeyed ninety-six miles through an interesting country from the Valley of the Scioto to that of the Little Miami.

During the three succeeding days I visited men and places of interest in and about Cincinnati. I crossed the Ohio to Covington and Newport, cities on the Kentucky shore, flanking the mouth of the Licking River. I also rode out to Batavia, the capital of Clermont County, about twenty miles distant, one hot afternoon, fortunately occupying a portion of the driver's seat on a stage-coach. Our route lay along the Ohio through Columbia, a suburban village (settled before the seed of Cincinnati was planted), to the mouth of the Little Miami, the eye every where delighted with the picturesque beauty of the shores of the great river, covered with vineyards then wealthy with immense stores of grapes, on the Ohio side.

"There grows no vine
By the haunted Rhine,
By Danube or Guadalquivir,
Nor on island or cape,
That bears such grape
As grows by the Beautiful River."¹

We crossed the Miami, and made our way along the level country on its eastern side a few miles, when our course bent more eastward among lofty cultivated hills. Toward sunset we looked down from a rugged eminence into the fertile vale of the east branch of the Little Miami, then flooded with the evening sunlight, which

¹ Senate of the United States, and was an active supporter in Congress of Jefferson's administration. He was elected Governor of the state in 1814, and held the office four years. After his retirement from the chief magistracy he was appointed a member of the first board of Canal Commissioners, and held that office until his death in the year 1827, having been in public station about thirty years.

² Ohio is the Shawnoese word for Beautiful River. The French called it *La Belle Riviere*.

brought out, in luminous relief, against the green verdure back of it, the quiet village of Batavia, that lay nestled in the lap of the hills at the head of the valley. There, at the houses of relatives and friends, I passed the Sabbath, and met three surviving soldiers of the War of 1812, namely, John Jamieson, Abraham Miley, and James Carter. Mr. Jamieson was from Kentucky, and belonged to a company of spies in Porter's regiment. He was active on the frontier in the vicinity of Detroit during a greater portion of the war. In 1814 he saw the infamous Simon Girty on the rack of severe rheumatism at his house a few miles below Malden. The villain's cabin was decorated with scalps. Mr. Miley was a rifleman in Fort Meigs at the time of the siege in May, 1813. Mr. Jamieson and Mr. Carter confirmed the horrid story of the conversion of some of the skin of Tecumtha into razor-strops. One of them had seen pieces of the skin in the hands of a Kentuckian who took it from Tecumtha's thigh!

^a September 18, 1860. On the evening after my return to Cincinnati from Batavia^a I departed for North Bend, fourteen miles westward, on the Ohio and Mississippi Railway, where General Harrison was wedded while yet a subaltern in the army of the United States, where he lived when he bore the honors of a gallant general of that army, and where he was buried while the laurels which composed the most precious civic crown in the power of a people to bestow were yet fresh upon his brow.

The annual fair of the United States Agricultural Society was about to close in Cincinnati, and thousands of visitors were making their way homeward. The cars were densely packed, and, because of some detention in the lower part of the city, we did not reach North Bend until after dark. The nearest public house was at the little village of Cleves, a mile distant over the hills, and thitherward I made my way on foot, accompanied by a grandson of General Harrison, son of W. W. H. Taylor, Esq., at whose house I supped and spent the evening. Their dwelling is pleasantly situated on a slope overlooking the village of Cleves and the Great Miami Valley at that point, and is only half a mile from the tomb of Harrison. Mrs. Taylor is a daughter of the general. She kindly invited me to pass the night under their roof, but circumstances made it proper for me to take lodgings at the tavern in Cleves. In the possession of Mrs. Taylor were portraits of her father and mother, the former painted in the winter of 1840-'41 by J. G. H. Beard, of Cincinnati, and pronounced a faithful likeness by the family. The latter, an equally faithful likeness, was painted in 1828 by a young artist named Corwin, who died in New York when about to embark for Italy. It is the portrait of a small and beautiful woman at the age of fifty-three years. Mrs. Taylor kindly furnished me with photographic copies of the portraits.

When I visited North Bend, Mrs. Harrison, who had just passed the eighty-fifth year of her age, was residing with her son, Scott Harrison, Esq.,¹ at Lawrenceburg, five miles farther down the Ohio. I was informed that she had not received visits from strangers for a long time, her sensitive nature instinctively shrinking from the notoriety which her husband's exalted position had given her. It was said that she retained much of the rare beauty of her earlier years, and that the portrait of her given on the opposite page is a fair likeness of her in her extreme old age.² She was Anna Symmes, daughter of the Honorable John Cleves Symmes, of New Jersey, who, as we have observed (page 36), purchased an immense tract of land between

¹ Mr. Harrison had in his possession the telescope used by Commodore Perry in the engagement on Lake Erie, which that gallant commander presented to General Harrison as a token of his regard.

² Mrs. Harrison died on the 25th of February, 1864, when lacking exactly five months of being eighty-nine years of age. She was born in Sussex County, New Jersey, on the 25th of July, 1775. Her remains were taken to the house of her daughter, Mrs. Taylor, at Cleves, and at the Presbyterian Church in that village the Reverend Mr. Bushnell preached a funeral sermon, from the text which she had selected for the occasion a year before—"Be still, and know that I am God." Her remains were then laid in the vault overlooking the North Bend, by the side of those of her husband. Mrs. Harrison was distinguished for personal courage, good sense, modesty, and sincere piety. Her life was made up of alternate excitement and repose. She was loved most dearly by all who knew her.

Settlement at North Bend.

Symmes's City to be the future Capital of Ohio.

A successful River.

the Great and Little Miami Rivers, and who, early in February, 1790, landed with some settlers at the most northerly bend of the Ohio River in its course below Wheeling, and proceeded to found a settlement by laying out a village upon the elevated plateau through which the White-water Canal courses at the present North Bend Station. He commenced the construction of hewn-log huts, with substantial stone chimneys, and the town was named "Symmes's City." The first house erected is yet [1867] standing on the bank of the canal, a few rods from the Ohio, and about eighty rods from the

PIONEER HOUSE, NORTH BEND.

North Bend Station. The chimneys of two others might be seen at the time of my visit nearer the station and the river.

Anna Harrison

Settlers on the "Miami Purchase" had already built huts at Columbia and on the site of Cincinnati, but at North Bend Judge Symmes designed to plant the fruitful seed of a commercial city; but the choice of the site of

Cincinnati for a block-house to protect the Miami settlers deranged all the judge's plans and destroyed his hopes. The settlers that came preferred to place their families under the immediate wing of military protection, and Cincinnati, instead of "Symmes's City," or North Bend, became the great emporium of the Ohio region.¹ There Fort Washington was built and a garrison stationed,² and there, after the treaty of Greenville³ in 1795, Captain Harrison was stationed as commander. Meanwhile a block-house had been erected at North Bend, and about a quarter of a mile above the present railway station, on the bank of

BLOCK-HOUSE AT NORTH BEND.⁴

¹ We have observed in Note 4, page 46, that Ensign Luce, of the United States Army, in the exercise of his discretion, chose the site of Cincinnati for the block-house in opposition to the powerful influence of Judge Symmes. According to common tradition, it was passion, not judgment, that fashioned the ensign's decision. He had formed an acquaintance with the beautiful young wife of one of the settlers at the Bend. When the husband discovered the gallant officer's too great attention to his black-eyed spouse, he removed to Cincinnati, that she might be beyond the power of the tempter. This movement suddenly changed the mind of the ensign. He had resolved to build the block-house at the Bend; now he discovered that Cincinnati was a much more eligible site. He accordingly marched his troops to that little settlement. Judge Symmes warmly remonstrated, but in vain. The ensign was fairly captivated by the sparkling eyes, and they decided the question. "Thus we see," says Judge Burnet, from whose "Notes" these facts have been gleaned, "the incomparable beauty of a Spartan dame produced a ten years' war which terminated in the destruction of Troy, and the irresistible charms of another female transferred the commercial emporium of Ohio from the place where it had been commenced to the place where it now is. If this captivating American Helen had remained at the Bend the block-house would have been erected there, population, capital, and business would have centred there, and there would have been the Queen City of the West." ² See page 40. ³ See page 57.

⁴ This is copied, by permission, from a sketch in Howe's *Historical Collections of Ohio*, page 256.

Captain Harrison and Anna Symmes as Lovers.

Their Marriage opposed.

Its Consummation and Result.

the river, Judge Symmes had erected quite a commodious house for himself, the ruins of whose chimney and fire-place might yet be seen in 1860. To that dwelling came his family in January, 1795, one of whom was the beautiful Anna, then a girl twenty years of age. The block-house was a dependency of the post at Cincinnati, and it received the early personal attention of Captain Harrison, then a young man twenty-two years of age. He was the son of a leading citizen of Virginia, and bearing the highest praises of his commander, General Wayne, as a gallant soldier. He was a welcome guest in the hospitable house of Judge Symmes; and his visits, which became more and more frequent, were especially pleasing to the gentle Anna, who had first met him at the house of her sister, Mrs. Major Short, near Lexington, Kentucky. The young friends soon became lovers, and the judge gave his consent to their marriage. Hearing some slanderous stories concerning Captain Harrison, he withdrew that consent, but the loving Anna, like a true woman, had implicit confidence in her affianced. She resolved to marry him, and her faithfulness verified the saying that

"Love will find its way
Through paths where wolves would fear to prey."

On the morning of the day fixed for the marriage, Judge Symmes, without any suspicion of such an event then, mounted his horse and rode to Cincinnati. The lovers
* November 22, were united at his house,^a in the presence of Anna's step-mother and
1795. many friends, by Dr. Stephen Wood, then a magistrate. The judge did not see his son-in-law until a few weeks afterward, when he met him at a dinner-party given by General Wilkinson, then in command of Fort Washington, to General Wayne. "Well, sir," the judge said, somewhat sternly, "I understand you have married Anna." "Yes, sir," responded Captain Harrison. "How do you expect to support her?" the father inquired. "By my sword and my own right arm," quickly answered the young officer. Judge Symmes was pleased with the reply, and, like a sensible man, was reconciled, and gave them his blessing. He lived to be proud of that son-in-law as governor of the Indiana Territory, and the hero of Tippecanoe, Fort Meigs, and the Thames; and the devoted wife, after sharing his joys and sorrows for five-and-forty years, laid him in the grave within sight of the place of their nuptials, while the nation mingled its tears with hers, for he was crowned with the unsurpassable honor of being the chief magistrate of this republic.¹

¹ William Henry Harrison, the youngest of fifteen children, was born at Berkeley, on the James River, in Virginia, on the 9th of February, 1773. He was descended from a celebrated leader of the same name in Cromwell's army. He was educated at Hampden-Sydney College, in Virginia. On the death of his father, Robert Morris, of Philadelphia, became his guardian. Contrary to the advice of that gentleman, he entered the army. He hastened to the Northwest, but too late to share in the horrors of St. Clair's defeat. His services with Wayne have already (page 58) been noticed. Soon after his marriage he resigned his commission, and entered upon the duties of civil life, at the age of twenty-four, as Secretary of the Northwestern Territory. In 1799 he was elected the first delegate in Congress for that extensive region. Soon afterward, when Indiana was erected into a separate Territory, he was appointed governor, and clothed with extraordinary powers. He entered upon the duties of his office at the old military post of Vincennes in 1801, and discharged his duties for several years with great wisdom and fidelity. His troubles with the Indians, and his military movements in the Wabash Valley, are recorded in Chapter X. of this work. In subsequent chapters may be found a detailed account of his conduct as a military commander. His services in the field ended with the battle on the Thames, in October, 1813, and in the following spring he retired to his farm at North Bend. He was frequently called to serve his adopted state in public capacities. He was a member of the Ohio Legislature and of the United States House of Representatives. In 1824 he was elected to a seat in the United States Senate, and in 1828 was appointed minister to Colombia. Differing with President Jackson in some views respecting Panama, he was recalled. In 1840, after living in retirement many years, he was nominated by the party then called Whig for the chief magistracy of the United States, and was elected by an overwhelming vote. He was inaugurated on the 4th of March, 1841, being then a little past sixty-eight years of age. Precisely a month afterward he died, leaving behind him a clean record of almost fifty years of public service.

"Calm was the life he led, till, near and far,
The breath of millions bore his name along,
Through praise, and censure, and continuous jar—"

But long as on Ohio's coursing wave
Is borne one freeman toward the glowing West,
His eye and tongue above the chieftain's grave
Shall hail the marble honors of his rest!
And, long as Dian lifts her waning crest
Where Liberty yet holds what she hath won,
A pensive thought shall haunt the patriot's breast

An early Settler in Ohio.

A Visit to the Tomb of General Harrison.

Captain Symmes and his Theory.

I passed the night, as I have intimated, at the tavern in Cleves, and in the morning had the good fortune to meet the venerable Daniel G. Howell, who was the first man-child born on "Symmes's Purchase." That event occurred at North Bend, on the 23d of August, 1790. A child of the opposite sex, the first in the settlement, was born nine days earlier. Mr. Howell's family were from New Jersey, and came West with Judge Symmes. He gave me some interesting particulars concerning the hardships of the early settlers, and his adventures as one of the volunteers for the relief of Fort Meigs. At first the settlers could not spare land enough for raising flax, but they fortunately found a useful substitute in a species of nettle that grew on the open glades in the Miami Valley to the height of about three feet. The autumn winds would prostrate it, beneath the winter snows it would rot, and in the spring all the boys of the settlement would be engaged in carrying the crop to North Bend, where it was treated like flax, spun by the women, and woven into cloth for summer wear. This was all the *linen* in use there for some time. It was very dark at first, but was susceptible of bleaching. They used dressed deer-skin for external clothing, and wild turkeys came over from Kentucky in abundance, like the quails to the Hebrews, and supplied them with much food.

After breakfast I called at Mr. Taylor's, and his son accompanied me to the tomb of Harrison. On an adjacent hill, about thirty rods westward from it, is a family burial-ground, in which is the grave of Judge Symmes, covered by a marble slab, resting a little above the ground, on brick-work.¹ From this little cemetery we crossed a grassy hollow and ascended to the tomb of Harrison, on a beautiful knoll about two hundred feet above the Ohio River. It was built of brick,

HARRISON'S GRAVE.

Of him, whose reign in her brief year was done,
And from his heart shall rise the name of HARRISON."—GEORGE H. COLTON.

¹ The following is the inscription on the slab: "Here rest the remains of John Cleves Symmes, who, at the foot of these hills, made the first settlement between the Miami Rivers. Born on Long Island, New York, July 21, A.D. 1742. Died at Cincinnati, February 26, A.D. 1814."

John Cleves Symmes was born at Riverhead, Long Island, and in early life was a surveyor and school-teacher. He married a daughter of Governor William Livingston, of New Jersey, and sister of the wife of John Jay. He was active during the Revolution, and in 1777 was made an associate judge of the Supreme Court of the State of New Jersey. On his removal to the Northwestern Territory he was appointed one of the United States district judges. Near the present village of Cleves he built a fine house, at a cost of \$12,000, the brick for which was hauled on the spot. A political enemy, named Hart, set it on fire on the 1st of March, 1811, and it was entirely consumed. Judge Symmes died, as his monument says, in 1814, at the age of about seventy-four years.

A nephew and namesake of Judge Symmes attracted much public attention and considerable ridicule, about forty years ago, by the promulgation of his belief that the earth was open at the poles, and that its interior was accessible and habitable. He had held the office of captain in the army in the War of 1812, and performed gallant service at Fort Erie. He petitioned Congress in 1822 for aid in performing a voyage of discovery to the inner earth, setting forth the honor and wealth that would accrue to his country from a discovery which he deemed certain. His memorial was presented by Colonel Richard M. Johnson, of Kentucky, but was laid on the table. He found very little encouragement or support from any quarter. His arguments were ingenious, and he had a few believers. He died at Hamilton, Butler County, Ohio (the site of old Fort Hamilton), on the 28th of May, 1828, and some admirer of his caused a monument to his memory, having as a part of it a globe open at both ends, to be constructed. The picture of it here given is from Howe's *Historical Collections of Ohio*, page 77.

SYMME'S MONUMENT.

Site of General Harrison's Residence.

Destruction of his House by Fire.

Mementoes.

was ten by twelve feet in size, and was surrounded by trees, shrubbery, and green sward. At its foot was a noble mulberry-tree, and at its head was the entrance, with doors slightly inclined. The only tenants when I was there were the remains of General Harrison and his second daughter, Mrs. Doctor Thornton. The engraving shows the appearance of the spot, and a view of the great North Bend of the Ohio, as we look eastward from the grave. On the right, near the bank of the river, is seen one of the stone chimneys already mentioned, a few rods from the North Bend Station.

Descending from Harrison's tomb, we crossed the Whitewater Canal, and, after sketching the old house seen on page 571, visited the site of General Harrison's residence, on a level spot at the foot of gentle hills, about three hundred yards from the

HARRISON'S RESIDENCE AT NORTH BEND.

Ohio, and in full view of the North Bend Railway Station. Nothing of it remained but the ruins of cellar and fire-places, and these were covered with brambles. The house was set on fire by a dismissed servant-girl, it was believed, a few years ago, and entirely consumed. All of General Harrison's military and other valuable papers were burned; also many presents that were sent to him by political friends during the presidential canvass in 1840. The family portraits and a few other things were saved.¹ I sketched the locality from the railway station. Placing a drawing of the mansion, from one in Howe's *Historical Collections of Ohio*, in the proper position, I give to the reader a correct view of the residence and its surroundings before the fire. The water seen in the foreground is that of the Whitewater Canal. I returned to Cincinnati toward noon, and left the same evening for Dayton and the shores of Lake Erie.

¹ Among these was a beautiful black cane with a silver head, on which was engraved a log cabin, a cider-barrel, a sheaf of wheat, a steam-boat, and other devices; also his name, and presentation "by a gentleman of Louisiana." The log cabin and cider-barrel refer to a peculiarity in the features of that campaign. The eastern end of Harrison's mansion was one of the original log houses built by the settlers at North Bend, and clap-boarded over. His partisans, when he was nominated, started the story that he lived in a log cabin, whose latch-string was always on the outside, so that the traveler might enter, and that a mug of cider was always ready there for the wayfarer. The story was popular with the masses. Log cabins were erected all over the country, in which Harrison meetings were held, and a barrel of cider was always ready for free distribution at these meetings. The canvass was known as "the Hard Cider Campaign," and the demoralization produced by it was very great. Many a song was composed in his praise and sung at these meetings, in one of the most popular of which occurs the following verse, that may be appropriately quoted in this connection:

"Hurrah for the log cabin chief of our choice!
For the old Indian fighter, hurrah!
Hurrah! and from mountain to valley the voice
Of the people re-echoes hurrah!
Then come to the ballot-box—boys, come along,
He never lost battle for you;
Let us down with oppression and tyranny's throng,
And up with Old Tippecanoe!"

CHAPTER XXVII.

"Once this soft turf, this riv'let's sands,
Were trampled by a hurrying crowd,
And fiery hearts and armed hands
Encounter'd in the battle-cloud,
Ah! never shall the land forget
How gush'd the life-blood of her brave—
Gush'd, warm with hope and courage yet,
Upon the soil they fought to save."—WILLIAM CULLEN BRYANT.

WHILE the army of the Northwest, under Harrison, was slowly recovering what Hull had lost, and more, stirring and important events were occurring on the frontiers of Niagara, Lake Ontario, and the St. Lawrence River.

England was then putting forth her mightiest efforts to crush Napoleon, and her display of energy and resources was marvellous. It required the most vigilant exercise of these on the Continent, yet she withheld nothing that seemed necessary to secure success in America. The naval victories of the Americans during 1812 were very mortifying to the "Mistress of the Seas," and it was resolved by the British cabinet to prosecute the war on the ocean with the greatest vigor. A most profound and wholesome respect for the skill and valor of American seamen had been suddenly created in the British mind, and, to prevent farther disasters on that theatre of action, it was determined that no more conflicts with American ships should be hazarded but with such superior force as would seem to insure success. The American coast was to be practically blockaded, and with so much rigor as to prevent the egress of privateers and the return of them with prizes; and the fiat went forth from the British court that every thing American found afloat should be captured or destroyed, while all of her maritime towns should be menaced and annoyed by the presence and movements of British cruisers.

The success of the allied powers against Napoleon during 1812 greatly relieved England for the moment, and enabled her to give more force to her conflict in the Western world. During the winter of 1812-'13 a body of troops were sent to Halifax, to re-enforce those in Canada in the spring, the principal object to be accomplished in that quarter being the defense of the provinces against invasion, while the war should be carried on vigorously along the coast and on the ocean.

The Americans were disheartened by the results of their campaigns on land during 1812, and it was difficult to increase the army either by volunteers or militia. The government had determined to renew the efforts for the conquest of Canada, in which service nearly all of the regulars were to be employed. The remainder, to consist of militia and volunteers, were to compose, with the regulars, an army of fifty thousand men. By an arrangement for an exchange of prisoners, many valuable officers were restored to command. The states were divided into nine military districts,¹ to each of which a general officer of the United States army was assigned, whose

¹ The districts were composed as follows: 1. Massachusetts and New Hampshire. 2. Rhode Island and Connecticut. 3. New York from the sea to the Highlands, and the State of New Jersey. 4. Pennsylvania from its eastern limit to the Alleghany Mountains, and Delaware. 5. Maryland and Virginia. 6. The two Carolinas. 7. The States of Tennessee, Louisiana, and the Mississippi Territory. 8. Kentucky, Ohio, and the Territorial governments of Michigan, Indiana, Illinois, and Missouri. 9. Pennsylvania from the Alleghany Mountains westward, New York north of the Highlands, and Vermont.

duty it was to superintend and direct all the means of defense within his military district. Detachments of troops were stationed at the most exposed places on the sea-board to form rallying points for the militia in the event of invasion; and the commandant of each district was authorized to call upon the governors of the respective states for such portion of the militia most convenient to the menaced point as he should deem necessary, the operations of such troops to be combined with those of the regular force, and the whole to be under the direction of the commandant of the district, and while in service to be paid and supported by the United States. By this arrangement, designed to prevent any serious interference on the part of the governors of states who were opposed to the war, there was in each district a regular officer of rank equal with any militia officer who might be ordered out, and, under the Articles of War, entitled to chief command. Strict orders were also issued to receive no militia major general into the service of the United States except at the head of four thousand men, or a brigadier general without half as many. Eight new brigadiers were commissioned;¹ and each district, besides its commissary general, was to have an adjutant, a quartermaster, and an inspector of its own. Meanwhile vigorous preparations had been making by the *Northern Army* on the St. Lawrence and its vicinity, and the *Army of the Centre* on the Niagara frontier, for an invasion of Canada.

Early in February, 1813, some important movements were made on the St. Lawrence at Ogdensburg and its vicinity. In a former chapter we have observed some interesting occurrences between the hostile parties in that region during the preceding autumn and early winter. Both were vigilant, and both had committed "invasions" and made prisoners. British deserters had fled to the American lines, and parties of troops from Canada had crossed the river, captured some of these, and made prisoners of American soldiers and civilians. A number of these captives were confined in the jail at Elizabethtown, now Brockville, in Canada, eleven or twelve miles above Ogdensburg, some of whom expected to be shot by order of a court-martial.

An expedition to rescue the prisoners in Elizabethtown jail was planned by Major (late Captain) Forsyth, then stationed at Ogdensburg. With his riflemen, Lyttle's company of volunteers, and some citizens, about two hundred in all, Forsyth left the village in sleighs at about nine o'clock in the evening of the 6th of February,² rode along the southern shore of the St. Lawrence to Morristown, and there engaged Arnold Smith,² a tavern-keeper, to pilot them across the river, which is about two miles and a half wide there. It was a perilous passage, for the ice was not very strong. They crossed safely by keeping open order. The party was divided; Forsyth led one division, and Colonel Benedict, of the New York State Militia, the other. Flanking parties were thrown out under the respective command of Lieutenants Wells and Johnson. In this order they approached Elizabethtown, on the bank of the river, where the flanking parties took post at opposite ends of the village, to check any attempts at retreat or approaching re-enforcements.

The summer tourist on the St. Lawrence must remember with pleasure the appearance of Brockville (Elizabethtown), and the beautiful green ridges around it, rising, one above another, from and parallel to the river. It is at the foot of the group of the Thousand Islands, in the St. Lawrence; and in front of it, upon a bare rock a short distance from the shore, there still remained, when I visited the place in 1860, a small

¹ These were Thomas H. Cushing, Thomas Parker, George Izard, and Zebulon M. Pike, of the old army; William H. Winder, Duncan M'Arthur, Lewis Cass, and Benjamin Howard. Robert Swartwout, of New York, appointed quartermaster as successor of Morgan Lewis, bore the rank of brigadier.

² Mr. Smith was one of the earlier settlers there. Morristown was laid out in 1799 by Jacob (afterward General) Brown. Colonel David Ford made an actual settlement there in 1808, and Arnold Smith and Thomas Hill took up their residence, at about the same time, on the site of the village. Smith's was the first public house kept there. He also erected the first tavern at the present village of Edwardsville. Morristown now (1867) contains about 400 inhabitants.

A general jail Delivery at Elizabethtown.

The British determine to retaliate.

Ogdensburg to be attacked.

block-house erected there during the "Rebellion" in Canada in 1837. On the first of those ridges was the principal business part of Brockville, while on the one above stood a court-house and jail, of blue limestone, and churches and other fine buildings. On the site of that court-house and jail stood the building used for the same purpose in 1813, described as an "elegant brick edifice." Toward this building Major Forsyth moved through the town, after detaching small parties to secure the different streets in the village. On reaching it, he demanded the keys of the jailer. They were immediately surrendered, and the major proceeded to release every prisoner but one, who was confined for murder. He begged piteously to share the fate of his fellow-prisoners; but he was a criminal, and could not be taken from the hands of justice. Some of the prominent citizens were also seized and taken to Ogdensburg. A captured physician was paroled at Morristown and sent back. The only show of resistance was a shot from a window, which slightly wounded one man. Major Carley, the commander of the post, three captains, two lieutenants, with forty-six other prisoners, were taken in triumph to Ogdensburg, where the expedition arrived before daylight on the 7th, without the loss of a man. The spoils were one hundred and twenty muskets, twenty rifles, two casks of fixed ammunition, and a quantity of other stores. For this gallant enterprise, which called forth universal applause, Forsyth was made lieutenant colonel by brevet, his commission being dated the 6th of February, by which it was made to himself and family a memorial of the event.

BLOCK-HOUSE AT BROCKVILLE.

This exploit led to early retaliation on the part of the British. At about that time Sir George Prevost, the Governor General of Canada, arrived at Prescott on his way to the capital of the upper province. Lieutenant Colonel Pierson, commanding at Prescott, proposed an attack upon Ogdensburg. The governor was willing to have the attempt made; but on learning that some deserters had crossed the St. Lawrence, and would probably inform the Americans of the proximity of a prize so precious as his excellency, he became alarmed for his personal safety, and ordered Pierson to accompany him on an immediate journey to Kingston with an escort. Lieutenant Colonel McDonnell was charged with the business of assailing Ogdensburg, and was directed by the governor to first make a demonstration on the ice in front of the village, to engage the attention of the American troops, while his excellency should put much space between himself and his enemies.

British spies informed Forsyth of the intended attack, and he immediately dispatched a courier to General Dearborn at Plattsburg, on Lake Champlain, for reinforcements. "I can afford you no help," replied Dearborn. "You must do as well as you are able, and if you can not hold the place you are at liberty to abandon it." He intimated that the sacrifice of Ogdensburg might be of public benefit in arousing the flagging energies of the Americans. On the receipt of this reply, Forsyth called a council of officers, when it was resolved to hold the place as long as possible. Its defenses were few and feeble, yet stout hearts were there. Near the intersection of Ford and Euphemia (now State) Streets stood a trophy-cannon taken from Burgoyne at Saratoga—an iron six-pounder, on a wheel-carriage, commanded by Captain Kellogg, of the Albany Volunteers. On the west side of Ford Street, between State and Isabella Streets, was a store used as an arsenal, in front of which, likewise on a wheel-carriage, was a brass six-pounder, manned by some volunteers and citizens, under Joseph York, Esq., then sheriff of the county and captain of a small company of volunteers. On the river bank, a short distance from Parish's huge stone store-house,¹

¹ This was built by David Parish, a wealthy banker, who early in this century bought an extensive lauded estate on

PARKIN'S STORE-HOUSE.

a sled-carriage, in charge of one of Captain Kellogg's sergeants. Back of the old fort, and mounted on sleds, were two old-fashioned iron six-pounders, one of them commanded by Adjutant Daniel W. Church,¹ and the other by Lieutenant Baird, of Major Forsyth's company. In front of the huge gateway between the two buildings then remaining of the old fort² was another brass six-pounder on a sled, and about twenty feet to the left of this was a six-pounder iron cannon on a sled. Several others were lying on the edge of the Oswegatchie fast bound in ice. Below the town, on the square bounded by Washington and Water, Elizabeth and Franklin Streets, was an unfinished redoubt, which was commenced the previous autumn by M. Ramee, a French engineer, by order of General Brown, and named Fort Oswegatchie. All the troops then available for the defense of the place were Forsyth's riflemen, a few volunteers, and about a dozen raw recruits.

On the morning of the 22d of February, about eight hundred men, under Lieutenant Colonel McDonell, appeared on the ice, and approached Ogdensburg in two columns. It was a singular spectacle, for only once or twice before had the river been closed between Prescott and Ogdensburg. The right column, three hundred strong, composed of a detachment from the Glengary Light Infantry Fencibles³ and a body of Canadian militia, was commanded by Captain Jenkins. The left column, five hundred strong, composed of detachments of the King's Regiment and the Royal Newfoundland Corps, a body of Canadian local militia and some Indians, was commanded by Lieutenant Colonel McDonell. These troops moved steadily toward the village, while some of the inhabitants were yet in bed, and others were at breakfast. The right column proceeded to attack Forsyth and his command at the old fort, or "stone garrison," as it was called,⁴ Forsyth formed his men behind the stone build-

yet (1867) standing, near the International Ferry, was a rude wooden breastwork, on which was mounted, on a sled-carriage, an iron twelve-pounder, also taken from Burgoyne. This battery was commanded by Captain Joshua Conkey. On the point where the light-house now stands, near the site of old Fort Presentation, was a brass nine-pounder on

D. W. Church

the St. Lawrence frontier. He caused the large stone store on Water Street, Ogdensburg, to be erected in 1810, and in 1813 he constructed a blast-furnace at Roselle. He is regarded as the early benefactor of St. Lawrence County, and is always spoken of with affection.

¹ Daniel W. Church was born at Brattleboro', Vermont, in 1772, and emigrated to Northern New York in 1801, where, at Canton, St. Lawrence County, he commenced the business of millwright by erecting the first saw-mill built there. He was one of the pioneer settlers in that county, and acted a conspicuous part in its early history. He assisted in organizing the first court in that county, and was sitting on the bench as associate justice, with Judge Raymond presiding, in the court-house at Ogdensburg when the shot from Prescott passed through the building, as mentioned in note 1, page 589. He volunteered in the military service at the beginning of the War of 1812, and was appointed adjutant of Colonel Benedict's regiment. His particular services at Ogdensburg and vicinity are mentioned in the text. Twice during the war he received the special thanks of General Brown. He was a man of fine personal appearance, fond of history and science, and charming in society. He died at Morris-ton, on the St. Lawrence, on the 7th of January, 1857, in the 85th year of his age, universally esteemed and deeply regretted by the whole community.

² These were Scotch Roman Catholics, of the families of refugee Loyalists from the domain of the Johnsons in the Mohawk Valley, the most of whom inhabit the County of Glengary.

³ Father Francis Picquet was a priest of the Sulpician order, and was active, after his arrival in Canada in 1783, in the establishment of the Catholic religion and French political dominion in the New World. For the purpose of attack-

Surrender of a Part of the Americans.

Historical Localities.

ings, and directed them to reserve their fire until he should give the word of command. Baird, with the brass six-pounder, was on the right of his line, and Church, with the iron six-pounder, was near the centre. Just as the enemy reached the flat, snow-drifted shore, they fired, but without effect. Forsyth then gave the word, and a full volley of musketry and a discharge of artillery swept down eight of the foe, and threw their line into utter confusion. They attempted to rally and charge upon the Americans, but the frightened militia failing to support the light infantry, the movement was not executed, and the assailing party, after losing, besides the killed and wounded, a number of prisoners, fled out upon the frozen river, seriously annoyed by the nine-pounder on the point where the light-house now stands.

While these events were in progress on the upper side of the village beyond the Oswegatchie, Lieutenant Colonel M'Donnell had marched up into the town, from a point below the battery, near the barracks, without resistance.¹ Captain Conkey

kept his twelve-pounder silent, when he might have swept the enemy's ranks fearfully, and perhaps utterly checked their advance; and, without the least resistance, he surrendered himself, his gun, and his men to the invaders. When this was accomplished they expected an easy conquest of the town, but they were soon confronted by the cannon under Captain Kellogg and Sheriff York. The gun of the former was soon disabled by the breaking of its elevator screw, and he and his men fled across the Oswegatchie

SITE OF FORT PRESENTATION.

ing as many of the Iroquois confederacy of Indians to the French and the Church as possible, he founded a mission at the mouth of the Oswegatchie in 1748, and recommended the erection of a fort there. The river was called La Presentation by the French. There he erected a substantial stone building, on the corner-stone of which, found among the ruins many years ago, was the following inscription: "IN NOMINE DEI OMNIPOTENTIS HIC HABITATIONE INITIA DEBET PLANS RICQUET, 1749." Translation: "Francis Picquet laid the foundations of this habitation, in the name of the Almighty God, in 1749." Another stone building of the same size was erected about sixteen feet from the first one; and when a stockade fort was built there soon afterward, covering about an acre of ground, these edifices, standing on the bank of the Oswegatchie, formed part of the fort, which was called Presentation. Between the two buildings massive gates of oak, fifteen feet in height, were erected. "The remainder of the eastern or southeastern portions," says Mr. Guet, in his "Recollections of Ogdensburg and its Vicinity," "was heavy stone wall; indeed, this may be said to have inclosed the whole. Here was held the first court in St. Lawrence County, and here, also, they had preaching when they were fortunate enough to obtain a clergyman." Nothing now remains of these old works but a few traces of the foundation. The inscribed corner-stone occupies a conspicuous position in the State Armory, erected in Ogdensburg in 1836. I saw it in 1835 in a wall of the Hasbrouck estate on Ford Street. In the above sketch of the site of Fort Presentation, taken from its front of Judge Ford's mansion, the position of the stone buildings above mentioned is indicated by the two little figures seen between the low one-story building toward the right of the picture and the more distant landing-place at Ogdensburg. Toward the left of the picture, on the point projecting into the St. Lawrence, is seen the light-house, and across the river a glimpse of Prescott and Fort Wellington. Toward the extreme right, on the distant shore, are seen the ruined buildings on Windmill Point, desolated during the "Rebellion" of 1857. The landing-place of the British, on the marshy shore, to attack Forsyth, was directly beyond the clump of trees on the extreme left of the picture.

¹ The British struck the shore at the foot of Caroline (now Franklin) Street, and marched up that street to Washington, along Washington, past Parish's house, to State Street, and halted; then to the Arsenal in Ford Street, between State and Isabella Streets.

Retreat of the Americans from Ogdensburg.

Plunder of the Village.

Prisoners carried to Canada.

complete the conquest by dislodging Forsyth and his party. He paraded his troops on the northern shore of the Oswegatchie, and sent a flag to Forsyth summoning him to surrender instantly. "If you surrender, it shall be well; if not, every man shall be put to the bayonet," was a message sent with the summons. "Tell Colonel M'Donell," replied Forsyth, "there must be more fighting done first." The bearers of the flag had just reached their line on Ford Street, near Hasbrouck's, when Church and Baird fired the two six-pounders that stood before the gate of the fort, both charged with grape and canister. The effect was severe, but less frightful than it might have been had not Forsyth peremptorily ordered Church to elevate his piece a little higher. The discharge frightened the enemy, and they took shelter behind Parish's store-house and other buildings, and began picking off the Americans in detail, while another party, overwhelming in numbers, were preparing to storm the old fort. Forsyth's quick eye and judgment comprehended the impending peril. It was heightened by the wounding of Church and Baird, and he gave orders for a retreat to Thurber's Tavern, on Black Lake, eight or nine miles distant, where, on the same day, he wrote a dispatch to the Secretary of War, in which he gave a brief account of the affairs of the morning, and said, "If you can send me three hundred men, all shall be retaken, and Prescott too, or I will lose my life in the attempt."

Lieutenant Baird was too severely wounded to be taken away, and he was left at the mansion of Judge Ford,¹ where he was made a prisoner. The town now being in full possession of the enemy, the work of plunder commenced. Indians and camp-followers of both sexes came over from Canada, and these, with resident miscreants, defying the earnest efforts of the British officers to prevent plunder, carried off or destroyed a great amount of private property. Every house in the village except three was entered. The public property was carried over to Canada. Two armed schooners and two gun-boats fast in the ice were burned, the barracks near the river were laid in ashes, and an attempt was made to fire the bridge over the Oswegatchie.² Fifty-two prisoners were taken to Prescott, where those who were not found in arms were paroled and sent back.³ Some of the prisoners were confined in the jail at Johnstown, three miles below Prescott,⁴ and others were sent to Montreal. Fourteen of the latter escaped from prison at Montreal, and the remainder were sent to Halifax.

The Americans lost in this affair, besides the prisoners, five killed and fifteen wounded. The British lost six killed and forty-eight wounded. As the enemy immediately evacuated the place, the citizens soon returned. From that time until the close of the war Ogdensburg remained in an entirely defenseless state, which exposed the inhabitants to occasional insults from their belligerent neighbors over the river.⁵ A little east of Prescott, on the bank of the St. Lawrence, the British erected a small fortification during the war, which commanded Ogdensburg. It was called Fort Wellington. The present fort of that name was built upon an eminence back of the other, in 1838, at the time of the "Rebellion" in Canada."

¹ This mansion stood on a pleasant spot not far from the left bank of the Oswegatchie River. Nathan Ford, its owner, was among the earliest settlers of Ogdensburg. He was born in Morristown, New Jersey, on the 8th of December, 1768. He served in the Continental army, and in 1794 and 1795 he was employed by Ogden and others, who had purchased lands in Northern New York, to look after their affairs in that quarter. He was a man of indomitable energy, and early foresaw prosperity for the little settlement at the mouth of the Oswegatchie. He died in April, 1829, at the age of sixty-six years.

² The plunder of public property consisted of 1400 stand of arms, with accoutrements, 12 pieces of artillery, 2 stands of colors, 300 tents, a large quantity of ammunition and camp equipage, with some beef, pork, flour, and other stores.

³ The prisoners in the jail at Ogdensburg represented to the British that they were only political offenders, and then were all released. Most of them accompanied the invaders back to Prescott, when it was ascertained that they had deceived the British officers. Some were given up at once, and Sheriff York finally recovered the most of them.

⁴ This jail was used as a place of public worship for a long time, to which the inhabitants of Ogdensburg frequently resorted before the year 1812. Previous to that time there was no regular place of worship in Ogdensburg.

⁵ In May, 1813, an officer came over from Prescott for deserters, and insolently threatened to burn Ogdensburg if they were not given up. "You will do no such thing," said Judge Ford. "No sooner will I see the incendiaries landing than I will set fire to my own house with my own hands, rally my neighbors, cross the river with torches, and burn every house from Prescott to Brockville." The British officer, perceiving the consequences that might ensue, afterward apologized for his conduct.—Hough's *History of St. Lawrence County*, page 685.

I visited the theatre of scenes just described, and places of interest in their neighborhood, in July, 1860, after spending a day or two among the Thousand Islands in the vicinity of Cape Vincent. At dawn on a beautiful morning^a I embarked on the steam-boat *New York* at that point for Ogdensburg, and had the pleasure of meeting an old acquaintance (Captain Van Cleve), a veteran commander of steam-boats on Lake Erie and the St. Lawrence, and who was an involuntary actor in the stirring scenes in the neighborhood of the Oswegatchie in 1838, which will be noted presently. Familiar with every island, rock, and bush on the route, I found him a most instructive companion during that delightful voyage among the Thousand Islands. Another passenger was Mr. Pierpont, of Pierpont Manor, Jefferson County, New York, who was one of the United States commissioners that fixed the boundary-line between the former and Canada soon after the close of the War of 1812-'15. With these two gentlemen as companions willing to impart information, I lacked nothing.

Just above Brockville, as we emerged from the Thousand Islands, a settlement of Tories of the Revolution was pointed out to me, and the house in which a grandson of Benedict Arnold lived, and where he died a few years ago.

We arrived at Ogdensburg early in the day, and I went out immediately to visit places of historic interest there, accompanied by Messrs. Westbrook and Guest, to whom I am indebted for kind attentions while there. The landing-places of the British from the ice; the sites of the "stone garrison" and other military works; the arsenal, court-house, and old burial-ground, on an eminence south of the Oswegatchie, were all visited before dinner.¹ Afterward I went alone over to Prescott, and, in company with a citizen of that village, rode to Wind-mill Point, a mile below, to visit the scene of a serious tragedy, late in the autumn of 1838.

Allusion has already been made several times to the "Rebellion" in Canada in 1837 and 1838. It was a violent effort on the part of leaders and followers in both provinces to cast off the rule of an oligarchy and establish constitutional government, whose administrators should be responsible to the people. The most conspicuous leader in the upper province was the late William Lyon M'Kenzie, a Scotchman, and in the lower province the late Louis Joseph Papineau, a wealthy French Canadian. These, with many followers, assumed the position of open insurrection against the provincial authorities. They were joined by many sympathizers from the United States frontier, and in the autumn of 1838 the affair had grown to alarming proportions—so alarming that, on account of the active sympathy of the Americans with the Canadian "Patriots," it threatened to disturb the friendly relations between the United States and Great Britain. All the frontier towns on both sides of the line were kept in continual excitement, and none more so for a time than Ogdensburg and Prescott. Matters were brought to a crisis there in this wise. One of the most active of the "Patriots" on the American side was William Johnson, of Frenchtown (now Clayton), commonly known as "Bill Johnson," and sometimes called the "Patriot," and sometimes the "Pirate" of the Thousand Islands. Of him we shall have occasion to speak more in detail hereafter, for he was an active partisan in the War of 1812. Johnson's knowledge of the St. Lawrence from Cape Vincent to Ogdensburg made him a valuable auxiliary to the Canadian insurgents, and he engaged with them in co-operative movements for seizing Fort Wellington, which had just been completed at Prescott. For this purpose a large number of "Patriots" went down the St. Lawrence early in November, 1838. On the 12th, the steam-boat *United States*, Captain Van Cleve, just mentioned, took as passengers for Ogdensburg about two hundred

¹ I visited the fine mansion and beautiful grounds of Mr. Parish, son of the early proprietor of vast landed estates in that region. There for many years was the residence of Elena Vespucci, a lineal descendant of the Florentine American Vespucci, in whose honor our continent was named. She visited this country with the expectation of receiving a grant of land or money from Congress. She was a brilliant, fascinating woman. She left for Europe in 1830. Many evidences of her taste were seen about the mansion.

An American Steamer pressed into the Service of the "Patriots."

Siege of a garrisoned Wind-mill.

and fifty "Patriots" from Sackett's Harbor. On the way down the St. Lawrence, Van Cleve discovered two schooners becalmed. One of his passengers, a stranger of genteel appearance, asked him to take them in tow, as they were laden with goods for Ogdensburg, and he should be glad to have them reach port the next morning. The decks were covered with boxes and barrels, and only men enough to navigate the vessels were visible. The schooners were taken in tow, when Van Cleve was speedily undeceived. Full two hundred armed men came from them on board of his vessel. The schooners were a sort of Trojan horses. Van Cleve was perplexed. He resolved to "lay to" at Morristown, and send word to the authorities at Ogdensburg. This becoming known to the "Patriots," about one hundred of those on the *United States* who took passage at Sackett's Harbor, and all who had come from the schooners, went on board of the latter, when they cast off from the steam-boat and sailed down the St. Lawrence. On the following morning they were at anchor in the river between Ogdensburg and Prescott, and created the greatest excitement in both towns.

The British armed steamer *Experiment* was lying at Prescott, and made immediate arrangements to attack the schooners. One of them meanwhile had run aground, and the other had gone down to Wind-mill Point and landed her armed men. At about the same time the *United States* arrived at Ogdensburg. The "Patriots" pressed her into their service, and, with the assistance of the American steam ferry-boat *Paul Pry*, rescued the stranded schooner, and conveyed the other to a place of safety near Ogdensburg. She was also employed in carrying over some "Patriots" whom Johnson had persuaded to accompany him to Wind-mill Point, in which service she lost her pilot, Solomon Foster, an excellent young man, who was instantly killed by a ball from the *Experiment* that passed through the wheel-house of the *United States*. That evening Colonel Worth arrived at Ogdensburg with United States troops, accompanied by a marshal, who seized all vessels in the "Patriot" service, including the *United States*, and effectually cut off supplies of men, arms, and provisions from Wind-mill Point.

The "Patriots" at the Point made a citadel of the strong stone wind-mill there, took possession of some stone dwellings, and cast up breast-works. They were under the command of a brave young Polander named Von Schoultz. On the morning of the
* November, 1813. 13th^a they were attacked with shot and shell by the *Experiment* and two other armed steamers that had arrived. These were replied to by the battery that had been constructed on the shore near the wind-mill during the night. There were cowards among the "Patriots." So many had fled that when the cannonade commenced only one hundred and eighty were left. When, soon afterward, British regulars and volunteers to the number of more than six hundred went out from Fort Wellington and attacked the "Patriots" in the rear, only one hundred and twenty-eight were left; and yet these fought so desperately that, according to Dr. Theller's account,¹ they drove the British back to the fort, killing one hundred of them and wounding many, after a conflict of an hour.

THE BATTERED WIND-MILL.

Little but burying the dead occupied the next day.^b That night, four hundred British regulars, sixteen hundred volunteers, cannon, and gun-boats arrived from Kingston. The "Patriots" were doomed. Food, ammunition, and physical strength were exhausted, and they surrendered. They had lost thirty-six killed; ninety were made prisoners. Von Schoultz, only thirty-one years of age, and several Americans, were hanged in less than a month afterward. Some were re-

WIND-MILL AND RUINS NEAR PRESCOTT.

about three acres of ground. It was not neglected. The citadel, in the form of a block-house, seen in the engraving, is a strong work, the lower part of stone, the upper of hewn timbers. The barracks are in good condition. A few cannon were on the ramparts, and on the river side of the fort lay a brass one, on which was inscribed the words and characters "S. N. Y., 1834. Taken from the rebels in 1837." It was a trophy.

When I recrossed the St. Lawrence at near sunset, heavy clouds were floating down from the region of the Thousand Islands, and low thunder-peals were heard in the far southwest. I stopped on the International Ferry wharf just long enough to sketch the Parish store-house, and arrived at the Seymour House a few minutes before a heavy shower of rain began to fall. I passed part of the short summer evening with Mrs. York, already mentioned, at the house of Mr. Chapin, her son-in-law, and at four o'clock the next morning, when the clouds, after a night of tempest, were breaking, departed in the cars for the eastward, to visit French Mills (now Covington), Malone, Odelltown, Champlain, Chazy, and Plattsburg. Of those visits I shall hereafter write.

A second invasion of Canada, as we have observed, was a principal feature in the programme of the campaign of 1813. Quebec, on account of its military strength and accessibility to large vessels from the sea, was held to be unassailable; but Montreal, the emporium of the vast Indian trade in the immense country westward of it, seemed to promise an easy conquest. The possession of that city, and of the entire Upper Province, was the prize for which the Army of the North was expected to contend. But the same lack of sagacity on the part of the cabinet, to which much of the disasters of 1812 were chargeable, now reappeared. Instead of sending a competent force for the capture of Montreal before the ice in the St. Lawrence should move and permit British transports to bring re-enforcements from Halifax, it was determined first to reduce Kingston and York (now Toronto), on Lake Ontario, and

leased, and twenty-three were sent to England, and from thence to the British penal colony in Van Diemen's Land. Eleven years later they were all released by a declaration of amnesty by the crown.

The British burned the wood-work of the wind-mill and stone houses. In that desolated condition they yet remained when I visited the spot in 1860, and made the sketch from which our little engraving was copied. The wind-mill still exhibits many indentations made by the cannon-balls during the siege.

It was toward evening when I returned to Prescott, stopping on the way to visit Fort Wellington, a strong work covering garrisoned, and every thing within seemed

Dearborn and Chauncey on Lake Ontario.

Plans for invading Canada.

Preparations for active Movements.

Forts George and Erie, on the Niagara River, recapture Detroit, and recover the Michigan Territory. The latter enterprise was successful, as we have seen in the last chapter; it now remains for us to consider the events connected with the prosecution of the former, namely, the capture of York, Forts George and Erie, and Kingston, in the order here named.

Early in the winter of 1813, Dearborn, who was in the immediate command of the Army of the North, had about six thousand troops under his control, and was empowered to call out as many of the local militia as might be needed to supply any deficiencies in the regular army. Commodore Chauncey, by operations described in a former chapter,¹ had acquired such complete control of Lake Ontario that he could confine all the British vessels of war to the harbor of Kingston.

Orders were given for the concentration of four thousand troops at Sackett's Harbor, and three thousand at Buffalo. The former were to cross the ice to Kingston, capture that place, destroy all the shipping that might be wintering there, and then, as soon as practicable, either by land or water, proceed to York, seize the army stores collected there, and two frigates said to be on the stocks.

Dearborn received a general outline of this plan from the War Department on the 10th of February. He was then at Plattsburg with two brigades wintering there, amounting in the aggregate to about twenty-five hundred effective men. "Nothing shall be omitted on my part," he wrote on the 18th,^a "in endeavoring to carry into effect the expedition proposed."² Major Forsyth, who returned to Ogdensburg after the British left it, was ordered to Sackett's Harbor. General Brown was directed to call out several hundred militia; and Colonel Zebulon M. Pike (who was made a brigadier general a month later) was ordered to proceed from Plattsburg to the Harbor with four hundred of his best men in sleighs. But Chauncey was detained in New York, and the expedition against Kingston was abandoned, partly on that account, and partly because the arrival at that place of Sir George Prevost with Pierson's escort³ from Prescott gave foundation for a report that the British there had received large re-enforcements.⁴ When, about the 1st of March, Dearborn arrived at Sackett's Harbor, the story was current there, and generally believed, that Sir George, with six or eight thousand men, collected from Quebec, Montreal, and Upper Canada, was at Kingston, engaged in active preparations for offensive measures.

Dearborn found only about three thousand troops at the Harbor, and he sent expresses to hasten forward those on the way. On the 9th of March he wrote to the Secretary of War, saying, "I have not yet had the honor of a visit from Sir George Prevost," and expressed some doubts whether the knight would make his appearance at all. A week afterward all causes for apprehensions of an attack from Kingston had disappeared, and at a council of officers^b the expedition against that place was formally abandoned until the lake should be open and the co-operation of the fleet should be secured. To the strengthening of that arm of the service on the lake, the genius and industry of Henry Eckford, the naval constructor, were now earnestly directed, the President having, on the 3d of March, directed six sloops of war to be built on Lakes Ontario and Erie, and as many purchased as the exigencies of the service might require. The pay of seamen was advanced twenty-five per cent., and many of them were sent to the lakes for active service there. Early in April the brig *Jefferson* was launched^c at Sackett's Harbor, and the keel of the *General Pike* was laid.^d On the 14th the British launched two large vessels at Kingston, and at about the same time received for the service on the

³ See page 577.

⁴ "Chauncey has not returned," Dearborn wrote to the Secretary of War on the 26th of February. "I am satisfied that if he had arrived as soon as I had expected him, we might have made a stroke at Kingston on the ice; but his presence was necessary for having the aid of the seamen and marines."

water large numbers of seamen from the Royal Navy. On the 15th the ice in the lake disappeared, and two days afterward Chauncey sent out the *Grouler* to reconnoitre. Brigadier General Chandler had lately arrived. The effective force at Sackett's Harbor at this time consisted of about five thousand regulars and twelve months' volunteers, two thousand militia, and thirteen hundred sailors.

At the middle of April Dearborn and Chauncey matured a plan of operations. A joint land and naval expedition was proposed, to first capture York, and then to cross Lake Ontario and reduce Fort George. At the same time, troops were to cross the Niagara from Buffalo and Black Rock, capture Forts Erie and Chippewa, join the fleet and army at Fort George, and all proceed to attack Kingston. Every thing being arranged, Dearborn embarked about seventeen hundred men on Chauncey's fleet at Sackett's Harbor on the 22d of April, and on the 25th the fleet, crowded with soldiers, sailed for York.¹ After a boisterous passage, it appeared before the little town early in the morning of the 27th, when General Dearborn, suffering from ill health, placed the land forces under charge of General Pike,² and resolved to remain on board the commodore's flag-ship during the attack.

The little village of York³ was then chiefly at the bottom of the bay, near a marshy flat through which the Don, coming down from beautiful fertile valleys, flowed sluggishly into Lake Ontario, and, because of the softness of the earth there, it was often called "Muddy Little

Z. M. Pike

York." It gradually grew to the westward, and, while deserting the Don, it wooed the Humber, once a famous salton stream, that flows into a broad bay two or three miles west of Toronto. In that direction stood the remains of old Fort Toronto, erected by the French, and now (1867) an almost shapeless heap. On the shore eastward of it, between the present new barracks and the city, were two batteries, the most easterly one being in the form of a crescent. A little farther east, on the borders of

¹ Chauncey's fleet consisted of the flag-ship *Madison*, commanded by Commander Elliott; the *Onesida*, Lieutenant Commanding Woolsey; the *Pair American*, Lieutenant Chauncey; the *Hamilton*, Lieutenant M'Pherson; the *Governor Tompkins*, Lieutenant Brown; the *Conquest*, Lieutenant Pettigrew; the *Asp*, Lieutenant Smith; the *Fert*, Lieutenant Adams; the *Julia*, Mr. Trant; the *Grouler*, Mr. Mix; the *Ontario*, Mr. Stevens; the *Sourp*, Mr. Osgood; the *Lady of the Lake*, Mr. Flinn; and *Haven*, transport.

² Zebulon Montgomery Pike was one of the earlier explorers of the wilderness around the head-waters of the Mississippi River. He was born in Lambertton, New Jersey. His father was an army officer, and young Pike entered the army while yet a boy. His whole life was devoted to the military profession. Soon after the purchase of Louisiana, in 1803, President Jefferson decided to have the vast unknown territory explored, and sent Captains Lewis and Clarke to accomplish a portion of it. At the same time, young Pike (who was born on the 5th of January, 1779) was commissioned to explore the present Minnesota region. That was in 1806. In the following year he made a perilous but successful reconnaissance of the wilderness in the direction of Northern Mexico, and, returning in the summer of 1807, he received the thanks of Congress. He reached the rank of colonel of infantry in 1810, and in March, 1812, he was commissioned a brigadier. He lost his life in the attack on York (Toronto), in April, 1812, when he was little more than thirty-four years of age. His name and memory are perpetuated, not only on the pages of History, but in the titles of ten counties, and twenty-eight townships and villages in the United States, chiefly in the Western country.

On the day before he left Sackett's Harbor, General Pike wrote as follows to his father: "I embark to-morrow in the fleet, at Sackett's Harbor, at the head of a column of 1500 choice troops, on a secret expedition. Should I be the happy mortal destined to turn the scale of war, will you not rejoice, oh my father? May heaven be propitious, and smile on the cause of my country. But if we are destined to fall, may my fall be like Wolfe's—to sleep in the arms of victory." His wish was gratified.

³ York, or "Little York," as it was generally called, was a village of about nine hundred inhabitants, situated on the north shore of Lake Ontario, a little west of the meridian of the Niagara River. It was founded by Governor Simcoe, was made by him the seat of government in 1797, and designed to be, what it has since become, a large and flourishing city. In front of it is a beautiful bay, nearly circular, a mile and a half in diameter, formed by the main and a curlew-

Neglect of Defenses.

General Pike's Instructions.

His Troops confronted at their Landing-place.

a deep ravine and small stream, was a picketed block-house, some intrenchments with cannon, and a garrison of about eight hundred men, under Major General Sheaffe. On Gibraltar Point, the extreme western end of the peninsula, that embraced the Harbor with its protecting arm, was a small block-house; and another, seen in the engraving, stood on the high east bank of the Don, just beyond the present bridge at the eastern

YORK IN 1813, FROM THE BLOCK-HOUSE EAST OF THE DON.

termination of King and Queen Streets. These defenses had been strangely neglected. Some of the cannon were without trunnions; others, destined for the war vessel then on the stocks, were in frozen mud and half covered with snow. Fortunately for the garrison, the *Duke of Gloucester* was then in port undergoing some repairs, and her guns furnished some armament for the batteries. These, however, amounted to only a few six-pounders. The whole country around, excepting a few spots on the lake shore, was covered with a dense forest.

On the day when the expedition sailed from Sackett's Harbor General Pike issued minute instructions concerning the manner of landing and attack. "It is expected," he said, "that every corps will be mindful of the honor of the American arms, and the disgraces which have recently tarnished our arms, and endeavor, by a cool and determined discharge of their duty, to support the one and wipe off the other." "The unoffending citizens of Canada," he continued, "are many of them our own countrymen, and the poor Canadians have been forced into this war. Their property, therefore, must be held sacred; and any soldier who shall so far neglect the honor of his profession as to be guilty of plundering the inhabitants, shall, if convicted, be punished with death. But the commanding general assures the troops that, should they capture a large quantity of public stores, he will use his best endeavors to procure them a reward from his government." With such instructions the Americans proceeded to invade the British soil at about eight o'clock on the morning of the 27th of April, 1813.

It was intended to land at a clearing near old Fort Toronto. An easterly wind, blowing with violence, drove the small boats in which the troops left the fleet full half a mile farther westward, and beyond an effectual covering by the guns of the navy. Major Forsyth and his riflemen, in two bateaux, led the van, and when within rifle-shot of the shore they were assailed by a deadly volley of bullets by a company of Glengary Fencibles and a party of Indians under Major Givens, who were concealed in the woods that fringe the shore. "Rest on your oars! prime!" said Forsyth, in a low tone. Pike, standing on the deck of the *Madison*, saw this halting, and impatiently exclaimed, with an expletive, "I can not stay here any longer! Come," he said, addressing his staff, "jump into the boat." He was instantly obeyed,

shaped peninsula, which, within a few years, has become an island. It was only a few rods wide, where, in 1809, a storm cut a channel and made most of the peninsula an island, while at its western extremity it was very broad, and embraced several ponds. See map on page 590. It is low and sandy—so low that, from the moderate elevation of the town (fifteen or twenty feet above the water), the dark line of the lake may be seen over it. Upon it were, and still are, some trees, which, at first glance, seem to be standing on the water. This gave the name of *Trees on Water*, an Indian word signifying "trees on the water," to the place. When the French built a fort there, westward of the extreme western end of the peninsula (which was called "Gibraltar Point"), they named it Fort Tarontah, or Toronto. In pursuance of his plan of Anglicizing the Upper Province, Simcoe named it York. The people, at a later day, with singular good taste, resumed the Indian name of Tarontah, or Toronto.

and very soon they and their gallant commander were in the midst of a fight, for Forsyth's men had opened fire, and the enemy on the shore were returning it briskly. The vanguard soon landed, and were immediately followed, in support, by Major King and a battalion of infantry. Pike and the main body soon followed, and the whole column, consisting of the Sixth, Fifteenth, Sixteenth, and Twenty-first Regiments of Infantry, and detachments of light and heavy artillery, with Major Forsyth's riflemen and Lieutenant Colonel M'Clure's volunteers as flankers, pressed forward into the woods. The British skirmishers meanwhile had been re-enforced by two companies of the Eighth, or King's Regiment of Regulars, two hundred strong, a company of the Royal Newfoundland Regiment, a large body of militia, and some Indians. They took position in the woods, and were soon encountered by the advancing Americans, whose artillery it was difficult to move. Perceiving this, the British, led by General Sheaffe in person, attacked the American flanks with a six-pounder and howitzer. A very sharp conflict ensued, and both parties suffered much. Captain McNeil, of the King's Regiment, was killed. The British were overpowered, and fell back, when General Pike, at the head of the American column, ordered his bugler to sound, and at the same time dashed gallantly forward. That bugle blast thrilled like electric fire along the nerves of the Indians. They gave one horrid yell, then fled like frightened deer to cover, deep into the forest. That bugle blast was heard in the fleet, in the face of the wind, and high above the voices of the gale, and evoked long and loud responsive cheers. At the same time Chauncey was sending to the shore, under the direction of Commander Elliott, something more effective than huzzas, for he was hurling deadly grape-shot upon the foe, which added to the consternation of the savages, and gave fleetness to their feet. They also hastened the retreat of Sheaffe's white troops to their defenses in the direction of the village, while the drum and fife of the pursuers were briskly playing *Yankee Doodle*.

The Americans now pressed forward as rapidly as possible along the lake shore in platoons by sections. They were not allowed to load their muskets, and were compelled to rely upon the bayonet. Because of many ravines and little streams, the artillery was moved with difficulty, for the enemy had destroyed the bridges. It was a strong right arm, and essential in the service at hand; and by great exertions a field-piece and a howitzer, under Lieutenant Fanning, of the Third Artillery, was moved steadily with the column. As that column emerged from thick woods, flanked by M'Clure's volunteers, divided equally as light troops, under Colonel Ripley, it was confronted by twenty-four pounders on the Western Battery, the remains of

REMAINS OF THE WESTERN BATTERY, 1

which are now (1867) plainly visible between the present New Barracks and the city on the lake shore. Upon that battery the guns of some of Chauncey's vessels,

¹ In this sketch the appearance of the mounds in 1860 is given. On the left, in the distance, is seen a glimpse of a wharf and part of Toronto. On the right a portion of the peninsula, now an island. In the centre of the picture is the opening between the island and the remainder of the peninsula, looking out upon the lake. The steam-boat indicates the present channel, which is narrow and not very deep.

Battle at York.

Explosion of the British Powder-magazine.

Death of General Pike and others.

which had beat up against the wind in range of the enemy's works, were pouring heavy shot. Captain Walworth was ordered to storm it with his grenadiers, of the Sixteenth. They immediately trailed their arms, quickened their pace, and were about to charge, when the wooden magazine of the battery, that had been carelessly left open, blew up, killing some of the men, and seriously damaging the defenses. The dismayed enemy spiked their cannon, and fled to the next, or Half-moon Battery. Walworth pressed forward, when that, too, was abandoned, and he found nothing within but spiked cannon. Sheaffe and his little army, deserted by the Indians, fled to the garrison near the governor's house, and there opened a fire of round and grape shot upon the Americans. Pike ordered his troops to halt, and lie flat upon the grass, while Major Eustis, with his artillery battery, moved to the front, and soon silenced the great guns of the enemy.

The firing from the garrison ceased, and the Americans expected every moment to see a white flag displayed from the block-house in token of surrender. Lieutenant Riddle, whose corps had brought up the prisoners taken in the woods, was sent forward with a small party to reconnoitre. General Pike, who had just assisted, with his own hands, in removing a wounded soldier to a comfortable place, was sitting upon a stump conversing with a huge British sergeant who had been taken prisoner, his staff standing around him. At that moment was felt a sudden tremor of the ground, followed by a tremendous explosion near the British garrison. The enemy, despairing of holding the place, had blown up their powder-magazine, situated upon the edge of the water, at the mouth of a ravine, near where the buildings of the Great Western Railway stand. The effect was terrible. Fragments of timber, and huge stones of

POWDER-MAGAZINE AT TORONTO.

walls were built, were scattered in every direction over a space of several hundred yards.¹ When the smoke floated away the scene was appalling. Fifty-two Americans lay dead, and one hundred and eighty others were wounded.² So badly had the affair been managed that forty of the British also lost their lives by the explosion. General Pike, two of his aids, and the British sergeant were mortally hurt,³ while Riddle and his party were unhurt, the missiles passing entirely over them. The terrified Americans scattered in dismay, but they were soon rallied by Brigade Major Hunt and Lieutenant Colonel Mitchell. The column was reformed, and the general command was assumed by the gallant Pennsylvanian, Colonel Cromwell

¹ The magazine was about twenty feet square. It contained five hundred barrels of gunpowder, and an immense quantity of shot and shells. It was built of heavy stone, close by the lake shore, with a heavy stone wall on its water front. Its roof was nearly level with the surface of the ground. The descent to its walls was by stone steps outside of the wall. It was so situated that the Americans did not suspect its existence there. The picture of it above given, as it appeared before the explosion, is from a pencil sketch by an English officer. It is said that some of the fragments of the magazine were thrown by the explosion as far as the decks of Chancery's vessels, and, says Ingersoll, "the water was shocked as with an earthquake."

² A late provincial writer, whose pages exhibit the most bitter spirit, says, in speaking of this destruction of life, "We heartily agree with James (the most malignant and mendacious of the British writers on the War) 'that, even had the whole column been destroyed, the Americans would but have met their deserts' and if disposed to commiserate the poor soldiers, at least, we wish, with him, 'that their places had been filled by the American President and the ninety-eight members of the Legislature who voted for the war.'"—*A History of the Late War between Great Britain and the United States of America*, by G. Auchincloss, Toronto, 1855.

³ One of General Pike's officers afterward wrote: "I was so much injured in the general crash that it is surprising how I survived. Probably I owe my escape to the competency of the British sergeant, whose body was thrown upon mine by the concussion."—Letter in *The Aurora*, quoted by Hough in his *History of Jefferson County*, page 482.

Surrender of York. Escape of General Sheaffe and his Regulars. The Americans in Possession of the Post.

Pearce, of the Sixteenth, the senior officer.¹ After giving three cheers, the troops pressed forward toward the village, and were met by the civil authorities and militia officers with propositions for a capitulation, in response to a peremptory demand for surrender made by Colonel Pearce. An arrangement was concluded for an absolute surrender, with no other prescribed conditions than that all papers belonging to the civil officers should be retained by them, that private property of all kinds should be respected, and that the surgeons in attendance upon the British regulars and Canadian militia should not be considered prisoners of war.² General Sheaffe's baggage and papers were captured. Among the former was a musical snuff-box that attracted much attention.

Taking advantage of the confusion that succeeded the explosion, and the time intentionally consumed in the capitulation, General Sheaffe and a large portion of his regulars, after destroying the vessel on the stocks and some store-houses and their contents, stole across the Don, and fled along Dundas Street toward Kingston. When several miles from York they met a portion of the King's Regiment on their way to Fort George. These turned back, covered Sheaffe's retreat, and all reached Kingston in safety. Sheaffe (who was the military successor of Brock) was severely censured for the loss of York, and was soon afterward superseded in command in Upper Canada by Major General De Rottenburg. He retired to Montreal, and took command of the troops there.

On hearing of the death of General Pike, General Dearborn went on shore, and assumed command after the capitulation. At sunset the work was finished; and at the same hour (eight o'clock in the evening), both Chauncey and Dearborn wrote brief dispatches to the government at Washington, the former saying, "We are in

¹ Cromwell Pearce was born in Willistown, Chester County, Pennsylvania, on the 13th of August, 1772, on the farm where the celebrated "Paoli massacre" occurred in the autumn of 1777. His father was a native of Ireland. Cromwell was brought up a farmer. At the age of twenty-one years Governor Mifflin commissioned him a captain of militia, and in 1799 he entered the regular army of the United States as first lieutenant in the Tenth Regiment of Light Infantry. He was commissioned a colonel of the Sixteenth Infantry in July, 1812, and marched to the Northern frontier. He bore a distinguished part in the capture of York, and yet his name was not mentioned in General Dearborn's report of the affair. Only Chauncey, in his official report, speaks of him. Pearce was brave, modest, and unassuming, and performed his duties nobly throughout the war. In the autumn of 1813 he was in the battle of Chrysler's Field, on the St. Lawrence, when, on the fall of the commander, he again became the leader of the contending forces. At the close of the war he retired to private life. In 1816 he was elected sheriff of his native county. In 1824 he was chosen a presidential elector, and was deputed to carry to Washington City the electoral vote of the state. In 1828 he was appointed an associate judge of the County Court, which office he held until 1839. He died suddenly on the 2d of April, 1852, in the eightieth year of his age.—*Notes Centennialis*, by William Darlington, M.D., LL.D.

² The following were the commissioners who arranged the terms of capitulation: Americans: Lieutenant Colonel E. G. Mitchell; Major Samuel S. Conner, aid-de camp to General Dearborn; and Commander Elliott, of the Navy. British: Lieutenant Colonel W. Chewett, of the York Militia; Major W. Allen, of the same corps; and Lieutenant F. Gaurreau.

York abandoned by the Americans.

General Pike's last Moments.

A Scalp adorning the Parliament-house.

full possession of this place," and the latter, "I have the satisfaction to inform you that the American flag is flying upon the fort at York." The post, with about two hundred and ninety prisoners besides the militia, the war-vessel *Duke of Gloucester*, and a large quantity of naval and military stores, passed into the possession of the Americans. Such of the latter as could not be carried away by the squadron were destroyed; and before the victors left, the public buildings were fired by some unknown hand, and consumed.¹ Four days after the capitulation the troops were re-embarked, preparatory to a descent upon Fort George. The post and village of York, possessing little value to the Americans, were abandoned.² The British re-
May 8,
1813.

possessed themselves of the spot, built another block-house, and on the site of the garrison constructed a regular fortification.

The loss of the Americans in the capture of York was sixty-six killed and two hundred and three wounded on land, and seventeen killed and wounded on the vessels. The British lost, besides the prisoners, sixty killed and eighty-nine wounded. General Pike was crushed beneath a heavy mass of stone that struck him in the back. He was carried immediately after discovery to the water's edge, placed in a boat, and conveyed, first on board the *Pert*, and then to the commodore's flag-ship. Just as the surgeons and attendants, with the wounded general, reached the little boat, the huzzas of the troops fell upon his benumbed ears. "What does it mean?" he feebly asked. "Victory," said a sergeant in attendance. "The British union-jack is coming down from the block-house, and the stars and stripes are going up." The dying hero's face was illuminated by a smile of great joy. His spirit lingered several hours, and then departed. Just before his breath ceased the captured British flag was brought to him. He made a sign for them to place it under his head, and thus he expired. His body was taken to Sackett's Harbor, and with that of his pupil and aid, Captain Nicholson, was buried with military honors within Fort Tompkins there. Of his final resting-place I shall hereafter write.²

When I visited the site of York and the theatre of events there in 1813, in August, 1860, I found on the borders of that harbor the beautiful—really beautiful city of Toronto, containing between fifty and sixty thousand souls. I arrived there by the Toronto branch of the Great Western Railway at eight o'clock in the evening, having left Paris, on the Grand River, at about five in the afternoon. We reached Burlington Station at six, and occupied about an hour and a half in traveling the remaining

¹ The Parliament-houses stood on the site of the present jail in Toronto. It is said that the incendiary was instigated by the indignation of the Americans, who found hanging upon the walls of the legislative chamber a *human scalp*! British writers, ever ready to charge the Americans with all manner of crimes, have not only affected to disbelieve this story, but have charged American writers who have stated the fact with deliberate falsehood. It is not pleasant to relate facts so shameful to the boasted civilization of that country as this incident furnishes; but as one of the latest of British historians has, without the shadow of an excuse, intimated that the scalp in question had been taken by Commodore Chauncey from the head of a British Indian, "shot while in a tree," during the advance of the Americans on the town (see Auchinleck's *History of the War of 1812*, published in Toronto in 1856), I feel compelled, by a sense of justice, to submit the proofs of this evidence of the barbarism of the British authorities in Canada at that time.

On the 4th of June, 1813, Commodore Chauncey wrote from Sackett's Harbor to the Secretary of the Navy, saying, "I have the honor to present to you, by the hands of Lieutenant Dudley, the British standard taken at York on the 27th of April last, accompanied by the mace, over which hung a human scalp. These articles were taken from the Parliament-houses by one of my officers and presented to me. The scalp I caused to be presented to General Dearborn."—Autograph Letter, Navy Department, Washington City. Armstrong, who was Secretary of War at that time, writing in 1836, says, "One regimental standard was (by some strange confusion of ideas) sent to the Navy Department, and one *human scalp*, a prize made, as we have understood, by the commodore, was offered, but not accepted, as a decoration to the walls of the War Department."—*Notices of the War of 1812*, l., 132. General Dearborn wrote, "A scalp was found in the executive and legislative council-chamber, suspended near the speaker's chair, accompanied by the mace."—*Niles's Register*, iv., 190. Commenting on this, Niles says, "The mace is the emblem of authority, and the *scalp's* position near it is truly symbolical of the British power in Canada." The Canadian people had no part nor lot in the matter, and should not bear any of the odium. If British writers would fairly condemn the wrong-doings of their rulers, they would be more just to their fellow-subjects.

² The chief authorities consulted in the preparation of the foregoing narrative in this chapter are the official reports of the commanders on both sides; the histories of the events by Thompson, Perkins, James, Auchinleck, Armstrong, Christy, Ingersoll, and minor writers; Whiting's Biography of General Pike; Hough's Histories of Jefferson, Franklin, and St. Lawrence Counties; Rogers's History of Canada; Smith's Canada, Past and Present; Cooper's Naval History of the United States; The War; Niles's Register; the Port Folio; Analectic Magazine; manuscript notes of Dr. Amasa Trowbridge; autograph letters of actors in the scenes, and notes from the lips of survivors.

thirty-nine miles. Lieutenant Francis Hall, who traveled the same route in 1816, more than ten years before the first railway was built for the conveyance of passengers, says, "It took us three hours to accomplish the five miles of road betwixt the head of the lake and the main road, called Dundas Street, which runs from York toward Lake Erie and Amherstburg. . . . The face of the country from the head of the lake to York is less varied than that of the Niagara frontier. The thread of settlements is slender, and frequently interrupted by long tracts of hemlock swamp and pine barrens." Cultivation has somewhat changed the features of the country since then, but, after leaving the glimpses of Lake Ontario on our right, we found the route rather uninteresting, the country being generally flat.

We crossed the rocky bed of the Humber at twilight, and before nine o'clock, having supped, I was settled as a guest at the "Ross House" for two days. During the night a fearful thunder-storm burst over the city, and the lightning fired two buildings. Amid the din of the tempest came the doleful pealing of the fire-bells. At the midnight hour,

"Oh, the bells, bells, bells!
What a tale their terror tells
Of despair!
How they clang, and clash, and roar;
What a horror they outpour
On the bosom of the palpitating air!"—EDGAR A. POE.

For more than two hours I lay wondering when the tumult would cease. All things have an end, and so did this unwelcome disturbance—unwelcome, because I was worn and weary, and needed full rest for another hard day's work on the morrow.

The sun, at rising, peered longitudinally through a veil of mist that hung over the land and the lake. There was great sultriness in the air. I went out early to find the venerable John Ross, one of the oldest inhabitants of Toronto, then in his seven-

tieth year. He settled there in the year after it was made the seat of the provincial government, and for sixty-two years he had watched its growth from a few scattered huts to a stately city. He was born at "Butler's Barracks," just back of Newark, now Niagara. Some of Butler's Rangers, those bitter Tory marauders in Central New York during the Revolution, who in cruelty often shamed Brant and his braves, settled in Toronto, and were mostly men of savage character, who met death by violence.¹ In the War of 1812 Mr. Ross belonged to a company of York Volunteers. He was with Brock at Hull's surrender, and in the battle of Queenstown, two months later, where his loved commander fell. He assisted in the burial of the hero in Fort George, and he gave me many interesting incidents connected with the event.

Mr. Ross gave me such minute and clear directions concerning the interesting places in and around Toronto that I experienced no difficulty in finding them. I hired a horse and light wagon, and a young man for driver, and spent a greater portion of the day in the hot sun. We first rode out to the plain westward of the city, to visit the landing-place of the Americans and the remains of old Fort Toronto. The latter, delineated on the next page, were on the margin of the lake, where the bank is only about eight feet above the water. The spot is about sixty rods westward of the present military post called the New Barracks. The principal remains of the fort (in which may be seen some timber-work placed there when the fort was partially repaired in the winter of 1812-'13) are seen in the foreground. They presented abrupt heaps covered with sod. On the right, in the distance, is seen Gibraltar Point, with the trees springing from its low, sandy surface. On the left are the New Barracks. A few rods westward of the fort were the remains of a battery, the

¹ Mr. Ross knew a Mr. D—, one of these Rangers, who, when intoxicated, once told him that "the sweetest steak he ever ate was the breast of a woman, which he cut off and broiled!"

Remains of Old Fort Toronto. An Adventure among the Fortifications at Toronto Displeasure of a British Official.

REMAINS OF OLD FORT TORONTO.

mounds of which were four or five feet in height. Passing on toward the city, near the lake shore, we came to the remains of the Western Battery (see map on page 590), delineated on page 588, ten or fifteen rods eastward of the New Barracks; and, still nearer to the town, the mounds of the Half-moon Battery.

Riding into the city, we passed through the old garrison, where a few of the One Hundredth Regiment occupied a portion of the barracks. The gates were away, and the public road passed directly through the fort. For the purpose of obtaining a sketch of the old block-house of 1813, I mounted the half-ruined parapet on the north side, when I was accosted by the fort adjutant just as I had set my pencil at work. With great discourtesy of manner he informed me that it was a violation of law to

OLD FORT AT TORONTO IN 1800.

make sketches of British fortifications, and that I ought to think myself fortunate in being allowed to escape without a penitential day in the guard-house. I assured him that had I for a moment dreamed that a few old mounds of earth, two deserted block-houses, and some tumble-down barracks, with a public road crossing the very centre of the group, constituted a fortification in the sense of British military law, I should not have been a trespasser. This intimation that a man with his eyes open could not, in the chaos around him, discover a British fort, did not increase the amiability of the adjutant, and, with the supercilious hauteur of offended dignity, he gave me to understand that he wished no farther conversation with me. This was the only instance

A courteous Sergeant.

Visit to the Don.

Chief Justice Robinson and William Lyon M'Kenzie.

of incivility that I received during all my travels in Canada. I closed my portfolio, passed out at the eastern gateway, and from the causeway that crosses the ravine at the foot of Bathurst Street, a short distance from the site of the powder magazine that exploded, I obtained a much more interesting sketch than I should have done from the parapet.¹ This was full compensation for the fort adjutant's incivility. When I had finished my sketch I started into and through the fort, and fell in with Sergeant Barlow, a most courteous young man, who invited me to his quarters to see his bride. There he showed me a number of relics of the War of 1812, lately thrown up by the excavators in the employ of the railway company. Among them was a military button marked "P. R."—Pennsylvania Rangers—some silver and copper coins found with a skeleton, and the remains of an epaulette. There I also met Sergeant Robertson, a veteran Scotch soldier, who was one of the Glengary Regiment during the War of 1812. He had served in the British army twenty years previous to that war. He was tall and vigorous, but somewhat lame, and about ninety years of age. He gave me some curious details of the operations of the famous Glengary men during the strife.

From the old fort we rode out to the River Don, at the eastern extremity of the city. It is there about seventy feet wide, and was spanned by a bridge at the junction of King and Queen Streets, made of heavy open timber-work. There General Sheaffe crossed in his flight, burning the bridge behind him. Looking up the Don from it about three fourths of a mile, where its wooded banks are high, may be seen St. James's Cemetery, in the northeast corner of which is the site of the first palace or dwelling of the governor, which was built of logs and called Castle Frank. The spot still retains that name. I intended to visit it, but when we were at the bridge the day was waning, and a thunder-shower was gathering in the west; so we turned our faces cityward, and arrived at the hotel in time for a late dinner and a stroll around the city to view its very beautiful public buildings before dark.

On the following morning I called upon Sir John Beverly Robinson, chief justice of Upper Canada, at his pleasant residence on the southeast corner of John and Queen Streets. He was an aged man, small in stature, and elegant and affable in manners. His father was a member of Simcoe's corps of Queen's Rangers during our old War for Independence, and, with other Loyalists, fled to Nova Scotia at its close. He afterward settled in Upper Canada, where the chief justice was born. The son was destined for the legal profession, and finished his education in England, where he was admitted to the bar. When the War of 1812 broke out he abandoned his profession temporarily, joined the army in Canada, and was with Brock, in gallant service, at Detroit and Queenston. He was rewarded with the office of solicitor general, and was afterward made attorney general and chief justice of the province. He died at Toronto early in 1863, at the age of seventy-one years.

In the course of the morning I met the famous leader of the revolt in Upper Canada in 1837, William Lyon M'Kenzie, with whom I had been acquainted several years. He was still engaged in his favorite profession of editing and publishing a newspaper, and, though at near the end of the allotted age of man, he seemed as vigorous as ever, and was conducting his paper with that boldness that ever characterized his career. He, too, has since been laid in the grave. Mr. M'Kenzie accompanied me to the residence of the governor general, the Parliament-house, and the wharf, where great preparations were making for the reception of the Prince of Wales, who was then at Montreal on his way to the Upper Province. Workmen were engaged in the construction of an immense amphitheatre and triumphal arch, not far from the Parlia-

¹ In this view is seen the causeway and bridge over the ravine, and the general appearance of the fort in 1800. In the embankment is seen a *fraise*, or pickets placed horizontally. On the left is the old block-house of 1813. In the centre, to the right of the open gateway, is another block-house with a flag on it, built after the Americans left York. On the right is the governor's house, built after the war, with a poplar-tree near it. In the ravine, a little to the left of the cannon and horses, was situated the magazine that exploded.

Passage across Lake Ontario.

The Railway to Lewiston.

Arrival at Niagara Falls.

ment-house, at the foot of wide Brook Street, I think. The veteran agitator was to leave for Montreal that afternoon for the purpose of meeting the prince, and so we soon parted, he to dash off some spicy editorials—to hurl a shot at some political or social evil—and I to dine and prepare for a voyage across the lake to the Niagara River.

We left Toronto toward evening,^a hoping to reach Lewiston in time to take the train that would connect with one leaving Niagara Falls early for the East, but in this we were disappointed. The voyage was a delightful one in a stanch steamer. We passed out of the harbor through the channel across the former neck of the peninsula,¹ and in a short time we were out of sight of land. All along the western and northern horizons heavy clouds were drifting, and the watery expanse back of us was as black as the Styx. Before us, as we approached the mouth of the Niagara River, the white mist, which is eternally rising from the Great Cataract, was seen above Queenston Heights, at least twenty miles distant. When we entered the river a heavy thunder-shower was rapidly rising in the direction of Burlington Bay. It burst upon us at Lewiston, where we entered the railway cars. It was short and severe. As we moved along the fearful shelf in the rocks forming the perpendicular banks of the Niagara River—rocks a hundred feet above and a hundred feet below the railway that overlooks the rushing waters—the setting sun beamed out in splendor, and revealed clearly the whole country from Queenston Heights to Lake Ontario. Just as we had passed a small rocky tunnel, we were detained for a few minutes by some obstruction, when, from the back window of the last car in the train at which I was standing, I made the accompanying sketch. It will convey to the reader an idea of the nature of the road. Below is seen the waters of the Niagara, spanned by the suspension bridge at Lewiston, and, by a somewhat winding way, flowing into Lake Ontario in the far distance. We ran into Niagara Falls village at dark in the midst of another heavy thunder-shower, and late in the evening departed in the cars for the East. I rested at Rochester that night, and on the following day reached my home on the Hudson, after a wearisome but most interesting tour of a fortnight in Canada and along the Niagara frontier.

1860.

VIEW ON THE NIAGARA, NEAR LEWISTON.

We have observed on page 591 that the victors at York abandoned that post preparatory to an attack upon Fort George, at the mouth of the Niagara River. On ac-

¹ See note 3, page 588.

count of adverse winds, the expedition did not leave York Harbor until the 8th of May, when the whole fleet crossed the lake and anchored off the mouth of Four-mile Creek, four miles eastward of Fort Niagara. Dearborn and Chauncey, and other army and naval commanders, had preceded the fleet in the pilot schooner *Lady of the Lake*, and selected the place for an encampment near the mouth of the creek. There the troops were debarked, and Chauncey sailed for Sackett's Harbor with most of his fleet, to obtain supplies and re-enforcements for the army. He arrived there on the 11th.^a The smaller vessels were continually employed in conveying stores and troops to Dearborn's camp; and on the 22d the *Madison*, with the commodore's pennant flying in her, sailed for the same point with three hundred and fifty troops, including Macomb's artillery corps. She arrived at Four-mile Creek on the 25th, and on the evening of the same day Commander Perry, who had come down hastily from Erie, joined Chauncey, to the great delight of that officer. At the moment of his arrival, all the officers of the squadron were assembled on board the flagship to receive orders. "No person on earth," Chauncey said to Perry, "as he cordially grasped his hand, "could be more welcome at this time than yourself." On the following morning the commodore and Perry, in the *Lady of the Lake*, reconnoitred the enemy's batteries with care, planted buoys for the government of the smaller vessels which it was intended to send close in shore, and arranged other preliminaries for the attack. They then called upon General Dearborn, who was quite ill at his quarters, when Chauncey urged the importance of making the attack the next morning. The general assented, and issued an order to that effect, which was signed by Winfield Scott, adjutant general and chief of staff. The last clause of the order placed the landing of the troops in charge of Commodore Chauncey, and that specific duty was intrusted to Commander Perry. Information of this arrangement was communicated to the commanding general, who, it appears, had no definite plan of attack.¹

Fort Niagara and the troops there were under the command of Major General Morgan Lewis, of New York. During the occupancy of the camp at Four-mile Creek re-enforcements had come in from various points, and on the return of Chauncey, prepared for attacking the British post. The American land force fit for duty was over four thousand in number, under the general command of Dearborn. He was too ill to take the field, and issued his orders part of the time from his bed. He was supported by Generals Lewis, Boyd, Winder, and Chandler, and eminently so by Colonel Scott, whose skill and industry in disciplining the troops during their detention in camp was of the greatest service.

The British force in the vicinity was composed of about eighteen hundred regulars, consisting of the Forty-ninth Regiment, and detachments from the Eighth, Forty-first, Glengary, and Newfoundland Corps, under the command of Brigadier General John Vincent. Eight companies of the Forty-ninth, five companies of the Eighth or King's, three companies of the Glengary, and two of the Newfoundland Regiment, and a portion of the artillery, were stationed at Fort George and its immediate vicinity, with three hundred and fifty militia and fifty Indians. The right, from Fort George to Brown's Point (the first below Vrooman's, near Queenston), was commanded by Colonel Harvey; the left, from the fort to Four-mile Creek, on the Canada side of the Niagara River, was commanded by Colonel Myers, the deputy quarter-master general; and the centre, at the fort, by General Vincent. In the rear of Fort George, in the several ravines, companies were stationed so as to support each other when required.²

Besides Fort George, the British had several smaller works along the shores of the Niagara River and Lake Ontario, in the vicinity. Five of the twenty-four-pounders

Cannonade between Forts George and Niagara.

The American Squadron off the Niagara River.

taken from Hull had been brought to that frontier, four of which had been mounted in Fort George, and the fifth had been placed *en barbette*,¹ about half a mile from Newark, on or near the site of the present Fort Mississauga. They had another battery at the mouth of the Two-mile Creek. The Americans had quite a powerful work, called the Salt Battery, in the lower part of Youngstown, opposite Fort George. There were two other batteries above it, and two between it and Fort Niagara.

Arrangements were made for the attack on Fort George on the morning of the 27th of May. A large number of boats had been built at Five-mile Meadow, on the Niagara River, and orders were sent for them to be brought round to Four-mile Creek. When they were launched, toward evening on the 26th, a small battery opposite the Meadows opened upon the workmen. This brought on a general cannonading between the two forts and their dependent batteries, during which the Salt Battery at Youngstown inflicted severe injury upon every wooden building in and near Fort George, while the return fire from the fort was slow and feeble, owing, it is said, to a scarcity of powder. Meanwhile night came on, and under its cover the boats went down the river and reached the American encampment in safety. During the night, all the heavy artillery, and as many troops as possible, were placed on the *Madison*, *Oneida*, and *Lady of the Lake*, and instructions given for the remainder to follow in the smaller war vessels and boats, according to a prescribed plan.

Generals Dearborn and Lewis went on board the *Madison*, and between three and four o'clock in the morning the squadron weighed anchor. The troops were all embarked at a little past four, and the whole flotilla moved toward the Niagara with a very gentle breeze. The wind soon failed, and the smaller vessels were compelled to employ their sweeps. A heavy fog hovered over land and water from early dawn until the sun broke forth in splendor, when a magnificent sight was opened to view on the lake. The large vessels, filled with troops, were all under way, and the bosom of the water was covered with scores of boats, filled with soldiers, light artillery, and horses, grandly advancing upon the enemy, who had been greatly perplexed by the fog. The breeze had now freshened a little, and all the vessels took their designated positions without difficulty.

The *Julia*, Sailing-master Trant, and the *Growler*, Sailing-master Mix, took a position at the mouth of the Niagara River, to keep in check or silence a battery near the light-house (on or near the site of Fort Mississauga), in the vicinity of which it was

ENTRANCE TO THE NIAGARA RIVER.²

intended to land some of the troops. The *Ontario*, commanded by Mr. Stevens, took a position north from the light-house, so as to enfilade the same battery and cross the

¹ That is, on the top of an embankment, without embrasures or openings in the banks by which the cannon is sheltered and concealed.

² This view is from a drawing made in 1813, previous to the attack on Fort George, and published in the *Port Folio* in July, 1817. On the extreme left is seen Fort Niagara, and at a greater distance, across the river, Fort George and the village of Newark. To the right of the light-house, over which is a flag, is seen the battery which the *Julia* and *Growler* controlled.

fire of the other two. The *Governor Tompkins*, Lieutenant Brown, and the *Conquest*, commanded by another lieutenant of the same name, took position near Two-mile Creek, so as to command a battery which the enemy had erected there. Near this was the designated place for the debarkation of most of the troops. For the purpose of covering them in that movement, the *Hamilton*, Lieutenant M'Pherson, the *Asp*, Lieutenant Smith, and the *Scourge*, Sailing-master Osgood, took stations near the other two, but closer to the shore.

While the vessels were taking their positions, and the troops were preparing to land, the batteries upon both sides were playing briskly. Colonel Scott, on accepting the position of adjutant general, had stipulated that he should be allowed to command his regiment (Second Artillery) on extraordinary occasions. This he considered an extraordinary occasion, and he was placed in the command of the vanguard or forlorn hope of five hundred men destined to make the first attack. The troops were to land in three brigades, from six divisions of boats. Scott's advance was composed of his own corps acting as infantry, Forsyth's riflemen, and detachments from infantry regiments. These were to be followed by General Lewis's division and Colonel Moses Porter with his light artillery, and these, in turn, by the commands of Generals Boyd (who had succeeded General Pike), Winder, and Chandler. The reserve consisted of Colonel Alexander Macomb's regiment of artillery, in which the marines of the squadron, under Captain Smith, had been incorporated. Four hundred seamen were also held in reserve, to land, if necessary, under the immediate command of Commodore Chauncey.

Before the expedition reached the place of intended debarkation the wind had increased, and a rather heavy sea rolling shoreward made the landing difficult. The *Tompkins* swept gracefully into her designated position. Lieutenant Brown coolly prepared for action, and then opened a fire upon the British battery with so much precision that it was silenced, and its people driven away in less than ten minutes. The boats now dashed in under the skillful management of Perry; and so eager were the troops of the van, under Scott, to meet the foe, that they leaped into the water and waded to the shore, Captain Hindman, of the Second Artillery, being the first man who touched the beach. They had already been under fire; for, as the first brigade, under Boyd, with Scott in the van, approached the shore, they were unexpectedly assailed by volleys of musketry from more than two hundred of the Glengary and Newfoundland regiments under Captain Winter, and about forty Indians under Norton, who was conspicuous at Queenston the year before. These had been concealed in a ravine and wood not far from the battery that had been silenced. The shot passed over the heads of the Americans; and, a few minutes afterward, Scott and his party were on the beach, sheltered by an irregular bank, varying from six to twelve feet in height, where they formed for immediate action. The enemy, from apprehension of the fire from the schooners, did not approach the shore again immediately, but kept back, with the intention of assailing the invaders when they should ascend the bank to the plain above.

The conduct of Perry on this occasion was remarkable. Unmindful of personal danger, he went from vessel to vessel in an open boat, giving directions personally concerning the landing. With Scott he leaped into the water, and rushed ashore through the surf, and soon had the satisfaction of seeing the whole first brigade, under Boyd, landed in perfect order on the beach, flanked by M'Clure's Baltimore and Albany Volunteers. Meanwhile the schooners were not firing briskly enough to suit the young hero. He pushed off to the *Hamilton*, of nine guns, and while Scott and his party were attempting to ascend to the plain, he opened a tremendous discharge of grape and canister shot on the British, who were now advancing to repel the Americans, full one thousand strong, infantry and artillery, under Colonel Myers.

The struggle of the Americans in ascending the bank was most severe. Three

A severe Contest on the Shore.

Retreat of the British.

Capture of Fort George.

times they were compelled to fall back, hard pushed by the bayonets of the foe. In the first attempt, Scott, at the head of his men, was hurled backward to the beach. Dearborn, who was anxiously watching the movement with his glass from the *Madison*, and who placed more reliance on Scott than any other man, seeing him fall, exclaimed in agony, "He is lost! he is killed!" Scott soon recovered himself, rallied his men, rushed up the bank, knocked up the bayonets of the enemy, and took and held a position at a ravine near by. He was supported by Porter's field train and a part of Boyd's brigade, in which service the Sixth Regiment, three hundred strong, under Colonel James Miller, performed a conspicuous part. A severe and gallant action ensued—gallant on both sides—which was chiefly sustained by Scott's corps, and the Eighth (King's) British regiment, under Major Ogilvie. The contest lasted only about twenty minutes, when the severe cannonade from the *Hamilton* and the well-applied fire of the American troops caused the British to break and flee in much confusion. The whole body of the enemy, including the Forty-ninth Regiment, which had been brought forward by Colonel Harvey as a re-enforcement, fled toward Queenston, closely pursued by Colonel Scott. Colonel Myers, their commander, was wounded and taken from the field; and the whole corps, officers and men, who fought bravely, suffered severely.

General Vincent was satisfied that the victory of the Americans was complete, and that Fort George was untenable, so he ordered its guns to be spiked, the ammunition to be destroyed, the fort to be abandoned, and the whole force under his command to retreat westward, by the way of Vrooman's and St. David's, to a strong position among the hills, at a place called the Beaver Dams, about eighteen miles distant, and rendezvous there.

Information of the impending destruction of the fort was communicated to Scott while passing it with his pursuing column by some prisoners who came running out. He immediately detached two companies, under Captains Hindman and Stockton,¹ and, wheeling to the left, dashed on at their head toward the fort to save the guns and ammunition, if possible. When he was about eighty paces from the works one of the magazines exploded, and a piece of

PLAN OF OPERATIONS AT THE MOUTH OF THE NIAGARA RIVER.

flying timber threw the impetuous leader from his horse, and hurt him severely. He soon recovered from the shock, and pressed forward. The gate was forced, the lighted trains for firing two smaller magazines were extinguished, and, with his own hands, Scott hauled down the British flag. The whole manœuvre occupied but a few minutes, and Scott was soon again at the head of his column, in hot pursuit of the

¹ Thomas Stockton was a native of Delaware, and was appointed captain of artillery in 1812. In 1814 he became major of the Forty-second Infantry, and at the close of the war was retained as captain, with the brevet rank of major. He afterward served in the artillery. He resigned in 1825. In 1844 he was governor of Delaware, and died at Newcastle in March, 1846.

Pursuit of the British checked.

Their Flight to the Beaver Dams and Burlington Heights.

flying enemy, satisfied that he would overtake and capture them. Twice he disregarded an order from General Lewis to give up the pursuit, saying to Lieutenants Worth and Vandeventer, the messengers, "Your general does not know that I have the enemy within my power; in seventy minutes I shall capture his whole force." Just then Colonel Burn,¹ his senior, was crossing the Niagara River from the Five-mile Meadows with precisely the troops which Scott deemed necessary to make his successful pursuit of the enemy secure. While waiting for these he was overtaken by General Boyd, who gave him peremptory orders to relinquish the chase and return to Fort George. He obeyed with regret. He had followed the enemy five miles, and was then so near them that he was in the midst of the British stragglers. Lieutenant Riddle, who was not aware of the order, pursued the fugitives almost to Queenston, and captured and brought back several prisoners.

At meridian, Fort George and its dependencies, with the village of Newark, were in the quiet possession of the Americans, the attack and conquest having occupied only three hours. The Americans had been eleven hours on duty since embarking at Four-mile Creek. Only a small portion of them had been actually engaged in the conflict.² Their loss was about forty killed and one hundred wounded. The only officer slain was Lieutenant Henry A. Hobart, of the Light Artillery. The loss of the British regulars was fifty-one killed, and three hundred and five wounded, missing, and prisoners. The number of British militia made prisoners was five hundred and seven, making the entire loss of the enemy eight hundred and sixty-three, with quite a large quantity of munitions and stores saved from destruction at Fort George and the batteries.

General Vincent and most of his troops reached the Beaver Dams toward sunset, and during the evening he was joined by a "battalion company" of the Eighth, and a "detachment of the royal navy" under Captain Barclay, who had been escorted by the gallant Captain Merritt, of the mounted militia, from the Twenty-mile Creek.³ Between midnight and dawn, the troops from Fort Erie, under Lieutenant Colonel Bishopp, and from Fort Chippewa, under Major Ormsby, reached the camp, orders having been sent to those commanders to abandon the entire Niagara frontier. Early in the morning Vincent resumed his march toward the head of Lake Ontario, his whole force being about sixteen hundred men. From Forty-mile Creek (now Grimsby) he wrote an official dispatch to Sir George Prevost that evening, giving an account of his disasters, and suggesting the propriety of establishing a communication with the army on Burlington Heights (whither he was marching) "through the medium of the fleet." On the 29th he took post on the heights, and was soon joined by troops from Kingston.

^a ^{May,} On the morning of the 28th,^a when it was known that Vincent had fallen back to his deposit of provisions and stores at the Beaver Dams, General Lewis was sent in pursuit of him with the brigades of Chandler and Winder. They accomplished nothing. Ascertaining that Vincent had fled westward, they made a circuit

¹ James Burn was a native of South Carolina. He was a captain of cavalry in 1799. He settled in Pennsylvania, and in the spring of 1812 was appointed colonel of the Second Light Dragoons. He left the service on the disbanding of the army in 1815. He died at Frankfort, near Philadelphia, in 1828.

² General Dearborn, in a second dispatch to the Secretary of War, written on the 8th of June, spoke in the highest terms of *all* the officers and men engaged in the affair, especially of the "animating examples" of Scott and Boyd, and the services of Colonel Porter, Major Armistead, and Lieutenant Totten, in their "judicious and skillful execution in demolishing the enemy's batteries." Lieutenant Totten finally became a brigadier general, and was the Chief Engineer of the United States Army for several years before his death.

³ "We formed again at the Council-house" [see plan on page 599], says Captain Merritt, "when I was sent up to order down the light company of the King's, who, we understood, were at the Eight-mile Creek. I rode through the woods, around the American regiments, followed up the lake to the Twenty-mile Creek (was two hours on the road), where I met Commodore Barclay with his sailors, and the King's. We hurried on to Shipman's, where I learned the army had retreated to De Cou's (the Beaver Dams). I took the party through the woods, and arrived there at nine o'clock in the evening. Next morning the militia were allowed to remain or follow the army. This was a bad day for many as well as myself. I went home, prepared my 'kit,' and with a heavy heart bid adieu, as I thought, to the place of my nativity for a long time. I was determined to share the fate of the army."—MS. Narrative.

British Property destroyed by themselves. Injurious Delay. Expedition sent toward Burlington Heights.

of many miles to assure themselves of the British evacuation of the frontier, and then returned to camp.

Fort Erie and Chippewa, and all public property from the former down to Niagara Falls, were doomed to destruction by an order received from General Vincent on the afternoon of the 27th. In pursuance of that order, Major Warren, in command of the batteries opposite Black Rock, was ordered to open fire upon that place, and keep it up all night, until the troops should move off. He did so; and in the morning the magazine at Fort Erie was blown up, and magazines, barracks, and store-houses all along the frontier were fired. In the evening of Friday the 28th, Lieutenant Colonel James P. Preston, the commandant at Black Rock (who was Governor of Virginia in 1816), crossed over with the Twelfth Regiment and took possession of Fort Erie. He at once issued an admirable proclamation to the people of Canada, by which he allayed their apprehensions and disarmed all resentment.¹

Two or three days were now consumed in apathy at Newark, Dearborn and Chauncey not having been able to agree respecting future movements. The latter, who had anchored his fleet in Niagara River, sailed for Sackett's Harbor on the 31st. Meanwhile a rumor came that Proctor was marching from the Detroit frontier to assist Vincent in recovering that of the Niagara. This determined the American commander to send troops in pursuit of Vincent immediately, for the purpose of attacking him among the hills or arresting his flight westward. For this purpose he detached General Winder, at his own request, on the 1st of June, with about eight hundred men, including Burn's dragoons, and Archer's and Towson's artillery. He took the Lake Road, and marched rapidly to Twenty-mile Creek, where he was informed of Vincent's position at Burlington Heights and his re-enforcements from Kingston. Winder prudently halted, sent to Dearborn for re-enforcements, and waited for their arrival. He was joined on the 5th by General Chandler and about five hundred men. Chandler, being the senior officer, took the chief command, and the whole body moved

¹ "The Albany steam-boat which arrived yesterday (Sunday) brings intelligence that Fort Erie had surrendered to the troops of the United States, under Generals Dearborn and Lewis, with little or no resistance on the part of the enemy." This announcement appeared in a New York paper on Monday morning, the 7th of June, 1813. "This form of announcement of war news from the North and West at that time was very common. Expresses from the army at different points were sent to Governor Tompkins, the chief magistrate of the State of New York, living at Albany, and the steam-boat was the most rapid method for conveying intelligence then known. Every few days the New York papers would say, "The Albany steam-boat brings intelligence," et cetera. It must be remembered that steam navigation was then in its infancy. It was not six years since Fulton's first successful experiment had been made. There were only three steam-boats on the Hudson at that time, whose owners had, by legislative grant, the monopoly of that kind of navigation. These were the *Paragon*, *Car of Neptune*, and *North River*. The average length of the passage from New York to Albany was then about thirty-six hours."

* The following advertisement, taken from the *New York Evening Post* of the date under consideration, with a facsimile of a cut of "the steam-boat" at its head, will seem very curious to the traveler now, at the distance of sixty years:

HUDSON RIVER STEAM-BOATS.

From Albany to Kinderhook, \$1.50; Coxsackie, \$2; Hudson, \$2; Catskill, \$2.25; Red Hook, \$2.75; Esopus, \$3; Hyde Park, \$3.25; Poughkeepsie, \$3.50; Wappinger's Creek, \$4; Newburg, \$4.25; West Point, \$4.75; Verplanck's Point, \$5.25; New York, \$7.

All other way passengers to pay at the rate of one dollar for every twenty miles. No one can be taken on board and put on shore, however short the distance, for less than one dollar.

Young persons from two to ten years of age to pay half price. Children under two years, one fourth price. Servants who use a berth, two thirds' price; half price of none.

Encounter at Forty-mile Creek.

Americans at Stony Creek.

Preparations to surprise their Camp.

Henry Merritt

forward briskly to Forty-mile Creek, where they rested, after driving off a patrol of mounted militia under Captain Merritt. They then moved forward to Stony Creek, ten miles farther westward and within about seven miles of Vincent's camp, where they encountered a British picket-guard. These were dispersed, and hotly pursued by the American advance-guard, consisting of light infantry under Captains Hindman, Biddle, and Nicholas, part of a rifle corps under Captain Lyttle, and a detachment of dragoons under Captain Selden. Near the present toll-gate, a little eastward of Hamilton, they encountered another picket. These, too, were driven in, and the victors pushed on in pursuit until they saw Vincent's camp on the great gravelly hill at the head of Burlington Bay. Then they wheeled, and made their way leisurely back to camp at Stony Creek.

The main body of the army encamped upon ground rising slightly above a meadow, through which flows a branch of Stony Creek, and occu-

piated the space from the main stream north of the village to the house of Mr. Gage, at the foot of the hills, on the site of which, when I visited the spot in 1860, stood the residence of Nelson Miller. The Thirteenth and Fourteenth Regiments, and a company of artillery under Captain Archer,¹ took post on the lake shore, near the mouth of the creek, about three miles from the main body. The troops in both camps, expecting a night attack, slept on their arms, and every precaution was taken by Chandler in the posting of pickets, throwing out patrols, etc., to prevent a surprise. Explicit directions were given by him where and how to form the line of battle in the event of an attack. The cannon were properly planted, and the horses that drew them were unharnessed.

There was equal vigilance in the British camp. The audacity of the American vanguard in pursuing the pickets amazed and alarmed Vincent. He was anxious to obtain immediate knowledge of the numerical strength and the disposition of his foe, and sent out Lieutenant Colonel Harvey, with the light companies of the Eighth and Forty-ninth Regiments, to reconnoitre the American camp. The duty was well performed, notwithstanding the night was very dark, and Harvey reported, before midnight, that "the enemy's camp-guards were few and negligent; that his line of encampment was long and broken; that his artillery was feebly supported; and that several of the corps were placed too far in the rear to aid in repelling a blow which might be rapidly and vigorously struck at the front." He advised a night attack, and Vincent, heeding it, made immediate preparations to execute the movement.

At midnight the British commander left his camp with about six hundred men, composed of five companies of the King's (Eighth) Regiment and the whole of the Forty-ninth, and marched for Stony Creek. Harvey's scout joined them, and at about two o'clock in the morning they all halted within a mile of the American camp. Harvey had discovered the centre to be the weakest point in Chandler's line. By one of the inhabitants of the neighborhood, who had treacherously joined the Amer-

¹ Samuel B. Archer was a native of Virginia. He was a captain in Scott's Second Regiment of artillery, and was breveted major for his gallant conduct at Fort George on the 27th of May, 1813. He was retained in the service in 1814, and in 1821 became inspector general, with the rank of colonel. He died on the 11th of December, 1823.

BATTLE-GROUND OF STONY CREEK.¹

icans and deserted, Vincent had obtained the countersign for that night, and through it he was enabled to secure the sentinels without giving alarm.

It was now two o'clock in the morning^a—a warm Sabbath morning—and the little army of Americans were sleeping soundly, unconscious of impending danger. Clouds covering a moonless sky made the gloom deep, but not impenetrable. Five hundred British regulars loaded their muskets, fixed their bayonets, and, led by General Vincent in person, rushed upon the American centre at double-quick, with the appalling Indian war-whoop, and plied the bayonet so fearfully that the line was cut, and that portion of it scattered to the winds. This furious charge was immediately followed by Major Plenderleath at the head of forty men of the Forty-ninth, who fell upon the artillery, bayoneted the men at the guns, captured two six-pounders, and turned them with fearful effect upon the camp. The greatest confusion prevailed, Chandler's centre and the assailants becoming almost inextricably mixed in the dark, and each was unable to distinguish friends from foes.

In the mean time Major Ogilvie, with a part of the King's Regiment, had fallen upon the American left, composed of the Fifth, Sixteenth, and Twenty-third Regulars, and some riflemen under General Winder, to which was attached Burn's dragoons, who were too far in the rear to render immediate assistance. This attack was at first gallantly resisted, the Twenty-fifth, of the centre, lending their aid; but a fire in the rear, from a detachment of the assailing party that broke through the line, threw them into great confusion.

While Chandler² was making preparations to meet this unexpected assault, a heavy

¹ This view, sketched in the morning sunlight, is from the residence of Daniel Lewis, Esq., lieutenant colonel of the Wentworth Militia, who was in the battle. In the foreground is seen the meadow through which flows a branch of Stony Creek. Beyond it, on the left, is a gentle elevation, the estate of Mr. Thomas Waddle, of Hamilton, and near the village, on which lay the encampment. Miller's (Gage's) house is seen on the extreme right, with a veranda and grove of trees in front. In the distance is the range of hills which extend westward from Queenston, and are called "the Mountain" by the Canadians.

² John Chandler was born within the bounds of the present State of Maine (Kennebec County), then a part of Massachusetts, in the year 1760. His parents were very humble, and he became an itinerant blacksmith. His residence was in General Dearborn's settlement of Monmouth, about fifteen miles west from Augusta. It is recorded, in a late *History and Description of New England*, by Coolidge and Mansfield, that "he was the poorest man in the settlement." By industry and perseverance he became wealthy. His talents were of a high order. He was a representative in Congress from 1806 to 1808, and when the war broke out and he was commissioned a brigadier general, he was major general of militia. His military career ended at Stony Creek, and he was disbanded in 1816. He represented Maine in the Senate of the United States from 1820 to 1829. He died at Augusta, Maine, September 25, 1841, at the age of eighty-one years.

Capture of Generals Chandler and Winder. Narrow Escape of General Vincent. Retreat of the Americans.

fire was opened on the right flank of the Americans. Perceiving this, he hastened in that direction to prevent its being turned, when, in the darkness, his horse stumbled and fell, and the general was severely hurt. He soon recovered his feet, succeeded in providing for the safety of his right, and was returning to the centre, moving with difficulty on foot, when he was attracted to the artillery, where there was much confusion. He was not aware that the two cannon were in possession of the enemy; and, under the impression that those in confusion around the pieces were some of his own command, he gave orders for them to rally. To his utter astonishment he found himself among the enemy, and in a moment he was disarmed and made a prisoner of war. At about the same time General Winder and Major Van De Venter¹ fell into the same trap and were made prisoners.²

At this moment there was the wildest confusion every where. Towson's artillery had poured a destructive fire upon the assailants and had broken their ranks. Colonel Burn, with his cavalry, had cut his way through the British Forty-ninth, and was performing the same feat with the American Sixteenth, when he discovered that he was fighting his own friends. They had combated severely for several minutes before the fatal mistake was discovered. Meanwhile General Vincent, the British commander, had been thrown from his horse in the darkness; and being unable to find either his animal or his troops, had wandered off in the woods. His friends supposed him to be killed or a prisoner. The command devolved upon Colonel Harvey, who, finding it impossible to drive the Americans from their position, collected his scattered forces as quickly as possible, and while it was yet dark hastened back toward Burlington Heights with his notable prisoners. He sent Captain Merritt back to look for General Vincent. He was unsuccessful, but captured two Americans, and ^a June 6, 1813, took them into camp as trophies.³ During the ensuing day^b Vincent was found by his friends in the woods, four miles from the place of conflict, without hat or sword, and almost famished. His horse and accoutrements had fallen into the hands of the Americans.

In this confused and terrible night-battle the Americans lost seventeen men killed, thirty-eight wounded, and ninety-nine missing. The British lost twenty-three killed, one hundred wounded, and fifty-five missing. Notwithstanding the Americans held the ground, it was a substantial victory for the British, and the loss of the two generals a severe one for the former. Through the gallantry of Lieutenant M'Chesney one piece of artillery was immediately recovered, and the other the enemy was not able to take away for the want of horses.⁴ They were endeavoring to do so when they were overtaken by Lieutenant Macdonough, and the piece was seized by him.

The Americans, fearing a renewal of the attack, retreated so precipitately that they left their dead unburied. Under the command of Colonel Burn they fled to Forty-mile Creek, near which they were met by Colonel James Miller and four hundred men sent to re-enforce them. "I can assure you," Colonel Miller wrote to his wife, "I can scarce believe that you would have been more glad to see me than that army was."⁵ On the following day,^b in the afternoon, they were joined by Generals ^b June 7. Lewis and Boyd, with their staffs, and the little army encamped there, on a

¹ Christopher Van De Venter was a native of New York. He was appointed lieutenant in Scott's regiment of artillery in 1809. In 1812 he was assistant military agent at Fort Columbus, in New York Harbor. He was afterward deputy quarter-master, with the rank of major, and in that capacity served on the Niagara frontier. He was taken a prisoner to Quebec. At the close of the war he was retained in the service, and in 1816 was aid-de-camp to Brigadier General Joseph G. Swift. He resigned in August that year, and from 1817 until 1827 he was chief clerk in the War Department. He died at Georgetown, D. C., on the 22d of April, 1838.

² Colonel William Fraser (then a sergeant), who was living at Perth, back of Brockville, in Canada, in 1860, took both the generals prisoners. He advanced upon the artillery, he said, with forty-six men, but when they drew near it they had only twenty-five men. The American cannon in their front was loaded with all sorts of missiles. The priming flashed, and the gun was not discharged. They then rushed forward, shouting "Come on, Brant!" The cannon were taken. Plenderleath was wounded. Fraser was binding up his wounds, when Chandler and Winder fell into the snare and were captured.

A British Fleet in Sight.

Pursuit of the Americans.

The British at Sodus Bay.

plain, its right flank on the lake, and its left on a creek which skirts the base of a very steep but not lofty mountain.

At six o'clock that evening a British squadron under Sir James L. Yeo appeared in the distance. The Americans lay on their arms all night, and in the morning the hostile vessels were near. There was a dead calm. At six in the morning an armed schooner was towed in, and opened a fire upon the American boats in which most of their baggage and camp equipage was transported, which lay on the shore. Meanwhile the artillery companies under Archer and Towson had placed four cannon in defensive position, and Lieutenant Totten had constructed a temporary furnace for heating shot. The hostile vessel was soon driven off. At about the same time some savage allies of the British appeared on the bald brow of the mountain, and fired ineffectually into the camp, and intelligence came that the British were moving eastward from Burlington Heights. Sir James sent an officer, with a flag, to demand from General Lewis an immediate surrender of his force, reminding him that a British fleet was on his front, a savage foe in his rear, and an approaching British army on his flank. Lewis answered that the summons was too ridiculous to merit a serious reply. He had not lost a man in the whole affair of the morning. The schooner had been driven away, and he was prepared to send off the boats with baggage and camp equipage, accompanied by a guard of two hundred men under Colonel Miller. The boats started prematurely—before the troops were ready. They were chased by an armed schooner. A dozen of them were captured, and the remainder were run ashore and abandoned by the crews. At ten o'clock in the morning the whole army commenced a retrograde movement, the savages and local militia constantly hovering on their flank and rear. They reached Fort George after losing several prisoners captured by pursuers, and General Vincent came forward and occupied their camp at Forty-mile Creek. Lieutenant Colonel Bishopp, who was placed in command of the right division of the British force, pushed forward with detachments, and took positions which commanded the cross-roads from a little west of the present Port Dalhousie, on the lake shore, to the mountain passes at the Beaver Dams.¹

The British squadron in the mean time hovered along the lake coast, and interfered greatly with the supplies for the American camp. On the evening of the 12th^a * June, 1813. they captured two vessels laden with valuable hospital stores in the mouth of Eighteen-mile Creek, eastward of the Niagara River; and on Tuesday evening, the 15th, they made a descent upon the village of Charlotte, at the head of the navigation of the Genesee River, and carried off a large quantity of stores. Sailing eastward, they appeared off Sodus Bay on Friday, the 18th, and on the following evening a party of about one hundred, fully armed, landed at Sodus Point (now in Wayne County) for the purpose of destroying the American stores known to be deposited there. These had been removed to a place of concealment a little back of the village. The enemy were exasperated on finding the store-houses empty, and threatened to destroy the village if the place of the concealment of their contents should not be revealed. The women and children fled in alarm. A negro, compelled by threats, gave the enemy the desired information, and they were marching in the direction of the stores, when they were confronted at a bridge over a ravine by forty men under Captain Turner, of Lyons. A sharp skirmish ensued, in which each party lost two men.² Both parties fell back, and the foiled British, as they returned to their vessels,

¹ The chief authorities consulted are the official dispatches of commanders on both sides, and the several histories of the war already mentioned; Mansfield's Life of General Scott; autograph letters of Colonel James Miller; MS. statement of Captain William H. Merritt; Armstrong's Notices of the War of 1812; Niles's Weekly Register; The War, and oral statements of survivors.

An account of my visit to the battle-grounds of Stony Creek and the Beaver Dams will be given in the next chapter.

² Statement of Captain Luther Redfield, of Clyde, Wayne County, New York, in a letter to the author in February, 1860, when the old soldier was about eighty-six years of age. He says that in a log house a few rods north of the present Presbyterian church, in the village of Junius, public worship was held. The attack of the British at Sodus was on Saturday evening. The next day, just as the afternoon service was about to commence at the house above mentioned,

Destruction of Property at Sodus.

British Fleet off Oswego.

burned the public store-houses, five dwellings, and the old Williamson Hotel. They laid waste by fire property valued at about twenty-five thousand dollars.

^{June 20,}
^{1813.} From Sodus the British squadron sailed eastward, and appeared off Oswego,^a with a wish to enter the harbor and seize or destroy stores there; but Sir James, who was a cautious commander, did not venture in, and on the morning of the 21st his squadron turned westward, and for several days lay off the Niagara River.

a horseman came dashing up at full speed with the news of the British invasion. Redfield was a captain in the regiment of Colonel Philetus Swift. There were several non-commissioned officers in the church. These were sent to arouse the military of the neighborhood, and by five o'clock Captain Redfield was on the march with about one hundred men. They halted most of the night a few miles north of Lyons, and resumed their march by moonlight toward morning. They arrived at Sodus at a little after sunrise on Monday morning, when they met a funeral procession with the body of Turner's slain soldier. The British had gone, but the fleet was in sight. The company remained about a week at Sodus, and were then discharged.

CHAPTER XXVIII.

"To Sackett's Harbor Yeo steered, with Prevost's chosen blood-hounds,
But Brown his dogs of valor cheered, militia blood, but good hounds.
He chased them from the bloody track, and Yeo's bull-dogs slighting,
Though Chauncey was not there, he show'd Sir James the art of fighting,
Bow, wow, wow!
Fresh-water dogs can tutor them with bow, wow, wow!"

OLD SONG—A NEW BOW WOW.

WHEN the military and naval authorities at Kingston were informed of the weakening of the important post at Sackett's Harbor by the withdrawal of troops and vessels for the expedition against York, they resolved to attempt the capture of the place, or to destroy the new ship-of-war then on the stocks,¹ and other public property there. The capture of York made them circumspect, for the flushed victors might turn their faces toward Kingston; but when it was known that Dearborn and Chauncey were about to attack Fort George and its dependencies, it was resolved to assail Sackett's Harbor immediately. The prize was more attractive now than ever before. Besides being the principal place of deposit on the lake for military and naval stores, and a fine vessel was there nearly completed, all the property captured at York² was deposited there. The possession or destruction of these by the British would have given them the command of Lake Ontario, and a decided advantage during the whole campaign. With singular remissness of duty on the part of the commanding general, these had been left exposed. The guard detailed for their protection, under Colonel Barker, was utterly inadequate for the task. It consisted of parts of the First and Second Regiments of Dragoons, numbering about two hundred and fifty men, fifty or sixty artillerymen, and from eighty to one hundred infantry, composed chiefly of invalids, recruits, and fragments of companies left behind when the expedition sailed for York. The dragoons, dismounted, manned Fort Tompkins, a considerable work on the bluff, on the west side of the Harbor,³ and covering the site of the present residence and garden of the naval commandant of the station. The artillerymen, under Lieutenant Ketchum, were also there. A little north of the village, on the east side of the Harbor, opposite Fort Tompkins, was a small work, erected principally by the labor of a company of exempts, called Fort Volunteer. General Jacob Brown,⁴

¹ After the death of the gallant leader in the attack on York, this vessel was named *General Pike*.

² See page 591.

³ This consisted of a strong block-house and surrounding intrenchments, and occupied the place of the battery on which the iron thirty-two-pounder that drove off the British in 1812 was mounted. See page 368. The single cannon with which it was armed at the time we are now considering was the same iron thirty-two-pounder. The fort was named Tompkins in honor of Daniel D. Tompkins, then governor of the State of New York. The bluff on which it stood overlooks Navy Point, within which is the Harbor, where the ship-yard was. The place was named in honor of Augustus Sackett, the first settler. Its Indian name was a long one, and signified "fort at the mouth of Great River."

⁴ Jacob Brown was born of Quaker parents, in Bucks County, Pennsylvania, on the 9th of May, 1775. He was well educated early. When he was sixteen years of age his father lost his property, and the right-minded youth resolved to earn his own livelihood. He taught school in the Quaker settlement of Crosswicks, in New Jersey, from his eighteenth to his twenty-first birth-day. For a while he was a surveyor in the vicinity of Cincinnati, and in 1798 was a school-teacher in the city of New York. He commenced the study of law, but it was distasteful to him, and he abandoned it. He then purchased some land on the Black River, in Jefferson County, and adopted the pursuit of a farmer. In 1809 he was appointed colonel of a regiment of militia in that section, and on his estate a settlement was formed and named Brownsville. In 1811 the Governor of New York commissioned him a brigadier general of militia, and, as we have seen (see page 366), he was intrusted with important command. From that time until the close of the war General Brown's public career formed an important part of the history of the times, and the record may be found in these pages. He

Brown's Position.

Approach of the British.

Brown assumes Command at Sackett's Harbor.

Jac: Brown

of the New York Militia, who, having finished the six months' service for which he was called to the field at the beginning of the war, as we have seen, was residing at his home in Brownsville, on the Black River, a few miles from Sackett's Harbor, had been requested by General Dearborn, and urged by Colonel Macomb, to assume chief command in that region. He was unwilling to interfere with his esteemed friend, Colonel Backus, and agreed to take command only in the event of actual invasion. He went to head-quarters frequently to advise with Backus concerning preparations for defense, and it was understood between them that if the enemy should threaten the post, Brown was to call the neighboring militia to the Harbor and take chief command.

On the evening of the 27th of May, the *Lady of the Lake*, which had been cruising off Kingston to watch the movements of the enemy, came into Sackett's Harbor with the startling information that a strong British squadron, under Sir James L. Yeo,

had just put to sea. Colonel Backus sent an express to General Brown with the intelligence. That vigilant officer immediately dispatched messengers to the militia officers of his district with orders to hasten, with as many men as possible, to the Harbor. This accomplished, he mounted his horse, and before the dawn of the 28th he entered Backus's camp, took command, ordered alarm guns to be fired to arouse the country, and sent off expresses in various directions to militia officers, and to

was retained in the army at the close of the war, and was appointed to the command of the Northern Division. He became a general-in-chief of the armies of the United States in 1821, and held that office until his death, at his headquarters in the City of Washington, on the 24th of February, 1828, at the age of fifty-three years. His widow, yet (1867) living, resided, until recently, in the fine mansion erected at Brownsville by the general in 1814.

General Brown's remains were interred with imposing ceremonies in the Congressional Burial-ground, and over them stands a beautiful white marble monument, composed of a truncated fluted column and tableted base, on which are the following inscriptions:

East Side.—"Sacred to the memory of Major General Jacob Brown, by Birth, by Education, by Principle, devoted to Peace. In defense of his country, and in vindication of her rights, a Warrior. To her he dedicated his life—wounds received in her cause abridged his days."

South Side.—"He was born in Bucks County, Pennsylvania, on the 9th of May, 1775, and died at the City of Washington, commanding general of the army, on the 24th of February, 1828."

"Let him whoe'er in after days
Shall view this monument of praise,
For Honor heave the Patriot sigh,
And for his country learn to die."

West Side.—"In both by the thanks of the Nation and a golden medal from the hands of their chief magistrate—and by this marble erected to honor him, at the command of the Congress of the United States."

North Side.—"In War his services are attested by the fields of Chippewa, Niagara, Erie; in Peace by the improved organization and discipline of the army."

The monument stands very near that of General Macomb, his successor in the chief command of the armies of the United States.

GENERAL BROWN'S MONUMENT.

Assembling of the Militia.

The British Force approaches Sackett's Harbor.

AN ALARM.

Colonel Tuttle, who was advancing with regulars. During the day the people of the surrounding country continually arrived at head-quarters. Some were armed, and some were not, and all were entirely without discipline, and almost without organization. As fast as they appeared they were armed and sent to Horse Island, a mile distant, where Colonel Mills and about two hundred and fifty Albany Volunteers had been stationed for a week. The island (on which the light-house stands¹)

LIGHT-HOUSE ON HORSE ISLAND.

commands the entrance to the Harbor, and there it was believed the enemy would attempt to land. Then, as now, it was separated from the main by only a shallow strait, always forlable, and sometimes almost dry. Between it and the village was a thin wood that had been partly cut over, and was encumbered with logs, stumps, and brush. The main shore is a ridge of gravel, about five feet in height, and at that time formed a natural breast-work.

At midday on the 28th,^a the British squadron, which left Kingston on the evening of the 27th, appeared off Sackett's Harbor. It consisted of the *Wolfe*,¹⁸¹⁸ 24, just finished; *Royal George*, 24; *Earl of Moira*, 18; schooners *Prince Regent*, *Sineoe*, and *Seneca*, mounting from ten to twelve guns each, and about forty bateaux. The land troops, ten or twelve hundred strong, consisted of the grenadier company of the One Hundredth Regiment, two companies of the Eighth or King's, a section of the Royal Scots, four companies of the One Hundred and Fourth, one company of the Glengary Regiment, two of the Canadian Voltigeurs, a detachment of the Newfoundland Regiment, and another of the Royal Artillery, with two 6-pounders. There was also a considerable body of Indians attached to the expedition, and who accompanied it in canoes. Sir James Lucas Yeo commanded the squadron, and the whole expedition was under the direction of Sir George Prevost, the Governor General of Canada, who accompanied it as leader of the land forces. He was with Yeo on the *Wolfe*.

The British squadron lay to about six miles from the Harbor, and a large number of troops were embarked in boats for the purpose of landing. While anxiously waiting for the signal to pull for shore, the soldiers were perplexed by an order to return to the squadron. They were still more perplexed when that squadron, without apparent cause, spread its sails to the light breeze and turned toward Kingston. The secret was soon known. A flotilla of nineteen American gun-boats had been seen off

¹ This is a view of the light-house as it appeared when I visited the island in 1855. It stands upon the spot where the enemy landed, and the keeper at the time of my visit was Captain Samuel McNit, of whom I shall hereafter speak. The island contains about twenty-seven acres.

Six-towns Point, approaching from the westward, and Sir George Prevost did not doubt their being filled with armed men destined to re-enforce Sackett's Harbor. It was even so. They were conveying part of a regiment under Lieutenant Colonel Thomas Aspinwall from Oswego to the Harbor. The apparition had made Sir George nervous. The Indians were not so easily frightened as their pale-faced ally. They darted in their canoes toward the American flotilla. This movement shamed Sir George. He listened to the advice of Sir James, turned the prows of his vessels once more in the direction of Sackett's Harbor, and sent several boats with armed men to join the canoes. Aspinwall and his party, closely chased, made for the shore. Twelve of his boats and seventy of his men were captured. The other seven boats, more fleet than their companions or pursuers, reached the haven in safety. The escaped party on shore made their way thither by land. They arrived at nine o'clock in the evening, and added one hundred men to the effective force at Sackett's Harbor.

The night of the 28th^a was spent by the Americans in active preparations for the expected attack. Toward midnight, about forty Indians, under Lieutenant Anderson, were landed on the shore of Henderson Bay, for the purpose of attacking the American militia in the rear. They were discovered, and Colonel Mills and his force, about four hundred strong, were withdrawn from Horse Island and placed behind the gravel ridge, at a clearing of five or six acres on the main, with a 6-pounder field-piece. The remainder of the militia, under Colonel Gershom Tuttle, were posted on the edge of the woods, a little farther back; and Colonel Backus, with his dismounted dragoons, was stationed on the skirt of the same woods, nearer the village. Lieutenant Colonel Aspinwall was posted on the left of Backus, and the artillerymen, under Lieutenant Ketchum, were stationed in Fort Tompkins, whose only armament was a 32-pounder mounted on a pivot.

Not a zephyr rippled the waters of the Harbor on the morning of the 29th, and not a cloud flecked the sky. Calmness, serenity, and beauty were visible on every side. The sails of the enemy's squadron could not catch the slightest breeze, and it was impossible for the large vessels to approach near enough to join in the attack. At dawn, thirty-three boats, filled with armed men, left the British squadron and made for Horse Island, where they landed under cover of two gun-boats directed by Captain Mulcaster, of the royal navy. As the flotilla rounded the island, the huge pivot gun in Fort

W. A. 2 Mulcaster

Tompkins hurled murderous enfilading shots in their midst, and when they were near the shore they received a scattering fire from the muskets of the militia. This was promptly responded to by Mulcaster's great guns, loaded with grape and canister, and by his first fire Colonel Mills, who was standing near his men, was shot dead.

The British formed in good order on the island, and with the grenadiers of the One Hundredth at their head, commanded by Colonel Baynes, they pressed rapidly across the shallow strait. The rank and file of the American militia had suffered no material injury, but the sound of bullets among the bushes, and the din of the oncoming foe, struck the whole line with an extraordinary panic, and before they had time to give a second fire they rose from their cover behind the gravel bank and fled with precipitation, leaving their 6-pounder behind. The efforts of the gallant Major Herkimer to arrest their flight were vain.¹

This disgraceful retreat astonished and perplexed General Brown, who was on the

¹ It is said that one of the militia commanders, who had talked very valiantly and hopefully, became much discouraged as soon as he saw the enemy's boats approaching the shore. As they came forward in a swarm he became less and less hopeful, until at length he told his men that he doubted the ability of the American force to cope with the enemy. "I fear we shall be compelled to retreat," he said. After a pause he continued, "I know we shall, and as I am a little lame I'll start now," and away he went upon the road leading to Adams, as fast as his legs could carry him, just as Mulcaster's guns opened their fire. He was among the "missing" at the close of the battle.

Cowardly Flight of Militia.

Gallantry of Captain M'Nitt.

Destruction of Public Stores.

left of his little army. He expected the militia would have remained firm until the enemy were finally on the main. But their movement was so sudden, general, and rapid, that he found himself completely alone, not a man standing within several rods of him. Stung by this shameful conduct, he ran after the fugitives and endeavored to arrest their flight. His efforts were unavailing. Forgetful of their promises of courage, and unmindful of the orders they had received to rally in the woods in the event of their being driven back, they continued their flight until they were sure of being out of harm's way. Some of them were not heard of again during the day. Those under Colonel Tuttle were equally recreant to duty, and joined in the disgraceful flight, although they had not in any way been exposed to the enemy's fire. But there was an honorable exception. Captain Samuel M'Nitt, with unflinching courage, had maintained his position on the extreme left, and stood blazing away at the enemy after his companions had fled. Seeing the panic, he started in pursuit of the fugitives, and, with the aid of Lieutenant Mayo, succeeded in rallying almost one hundred of them behind some fallen timber. From that cover they annoyed the enemy exceedingly, who were then marching through the woods toward the town.¹ Meanwhile Colonel Backus and his regulars had advanced, and, with the Albany Volunteers, who had stood firm when the militia fled, and had retired slowly along a wagon-road by the margin of the lake before superior numbers, was disputing the march of the invaders inch by inch.

These demonstrations of courage revived the sinking hopes of the commanding general. In hastening from M'Nitt's gallant band to Backus's line, his affrighted horse had broken from him in the woods. Fortunately, he soon met a man on horseback, whose animal he seized and mounted, and then pushed forward to the extreme right. There he found Colonel Backus with his dismounted dragoons on the right, assisted by Major Lavall, the gallant Albany Volunteers on the left, and infantry and artillery in the centre, while the gun at Fort Tompkins was playing upon the advancing column of the foe. For an hour the conflict continued, and so great was the weight of the enemy that the American line was constantly pressed back. Lieutenant Fanning, in command at Fort Volunteer, perceiving no danger of an attack there, had led his little force forward and engaged gallantly in the fight. Still the foe bore heavily upon them, and when the Americans were most in want of encouragement a disheartening event occurred. Dense smoke arose in their rear, and it was soon ascertained that the store-houses on the margin of the Harbor, filled with the spoils of York and a vast amount of other valuable property, also the new ship *General Pike*, were in flames. Had a portion of the enemy landed in the rear and applied the torch? No. In the almost universal panic that prevailed when the militia fled, Lieutenant Wolcott Chauncey, of the Navy, who had the stores in charge, was informed that all was lost, and that the victorious enemy was rapidly marching upon the post. A train prepared for the emergency was lighted, and in a few minutes stores and ship were in flames. The friendly incendiary was soon named to General Brown, much to his relief, and he hastened to inform and reassure Colonel Backus. He arrived just in time to see that gallant officer fall, mortally wounded, and to wipe his pallid brow with his own hand.²

Pressed back, back, back, the wearied and worried Americans took refuge in some new log barracks in an open space near the town. The enemy made desperate efforts to dislodge them. Brown saw that all would be lost should they be driven from that

¹ Samuel M'Nitt was a Scotchman, and a brave and active man. He was for some time a member of Forsyth's corps, and, as such, saw much active service at the beginning of the war. He commanded a militia company at the time we are now considering. He was in Wilkinson's expedition that went down the St. Lawrence in the autumn of 1813, and was in command of a company of regulars in the battle at Chrysler's Field. He died on the 9th of September, 1861, at Depauville, in Jefferson County, at the age of about ninety years.

² Electus Backus was a native of New York. He was commissioned major of the First Light Dragoons in October, 1808, and in February following was promoted to lieutenant colonel. He died eight days after the battle (June 7, 1813), and was buried at Sackett's Harbor with military honors.

The Militia reassembled.

Prevost alarmed.

His disgraceful Retreat.

shelter, and he determined to rally the fugitive militia, if possible, who, he was informed, were on the outskirts of the village and on the roads leading from it, and with them feign a descent upon the enemy's boats. He sent out mounted dragoons instructed to proclaim a victory gained, knowing that in the supposed absence of danger most of them would return. The stratagem was successful. About three hundred of them were collected, though in great disorder, on the eastern side of the village, about three fourths of a mile from the place where the battle was still raging. There they were addressed by the commanding general, who loaded them with reproaches, and informed them that measures had been taken to shoot every man of them who should be found attempting to run again. Many of them, stung by the words of the general, begged to be led into the thickest of the fight, and almost two hundred of them formed under the direction of Westcott, a Sackett's Harbor butcher, and Caleb, a volunteer, and, while others went toward the British landing-place, they attacked a flanking party of the enemy under Captain Grey, the adjutant general, just as they were about to assail the log barracks. Grey was a gallant soldier. He was walking backward, waving his sword, and had just shouted "Come on, boys; remember York! The day is ours!" when a drummer-boy among the rallied militia cried out, "Perhaps not yet!" and shot him. Grey fell, and instantly expired.¹

This rallying of the fugitive militia and menacing of the enemy's boats decided the fortunes of the day in favor of the Americans. Sir George Prevost, sweeping the horizon with his glass from a high stump, perceived the militia on his flank and rear, and supposing them to be re-enforcements of regulars in large numbers, immediately sounded a retreat while the way to their boats was open.² It was commenced in good order, but soon became a disorderly flight. It was so precipitate that the fatigued Americans could not overtake them. They reached the squadron in safety, leaving a large portion of their dead and wounded behind.³ At about ten o'clock in the morning, Sir George, with cool impudence, sent a flag to demand the surrender of the post which he had failed to capture. The summons was treated with deserved contempt. He then asked permission to send surgeons to take care of his wounded. This was denied; but an assurance was given by General Brown that Americans were "distinguished for humanity as well as bravery."

It was believed that the enemy intended to renew the attack. His squadron continued at anchor, and his boats remained filled with soldiers for some time not far from Horse Island. At noon they returned to the squadron, and the whole flotilla sailed for Kingston. It entered that port on the morning of the 30th, to the great mortification of the inhabitants, who had expected to see the expedition return with

¹ Captain Grey was a son of General Grey, the commander of the corps in the massacre of a part of Wayne's detachment at Paoli, in Pennsylvania, in September, 1777. ² Oral statement of E. Camp, Esq., of Sackett's Harbor. ³ The British lost 60 killed and 211 wounded. The Americans lost 47 killed, 84 wounded, and 38 missing. Most of the latter were the cowardly militia, who were ashamed to show their faces again.

How public Property was saved.	Conceit and Inefficiency of Sir George Prevost.	A Sort of "Greek Fire."
--------------------------------	---	-------------------------

all the garrison at Sackett's Harbor and the public property there.¹ The whole affair, on the part of the British, was pronounced at the time, and has been by their own writers since, "in a high degree disgraceful."² The skill, courage, and energy of General Brown, under the most appalling difficulties, seconded by the like qualities in a part of the troops, made it a brilliant achievement for the Americans, and a subject for just praise of the commanding general.³

As soon as the battle was ended the efforts of the men were turned to the salvation of the public property from the flames. Because of the greenness of the timber of the *General Pike* she had burned but little, and was saved. The *Duke of Gloucester*, captured at York, also escaped destruction. She was saved by the gallantry of Lieutenant Talman, of the army, who, notwithstanding he knew there was a large quantity of gunpowder on board of her, hastened to her deck, extinguished the kindling flames, and brought her from under the fire that was consuming the store-houses. The *Fair American* and *Pert* had cut their cables and retreated up the Black River. Several of the guns on Navy Point were spiked. The value of the property destroyed by the fire was about half a million of dollars. The loss was severely felt, because the distance from Albany, from which most of these stores were drawn, was such that they could not be seasonably replaced.⁴

No further attempts were made by the enemy to capture Sackett's Harbor, and it remained, as it had been from the beginning, the most important place of deposit for the army and navy stores of the Americans on the Northern frontier. During the

SACKETT'S HARBOR IN 1814.⁵

¹ James's *Military Occurrences*, i., 173.

² The conduct of Sir George Prevost in this and other occurrences where he became military commander was severely criticised. Wilkinson, in his *Memoirs*, i., 535, declares that Sir James Yeo was averse to the retreat. He says he was informed that Major Drummond (afterward Lieutenant Colonel Drummond, killed at Fort Erie), when Sir George gave the order to retreat, stepped up to him and said, "Allow me a few minutes, sir, and I will put you in possession of the place." To this the haughty baronet replied, "Obey your orders, sir, and learn the first duty of a soldier." The contempt for Sir George on the part of the army, which his conduct on this occasion engendered, was much intensified by his ignominious retreat from Plattsburg the following year.

³ The authorities consulted in the preparation of this narrative are the official reports of the respective commanders; the several American histories of the war; Anchinleck, Christie, and James on the British side; Wilkinson's *Memoirs*; Cooper's *Naval History of the United States*; manuscript statement found among General Brown's papers, and narratives of survivors.

⁴ In a letter to the author in October, 1863, the late venerable Robert Carr, who was a lieutenant colonel on the Northern frontier, gave the following account of a sort of "Greek fire" that was exhibited at Sackett's Harbor at about the time of the events recorded in the text. "At Sackett's Harbor," says Colonel Carr, "in September, 1815, a person from New England called on General Brown to exhibit some preparation which he called *liquid fire*, or some such name. General Covington called at my tent and invited me to go with him to witness the trial to be made that morning; but as I was a member of a court-martial then sitting, I could not go with him. On his return he informed me that the affair was most astonishing. The liquid resembled ink, and he had it in two small porter-bottles, one of which he threw against a small hemlock-tree, which was instantly in a blaze from top to bottom. The other bottle he also broke against another tree with a similar result. He asserted that water would not extinguish it. General Covington remarked that it might be called '*hell fire*.'"

⁵ This view is from a print from a drawing by Birch, published in the *Port Folio* in 1815. On the left is seen *Pike's*

Sackett's Harbor, and Occurrences there.

Description of its Defenses.

summer and autumn of 1813 several expeditions were fitted out there, which we shall hereafter consider, and labor was vigorously applied by the troops stationed there in the autumn, and by the sailors in the winter, in strongly fortifying the post. Fort

PLAN OF SACKETT'S HARBOR AND ITS DEFENSES IN 1814.

Tompkins was strengthened, and several other works were constructed, and before the midsummer of 1814 the post seemed

to be secured against any force the enemy might bring to bear upon it.¹

cantonment, where were barracks erected by Major Darby Noon. See page 292. On the rocky bluff at the right is seen Fort Tompkins. Near Pike's cantonment is seen a block-house, on the site of Fort Volunteer, and immediately back of it, a circular building with battlemented top represents Fort Chauncey. The little figures near the small boat, toward the centre of the picture, are on Navy Point, where the ship-house now stands.

¹ Joseph Bouchette, one of the most eminent writers on the statistics of the Canadas, gave the following description of the place at the close of 1814: "A low point of land runs out from the northwest, upon which is the dock-yard, with large store-houses and all the requisite buildings belonging to such an establishment. Upon this point is a very powerful work, called Fort Tompkins, having within it a strong block-house two stories high; on the land side it is covered by a strong picketing, in which there are embrasures: twenty guns are mounted, besides two or three mortars, with a furnace for heating shot. At the bottom of the harbor is the village, that contains from sixty to seventy houses, and to the southward of it a barrack capable of accommodating two thousand men, and generally used for the marines belonging to the fleet. On a point eastward of the harbor stands Fort Pike, a regular work surrounded by a ditch, in advance of which there is a strong line of picketing. In the centre of the principal work there is a block-house two stories high. This fort is armed with twenty guns. About one hundred yards from the village, and a little to the westward of Fort Tompkins, is Smith's cantonment or barrack, strongly built of logs, forming a square, with a block-house at each corner. It is loop-holed on every side, and capable of making a powerful resistance. Twenty-five hundred men have been accommodated in it. A little farther westward another fort presents itself (Fort Kentucky), built of earth and strongly palisaded, having in the centre of it a block-house one story high. It mounts twenty-eight guns. Midway between these two works (a little farther inland) is a powder magazine, inclosed within a very strong picketing.

"By the side of the road that leads to Henderson Harbor stands Fort Virginia, a square work with bastions at its angles, covered with a strong line of palisades, but no ditch. It is armed with sixteen guns, and has a block-house in the middle of it. (See sketch on p. 617.) Fort Chauncey is a small circular tower, covered with plank, and loop-holed for the use of musketry, intended for a small-arm defense only. It is situated a small distance from the village, and commands the road that leads to Sandy Creek. In addition to these works of strength, there are several block-houses in different situations, that altogether render the place very secure, and capable of resisting a powerful attack; indeed, from recent events, the Americans have attached much importance to it, and, with their accustomed celerity, have spared no exertions to render it formidable."—Bouchette's *Canada*, page 626. To this account may be added the statement that, after the battle in May, 1813, a breastwork of logs was thrown up around the village from Horse Island to the site of Madison Barracks.

The above map, showing a plan of Sackett's Harbor and its defenses in 1814, as described by Bouchette, is from a manuscript drawing by Patrick May, a soldier who was stationed there for two years. The topography may not be pre-

A Visit to Sackett's Harbor.

Commodore Tattnall.

Historical Localities.

Henry Eckford.

I visited Sackett's Harbor in the summer of 1860. I rode up from Sandy Creek during a sultry morning, through the wealthy agricultural towns of Ellisburg and Henderson, after a heavy rain. Before noon the sky was almost cloudless, and I spent the afternoon in visiting places of interest around Sackett's Harbor. Commodore Josiah Tattnall, one of the most accomplished men in the navy, and then in command of the naval station at the Harbor, accompanied me. I found him an exceedingly courteous man, of medium size in stature, and in the sixty-fourth year of his age. He had been commander of the East India squadron for some time, having the *Powhatan* for his flag-ship, in which he brought over the seas the Japanese ambassadors in the spring of 1860. Having been for several years in arduous service, the government had kindly ordered him to the Sackett's Harbor station to enjoy a season of rest. There he deserted the flag of his country, under which he had been cherished for almost half a century. He resigned his commission, joined the traitors in the slave-labor states who were then in open rebellion against his government, and became commander-in-chief of the "Confederate Navy."¹

Yet I can not forget the commodore's kindness. He accompanied me to the ship-house on Navy Point, in which is the *New Orleans*, just as she was left in her unfinished state at the end of the war in 1815. He also went with me to the site of Fort Pike, to Madison Barracks and the burial-ground, and to visit the widow of Captain William Vaughan, whose exploits have already been mentioned in these pages.² Mrs. Vaughan (a small, delicate woman) occupied the Sackett mansion, which was her residence in 1812. At the time now under consideration, Colonels Backus and Mills boarded with her there. The house was near the site of Fort Tompkins. It was a substantial frame building, with a fine portico, and was embowered in shrubbery and trees.

The *New Orleans* was to have been a huge vessel, made to cope with the *St. Lawrence*, a three-deck man-of-war of 120 guns, which the British launched at Kingston in the autumn of 1813. Henry Eckford³ was the constructor, and Henry Eagle, late of Oswego, was foreman of the navy yard. Time was precious, and Eckford applied

cisely correct, but it gives a general idea of the pains taken, and the method adopted for making the post as secure from capture as possible. It shows the localities of the fortifications, and of the vessels in the harbor in the autumn of 1814.

¹ Josiah Tattnall was born at Bonaventure, four miles from Savannah, Georgia, in November, 1796. He is a grandson of Governor Tattnall. He entered the navy as a midshipman in 1812, and was commissioned a lieutenant in 1818. He was promoted to commander in February, 1838, and to captain in February, 1850. He first served in the frigate *Constellation*, and was in the affair at Craney Island in June, 1813. He was in the Algerine war under Decatur, was with Perry on the coast of Africa, and with Porter in his expedition against the pirates in the Gulf of Mexico. He was in command of the *Spitefire* in the bombardment of Vera Cruz in the war with Mexico, and in the attacks on Tuspan, Tampico, and Alvarado. He was in command of the East India squadron during the trouble with the Chinese in the summer of 1853, and in the spring of 1860 brought the Japanese ambassadors to this country. He resigned his commission in 1861, and accepted one from the "government" of the so-called "Confederate States of America." He was in command of the vessels of the rebels at Norfolk when the *Merrimack* was destroyed, and in 1863 was in command of the "mosquito fleet" at Savannah, Georgia. His services were soon afterward dispensed with, and he sunk into obscurity. ² See page 368.

³ Henry Eckford was born in Scotland on the 12th of March, 1775, and at the age of sixteen became an apprentice to

his uncle, John Black, an eminent naval constructor at Quebec. In 1796 he commenced the business of ship-building in the city of New York, and soon rose to the head of his profession, and New York-built ships were most sought after. Eckford had become thoroughly identified with the interests and destiny of his adopted country when the war commenced in 1812, and he made large con-

tracts with the government for vessels on the Lakes. His achievements were wonderful, considering the theatre on which they were performed. At the close of the war, his accounts with the government, involving several millions of dollars, were promptly and honorably settled. Soon after that he constructed the *Robert Fulton*, a steam-ship of a thousand tons, to run between New York and New Orleans. He became naval constructor at the Brooklyn dock-yard of the government. His genius was too much hampered by government interference, and he soon left the position and engaged extensively in his profession. Orders came to him from foreign governments to construct war vessels. At the request of General Jackson he furnished a plan for a new organization of the navy. He had now amassed an ample fortune, and had set aside \$20,000 for the endowment of a professorship of Naval Architecture in Columbia College, when an unfortunate connection with an insurance company reduced him almost to penury. In 1831 Mr. Eckford built a sloop of war for the Sultan of Turkey, and he sailed in her to Constantinople. The sultan made him chief naval constructor of the empire. He died suddenly at Constantinople on the 12th of November, 1832, in the fifty-seventh year of his age.

The *New Orleans* Frigate.

Madison Barracks.

A neglected Monument.

to the work all the force that he could command. So vigorous were his efforts, that within twenty-seven days^a from the time when the axe was first laid to the timber in the surrounding forest for the great ship she was almost ready to be launched. She was to have been a three-decker, pierced for 110 guns, but capable of carrying 120 eighteens and forty-fours. Her frame was all completed, and planks nearly all on, when tidings of peace caused work upon her to cease. In the condition in which she was then left she has ever since remained. She was never launched. A spacious house was built over her, and so well has she been taken care of that her timbers remain perfectly sound. Her keel, according to a statement of Mr. Henry Metcalf, the ship-keeper, is 183 feet 7½ inches; breadth of beam, 56 feet; depth, 47 feet; length over all, 214 feet; tonnage, 3000. She was to draw 27 feet. Within the time above mentioned all the timbers for other purposes connected with the vessel were got out. The annexed sketch shows the

THE "NEW ORLEANS."

appearance of her bow as seen at the entrance to the ship-house. Near this building, on the south side, may be seen the sunken hulk of the *Jefferson*.

From the *New Orleans* we went up to *Madison Barracks*, on the high ground overlooking the village, the harbor, Black River Bay, and the wooded country beyond. These barracks are spacious stone buildings, covering three sides of a square, near the remains of Fort Pike. They were erected soon after the war, under the direction of Deputy Quarter-master General Thomas Tucker, at an expense of \$85,000. They have not been occupied by troops for a number of years.

We strolled into the burial-ground attached to the barracks, and visited the wooden monument erected to the memory of General Pike and others who gave their lives to their country during the war. That monument, utterly neglected, was rapidly crumbling into dust. I was there five years before,^b when it was more leaning than the Pisa tower, and fortunately made a sketch of it and copied the fading inscriptions upon it. Sergeant Gaines, who was then taking charge of the barracks, accompanied me, and assisted in deciphering the inscriptions. He had placed a copy of them, written on parchment, in a bottle, which was tightly sealed, and was then hanging under the urn, as the best way to preserve the precious records on the spot. When I was there in 1860 the urn and the bottle had disappeared, the panels were much decayed, and the inscriptions were illegible. The remains of the gallant dead were collected there during the administration of Colonel Hugh Brady, who commanded the post for ten years after the war; and the monument, which was about seven feet in height to the top of the urn,

^a July, 1805.

PIKE'S MONUMENT.

Forts Pike and Virginia.

An evening Ride to Watertown.

A Visit to the Widow of General Brown.

was erected by the officers of the garrison.¹ How long will our national government suffer just reproach for neglect in not erecting enduring monuments over the graves of these heroes?

On leaving the barracks we went out to the remains of Fort Pike, south of them, whose grassy mounds skirt the brow of the high bank. Within these were a magazine, a few cannon, and heaps of balls; and across the parade, the declining sun, shining brightly, was casting long shadows of the poplar-trees which were planted there when the fort was built in 1814. It was a beautiful spot, and we lingered as long as time would permit, when we returned to the village and went to the site of Fort Virginia, whose block-house,

REMAINS OF FORT PIKE.

made of heavy hewn timber, was yet standing in perfect preservation, and used as a barn. It was on the premises of Mrs. Tisdale, about twelve rods south from Washington Street.

We returned to the commodore's residence at five o'clock, and after tea I started in a light wagon for Watertown, on the Black River, about twelve miles distant, where I spent the Sabbath^a with the family of an old friend. On Monday morning he accompanied me to Brownsville, four miles distant, where I had the pleasure of spending a part of the forenoon at the elegant mansion of the widow of General Brown. There many mementos of that gallant officer were preserved. Among them was the portrait painted by John Wesley Jarvis, from which the engraving on page 608 was copied; also a monochrome drawn by Sully, of Philadelphia (now [1867] the oldest painter in the United States), for the medal voted to General Brown by the American Congress for his meritorious conduct on the Niagara frontier. That medal was also there. There too was his sword; also the elegantly written and well ornamented diploma which by vote of the Common Council of New York conferred upon him the "freedom of the city," and the gold box in which it was presented to him. Of the latter mementos of the gallant soldier I shall have occasion to write hereafter.

The mansion of General Brown, which he built in 1814-'15, is spacious and elegant. It is of blue limestone, and stands on the borders of the village of six or seven hundred inhabitants, in the midst of a lawn of about eight acres, ornamented with shrub-

^a August 22, 1860.

¹ The following were the inscriptions on the monument:

West Panel.—"In memory of Brigadier General Z. M. Pike, killed at York, U. C., 27th April, 1813. Captain Joseph Nicholson, 14th Infantry, *aid-de-camp* to General Pike, killed at York, U. C., 27th April, 1813."

North Panel.—"In memory of Brigadier General L. Covington, killed at Chrysler's Field, U. C., Nov. 11, 1813. Lieutenant Colonel E. Backus, 1st Dragoons, killed at Sackett's Harbor, 29th May, 1813."

East Panel.—"In memory of Colonel Tuttle, Lieutenant Colonel Dix, Major Johnson, Lieutenant Vandevanter."

South Panel.—"In memory of Lieutenant Colonel John Mills, Volunteer, killed at Sackett's Harbor, 29th May, 1813. Captain A. Spencer, 29th Infantry, killed at Lundy's Lane, 25th July, 1814."

General Pike was first buried near Fort Tompkins, not far from the ship-house. The remains of all were deposited in the cemetery of the barracks in 1819, when the monument was erected. Those of Colonel Mills were taken to Albany immediately after the battle.

BLOCK-HOUSE, SACKETT'S HARBOR.

bery and stately trees. The view of it here given is from the banks of a little stream that runs through a gentle swale along the skirt of the lawn.

MANSION OF GENERAL BROWN.

On our return to Watertown we rode along the margin of the Black River, where it sweeps in swift current through the village after leaping the precipice at the falls, and halted at the entrance to a cavern which extends to an unknown distance under

WHITTLESEY ROCK, WATERTOWN.

the town. In front of it, projecting into the stream like a huge buttress, is a mass of limestone known as the Whittlesey Rock, it being the place where the guilty wife of a man of that name jumped into the stream and perished over fifty years ago. Her husband was a lawyer from Connecticut, and settled in Watertown in 1809. Toward the close of the war he was appointed brigade paymaster, and in the performance of his duties went to the city of New York for funds, accompanied by his wife. He received thirty thousand dollars. On the way back she robbed him of several thousand dollars; and he was induced by the machina-

tions of his wife—a woman of education, but thoroughly depraved, who worked upon his fears—to report himself robbed of all, in order to secure the money for themselves. This was done on an occasion when he went out on a tour to pay off the drafted militia. He offered two thousand dollars reward for the robber, and made

A Confession extorted. Suicide of the guilty Party. Captain Hollins. Movements on the Niagara Frontier.

other demonstrations of honesty. But he was not believed by many; and his securities, Fairbanks and Keyes, of Watertown, were so well convinced of foul play, that they decoyed him into a lonely place^a not far from the village, and extorted from him a confession, and the assertion that a larger portion of the money might be found with his wife. One of the sureties and two or three others proceeded to the residence of Whittlesey, which stood near the bank of the river, forcibly entered the house, and there, between beds and quilted in a garment, most of the money was found. Whittlesey was taken to his home, and husband and wife, bitterly criminating each other, were placed under a guard. Unperceived by these, in a moment of confusion Mrs. Whittlesey glided from the house, crossed the present cemetery of Trinity Church to the river, and plunged in. Her body was found floating near the lower bridge. Public opinion fastened all the guilt upon the wretched wife. Whittlesey went into a Western state, where he led a correct life, and held the offices of justice of the peace and county judge. Mr. Fairbanks, one of the actors in the affair, is yet (1867) living at Watertown, and from his lips, on our return to the village, I received an account of the tragedy.¹

At the Woodruff House, in Watertown, I met Captain Hollins, of the navy, a stout, thick-set man, sixty-one years of age. He was a midshipman in our navy toward the close of the War of 1812, and in the course of long years rose to the rank of captain. He, too, deserted his flag in the hour of his country's peril, went South, and, during the Great Rebellion, played traitor with all the vigor his abilities would allow.² His accomplished wife, who was with him in Watertown, was a daughter of the patriotic Colonel Sterett, of Baltimore, and, true to her family instincts, tried, it is said, to persuade her husband to stand by his flag. She was in Poughkeepsie, New York, when he arrived at Boston from a cruise in the *Massachusetts* in May or June, 1861, and hastened to him to prevent his apprehended purpose. She failed, and he fell.

I left Watertown on Monday evening for Cape Vincent, for the purpose of visiting places of historic interest on the St. Lawrence. Concerning my visit to Carleton Island, French Creek, and other places near the Thousand Islands, I shall hereafter write. Let us now return to the Niagara frontier, and consider the hostile movements there soon after the battles at Sackett's Harbor, Fort George, and Stony Creek.

We left the Americans, under General Dearborn, at Fort George, and the enemy's advance, at the same time, occupied a strong position at the Beaver Dams, among the hills, and at Ten-mile Creek (now Homer village, three miles eastward of St. Catharine's), nearer the lake shore. At the former place, De Cou's house, a strong stone building, was made a sort of citadel by the enemy, where supplies were collected from the surrounding country, especially from those of the inhabitants who favored the American cause. The character and position of the place had been ascertained by a scout of mounted riflemen under Major Cyrenius Chapin, of the New York Volunteers, who was under Towson in the capture of the *Caledonia* at Fort Erie the preceding autumn.³ It was an important post, and General Dearborn determined to attempt its capture. For that purpose he detached five hundred and seventy men, including Chapin's corps, some artillerymen, and two field-pieces, under Lieutenant Col-

¹ A minute account of this affair, with a portrait of Mr. Fairbanks, may be found in Hough's *History of Jefferson County*, page 263.

² George N. Hollins was born in Baltimore, Maryland, on the 20th of September, 1790. He entered the navy as midshipman in February, 1814, on the sloop-of-war *Baltimore*, Captain Ridgely. He was a volunteer, under Barney, in the battle of Bladensburg. He was also an aid of Commodore Rodgers during the attack on Baltimore, and carried messages to Fort M'Henry. He was in the battle between the *President* and *Endymion*, off Sandy Hook, in January, 1815, when he was taken prisoner and carried to Bermuda. He is supposed to be the last survivor of the men of the *President*. He was with Decatur in the Mediterranean. His exploit in the attack on Greytown, Nicaragua, is fresh in memory, and not productive of pleasant reflections on the part of American citizens. Hollins seems not to have been highly prized by the leaders in the Rebellion, and is almost unknown to honorable fame among them.

³ See page 386. He was very efficient as lieutenant colonel commanding in skirmishes near Fort George in October following. He died in Buffalo in February, 1838.

Chas G Børstler

onel Charles G. Børstler, of the Fourteenth Infantry.¹ They left Fort George on the

evening of the 23d of June, marched up the Niagara River to Queenston, and then halted for the night. Early the next morning they proceeded toward St. David's, four miles west of Queenston, and when near it several British officers were seen to leave houses, mount their horses, and ride off westward in haste. They fired alarm guns and sounded a bugle, by which means the several cantonments of the enemy were aroused.

The Americans moved steadily forward until they reached the "Ten Road," a little eastward of the present village of Thorold, and at an old German church² commenced the ascent of the "Mountain" (as the Canadians call the gentle eminences that extend from the Niagara to Hamilton and beyond), through a forest of pine and beech trees, to the more level country on the summit, where they halted for some time. On resuming their march and proceeding about a mile, they saw Indians in a cleared field (Hoover's) and open woods running toward a more dense forest of beech-trees that skirted each side of the road, near the present toll-gate, close by the residence of the Rev. Dr. R. H. Fuller, rural dean. Chapin was immediately ordered forward with his mounted men, who were kept considerably in advance of the main body.

GERMAN CHURCH.

These had passed the beech woods, and a greater portion of the others had also gone by, when a body of Mohawk and Caughnawaga Indians, four hundred and fifty in number, under Captain John Brant and Captain William John Kerr³ (who afterward became his brother-in-law), who had been lying in ambush, fell upon Børstler's rear, where about twenty light dragoons were posted. Børstler immediately recalled Chapin, formed his troops, charged upon the half-concealed foe, and drove them almost a mile. The Indians might have been entirely routed had Børstler followed up the advantage gained. He hesitated. The Indians rallied, and hung upon his flank and rear, keeping up a most galling fire at every exposed situation. The Americans pressed onward, over the Beaver Dam Creek, fighting the wily foe to immense disadvantage, and made conscious that they were almost, if not altogether surrounded by them. For about three hours this annoying contest was kept up. Børstler's cannon had been posted on a rise of ground at the turn in the road near the residence of Mr. Schriener at the time of my visit, and the Indians fell slowly back before the American bayonets.

At length Børstler determined to retire and abandon the object of the expedition.

¹ Charles G. Børstler was a native of Maryland, and was commissioned lieutenant colonel of the Fourteenth Infantry in March, 1812. He was active, as we have seen (page 428), in affairs at Black Rock toward the close of that year. Three days before his unfortunate expedition to the Beaver Dams he was promoted to colonel of the Fourteenth. At the close of the war he was disbanded.

² This is a view of the oldest building erected for the worship of God in that section of Canada remaining at the time of my visit. It was a little more than half a mile from the village of Thorold. The German refugees from the Mohawk Valley at the close of the Revolution built it. It was formed of logs, and was about twenty-five feet square. It stood in the midst of a burial-ground.

³ Captain Kerr was a grandson of Sir William Johnson, by Molly Brant, sister of the great Mohawk chief, and was one quarter Mohawk. He married Elizabeth, the beautiful and accomplished youngest child of Brant.

British Troops saved by a Heroine.

Mrs. Secord's Services and Reward.

Børstler and his Command captured.

While moving off he encountered a small body of militia, under Lieutenant Colonel Thomas Clark, in the Beech Woods. They had hastened to the field from all quarters. Børstler halted, and sent a courier to Dearborn for re-enforcements. Very soon after-

ward Lieutenant James Fitzgibbon, who was in command at De Cou's, appeared with forty or fifty men of the British Forty-ninth.¹ He had been warned of the expedition of Børstler, and the danger to his post and command, by Mrs. Laura Secord, then a resident of Queenston, and now (1867) dwelling at Chippewa, who had been privately informed of the plans of General Dearborn. Resolving to reveal them to her endangered friends, she made a circuit of nineteen miles on foot, and gave the information which led to the Indian ambush and the check of Børstler's march.² Fitzgibbon displayed his men, and, perceiving much confusion in the American ranks, conceived the plan of boldly demanding their surrender in the name of Major De Haven, the commandant of the district. Fitzgibbon himself approached with a flag. He falsely assured Børstler that his party was the advance of fifteen hundred British troops and seven hundred Indians, then approaching under Lieutenant Colonel Biss-

Laura Secord

¹ A blacksmith in Smoky Hollow, two miles north from St. Catharine's, named Yonon, piloted Fitzgibbon from De Cou's to the Beaver Dams.

² Mrs. Secord was then, as now, a woman of light and delicate frame, and her patriotic journey was performed on a very hot summer's day. She is now (1867) living at the Canadian village of Chippewa, on the Niagara River, at the age of ninety-two years, her mental faculties in full play, and her eyesight sufficiently retained to see to read without spectacles. She is the widow of James Secord, Esq., who commanded a company of militia in the battle at Queenston in 1812, and was severely wounded there. In a letter to me, written on the 18th of February, 1861, Mrs. Secord has given the following interesting account of her exploit here mentioned: "After going to St. David's, and the recovery of Mr. Secord, we returned again to Queenston, where my courage again was much tried. It was then I gained the secret plan laid to capture Captain Fitzgibbon and his party. It was determined, if possible, to save them. I had much difficulty in getting through the American guards. They were ten miles out in the country. When I came to a field belonging to a Mr. De Cou, in the neighborhood of the Beaver Dams, I then had walked nineteen miles. By that time daylight had left me. I yet had a swift stream of water to cross over an old fallen tree (Twelve-mile Creek), and to climb a high hill, which fatigued me very much.

"Before I arrived at the encampment of the Indians, as I approached they all arose with one of their war-yells, which indeed awed me. You may imagine what my feelings were to behold so many savages. With forced courage I went to one of the chiefs, told him I had great news for his commander, and that he must take me to him, or they would be all lost. He did not understand me, but said, 'Woman! what does woman want here?' The scene by moonlight to some might have been grand, but to a weak woman certainly terrifying. With difficulty I got one of the chiefs to go with me to their commander. With the intelligence I gave him he formed his plans and saved his country. I have ever found the brave and noble Colonel Fitzgibbon a friend to me; may he prosper in the world to come as he has done in this.

"LAURA SECORD.

³ Chippewa, U. C., February 18, 1861."

Lieutenant Fitzgibbon was promoted to the rank of captain in the British army, and is now (1867) a Peer Knight of Windsor Castle. He gave Mrs. Secord a certificate setting forth the facts above recorded. It is signed "James Fitzgibbon, formerly Lieutenant in the Forty-ninth Regiment." That certificate is printed in the *Anglo-American Magazine*, and on page 115 of Auchincloss's *History of the War of 1812*, published in Toronto in 1855.

When the Prince of Wales was making a tour in Canada in 1860, the veteran soldiers of 1812 on the Niagara frontier went to Niagara to sign an address to his royal highness. Mrs. Secord applied for permission to place her name on the list. "Wherefore?" was the natural question. She told her story, and it was agreed that she was one of the most eminently deserving of honor among the patriots of that war. The story was repeated to the prince on his arrival at Queenston, and it made such an impression on his memory and kind heart, especially when it was said that the brave and patriotic woman was not "rich in this world's goods," that, soon after his return home, he caused the sum of one hundred pounds sterling to be presented to her. The likeness above given is from a daguerreotype kindly sent to me from Mrs. Secord by the hand of Mr. J. P. Merritt, of St. Catharine's.

The Terms of Surrender violated by the Indians. A bold Stroke for Liberty. Fort George invested by the British.

opp, and that the savages were becoming so exasperated that it would be difficult to keep them from massacring the Americans. Børstler believed, and was alarmed. He agreed to surrender on the conditions that the officers should retain their arms, horses, and baggage, and that the militia and volunteers, with Colonel Børstler (who was slightly wounded), should be permitted to return to the United States on parole.¹ By the time the capitulation was agreed to in final form, De Haven, who had been sent for by Fitzgibbon, came up with two hundred men and received the submission of the captives. The number of prisoners surrendered was five hundred and forty-two, and the spoils of victory were one 12-pounder, one 6-pounder, and a stand of colors.

The surrender was scarcely completed when the articles of the capitulation were violated. The Indians immediately commenced plundering the prisoners of their arms and clothing, and the militia and volunteers, instead of being released on parole, were taken to Burlington Heights and kept there as prisoners of war. Some of them escaped through the adroit management of Major Chapin, who was soon sent, with a number of his volunteers, in two bateaux, in charge of Captain Showers and a guard, to Kingston, there to be held as prisoners. When within twelve miles of York they arose and overpowered the guard, crossed the lake in the night, and arrived safely at Fort Niagara with their jailers as prisoners.²

When Børstler's courier reached Dearborn, that commander sent Colonel Christie with three hundred men to re-enforce him. They pushed forward rapidly to Queenston, where they heard of the surrender of the Americans. Christie hastened back to camp with the sad intelligence. It caused alarm there that was speedily justified by events. The British advanced upon Queenston, and, occupying that place and vicinity, soon invested the Americans at Fort George with a formidable force. General Vincent, with a small force, held Burlington Heights, and General De Rottenburg was encamped with a strong body at Ten-mile Creek. Dearborn, whose career as chief had been singularly unsuccessful, was soon superseded by a more incompetent and less trustworthy man, General Wilkinson,³ whose movements on the Northern frontier present a series of blunders and disasters.⁴

¹ This capitulation, in four brief articles, the substance of which is given in the text, was signed on the part of Colonel Børstler by Captain Andrew M'Dowell, and on that of Lieutenant Colonel Bishopp by Major P. V. De Haven. Captain Merritt, in his MS. Narrative, says that Captain Norton, of the Indian force, humorously declared that the Caughnawagas fought the battle, the Mohawks got the plunder, and Fitzgibbon got the credit. "The greater part of the Caughnawagas," says Merritt, "were displeased, and returned home in a few days afterward, which at this time was a very great loss."

² Major Chapin, in his *Review of Armstrong's Notices of the War of 1812*, page 16, says that he was placed in one boat with a principal part of the guard, and Captain Sackrider and a greater portion of the prisoners in the other boat. Orders had been given for the boats to keep some rods apart, one ahead of the other. After they had passed out of Burlington Bay upon the open lake, Chapin made a signal to Sackrider in the hinder boat, which the Americans were rowing, to come up closer. He gave the word in whispers to the men, and while the major was amusing the British captain with a story, the hinder boat came up under the stern of the forward one. It was ordered back, when Chapin, with loud voice, ordered his men not to fall back an inch. Captain Showers attempted to draw his sword, and some of his men thrust at Chapin with bayonets. The latter prostrated the captain with a blow. He fell in the bottom of the boat, and two of his men who were thrusting at Chapin fell upon him. The latter immediately stepped upon them. The guard in both boats were speedily overcome and secured. "I succeeded to the command of our fleet of two bateaux," says Chapin, "with no little alacrity. We shifted our course, crossed Lake Ontario, and with the boats and prisoners arrived the next morning safe at Fort Niagara."

³ Congress was in session when this "climax of continual tidings of mismanagement and misfortune" reached Washington. The late Charles J. Ingersoll, one of the historians of the war, was then a member of the House of Representatives. The intelligence produced great irritation. "On the 6th of July, 1813, therefore," says Ingersoll, "after a short accidental communion of regret and impatience in the lobby of the House of Representatives with the Speaker and General Ringgold, of Maryland, I was deputed a volunteer to wait on the President, and request General Dearborn's removal from a command which, so far, had been so unfortunate." The recall of General Dearborn immediately followed this request, and on the 15th of July that officer, who had performed noble service in the Continental army, took leave of that on the Niagara frontier, at Fort George, pursuant to an order from the Secretary of War that he should "retire from command until his health should be re-established." "The Northern army," says Ingersoll, "relieved of a veteran leader whose age and health disqualified him for active and enterprising services, in his successor, General Wilkinson, did not get a younger, healthier, or more competent commander."—*Historical Sketch of the Second War*, etc., i., 288.

⁴ The authorities consulted in the preparation of the foregoing narrative are the official dispatches; statements of officers; the Histories of Thompson, Perkins, Conner, Brackenridge, Ingersoll, James, Christie, Auchincloss; Stone's *Life of Brant*; Chapin's *Review of Armstrong*; Merritt's MS. narrative; personal narratives of survivors, etc.

It was in sultry August, 1860, that I visited the scenes of Børstler's march and disaster, and places in the vicinity. I have already mentioned my trip from Queenston to St. Catharine's, and so on to Hamilton, Paris, Brantford, and the Indian settlements on the Grand River in Canada.¹ It was at that time that I stopped at St. Catharine's for the purpose of seeing the Honorable William Hamilton Merritt, the brave British cavalry officer already mentioned, and of visiting places of interest near. I arrived there on Saturday evening, and at a boarding-house where I procured lodgings I had the pleasure of meeting the family of a once valued acquaintance in Virginia, who were seeking health from the use of the powerful mineral waters that flow up copiously there from the deep recesses of the earth.² Little did I think that within a few months the accomplished head of that family, whom I had learned to esteem most highly, would be seduced from his allegiance to the flag of his country, under which he had served with fidelity and distinction for five-and-thirty years, and become the general-in-chief of armies in rebellion against the government of the Republic! He held the narrow view of American citizenship, engendered by the doctrine of supreme state sovereignty, expressed in the words "I go with my state," and followed the terrible fortunes of his native Virginia when her political charlatans—her selfish trading politicians—declared her secession from the Union, and brought ruin on her people.

I was unfortunate in not finding Mr. Merritt at home. As a member of the Canadian Parliament, he had gone to Quebec to receive the Prince of Wales. To his son, Mr. J. P. Merritt, I am indebted for many kind courtesies while there. He gave me free access to his father's military papers, and kindly lent me the MS. Narrative of Events in the campaigns on the Canadian Peninsula already referred to.

Early on Monday morning,³ after a night made memorable by a fearful thunder-storm, I started for the Beaver Dams, accompanied by Mr. Merritt. On the way I sketched the ancient German church delineated on page 620; and early in the forenoon we reached the house of the Reverend Dr. Fuller by the famous Beech Woods where Børstler was first attacked. From the roof of his dwelling we obtained a fine view of the Beaver Dams' battle-ground and the theatre of Børstler's misfortunes, and from that elevation made the sketch seen at the top of the picture on the following page. On the right is seen the Beech Wood, and through the centre Beaver Dams' Creek. On the left is seen the turn of the road where Børstler's cannon were planted, and a little to the right of it is the stone house of Mr. Shriner, whose orchard, adjoining it, was the place where Børstler surrendered to De Haven. The two-story house on the right of the picture is De Cou's, and the cascade on the left is a view of De Cou's Falls, in Twelve-mile Creek.

From Dr. Fuller's we rode on through Beaver Dam village to De Cou's, passing on the way the smoking ruins of a barn which had been fired by lightning during the night. The famous house was of stone, two stories in height, spacious, with ornamental shrubbery around it. It was in an elevated, fertile, and beautiful region. After sketching the building we passed on to the lake slopes of the hills, and, following a farm-road a little distance, came to De Cou's Falls, where the Twelve-mile Creek pours over a ledge of rocks, semicircular in form, into a wild ravine, in a perpendicular cascade of sixty feet. The sides of the ravine are very precipitous, and covered chiefly with evergreens. With much difficulty and some danger, I made my

¹ See page 420.

² The city of St. Catharine's, on the Twelve-mile Creek, the Welland Canal, and the Great Western Railway, was known as "Chipman's" during the war. It is between twelve and thirteen miles west from the Niagara River. It is a port of entry (Port Dalhousie is at the mouth of the creek), is beautifully situated, and threatens to rival Hamilton. Its mineral springs are very noted for their healing properties, and St. Catharine's has become a place of great resort for invalids and fashionable people. It is a very desirable place for those who love a quiet watering-place for a few weeks in summer. The population is about seven thousand.

August 20,
1860.

BATTLE-GROUND.

way to its wild depths, and obtained a favorable position for a sketch of the Falls, on the crown of which, shaded by cedars and hemlocks, were the remains of an old mill. A fourth of a mile below was another fall of thirty feet, where the ravine deepens and darkens, for the whole declivity down which the stream pours toward the plain is covered with a dense forest.

DE COU'S STONE HOUSE.

We made our way along a most picturesque road among the hills to the fertile rolling plain below, and stopped at the little log cottage of Captain James Dittrick, a bachelor of seventy-five, and a veteran of the War of 1812.

James Dittrick

He was commander of the Fourth Lincoln company, and was in the battles at Queenston, Fort George, and Niagara, or Lundy's Lane, and was active on the frontier and over the peninsula during the whole of the war. He arrived at the Beaver Dams a few minutes after the surrender of Bærstler, and participated in the joy of the occasion. Captain Dittrick was a bald-headed, heavy man, very pleasant and communicative—ready to "fight his battles o'er again" by his hearthstone. Our visit was made too short for our pleasure and profit by the rumbling of thunder. We rode on to St. Catharine's, where we arrived in time to escape a drenching shower. I dined with Mr. Merritt and his father's family, and had

the pleasure of meeting at the table the widow of the eminent Jesse Hawley, who was a distinguished citizen of Western New York, to whom Governor De Witt Clinton (autograph letter now before me) gave the credit of being the chief projector of that great work of internal improvement, the Erie Canal. He published a series of

DE COU'S FALLS.

Visit to Hamilton and Stony Creek.

A Refugee from the Wyoming Valley.

Departure for Brantford.

able letters over the signature of "Hercules," whose wise suggestions led to the construction of that mighty work which immortalized the name of Clinton, and added millions to the wealth of New York.¹

I left St. Catharine's toward evening for the beautiful city of Hamilton, at the head of the lake. The railway passes through a most charming country lying between the "Mountain" or ancient shore of Ontario and the lake. This mountain approaches the lake within three fourths of a mile at Hamilton, and then, turning more southward, assists in forming the deep valley in which Dundas lies nestled. I passed the night at the Royal Hotel in Hamilton, and at six o'clock the next morning started in a light wagon for Stony Creek, seven miles eastward, over a fine stone road. I was directed to Colonel Daniel Lewis for information concerning the battle and its localities. His residence was a little northward of the village, but he was absent. From Mr. Heales, residing there, I obtained all needful knowledge respecting the place of the encampment and the combat. After making the sketch on page 603, I returned to the village, made my way half a mile southward of it, and took a hasty glance at the pouring down of Stony Creek from the "Mountain" in a perpendicular fall of one hundred and thirty feet into a deep, narrow gorge. Wishing to depart from Hamilton for Paris at twelve o'clock, I did not linger long at the falls. On my way back I stopped at the house of Mr. Michael Aikman to obtain some information concerning the place of the British encampment on Burlington Heights. He too was absent, but I spent a most interesting half hour with his mother, Mrs. Hannah Aikman, a small, delicate woman, then ninety-one years of age. She was the daughter of Michael Showers, a Tory refugee from the Wyoming Valley. She and her family were in Wintermoot's Fort, and her father was one of Butler's Rangers. After the battle there they were compelled to fly. They went up the Susquehanna, and across the country by way of the Genesee, intending to go to Niagara by the lake in a small boat which they took with them. It was so injured that it could not be used. The father walked to Fort Niagara for relief, and for a week his family subsisted on roots which they dug from the soil. They were timely relieved by some Mississagua Indians. Her father was one of the settlers with Butler's Rangers on the Canadian peninsula, and for almost seventy years she had lived at her then place of abode.² When I told her of my visit to Wintermoot's house, and described it as she remembered it, and spoke of the Wintermoots, the Burnets, the Hallenbecks, the Dorrances, and others whom she knew, her eyes brightened, and she said it seemed as if one of her old neighbors had come to see her.

I reached Hamilton³ just in time to take the cars for the West, and, as I have already mentioned, arrived at Brantford, on the Grand River, that evening. Of my visit to the Indian settlements in that vicinity I have elsewhere written.⁴

¹ It is proper to say here that the project of a canal to connect the waters of Lake Erie with those of the Hudson River was contemplated by General Philip Schuyler, Elkanah Watson, and Christopher Colles, many of years before Mr. Hawley wrote his convincing letters.

² I have before mentioned in this work that, after the Revolution, Butler's Rangers and other refugees from the United States settled on the Canadian peninsula. Each one of Butler's Rangers, almost five hundred in number, was presented with a thousand acres of land in this then wilderness, and that district, of which there were four in the province, was called Nassau. Governor Haldimand, a German, named the four districts respectively, beginning at the Detroit, Hesse, Nassau, Mecklenburg, and Lunenburg. Haldimand was a great friend of the Canadians; but Simcoe, desirous of making the province as English as possible, and denoting native nationality, gave British names to almost every place. In this spirit he changed the name of Toronto to York, in honor of a victory by the Duke of York on the Continent.

³ Hamilton was laid out in 1813, and is situated on the southwestern extremity of Burlington Bay. It is the chief city of West Canada, having a population of about 24,000. Burlington Heights are composed of an immense deposit of gravel, sand, and loam. The village of Burlington was the germ of the city of Hamilton, and stood on its site. The Great Western Railway passes along the shore of the bay, at the foot of the heights, and crosses the Des Jardins Canal, which is cut directly through the great hill north of the cemetery and the residence of the late Sir Allan M^cNab. The present railway bridge over the canal is of iron, and seventy feet above the water. The first one was of wood. It gave way, with a train of cars upon it, in March, 1867, when fifty-six persons were killed. In the cemetery may be seen the remains of General Vincent's fortified camp. They form a ridge across the grounds (which comprise about twenty-seven acres), running east and west. The palatial residence of the late Sir Allan M^cNab is called Dundurn Castle. It is built of limestone, fronts southeast, overlooking the bay and Hamilton, and is surrounded by about forty acres of land.

⁴ See pages from 420 to 425, inclusive.

General Boyd, being the senior officer on the Niagara frontier, became temporary commander-in-chief there after the departure of General Dearborn. He found his position an important and arduous one. The success of the British at the Beaver Dams made them bold, and they were gradually closing upon the Americans at Fort George and Newark. Frequent picket skirmishing occurred, and bold raids into the American territory were performed. One of these occurred on the night of the 4th of

July.¹ A party composed of Canadian militia and Indians, and led by Lieutenant Colonel Thomas Clark, crossed the Niagara from Chippewa to Schlosser, captured the guard there, seized a large quantity of provisions, one brass 6-pounder cannon, several stands of arms, and some ammunition. With these spoils they returned in triumph to the Canada shore.

Four days later a sad tragedy was performed near the residences of John and Peter Ball,¹ about a mile and a half from Fort George. The gallant young leader, Merritt, then just twenty years of age, was sent with a small party to recover some medicines near Ball's which the British had concealed when they fled from Fort George in May. A body of one hundred and fifty savages, just arrived from the Western wilderness, under Captain M. Elliott, and led by the bloody Blackbird, of Chicago fame,² were employed as a covering party. Merritt was encamped, and while breakfasting at Ball's a skirmish with an American picket-guard took place not far off. Lieutenant Eldridge (then adjutant), with thirty-nine volunteers, went out to the relief of the guard, and a larger force, under Major Malcolm, prepared to follow. The impetuous Eldridge dashed forward into the thick wood, and fell into an ambush prepared for him by Blackbird and his followers. The foe was repulsed at first, but overwhelming numbers crushed Eldridge and his little party.³ Only five escaped. The prisoners and wounded were butchered and scalped by the Western savages, whose conduct on the occasion was marked by the most atrocious barbarity.⁴ This was so shocking and exasperating that General Boyd resolved to adopt Washington's plan of having "Indians fight Indians," and to accept the services of the Senecas and Tus-

¹ The Ball family still occupied this dwelling, I was informed, when I visited Niagara in 1860. They have, as a cherished relic, the military chapeau worn by the gallant Brock when he fell at Queenston.

² Joseph C. Eldridge was a native of New York. He entered the army as second lieutenant in the Thirteenth Regular Infantry in the spring of 1812. A year afterward he was promoted to first lieutenant, and appointed adjutant. He was distinguished for bravery at Stony Creek a month earlier, and was a young officer of great promise.

³ There are statements by American and British writers concerning this affair too widely differing to admit of reconciliation. Some of the American writers say that the force which fell upon Eldridge was composed of British and Indians, while British writers declare that no white man was present. The only statement that I have ever met from an eye-witness is that of the late Hon. William Hamilton Merritt in his MS. narrative, now before me, and from that I have drawn the facts up to the ambush. He says that he had no expectation of being in the fight, and that he and John Bell were the only two white persons engaged in it except a boy thirteen years old, whose father was a prisoner and dangerously wounded, and whose eldest brother was killed at Fort George. "This little fellow," says Merritt, "was determined to revenge the loss his family had sustained, and would not be persuaded to leave the field until his mother [Mrs. Law, whose house was on the ground] came out and took him away in her arms by force." An American officer, writing from Fort George the next day, said that two of the five survivors, and who were at first taken prisoners, stated that there were British soldiers in the ambush, painted as Indians, "with streaks of green and red around their eyes."

—*Niles's Register*, iv., 352.

Mr. Merritt says that his whole attention, after the fight, was given to the prisoners in the hands of Blackbird and his followers, and that his own life was threatened because he made intercession for those of the captives. "The poor devils," he says, "were crying and imploring me to save their lives, as I was the only white man they saw." He says that the Indians, after getting an interpreter, promised him that "the lives of the prisoners should be spared—would only frighten them a great deal, to prevent them coming again. I made a solemn vow," he continues, "if a prisoner was killed, never to go out with an Indian again." The savages violated their pledge, and butchered their prisoners with a barbarity too revolting to be repeated here. The American officer above alluded to says: "I break open this letter for the purpose of stating that the body (as is supposed) of Lieutenant Eldridge, the adjutant of the Thirteenth, has been brought in this moment, naked, mangled in the manner mentioned of the other." The excuse made for the murder of Eldridge was that, after he was made prisoner, he treacherously drew a concealed pistol and shot one of the chiefs through the head. This was Blackbird's reason for murdering *all*. Mr. Merritt speaks of Eldridge as "the officer who forfeited his life by firing at an Indian while a prisoner." He does not speak from his own knowledge. An investigation proved the assertion of the savage leader to be wholly untrue, and this crime (strange as it may appear) stands, uncondemned by British writers, one of pure barbarian cruelty.

The following least revolting recital is from a letter from an American officer to his friend in Baltimore, dated at Fort George, July 12: "A recital will make you shudder. I will merely mention the fate of a young officer who came under my notice, whose body was found, the day after the action, cut and mangled in the most shocking manner, his entrails torn from his body, and his heart stuffed in his mouth! We are resolved to show no quarter to the Indians after this."—*Niles's Weekly Register*, iv., 352.

Expedition against Black Rock.

General Porter hurries to its Defense.

Repulse of the British.

caroras, who had proffered them, under certain conditions which humanity would impose.

Clark's success at Schlosser suggested another and more important expedition. It was the surprise of the American naval station and deposit for stores and munitions of war at Black Rock, near Buffalo. It was organized by the gallant Lieutenant Colonel Cecil Bisshopp, of the British Forty-first. He left his head-quarters at Lundy's Lane on the afternoon of the 10th,^a with detachments from the Royal Artillery, and the Eighth, Forty-first, and Forty-ninth Regiments, and at Chippewa was joined by Lieutenant Colonel Clark, with a body of Lincoln militia and volunteers, making his whole force between three and four hundred in number. They embarked at Chippewa early in the evening, and at half an hour before dawn^b landed unperceived on the American shore, a short distance below Black Rock. The block-house there, called Fort Tompkins, was in charge of less than a dozen artillerymen; and the only other available military force at the station was about two hundred militia, under Major Adams, with two or three pieces of artillery. At Buffalo, two miles distant, were less than a hundred infantry and dragoon recruits from the South, on their way to Fort George, and a small body of Indians under Henry O'Bail, the young Corn-planter, who had been partially educated at Philadelphia, but who, Indian-like, could not brook the restraints of civilization, and had gone back to his blanket and feather head-dress. These forces were under the command of General Peter B. Porter, who was then residing at his house near Black Rock.¹

Bisshopp was accompanied by Colonel Warren. They surprised Major Adam's camp, and he and his alarmed militia fled precipitately to Buffalo, leaving the artillery unharmed on the ground. General Porter narrowly escaped capture in his own house. He made an unsuccessful attempt to reach Adam's camp when he learned of the flight of the militia and the garrison at the block-house. He followed on foot toward Buffalo, and on the way met Captain Cummings, with one hundred regulars, who, having heard of the invasion, was advancing toward Black Rock. In the mean time the enemy had fired the block-house and barracks, attacked the navy buildings and a schooner lying there, and the principal officers had gone to the house of General Porter, where they ordered breakfast. Their followers, and the re-enforcements continually coming over from the Canada shore, were employed meanwhile in plundering the inhabitants and public stores not destroyed by fire.

On meeting Captain Cummings, Porter ordered him to halt. Then, mounting the horse of one of the dragoons, he hastened to Buffalo, rallied about one half of Major Adam's militia, and, with these and about fifty volunteer citizens, he soon rejoined Cummings. With the united force and about forty Indians, he attacked the invaders, at eight o'clock, from three different points. The Indians, who were concealed in a ravine, arose from cover, and gave the appalling war-whoop at the moment of the attack, and added much to the surprise and confusion of the British, who did not expect the return of the Americans. After a short, spirited contest, the foe were beaten, and driven in confusion toward their boats, now moored near the present ferry, where they rallied. Porter now concentrated his own forces, and fell upon Bisshopp with so much power that, after a contest of not more than twenty minutes, he fled with precipitation to his boats, leaving nine killed and sixteen or eighteen prisoners, among whom was Captain Saunders, of Bisshopp's regiment, who was badly wounded.² He was carried gently by the Indians in blankets to General Porter's house.³ The Brit-

¹ See page 426.

² Stone's Life of Brant, page 242; Lieutenant Colonel Clarke's Official Report to Lieutenant Colonel Harvey, dated Chippewa, July 12, 1813. Mr. Stone says that, after he had written his account of the affair at Black Rock, he placed his manuscript in the hands of General Porter, who was then living. The general not only corrected it, but rewrote the whole narrative, the substance of which is given in the text.

³ The Indians, after taking from Captain Saunders his cap, epaulettes, sword, and belt, carried him gently to Porter's house. He was wounded by a rifle-ball passing through his chest and lungs, and another shattering his wrist. He re-

Death of Bishopp. His Monument. Expedition to Burlington Heights. Descent on York.

ish suffered a greater loss after they had reached their boats.¹ Among those mortally wounded was the commander of the expedition, a gallant young man, thirty years of age. He was conveyed in sadness to his head-quarters at Lundy's Lane, where, after lingering five days, he died. He was buried in the bosom of a green slope, in a small cemetery on the south side of Lundy's Lane, a short distance from

BISHOPP'S MONUMENT.

the great cataract of the Niagara, by his brother officers, who erected over his grave a neat monument. In the course of time it fell into decay, and thirty-three years afterward the sisters of the young soldier replaced it by another and more elegant one. Upon the recumbent slab that surmounts it is an appropriate inscription.²

During the remainder of the summer there were frequent skirmishes in the neighborhood of Fort George, caused by attacks upon American foraging parties, but no enterprise of much importance was undertaken excepting an attempt to capture the British stores at Burlington Heights, known to be in charge of a feeble guard under Major Maule. This was attempted toward the end of July. Colonel Winfield Scott had just been promoted to the command of a double regiment (twenty companies), and had resigned the office of adjutant general. He was eager for distinction and useful service, and he volunteered to lead any land force that might be sent to the head of Ontario. Chauncey was then making gallant cruises about the lake. He had twelve vessels, and felt strong enough to cope with any force that might appear under Sir James Yeo.

The expedition to Burlington Heights was under the chief command of Chauncey. He appeared at the mouth of the Niagara River with his fleet on the 27th of July, and on the following day he sailed for the head of Ontario, with three hundred land troops under Colonel Scott. Meanwhile Colonel Harvey had taken measures for the security of the British stores at Burlington. Lieutenant Colonel Battersby was ordered from York with a part of the Glengary corps to re-enforce the guard under Major Maule. By forced marches Battersby joined Maule before Chauncey's arrival. That officer and Scott soon perceived that their force was insufficient for the prescribed work. Convinced of this, and informed of the defenseless state of York on account of the withdrawal of Battersby's detachment, Chauncey spread his sails, went across the lake, and entered that harbor on the 31st. Colonel Scott landed his troops without opposition, took possession of the place, burnt the barracks, public storehouses and stores, and eleven transports, destroyed five pieces of cannon, and bore

maintained at Porter's, kindly treated and attended by his wife, who was sent for, for about three weeks, when he was sufficiently recovered to be sent to the rendezvous of prisoners at Williamsville.—*Stone's Life of Red Jacket*, page 246.

¹ The entire loss of the British during this expedition, in killed, wounded, and missing, must have been almost seventy. Some estimated it as high as one hundred. The loss of the Americans was three killed and five wounded. Two of the latter were Indians. The destruction of property was not so great as has been generally represented. The Americans did not lose, by destruction or plunder, more than one third of the valuable naval stores at Black Rock, collected for Commodore Perry, nor did they reach a particle of the military stores for the use of the army, then deposited at Buffalo. The enemy destroyed or captured 4 cannon, 177 English and French muskets, 1 three-pounder traveling carriage, 6 ammunition kegs, a small quantity of round and case shot, 123 barrels of salt, 46 barrels of whiskey, considerable clothing and blankets, and a small quantity of other stores.—*Clark's Official Report*.

² The following is a copy of the inscription:

"Sacred to the memory of Lieutenant Colonel the Honorable Cecil Bishopp, 1st Foot Guards, and inspecting field-officer in Upper Canada, eldest and only surviving son of Sir Cecil Bishopp, Bart., Baron de la Fouché, in England. After having served with distinction in the British army in Holland, Spain, and Portugal, he died on the 16th of July, 1813, aged 30, in consequence of wounds received in action with the enemy at Black Rock on the 11th of the same month, to the great grief of his family and friends, and is buried here.

"This tomb, erected at the time by his brother officers, becoming much dilapidated, is now (1846) renewed by his affectionate sisters, the Baroness de la Fouché and the Honorable Mrs. Rechell, in memory of an excellent man and beloved brother."

Lieutenant Colonel Bishopp received a severe, but not mortal wound while on shore, and four or five others after he entered his boat. The gallant Fitzgibbon took charge of him, and conveyed him as tenderly as possible from Chippewa to Lundy's Lane.

General Dearborn succeeded by General Wilkinson. Arrival of the Latter at Washington. Indian skirmishing.

away as spoils one heavy gun and a considerable quantity of provisions, chiefly of flour. The expedition returned to the Niagara on the 3d of August, carrying with them the sick and wounded of Bœrstler's command found in York. No military movements of much importance occurred on that frontier after this until late in the year.¹

Four days after the return to the Niagara, while Chauncey's fleet was lying at anchor in the mouth of the river, a British squadron under Sir James Yeo made its appearance. Chauncey went out to attack the baronet. They manœuvred all day, and after midnight, during a heavy squall, two of the American vessels were capsized and lost, with all on board excepting sixteen. This movement we shall consider hereafter, in giving a connected account of the naval operations on Lake Ontario during the year 1813.

We have noticed the retirement of General Dearborn from the command of the Northern Army. That measure had been decided upon by General Armstrong, the Secretary of War, full six months before it occurred. He considered the command of that army "a burden too heavy for General Dearborn to carry with advantage to the nation or credit to himself," and two remedies were suggested to the Secretary's mind—"the one a prompt and peremptory recall, the other such an augmentation of his staff as would secure to the army better instruction, and to himself the chance of wiser councils."² The former remedy was chosen, and General James Wilkinson, then in command in the Gulf region, and General Wade Hampton, stationed at Norfolk, in Virginia, were ordered to the Northern frontier. These men had been active officers in the old War for Independence, the first on the staff of General Gates, and the second as a partisan ranger in South Carolina in connection with Marion. Unfortunately for the good of the public service, they were now bitter enemies, and so jealous of each other that they would not co-operate, as we shall observe, at a critical moment.

It was early in March when the Secretary's orders were sent to Wilkinson, and with them was a private letter from the same hand, breathing the most friendly spirit, and saying, "Why should you remain in your land of *cypress* when patriotism and ambition equally invite you to one where grows the *laurel*? . . . If our cards be well played we may renew the scenes of Saratoga."³ Wilkinson was flattered, and as soon as he could make his arrangements he left the "land of the cypress," journeyed through the Creek country by way of Fort Mims to the capital of Georgia, and thence northward to Washington City, where he arrived, weary and worn with several hundreds of miles of travel, and weak with sickness, on the 31st of July. He was cordially received by Armstrong and the President, and, after being allowed to rest a few days, and becoming formally invested with the power of commander-in-chief of the Army of the North in place of Dearborn, a plan of the proposed operations of that army during the remainder of the campaign, which the Secretary had laid before the Cabinet on the 23d of July,^a was presented to him for consideration,^b with an expressed desire that if he should perceive any thing objectionable in the plan he would freely suggest modifications.

At the beginning of the campaign Armstrong was anxious to secure the control

¹ There were frequent picket skirmishes. Among the most conspicuous of these was one that occurred near Fort George on the 16th of August while the belligerents were near each other. It was the first, of any account, in which the Indians of Western New York engaged after their alliance with the Americans, which had been made with the explicit understanding that they were not to kill the enemy who were wounded or prisoners, or take scalps. The occasion referred to was an effort to capture a strong British picket. About three hundred volunteers and Indians under Major Chapin and General Peter B. Porter, and two hundred regulars under Major Cummings, were sent out by General Boyd for the purpose. The primary object was defeated by a heavy rain, but a severe skirmish ensued, in which the enemy was routed, and twelve British Indians and four white soldiers were captured. The principal chiefs who led the American Indians were Farmer's Brother, Red Jacket, Little Billy, Pollard, Blacksnake, Johnson, Silver Heels, Captain Half-town, Major Henry O'Bail (Cornplanter's son), and Captain Cold, chief of the Onondagas.—*Boyd's Dispatch*.

² *Notices of the War of 1812*, ii., 23.

³ Armstrong to Wilkinson, March 12, 1813. Armstrong and Wilkinson were both members of General Gates's military staff during the campaign which resulted in the capture of Burgoyne at Saratoga in the autumn of 1777.

of the St. Lawrence by the capture of Kingston, but circumstances, as we have seen,¹ prevented an attempt to do so. That project was now revived, and had received the approval of the Cabinet. It did not strike Wilkinson favorably, and on the 6th of August, in a written communication to the Secretary, the general freely suggested modifications, saying, "Will it not be better to strengthen our force already at Fort George, cut up the British in that quarter, destroy Indian establishments, and (should General Harrison fail in his object) march a detachment and capture Malden? After which, closing our operations on the peninsula, razing all works there, and leaving our settlements on the strait in tranquillity, descend like lightning with our whole force on Kingston, and, having reduced that place, and captured both garrison and shipping, go down the St. Lawrence and form a junction with Hampton's column,² if the lateness of the season should permit."³ The object of that junction was to make a combined attack on Montreal. The Secretary of War, always impatient when his opinions were disputed, at once conceived a dislike of his old companion in arms, whom he had invited so kindly to come North and win laurels, and from that time a widening estrangement existed. Long years afterward the Secretary wrote, "This strategic labor of the general had no tendency to increase the executive confidence in either his professional knowledge or judgment. Still the President hoped that if the opinions it contained were mildly rebuked, the general would abandon them, and, after joining the army, would hasten to execute the plan already communicated to him."⁴

Armstrong replied courteously to Wilkinson. He adhered to his own plan, but allowed that the fall of Kingston and the attainment of the control of the St. Lawrence might be as effectually accomplished indirectly by a quick movement down the river against Montreal, masked by a feigned attack on the former place. But he decidedly objected to any farther movements against the enemy on the Canadian peninsula, as they would but "wound the tail of the lion;"⁵ and Wilkinson departed for Sackett's Harbor^a without any definite plan of operations determined upon, while

^a August 11.
1813.

Armstrong sent instructions to General Boyd to keep within his lines at Fort George, and simply hold the enemy at bay, notwithstanding the American force was much larger than that of the British.

On his way to Sackett's Harbor Wilkinson sent from Albany his first orders to Hampton, as commander-in-chief of the Northern Army. This aroused the ire of the old aristocrat, whose landed possessions in South Carolina and Louisiana were almost princely, and whose slaves were numbered by thousands. His anger was intensified

^b August 23.

by his hatred of Wilkinson, and he immediately wrote to the Secretary of War,^b insisting that his was a separate command, and tendering his resignation in the event of his being compelled to act under Wilkinson. Wilkinson at the same time was distrustful of Armstrong, and evidently quite as jealous of his own rights, for on the 24th of August he wrote to the Secretary of War, saying, "I trust you will not interfere with my arrangements, or give orders within the district of my command, but to myself, because it would impair my authority and distract the public service. Two heads on the same shoulders make a monster." "Unhappily for the country," says Ingersoll, "that deplorable campaign was a monster with three heads, biting and barking at each other with a madness which destroyed them all and disgusted the country."⁶ This calamity we shall have occasion to consider hereafter.

^c August 20.

Wilkinson arrived at Sackett's Harbor late in August,^c and found himself nominally in command of between twelve and fourteen thousand troops, four thousand of them, under Hampton, at Burlington, composing the right wing, and the remainder equally divided between Sackett's Harbor, the centre, and

Wilkinson at Sackett's Harbor.

Affairs on the Niagara Frontier.

Scott marches for Sackett's Harbor.

Fort George, the left wing.¹ But his real effective force did not exceed nine thousand men. It had been a sickly summer on the frontier, especially on the Canadian peninsula, and the hospitals were full. The British force opposed to him amounted to about eight thousand. Their right was on Burlington Heights, their centre at Kings-ton, and their left at Montreal.

Wilkinson called a council of officers on the 28th.^a It was attended by ^{a August, 1813.} Generals Lewis, Brown, and Swartwout, and Commodore Chauncey. It was determined to concentrate at Sackett's Harbor all the troops of that department except those on Lake Champlain, preparatory to striking "a deadly blow somewhere."² Wilkinson accordingly hastened to Fort George, leaving Lewis in command at the Harbor, and arrived there on the 4th of September, extremely ill, after a fatiguing voyage the whole distance in an open boat. As soon as his strength would allow he assumed active command there, and on the 20th held a council of officers, at which Generals Boyd, Miller, and Williams, eleven colonels and lieutenant colonels, and ten majors, attended. It was resolved to abandon and destroy Fort George, and transfer the troops to the east end of Lake Ontario. But orders came from Washington to "put Fort George in a condition to resist assault; to leave there an efficient garrison of at least six hundred regular troops; to remove Captain Nathaniel Leonard, of the First Regiment of Artillery, from the command of Fort Niagara, and give it to Captain George Armistead, of the same regiment; to accept the services of a volunteer corps offered by General P. B. Porter and others, and to commit the command of Fort George and the Niagara frontier to Brigadier General Moses Porter."³ These instructions were but partially obeyed. Leonard was left in command of Fort Niagara; no arrangements were made for the acceptance of the volunteers; and Colonel Scott, instead of General Moses Porter, was placed in command of Fort George, with a garrison of about eight hundred regular troops, and a part of Colonel Philetus Swift's regiment of militia, instructed, in the anticipated event of the British abandoning that frontier, to leave the fort in command of Brigadier General M'Clure, of the New York Militia, and with his regulars join the expedition on the St. Lawrence. Having completed his arrangements, Wilkinson embarked with the Niagara army on Chauncey's fleet, and sailed eastward on the 2d of October.

Colonel Scott immediately set Captain Totten, of the Engineers, at work to strengthen the post over which, a few months before, he had unfurled the American flag for the first time. Much had been accomplished at the end of a week, when, suddenly, to the surprise of all, the British broke camp and hastened toward Burlington Heights. General Vincent had received intelligence of the defeat of Proctor on the Thames,⁴ and he instantly directed the concentration of all his forces at the head of the lake, to either meet Harrison, should he push in from the field of victory, or to renew the attempt to repossess themselves of the Niagara frontier. Proctor, with the small remnant of his vanquished army, joined Vincent on the 10th. This retrograde movement of the British was the contingency which Scott longed for, because he preferred active service down the St. Lawrence to garrison duty. He accordingly placed Fort George in command of General M'Clure, and crossed the river to the American shore with all the regulars on the 13th of October.^b He marched to the mouth of ^{b 1813.} the Genesee River, where he expected to find lake transportation for his troops. He was disappointed; and in drenching rain, and through deep mud, he pressed on with his little army by way of the sites of Rochester⁵ and Syracuse⁶ to Utica,⁷ where

⁴ See page 554.

⁵ The only dwelling then at the Falls of the Genesee, where the city of Rochester now stands, was the log house of Enos Stone, built in 1807. Now (1867) the population of Rochester is about 65,000.

⁶ Syracuse was then in embryo, in the form of a few huts of salt-boilers, and called by the village name, South Salina. It now (1867) contains a population of about 34,000.

⁷ Utica is on the site of old Fort Schuyler, a few miles eastward of the later Fort Schuyler, originally called Fort Stanwix, now Rome. It was then an incorporated post village, and considered the commercial capital of the great Western

Armstrong on the Frontier. The British threaten Fort George. It is abandoned. Newark burnt.

he struck the road that from there penetrated the Black River country.¹ There he met General Armstrong, who had left his post at Washington for the double purpose of reconciling the differences between Wilkinson and Hampton, and to superintend in person the movements of the St. Lawrence expedition. The Secretary permitted Scott to leave his troops in command of Major Hindman, and to push forward to Ogdensburg, where he joined Wilkinson, and took part in subsequent events of the expedition.

^a October 13, 1813. When Scott left Fort George^a it was believed that the British troops had been called from the west end of Lake Ontario to re-enforce the garrison at Kingston. Such order had been sent to Vincent by the timid Sir George Prevost when he heard of Proctor's disaster. On the receipt of it Vincent called a council of officers, when it was resolved to disobey it, and not only hold the peninsula, but endeavor to repossess every British post on the Niagara frontier. Meanwhile M'Clure was sending out foraging parties, who greatly alarmed and distressed the inhabitants. They appealed for protection to General Vincent, and he sent a detachment of about four hundred British troops under Colonel Murray, and about one hundred Indians under Captain M. Elliott, to drive the foragers back. The work was accomplished, and the Americans were very soon hemmed within their own lines by the foe, who took position at Twelve-mile Creek, now St. Catharine's.

While affairs were in this condition at Fort George General Harrison arrived there, as we have seen,² with the expectation of leading an expedition against Burlington Heights. But he was speedily ordered to embark, with all his troops, on Chauncey's squadron, for Sackett's Harbor. M'Clure was again alone^b with his volunteers and militia. The time of service of the latter was about to expire, and none could be induced to remain.³ Gloomy intelligence came from the St. Lawrence—Wilkinson's expedition had failed. Startling intelligence came from the westward—Lieutenant General Drummond, accompanied by Major General Riall, had lately arrived on the Peninsula, with re-enforcements from Kingston, and assumed chief command; and Murray, with his regulars and Indians, was moving toward Fort George. Its garrison was reduced to sixty effective regulars of the Twenty-fourth United States Infantry. These were in great peril, and M'Clure determined to abandon the post, and place his little garrison in Fort Niagara. The weather was extremely cold. Temperature had been faithful to the calendar, and winter had commenced in earnest on the 1st of December. Deep snow was upon the ground, and biting north winds came over the lake. "Shall I leave the foe comfortable quarters, and thus increase the danger to Fort Niagara?" he asked of the Spirit and Usage of War. They answered No, and with this decision, and under the sanction of an order from the itinerant War Department,⁴ he attempted to blow up the fort while his men were crossing^c the icy flood.⁵ Then he applied the brand to the beautiful village of Newark. One hundred and fifty houses were speedily laid in ashes.⁶ The inhabitants had been given only a few hours' warning; and,

District of New York. It was first called Old Fort Schuyler Village. At the time we are considering it had about 1700 inhabitants, and was a central point for all the principal avenues of communication. Its population now is about 25,000.

¹ The present Jefferson County was then known as the Black River country. ² See page 559.

³ "I offered a bounty of two dollars a month," says M'Clure, in the *Buffalo Gazette*, "for one or two months, but without effect. Some few of Colonel Bloom's regiment took the bounty, and immediately disappeared."

⁴ From Sackett's Harbor the Secretary of War wrote as follows:

"War Department, October 4, 1813.

"Sir,—Understanding that the defense of the post committed to your charge may render it proper to destroy the town of Newark, you are hereby directed to apprise the inhabitants of this circumstance, and invite them to remove themselves and their effects to some place of greater safety.

JOHN ARMSTRONG.

"Brigadier General M'Clure, or officer commanding at Fort George."

Behind this order General M'Clure took shelter when assailed by the public indignation.

⁵ Mr. E. Giddings, a printer, kept the ferry between the fort and Youngstown opposite at that time, and for many years succeeding the war he had charge of Fort Niagara. He narrowly escaped capture when the British took the fort in December, 1813.

⁶ Only one house was left standing. Mr. Merritt, in his Narrative, says: "Nothing but heaps of boats, and streets full of furniture that the inhabitants were fortunate enough to get out of their houses, met our eyes. My old quarters, Gordon's house, was the only one standing."

Sufferings of the Inhabitants.

Just Indignation of the British.

Fort Niagara surrendered.

with little food and clothing, a large number of helpless women and children were driven from their homes into the wintry air houseless wanderers.¹ Oh! it was a cruel act. War is always cruel, but this was more cruel than necessity demanded. It excited hot indignation and the spirit of vengeance, which soon caused the hand of retaliation to work fearfully. It provoked the commission of great injury to American property, and left a stain upon the American character.

Murray was at Twelve-mile Creek when he heard of the conflagration of Newark. He pressed on eagerly, hoping to surprise the garrison. He was a little too late, yet his swift approach had caused M'Clure to fly so precipitately that he failed to blow up the fort or destroy the barracks on the bank of the river; and he left behind tents sufficient to shelter fifteen hundred men. These, with several cannon, a large quantity of shot, and ten soldiers, fell into the hands of the British. That night the red cross of St. George floated over the fortress, and Murray's troops slumbered within its walls.

"Let us retaliate by fire and sword," said Murray to Drummond, as they gazed, with eyes flashing with indignation, upon the ruins of Newark. "Do so," said the commander, "swiftly and thoroughly;" and on the night of the 18th of December—a cold, black night—Murray crossed the river at Five-mile Meadows, three miles above Fort Niagara, with about a thousand men, British and Indians. With five hundred and fifty regulars he pressed on toward the fort, carrying axes, scaling-ladders, and other implements for assault, and shielded from observation by the thick cover of darkness. They captured the advanced pickets, secured silence, and, while the garrison were soundly sleeping, hovered around the fort in proper order for a systematic and simultaneous attack at different points. Five companies of the One Hundredth Regiment, under Lieutenant Colonel Hamilton, were to assail the main gate and escalade the adjacent works; three companies of the same regiment, under Captain Martin, were to storm the eastern demi-bastion; the Royal Scots Grenadiers, Captain Bailey, were to assault the salient angle of the fortification; and the flank companies of the Forty-first Regiment were ordered to support the principal attack.²

These preparations were unnecessary. Gross negligence or positive treachery had exposed the fort to easy capture. M'Clure had established his head-quarters at Buffalo, and when he left Niagara on the 12th,³ he charged Captain Leonard, ^{December, 1813.} commander of the garrison, to be vigilant and active, for invasion might be expected. This vigilance and activity the invaders had prepared for; but when, at about three o'clock in the morning, Hamilton went forward to assail the main gate, he found it standing wide open and unguarded! Leonard had left the fort the evening before at eleven o'clock, and spent the night with his family at his house three miles in the rear. He gave no hint to the garrison of expected assault, and his departure was without their knowledge.³ They were between three and four hundred strong in fairly effective men, and, with a competent and faithful commander, might have kept the invaders at bay. They had neither, and when the foe came there was no one to lead. The sentinels were seized, and in fear gave up the countersign to the foe, and the fort was entered without much resistance. The occupants of the south-eastern block-house, and the invalids of the Red Barracks, made such determined opposition for a few minutes that Lieutenant Nowlan and five men were killed, and Col-

¹ The unscrupulous James (il., 8) says: "General M'Clure gave about half an hour's notice to the inhabitants of Newark that he should burn down their village," and says very few believed him to be in earnest. General M'Clure, in a communication to the *Buffalo Gazette*, says: "The inhabitants had twelve hours' notice to remove their effects, and those who chose to come across the river were provided with all the necessaries of life."

² Colonel J. Murray's Report to Lieutenant General Drummond, December 19, 1813.

³ Captain Leonard was suspected of treason. It was stated by General M'Clure, six days after the capture of the fort, that he had given himself up to the enemy, "and that his family are now on the Canada side of the strait." It is known that he returned to the fort and became a prisoner. He was "disbanded," or dropped from the service not long afterward.

INTERIOR OF FORT NIAGARA.

onel Murray, three men, and a surgeon were wounded. This conflict was over before the remainder of the garrison were fairly awake to the cause of the tumult, and the fort was in possession of the foe. It might have been an almost bloodless victory had not the unhallowed spirit of revenge for the outrage at Newark demanded victims. Murray did not restrain that spirit, and a large number of the garrison, many of them invalids, were bayoneted after all resistance had ceased!¹ This horrid work was performed on Sunday morning, the 19th of December, 1813.

When Murray had gained full possession of the fort, he fired one of its largest cannon as a signal of success for the ear of General Riall, who, with a detachment of British regulars and about five hundred Indians, was waiting for it at Queenston. Riall immediately put his forces in motion, and at dawn crossed the Niagara to Lewiston, and took possession of the village without much opposition from Major Bennett and a detachment of militia who were stationed on Lewiston Heights at Fort Grey. At the same time a part of Murray's corps plundered and destroyed the little village of Youngstown (only six or eight houses), near Fort Niagara.

Full license was given by Riall to his Indian allies, and Lewiston was sacked, plundered, and destroyed—made a perfect desolation.² This accomplished, the invaders pushed on toward the little hamlet of Manchester (now Niagara Falls Village); but, when ascending Lewiston Heights, they were met and temporarily checked and driven back by the gallant Major Mallory, who, with forty Canadian volunteers, came down from Schlosser and fought the foe for two days as they pushed him steadily back toward Buffalo.³ He could do but little to stay the march of the desolator. The whole Niagara frontier on the American side, from Fort Niagara to Tonawanta Creek, a distance of thirty-six miles, and far into the interior, was swept with the be-

¹ The loss of the Americans was 80 killed—many of them hospital patients—14 wounded, and 344 made prisoners. Of the entire garrison only 20 escaped. The spoils consisted of 27 pieces of cannon, 2000 stand of arms and many rifles, an immense amount of ordnance and commissariat stores, and a large quantity of clothing and camp equipage of every description.

² A letter to the editor of *Niles's Weekly Register* from a gentleman on the frontier said: "They killed at and near Lewiston eight or ten of the inhabitants, who, when found, were all scalped with the exception of one, whose head was cut off. Among the bodies was that of a boy ten or twelve years old, stripped and scalped."

³ General M'Clure's Report to Governor Tompkins, dated at Buffalo, December 22, 1813.

som of destruction placed by British authority in the hands of savage pagans.¹ Manchester, Schlosser, and Tuscarora Village shared the fate of Youngstown and Lewiston.² Free course was given to the blood-thirsty Indians, and many innocent persons were butchered, and survivors were made to fly in terror through the deep snow to some forest shelter or remote cabin of a settler far beyond the invaders' track. Buffalo, too, would have been plundered and destroyed had not the progress of the foe been checked by the timely destruction of the bridge over the Tonewanta Creek.

But the respite for doomed Buffalo was short. Riall and his followers returned to Lewiston, crossed over to Queenston, and on the morning of the 28th appeared at Chippewa, under the command of Lieutenant General Drummond. In the mean time the alarm had spread over Western New York, and the inhabitants were thoroughly aroused. General M'Clure had sent out a stirring address³ to the "in-
December 18,
1813. habitants of Niagara, Genesee, and Chautauqua," urging them to repair immediately to Lewiston, Schlosser, and Buffalo.³ General Amos Hall, with his usual

alacrity, called out the militia and invited volunteers. His headquarters were at Batavia, where the government had an arsenal, thirty or forty miles eastward from Buffalo, and

E. A. Hall M. Genl

there General M'Clure resigned his command, and took orders from Hall. As fast as men were collected they were sent to Black Rock and Buffalo, and thitherward Hall hastened on the morning of the 25th. He reached Buffalo twenty-four hours after his departure from Batavia, and there found "a considerable body of irregular troops of various descriptions, disorganized and confused. Every thing wore the appearance of consternation and dismay."⁴ He ordered their immediate organization; and when, on the 27th, he reviewed the troops, he found their number to be a little more than two thousand at Buffalo and Black Rock.⁵

General Drummond advanced to a point nearly opposite Black Rock on the 29th, and reconnoitred the American camp. At midnight General Riall crossed with regulars, Canadians, and Indians, about a thousand strong, and landed where Bisshopp did, about two miles below Black Rock. Moving immediately forward, they encountered mounted pickets under Lieutenant Boughton, who, after a brief skirmish with the British vanguard, fled across Shogeoquady Creek.⁶ The enemy took possession of the "Sailors' Battery" there and the bridge, and then paused, while Boughton

¹ This was a hamlet. Augustus Porter, Esq., had valuable mills there. These were destroyed.

² A handbill printed at Montreal on the 28th of December, and cited by the *Plattsburg Republican* of January 1, 1814, contained an extract of a letter from "an officer of high rank" (Lieutenant General Drummond?) at Queenston, written on the 19th, in which the following passage occurs: "A war-whoop from five hundred of the most savage Indians (which they gave just at daylight, on hearing of the success of the attack on Fort Niagara) made the enemy take to their heels [at Lewiston], and our troops are in pursuit. We shall not stop until we have cleared the whole frontier. The Indians are retaliating the conflagration of Newark. *Not a house within my sight but is in flames.* This is a melancholy but just retaliation."

³ This address was issued on the day preceding the capture of Fort Niagara, M'Clure having been informed by his scouts of the preparations of the British to make a descent upon the American side of the Niagara.

⁴ Hall's Report to Governor Tompkins.

⁵ There were 129 mounted volunteers, under Lieutenant Colonel Boughton; 433 exempts and volunteers, under Lieutenant Colonel Blakelee, of Ontario; 136 Buffalo militia, under Colonel Chapin; 97 Canadian volunteers, under Major Mallory; 332 Genesee militia, under Major Adams. These were at Buffalo. At Black Rock were stationed 382 effective men, under Brigadier General Hopkins, composed of corps commanded by Lieutenant Colonels Warren and Churchill, exclusive of a body of 37 mounted infantry under Captain Ransom; 83 Indians, under Lieutenant Colonel Granger; 25 artillery, under Lieutenant Seely, with a 6-pounder; and about 300 Chautauqua Indians, under Lieutenant Colonel M'Mahon.—Hall's Report to Governor Tompkins, January 6, 1814.

⁶ See map on page 382.

* Major Benajah Mallory had been, in early youth, in the military service toward the close of the Revolutionary War. He had settled in Canada, but, with others, took sides with his own country, and became the commander of the famous partisan corps known as the "Canadian Refugees." He was in the severe battle at Niagara Falls, or Lundy's Lane, and assisted General Scott from the field after he was wounded. He resided many years in Lockport, New York, and when, in 1852, Scott stopped there on a journey, he recognized the veteran as one of his loved companions in arms.

hastened with news of the fact to General Hall's quarters, between Buffalo and Black Rock. The night was very dark. The troops at head-quarters were paraded, and Lieutenant Colonels Warren and Churchill (General Hopkins was absent from camp) were ordered to go forward with their corps and feel the position and strength of the enemy. They met the foe, and at the first fire they broke and fled, and were no more seen during the following day. Hall then ordered Adams and Chapin, with their commands, to the same duty, and the same result ensued; and at the dawn of the 30th he found himself in command of eight hundred troops less than at the evening twilight of the 29th. They had actually *deserted*.

Hall now advanced with his whole force, and ordered Lieutenant Colonel Blakeslee to move forward and commence the attack on the enemy's left. They marched toward Black Rock on the Hill Road, and in the dim light of early dawn saw a flotilla of British boats making for the shore near General Porter's mansion. These bore the Royal Scots, eight hundred in number, who landed under cover of a five-gun battery on the American shore, in the face of severe opposition. Their plan of attack was soon revealed to the American general, and he made his dispositions accordingly. Colonel Gordon, of the centre, with about four hundred Scots, commenced the attack, while the British left wing attempted to flank the American right. Hall quickly foiled this design by throwing Granger and his Indians, and Mallory and his Canadian Refugees, in the way of the enemy's advancing left wing. At the same time Blakeslee and his Ontario militia confronted the centre, and M'Mahon and his Chautauqua troops were posted as a reserve at the battery of Fort Tompkins,¹ which was commanded by the gallant Lieutenant John Seely.

The batteries on the Canada shore and the cannon of the Americans opened fire simultaneously and vigorously, while Blakeslee's men, cool as veterans, disputed the ground with the foe inch by inch. But the Indians and Canadians, lacking moral strength, gave way almost before a struggle was begun, and M'Mahon and his reserves were ordered to the breach. They, too, gave way and fled, and could not be rallied by their officers. Hall's power was thus completely broken, and he was placed in great peril. Deserted by a large portion of his troops, opposed by veterans, vastly outnumbered, and almost surrounded, he was compelled, for the safety of the remnant of his little army, to sound a retreat, after he had maintained the unequal conflict for half an hour. He tried to rally his troops, but in vain. The gallant Chapin, with a few of the bolder men, retired slowly along the present Niagara Street toward Buffalo, keeping the enemy partially in check,² while Hall, with the remainder, who were alarmed and scattered, retired to Eleven-mile Creek, where he rallied about three hundred men, who remained true to the old flag. With these he was enabled to cover the flight of the inhabitants, and to check the advance of the invaders into the interior.

The British and their Indian allies took possession of Buffalo,³ and proceeded to plunder, destroy, and slaughter. Only four buildings were left standing in the town. These were the jail (built of stone), the frame of a barn, Reese's blacksmith-shop, and the dwelling of Mrs. St. John, a resolute woman, who, more fortunate than her neigh-

¹ This battery, of three guns, was on the site of William Bird's house, and Fort Tompkins was on ground now occupied by the stables of the Niagara Street Railway Company. It had six pretty heavy guns, and was the largest work there.

² "Among these was Lieutenant John Seely, a carpenter and joiner, who lived on the corner of Auburn and Niagara Streets, and was lieutenant of a company of artillery at Black Rock. He had fought his pieces on the brow of the hill, on what is now Breckinridge Street, until he had but seven men and one horse left. Mounting the horse, which was harnessed to the gun, he brought it away with him, firing upon the enemy whenever occasion offered. Near where Mohawk Street joins Niagara was then a slough. Here Seely turned upon his foe. The gun was thrown off from its carriage by the discharge, but was quickly replaced, and taken to the village.—*Buffalo during the War of 1812*; a paper read before the Buffalo Historical Society, March 13, 1863, by WILLIAM DORNSEIMER, Esq.

³ The place was unofficially surrendered by Colonel Chapin to prevent farther bloodshed. He approached the British with a piece of his shirt as a flag of truce, and agreed to surrender on condition that private property should be respected. It was agreed to, and he and some other citizens became prisoners. When General Riall found that Chapin had no authority to surrender the city, he declared his own agreement void, and gave his marauders free play.

Destruction of Buffalo and Black Rock.

Murders by the Indians.

Horrors of retaliatory Warfare.

bor, Mrs. Lovejoy (who was murdered and burnt in her own house), saved her own life and her property.¹ At Black Rock only a single building escaped conflagration. It was a log house, in which women and children had taken refuge. The *Ariel*, *Little Belt*, *Chippewa*, and *Trippe*, vessels that performed service in the battle on Lake Erie a little more than a hundred days before, were committed to the flames. Fearful was the retaliation for the destruction of half-inhabited Newark, *where not a life was sacrificed!* Six villages, many isolated country houses, and four vessels were consumed; and the butchery of innocent persons at Fort Niagara, Lewiston, Schlosser, Tuscarora Village, Black Rock, and Buffalo, and in farm-houses, attested the fierceness of the enemy's revenge.²

¹ Mrs. St. John was a stout, resolute woman. I was informed by the venerable Dr. Trowbridge, of Buffalo, who was there at the time, that he went to the house of Mrs. St. John, begged her to leave because the Indians would kill her, offered her the use of his horse for the purpose, and assured her that he would take care of her children. She said, "I can't do it; here is all I have in the world, and I will stay and defend it." She did so, not by force but kindness of manner, and her life and property were spared. Mrs. Lovejoy was not so prudent. She, too, was resolute, but resisted the Indians by force when they came to the house. They killed and scalped her, and left her body, covered with the silk in which she was dressed, upon the floor. On the following day, when the savages came into the town again to complete their work of destruction, her house and corpse were consumed. The latter had been laid out across the cords of a bedstead by a neighbor. Her son, Henry Lovejoy (see note 2, page 357), now (1867) living in Buffalo, was then a lad twelve years of age, and was in the affair at Black Rock when Bishopp was repulsed, where he carried a flint-lock musket, too huge for his strength to bear it long. When the enemy approached at the time we are considering, this brave-hearted woman said to the boy, "Henry, you have fought against the British; you must run. They will take you prisoner. I am a woman; they'll not harm me." He fled to the woods. Her house stood on the site of the present Phoenix Hotel.

² In a letter of a gentleman to his wife in Albany, written on the 6th of January, 1814, from Le Roy, he says: "Numerous witnesses testify to the following facts: The Indians mangled and burned Mrs. Lovejoy in Buffalo; massacred two large families at Black Rock, namely, Mr. Luffer's and Mr. Lecori's; murdered Mr. Gardner; put all the sick to death at Youngstown, and killed, scalped, and mangled sixty at Fort Niagara after it was given up. Many dead bodies are yet lying unburied at Buffalo, mangled and scalped. Colonel Marvin counted thirty-three this morning. I met between Cayuga and this place upward of one hundred families in wagons, sleds, and sleighs, many of them with nothing but what they had on their backs; nor could they find places to stay at." The suffering of the fugitives was terrible.

The almost universal condemnation of General McClure for the destruction of Newark, and the manifold greater enormities committed in retaliation, caused Sir George Prevost to hasten before the world with an assurance that he should endeavor to stop that sort of warfare. He well knew that the judgment of mankind would pronounce farther prosecution of war on that plan to be atrocious, and, in a proclamation issued on the 12th of January, 1814, after justifying the retaliation thus far, said: "To those possessions of the enemy along the whole line of frontier which have hitherto remained undisturbed, and which are now at the mercy of the troops under his command, his Excellency has determined to extend the same forbearance, and the same freedom from rapine and plunder which they have hitherto experienced; and from this determination the future conduct of the American government shall alone induce him to depart."

Wilkinson concentrates his Forces.

The Secretary of War at Sackett's Harbor.

Colonel J. G. Swift

CHAPTER XXIX.

"For a nautical knight, a lady—heigh-ho!—
Felt her heart and her heart-strings to ache;
To view his dear person she looked to and fro.
The name of the knight was Sir James Lucas Yeo,
And the Lady—'twas she of the Lake."
OLD SONG—THE COURTEOUS KNIGHT, OR THE FLYING GALLANT.

GENERAL WILKINSON, as we have seen, arrived at Sackett's Harbor on the 20th of August, 1813, where he formally assumed command of the Northern Army, and, with the co-operation of a council of officers, formed a general plan of operations against the enemy at Kingston and down the St. Lawrence. His first care was to concentrate the forces of his command, which were scattered over an extensive and sparsely-settled country, some on the Niagara frontier, some at the eastern end of Lake Ontario

and on the St. Lawrence, and some on Lake Champlain. He accordingly directed those on the Niagara and at Sackett's Harbor to rendezvous on Grenadier Island, in the St. Lawrence, about eighteen miles from the Harbor, and at French Creek (now Clayton), about the same distance further down the river. Those composing the right wing, on Lake Champlain, were directed to move at the same time to the Can-

ada border, at "the mouth of the Chateaugay, or other point which would favor the junction of the forces and hold the enemy in check."

For the purpose of promoting harmony of action between Wilkinson and Hampton, as we have observed, and to add efficiency to projected movements, the Secretary of War, accompanied by the adjutant general, Colonel Walbach, established the seat of his department at Sackett's Harbor.^a He, and Wilkinson, and the late venerable General Joseph Gardner Swift (then chief engineer of the Northern Army, and bearing the commission of colonel¹) held consultations with Governor Tompkins at Albany, who, from the beginning, had employed his best energies for the promotion of the general good, and especially for the defense of his commonwealth against invasion.

Before considering Wilkinson's expedition, let us turn back a little, and take a

J. G. Swift

^a Joseph Gardner Swift was born in Nantucket on the last day of the year 1783. He entered the army as a cadet at Newport, Rhode Island, in 1800, and was the first graduate of the Military Academy at West Point. He became attached to a corps of United States Engineers, and in 1807, having attained the rank of captain, he was appointed commandant of West Point. He was military agent at Fort Johnson, South Carolina, early in 1812, and was soon afterward made an

General Dearborn moves into Canada.

glance at military and naval operations on Lake Champlain up to the autumn of 1813. We shall then better understand several aspects of that expedition.

When war was declared in June, 1812, zealous supporters of the national administration were governors of New York and Vermont,¹ between which lay important Lake Champlain. These magistrates, sustained by their respective Legislatures, seconded the administration in all its measures. The Legislature of Vermont prohibited all intercourse with Canada except with the permission of the governor, and they adopted measures for calling out the militia of the state when needed. New York was not a whit behind her sister of the Green Mountains in zeal and efficiency.

During the summer of 1812 Brigadier General Bloomfield was sent to the Cham-

Joseph Bloomfield
Brigadier General

plain frontier with several regiments, and on the 1st of September had collected about eight thousand men at Plattsburg—regulars, volunteers, and militia—besides some small advanced parties at Chazy and Champlain. General Dearborn arrived there soon afterward, and assumed direct command; and on the 16th of November he moved toward the Canada line with three thousand regulars and two thousand militia, and encamped upon the level ground near the present village of Rouse's Point. There he advanced across the line toward Odell Town, for what ultimate object no one knew, and on the banks of the La Colle, a tributary of the Sorel, he was confronted by a considerable force of voltigeurs, chasseurs, militia, and Indians, under Lieutenant Colonel De Salaberry, an active British commander.

On the morning of the 20th, just at dawn, Colonel Zebulon M. Pike, with about six hundred men, crossed the La Colle, and surrounded a block-house which had been occupied by a strong picket-guard of Canadians and Indians. These had fled during the previous evening. At about the same time a body of New York militia, who had been detached by another road, approached for the same purpose, and in the dim light of the early morning were mistaken by those at the block-house for enemies. Pike's men opened fire upon them, and for

A. de Salaberry

aid-de-camp to Major General C. C. Pinckney, of South Carolina, with the rank of lieutenant colonel. He succeeded Jonathan Williams as commander of the United States corps of Engineers, with the rank of colonel. For his valuable services on the St. Lawrence frontier in 1813 and 1814, and in defense of the city of New York, he was breveted brigadier general. He was connected with the Military Academy at West Point for several years after the war, and in 1818 he, with several officers of the corps, left the service because of the appointment of General Bernard, a French officer of distinction, to the control of important engineering services on the coast. For nine years General Swift was Surveyor of the port of New York, and from 1829 to 1845 he was superintendent of the harbor improvements on the Lakes. He was in charge of several important works as civil engineer, among which may be named the Baltimore and Susquehanna Railroad, the New Orleans and Lake Pontchartrain Railroad, and the Harlem Railroad. He went on a mission of peace, by order of President Harrison, to the British American Provinces in 1841, and in 1862 he made a tour in Europe. General Swift contributed many valuable papers to publications on scientific subjects. After 1830 he resided in Geneva, New York, spending his winters in Brooklyn, Long Island. I am indebted to him for many valuable letters relating to the subject of this work. He retained his mental faculties in great perfection until near the time of his death, which occurred at Geneva on the 23d of July, 1865.

nearly half an hour a sharp contest was sustained. When they discovered their mistake, they found De Salaberry approaching in force with a strong advance guard, when Lieutenant Ward,¹ of the Twenty-ninth New York Militia, with his company of fifty men, moved slowly upon the enemy, and, after receiving three discharges from them without returning a shot, gave the order to fire and charge. This was promptly obeyed, and the appalled foe, taken completely by surprise, were driven back to the main body. This gallant performance of the lieutenant elicited the highest praise from his superiors. But De Salaberry's force was too overwhelming to be successfully withstood. To the Americans a retreat was sounded, and they fled so precipitately that they left five of their number dead and five wounded on the field.² It was a fruitless expedition, and the army returned to

Robert Carr

¹ November 23, 1812. Plattsburg³ out of humor and depressed in spirits. Three of the regiments of regulars went into winter

¹ Lieutenant Aaron Ward received his commission on the 30th of April, 1813. He was promoted to captain a year later. At the close of the war he was charged with the conducting of the first detachment of British prisoners from the States to Canada. Law was his chosen profession, and in 1825 he became a law-maker by being elected a representative of his district in the State of New York in the National Congress. He was an active and efficient worker, and his constituents were so well satisfied with his services that he kept his seat twelve out of eighteen consecutive years. He assisted in framing the new Constitution of the State of New York in 1846, and after that he declined to engage in public life. He traveled extensively abroad in 1850, and afterward published a very interesting volume, entitled *Around the Pyramids*. For many years he was major general of the militia of Westchester County. He died early in 1867. His residence was at a beautiful spot overlooking the village of Sing Sing, and the Hudson and its scenery from the Highlands to Hoboken.

² MS. Journal of Colonel Robert Carr. *Christie's History of the War in the Canadas*, page 90. Robert Carr, whose journal is here cited, was born in Ireland on the 29th of January, 1775. He came to America at the age of six years, and settled, with his father, in Philadelphia. They lived next door to Dr. Franklin, and he was often employed by that great man as an errand-boy. He learned the art of printing with Benjamin Franklin Bache, a grandson of Dr. Franklin, with whom he commenced his apprenticeship in 1792. He rose to the head of his profession, and in 1804 received a first premium as the best printer in Philadelphia. He printed *Wilson's Ornithology* from manuscript; also *Rose's Cyclopaedia*. In March, 1812, he received the commission of major in the Sixteenth Regiment of Infantry, and in August, 1813, was promoted to Lieutenant Colonel of the Ninth, from which he was transferred to the Fifteenth. He was disbanded in 1815, and for several years he was the last surviving field-officer of the army of 1812 in Pennsylvania, New Jersey, or Delaware. He was a member of the *McPherson Blues* of Philadelphia, and one of the firing party on the occasion of the Congressional funeral of Washington in that city. See note 4, page 110.

Colonel Carr married a daughter of William Bartram, proprietor of the celebrated Botanical Gardens near Philadelphia, and in right of his wife, carried on the establishment from the year 1809 to 1850, a period of more than thirty years. From 1821 to 1824 he was adjutant general of the State of Pennsylvania; and, by order of the Legislature, he compiled a work on "Rules and Regulations for the Field Exercise." He was a long time an alderman and a justice of the peace in Philadelphia, and has ever been held in the highest esteem by his fellow-citizens. Deprived of his property in his old age by the vicissitudes of fortune, he was for some time gate-keeper at the Pennsylvania *Asylum for the Insane*, situated in a beautiful spot beyond the Schuylkill. There I visited him on a blustery afternoon late in November, 1861, when he was almost eighty-four years of age. He was in excellent health and spirits, and assured me that he had not been sick in more than sixty years. He had led a strictly temperate life, never having been intoxicated but once. It was when he was a boy, and was produced by eating rum-cherries. A month before I visited him he had been among the American camps in Virginia, near Arlington Heights, where he walked seventeen miles in one day, and attended a theatre in Washington the same evening. "I could have danced a cotillon after that," he said. He attended the celebration of Bradford's birth-day by the New York Historical Society in May, 1862, as a delegate from Philadelphia, and was then doubtless the oldest printer in the United States. On the 22d of February, 1864, Colonel Carr, then past eighty-six years of age, read Washington's Farewell Address before the veteran soldiers of the War of 1812, at the Union soldiers' celebration in Philadelphia. He never used spectacles, excepting when his photograph was taken, yet he wrote with grace and facility until the time of his death, which occurred in Philadelphia on the 15th of March, 1866. He kindly lent me his Diary, kept during the War of 1812. It is written in a fine hand, and contains much valuable matter. I shall ever remember with pleasure my interview with an errand-boy of Dr. Franklin, and one who had read *rueur*, as a printer, with President Washington when correcting his own compositions.

End of Dearborn's Canada Expedition. Preparations for War on Lake Champlain. Early Naval Operations there.

quarters at Plattsburg, and three others at Burlington, the former under the command of Colonel Pike, and the latter under Brigadier General Chandler. The light artillery and dragoons returned to Greenbush (opposite Albany), the head-quarters of General Dearborn, and the militia were disbanded.

There were no farther military movements on Lake Champlain of special importance until July, 1813. Naval preparations had been somewhat active under the superintendence of Lieutenant Thomas Macdonough, who, in the fall of 1812, superseded Lieutenant Sidney Smith in the command on Lake Champlain.¹ When war was declared the whole American naval force on the lake consisted of only two gun-boats that lay in Basin Harbor on the Vermont shore.² Two small sloops and four bateaux were fitted up and armed, each carrying a long eighteen-pounder. The British had two or three gun-boats and armed galleys in the Richelieu, or Sorel River, the outlet of Lake Champlain into the St. Lawrence.

In the spring of 1813 Macdonough put the new-armed sloops *Growler* and *Eagle* afloat, the former commanded by Lieutenant Smith and the latter by Mr. Loomis. At the beginning of June intelligence came that the British gun-boats had attacked some American small craft near Rouse's Point. Macdonough ordered Smith, with the *Growler* and *Eagle*, and one hundred and twelve men (including Captain Herrick and thirty-three volunteers), to look after the matter, and, on the evening of the 2d of June,^a these vessels anchored near Rouse's Point, within a mile of the Canada line. On the following morning they went down the Sorel with a stiff favoring breeze from the south, and at Arch Island gave chase to three British gun-boats. The pursuit continued to a point within sight of the fortifications on *Isle aux Noix*, where prudence caused Smith to tack and beat up the Sorel against the wind. When this movement was discovered by the British, three armed row-galleys were sent out from the shelter of the batteries on the island, and gave chase. They soon opened upon the flying sloops with long twenty-four pounders. At the same time a land force was sent out on each side of the river, who poured severe volleys of musketry upon the decks of the *Growler* and *Eagle*. These were answered by grape and canister. This running fight had been kept up for about four hours, when a heavy cannon-shot tore planking from the *Eagle* below water, and she went down almost immediately. At about the same time the *Growler* became disabled and ran ashore, and the people of both vessels were made prisoners. The Americans lost in the engagement one killed and nineteen wounded. The loss of the British was much greater—probably at least one hundred. But they gained a victory, and with it secured, for the time, the full control of the lake. The captured sloops were refitted by them, named respectively *Finch* and *Chubb*, and placed in the British naval service. Macdonough recaptured them at Plattsburg in September the following year.

Macdonough was not disheartened by his loss. It stimulated him to greater exertions, and by the 6th of August he had fitted out and armed three sloops and six gun-boats. Meanwhile a British force of soldiers, sailors, and marines, fourteen hundred strong, under Colonel J. Murray, conveyed in two sloops of war, three gun-boats, and forty-seven long boats, had fallen upon Plattsburg.^b That place was entirely uncovered, there being no regular troops on the west side of the lake. The enemy landed on Saturday afternoon without opposition, and began a work of destruction which lasted until ten o'clock the next day. Major General Hampton was at Burlington, only twenty miles distant, with almost four thousand men, yet he did not attempt to cross the lake, or in any way oppose the inroad of Murray. The latter officer shamefully violated the promises made to the civil authorities of Platts-

¹ Sidney Smith was fifth lieutenant under Commodore Barron in the *Chesapeake* at the time of her affair with the *Leopard*. In 1810 he was ordered to Lake Champlain, and remained in command there until the arrival of Macdonough, his senior in rank. He died a commander in the service in 1827.

² Basin Harbor is considered the best on Lake Champlain. It is near the southwest corner of Ferrisburg, Addison County, Vermont, and nearly opposite Westport on the New York side of the lake.

burg when he entered the village, that private property should be respected, and that non-combatants should remain unmolested. After destroying the block-house, arsenal, armory, and hospital in the town, and the military cantonment (known as Pike's) near Fredenburg Falls, on the Saranac, two miles above the village, he wantonly burned three private store-houses, and plundered and destroyed private merchandise, furniture, etc., to the amount of several thousand dollars. The value of public property destroyed was estimated at twenty-five thousand dollars.¹

Having accomplished the object of his raid, Colonel Murray retired so hastily that he left a picket of twenty men, who were captured. He went up the lake several miles above Burlington on a marauding expedition, destroying transportation boats, and on his way back to Canada he plundered private property on Cumberland Head, on the Vermont shore, and at Chazy Landing. Such was the condition of affairs on Lake Champlain at the close of the summer of 1813, when Wilkinson took command of the Army of the North, and prepared for his expedition down the St. Lawrence.

The right wing of the army, under General Hampton, was first put in motion, when it was thought that Kingston would be the first point of attack. He was ordered to penetrate Canada toward Montreal by way of the Richelieu or Sorel, to divert the attention of the enemy in that direction. For this purpose his forces were assembled on Cumberland Head at the middle of September, consisting of four thousand effective infantry, a squadron of horse, and a well-appointed train of artillery. On the 19th^a he moved forward to the Great Chazy River, the infantry in boats, ^{1813.} convoyed by Macdonough's flotilla, and the squadron of horse and artillery by land. They formed a junction at Champlain on the 20th,^b and on the same day the advance, under Majors Wool, Snelling, and M'Neil, marched as far as Odell Town, just within the Canada borders, westward of Rouse's Point. A severe drought was prevailing over all that region. Hampton was convinced that he would not be able to procure water on the route northward over that flat country for his horses and draught-cattle, and he at once returned to Champlain^c and took the road westward, which led to the Chateaugay River. At the "Four Corners," not far from the present village of Chateaugay, he encamped,^d ^{September 24.} and remained there awaiting orders twenty-six days.

In the mean time preparations for the expedition were going on at the eastern end of Lake Ontario, over whose waters Commodore Chauncey and Sir James Yeo had been for some time playing a sort of hide-and-seek game. As Chauncey's fleet was a co-operative force in the expedition of Wilkinson, we may here appropriately consider the naval movements on Lake Ontario not already described, up to the departure of the expedition down the St. Lawrence.

We have already observed the active co-operation of the naval with the land forces in the capture of York² and Fort George,³ and the attempt of Sir James Yeo to seize or destroy the post at Sackett's Harbor.⁴ Intelligence of the fact that the British squadron was out upon the lake reached Chauncey on the 30th of May, while lying in the mouth of the Niagara River. He immediately weighed anchor, crossed over the lake and looked into York, and then ran for Kingston. No foe was to be seen, and he sailed for Sackett's Harbor, where the embers of the recent conflagration were smouldering. Chauncey felt some doubts of his ability to cope with the heavy vessels of the enemy, and he used every exertion to have the new ship, the *General Pike*, put afloat. She was a corvette, pierced for twenty-six long twenty-fours. She was

¹ *History of Lake Champlain from 1609 to 1814*, by Peter S. Palmer, page 168. Mr. Palmer says: "Soldiers would break into private dwellings, and bear off back-loads of property to the boats in the presence of British officers, who, when remonstrated with by the plundered citizens, replied that they could not prevent it, as the men did not belong to their particular company." Among the sufferers in this way, according to an inventory made at the time, and published by Mr. Palmer, were Judge D. Lord, who lost property to the amount of \$1079 81; Peter Salliey, \$387 77, besides two store-houses valued at \$900; Judge Palmer, \$386 50; Doctor Miller, \$1200; Bostwick Burk, \$150 00; Jacob Ferris, \$700; and lesser amounts by other citizens. A store-house belonging to Major Platt was also burned.

Commodore Chauncey tries to engage Sir James Yeo. Serious Disaster. The British Commander avoids a Conflict.

launched on the 12th of June, and on the day before, Captain Arthur Sinclair had arrived and was placed in command of her. But it was late in the summer before she was fully equipped and manned, for much valuable material intended for her had been consumed, and men came from the sea-board tardily, a part of whom were sent to the importunate Perry, then anxiously preparing his squadron on Lake Erie to cooperate with General Harrison. Meanwhile the keel of a fast-sailing schooner, afterward named the *Sylph*, was laid by Eckford at the Harbor; and a small vessel was kept constantly cruising as a scout between the Ducks (a group of islands) and Kingston, to observe the movements of Sir James. On the 16th of June the *Lady of the Lake*, Lieutenant W. Chauncey, engaged in that service, captured the British schooner *Lady Murray*, loaded with provisions, shot, and fixed ammunition, and took her into the Harbor. At about this time the British squadron made a cruise westward, and, as we have seen, interfered seriously with vessels bearing supplies for the Americans at Fort George, and destroyed stores at Sodus.¹ Sir James, as we have observed, had looked into Oswego, but thought it prudent not to land.²

We have alluded to the appearance of Sir James and his squadron off Niagara on the 7th of July, just after Chauncey, with the troops under Colonel Scott, had returned from the second expedition to York.³ The British squadron was first seen about six miles to the northwest. Chauncey immediately weighed anchor, and endeavored to obtain the weather-gage of his enemy. He had thirteen vessels, but only three of them had been originally built for war purposes.⁴ The enemy's squadron consisted of two ships, two brigs, and two large schooners. These had all been constructed for war, and were very efficient in armament and defensive shields.

All day the belligerents manœuvred, with a good breeze, without coming into conflict. At sunset there fell a dead calm, and sweeps were used. When night came on the American fleet was collected by signal. During the evening the wind came from the westward, freshened, and at midnight was a fitful gale. Suddenly a rushing sound was heard astern of most of the fleet, and it was soon ascertained that the *Hamilton*, Lieutenant Winter, and *Scourge*, Mr. Osgood, had disappeared. They were capsized by a terrific squall, and all the officers and men, excepting sixteen of the latter, were drowned. This was a severe blow to the lake service, for these two vessels, carrying nineteen guns between them, were the best in it.

Soon after dawn^a the British squadron was seen bearing down, as if for action, but when within a league of the Americans it bore away. Again the belligerents commenced manœuvring for advantages. Alternate wind and calm made the service severe, and at length the considerate Chauncey, whose men had been at quarters full thirty-six hours, ran in and anchored at the mouth of the Niagara River. All night the lake was swept by squalls. When, in the morning,^b the enemy was seen at the northward, Chauncey weighed anchor and stood out to meet him. Another day and night were consumed in fruitless manœuvres. At length, at six o'clock on the morning of the 10th, having the weather-gage, Chauncey, with a light wind, formed his fleet in battle order, and a conflict seemed imminent.⁵ But varying breezes, and an unwillingness on the part of the enemy to engage,

⁴ The *Pike*, *Madison*, *Oneida*, *Hamilton*, *Scourge*, *Ontario*, *Fair American*, *Governor Tompkins*, *Conquest*, *Growler*, *Julia*, *Asp*, and *Pert*.

⁵ On the night of the 9th, Chauncey, becoming convinced that he could not get the wind of the British while the latter were disposed to avoid an action, formed his fleet in an order of battle well calculated to draw the enemy down. It was considered an admirable movement. His vessels were formed in two lines, one to windward of the other. "The weather line," says Cooper, in giving an account of it, "consisted altogether of the smallest of the schooners, having in the order in which they are named from the van to the rear, the *Julia*, *Growler*, *Pert*, *Asp*, *Ontario*, and *Fair American*. The line to leeward contained, in the same order, the *Pike*, *Oneida*, *Madison*, *Governor Tompkins*, and *Conquest*."—*Naval History of the United States*, ii., 364. Commodore Chauncey, in his dispatch to the Secretary of the Navy on the 13th, said, "The schooners, with long, heavy guns, formed about six hundred yards to windward, with orders to commence a fire upon the enemy as soon as they could reach him with effect, and, as he approached, to edge down the line to leeward." The *Julia*, *Growler*, *Pert*, and *Asp* to pass through the intervals, and form to leeward, the *Ontario* and *Fair American* to take their stations in the line." The same disposition was made on the night of the 10th, when an action en-

Capture of American Vessels.

The British Commander very prudent.

A Battle at last.

caused another day to be spent in manœuvring. At ten o'clock at night the enemy made chase, and at eleven the *Fair American* (the sternmost of the schooners) opened fire upon the advancing foe. The enemy continued to draw ahead, and a general action seemed unavoidable. The commanders of the *Growler* (Lieutenant Deacon) and *Julia* (Mr. Trant¹), in the excess of their zeal, took their vessels out of the prescribed line. They became separated from the rest of the fleet, and were captured after a severe but short struggle, with small loss. There was but little fighting elsewhere, and at midnight, the gale increasing, Chauncey determined to run for shelter into the Genesee. He changed his course, however, and went to Sackett's Harbor, where, after encountering a calm, he arrived with the remains of his fleet on the 13th. On the same day he took in provisions for five weeks and sailed on another cruise, with eight vessels. Off Niagara, on the 16th, he fell in with the enemy, who had the same number of vessels; but, after a cruise of three days more, he returned to the Harbor,^a where he found the new vessel (the *Sylph*) launched. Great sickness ^{July 19, 1813.} prevailed in the fleet, and Chauncey lay inactive in the Harbor for some time.²

On the 28th of August Chauncey put out again upon the lake, but it was not until the 7th of September that he came in sight of the enemy. At dawn of that day the British squadron was seen off the Niagara, and Chauncey, with the *Pike*, *Madison*, and *Sylph*, each with a schooner in tow, made chase. For six days he endeavored to bring his antagonist into action; but Sir James Yeo, following the strict injunctions of his superiors to risk nothing, avoided a contest. The critical situation of Canada at that time made the preservation of a naval force sufficient to protect harbors and keep Chauncey employed, very important.

On the 11th Sir James lay becalmed off the Genesee. Catching a gentle breeze from the northwest, Chauncey bore down upon him, and was within gun-shot distance of his enemy when the British sails took the wind, and their vessels, being the faster sailers, escaped, not, however, without sustaining considerable damage during a running fight for more than three hours. The *Pike* had been hulled several times, but not seriously hurt, while the British vessels were a good deal out up. Yeo finally escaped to Amherst Bay, whose navigation was strange to the American pilots, and he was not followed. Chauncey lay off the Ducks until the 17th, when Sir James made his way into Kingston harbor. Chauncey now ran into Sackett's Harbor for supplies.

On the 18th the American squadron sailed for the Niagara for troops to be conveyed to Sackett's Harbor, and was followed by the enemy. After remaining a few days, Chauncey crossed the lake with the *Pike*, *Madison*, and *Sylph*, each with a schooner in tow, having been informed that the enemy was in York harbor. When he approached, Sir James fled, followed by Chauncey in battle order and with the weather-gage. The baronet was now compelled to fight, or to cease boasting of unsatisfied desires to measure strength with Americans. An action commenced at a little past noon, when the *Pike* for more than twenty minutes sustained the desperate assaults of the heaviest vessels of the enemy. She was managed admirably, and delivered tremendous broadsides upon her antagonists. She was gallantly assisted a part of the time by the *Tompkins*, Lieutenant W. C. B. Finch, of the *Madison*; and when the smoke of battle passed away, the *Wolfe* (Sir James's flag-ship) was found to

sued. "Nothing could have been simpler or better devised," says Cooper, "than this order of battle; nor is it possible to say what would have been the consequences had circumstances allowed the plan to be rigidly observed." A sketch of the positions of the vessels in this engagement was sent by Chauncey with his report of the affair to the Navy Department.

¹ James Trant was a native of Ireland, and came to America in 1781 with Captain Barry, in the *Alliance*. He was a sailing-master in the United States Navy from its formation. He was marked by eccentricities of character and opinions, and for the most unflinching courage. He lived until he was about seventy years of age. Toward the close of his life he was commissioned a lieutenant (May 5, 1817), which gave him great comfort. He died at Philadelphia on the 11th of September, 1820.

² It appears, by the official reports made at about that time, that one fifth of the men were left on shore in consequence of illness. Of two hundred men on board the *Madison*, eighty were on the sick-list at one time.

be too seriously injured to sustain a conflict any longer. She had lost her main and mizzen top-masts, and her main yard, besides receiving other injuries, and when discovered she was pushing away dead before the wind, crowded with canvas, and gallantly protected by the *Royal George* in her flight. A general chase was immediately commenced, and a running fight was maintained for some time. The pursuit was continued toward Burlington Bay for two hours, when Chauncey called off his vessels. No doubt, by pressing sail, and with proper support, he might have captured or destroyed the British squadron,¹ but the wind was increasing, and there was no good harbor or place of shelter on the coast, where, in the event of being driven ashore, capture by land troops would be almost certain. Taking counsel of prudence, Chauncey sailed into the Niagara, and there lay safely during a severe gale that lasted forty-eight hours.

For two days after the gale had subsided the wind blew strongly from the east, when it shifted to the westward.^a All the transports with troops had now departed for Sackett's Harbor, and Chauncey went out again in search of the foe. The weather was thick, and the *Lady of the Lake*, sent to reconnoitre Burlington Bay, reported that only two gun-boats were to be seen there. Supposing the enemy to have escaped under cover of mist or darkness, Chauncey sailed away eastward, and at sunset of the 5th of October, when near the Ducks, the *Pike* captured three British transports, *Confiance*, *Hamilton*,² and *Mary*. The *Sylph* captured the *Drummond* cutter, and the armed transport *Lady Gore*. These carried from one to three guns each. The whole number of persons found on the five vessels, and made prisoners, including the officers, was two hundred and sixty-four. Among the latter was a lieutenant and two master's mates of the royal navy, four masters of the provincial marine, and ten army officers. During the remainder of the season Sir James Yeo remained inactive in Kingston harbor, and Commodore Chauncey was employed in watching the movements of the enemy there, and in aiding the army in its descent of the St. Lawrence.

After much discussion at Sackett's Harbor between the Secretary of War, General Wilkinson, and other officers, it was determined to pass Kingston and make a descent upon Montreal. For weeks the bustle of preparation had been great, and many armed boats and transports had been built at the Harbor. Every thing was in readiness by the 4th of October.³ Yet final orders were not issued until the 12th, when a plan of encampment and order of battle was given to each general officer and corps commander, to be observed when circumstances would permit. Four days more were consumed without any apparent necessity, when, on the 17th, orders were given for the embarkation of all the troops at the Harbor destined for the expedition. At the same time, General Hampton, who, as we have seen, had been halting on the banks of the Chateaugay, was ordered to move down to the mouth of that river.

¹ Chauncey was indignant and loud in his complaints of a want of support on this occasion. Speaking of this, the Hon. Alvin Bronson, of Oswego, New York, in a letter to me, dated August 28, 1860, says: "While on board the British fleet as a prisoner in May, 1814, and associating familiarly with its subordinate officers, I received ample confirmation of reports that had been current in the army and navy of the bad conduct of some of the officers under Commodore Chauncey in a then late naval engagement at the head of the lake. It was a running fight, and the British sailors facetiously called it the *Burlington Races*, as it was fought partly off Burlington Heights. Chauncey was the assailant, and would have destroyed the British fleet, or have driven it on shore, had he been properly sustained by his best and heaviest vessels, particularly the *Madison*, Commander Crane, and the heavily-armed and fast-sailing brig *Sylph*, Captain Woolsey. These vessels never got into close action." The only excuse was that they had gun-boats in tow; but Chauncey's signal for close action, which he kept flying, implied that the vessels must cast off every encumbrance. "The British officers," continues Mr. Bronson, "awarded Chauncey all credit for skill and bravery, and admitted that their fleet must have been destroyed if he had been properly sustained by his subordinates."

The bearer of a flag of truce who went into Sackett's Harbor on the 12th of October admitted that Sir James Yeo was so badly beaten on this occasion that he had made preparations to burn his vessels, and would have done so had Chauncey chased him twenty minutes longer. Every gun on the *Wolfe's* starboard side was dismounted.—Letter to the Editor of the *Democratic Press*, dated at Sackett's Harbor, October 18, 1813, and copied in *The War*, ii., 86.

² The *Confiance* and *Hamilton* were the *Grouler* and *Julia*, captured from the Americans on the night of the 10th of August. Their names had been changed by the captors.

³ General Morgan Lewis's testimony on the trial of Wilkinson.

With a reckless disregard of life and property, the troops under Major General Lewis were embarked at the beginning of a dark night, when portents of a storm were hovering over the lake, at a season when sudden and violent gales were likely to arise. They were packed in scows, bateaux, Durham boats, and common lake sail-boats, with ordnance, ammunition, hospital stores, baggage, camp equipage, and two months' provisions. The voyage was among islands and past numerous points of land where soundings and currents were known to few. There was a scarcity of pilots, and the whole flotilla seemed to have been sent out with very little of man's wisdom to direct it. The wind was favorable at the beginning, but toward midnight, as the clouds thickened and the darkness deepened, it freshened, and before morning became a gale, with rain and sleet. The flotilla was scattered in every direction, and the gloomy dawn^a revealed a sad spectacle. The shores of the islands and the main were strewn with wrecks of vessels and property. Fifteen large boats were totally lost, and many more too seriously damaged to be safe. For thirty-six hours the wind blew fiercely, but on the 20th, there having been a comparative calm for more than a day, a large proportion of the troops, with the sound boats, arrived at Grenadier Island.¹ These were chiefly the brigades of Generals Boyd, Brown, Covington, Swartwout, and Porter² (the three former had encamped at Henderson Harbor), which had arrived.

General Wilkinson in the mean time was passing to and fro between the Harbor and Grenadier Island, looking after the smitten expedition. A return made to him on the 22d showed that a large number of troops were still behind, in vessels "wrecked or stranded." The weather continued boisterous, and on the 24th he was compelled to write to the Secretary of War, "The extent of the injury to our craft, clothing, arms, and provisions greatly exceed our apprehensions, and has subjected us to the necessity of furnishing clothing, and of making repairs and equipments to the flotilla generally. In fact, all our hopes have been nearly blasted; but, thanks to the same Providence that placed us in jeopardy, we are surmounting our difficulties, and, God willing, I shall pass Prescott on the night of the 1st or 2d proximo."

The troops remained encamped on Grenadier Island until the 1st of November, except General Brown's brigade, some light troops, and heavy artillery, which went

James Wilkinson

¹ The now venerable Major Mordecai Myers, of Schenectady, New York, to whom I am indebted for an interesting narrative of the events of this campaign, was very active in saving lives and property during this boisterous weather. It was resolved to send back to Sackett's Harbor all who could not endure active service in the campaign. Nearly two hundred of these were put on board two schooners, with hospital stores. The vessels were wrecked, and Captain Myers, on his own solicitation, was sent by General Boyd with two large boats for the rescue of the passengers and crew. He found the schooners lying on their sides, the sails flapping, and the sea breaking over them. Many had perished, and the most of those alive, having drunk freely of the liquors among the hospital stores, were nearly all intoxicated. The hatches were open, and the vessels were half-filled with water. By great exertions and personal risk Captain Myers succeeded in taking to the shore nearly all of the two hundred persons who had embarked on the schooners. Forty or fifty of them were dead.

² Colonel Carr's MS. Journal. "October 19, first brigade, under Boyd—5th, 12th, and 13th Regiments; second brigade, under Brown—6th, 15th, and 22d Regiments, already arrived and encamped. October 20, the third brigade, under Covington—9th, 16th, and 25th Regiments; and fourth brigade, under Swartwout—11th, 21st, and 14th, have arrived. The 5th, under Porter—light troops and artillery—arriving hourly. The weather still stormy, and continual rains for the last two days."

Hampton in the Chateaugay Country.

Position of the Belligerents.

Hampton's criminal Negligence.

down the St. Lawrence on the 29th,^a and took post at French Creek. In the mean time Hampton, pursuant to Wilkinson's orders, moved^b down the Chateaugay toward the St. Lawrence for the purpose of forming a junction with Wilkinson from above. He found a forest ten or twelve miles in extent along the river in the line of his march, in which the vigilant and active De Salaberry had felled trees across the obscure road, and placed Indians and light troops to dispute the passage of the Americans. General George Izard was at once sent out with light troops to gain the rear of these woods, and seize the Canadian settlements on the Chateaugay in the open country beyond, while the remainder of the army made a circuit in an opposite direction, and avoided the obstructed forest altogether. The movement was successful, and on the following day^c a greater portion of the army encamped at Spear's, near the confluence of the Outard Creek and the Chateaugay River.¹ It was an eligible position, and there Hampton remained until the stores and artillery came up on the 24th.

^a October, 1813.
^b October 21.

^c October 22.

Immediately in front of the army at Spear's was an open country, seven miles along the river, to Johnson's,² where another extensive forest lay in the way. These woods had been formed into *abatis*, covering log breastworks and a log block-house. On the latter were some pieces of ordnance. In front of these defenses were Indians and a light corps of Beauharnais militia, and behind them, under the immediate command of Lieutenant Colonel De Salaberry, was the remainder of the disposable force of the enemy, charged with the duty of guarding a ford at a small rapid in the river, and keeping open communication with the St. Lawrence. De Salaberry's force was almost a thousand strong, and Sir George Prevost and General De Wattville were within bugle call with more troops.

Hampton determined to dislodge De Salaberry, take possession of his really stronghold, and keep it until he should hear from Wilkinson, from whom no tidings had been received for several days. He was informed of the ford opposite the lower flank of the enemy, and on the evening of the 25th he detached Colonel Robert Purdy, of the Fourth Infantry, and the light troops of Boyd's brigade, to force the ford, and fall upon the British rear at dawn. The crack of Purdy's musketry was to be the signal for the main body of the Americans to attack the enemy's front. But the whole movement was foiled by the ignorance of the guides and the darkness of the night. Purdy crossed the river near the camp, lost his way in a hemlock swamp, and could neither find the ford nor the place from which he started. His troops wandered about all night, and different corps would sometimes meet, and excite mutual alarm by the supposition that they had encountered an enemy.³ In the morning Purdy extricated his command from the swamp labyrinth, and, within half a mile of the ford, halted and gave them permission to rest, for they were excessively fatigued. In the mean time Hampton put three thousand five hundred of his army in motion, under General Izard, expecting every moment to hear Purdy's guns; but they were silent. The forenoon wore away; meridian was past; and at two o'clock Izard was ordered to move forward to the attack. Firing immediately commenced, and the enemy's pickets were driven in. The gallant De Salaberry came out with about three hundred Canadian fencibles and voltigeurs, and a few Abenake Indians, but Izard's overwhelming numbers pressed him back to his intrenchments.

Firing was now heard on the other side of the river. Purdy, who seems to have neglected to post pickets or sentinels, had been surprised by a small detachment of

¹ This point is seen at the junction of "Hampton's route" and "Smith's road" on the map on page 881. The stream seen along "Smith's road" is the Outard.

² See Map on page 881.

³ "Incredible as it may appear," said Purdy, in his official report to Wilkinson, "General Hampton intrusted nearly one half of his army, and those his best troops, to the guidance of men *each of whom repeatedly assured him that they were not acquainted with the country*, and were not competent to direct such an expedition." "Never, to my knowledge," said Purdy, in another part of his report, "during our march into Canada, and while we remained at the Four Corners, a term of twenty-six days, did General Hampton ever send off a scouting or reconnoitring party, except in one or two cases at Spear's, in Canada."

Disgraceful Events. Hampton's inglorious Retreat. Wilkinson's Expedition on the St. Lawrence.

chasseurs and Canadian militia, who gained his rear. His troops, utterly disconcerted, fled to the river. Several officers and men swam across, bearing to General Hampton alarming accounts of the great number of the enemy on the other side of the stream. That enemy, instead of being formidable, had fled after his first fire, and the ludicrous scene was presented of frightened belligerents running away from each other. All was confusion; and detachments of Purdy's scattered men, mistaking each other for enemies in the dark swamp, had a spirited engagement. The only sad fruit of the blunder was the death of one man.

De Salaberry had perceived that superior numbers might easily outflank him, and he resorted to stratagem. He posted buglers at some distance from each other, and when some concealed provincial militia opened fire almost upon Hampton's flank, these buglers simultaneously sounded a charge. Hampton was alarmed. From the

seeming extent of the British line as indicated by the buglers, he supposed a heavy force was about to fall upon his front and flank. He

immediately sounded a retreat, and withdrew from the field. The enemy in a body did not venture to follow, but the Canadian militia¹ harassed the army as it fell slowly back to its old quarters at Chateaugay Four Corners, where its inglorious campaign ended. The whole affair was a disgrace to the American arms, and, as one of the surviving actors in the scenes (now a distinguished major general in the United States Army) has said, "no officer who had any regard for his reputation would voluntarily acknowledge himself as having been engaged in it."² In this affair, which has been unwarrantably dignified with the character of a *battle*, the Americans lost about fifteen killed and twenty-three wounded. The British lost five killed, sixteen wounded, and four missing.³

Storm followed storm on Lake Ontario and the St. Lawrence. Snow fell to the depth of ten inches, and the troops collected by Wilkinson on Grenadier Island suffered much. The season was too far advanced—a Canadian winter was too near—to allow delays on account of weather, and General Brown and his division moved forward, in the face of the tempest and of great peril, on the 29th of October. They landed at French Creek, and took post in a thick wood about half a mile up from the present village of Clayton. Chauncey in the mean time attempted to blockade the enemy in Kingston Harbor, or at least to prevent his going down the river either to pursue the Americans or to take possession of and fortify the important old military post at the head of Carleton Island, just below Cape Vincent. But Chauncey's blockade was ineffectual. British marine scouts were out among the Thousand Islands; and when, on the afternoon of the 1st of November, they discovered Brown at French Creek, two brigs, two schooners, and eight gun-boats, filled with infantry, were out and ready to bear down upon him. They did so at about sunset of the same day. Fortunately Brown had planted a battery of three 18-pounders on Bartlett's Point, a high wooded bluff on the western shore of French Creek, at its mouth, under the command of Captain M'Pherson, of the light artillery. This battery, from its elevation, was very effective, and it was served so skillfully that the enemy were driven away after some cannonading. At dawn the next morning the conflict was renewed, with

¹ In his official dispatch Sir George Prevost asked from the Prince Regent a stand of colors for each of the five battalions of Canadian militia as a mark of approbation. They were granted.

² Major General John E. Wool, who then held the commission of major in the Twenty-ninth Regiment United States Infantry. I am indebted to written and oral statements of General Wool for many of the facts given concerning the affair near Johnston's, on the Chateaugay. Hon. Nathaniel S. Benton, of Little Falls, New York, late Auditor of the State of New York, and author of a *History of Herkimer County and the Upper Mohawk Valley*, was captain of a militia company engaged in this affair. He informed me that his company numbered 109 men, and all of them his own height—six feet.

W. Hampton

American Camp at French Creek. The attacking British repulsed. Wilkinson pursued down the St. Lawrence.

the same result, the enemy in the two engagements having suffered much loss. That of the Americans was two killed and four wounded. It was with much difficulty that the British saved one of their brigs from capture.

Troops were coming down from Grenadier Island in the mean time, and landing upon the point on which Clayton¹ now stands, and along the shore of French Creek as far as the lumber and rafting yard on what is still known as Wilkinson's Point. Wilkinson arrived there on the 3d, and on the 4th² he issued a general order preparatory to final embarkation, in which he exhorted his troops to sustain well the character of American citizens, and abstain from rapine and plunder. "The general is determined," he said, "to have the first person who shall be detected in plundering an inhabitant of Canada of the smallest amount of property made an example of."³

On the morning of the 5th, a clear, bright, crisp morning, just at dawn, the whole flotilla, comprising almost three hundred boats, moved down the river from French Creek with banners furled and music silent, for they wished to elude discovery by the British, who, until now, were uncertain whether the expedition was intended for Kingston, Prescott, or Montreal.³ The vigilant foe had immediately discovered their course, and, with a heavy armed galley and gun-boats filled with

MOUTH OF FRENCH CREEK.⁴

troops, started in pursuit. The flotilla arrived at Morristown early in the evening. It had been annoyed by the enemy all the way. Several times Wilkinson was disposed to turn upon them; and at one time, near Bald Island, about two miles below Alexandria Bay, he was compelled to engage, for the enemy's gun-boats shot out of the British channel on the north, and attacked his rear. They were beaten off, and Wilkinson determined to run by the formidable batteries at Prescott during the night. It was found to be impracticable, and his boats lay moored at Morristown until morning. A corps of land troops from Kingston had also followed Wilkinson along the northern shore of the river, and arrived at Prescott before the American flotilla reached Ogdensburg.

For the purpose of avoiding Fort Wellington and the other fortifications at Prescott, Wilkinson halted three miles above Ogdensburg, where he debarked his ammunition and all of his troops,⁵ except a sufficient number to man the

¹ This was formerly called Cornella, and is yet called by the name of French Creek. It was named in honor of Senator John M. Clayton, of Delaware, in 1833. French Creek was called by the Indians *Fallen Fort*, from the circumstance that, long before a white man was ever seen there, a fort had been captured on its banks by the Oneidas.

² General Order, French Creek, November 4, 1813.

³ The boat that conveyed Wilkinson and his military family was commanded by the now venerable William Johnston, who was an active spy on that frontier during the war. He is better known as "Bill Johnston," by some called the "Hero," and by others the "Pirate," of the Thousand Islands. Of Mr. Johnston and his remarkable career I shall write presently.

⁴ This is from a sketch made in the summer of 1860, from the place of Brown's encampment, at the lumber and rafting yard on Wilkinson's Point. In the water, in the foreground, is seen a raft partly prepared for a voyage down the St. Lawrence. The bluff in the distance, beyond the little sail-vessel, is Bartlett's Point, on which M'Pherson's battery was placed. The vessel without sails indicates the place where the British squadron lay when it was repulsed. The land seen beyond is Grindstone Island, from behind which the British vessels came. The point in the middle distance, on the extreme right, is the head of Shot-bag Island.

BALD ISLAND AND WILKINSON'S FLOTILLA.¹

boats. These were to be conveyed by land to the "Red Mill," four miles below Ogdensburg, on the American shore, and the boats were to run by the batteries that night. At the place of debarkation he issued a proclamation to the Canadians, intended to make them passive;² and there, at noon, he was visited by Colonel King, Hampton's adjutant general. By him he sent orders to Hampton to press forward to the St. Lawrence, to form a junction with the descending army at St. Regis.

By the skillful management of General Brown, the whole flotilla passed Prescott safely on the night of the 8th, with the exception of two large boats heavily laden with provisions, artillery, and ordnance stores,³ which ran aground at Ogdensburg. They were taken off under a severe cannonading from Fort Wellington, and soon

¹ November 7, 1813. joined the others⁴ at the "Red Mill." Wilkinson was now informed that

the Canada shore of the river was lined with posts of musketry and artillery at every eligible point, to dispute the passage of the flotilla. To meet and remove these impediments, Colonel Alexander Macomb was detached, with twelve hundred of the *élite* of the army, and on Sunday, the 7th, landed on the Canada shore. He was soon followed by Lieutenant Colonel Forsyth and his riflemen, who did excellent service in the rear of Macomb.

The flotilla arrived at the "White House,"⁵ opposite Matilda,⁶ about eighteen miles below Ogdensburg, on the 8th, and there Wilkinson called a council of his officers, consisting of Generals Lewis, Boyd, Brown, Porter, Covington, and Swartwout. After hearing a report from the active chief engineer, Colonel Swift, concerning the reported strength of the enemy,⁷ the question, Shall the army proceed with all possible rapidity to the attack of Montreal? was considered, and answered in the affirmative.

¹ This is from a sketch by Captain Van Cleve (see note 1, page 617), who kindly allowed me the use of it. Bald Island is one of the Thousand Islands, and lies on the left of the American or steam-boat channel of the river. It is mostly bare, and rises to the height of about thirty or forty feet above the water in the centre. At some distance beyond it, northward, is the British channel. The gun-boats that attacked Wilkinson's flotilla came out at the lower end of Bald Island, through a lateral channel in which the sail-vessel lies.

² He assured them that he came to invade, and not to destroy the province—"to subdue the forces of his Britannic Majesty, not to war against unoffending subjects. Those, therefore," he said, "who remain quiet at home, should victoriously incline to the American standard, shall be protected in their persons and property; but those who are found in arms must necessarily be treated as avowed enemies. To menace is unmanly; to seduce, dishonourable; yet it is just and humane to place those alternatives before you."—Proclamation, November 7, 1813.

³ The flotilla moved at eight o'clock in the evening, under cover of a heavy fog, General Brown, in his gig, leading the way. There was a sudden change in the atmosphere, when the general's boat was discovered at Prescott, and almost fifty 34-pound shot were fired at her, without effect. The gleaming of bayonets on shore, in the light of the moon in the west, caused a heavy cannonade in the direction of the American troops on the march, also without effect. Brown halted the flotilla until the moon went down, but its general movement was perceived by the enemy. For three hours they poured a destructive fire upon it, and yet, out of about three hundred boats, not one was touched, and only one man was killed and two wounded.—General Wilkinson's Journal, November 6, 1813.

⁴ According to the statement of Captain Mordcaid Myers, already referred to (note 1, page 546), there were traitors in Ogdensburg. He says that the British at Prescott were apprised of the approach of the flotilla by the burning of blue lights in one or more houses in Ogdensburg.

⁵ Matilda is a post village in Dundas County, Canada West, on the Pointe à la Pline Canal. The "White House" had disappeared when I visited the spot in 1855, when the place belonged to James Parlor.

⁶ Colonel Swift employed a secret agent, who reported to him that the enemy's forces were as follows in number and position: 600 under Colonel Murray, at Coteau du Lac, strongly fortified with artillery; about 200 men of the British line of artillery, but without ammunition, at the Cedars; 200 sailors, 400 marines, and an unknown number of militia at Montreal, with no fortifications; 2500 regular troops expected daily from Quebec; and the militia between Kingston and Quebec, 20,000. Wilkinson reported his own force to be 1000 men, and that he expected to meet 4000, under Hampton, at St. Regis.—Journal of Dr. Amasa Trowbridge, quoted by Dr. Hough in his *History of St. Lawrence County*, page 639.

General Brown invades Canada.

Wilkinson in Peril.

Preparations for Battle at Chrysler's Farm.

General Brown was at once ordered to cross the river with his brigade and the dragoons, for the purpose of marching down the Canada side of the river in connection with Colonel Macomb, and the remainder of the day and night was consumed in the transportation.¹ Meanwhile Wilkinson was informed that a British re-enforcement, full one thousand strong, had been sent down from Kingston to Prescott, under the command of Lieutenant Colonel Morrison. They had come in the armed schooners *Beresford* and *Sidney Smith*, and several gun-boats and bateaux under Captain Mulcaster, which had eluded Chauncey's inefficient blockading squadron. They were joined at Prescott by provincial infantry and dragoons under Lieutenant Colonel Pearson, and on the morning of the 9th they were close upon Wilkinson with the vessels in which they came down the river, and a large portion of the land troops were debarked near Matilda for the purpose of pursuing the Americans. General Boyd and his brigade were now detached to re-enforce Brown, with orders to cover his march, to attack the pursuing enemy if necessary, and to co-operate with the other commanders.

Wilkinson now found himself in a perilous position. The British armed vessels were following his flotilla, and a heavy British force was hanging upon the rear of his land troops, ready to co-operate with the water craft in an attack upon the Americans. They constantly harassed Brown and Boyd, and occasionally attacked the rear of the flotilla. The forces on the shore also encountered detachments coming up from below, and were compelled to make some long and tedious circuits in their march because of the destruction of bridges in the front.

On the morning of the 10th,^a when Wilkinson was approaching the "Longue Saut," a perilous rapid in the St. Lawrence, eight miles in extent, he was informed that a considerable body of the enemy had collected near its foot, constructed a block-house, and were prepared to attack him when he should come down. General Brown was ordered to advance at once and dislodge them, and at noon cannonading was heard in that direction for some time. At the same hour the enemy came pressing upon Wilkinson's rear, and commenced cannonading from his gun-boats. The American gun-barges were so slender that the eighteen-pounders could not be worked effectively, so they were landed, placed in battery, and brought to bear upon the enemy so skillfully that his vessels fled in haste up the river. In these operations the day was mostly consumed. The pilots were unwilling to enter the rapids at night. It was necessary to hear from Brown, for when the flotilla should once be committed to the swift current of the rapids there could be no retreat. These considerations caused Wilkinson to halt for the night, and his vessels were moored a little below Chrysler's Island, nearly in front of the farm of John Chrysler (a British militia captain then in the service), a few miles below Williamsburg, while Boyd, with the rear of the land force, encamped near.

At ten o'clock in the morning of the 11th Wilkinson received a dispatch from Brown, addressed from "five miles above Cornwall," announcing his success in his attack upon the British post at the foot of the rapids, informing him of the wounding of Lieutenant Colonel Forsyth and one of his men, and urging him to come forward with the boats and supplies as quickly as possible, because his wearied troops were "without covering in the rain."² This dispatch found Wilkinson extremely ill, and his reply, in which he told Brown of the presence of the enemy upon his rear, and his apprehensions that he intended to pass him with his gun-boats and strengthen the British force below, was addressed "From my bed." "It is now," he said, "that I feel the heavy hand of disease—enfeebled and confined to my bed while the safety

¹ A part of this force landed on the property of Christian Delabough, near Matilda, owned, in 1865, by Daniel Shaw. Another portion landed at Snyder's, now Pillar's Bay.

² General Brown's MS. Letter-book. Colonel Carr, in his MS. Journal before me, says: "We are wet to the skin, and, having no tents or shelter but bushes, must pass a very uncomfortable night." Dated "Near Cornwall, November 10, 10 P.M."

CHRYSLER'S IN 1855.¹

of the army intrusted to my command, the honor of our armies, and the greatest interests of our country are at hazard."²

Wilkinson now ordered the flotilla to proceed, and Boyd and his command to resume their march. At that moment information reached the commanding general that the enemy were advancing in column, and that firing from their gun-boats was heard. He immediately sent Colonel Swift with an order for Boyd to form his detachment into three columns, advance upon the enemy, and endeavor to outflank him and capture his cannon. At the same time the flotilla was ordered to lie moored on the Canada shore, just below Weaver's Point, while his gun-boats lay off Cook's Point.

General Brown

The brave Boyd, anxious for battle, instantly obeyed. Swartwout was detached with the fourth brigade to assail the vanguard of the enemy, which was composed of light troops, and Cov-

ington was directed to take position at supporting distance from him with the third brigade. Swartwout, on a large brown horse, dashed gallantly into woods of second growth, followed by the Twenty-first Regiment, commanded by Colonel E. W. Ripley, and with them drove the light troops of the enemy back upon their main line in open fields on Chrysler's farm, below his house.³ That line was well posted, its right resting on the St. Lawrence, and covered by Muleaster's gun-boats, and the left on a black-oak swamp, supported by Indians and gathering militia, under Colonel Thomas Fraser. They were advantageously formed back of ravines that intersected the extensive plain and rendered the advance of the American artillery almost impossible, and a heavy rail-fence.⁴

¹ This is a view of Chrysler's house and the outbuildings as they appeared when I visited the spot in August, 1855, a circumstance to be noticed presently. The house fronted the St. Lawrence. The road, in which the oxen and cart are seen, is the fine highway along the river from Cornwall to Prescott. ² General Brown's MS. Letter-book.

³ This conflict is usually called the battle of Chrysler's Field. It is sometimes called the battle of Williamsburg, that village being almost within cannon-shot range of the battle-field. Chrysler's name is frequently spelled with a t.

⁴ The British army, on this occasion, was slightly superior in numbers, counting its Indian allies, to the Americans, and had the double advantage of strong position behind ravines and of freshness, for the Americans had undergone great fatigue. They were formed in what Wellington called *en échelon*, or the figure of steps, with one corps more advanced than another, as follows: Three companies of the Eighty-ninth Regiment were posted on the extreme right,

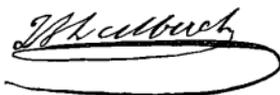

Battle on Chrysler's Farm.

Incidents of the Contest.

The Americans repulsed.

Swartwout's sudden and successful dash was quickly followed by an attack on the enemy's left by the whole of the fourth brigade, and a part of the first, under Colonel Coles, who advanced across plowed fields, knee-deep in mud, in the face of a heavy shower of bullets and shrapnel-shells.¹ At the same time General Covington, mounted on a fine white horse, gallantly led the third brigade against the enemy's left, near the river, and the battle became general. By charge after charge, in the midst of difficulties, the British were pushed back almost a mile, and the American cannon, placed in fair position by General Boyd, under the direction of Colonel Swift, did excellent execution for a few minutes. The squadron of the Second Regiment of Dragoons was early on the field, and much exposed to the enemy's fire, but, owing to the nature of the ground, was unable to accomplish much. At length Covington fell, severely wounded,² and the ammunition of the Americans began to fail. It was soon exhausted, and the fourth brigade, hard pushed, fell back, followed by Colonel J. A. Coles. This retrograde movement affected the third brigade, and it too fell back, in considerable disorder. The British perceived this, and followed up the advantage gained with great vigor, and were endeavoring by a flank movement to capture Boyd's cannon, when a gallant charge of cavalry, led by Adjutant General Walbach, who had obtained Armstrong's permission to accompany the expedition, drove them back and saved the pieces. The effort was renewed. Lieutenant Smith, who commanded one of the cannon, was mortally wounded, and it fell into the enemy's hands.³

J. A. Coles

J. H. Walbach

The conflict had lasted about five hours, in the midst of cold, and snow, and sleet, when the Americans were compelled to fall back. During that time victory had swayed, like a pendulum, between the combatants, and would doubtless have rested with the Americans had their ammunition held out. Their retreat was promising to be a rout, when the flying troops were met by six hundred men under Lieutenant Colonel Timothy Upham,⁴ of the Twenty-first Regiment of Infantry, and Major Malcolm, whom Wilkinson had sent up to the support of Boyd. These checked the disorderly flight, and, taking position on the ground from which Boyd's force had been driven, they gallantly attacked the enemy, seized the principal ravine, and, with a severe fire at short musket range, drove the British back and saved the day.⁵ Meanwhile Boyd had reformed his line in battle order on the edge of the wood from which Swartwout drove the foe at the beginning, and there awaited another attack. It was not made. Both parties seemed willing to make the excuse of oncoming darkness a warrant for suspending farther fighting. The Americans, under cover of night, retired unmolested to their boats, and the British remained upon the field. Neither party had gained a victory, but the advantage was with the British.⁶

resting on the river, with a 6-pounder, and commanded by Captain Barnes. On their left, and a little in the rear, were flanking companies of the Forty-ninth and a detachment of fencibles, with a 6-pounder, under Lieutenant Colonel Pearson. Still further to the left and rear were other companies of the Forty-ninth and Eighty-ninth Regiments, and a 6-pounder, under Lieutenant Colonel Morrison, whose left rested on a pine forest. In front of all were voltigeurs, under Major Herriott, and some Indians, under Lieutenant Anderson.

¹ Shells containing a quantity of musket-balls, which, when the shell explodes, are projected still farther.

² Covington was killed a short distance from Chrysler's barn (see picture on page 652), which was yet standing, well bored by bullets, when I visited the battle-ground in 1856. The British fired from that barn, and it is believed that a bullet from it was the one fatal to the general. The place where he fell was on the site of a nursery of thrifty trees in 1855.

³ William Wallace Smith was a cadet in 1809. He was a native of New Jersey. He was commissioned second lieutenant of light artillery on the 1st of June, 1812, and promoted to first lieutenant in October, 1813. In the battle on Chrysler's Field he was serving his field-piece himself, having lost all of his men, when he was mortally wounded. He died, a prisoner, at Fort Prescott, on the 18th of December, 1813.

⁴ Upham was a gallant soldier. We shall meet him again on the Niagara frontier.

⁵ MS. sketch of the military career of Colonel Timothy Upham, by an officer of the army.

⁶ Official dispatches of Wilkinson and Boyd, and Lieutenant Colonel Morrison; Wilkinson's Journal; Life of General Macomb, by Captain George H. Richards; General Brown's MS. letter-book; Colonel Robert Carr's MS. journal; the

On the morning after the battle the flotilla and gun-boats passed safely down the Long Rapids without discovering any signs of an enemy, and at the same time the land troops marched in the same direction unmolested. At Barnhart's, three miles above Cornwall, they formed a junction with the forces under General Brown, and Wilkinson expected to hear of the arrival of Hampton at St. Regis,

on the opposite shore of the St. Lawrence. But he was disappointed. General Brown had written to Hampton the day before informing him of rumors of a battle above, and saying, "My own opinion is, you can not be with us too soon," and begging him to inform the writer by the bearer when he might be expected at St. Regis.¹ Soon after Wilkinson's arrival, Colonel Atkinson, Hampton's inspector general, appeared as the bearer of a letter from his chief, dated the 11th, in which the commander of the left of the grand army of the North, who had fallen back to Chateaugay Four Corners, declared his intention not to join Wilkinson at all, but to co-operate in the attack on Montreal by returning to Champlain and making a descent from that place.² Wilkinson was enraged, and declared that he would "arrest Hampton, and direct Izard to bring forward the division." He was too feeble in mind and body to execute his threat, or do any thing that required energy; and, after uttering a few

various published Histories of the War; oral statements to the author in 1855 by Peter Brouse, a surviving British soldier in the battle, living near the ground; Dr. Amasa Trowbridge's narrative, quoted by Hough.

The loss of the British in this engagement was 22 killed, 150 wounded, and 15 missing. The Americans lost 106 killed and 227 wounded. Among the killed and mortally wounded were General Covington, and Lieutenants Smith, Hunter, and Olmstead; and their wounded officers were Colonel Preston, Majors Chambers, Cummings, and Noun, Captains Foster, Campbell, Myers, Murdoch, and Townsend, and Lieutenants Heaton, Pelham, Lynch, Williams, Brown, and Cray. Among the officers specially mentioned with praise were General Covington, Colonel Pearce, who took command of his corps when he fell, Colonels E. P. Gaines, E. W. Ripley, and Walbach, Lieutenant Colonel Aspinwall, Majors Cumming, Morgan, Grafton, and Gardner, and Lieutenants Whiting (his aid) and (late Major General) W. J. Worth.

The wounded in the battle were placed in barns and log houses, and the mansion of Chrysler was made a hospital. A bullet passed through Captain Myers's arm, near his shoulder, while at the head of his men in assailing the British behind the stone wall. The desperation of the encounter may be conceived when the fact is stated that of 50 men he lost 23. He shared General Boyd's quarters at French Mills. Dr. Man, a noted physician, took him to his house, ten miles distant, where he remained four months. He there became acquainted with the daughter of Judge William Bailey, of Plattsburg, and in March following they were married in that town.

Mordecai Myers was born at Newport, Rhode Island, on the 1st of May, 1776, and is now (1867) in the ninety-second year of his age. He was educated in New York City, and became a merchant in Richmond, Virginia. There he served in a military company under Colonel (afterward Chief Justice) Marshall. He soon returned to New York, engaged in business there, and served in an artillery company under the command of Captain John Swartwout. He was afterward commissioned an officer of infantry, and for two years studied military tactics assiduously. When war was threatened he was active in raising volunteer companies, and in March, 1812, he was commissioned a

captain in the Thirteenth United States Infantry, and ordered to report to Colonel Peter B. Schuyler. During the war he performed laborious and gallant services under several commanders in the Northern Department, and in 1815 the disability produced by his wound caused him to be disbanded and placed on the pension roll for the half pay of a captain. Thus ended his military career. He has resided many years in Schenectady. He has been mayor of that city, and represented New York city in the Legislature of the State for six years.

Character of its chief Leaders.

Hampton censured.

courses, he called a council of war, and left Hampton to do as he pleased. That council decided that the "conduct of Major General Hampton, in refusing to join his division to the troops descending the St. Lawrence, rendered it expedient to remove the army to French Mills, on the Salmon River."¹ "The opinion of the younger members of the council was," says General Swift, "that, with Brown as a leader, no character would be lost in going on to Montreal;"² but the majority said no, and on the following day,³ at noon, when information came that there was a considerable British force at Coteau du Lac, the foot soldiers and ar-

* November 15, 1813.

tillerymen were all embarked on the transports, under the direction of General Brown, and departed for the Salmon.³ The horses of the dragoons, excepting about forty, were made to swim across the cold and rapidly-flowing river, there a thousand yards wide, and the squadron proceeded to Utica. The flotilla passed up the Big Salmon River about six miles to its confluence with the Little Salmon, near the French Mills, when it was announced

PLACE OF DEBARKATION ON THE SALMON RIVER.³

that the boats were scuttled, and the army was to go into winter quarters in huts.⁵

Thus ended in disaster and disgrace an expedition which, in its inception, promised great and salutary results. It was composed of brave and patriotic men; and justice to those men requires the humiliating confession from the historian that their failure to achieve complete success is justly chargeable to the incompetency of the chief commanders, and the criminal indulgence on the part of those commanders of personal jealousies and animosities. The appointment of Wilkinson to the command of the Northern Army was a criminal blunder on the part of the government. His antecedents were well known, and did not recommend him for a responsible position. The weakness of his patriotism under temptation, and his too free indulgence in intoxicating liquors, were notorious. Hampton was totally unfitted for the responsible station in which he was placed;⁶ and Armstrong, who was a fellow-soldier with them both in the old War for Independence, lacked some of the qualities most essential in the administration of the extraordinary functions of his office in time of war. His presence on the frontier during the progress of the expedition was doubtless detrimental to the service, and he left for the seat of government at a moment when the counsel and direction of a judicious Secretary of War was most needed.⁷

¹ "The grounds on which this decision was taken were—want of bread, want of meat, want of Hampton's division, and a belief that the enemy's force was equal, if not greater than our own."—General J. G. Swift to General John Armstrong, June 17, 1836.

² General Swift's Letter to General Armstrong, June 17, 1836.

³ In a general order issued on the morning of the 13th, General Wilkinson said, "The commander-in-chief is compelled to retire (from the Canada shore) by the extraordinary, unexpected, and, it appears, unwarrantable conduct of Major General Hampton in refusing to join this army with a division of four thousand men under his command agreeable to positive orders from the commander-in-chief, and, as he has been assured by the Secretary of War, of explicit instructions from the War Department."

⁴ This is a view of the place where Wilkinson's flotilla was moored. The boats were soon frozen in the ice, and in February, apprehensions being felt of their capture by the enemy, they were cut and burnt down even with the surface of the ice, and sank when it melted in the spring.

⁵ Colonel Robert Carr's MS. Diary.

⁶ See page 630.

⁷ On the 24th of November, General Brown, then in command of the army at French Mills, wrote, with considerable

On arriving at Salmon River the army was immediately debarked on the frozen shores, and set to work in the construction of huts for winter quarters. Their first labor was the sad task of digging a grave for the remains of General Covington. He was shot through the body on the 11th, and died at Barnhart's on the morning of the 13th, just before the flotilla departed for French Mills.¹ Wilkinson at once left for Malone, after transferring the command of the army to General Lewis,² * November 16, 1813. who, with General Boyd, made

LEWIS' AND BOYD'S HEAD-QUARTERS.

BROWN'S HEAD-QUARTERS.

his head-quarters at a long, low building, yet standing in 1860, a dingy red in color, on the left bank of the Salmon, near the present lower bridge over the river at French Mills or Fort Covington.² Lewis and Boyd obtained leave of absence, and the command of the army devolved upon Brigadier General Brown, who made his head-quarters on the right bank of the river, in a house built by Spafford in 1811 (store of P. A. Mathews in 1860, corner of Water and Chateaugay Streets), and there he received his commission^b of * February 11, 1814. major general of the United

States Army. Hampton, in the mean time, had retired to Plattsburg with his four thousand men. By special orders, sent from Malone by the hand of Colonel Swift (when on his way to Washington with dispatches),³ Wilkinson directed Hampton to join the army at French Mills. This, like other orders, were utterly disregarded by

feeling to the Secretary of War, saying, "You have learned that the grand army of the United States, after marching and countermarching most ingloriously, arrived at this place on the 13th instant. I must not express to you my indignation and sorrow. I did not expect you would have left us." In the same letter he said, "Colonel Scott will hand you this, and can give you all the information you wish relative to our movements since he joined us (see page 652), and the present situation of our army. The public interest would be promoted by the advancement of such men as Scott."⁴ —MS. Letter-book.

¹ Leonard Covington was a brave soldier. He was a native of Maryland, and born in October, 1768. In 1792 he was a cornet of cavalry, and was distinguished for bravery under Wayne in the defense of Fort Recovery (see page 57) in June, 1794. He was in the battle at the Mannece Rapids in August following, where Wayne achieved a victory over the Indians. At the time of the first engagement he held the commission of lieutenant; in the last he was captain. He resigned in 1798. From 1806 to 1807 he represented a district of his native state in the National Congress. In 1809 he was commissioned colonel of light dragoons, and in August, 1812, was breveted brigadier general. He accompanied Wilkinson in his unfortunate expedition that ended at the French Mills. At the time of his death, on the 13th of November, 1813, he was about forty-five years of age.

² There was a block-house at French Mills situated on the property, owned, when I visited there in 1880, by Mr. McCre. General Covington's body was buried just outside of the block-house, in the present garden of Mr. McCre. There also was buried the remains of Major John Johnson, of the Twenty-first Infantry,^a who died at the station on the 11th of December, 1813. The block-house was named Fort Covington in honor of the slain general, and the village that grew up around the French Mills was also called Fort Covington. The place was first settled by a few French Canadians, who built mills there, and from this circumstance it was called French Mills until after the war.

³ "I found Mr. Madison much grieved by the failure of the campaign," General Swift wrote to the author in February, 1800. "It was generally believed that, had younger officers been placed in command of the armies of Wilkinson and Hampton, Montreal would have been taken without the inconsequential conflict at Chrysler's Field, though that affair gave distinction to several officers for meritorious services." Major Totten succeeded Colonel Swift as chief engineer after he left, of whom Brown spoke in the highest terms.

^a Major Johnson was from Pennsylvania. He entered the service as a marine in 1806, and was first lieutenant under Preble at Tripoli in 1804. In April, 1813, he was assistant adjutant general with the rank of major. In June he was commissioned major.

The Army relieved of Hampton's Presence. Sufferings of the Army at the French Mills. Departure of the Troops.

Hampton. He had accomplished the defeat of efforts to take Canada,¹ and, leaving General Izard, of South Carolina, in command, he abandoned the service, and returned to his immense sugar plantations in Louisiana,² followed by the contempt of all virtuous and patriotic men.

General Brown at once adopted measures for making the troops as comfortable as possible. Huts were constructed, but this was a work of much labor, and consumed several weeks. Meanwhile severe winter weather came. They were on the forty-fifth parallel, and at the beginning of December the cold became intense. Most of the soldiers had lost their blankets and extra clothing in the disasters near Grenadier Island, or in the battle on Chrysler's Field. Even the sick had no shelter but tents. The country in the vicinity was a wilderness, and provisions were not only scarce, but of inferior quality. A great quantity of medicines and hospital stores had been lost through mismanagement, and these could not be procured short of Albany, a distance of two hundred and fifty miles. The mortality among the sick became frightful, and disease prostrated nearly one half of the little army before they were fairly housed in well-regulated cantonments.³ Taking advantage of this distress, British emissaries tried, by the circulation of written and printed placards, to seduce the suffering soldiers from their allegiance. One of these written placards (see a fac-simile on the next page), found one morning upon a tree in one of the American camps, and presented to me by Colonel Carr, reads thus:

"NOTICE.—All American Soldiers who may wish to quit the unnatural war in which they are at present engaged will receive the arrears due to them by the American Government to the extent of five month's pay; on their arrival at the British out Posts. No man shall be required to serve against his own country."

It is believed that not a single soldier of American birth was enticed away by such allurements.

The enemy frequently menaced the cantonment at French Mills, as well as at Plattsburg, and toward the close of January Wilkinson received orders from the War Department to break up the post on Salmon River. Early in February the movement was made. The flotilla was destroyed as fully as the ice in which it was frozen would permit, and the barracks were consumed. The hospital at Malone was abandoned; and while Brown, with a larger portion of the troops, marched up the St. Lawrence and to Sackett's Harbor, the remainder accompanied the commander-in-chief to Plattsburg. The enemy at Cornwall were apprised of this movement, and crossed the river on the ice on the day when the last American detachment left French Mills. They were regulars, Canadian militia, and Indians, and plunder seemed to be their chief object. In this they were indulged, and the abandoned frontier suffered much. No discrimination seemed to be made between public and private property, and it was estimated that at least two hundred barrels of provisions were carried away.

Thus closed the events of the campaign of 1813 on the Northern frontier.

I visited the theatre of the scenes described in this chapter partly in the year 1855,

¹ See note 3, page 259.

² Hampton had immense sugar plantations in Louisiana, and was doubtless the most extensive planter and wealthiest man in the Southern States. He owned at one time five thousand negro slaves. He was a native of South Carolina, and was born in 1754. He was an active partisan soldier with Sumter and Marion. In 1808 he was commissioned a colonel of light dragoons, and a brigadier general in 1809. On the 2d of March, 1813, he was promoted to major general. His inefficient career is recorded in the text. In April, 1814, he resigned his commission, to the great joy of the Northern Army, with whom his deportment and habits had made him unpopular. He died at Columbia, South Carolina, on the 4th of February, 1835, at the age of eighty-one years.

³ The army was cantoned as follows on the 1st of January, 1814:

The artillery, under Colonel Alexander Macomb, of the Engineers, at the block-house on Mr. John M'Crea's property. The wounded from Chrysler's were taken into the block-house. This was called the *Centre Camp*. The *East Camp*, under the charge of Colonel E. W. Ripley, was on Seth Blanchard's property. The *North Camp*, under Colonel James Miller, was on the property of Allen Lincoln. The *West Camp*, under Colonel Campbell, was on W. L. Manning's property. The *South Camp* was on Hamlet Mear's property. The owners above mentioned were the proprietors of the land when I visited Fort Covington in the summer of 1860.

Attempt to seduce the American Soldiers from their Allegiance.

Notice

All American Soldiers who may wish
to quit the unnatural war in which they
are at present engaged will receive the ar
rears due to them by the American Govern
ment to the extent of five months pay, on
their arrival at the British out posts.
No man shall be required to serve
against his own country.

FACSIMILE OF A WRITTEN PLACARD.

Visit to Carleton Island.

Remains of Fortifications there.

Their History.

Vincent¹ by railway, and lodged in an inn connected with the road station there, standing on the margin of the St. Lawrence. It was a chilly night. The next morning was clear and blustering, and the surface of the river was dotted with the white caps of the waves. After an early breakfast we started for Carleton Island; three miles down the St. Lawrence, in a skiff rowed by a son of the proprietor of the hotel. As we approached the rocky bluff at the head of the island we observed several chimneys standing alone (built of stone, some perfect, some half in ruins), which mark the remains of strong and somewhat extensive fortifications erected there by both the French and English during the last century, that post being a key to the internavigation of the St. Lawrence River and Lake Ontario. We moored our boat in a small sheltered creek by which the head of the island is made a pleasant peninsula of eight or ten acres. On this stand the residences of Mr. Charles Pluche, an intelligent French Canadian (who owns five hundred acres of the western end of the island²), and of his brother. That creek separates the peninsula from the higher bluff on which the ruins of Fort Carleton are seen. Mr. Pluche kindly accompanied us to these ruins and other interesting places near, and, but for the increasing violence of the wind, which became almost a gale at noon, our visit would have been one of unmixed satisfaction.

The ruins of Fort Carleton are upon the most elevated portion of the island, and from the ramparts may be viewed some of the most picturesque scenery of the famous Thousand Islands and the New York shore. At what precise time fortifications were first erected there is not positively known. The English found it quite a strongly fortified post at the time of the conquest of Canada, at a little past the middle of the last century, and, perceiving its value in a military point of view (for it commands the main channel of the St. Lawrence), they greatly strengthened it.³ They occupied it until 1812. On the declaration of war that year most of the barracks to which the

now standing chimneys belonged were in good order, and before Cape Vincent was settled two or three families resided on the island. A garrison, composed of a sergeant and three invalid soldiers, and two women, occupied the fort when the war broke out. As soon as intelligence of the declaration reached the frontier, Captain Abner Hubbard, of Hubbard's (now Millen's) Bay, a soldier of the Revolution, started in a boat, with a man and boy, to

REMAINS OF FORT CARLETON.⁴

¹ This was known as Gravelly Point at the time of the War of 1812. It was laid out as a village in 1817. It is the northernmost town of Jefferson County, and is the terminus of the Rome, Watertown, and Cape Vincent Railway. From this point is a ferry to Kingston, passing through Wolf or Grand Island by a canal dug for the purpose a few years ago. The railway wharf is 3000 feet in length, with large store-houses and a grain-elevator.

² The island contains 1274 acres. The portion here alluded to was a military class-right, located there in 1786. The island forms a part of Cape Vincent Township, Jefferson County, New York. The island received its name from Governor Sir Guy Carleton.

³ Long, in his *Voyages*, printed in London, 1791, after speaking of Oswegatchie (Ogdensburg), says, "Carleton is higher up the river, and has greater conveniences to it than Oswegatchie, having an excellent harbor, with strong fortifications, and well garrisoned, excellent accommodations for shipping, a naval store-house for Niagara and other ports."

⁴ This view is from the N. N. E. point of the fort, and shows eight of the nine chimneys yet standing. On the extreme right, beyond the little vessel, is seen Cape Vincent.

capture Fort Carleton. He succeeded, and this was the first seizure of a military post after the declaration of war. He sent a boat on the following day to bring away the stores, and soon afterward the barracks were burned. Nine bare chimneys have stood there ever since, gray and solitary tokens of change. There were about twenty originally within the fort, some of which are in ruins. There were also chimneys on the little peninsula near Mr. Pluche's house, and along the shore northward, where, on a fine grassy point, vestiges of the gardens that were attached to the officers' quarters may yet be seen. The moat that surrounded the fort was dug in the rock, and so was the well in the northwestern portion of the works.

A little northward of the fort was the garrison cemetery; and beyond this, a fourth of a mile from the ramparts, is an ancient Indian burial-ground, in a grove of small trees on the verge of the river. In a grave that was opened there in the spring of 1860 was found the skeleton of a chief, bearing evidence that the body was first wrapped in the hide of a buffalo, then swathed in birch-bark, and next deposited in a board coffin. With the skeleton was found a silver gorget, on which was engraved a running deer; also a fine silver armlet (now in possession of the writer) bearing the royal arms of England,¹ silver ear-rings, and other trinkets. Near this burial-ground was found, the year before, a silver medal given by the British government to Colonel John Butler. It is known that Butler and Sir John Johnson encamped, with the Indians from the Mohawk Valley, on Carleton Island in 1775, when on their way to join the British at Montreal. The

INDIAN ARMLET.

medal was doubtless lost there at that time, and the chief who bore the armlet and gorget was probably one of the expedition, who perished there.

After partaking of some refreshments from the hands of Mrs. Pluche and daughter, we re-embarked in our little boat at noon. The wind was blowing almost a gale from the direction of Lake Ontario, bringing down waves that made the voyage a dangerous one. At times, when in the trough, we could not see the land. Our oarsman, a stout, resolute young man, labored faithfully, with the boat's bow up stream, but he could not make an inch of headway toward Cape Vincent; so, after heavy exertions and some anxiety, we were driven to the southern shore of the river, at a point opposite our place of departure. There we abandoned the boat and started on foot for Cape Vincent, when we met a farmer, with his wagon and rick, going to his field for hay. We hired him to take us to the Cape, and on soft, sweet dried grass we lay and rested in the cool air to the end of the wagon journey. The remainder of the afternoon was spent at the Cape in strolling about the little village, for the river was too rough to make a wished-for voyage to Grenadier Island either safe or pleasant. There we met General William Estes, who was conspicuous in the "Patriot War" in Canada in 1838, and visited the dwelling of Dr. Webb, the kitchen part of which is the remnant of the house of Richard M. Esseltyn, which, with others, was destroyed by the British. In it an American was shot.

We lodged at Cape Vincent that night, and at five o'clock the next morning departed in a lake steamer for Clayton (French Creek), sixteen miles below, where we landed, and breakfasted at the "Walton House," kept by a son of William Johnston, known among his British contemporaries in 1838 as "the Pirate of the Thousand Islands."

¹ This armlet is little more than ten inches in length and two and a half in width, and the ornamentation is embossed work. In addition to the royal arms is a trophy group, composed of helmet and cuirass, cannon, spears, and banners, the latter bearing the letters G. R., the monogram of the king; and a group inclosed within branches of the olive and palm, composed of a crown resting upon a sword and sceptre crossed. These armlets, gorgets, and other silver ornaments were distributed freely among the Indian chiefs by the British government, as one of the means of securing their loyalty. The gorget was always suspended from the neck, and rested upon the upper part of the breast.

Visit to Rock Island, the Home of Johnston of the Thousand Islands.

Peel Island and Its Associations.

There we were informed that the hero of many a romantic legend of the frontier was still living, in the light-house of which he was keeper, on a solitary island a few rods in circumference, five miles below, where, in company with two young ladies—traveling companions—I had visited him two years before. Hiring a boat, and a good fisherman as oarsman, we set out after breakfast to visit Mr. Johnston, prepared with fishing tackle to indulge in sport on the way. We trolled faithfully, but only a solitary pickerel of moderate size rewarded our watchfulness of the lines. Our dreams of mighty masquelonges, forty pounds in weight, which some young ladies, they say, sometimes "hook," were dispelled; but the kindly oarsman came to the assistance of our humbled pride as sportsmen with the pleasant suggestion that the late storm of wind had so roiled the water that "nobody couldn't do nothin' at fishin' when the creeturs couldn't see the spoon." And we were no more successful in catching a hero.

Silence reigned on Rock Island.¹ Not a living thing was seen. Johnston lived there entirely alone, at the age of seventy-eight years. He was now absent, and the island was deserted.² After making a sketch of the light-house and its locality, we left in disappointment, and again trolled unsuccessfully as we floated down the current about two miles to Peel Island, the scene of Johnston's exploit which caused him to be declared an outlaw by his own government, and gave him the name

LIGHT-HOUSE KEPT BY JOHNSTON.

of "Pirate." This exploit was the destruction of the British mail steamer *Sir Robert Peel* at this place on the night of the 29th and 30th of May, 1838, by Johnston and some disguised associates, who were engaged with the Canadians in their armed resistance to government. The immediate object of the assailants appears to have been the capture, and not the destruction of the steamer, and with her aid to seize, on the following day, the steamer *Great Britain*, and convert the two into cruisers on the lake. Johnston had but thirteen men with him, but was promised that two

hundred should be within call on the shore of the neighboring main. They were not there. He had not sufficient men to manage the powerful steamer, and, toward morning, he committed her to the flames. She was seized at

PEEL ISLAND.

¹ This is an appropriate name. It is a group of bare rocks, with a few trees and shrubs growing in the interstices. Johnston had filled some of the hollows with earth, brought from the main shore in his boat, and we found them covered with vegetables and flowers. The barren island possessed a pleasant little garden.

² This is in the midst of the Thousand Islands, five miles below Clayton, on the south side of the steam-boat channel. At the time of my visit there in 1858 I ascended to the lantern, and from that elevation counted no less than seventy islands, varying from rods to miles in circumference.

Johnston's Exploits among the Thousand Islands. His Arrests and Imprisonments. His Commission as Commodore.

Ripley's dock, on Wells's Island, taken into the stream, set on fire, and floated down and lodged against a small island near (represented in the sketch on the preceding page), which has since been known as Peel Island.¹

¹ From the lips of Mr. Johnston I received a very minute and particular account of this transaction. He was living at Clayton when the "Patriot" war broke out. Being a bold, adventurous man, and cordially hating the British government and its employes, he was easily persuaded by the American sympathizers with the "Patriots" to engage in the strife. His thorough knowledge of the St. Lawrence from Kingston to the Longue Sault pointed the "Patriots" to him as a valuable man for the service on that frontier. He says that the leaders promised him ample assistance in men and means, but disappointed him. They employed him to capture the *Peel* and seize the *Great Britain*. The former was a new and staunch vessel, built at Brockville in 1837. She was 30 feet wide and 160 in length, and was commanded by Captain John B. Armstrong. On the evening of the 20th of May, 1838, she was on her way up from Prescott to Toronto, with nineteen passengers, and stopped at M'Donnell's Wharf, on Wells's Island, for wood. Johnston and thirteen men in disguise were lying in wait at Ripley's wood wharf near by. They were armed with muskets and bayonets, and painted like Indians. They rushed on board, crying out, "Remember the *Caroline*!" (an American vessel that the British had destroyed at an American wharf a few months before), and compelled the passengers, in terrible alarm, and in their night-clothes, to go on shore. Their baggage was taken on shore likewise, and in this plight they remained, in a woodman's shanty, until morning, when they were conveyed to Kingston by the *Oncida*. When the insurgents had taken possession of the *Peel*, they hauled her out into the stream, expecting, as we have observed in the text, to be joined by a large number of others from the main. They did not appear. Johnston and his men, who, he says, "looked like devils," could not manage her, and she was set on fire. Governor Marcy declared Johnston an outlaw, and offered a reward of \$500 for his person, and smaller sums for each of his confederates who might be convicted of the offense. The

Mr. Johnston

Earl of Durham, governor of Canada, offered \$5000 for the conviction of any person concerned in the "infamous outrage." Johnston boldly avowed himself the leader of that party, in a proclamation which he issued from "Fort Wallace" on the 10th of June, 1838. He declared that the men under his command were nearly all Englishmen, and that his headquarters were on an island in the St. Lawrence, not within the jurisdiction of the United States. "I act under orders," he said. "The object of my movements is the independence of the Canadas. I am not at war with the commerce or property of the United States." "Fort Wallace" was a myth. It was wherever Johnston happened to be.

Johnston was now placed in peril between the officers of the two governments, and for several months he was a refugee, hiding among the Thousand Islands, and receiving food at night from his daughter, a beautiful girl eighteen years of age, small in stature and delicate in appearance, who handled oars with skill, and who, in a light boat, sought his hiding-places under cover of darkness. She was often watched and followed by persons in the interest of the United States government, but her thorough knowledge of the islands and skill in rowing allowed her to elude them. Finally Johnston joined in the expedition to Prescott, to "keep out of the way of both parties," he said. After the defeat of the insurgents at Windmill Point (see page 583), he was seen publicly in the streets of Ogdensburg, where he had many sympathizers, and was not arrested. He saw that all was lost, and, weary of hiding, he resolved to give himself up to the authorities of the United States, and cast himself upon the clemency of his country. He made an arrangement with his son John to arrest him and receive the \$500 reward. On the 17th of November (1838) he left Ogdensburg in a boat, with his son, when Deputy Marshal M'ulloch pursued him in a boat over which floated the revenue flag. Johnston was overtaken about two miles above Ogdensburg. He was armed with a Cochran rifle, two large rife-platois, and a bowie-knife. He agreed to surrender on condition that he should give up his arms to his son. He was then conducted back to the village, and delivered into the custody of Colonel (late Major General) Worth. He was taken to Syracuse, tried before Judge Conklin on a charge of violating the neutrality laws of the United States, and acquitted. He was again arrested, and escaped, when a reward of \$200 was offered for his arrest. He gave himself up at Albany, and, after lying three months in jail, was tried, found guilty, and sentenced to one year's imprisonment, and a fine of \$250. His faithful daughter, who had acquired the just title of the "Heroine of the Thousand Islands," hastened to Albany, and shared prison life with her father. After being there six months, with his faithful child at his side, he found means, by making a key of some zinc furnished him by a friend, to escape. The plan was made known to his daughter, who left the prison, and waited for him at Rome. One evening, at eight o'clock, he left the jail, and before daylight had walked forty miles toward Rome. When he arrived there, finally, at the house of a friend, he was dreadfully exhausted. He went home, and was unmolested; but the "Patriots" were determined to drive him into active service, and he received a commission creating him commander-in-chief of all the naval forces in "Patriot service" on the lakes.* This position had been accorded to him by common consent the year before. But he had seen enough of that kind of service, and he declined the office. A year or more afterward, when the agitation on the frontier had pretty

* Johnston's commission as commodore is before me, printed and written on thin paper. On the margin of it, occupying nearly one half of the space, is a rough engraving, a copy of which is given on the opposite page, reduced to half the size. Above this design (in which the American eagle is seen bearing off the British lion, whose crown has fallen; a maple leaf, symbolic of Canada, and two stars representing the two provinces) were little pictures of the arms of the

Johnston's heroic Daughter.

His Birthplace.

His Services in the War of 1812.

We returned to Clayton, and there found "Commodore" Johnston, a hale man, full of spirit, but suffering some from recent illness. I spent two hours pleasantly and profitably with him and his courageous daughter, listening to narratives of the stirring scenes in which they had been engaged twenty-two years before, and of which I have given a meagre outline in note 1, page 662. The "Heroine of the Thousand Islands" was now Mrs. Hawes, an intelligent and interesting woman, and mother of several children. Mr. Johnston is a man of medium size, compactly built, and full of pluck. His life-history was a stirring one previous to the "Patriot War." During the War of 1812 he was employed by Chauncey and Wilkinson in active service on the frontier waters; and he gave the British, whom he cordially disliked, a great deal of trouble. He was a native of Canada.¹ On the breaking out of the war he was residing at Bath, above Kingston, and conveyed some Americans across the lake to Sackett's Harbor in a large bark canoe. Not being satisfied with the militia service, in which he had been engaged, he remained on the American side, and from that time until the close of the war was engaged in the secret service on Lake Ontario and the St. Lawrence, with a permit to capture all British public property that he might find afloat. His vessel was a gig, or light, swift boat, called the *Ridgeley*, and his companions were a corporal and five armed seamen. With these he captured bateaux and stores; with these he conveyed Wilkinson down the St. Lawrence, beyond the Longue Sault;² and with these he bore the body of the gallant Covington from Barnhart's to the French Mills.³ On one occasion he captured the Canadian dispatch mail on its way from Governor Prevost at Montreal to the lieutenant governor at Toronto, on delivery to Chauncey, was found to contain information of great value to the American commander. On another occasion he was out in Chauncey's boat, and

much ceased, a petition for his pardon was numerously signed. He took it to Washington himself, and, just at the close of Mr. Van Buren's administration in March, 1841, presented it to the President. "Mr. Van Buren," he said, "scolded me for presuming to come there with such a petition; but I waited ten days, presented it to President Harrison, and he pardoned me."

Mr. Johnston has lived at Clayton ever since. His offense was finally overlooked, and for several years the government that offered a reward of \$500 for him as an outlaw has been paying him \$350 a year for taking charge of one of its light-houses, in sight of the spot (Peel Island) where the offense was committed! Time makes great changes. When the late Rebellion broke out in 1861, Johnston, then about eighty years of age, went to Washington City, called on General Scott, and offered his services to his government.

State of New York, and below two others representing an eagle on its nest arranging its ears of wheat. The commission runs thus:

"Head-quarters, Windsor, U. C., September 5, 1839.

"WILLIAM JOHNSTON, Esq.:

"SIR.—By authority of the Grand Council, the Western Canadian Association, the great Grand Eagle Chapter, and the Grand Eagle Chapter of Upper Canada, on Patriot Executive duty—You are hereby Commissioned to the Rank in Line of a Commodore of the Navy, Commander-in-Chief of all the Naval forces of the Canadian Provinces, on Patriot service in Upper Canada.

"Yours with respect,

H. S. HAND,

"Commander-in-chief of the Northwestern Army on Patriot service in Upper Canada.

"E. J. ROBERTS, Adjutant General, N. W. A. P. S."

This commission is indorsed by "John Montgomery, of the Grand Eagle Chapter of Upper Canada, on Patriot Executive duty.

"ROBERT ROBERTSON, Secretary."

"Sworn to before me, at Windsor, U. C., this 25th day of September, 1839.

"H. S. HAND."

The seal attached to the commission appears to have been impressed by a common glass signet, on which are the words, "*Remember me to all friends.*"

JOHNSTON'S COMMISSION.

These "Chapters" refer to the secret leagues of sympathizers with the insurgents that were formed along the entire frontier, under the name of "Hunters' Lodges." These were suppressed by President Tyler, who issued a proclamation for the purpose on the 5th of September, 1841.

¹ He was born at Three Rivers on the 1st of February, 1782. His father was an Irishman, and his mother was a Dutch girl from New Jersey. After the war he lived at Sackett's Harbor and Watertown, and kept a tavern for a while in the latter village. He finally settled at French Creek (now Clayton), where he and most of his family have since resided.

² See page 661. Johnston was well acquainted with Chrysler, and tried to get the army below his residence, that it might not suffer during the engagement that seemed inevitable. During the battle of Chrysler's Field or Farm, Johnston carried powder from the boats to the dragoons, who delivered it to those in the fight. It is well known that General Wilkinson indulged too freely in spirituous liquors. Johnston assured me that, at the time of the battle of Chrysler's Field, the commander-in-chief was so intoxicated ("indisposed," as charity phrases it) that he could not leave his boat.

³ See page 660.

was wrecked on the Canada shore in a storm. The boat was a ruin. They were discovered. Johnston was identified, and a body of militia and Indians were sent out from Kingston (where he had been hung in effigy) to arrest him. He directed his men not to avoid capture, but to affirm that they had been sent out for deserters, and were returning home when struck by the storm. Their story was believed, and within a week they were sent home on parole. Johnston meanwhile concealed himself in a huge hollow stump, in a field of oats, for several days, and it was three weeks before he found a way to return to Sackett's Harbor.

There was a crowd of visitors at the "Walton House," for it is a favorite place of summer resort for those who love good fishing, boating, and the most picturesque scenery of the Thousand Islands. The St. Lawrence, filled with these islands, is there about nine miles wide. During an afternoon I visited the place of Brown's encampment when attacked by the British,¹ and made the sketch on page 649. Toward sunset the quiet of the little village was disturbed, and the faces of all the inhabitants were turned skyward to observe the passage over them of a man in a balloon, a thousand feet in the air, who had ascended from Kingston, and, as we were informed next day, descended far toward the Sorel, the outlet of Lake Champlain. On the following morning I went down the St. Lawrence to Ogdensburg, and made the visits there and in the vicinity recorded in Chapter XXVIII. On Friday, the 27th, I breakfasted at Malone,² and after a brief interview with Sidney W. Gillett, Esq., whose elegant new mansion stood fronting on Main Street in that village, on the site of the arsenal established there in 1812, I rode out to Fort Covington (French Mills), about fourteen miles northward, in a light wagon drawn by a span of fleet black ponies.

FRENCH MILLS IN 1860.³

The Honorable James Campbell, who was an ensign, and was stationed at French Mills and vicinity during a greater portion of the war, in the service of the Quartermaster's and Commissary Departments, was yet living, and residing with his daughter at Fort Covington. I had been at his house, on the road between Massena Springs and St. Regis, a few years before; and I found him now, as then, able to say that he had never been sick in his life, though almost fourscore years of age. His mental

¹ See page 648.

² Malone is the capital of Franklin County, and is pleasantly situated on the Salmon River. It was the only incorporated village in the county, and had a population of about 2000. The banks of the river there, below the railway bridge, are rugged and picturesque. Settlements were made there at the beginning of this century.

³ The building on the right, with its gable next to the dam, is the original mill erected there by the French Canadians.

Veteran Soldiers at Fort Covington. Journey to Rouse's Point. La Colle. Passage of St. Lawrence Rapids.

vigor seemed perfect, and his memory of events in his experience was vivid. He was stationed at French Mills early in the war, in charge of rations, which were served regularly to the St. Regis Indians in order to keep them quiet.¹ He was assistant store-keeper, and when Wilkinson left there he was placed in charge of all the provisions of the army. He continued in that service until its departure in February, 1814. Judge Campbell kindly accompanied me to places of interest about Fort Covington, namely, the original mill;² the head-quarters of Boyd and Brown;³ the place of debarkation, where the gun-boats were destroyed;⁴ the site of the respective cantonments of the army; and of the block-house on the M'Crea property,⁵ whose well, contained within the building, was yet standing.

James Campbell

THE MAGNANIMOUS WELL.

While on the lower bridge over the Salmon, sketching the picture of the Mills on the opposite page, an old gentleman approached, and was introduced to me by Judge Campbell. He was Colonel Ezra Stiles, the deputy collector of the port at Fort Covington,⁶ who enlisted in the Eleventh Regiment in December, 1812, when a little more than fourteen years of age. He was with Hampton in the affair at Chateaugay, and was with General Brown in all of his military operations on the Niagara frontier during the remainder of the war. He left the service when the army was disbanded in 1815.

I returned to Malone in time to take the cars for Rouse's Point at about three o'clock P.M. It was a bright and very delightful day. In that journey, fifty-seven miles, we crossed the foot of the great Adirondack slope, the northernmost portion of the Alleghany or Appalachian range of mountains, that traverse the sea-board states from Georgia to the St. Lawrence level. The lofty peaks of the Adirondacks were in sight southward, while the eye, glancing northward over an immense wooded prairie, rested upon the Mountain back of Montreal. At near six o'clock I took a hurried meal at the village of Rouse's Point, and hiring a light wagon, fleet horse, and intelligent driver, rode to La Colle River, a tributary of the Sorel, and made a sketch of a block-house there before sunset. By a slight circuit we rode through La Colle village and Odelltown in the twilight. I spent the night at Rouse's Point, and on the following morning journeyed to Champlain, Chazy, and Plattsburg. Of the events which have made all the places just named famous in our history, and of my visit there, I shall hereafter write.

In the summer of 1855 I spent a short time at Massena Sulphur Springs, on the Racquette River, seven miles by road from the St. Lawrence. While sojourning there I visited St. Regis, as already mentioned, and, on leaving, crossed the St. Lawrence from Lewisville, at the head of the Longue Sault, for the purpose of visiting the battle-field on Chrysler's Farm. It was a warm and pleasant day late in August,⁷ and a friend accompanied me. At Lewisville we hired a water-man, who engaged to take us safely across the swift and, in some places, turbulent stream, there divided by two or three islands. We shot obliquely across and down the first channel, rounded the lower cape of an island, went up its farther shore in an eddying current, and in a similar manner shot across to another island. In this zigzag way we made the really perilous passage of the rapids to the village of Chrysler, where we lunched on apple-pie, cheese, and cold water, and hired a conveyance to the battle-ground and Williamsburg beyond.

⁷ August 27, 1855.

¹ See page 373. ² See picture on page 664. ³ See pictures on page 656. ⁴ See page 655. ⁵ See note 2, page 656. ⁶ Fort Covington is a part of entry; but the steam-boats seldom go above Duquesne, a small village a mile below, and about half way between the Mills and the boundary-line between the United States and Canada.

Visit to the Battle-ground on Chrysler's Farm. A British Soldier and his Medal of Honor. Scene on the St. Lawrence

We were kindly welcomed at the Chrysler mansion, delineated on page 652, by Mr. James Croile, the proprietor, who pointed out the various localities of the battle,

and accompanied us to the house of his nearest neighbor, Peter Brouse, who was a soldier in the Dundas militia, and participated in the fight. Mr. Brouse related with much self-satisfaction the exploits of the British on that day, and, with much genuine pride,

Peter Brouse

exhibited a small silver medal, suspended by a ribbon, which he had lately received. These had been presented to the surviving soldiers of that and other battles, from 1793 to 1814, by the British queen as a sort of "Legion of Honor." The picture here given is the exact size of the original, and exhibits both sides. On one side is the effigy of the queen and her name; and on the other a representation of her majesty crowning a soldier with a civic wreath, and the words, "TO THE BRITISH ARMY—1814—1793."

One of Chrysler's barns, pierced and battered by bullets, was yet standing, and appears the larger (though the most remote) in the group of outbuildings in the picture on page 652. In the orchard, between the mansion and the river, may be seen the burial-places of the killed in the battle.

VICTORIA MEDAL.

We dined with Mr. Croile and his family in the Chrysler mansion, and at two o'clock started for Williamsburg, four and a half miles up the river. Our road lay along the margin of the stream, through one of the most fertile districts of Canada. We had not proceeded far before a small cloud, whose gathering we had scarcely noticed, sent down a violent shower of rain. We sought shelter under a wide-spreading tree in front of a plain dwelling, from which came the giggling of girls who were amused at our plight. The tree was no shelter, and we unceremoniously took refuge from the storm in the house, where those who had innocently made merry over our drenching kindly regaled us with strawberries and cream, and made the balance-sheet of courtesy in their favor. The storm was brief. The sun burst forth in sudden splendor, and its rays, wedded to the retiring rain-drops, wove a gorgeous iridescent vail, marked, like the bow on the cloud, with specific curves, but lying prone upon the bosom of the St. Lawrence, and bathing its surface and islands in prismatic beauty. It was a charming spectacle, and has left an ineffaceable picture on the memory.

At four o'clock we reached Williamsburg (whose name had just been changed to Morrisville, in honor of a distinguished officer in the postal department of Canada), where we dismissed our carriage, intending to go by water to Prescott. We were directed to the "Grand Trunk Hotel" as the best in the village, which is remarkable in our recollection for swarms of flies, flocks of spiders, and an obliging host. There we supped and lodged, and before dawn took passage in a Montreal steamer for Prescott, where we breakfasted. Crossing to Ogdensburg, we spent the day and night there, and on the following day made a voyage through the Thousand Islands to Cape Vincent, from whence I journeyed by railway to my home on the banks of the Hudson.

CHAPTER XXX.

"She comes! the proud invader comes
To waste our country, spoil our homes;
To lay our towns and cities low,
And bid our mothers' tears to flow;
Our wives lament, our orphans weep—
To seize the empire of the deep!"—ASGOT UMBREAVILLE.

HASTISE THE AMERICANS INTO SUBMISSION! was the fiat of the British Cabinet at the close of 1812, and it was determined to send out a land and naval force sufficient to do it. It was evident that efforts such as have been recorded in preceding chapters would be made by the Americans for the invasion and conquest of Canada, and that the successes achieved by them on the ocean would stimulate them to the performance of more daring exploits on the waves which Britannia claimed to rule.

These efforts must be met, and Great Britain put forth her strength for the purpose. It was determined to blockade and desolate the coasts of the United States, lay waste their sea-port towns, destroy their dock-yards, and thus not only endeavor to divert their military strength from the Canada frontier, but destroy the centres of their commercial and naval power, dispirit the people, intensify the domestic resistance to the farther prosecution of the war, and secure the absolute submission of the nation to British insolence and greed. Admiral Warren's fleet in American waters was re-enforced, and Sir George Cockburn, a rear admiral in the British navy, and willing instrument in the accomplishment of work which honorable English commanders would not soil their hands with, was made his second in command. He was specially commissioned to wage a sort of amphibious and marauding warfare on the coasts, from the Delaware River southward.

On the 26th of December, 1812, an order in Council declared the ports and harbors in the Chesapeake and Delaware Bays to be in a state of rigorous blockade. Soon afterward additional ships of war and transports arrived at Bermuda, bearing a considerable land force, and well furnished with bomb-shells and Congreve rockets, to be used in the conflagration of sea-board towns.¹ A part of the land force consisted of French prisoners of war, who preferred to engage in the British marine service to risking indefinite confinement in Dartmoor Prison, in England.

The first appearance of blockading vessels was on the 4th of February,² when four 74-gun ships and several smaller armed vessels³ entered the Virginia Capes and bore up toward Hampton Roads. The fleet was under the command of Admiral Cockburn (whose flag-ship was the *Marlborough*), assisted by Commodore Beresford, whose pennant was over the *Poictiers*.³ They bore a land force of about eighteen hundred men, and were well supplied with small surf-boats for landing. Their appearance alarmed all lower Virginia, and the militia of the Peninsula and the region about Norfolk were soon in motion. An order soon went out from the Secretary of

¹ This rocket is a very destructive species of fire-work, invented by Sir William Congreve, an English artillery officer, in 1804, and first used against Boulogne in 1806. The body of the machine is cylindrical, and its head conical. It is filled with very inflammable materials, on the combustion of which, as in the common sky-rocket, the body is impelled with continued acceleration.

² *Marlborough*, Admiral Cockburn; *Dragon*, Captain Berry; *Poictiers*, Commander Beresford; and *Victorious*, Captain Talbot, were the 74's. These were accompanied by the *Acacia*, 44, *Kerr*, *Junon*, 38, *Kerr*, *Stalira*, 38, *Stackpole*; *Maitland*, 36, *Burdett*; *Helvidera*, 36, *Byron*; *Narcissus*, 32, *Aylmer*; *Lauristonius*, 21, *Gordon*; *Tartarus*, 20, *Pasco*. Others soon joined these, making a very formidable fleet.

³ See page 467.

Defenses of Norfolk and Hampton Roads. Discretion of the Blockaders. Patriotism on the Shores of Delaware Bay.

• March 16, 1813, the Treasury^a for the extinguishment of all the beacon-lights on the Chesapeake coast.

It was supposed that Hampton and Norfolk would be attacked. The latter place was pretty well defended by fortifications which General Wade Hampton had caused

INTERIOR OF OLD FORT NORFOLK IN 1853.

to be thrown up on Craney Island, five miles below the city, under the superintendence of Colonel Armistead. The masters and mates of merchant vessels in Norfolk harbor joined themselves into volunteer military companies and garrisoned old Fort Norfolk. The frigate *Constellation*, 38, Captain Tarbelle, was lying near, supported by a flotilla of gunboats. Old Point Comfort soon bristled with bayonets; and the British commanders thought it more prudent at that time to destroy the small merchant craft found in Chesapeake Bay than to enter Hampton Roads. They did little more than this for several weeks, when Commodore Beresford was sent, with the *Poictiers*, *Belvidera*, and some smaller

vessels, to blockade the Delaware Bay and River, and teach the inhabitants along their shores the duty of submission. He found his unwilling pupils very refractory; for when, on the 16th of March, he pointed the guns of the *Poictiers* toward the village of Lewis, near Cape Henlopen, and said, in a note to "the first magistrate" of that little town, "You must send me twenty live bullocks, with a proportionate quantity of vegetables and hay, for the use of his Britannic majesty's squadron," offering to pay for them, but threatening, in the event of refusal, to destroy the place, the "first magistrate" of Lewistown, and all the people, from Philadelphia to the sea, said in substance, as they every where prepared for resistance, "We solemnly refuse to commit legal or moral treason at your command. Do your worst." They had heard of his coming, and had already, on both sides of the bay and river, assembled in armed bodies at expected points of attack to repel the invaders. The spirit of the fathers was aroused, some of whom, full of the fire of the flint, were yet abiding among them. At Dover, on the Sabbath day, the drum beat to arms, and men of every denomination in politics and religion, to the number of almost five hundred, responded to the call. Among them was Jonathan M'Nutt, an age-bent soldier of the Revolution, who exchanged his staff for a musket and engaged in the drill. Pious Methodist as he was, he did not regard the day as too holy for patriotic deeds, and he spent the whole afternoon in making ball-cartridges.¹ This was the spirit every where manifested. At Smyrna, New Castle, and Wilmington, the inhabitants turned out with spades or

muskets, prepared to cast up the earth for batteries and trenches,² or to be soldiers to meet the foe. At the latter place, the venerable soldier of the Revolution, Allan M'Lane, took the direction of military affairs.³ The specie of the banks of

New Castle and Wilmington was sent to Philadelphia for safety; and in the latter city Captain William Mitchell and his *Independent Blues*, and Captain Jacob H. Fis-

The British threaten and hesitate.

Attack on Lewistown.

Cockburn's Operations.

ler and his *Junior Artillerists*, formed in three days for the occasion, volunteered to garrison Fort Mifflin.

Beresford was astonished by the spirit of the people, and held the thunders of his threat at bay for almost three weeks. Governor Haslet, in the mean time, summoned the militia to the defense of the menaced town, and on his arrival at Lewis on the 23d he reiterated the positive refusal of the inhabitants to furnish the invaders with supplies. Beresford continued to threaten and hesitate; but at length, on the evening of the 6th of April, he sent Captain Byron, with the *Belvidera* and smaller vessels, to attack the village. They drew near, and the *Belvidera* sent several heavy round-shot into the town. These were followed by a flag of truce, bearing from Byron a renewal of the requisition. It was answered by Colonel S. B. Davis, who commanded the militia. He repeated the refusal, when Byron sent a reply, in which he expressed regret for the misery he should inflict on the women and children by a bombardment. "Colonel Davis is a gallant officer, and has taken care of the ladies," was the verbal answer. This correspondence was followed by a cannonade and bombardment that was kept up for twenty-two hours. So spirited was the response of a battery on an eminence, worked by Colonel Davis's militia, that the most dangerous of the enemy's gun-boats was disabled, and its cannon silenced. Notwithstanding the British hurled full eight hundred of these eighteen and thirty-two pound shot into the town, and many shells and Congreve rockets were sent, the damage inflicted was not severe. The shells did not reach the village; the rockets passed over it; but the heavy round shot injured several houses. No lives were lost. An ample supply of powder was sent down from Dupont's, at Wilmington, while the enemy supplied the balls. These fitted the American cannon, and a large number of them were sent back with effect.¹

On the afternoon of the 7th the British attempted to land for the purpose of seizing live-stock in the neighborhood, but they were met at the verge of the water by the spirited militia, and driven back to their ships. For a month the squadron lingered, and then, dropping down to Newbold's Ponds, seven miles below Lewistown, boats filled with armed men were sent on shore to obtain a supply of water. Colonel Davis immediately detached Major George H. Hunter with a few men, who drove them back to the ships. Failing to obtain any supplies on the shores of the Delaware, the little blockading squadron sailed for Bermuda, where Admiral Warren was fitting out re-enforcements for his fleet in the American waters.

The blockaders within the Capes of Virginia were very busy in the mean time. The fleet was under the command of Admiral Cockburn, and took chief position in Lynn Haven Bay.² He continually sent out marauding expeditions along the shores of the Chesapeake, who plundered and burnt farm-houses, carried off negroes and armed them against their masters, and seized live-stock wherever it could be found. The country exposed to these depredations was extensive and sparsely settled, and it was difficult to concentrate a military force at one point in sufficient time to be effective against the marauders. In some instances they were severely punished, but these were rare.

More felicitous and more honorable exploits were sometimes undertaken by the blockaders under Cockburn. On the 3d of April a flotilla of a dozen armed boats from the British fleet, under Lieutenant Polkingthorne, of the *St. Domingo*, 74, entered the mouth of the Rappahannock River, and attacked the Baltimore privateer *Dolphin*, 10, Captain Stafford, and three armed schooners prepared to sail for France. The assault was unexpected and fierce. The three smaller vessels were soon taken, but the struggle for the *Dolphin* was severe. She was finally boarded,

Cockburn's Desires restrained by Fear.

The British capture Frenchtown.

Havre de Grace threatened.

and for fifteen minutes the contest raged fearfully on her deck. Overpowered by numbers, Captain Stafford was compelled to submit.¹ In this affair the loss was much heavier on the British than on the American side. No official account of the casualties were ever given by either party, but contemporary writers agree that the capture of the *Dolphin* cost the victors many lives.

Emboldened by this success, Cockburn resolved to engage in still more ambitious adventures. He thought of attacking Annapolis and Baltimore, and even dreamed of the glory and renown of penetrating the country forty or fifty miles and destroying the national capital. Prudence restrained obedience to his desires. His friends among the "Peace men" of Baltimore doubtless informed him that the vigilance of the people of that city, under the eye of the veteran General Smith, was sleepless; that look-out boats were far down the Patapsco; that riflemen and horsemen were stationed along the shores of the river and bay; that Fort M'Henry was being strengthened by the mounting of thirty-two-pounders; that the City Brigade numbered almost two thousand men; and that an equal number of volunteers for the defense of the place were within trumpet-call. He wisely concluded to pass by the political and commercial capitals of Maryland, and fall upon weaker objects. With a large force he menaced Baltimore as a feint on the 16th of April, and on the 29th, with the brigs *Fantome* and *Mohawk*, and tenders *Dolphin*, *Racer*, and *Highflyer*, he entered Elk River, toward the head of Chesapeake Bay, and proceeded to destroy Frenchtown, on the Delaware shore. It was a village of about a dozen buildings, composed of dwellings, store-houses, and stables. The blockading vessels had driven the trade between Philadelphia and Baltimore from the ordinary line of water-travel, and this place had become an important entrepôt of traffic between the two cities.

Admiral Cockburn made the *Fantome* his flag-ship, and sent First Lieutenant Westphall, of the *Marlborough*, with about four hundred armed men in boats, to destroy the public and private property at Frenchtown. The only defenders were quite a large number of drivers of stages and transportation wagons who were assembled there, and a few militia who came down from Elkton. The former garrisoned the redoubt, which had just been erected, upon which lay three iron four-pounders, first used in the old War for Independence. They fought manfully, but were compelled to retire before overwhelming numbers. The store-houses were plundered and burnt, but no dwelling was injured. The women and children were treated with respect. Property on land to the amount of twenty-five thousand dollars was consumed, and on the water five small trading-vessels.² This incendiary work accomplished, the invaders withdrew, and on the *Fantome*, the following day, Sir George wrote an account of the affair to Admiral Warren, taking care to assure that humane commander that he was following out his orders in giving a receipt for property taken from non-combatants.

Havre de Grace, near the mouth of the Susquehanna River, was the marauding knight's next object for visitation. It was a small town, two miles up from the head of Chesapeake Bay, and contained about sixty houses, built mostly of wood. It was on the post-road between Philadelphia and Baltimore, as it now is upon the railway between the two cities. For some time the enemy had been expected there, not because there were stores or any other seductions for him, but because the love of plunder and wanton destruction appeared to be Cockburn's animating spirit. Several companies of militia had been sent to the vicinity; and upon the high bank of the

¹ Niles's *Weekly Register*, iv., 119.

² Niles's *Weekly Register*, iv., 164. A letter in *The War* (l., 196) says: "On their arrival at the Stage Tavern, which was nearest their landing, the British officer told the landlady not to be frightened, as they would not hurt her or her property, and ordered something to regale himself. Soon afterward some under officers came in and said they had possession of the stores, and asked what they should do with them. The officer replied that if there was any thing they wanted they might take it and then burn the houses. In a few minutes every British sailor was rigged in an American uniform, after which they set the stores on fire, and consumed them and all the goods in them to a considerable amount." A greater portion of the merchandise consumed was private property.

Preparations for the Invaders at Havre de Grace.

Cockburn assails the Village.

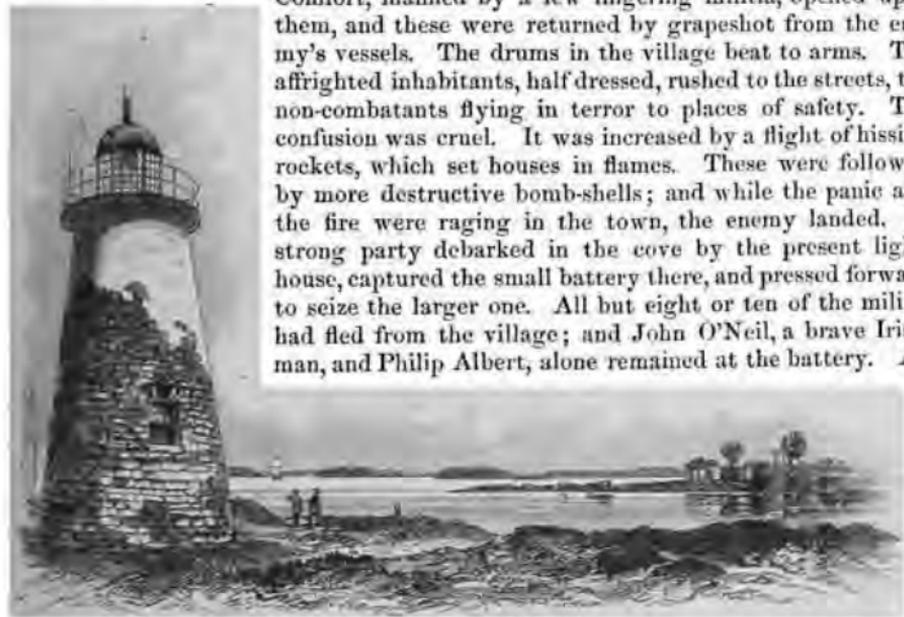

Flight of the Inhabitants.

river, just below the village, near the site of the present (1867) iron-works of Whittaker & Co., a battery was erected, on which one eighteen-pounder and two nine-pounders were mounted. This, for reasons unexplained, was called the "Potato Battery." On the lower, or Concord Point, where the light-house now stands, was a smaller battery, and both were manned by militia exempts. Patrols watched the shores all the way to the Bay looking for the enemy, and for about three weeks this vigilance was unslumbering. The enemy did not appear. All alarm subsided; and the spirit that brought out armed men began to flag. Some returned home, and apathy was the rule.

Cockburn was informed of this state of things at Havre de Grace, and prepared to fall upon the unsuspecting villagers on the night of the 1st of May. A deserter carried intelligence of his intentions to the town, and the entire neighborhood was speedily aroused. The women and children were carried to places of safety, and about two hundred and fifty militia were soon again at their posts. But Cockburn did not come. He purposely lulled them into repose by a postponement of the attack. The deserter's story was disbelieved. It was thought to be a false alarm. What is there to call the British here? common sagacity queried. The militia again became disorganized, and many of them returned home.

On the night of the 2d of May there was perfect quiet in Havre de Grace. The inhabitants went to sleep more peacefully than they had done for a month. They were suddenly awakened at dawn by the din of arms. It was a beautiful serene morning; "not a cloud in the sky nor a ripple on the water," said the venerable Mr. Howtell, of Havre de Grace, to me, in the autumn of 1861, as we stood upon the site of the "Potato Battery." He was there at the time, and participated in the scenes. Fifteen to twenty barges, filled with British troops, were discovered approaching Concord Point, on which the light-house now stands. The guns on higher Point

Comfort, manned by a few lingering militia, opened upon them, and these were returned by grapeshot from the enemy's vessels. The drums in the village beat to arms. The affrighted inhabitants, half dressed, rushed to the streets, the non-combatants flying in terror to places of safety. The confusion was cruel. It was increased by a flight of hissing rockets, which set houses in flames. These were followed by more destructive bomb-shells; and while the panic and the fire were raging in the town, the enemy landed. A strong party debarked in the cove by the present light-house, captured the small battery there, and pressed forward to seize the larger one. All but eight or ten of the militia had fled from the village; and John O'Neil, a brave Irishman, and Philip Albert, alone remained at the battery. Al-

LANDING-PLACE OF THE BRITISH.

bert was hurt, and O'Neil attempted to manage the heaviest gun alone. He loaded and discharged it, when, by its recoil, his thigh was injured, and he was disabled. They both hurried toward the town, and used their muskets until compelled to fly toward the open common, near the Episcopal Church, pursued by a British horse-

Landing of the British at Havre de Grace.

Their cruel Conduct.

Destruction of private Property.

man. There O'Neil was captured, but Albert escaped. The brave Irishman was carried on board the frigate *Maidstone*, and in the course of a few days was set at liberty.

The guns of the captured battery were turned upon the town, and added to the destruction. A greater portion of the enemy (almost four hundred in number) went up to the site of the present railway ferry landing, and debarked there. They rushed up to the open common, separated into squads, and commenced plundering and destroying systematically, officers and men entering into the business with equal alac-

rity.¹ Finally, when at least one half of the village had been destroyed, Cockburn, the instigator of the crime, went on shore, and was met on the common by several ladies who had taken refuge in an elegant brick house, some distance from the village, known as the Pringle mansion. They entreated him to spare the remainder of the village, and especially the roof that sheltered them. He yielded with reluctance, and at length gave an order for a stay of the plundering.²

Meanwhile a large detachment of the enemy went up

THE PRINGLE HOUSE.

the Susquehanna about six miles, to the head of tide-water, and there destroyed the extensive iron-works and cannon foundry belonging to Colonel Hughes. A number of vessels that had escaped from the Bay and were anchored there were saved from the flames by being sunk. At a point below, Stump's large warehouse was burnt. Finally, when all possible mischief had been achieved along the river bank—when farm-houses had been plundered and burnt a long distance on the Baltimore road—when, after the lapse of four hours, forty of the sixty houses in the village had been destroyed, and nearly all the remainder of the edifices, except the Episcopal Church,³ were more or less injured, the marauders assembled in their vessels in the stream,

EPISCOPAL CHURCH.

¹ The late Jared Sparks, LL.D., was an eye-witness of the conduct of the marauders, and has left an record, in the *North American Review* (July, 1817), an account of real barbarities committed by them; and William Charles, the caricaturist, perpetuated their cruelties and robberies with his pencil. A few of the British officers, who did not share in the spirit of Cockburn, remonstrated, but in vain.

² Among those who took shelter there were the wife of Commodore Rodgers, Mrs. William Pinkney, and Mrs. Goldborough. The latter begged the officer who had been sent up with a detachment to burn Mr. Pringle's house to spare it, for she had an aged mother in it. He replied that his orders were from Admiral Cockburn himself, and that she must see him. This was the occasion of the depopulation of women meeting him on the common. When they returned the house was on fire, and men were leaving it with plunder. By great exertions the flames were extinguished. Such was the statement of a lady living near to her brother in Baltimore, published in Niles's *Register*, iv., 196. She mentions several instances of vandalism.

³ This building is of brick, and stands on the corner of Union Street and Congress Avenue. It was two stories in

A Visit to Havre de Grace.

Historical Localities there.

John O'Neil, his Sword and Dwelling.

and at sunset sailed out into the Bay to pay a similar visit to villages on the Sassafras River.¹ Havre de Grace was at least sixty thousand dollars poorer when they left than when they came twelve hours before.

It was a sunny but blustery day^a when I visited Havre de Grace and the scenes around it, made memorable by its woes. I arrived in the evening by railway from Baltimore, where I had spent three days in visiting the battle-ground at North Point and other interesting places hereafter to be described. The town was full of soldiers, many being stationed there to guard the ferry and public property from the violence of the sympathizers with the rebels in Maryland. The only hotel in the place was entirely filled with lodgers, and private houses were in like condition. The prospect for a night's repose was unpromising. For myself, a settee or an easy-chair might have sufficed; but I had a traveling companion (a young woman and near relative) who required better accommodations. The obliging proprietor of the hotel, after much effort, succeeded in placing us in the unoccupied furnished house of his son-in-law, where we passed a dreary night, the windows of my room clattering continually at the bidding of the gusty wind. Early the next morning I went out in search of celebrities, and, after sketching the old residence of Commodore Rodgers, printed on page 182, I fortunately fell in with Mr. Howtell, already mentioned, who became my cicerone. Under his direction I was enabled to find every place sought after.

While sketching the landing-place of the British near the light-house (page 671), the keeper of the pharos came to know my business. He was an aged man, and I soon discovered that he was one of the oldest residents of the place, having been a half-grown boy at the time of the British visitation. "Did you know John O'Neil, who behaved so gallantly at the Potato Battery?" I asked. "I ought to," he replied, "for he was my father." Can you tell me any thing about the sword presented to him by the authorities of Philadelphia for his bravery on that occasion?" I inquired. "If you will go with me to the house," he replied, "it will speak for itself." When I had finished my sketch of the weather-beaten light-house (from which most of the stucco had been abraded) and the cove, with the distant Turkey Point, Spesutia Island, and the Maryland main on the right, I followed Mr. O'Neil to his little cottage near by, and there not only saw and sketched the honorary sword, but from the brave John O'Neil's own family Bible obtained a few facts concerning his personal history. He was born in Ireland on the 23d of November, 1768, and came to America at the age of eighteen years. He was in the military service under General Harry Lee in quelling the Whisky Insurrection in Western Pennsylvania, and in 1798 entered the naval service against the French. He became an extensive nail-maker at Havre de Grace, sometimes employing as many as twenty men. The destruction of the place ruined his business. When the present light-house was built on Concord Point in 1829 he became its keeper; and on the 26th of January, 1838, he died in the house where his son and successor resides. The sword had a handsomely-ornamented gilt scabbard, on which was the following inscription: "PRESENTED TO THE GALLANT JOHN O'NEIL FOR HIS VALOR AT HAVRE DE GRACE, BY PHILADELPHIA—1813." In Charles's caricature just mentioned, a British officer, who has arrested the bold cannonier and con-

SWORD.

^a height at the time of the destruction of Havre de Grace. Between thirty and forty years ago it was fired by a lightning stroke and partially consumed. The square spaces in the walls over the windows show the lower portions of the old windows in the second story. Although the British did not apply the torch to the church, they amused themselves by hurling stones through the windows.

^b In the affair at Havre de Grace the Americans lost one man (Mr. Webster), killed by a rocket. The British lost three killed and two wounded.

The "Pringle House." Its Owner a Veteran of the War. Plunder and Destruction of Villages by Cockburn.

fronts him, is made to say, "I tell you what, Mr. O'Neil, you are certainly a brave fellow, but as a prisoner of war must go on board with us." They did not keep him long, for on the 10th, seven days after his capture, he wrote to a friend in Baltimore, saying, "I was carried on board the *Maidstone* frigate, where I remained until released three days since." His letter opened with the quaint sentence, "No doubt before this you have heard of my *defeat*," and this was followed by a brief narrative of the affair.

Toward noon I rode up to the "Pringle House," the residence of the Honorable Elisha Lewis, who had just been elected a member of the State Legislature by the Unionists of his district. His estate is called Bloomsbury, an old English title, and contains six hundred acres of land, with a front of a mile on Chesapeake Bay. When the mansion was built in 1808 by Mark Pringle, a wealthy Baltimore merchant, it was the finest country residence in the state, and even when I visited it few rivaled it either in appearance or comfort. It stood upon an eminence overlooking Havre de Grace, the Susquehanna River, and Chesapeake Bay. It was very large, and substantially built of pressed brick. Mr. Lewis was one of the brave defenders of Baltimore in 1814, when that city was threatened by General Ross and his army. He served as a volunteer sergeant in Captain Perring's company, Twenty-seventh Regiment—the brave Twenty-seventh—Maryland Militia, which did such gallant service in the battle of North Point. His gun was disabled by a shot through the stock, when he took the musket of a slain companion by his side, and continued the fight. Founder of a commercial house in Baltimore, he was engaged thirty years in trade, and passed much of his time in England. For sixteen years he had been enjoying the quiet of country life.

After spending an hour pleasantly at Bloomsbury I rode back to the village, and to the quarters of Colonel Rodgers, son of the commodore, who was then raising a Maryland regiment for the war. At half past three we left Havre de Grace, and were with friends in Philadelphia in time for supper.

Let us resume the historical narrative.

Cockburn and his marauders went up the Sassafraz River, that separates Cecil and Kent Counties, Maryland, and attacked the villages of Fredericktown and Georgetown, lying on opposite banks of that stream, about eleven miles from its mouth. The former is in Cecil County, the latter in Kent County. Both of them at that time, and especially Georgetown, had a flourishing trade with Baltimore. These villages contained from forty to fifty houses each, and at Fredericktown several small vessels that had run up from the bay for shelter were moored.

It was on the 6th of May, a warm and beautiful morning, that Cockburn, with six hundred men, in eighteen barges, went up the Sassafraz. He first visited Fredericktown, on the northern shore of the stream. Less than one hundred militiamen, under Colonel Veazy, were there, with a little breastwork, and a small cannon to defend it. When the enemy opened his great guns all but thirty-five of them fled. With these Veazy made stout resistance, but was compelled to retire. The marauders landed, and the entreaties of the women to spare the town, especially the more humble dwellings of the poor, were answered by oaths and coarse jests and the application of the fire-brand. The store-houses, the vessels, and the beautiful village were set in flames after the invaders were glutted with plunder. The marauders then crossed over to Georgetown, and served it in the same way. So delighted was Cockburn with his success in plundering and destroying unprotected towns, that, with characteristic swagger, he declared he should not be satisfied until he had burned every building in Baltimore.

After having plundered and destroyed these quiet villages, and despoiled them of an aggregate of at least seventy thousand dollars, Cockburn and his pirates returned to their ships. This kind of warfare, so disgraceful to a civilized government, created

The blockading Force strengthened.

Norfolk menaced.

Stirring Scenes in Hampton Roads.

the most intense hatred of the enemy, and aroused a war spirit throughout the land that for a time appalled the cowardly "Peace Party," and nearly silenced the newspapers in their interest.

On the 26th of May a British order in Council extended the blockade to New York and all the Southern ports; and on the 1st of June Admiral Warren entered the Chesapeake with a considerable naval re-enforcement for Cockburn and Beresford, bearing a large number of land troops and marines under the command of Sir Sidney Beckwith. The British force now collected within the Capes of Virginia consisted of eight ships of the line, twelve frigates, and a considerable number of smaller vessels, and it was evident that some more important point than defenseless villages would be the next object of attack. The citizens of Baltimore, Annapolis, and Norfolk were equally menaced, but when, at the middle of June,^a three British frigates entered Hampton Roads, and sent their boats up the James River to destroy some ^{June 18.} small American vessels there and plunder the inhabitants, it was evident that Norfolk would be the first point of attack. The *Constellation*¹ and a flotilla of twenty gun-boats, as well as Forts Norfolk and Nelson (one on each side of the Elizabeth River), and Forts Tar and Barbour,² and the fortifications on Craney Island, were all

GENERAL VIEW OF CRANEY ISLAND.

put in the best state of defense possible; while Commodore Cassin, then in command of the station, ordered Captain Tarbell to organize an expedition for the capture of the frigate that lay at anchor at the nearest distance from Norfolk.

Toward midnight on Saturday, the 19th of June,^b Captain Tarbell, with ^{1813.} fifteen gun-boats, descended the Elizabeth River in two divisions, one under Lieutenant J. M. Gardner, and the other under Lieutenant Robert G. Henley. Fifteen volunteer sharpshooters from Craney Island were added to the crews of the boats.

Because of head winds the flotilla did not approach the nearest vessel until half past three in the morning. She lay about three miles from the others, and under

Jos Tarbell

cover of the darkness just before daylight, and a heavy fog, the Americans approached within easy range of the vessel without being discovered. At four o'clock Tarbell opened fire upon her. She was taken by surprise, and her response was so feeble and irregular that a panic on board was indicated. The wind was too light to fill her sails, while the gun-boats, managed by sweeps, had every advantage. They were formed in crescent shape, and during a conflict of half an hour Tarbell was continually cheered by sure promises of victory. It was snatched from his hand by a breeze that suddenly sprung up from the north-northeast, which enabled the two frigates anchored below to come up to the assistance of the assailed vessel, supposed to be

¹ During the spring efforts had been made by officers of the British blockading squadron to capture the *Constellation*, then in command of the now (1867) venerable Admiral Stewart. Some stirring events had occurred in connection with these efforts.

² Fort Tar was a small redoubt south of Armistead's Bridge. Fort Barbour was east of Church Street and south of the Princess Anne Road. These were to defend the land-side approaches of the enemy.

Skirmish in Hampton Roads.

A British Fleet enters the Roads.

Admiral Shubrick's public Life.

the *Juno*, 38, Captain Sanders. These opened a severe cannonade on the flotilla, and the Americans were obliged to haul off. As they retired in good order, they kept up a fire on the British vessels for almost an hour.¹ They damaged their enemy seriously, while some of their own boats were badly bruised. Master's Mate Allison was killed, and two seamen were slightly wounded. These composed the entire loss of the Americans. How much the British seamen suffered is not known.

Sanders

This attack brought matters to a crisis. Efforts for the capture of Norfolk, with its fortifications, the armed vessels there, and the navy yard, were immediately made by the British admiral. The cannonade had been distinctly heard, and with the very next tide after the conflict on that foggy Sunday morning fourteen of the enemy's vessels entered the Roads, ascended to the mouth of the James River, and took position between the point called Newport-Newce and Pig Point, at the mouth of the Nansemond. These vessels had on board the One Hundred and Second Regiment of British Infantry, the Royal Marine Brigade, and two companies of French volunteer prisoners, who, in compliment to their language, were called *Chasseurs Britanniques*. These land troops were commanded by General Sir Sidney Beckwith, assisted by

W. Branford Shubrick

¹ In this affair Lieutenant (now Admiral) W. B. Shubrick performed a gallant part. I was informed by Commodore Tattnall that after the engagement had continued about an hour Captain Tarbell made general signal to withdraw from the contest. The boat commanded by Shubrick at that time happened to be nearest the enemy, and that brave young officer, then twenty-three years of age, satisfied that a few more shots would damage the enemy, obeyed the order very slowly, and continued to blaze away on the frigate. This caused the concentration of the enemy's fire upon his single boat. Still he moved off slowly, firing on his retreat, until a signal made specially for him directed him to leave, and take in tow a disabled gun-boat. This he did without losing a man.—Notes of Conversation with Commodore Tattnall in July, 1860.

William Branford Shubrick was born near Charleston, South Carolina, on the 31st of October, 1790. He was at school in New England about three years, from his twelfth to his fifteenth year, the latter part of the time in Harvard University, from which he was called home, and in Charleston was instructed in the science of navigation. In June, 1806, he entered the navy as midshipman, but continued his studies until 1807, when he joined the sloop of war *Wasp* at Norfolk. She left that port about three days before the attack of the *Leopard* on the *Chesapeake*. He was actively engaged in service until the war broke out, when he made a cruise in the *Hornet* with Commander Lawrence, when he was transferred to the *Constitution*, then under the command of the now venerable Admiral Stewart. He then bore the commission of a lieutenant. He behaved gallantly in the attack on the *Juno* and in the defense of Craney Island. After that he followed Stewart to the *Constitution*, and in that vessel he served until the close of the war, always taking an active part in her brilliant conduct. Pursuant to a resolution of Congress (February 22, 1816), he received a silver medal as one of Stewart's officers. In 1824 the Legislature of South Carolina presented him with an elegant sword in testimony of their appreciation of his gallant services in the *Constitution* when she captured the *Cyane* and *Levant*. He was acting first lieutenant during her remarkable escape from the British squadron, hereafter to be recorded in these pages. At the close of the war he was commissioned first lieutenant, and in the *Washington*, 74, under Chauncey's flag, he cruised in the Mediterranean. He was promoted to master commandant in 1820. Eleven years later, after several well-conducted cruises, he was promoted to captain, and until 1828 was engaged in service on shore. He was afloat again in 1828 as commander of a squadron in the West Indies. In 1840, on the breaking out of the war with Mexico, he was assigned to the command of a squadron in the Pacific, and actively participated in events there. In 1853 he was in command of a squadron on our Eastern coast for the protection of the fisheries, an important and delicate duty. In 1860 he commanded a powerful squadron sent to demand satisfaction for injuries from the government of Paraguay, and having discretionary power to commence hostilities should that satisfaction not be made to the United States Commissioners.

Virginia Militia near Norfolk.	Cranev Island.	American Forces there.	General Taylor.
--------------------------------	----------------	------------------------	-----------------

Lieutenant Colonel Napier and other eminent leaders. The whole force of the enemy, including sailors, was about five thousand men.

James Barbour was then Governor of Virginia. He was patriotic and active, and by untiring energy he had assembled several thousand militia. A large portion of these, with some United States regulars under Captain Pollard, were at old Fort Norfolk and vicinity. They had been drawn chiefly from the coast districts most immediately menaced by the enemy. The governor had been zealously seconded in his efforts by the Richmond press and leading provincial journals, who, as usual, appealed vehemently to state pride. The appeal was effectual, and gallant men flocked to the standard of their common country.

Cranev Island, then in shape like a painter's pallet, and rising a few feet above the water, was separated from the main by a strait that was fordable at low or half tide. Across this a temporary foot-bridge had been constructed, which led to Stringer's farm-house. The island at that time contained about thirty acres of land. On the southeastern side of it, and commanding the ship channel, were intrenchments, on which two 24, one 18, and four 6 pound cannon were planted. These formed the most remote outpost of Norfolk, and were the key to the harbor. The defense of this island was demanded by stern necessity, and to that end the efforts of the leaders in that vicinity were directed. The chief of these was Brigadier General Robert B. Taylor, the commanding officer of the district. The whole available force on the island when the British entered Hampton Roads consisted of two companies of artillery from Portsmouth, led by Captains Emerson and Richardson, under the command of Major James Faulkner, of the Virginia State Artillery; Captain Roberts's company of riflemen; and four hundred and sixteen militia infantry of the line, commanded by Lieutenant Colonel Henry Beatty, assisted by Major Andrew Waggoner. These were so situated that, if attacked and overpowered, they had no means for escape, and yet, as one of the newspapers of the day said, they were "all cool and collected, rather wishing the attack."

Robert B. Taylor

On the arrival of General Taylor¹ at Norfolk he perceived the necessity of reinforcing the troops on Cranev Island,

¹ President Lopez complied with the demand, and he returned in 1859. Before leaving he visited General Urgine, President of the Argentine Republic, who presented him with a splendid sword. The United States Congress by joint resolution authorized him to accept it. This closed his sea service, in which he has held every rank and exercised every command, from midshipman to rear admiral. He has also performed faithful shore service of every kind pertaining to his rank. He has commanded three different navy yards, and held two bureaus in the Navy Department. He has been chairman of the Light-house Board since its establishment in 1853, and in a service of over sixty-one years has been only six years and eight months unemployed. His father was an officer of the Revolution.

² Robert Bernard Taylor was an eminent man. He was born on the 26th of March, 1774, and was educated at William and Mary College, Williamsburg. He studied law with Judge Marshall, and was associated at the bar with William Wirt, L. W. Tazewell, and other eminent lawyers. In 1798-'99 he was a member of the Virginia Assembly, of the Federal school. He was one of the grand jurors (John Randolph, foreman) in 1807 who found a bill of indictment against Aaron Burr, charged with treason. During the same year he was counsel for Commodore Barron, after the affair of the *Chesapeake* and *Leopard*. He took pride in military affairs, and at the breaking out of the War of 1812 he was appointed to the command at Norfolk as brigadier general of the Virginia forces. He was very efficient in defense of that city in the summer of 1813. He retired from the command in February, 1814, when General Parker succeeded to his place. On that occasion the citizens of Norfolk gave him a public dinner, and from the military he received the most flattering testimonies of their esteem and affection. When, as the national guest, General Lafayette visited the

where the first blow of the coming battle was likely to fall. He accordingly sent down thirty regulars under Captain Richard Pollard, from Fort Norfolk, and thirty volunteers under Lieutenant Johnson, of Culpepper, and Ensign Archibald Atkinson (member of Congress in 1849), of Isle of Wight, most of them riflemen. These were

B. J. Neale

followed by about one hundred and fifty seamen, under Lieutenants B. J. Neale, W. B. Shubrick, and James Sanders, and fifty marines under Lieutenant Breckinridge. These, on the solicitation of General Taylor, were sent by Tarbell to work

the heavy guns. The whole force on the island, on the evening of the 21st, numbered seven hundred and thirty-seven men.

At midnight the camp was alarmed by the crack of a sentinel's musket. He thought he discovered a boat in the strait.¹ The troops were called to arms, and stood watching until dawn, when a bush, and not a boat, was found to have been the cause of the commotion. The troops were dismissed, but they had scarcely broken ranks when a horseman came dashing across the fordable strait, and reported that the enemy were landing in force near Major Hoffleur's, a little more than two miles distant. The drum beat the long roll, and as the daylight increased the British were seen passing continually in boats from the ships to the shore. Major Faulkner at once ordered the three heavy guns in the southeastern portion of the island to be transferred to the northwestern part, and had them placed in battery there with the four 6-pounders. These seven pieces constituted a pretty formidable battery. A short distance in the rear of it, the infantry, riflemen, and Richardson's artillerymen acting as infantry, were formed in line, so as to face the strait at the mouth of Wise's Creek.

The command of the 18-pounder was given to Lieutenant B. J. Neale, assisted by Lieutenants Shubrick and Sanders, and about one hundred sailors and marines, chiefly from the *Constellation*. The two 24's and four 6's were under the charge of Captain Emerson, with his company of artillery, and aided by Lieutenants Godwin and Howle, Sergeants Young and Livingston, Corporal Moffatt, and Captain Thomas Rooke, master of the merchantman *Manhattan*, who had been of great service in transferring the heavy guns from one end of the island to the other. These heavy guns were worked chiefly by the men from the navy. The entire battery was under the supreme command of Major Faulkner, a cool and skillful artilleryman.² The whole force on the island was commanded by Lieutenant Colonel Beatty.

J. Faulkner

United States in 1824, and a grand reception was given him at Yorktown, in Virginia, the scene of his warfare and triumph in youth. General Taylor was the chosen orator for the assembled multitude. "In all my time I never heard such eloquence," said a veteran to me in the spring of 1853. "In all my time I never saw so many men in tears."

General Taylor filled the position of judge and legislator with distinction. He was in the Convention in 1829-'30, charged with amending the Constitution of Virginia. In that body he introduced enlightened measures in regard to the elective franchise. In the winter of 1831-'32 he was made judge of the General Court of Virginia, and held the office until his death on the 13th of April, 1834.

¹ This sentinel was William Shutte. He was stationed upon a small island that once lay near the mouth of Wise's Creek. See map on page 679. Shutte made the usual challenge, and, receiving no answer, fired, and continued to fire until the camp was fully aroused.

² James Faulkner was born in Ireland in 1776, and came to America when a boy under the charge of a distant rela-

A sharp Conflict.

Advance of the British on Water.

A long pole was procured, the national flag was *nailed* to it, and then it was planted firmly in the redoubt. The gun-boats were anchored in the form of a segment of a circle, extending from Craney Island to Lambert's Point, while the *Constellation* lay nearer the city. Thus prepared, the Americans calmly awaited the approach of the foe.

The British landed about twenty-five hundred men, infantry and marines, at Hofleur's Creek. The morning sky was cloudless; and for more than two hours the flashing of their burnished arms might be seen by the Americans as they manœuvred on the beach and on the edge of an intervening wood. Stealthily they crept through the thick undergrowth of the forest, and appeared suddenly on the point at the confluence of Wise's Creek and the strait. They immediately opened a cannonade from a field-piece and a howitzer, and sent a bevy of Congreve rockets upon the island, to cover the movement of a detachment sent to cross Wise's Creek, and gain the rear of the American left flank in position on the main. They were partially sheltered by the house of Captain George Wise, known as Wise's Quarters, and a thick wood. Some of the heavy guns of the battery on the island were opened upon them with great precision and rapidity, and a show-

PLAN OF OPERATIONS AT CRANEY ISLAND.

er of grape and canister shot soon drove the enemy out of reach of the artillery.

Almost simultaneously with this advance of the British land-force fifty large barges, filled with full fifteen hundred sailors and marines, were seen approaching from the enemy's ships. They hugged the main shore to keep out of range of the gun-boat artillery, and moved in column order, in two distinct lines, in the direction of the strait, led by Admiral Warren's beautiful barge. This vessel was fifty feet in length, painted a rich green, and employed twenty-four oars. Because of her shape and numerous oars she was called the *Centipede*. In her bow was a brass 3-pounder,

the. He established himself in mercantile business in Martinsburg, Berkeley County, Virginia, at the age of twenty-one years, and that was the place of his residence until his death. He long tried in vain to obtain a commission in the regular army of the United States. When war broke out he hastened to Norfolk with the volunteer troops of his adopted state, and was there commissioned a major of artillery. In that capacity he served gallantly on Craney Island, and was the chief factor in the repulse of the British. Major Faulkner married the only daughter of Captain William Mackey, of the Revolutionary Army. He died in 1817 from the effects of exposure and fatigue in camp. His wife was then dead. They left but one child, who thus became an orphan in tender years. This was Charles J. Faulkner, who was an active public man in Virginia, and who was sent to the French court as minister plenipotentiary by President Buchanan. To him I am indebted for the likeness of his father on the opposite page. When the Great Rebellion broke out he took sides with the insurgents, and dishonored the memory of his gallant and patriotic father by abandoning the flag which his ancestor had so nobly defended.

The British Flotilla driven back. Attempt to seize Norfolk and the Navy Yard abandoned. Hampton.

called a "grasshopper," and she was commanded by Captain Hanchett, of the flag-ship *Diadem*, a natural son of George the Third.

As the first division of the fleet of barges approached, the eager Emerson could hardly be restrained by the more prudent Faulkner. At length they reached the fair range of the guns. Faulkner gave a signal, when Emerson shouted, "Now, my brave boys, are you ready?" "All ready," was the quick response. "Fire!" exclaimed Faulkner. The whole battery, except two dismounted guns, managed by Goodwin and Livingston, belched forth fire and smoke, and round, grape, and canister shot. The volley was fearful, yet in the face of it the barges moved steadily forward until the storm of metal was too terrible to be endured. The boats were thrown into the greatest confusion. The *Centipede* was hulled by a heavy round shot that passed through her diagonally, wounding several of the men in her, cutting off the legs of one of them, and severely hurting the thigh of Captain Hanchett. Orders for retreat were given. The *Centipede* and four other barges were sunk in shoal water, and the remainder of the flotilla escaped to the ships. Lieutenant Neale was directed to send some of his bold seamen to seize the admiral's barge and all in it, and haul it on shore. This was gallantly performed under the direction of Lieutenants Tattnell¹ and Geis-

enger, Midshipman Bladen Dulaney, and Acting Master George F. De la Roche. They se-

Josiah Tattnell

secured several prisoners and the admiral's fine barge. This was afterward repaired, and performed good service as a guard-boat during many a cold, dark night in the ensuing autumn.²

Thus ended the battle. "Thus, not long before the time when the Regent of Great Britain congratulated his kingdom on the pitch of grandeur it reached by dictating peace to France in the French capital, a brother of that regent was repulsed by a handful of militia in an attempt to capture a small island in Chesapeake Bay."³ It was a most mortifying result for the British.⁴ So certain was Sir Sidney Beckwith of success, that he promised the troops the opportunity of breakfasting on Craney Island that morning. Some of the officers took their shaving apparatus with them, and others their dogs. At ten o'clock the scene was changed, and before sunset the British commanders abandoned all hope of seizing Norfolk, the *Constellation*, and the navy yard. It was the last attempt there during the war.

Exasperated by their ignominious repulse at Craney Island, the British proceeded to attack the village of Hampton, a flourishing borough on the west side of Hampton Creek, two miles and a half from Old Point Comfort. It was the capital of Elizabeth City County, Virginia, and was a mile from the confluence of the creek with the waters of Hampton Roads. It was defended at the time by about four hundred and fifty Virginia soldiers under Major Stapleton Crutchfield, whose adjutant general was Robert Anderson, Esq., whom I had the pleasure of meeting at Yorktown in 1848. They were composed chiefly of militia infantry,⁵ and a few artillerymen and

¹ See page 615.

² "We waded out to the *Centipede*," said Commodore Tattnell, "and found a Frenchman in her with both legs shot off. Several others were in her, wounded in the legs and feet by the passage of the ball. We carried the Frenchman ashore in a hammock, and he died soon afterward. We also found a little terrier dog sitting upon the small cannon in her bow, and several cutlasses, pistols, et cetera. I had many a cold night's guard duty in the admiral's barge after that."—*Notes of a Conversation with Commodore Tattnell at Sackett's Harbor in the Summer of 1860*. Our little picture of the *Centipede* is from an exact model of it, on a small scale, which was made by order of Commodore Warrington. The black spot near the stern shows the place where the cannon-ball entered it.

THE CENTIPEDE.

³ Ingersoll's *Historical Sketch of the Second War*, etc. He is mistaken as to the locality of Craney Island. It is in the Elizabeth River, and not in Chesapeake Bay.

⁴ The Americans met with no loss. The British, according to their own account, lost 6 killed, 24 wounded, and 114 missing. Of the latter 40 were prisoners and deserters.

Americans at Hampton.

Landing of the British near Hampton.

cavalry. They were encamped on the "Little England" estate of five hundred acres, a short distance southwest from the town, where they had a heavy battery composed of four 6, two 12, and one 18 pounder cannon, in charge of Sergeant William Burke, to defend the water-front of the camp and the village.¹

On Friday night, the 24th of June, twenty-five hundred British land troops, including the rough French prisoners (*Chasseurs Britanniques*), were placed in boats and small sailing vessels, and between dawn and sunrise of the 25th² were landed * June, 1812. behind a wood near the house of Daniel Murphy, a little more than two miles from Hampton, under cover of the guns of the *Mohawk* sloop of war. These were designed to fall upon Hampton and the little American camp in the rear, while Admiral Cockburn, with a flotilla of armed boats and barges, should make a feint in front.

The land troops, under the general command of Beckwith, assisted by Lieutenant Colonels Napier³ and Williams, moved stealthily and rapidly forward toward the doomed town, while the armed boats appeared suddenly off Blackbeard's Point, at the mouth of Hampton Creek. The latter were first discovered by American patrols at Mill Creek, who gave the alarm. The camp was aroused, and a line of battle was formed. At that moment a messenger came in haste with intelligence that the British were moving in force on the rear of Hampton. The woods toward Murphy's were glowing with scarlet, and a grain-field near was verdant with the green uniforms of the French. The inhabitants of the village, who yet remained, fled toward Yorktown, excepting a few who could not leave or who were willing to trust to British honor and clemency.

The brave Crutchfield resolved to stand firm and defend the town against the invaders on land and water. He sent Captain Servant and his rifle company out to ambush on the road leading to Celey's plantation, beyond Murphy's, who were to at-

¹ This picture, sketched in the spring of 1863 from a window of Burcher's Hotel, near the steam-boat wharf in Hampton, is a view of the portion of the "Little England" estate, lying on Hampton Creek, mentioned in the text. A line drawn perpendicularly beneath each numeral on the clouds would touch the locality intended to be indicated by such numeral. Figure 4 shows the place of Crutchfield's encampment, and 1 the place where the four-gun battery was planted. Figure 2, the place of a smaller battery; 3, Blackbeard's Point, at the mouth of Hampton Creek, from behind which the British flotilla came; 5, the forest behind which Beckwith's troops landed; 6, Hampton Road; 7, a portion of the old mansion of the Little England estate; 8, the mouth of the west branch of Hampton Creek; and, 9, Bully's house, that stood there in 1812. The "Little England" estate was the ancestral possession of the family of Commodore Barron. In the foreground of the picture is seen the steam-boat wharf at Hampton, with the creek on the right.

² This was Charles James Napier, afterward a distinguished general in the British Army, who was knighted for his services in the East Indies, where he became commander-in-chief of the British forces. He was born in 1782, and died in August, 1836, bearing the honors of a worthy lieutenant general. He was a sprightly writer, and his biographer says that "when he was not fighting he was writing."

tack and check the enemy; and when Cockburn ventured within Blackbeard's Point, and opened fire on the American camp, Crutchfield's heavy battery responded with so much spirit and effect that the arch-marauder was glad to escape for shelter behind that point, and content himself with throwing a shot or rocket occasionally into the American camp.

Crutchfield gave special attention to the movement in his rear, being convinced that Cockburn's was only a feint. From his camp was a plantation road, that crossed cultivated fields, and by the edge of the woods behind which the British had landed unobserved, to a highway known as Celey's Road, that connected with the public road to Yorktown a short distance from Hampton. Connected with this road was a plantation lane leading to Murphy's, on the banks of the James River. Along this lane or road the British moved from their landing-place, and had reached rising ground and halted for breakfast when they were discovered by the Americans. Captain Pryor, of the artillery in camp, immediately detached Sergeant Parker and a few picked men, with a field-piece, to go up the Yorktown Road to Celey's Junction, to assist the ambushed riflemen. Parker had just reached his position and planted his cannon, when the British moved forward with celerity. They had just crossed the head of the west branch of Hampton Creek, at the Celey Road, when the advanced guard of Servant's corps (Lieutenant Thomas Hope and two others), who were concealed by a large cedar-tree (yet standing when I visited the spot in 1853), opened a deadly fire with sure aim upon the French column in front, led by the British sergeant major, a large and powerful man. That officer and several others were killed; the invaders were checked, and great confusion in their ranks ensued. The main body of the riflemen now delivered their fire, and the commander of the Marines, the brave Lieutenant Colonel Williams, of the British army, fell dead.

The British soon recovered from their temporary panic, and pressed forward, compelling the riflemen to fall back. In the mean time, Crutchfield, hearing the firing, had moved forward from his camp with nearly all of his force, leaving the position on the Little England estate to be defended by Pryor and his artillerymen from the attack of the barges. While he was marching in column by platoons along the lane from the Little England plantation toward Celey's Road and the great highway, he was suddenly assailed by an enfilading fire on his left. He immediately ordered his men to wheel and charge the enemy, who were on the edge of the woods. This was done with the coolness and precision of long-disciplined soldiers, and the foe fell back. The victors were pressing forward, when the British opened a storm of grape and canister shot upon them from two 6-pounders, and some Congreve rockets, and appeared in force directly in front of Crutchfield. The Americans withstood the fire a few minutes, when they fell back, and a part of them broke and fled in confusion across the Yorktown Road and the Pembroke estate.

Parker in the mean time had worked his piece with good effect. Now his ammunition failed. Lieutenant Jones, of the Hampton Artillery, hastened to his relief; but when they saw an overwhelming force of the enemy moving along the Celey Road, they fell back to the Yorktown Pike. Jones now found that his match was extinguished, so he ran to a house near by, snatched a brand from the hearth, and concealed himself in a hollow near a spring. When the British drew near and almost filled the lane, supposing the cannon to be abandoned, he arose and discharged his piece with terrible effect. Many of the foe were prostrated by its missiles, and during the confusion that ensued in the British ranks he attached a horse to his cannon and bore it off toward the camp. When he drew near that camp he saw that it was occupied by the enemy, who had come in force from the barges and compelled Pryor to spike his guns and flee. This he did in safety. He and his command, after fighting their way through the surrounding enemy with their firelocks, swam the West Branch of Hampton Creek, and, making a circuit in rear of the enemy, fled to what is

Americans driven from Hampton. The Village given up to Rapine and Pillage. A Committee of Investigation.

now known as Big Bethel, without losing a man or a musket. Seeing this, Jones turned and fled, after spiking his gun. He followed Pryor's track to the same destination.

Crutchfield, with the remainder of his troops, had rallied on the flank of Servant's riflemen, and renewed the fight with vigor. He soon observed a powerful flank movement by the enemy, which threatened to cut off his line of retreat, when he withdrew in good order, pursued almost two miles across and beyond the Pembroke farm. The pursuit was terminated at what is now known as New-bridge Creek. Thus ended the battle. The British had lost about fifty in killed, wounded, and missing, and the Americans about thirty. Of eleven missing Americans, ten at least had fled to their homes.

The victorious British now entered Hampton by the Yorktown Road, bearing the body of the brave Lieutenant Colonel Williams. Beckwith and Cockburn made their head-quar-

PLAN OF OPERATIONS AT HAMPTON.

HEAD-QUARTERS OF BECKWITH AND COCKBURN.

ters at the fine brick mansion of Mrs. Westwood, which stood upon the street leading to the landing. In her garden the remains of Williams were buried with solemn funeral rites on the same day. Then the village was given up to pillage and rapine. The atrocities committed at that time upon the defenseless inhabitants who remained in Hampton, particularly on the women, have consigned the name of Sir George Cockburn to merited infamy, for he was doubtless the chief author of them.¹ The reports of them at the time

were much exaggerated, but sufficient was proven by official investigation to cause the cheeks of every honest Briton to tingle with the deepest blush of shame. "We are sorry to say," said Commissioners Thomas Griffin and Robert Lively, appointed to investigate the matter, "that from all information we could procure, from sources too respectable to permit us to doubt, we are compelled to believe that acts of violence have been perpetrated which have disgraced the age in which we live. The sex hitherto guarded by the soldier's honor escaped not the rude assaults of superior force."² A correspondence on the subject occurred between General Taylor and Sir

¹ There can be little doubt that Cockburn promised his men "Booty and Beauty" to their hearts' content. It was like him. But no one could suspect the right-minded Admiral Warren, or even the more latitudinarian Sir Sidney, of such a crime against civilization and Christianity.

² In his dispatch to Governor Barbour on the 29th, Major Crutchfield, the American commander at Hampton, said, after giving an account of the battle and the excesses of the soldiery, "The unfortunate females of Hampton who could not leave the town were abused in the most shameful manner, not only by the soldiers, but by the venal savage blacks, who were encouraged in their excesses. They pillaged, and encouraged every act of rapine and plunder, killing a poor man by the name of Kirby who had been lying on his bed at the point of death for more than six weeks, shooting his

Sidney Beckwith, in which the latter, while he did not deny the charges, attempted to justify the atrocities by pleading the law of retaliation, falsely alleging, as was proven, that the Americans had waded out from Craney Island after the battle there, and deliberately shot the crew of a barge which had sunk on the shoal.¹ And while it was not denied that British officers and soldiers had engaged zealously in the business of plundering the private houses at Hampton of every thing valuable that might be easily carried away,² the more horrid crime of ravishing the persons of married women and young maidens, was charged by the British commanders upon the French soldiery. "The apology," said the commissioners just mentioned, "that these atrocities were committed by the French soldiers attached to the British forces now in our waters appeared to us no justification of those who employed them, believing, as we do, that an officer is, or should be, ever responsible for the conduct of the troops under his command." So shameful were these atrocities—too gross to be repeated here—that the most violent of the British partisan writers were compelled to denounce them; and Admiral Warren and General Beckwith, in obedience to the instincts of their better natures and the demands of public opinion, dismissed the *Chasseurs Britanniques* from the service.

At the "ides of March," in the year 1853,³ I visited Norfolk, Craney Island, and Hampton, for the purpose of collecting materials for this work, and I had the good fortune to meet several persons who were well acquainted with places and events in that region pertaining to the War of 1812. I had spent the 4th of March at the national capital, "assisting," as the French say, at the inauguration of President Pierce; a day or two with the late George Washington Parke Custis at his beautiful seat of "Arlington," opposite Washington City; then a few days in Richmond; a little time in a trip and visit to "Monticello," near Charlottesville, the home of the living and the grave of the departed Thomas Jefferson; and then part of a day on the James and Elizabeth Rivers on a voyage to Norfolk. I intended to go to Craney Island the next morning, but the wind was so high that no boatman was willing to venture upon the water, so that day I visited the Navy Yard at Gosport, Old Fort Norfolk, and other places of interest in and around the city. At the former place were seen the skeleton of the famous *Constellation*; the useless monster ship *Pennsylvania*; the work-shops and yards where full eight hundred men found employment, and more than twenty-five hundred huge iron cannon, with a complement of balls. All of this property, valued at several millions of dollars, with other government vessels, was destroyed or seized by the insurgents of Virginia in April, 1861, at the breaking out of the late Civil War.

Old Fort Norfolk, a structure made during the old War for Independence, on the right bank of the Elizabeth River, was in a dilapidated state, and was occupied only by a keeper and his family. That custodian was a queer old man, seventy years of

wife in the hip at the same time, and killing a faithful dog lying under his feet. The murdered Kirby was lying last night weltering in his blood."

Sir Charles Napier (see note 2, page 661), in his diary of these events, in which he bore a part, says, "Every horror was perpetrated with impunity—rape, murder, pillage—and not a man was punished." Again: "Strong is my dislike to what is, perhaps, a necessary part of our job, viz., plundering and ruining the peasantry. We drive all their cattle, and of course ruin them. My hands are clean; but it is hateful to see the poor Yankees robbed, and to be the robber."

¹ General Taylor addressed Admiral Warren, and was answered by Sir Sidney Beckwith as the commander of the land forces. In his note to Admiral Warren General Taylor said: "The world will suppose these acts to have been approved, if not executed by the commanders, if suffered to pass by with impunity. I am prepared for any species of warfare which you are disposed to prosecute. It is for the sake of humanity that I enter this protest." General Beckwith, as we have observed, charged cruelty on the part of the Americans as a palliation; to which Taylor replied that he was satisfied that no such act as charged ever took place, and if it had, it was no excuse for the crimes committed at Hampton against the helpless and innocent. A board of officers was convened to investigate the matter, when it was ascertained that, during the engagement off Craney Island, two of the British boats were sunk by the American guns, and the crews were in danger of being drowned; that, being in line of action, the firing necessarily continued, but that, in order to avoid injuring those in the water and helpless, the firing of grape was discontinued. One man, who had surrendered, but endeavored to escape, was fired upon to bring him back.

² Among other "property," according to the laws of Virginia, taken away by the British, were negroes. Under a promise of freedom, a large number of them flocked to the British standard. Most of those whom Cockburn enticed on board his vessels by these promises were afterward sold into a worse slavery in the British West Indies.

British Consul at Norfolk and his Residence. Thomas Moore and the Lake of the Dismal Swamp. Craney Island.

age. With boundless garrulity he gave me his domestic history, and insisted upon bringing out his last baby, the sixth child by his fourth wife. His third wife appears to have been "a thorn in his side." When speaking of her, he thrust his hands into his pockets, looked upon the grass, sighed, and, in a subdued voice, said, "The Lord was good to me, and took her away soon. I really believe she would have died happy could she have seen *me* die first. I didn't think it best to gratify her, and so she had to give it up." On leaving the fort I went to the residence of Robert E. Taylor, Esq., son of General Taylor, the defender of Norfolk, to whom I am indebted for much information concerning events in that vicinity in 1813. On the following morning² I breakfasted with the British consul, the late G. P. R. James, the eminent novelist. The circumstance is mentioned to introduce the fact that his residence was the same (118 Main Street) as that occupied by Mr. Hamilton, the British consul at Norfolk in 1807, at the time of the affair of the *Chesapeake* and *Leopard*, whose personal popularity alone saved his house from demolition by the exasperated people.¹ In that house Thomas Moore, the Irish poet, lodged in 1804, and there he wrote his beautiful poetic paraphrase of a popular legend connected with the Lake of the Dismal Swamp. I passed the morning delightfully with Mr. James and his interesting family, and at ten o'clock started for Craney Island in a skiff manned by a negro seventy years of age, and a mulatto boy of sixteen, both slaves. The air was balmy. Scarcely a ripple appeared on the water, and the sun was pleasantly obscured by a slight haziness of the atmosphere.

² March 14, 1863.

ILLUSTRATION OF THE HOUSE.

Just after passing Fort Norfolk we came abreast Lambert's Point, and, stretching far to the right, toward the Rip Raps, was seen Sewell's Point, made famous to this generation by the stirring events of the late Civil War with which it is associated.

OYSTER FISHING.

The waters in that vicinity were dotted with oyster-vessels at anchor, engaged in receiving cargoes from numerous small boats that were hovering over the oyster-beds in every direction, each bearing two men with fishing rakes. As we neared the head of Craney Island, I hailed a brace of these fishermen in a boat, and asked them for a "bip's

worth" of oysters for my watermen. To my astonishment, they dropped two rake's-full—at least a peck—into our boat, and on them the oarsmen feasted while I strolled over the island, viewing and sketching the remains of military works erected there during the War of 1812. These are seen rising above the common surface of the island in the little sketch on page 675. These works were erected immediately after the repulse of the British from the island in June,³ and were quite formidable.³ They consisted of a fort on the southeast part of the island, and a magazine

³ 1813.

¹ See page 158.
² This is from a sketch made by the author on New Year's Day, 1865.
³ The troops on the island at the time here mentioned were without any shelter excepting indifferent tents, and suffered much for lack of water. They dug hollows on the island in which they caught rain, and then strained the muddy water for use.

The Fortifications on Craney Island.

REMAINS OF FORTIFICATIONS ON CRANEY ISLAND.

and breast-works on the northwestern side, on the spot where Faulkner's efficient battery was planted. There was an intervening and connecting line of intrenchments along the channel side of the island, with embrasures for cannon. These had

almost disappeared, but the embankments of the fort were ten or twelve feet in height. They inclosed a hexagonal block-house, built of brick, and surrounded by an arcade below the ports. It was two stories in height, but the upper floor does not appear to have been laid. Near the block-house was a magazine, also built of brick. Nothing remained of the old main gate, on the land side, but an iron hinge, and of the gateway a broken arch. This block-house, or citadel, when I was there, was perfectly preserved.

BLOCK-HOUSE ON CRANEY ISLAND.

The magazine on the opposite end of the island was also built of brick, and was well preserved. Around it were some remains of breastworks, but many had perished from the encroachments of the sea. These and the whole island were almost wholly submerged during a very high tide

MAGAZINE ON CRANEY ISLAND.

a few weeks before my visit there. Much of the old embankments was washed away, but the solitary cedar, mentioned as being there in 1813, remained unharmed on the southern slope of the island.¹ From the magazine we had a fine view of the entire scene of action on the 22d of June. The schooner on the right, in the annexed picture, designates the place of the barges at the time of their repulse; and the distant point between the vessel and the shore by the magazine shows the landing-place of the British, who moved through the woods up to Wise's Creek. Just

¹ This tree is seen in the sketch on page 675.

A Slave's Freedom purchased by his Wife.

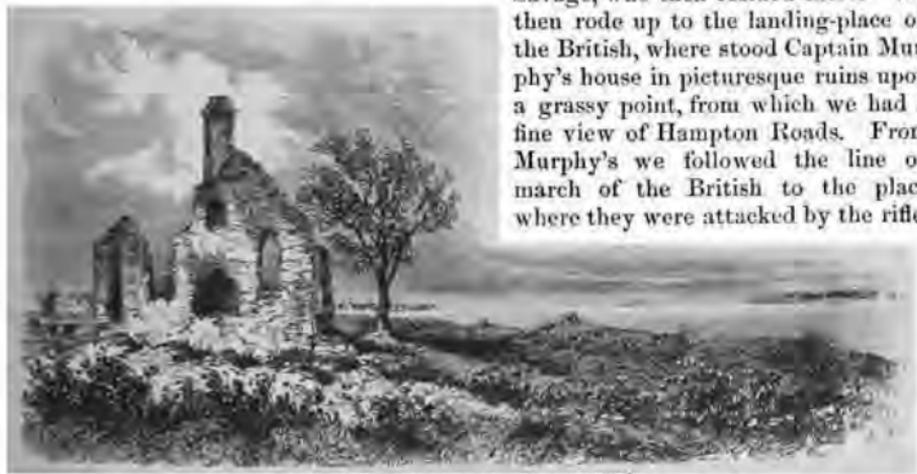

A Visit to Hampton and Vicinity.

Landing-place of the British.

at the left of the magazine, across the strait, is seen a small house, at the mouth of Wise's Creek. It was near the site of "Wise's Quarter," which was demolished many years ago. In the more modern house we found an intelligent colored man, about eighty years of age, rejoicing in the fact that his freedom had just been purchased by his wife, a woman almost as old as himself. She earned money by midwifery, in which profession she was very proficient. "Bress de Lord!" said the old man, "for de day when I married Dinah. She allers said Pomp shouldn't die a slave, but she's worked hard almost fifty years afore she made her promise sure." He was living near there at the time of the fight, and assisted in the erection of the fortifications on Craney Island.

It was about four o'clock when I returned to Norfolk. I spent the remainder of the afternoon in strolling about the city, and on the following morning departed in the steamer *Selden* for Hampton, eighteen miles distant. There I had the good fortune to meet Colonel Wilson W. Jones, brother of the lieutenant who went to the assistance of Parker with his cannon, and so gallantly took it from the field.¹ The colonel was a sergeant in Servant's rifle company, and was in the battle on Celey's Road when the British sergeant major and Lieutenant Colonel Williams were killed. He kindly accompanied me to places of interest around Hampton. First we visited the head-quarters of Beckwith and Cockburn (printed on page 683), and were kindly shown the rooms occupied by them, and the grave of Williams in the garden, by Mrs.

Savage, who then resided there. We then rode up to the landing-place of the British, where stood Captain Murphy's house in picturesque ruins upon a grassy point, from which we had a fine view of Hampton Roads. From Murphy's we followed the line of march of the British to the place where they were attacked by the rifle-

LANDING-PLACE OF THE BRITISH AT MURPHY'S.

men, and afterward by Jones with his field-piece, and then went to the mansion of the Pembroke farm, over which the Americans fled toward Little Bethel. In that mansion lived an aged couple at the time, named Kirby, whose treatment by the pursuing British soldiers who entered the house was the cause of the invoking of many an imprecation throughout the land upon the head of the enemy.² Near it stood the mansion of the Bethel estate, the dwelling of another aged man, named Hope, under whose roof great atrocities were committed.³ From these we returned to Hampton

¹ See page 682.

² Mr. Kirby was an aged man, very sick, and at the point to die when the soldiers entered the house. His wife was by his bedside, when they shot him through the body and wounded her in the hip. This was proclaimed as a wanton murder, and excited the greatest indignation. Colonel Jones knew Mrs. Kirby well, and her version of the story was that, with vengeful feelings, the soldiers chased an ugly dog into the house, which ran under Mr. Kirby's chair, in which he was sitting, and, in their eagerness to shoot the dog, shot the aged invalid, the bullet grazing the hip of Mrs. Kirby. Mrs. Kirby always considered the shooting of her husband an accident.

³ The conduct of the British at Mr. Hope's was barbarous in the extreme. He was sixty-five years of age. They stripped him entirely naked, wounded him intentionally with a bayonet, and tortured him with menaces of death. They would doubtless have killed him had not their attention been directed to a woman who had sought refuge in his

KIRBY HOUSE.¹

she died in January, 1862.

I spent the evening with Colonel Jones and his excellent wife, and saw in their little parlor two original crayon drawings by the eminent Sharpless, the faithful delineator from life of the profiles of Washington and his wife. These were profiles of Jefferson and Monroe. I made a careful copy of the former. Early the next morning I drew the sketch from my window at the hotel presented on page 681, and at the appointed hour left Hampton for Richmond in the James River steamer.

This was my second visit to Hampton, with an interval of five years, and both times I carried away with me pleasant remembrances of courteous inhabitants and a charming village. All is now changed. Hampton has been made a desolation by the smittings of civil war. Very few of its inhabitants were faithful to the old flag, and that county of which Hampton was the capital furnished no less than six companies to the rebel army. Colonel Jones remained a staunch Union man—faithful among the faithless—and was the last man to leave the doomed village when, at a few minutes past midnight on the 7th of August, 1861, the torch was applied by order of the rebel General Magruder during the maudlin delirium of intoxication. He (the aged veteran of 1812) was not allowed to take any thing from his house—the house in which the family of Commodore Barron long resided—and he and his equally aged companion had scarcely left it when they saw it in flames. Within twelve hours, four churches and four hundred and seventy dwellings were laid in ashes. Among the churches was one of the most ancient in Virginia,² which stood apart from the town. Its destruction was an act of purest barbarism.

¹ June, 1812. The British remained in Hampton until the 27th,³ when they re-embarked, and on the morning of the 29th Major Crutchfield entered the plundered village and took possession. On the 1st of July the blockading squadron, consisting at that time of seven ships of the line, seven frigates, and eleven smaller vessels, left Hampton Roads and entered the mouth of the Potomac River. A portion of the fleet went up that stream, exciting the most intense alarm at Alexandria, Georgetown, and the national capital. The only fortification on which those cities could rely at that time for the arrest of the invading squadron was old Fort Warburton, then called Fort Washington,³ situated on the Maryland side of the Potomac, a few miles below Alexandria. This was strengthened and its garrison increased by call-

house. They left him, seized her, and subjected her to indignities of which savages would be ashamed. Because of these atrocities, M'Laws, of the Veteran Corps at Wilmington, used the word HAMPTON, in place of *Attention*, when calling them to order.

¹ This house was of brick, and beautifully situated. At the time of the British invasion it belonged to John S. Westwood. When I visited it it was the property of his family. In front of it were some tomb-stones, near the site of the old Pembroke church.

² For a drawing and full historical description of this ancient church, see Lossing's *Pictorial Field-book of the Revolution*, II., 326.

³ This fort had been put in good condition. It had about twenty 18 and 32 pounder cannon mounted, that bore immediately upon the channel; also a water battery of eight 32-pounders advantageously placed.

Cockburn in the Potomac and on the Coast of North Carolina.

Alarm in South Carolina.

ing in the militia from the surrounding country. Breastworks were thrown up at Alexandria, Georgetown, and Washington, and vigorous measures were taken to meet the foe. The alarm soon subsided. The British did not approach nearer to Washington than seventy miles, and then withdrew, went around to the Chesapeake, and created equal alarm at Annapolis and Baltimore. Assured that those cities were amply defended, they withdrew, and a portion of the fleet, under Admiral Cockburn, went southward to plunder, destroy, and spread alarm along the coasts of the Carolinas and Georgia. His vessels were the *Sceptre*, 74 (flag-ship); *Romulus*, *Fox*, and *Nemesis*.

On the 12th of July Cockburn anchored off Ocracoke Inlet, and dispatched Lieutenant Westphal, with about eight hundred men in barges, to the waters of Pamlico Sound. They found within the bar the *Anaconda*, of New York, and *Atlas*, of Philadelphia, both private armed vessels. They fell upon the *Anaconda*, whose thirteen men, after stout resistance, blew holes in her bottom with her own guns and escaped. The British plugged the holes and saved her. They captured the *Atlas* and some smaller craft, but a revenue cutter escaped, and gave timely warning at Newbern. Westphal proceeded to attack that place, but it was too well defended by the newly-rallied militia to warrant an attack, so he proceeded to Portsmouth, not far off, took possession of the town, and for two or three days engaged in the pastime of plundering and desolating the surrounding country. The rapid-gathering of the militia caused them to decamp in haste on the 16th, carrying with them cattle and other property, and many slaves, to whom freedom was falsely promised. These Cockburn, it is said, sold in the West Indies.

Leaving Pamlico Sound, the arch-marauder went down the coast, stopping at and plundering Dewees's and Capers's Islands, and filling the whole region of the Lower Santee with terror. Several plantations on Dewees's were desolated, and from Capers's a large quantity of live-stock was taken away, with a few slaves. Other exposed places along the coast expected a similar visitation. Breastworks were thrown up around Charleston; Fort Moultrie and other fortifications were strengthened, and a considerable body of militia were assembled on Haddrell's Point, or Point Pleasant, where might have been seen, before the late Civil War, a monument erected to the memory of some soldiers who perished there by disease.¹ No battle was fought on South Carolina soil during the war. Her politicians were among the most clamorous for hostilities, and some of her citizens made fortunes by privateering; but few of her sons were found in the ranks of their country's defenders. She suffered most from the fear of losing property, especially slaves, which her state law declared to be property; and during the time

SOLDIERS' MONUMENT, POINT PLEASANT.

¹ This monument was built of brick, having in shallow recesses in the base of the crowning pyramid marble tablets bearing the following inscriptions:

East Side.—"On the 15th of June, 1812, the United States of America declared war against Great Britain. At the first sound of the trumpet the patriot soldiers who sleep beneath this monument flew to the standard of Liberty. Here they fell beneath the scythe of Death. The sympathies of the brave, the tears of the stranger, and the slow dirge of the camp attended them to the tomb.

"How sleep the brave, who sink to rest
With all their country's wishes blest.
The laurel wreath of shining green
Will still around their tomb be seen."

West Side.—"Sacred to the memory of Sergeant Truman Goodrich and Adam C. Spencer. Also of David Aarant,

when Cockburn was hovering along the coast the large slaveholders were agitated by the deepest anxiety lest a force of the British should land and declare freedom to all serfs who should join their standard. Had they done so, no doubt an army of many thousand colored people would have flocked to that standard, for the negroes had heard of the liberation of their brethren in Virginia by the British, but not of the infamous treachery of their seducer, who sold them into worse servitude in the West Indies. All along the coast, and far into the interior, secret organizations existed among the negroes for united efforts to obtain their freedom; and, in anticipation of the coming of a British army of liberation, they were prepared to rise in large numbers, at a given signal, and strike for freedom.¹ But Cockburn was content to fill his pockets by plundering, and a petty slave-trade on his own account; so, after keeping the Carolinas in a state like fever and ague for many weeks,² he went down to the Georgia coast, and at "Dungeness House," the seat of the fine estate of General Nathaniel Greene, of the Revolution, on Cumberland Island, he made his head-quarters for the winter. His marauders went out in all directions upon the neighboring coast, spreading desolation and alarm. Among the estates visited was that of Bonaventure, a few

William Rutland, John Williams, William McLellan, Henry Kilgore, John Taylor, John Bruce, and Harris Lancaster, private soldiers of the Third Regiment of State Troops."

When I visited the spot a few years before the late war, the tablets were much defaced by the effects of bullets which had been fired at them for the sport of some young men of Charleston. It was sad to see such evidences of utter carelessness of the memory of those whom another and better generation had delighted to honor. And yet there was testimony not far off—just across a broad channel—that respect for a really great man, though ranked in history as a savage, was not wanting. I refer to Osceola, the celebrated Seminole warrior, who for a long time outgeneraled some of the best commanders of the republic—Scott, Taylor, Gaines, and Jesup—in their attempts to expel his people from the Everglades of Florida, which had belonged to his fathers from time immemorial. A stone slab marks his last resting-place on earth, just at the entrance-gate to Fort Moultrie; and when I was there not even a pencil-mark defaced the surface, on which was inscribed, in large letters, OSCEOLA. And so it remained through the late Civil War, unscathed amid the ruins around it. I saw it, well preserved, in the spring of 1866. Osceola was made a prisoner by treachery, having been arrested in the camp of General Jesup, whither he had been invited to a conference under the generally sacred protection of a flag of truce. He was imprisoned, and his great heart was broken. The warrior became like a little child, and died at the close of January, 1829. No one can look upon that simple monument, just outside of the gate of a powerful fortress, without flinching in it and the huge walls near significant emblems of the comparative strength of the European and the native American on the continent; nor can an American citizen, acquainted with the history of the latter years of that warrior's life, avoid the blush of shame for the government

OSCEOLA'S GRAVE.

that sanctioned such treachery.

¹ I am indebted to an accomplished American scholar and professor in one of our colleges for an account of one of these secret organizations, which met regularly during the summer of 1813 upon an island in the vicinity of Charleston. The leader was a man of great sagacity and influence, and their meetings were opened and closed by singing the subjoined hymn, composed by that leader. They held meetings every night, and had arranged a plan for the rising of all the slaves in Charleston when the British should appear. At one of their meetings, the question "What shall be done with the white people?" was warmly discussed. Some advocated their indiscriminate slaughter as the only security for liberty, and this seemed to be the prevailing opinion, when the author of the hymn came in and said, "Brothers! you know me. You know that I am ready to gain your liberty and mine. But not one needless drop of blood must be shed. I have a master whom I love, and the man who takes his life must pass over my dead body." The following is a copy of the hymn—a sort of parody on the national song "*Hail, Columbia!*"

Repeat.—
{Hail! all hail! ye Afric clan!
Hail! ye oppressed, ye Afric band!
Who toil and sweat in slavery bound,
And when your health and strength are gone,
Are left to hunger and to mourn.
Let independence be your aim,
Ever mindful what 'tis worth;
Pledge your bodies for the prize,
File them even to the skies!
Chorus.—Firm, united let us be,
Resolved on death or liberty!
As a band of patriots joined,
Peace and plenty we shall find.

Repeat.—
{Look to heaven with manly trust,
And swear by Him that's always just
That no white foe, with impious hand,

Shall slave your wives and daughters more,
Or rob them of their virtue dear!
Be armed with valor firm and true,
Their hopes are fixed on Heaven and you,
That Truth and Justice will prevail.
Chorus.—Firm, united, etc.

Repeat.—
{Arise! arise! shake off your chains!
Your cause is just, so Heaven ordains;
'Tis you shall freedom be proclaimed!
Raise your arms and bare your breasts,
Almighty God will do the rest.
Blow the clarion's warlike blast;
Call every negro from his task;
Wrest the scourge from Buckra's hand,
And drive each tyrant from the land!
Chorus.—Firm, united, etc.

² Cockburn landed at Hilton Head and one or two other places, from which he carried off some cattle and a number of slaves; and Savannah was much agitated for a time with the fear of his grasp.

Cockburn on the Coast of Georgia.

Decatur runs the Blockade at New York.

miles from Savannah, the property of the Tattnall family, on which, in a grove of live-oak draped with the Spanish moss, is one of the most picturesque cemeteries in the world, the entrance to which is seen in the picture, made from a sketch by the artist T. Addison Richards.

While Cockburn, the marauder, was on the Southern coast, Hardy, the gentleman, was blockading a portion of the New England coast. The

ENTRANCE TO BONAVENTURE.

harbors from the Delaware to Nantucket were regularly watched, and ingress and egress were very difficult.

We have given an account of the arrival at New York of the frigates *United States* and *Macedonian*,¹ the former in the American service, under Decatur, and the latter a prize captured by him from the British in the previous autumn. These had been repaired and fitted for sea, and the gallant Captain Jones had been placed in command of the *Macedonian*. At this time the *Poictiers*, Captain Beresford, and a number of other vessels, were carefully guarding the entrance to New York Harbor through the Narrows, but Decatur, anxious to get out upon the ocean, resolved to run the blockade. He found it unsafe to attempt it at the Narrows; so, with his two frigates, accompanied by the sloop of war *Hornet*, Captain Biddle, which was anxious to join the *Chesapeake* at Boston, he passed up the East River and Long Island Sound for the purpose of escaping between Montauk Point and Block Island.² For a month

J. M. Parley Captain

Sir Thomas Hardy, with his flag-ship the *Ramillies*, the *Orpheus*, Captain Sir Hugh Pigot, the *Valiant*, *Acasta*, and smaller vessels, had been

keeping vigilant watch in that region. During that time Sir Thomas had won the good opinion of the inhabitants along the coast because of his honorable treatment of them.

When Decatur approached the mouth of the Thames,³ he was met by the *Valiant* and *Acasta*, and, knowing that the *Ramillies* and *Orpheus* were near, he deemed it prudent to run into New London Harbor. He was pursued by the enemy as far as Gull Island, at which point the British anchored in position to command the mouth of the Thames. Then commenced a regular blockade of New London, which continued full twenty months, and was raised only by the proclamation of peace. The squadron in sight of New London was soon strengthened, and when, at the latter part of June, Hardy assumed command of it, it consisted of two 74's, two frigates, and a number of smaller vessels.

¹ See page 456.

² This is out at sea, south of Rhode Island, and forms a part of that State's jurisdiction. The British had now raised their standard on this island.

June 1,
1813.

The presence of this fleet created much anxiety. The more aged inhabitants, who remembered Arnold's incursion in 1781, were filled with apprehensions of a repetition of the tragedies of that terrible day. It was generally expected that the enemy would enter the river and attack Decatur's squadron, and the neighboring militia were summoned to the town; the specie of the banks was conveyed to Norwich, at the head of tide-water; and women, and children, and portable property were sent into the interior. The character of Sir Thomas was a sufficient guaranty that neither life nor private property would be wantonly destroyed; but, in the event of the bombardment of the ships, the town could not well escape destruction by fire. Decatur, in anticipation of such bombardment of his vessels, after lightening them, took them five or six miles up the river, beyond the reach of the enemy, and upon an eminence near Allyn's Point, from which he had a fine view of the Sound and New London Harbor, he cast up some intrenchments, and placed his cannon upon them. The spot was named Dragon Hill.²

At about this time an event occurred off New London which caused great exasperation in the blockading squadron, and came near bringing most disastrous effects upon the New England coast. It was the use of a torpedo, or submarine mine, whose invention, construction, and character have already been given in these pages.³ The government of the United States, it will be remembered, refused to employ them. It was left for private enterprise to attempt the promotion of the public good by their use in weakening the power of the enemy. One of these enterprises was undertaken in New York city. In the hold of the schooner *Eagle*, John Scudder, junior, the originator of the plot, placed ten kegs of gunpowder, with a quantity of sulphur mixed with it, in a strong cask, and surrounded it with huge stones and other missiles, which, in the event of explosion, might inflict great injury. At the head of the cask, on the inside, were fixed two gun-locks, with cords fastened to their triggers at one end, and two barrels of flour at the other end, so that when the flour should be removed the

¹ In this view, looking down the river, the old court-house, yet standing on State Street, is seen near the centre of the picture. Upon the rocky peninsula farther to the right (erroneously made to appear like an island) is seen Fort Trumbull. Beyond it, in the distance, at the mouth of the river, is seen the light-house, and in the open sound the British blockading squadron. In the extreme distance is seen, as if in connecting line, Gull and Fisher's Island. On the extreme left are the Heights of Groton, east of the Thames.

² *History of New London*, by Miss Frances Manwaring Caultkins, author of a *History of Norwich, Connecticut*. These volumes justly rank among the best arranged and most interesting of the local histories of our country.

A Torpedo Vessel off New London.

Alarm and Precautions of the British.

Other Torpedo Vessels.

locks would be sprung, the powder ignited, and the terrible mine exploded. Thus prepared, with a cargo of flour and naval stores over the concealed mine, the *Eagle*, Captain Riker, late in June, sailed for New London, where, as was expected and desired, she was captured by armed men sent out in boats from the *Ramillies*. The crew of the *Eagle* escaped to the shore at Millstone Point, and anxiously awaited the result. The wind had fallen, and for two hours unavailing efforts were made to get the *Eagle* alongside the *Ramillies* for the purpose of transferring her cargo to that vessel. Finally boats were sent out as lighters, the hatches of the *Eagle* were opened, and when the first barrel of flour was removed the explosion took place. A column of fire shot up into the air full nine hundred feet, and a shower of pitch and tar fell upon the deck of the *Ramillies*. The schooner, and the first lieutenant and ten men from the flag-ship on board of her, were blown into atoms, and most of those in the boats outside were seriously, and some fatally injured.

The success which this experiment promised caused others to be tried. A citizen of Norwich, familiar with the machine used by Bushnell in attempts to blow up the *Eagle*, British ship-of-war, in the harbor of New York during the Revolution, invented a submarine boat in which he voyaged at the rate of three miles an hour. In this he went under, the *Ramillies* three times, and on the third occasion had nearly completed the task of fixing a torpedo to her bottom, when a screw broke, and his effort was foiled. He was discovered, but escaped. A daring fisherman of Long Island, named Penny, made attempts on the *Ramillies* with a torpedo in a whale-boat, and Hardy was kept continually on the alert. So justly fearful was he of these mines, that he not only kept his ship in motion, but, according to Penny, who was a prisoner on the *Ramillies* for a while, he caused her bottom to be swept with a cable every two hours night and day. He finally issued a warning to the inhabitants of the coasts that if they did not cease that cruel and unheard-of warfare, he should proceed to destroy their towns and desolate their country.¹

An attempt of Mr. Mix, of the navy, in July, to blow up the *Plantagenet*, 74, lying off Cape Henry, Virginia, was almost successful. The torpedo was carried out, under cover of intense darkness, in a heavy open boat called *The Chesapeake Avenger*, and dropped so as to float down under the ship's bow. It exploded a few seconds too soon. The scene was awful. A column of water, twenty-five feet in diameter, and half luminous with lurid light, was thrown up at least forty feet, with an explosion as terrific as thunder, and producing a concussion like the shock of an earthquake. It burst at the crown. The water fell in profusion on the deck of the *Plantagenet*, and at the same moment she rolled into the chasm made by this sudden expulsion of water, and nearly upset. Torpedoes were also placed across the Narrows, below New York, and at the entrance to the harbor of Portland. This fact made the British commanders exceedingly cautious in approaching our harbors, and they and their American sympathizers expressed great horror at this mode of warfare. It was replied that the wanton outrages committed on the defenseless inhabitants of the coast, from Havre de Grace to Charleston, fully justified *any* mode of warfare against such marauders, and that stratagem in the horrid business of war was always justifiable.²

¹ Hardy had been in the habit of allowing trading vessels to pass, the blockade being chiefly against Decatur's little squadron; but on the morning after the explosion of the *Eagle* he informed General Isham, the commander of the militia at New London, that no vessel would thereafter be allowed to pass the British squadron except flags of truce. And on the 28th of August, after an attempt upon the *Ramillies* by Penny from the south side of Long Island, Hardy wrote to Justice Terry, of Southold, desiring him to warn the inhabitants along the coast that if they allowed a torpedo boat to remain another day among them, he would "order every house near the shore to be destroyed." The leniency and courtesy extended to the inhabitants by Captain Hardy gave him claims to their respectful consideration.

² The Philadelphia *Aurora* said, in speaking of the complaints of the mischievous "Peace party" of that day, "We would respectfully solicit the pious men to explain to us the difference between waging war with submarine machines and with aerial destructive weapons—fighting under water or fighting in the air? The British, too cowardly to meet us on shore (except when they are certain of finding little or no opposition) like men and soldiers, send us Congreve rockets to burn our towns and habitations; we, in turn, dispatch some of our torpedoes to rub the copper off the bottoms of their ships."

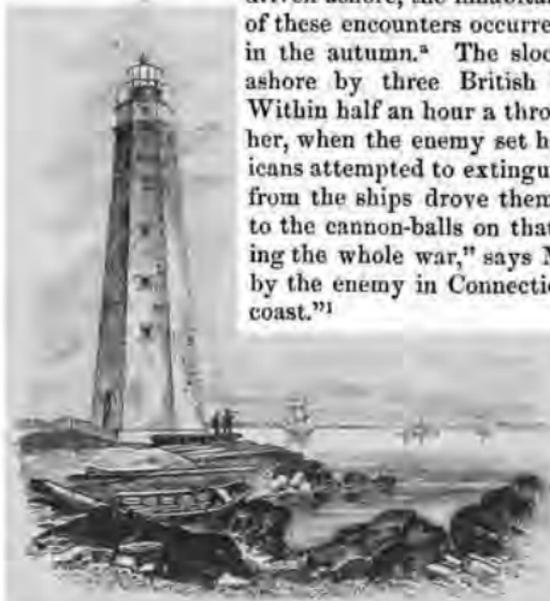

Vigorous Blockade of the Coast of Connecticut.

The local Militia.

Colonel Burbeck.

Although Hardy did not execute his threats, he made the blockade more rigorous than ever, and many trading vessels became prizes to the British cruisers. A tiny warfare was kept up along the Connecticut coast, for, whenever a chased vessel was driven ashore, the inhabitants would turn out to defend it. One of these encounters occurred a little west of the light-house late in the autumn.¹ The sloop *Roxana* was chased ashore by three British barges, and grounded.

Within half an hour a throng of people had assembled to rescue her, when the enemy set her on fire and retreated. The Americans attempted to extinguish the flames, but a heavy cannonade from the ships drove them off. Although many were exposed to the cannon-balls on that occasion, not one was hurt. "During the whole war," says Miss Caulkins, "not a man was killed by the enemy in Connecticut, and only one in its waters on the coast."²

LIGHT-HOUSE AT NEW LONDON.

At near the close of June, the veteran colonel of artillery in the regular service, Henry Burbeck, who had been stationed at Newport, arrived at New London to take charge of that military department.³ He found the militia, who were strongly imbued with the mischievous doctrine of state supremacy, unwilling to be transferred, according to late orders

from the Secretary of War, from the service of the state to the service of the United States. He accordingly, under instructions from Washington, dismissed them all. The people, misconstruing the movement, were alarmed and exasperated. They regarded themselves as unwarrantably deprived of their defenders, and betrayed to the enemy, who might come and plunder and destroy to his heart's content. At the same time, it was known that Hardy's fleet had been re-enforced by the arrival of the *Endymion* and *Statira*, vessels equal in strength to the *United States* and *Macedonian*. A panic of mingled fear and indignation prevailed, and it was only allayed by the quick response of the Governor of Connecticut to the invitation of Colonel

¹ *History of New London*, page 634.

² Henry Burbeck was born in Boston on the 8th of June, 1754. He was a soldier of the Revolution, and in 1787, under the Confederation, he was commissioned a captain. He was appointed captain of artillery in 1789, and promoted to major in 1791. He was raised to lieutenant colonel of artillery and engineers in 1798, and to colonel in 1802. During his service at New London, on the 10th of September, 1813, he was breveted a brigadier general, and held that commission until the close of the war, when, after thirty-eight years of military service, he re-

BURBECK'S MONUMENT.

tired from the army, and took up his abode in New London. He died there on the 2d of October, 1848, at the great age of ninety-four years. He was buried in the Cedar Grove Cemetery at New London, and over his grave the Massachusetts Society of the Cincinnati, of which, at the time of his death, he was president, and last survivor but one of the original members, erected a handsome granite monument, under the direction of Honorable R. G. Shaw, of Boston, the late General H. A. S. Dearborn, of Roxbury, and the Reverend Alfred L. Baur, of Newton Lower Falls, a committee of the society. Upon the front of the obelisk, on a shield, is the following inscription: "Brigadier General HENRY BURBECK, born in Boston, Mass., June 8, 1754. Died at New London, October 2, 1848." Upon the cube on which the obelisk stands the following words are deeply engraven: "The Massachusetts Society of the Cincinnati dedicate this monument to the memory of their late honored President. He was an officer of the United States from the commencement of the Revolutionary War until near the close of his life. By a patriotic and faithful discharge of the high and responsible duties of a Gallant Soldier, and an Exemplary Citizen, he became as justly and eminently distinguished as he was righteously and universally respected. Erected MDCCCL."

Decatur endeavors to get to Sea. The Blue-lights and the "Peace Party." A Challenge. Tour in New England.

Burbeck to call out the militia for the temporary defense of the menaced town. Brigadier General Williams was appointed to the command of the militia, and the alarm subsided.

Decatur watched continually during the summer and autumn for an opportunity to escape to sea with his three vessels; and hoping, as the severely cold weather came on, to find the enemy at times somewhat lax in vigilance, he slowly dropped down the river, and at the beginning of December was anchored in New London Harbor, opposite Market Wharf. With great secrecy he prepared every thing for sailing. He fixed on Sunday evening, the 12th,^a for making the attempt to run the blockade. Fortunately for his plan, the night was very dark, the wind was favorable, and the tide served at a convenient hour. When all things were in readiness, and he was about to weigh anchor, word came from the row-guard of the *Macedonian* and *Hornet* that signal-lights were burning on both sides of the river, near its mouth. They were *blue-lights*, and Decatur had no doubt of their being signals to warn the enemy of his movement, which was known in the village that evening. Thus exposed by "Peace Men," of whom there were a few in almost every community, he at once abandoned the project, and tried every means to discover the betrayers, but without effect. The Opposition, as a party, denied the fact, while others as strongly asserted it. In his letter to the Secretary of the Navy^b on the subject, Decatur said, "Notwithstanding these signals have been repeated, and have been seen by twenty persons at least in this squadron, there are men in New London who have the hardihood to affect to disbelieve it, and the effrontery to avow their disbelief." The whole Federal party, who were traditionally opposed to war with Great Britain, were often unfairly compelled to bear the odium of actions which justly pertained only to the "Peace" faction. They were compelled to do so in this case, and for more than a generation members of that party were stigmatized with the epithet of "Blue-light Federalist."

The *United States* and *Macedonian* were imprisoned in the Thames during the remainder of the war.¹ In the spring of 1814 they were dismantled, and laid up about three and a half miles below Norwich, and their officers and men made their way by land to other ports and engaged actively in the service. The *Hornet* lay at New London almost a year longer, when she slipped out of the harbor and escaped to New York.

Of the more stirring operations of the blockading fleet in this vicinity the following year I shall hereafter write, and it remains for me now only to make brief mention of the circumstances of my visit at New London and its vicinity late in the autumn of 1860. I had been on a tour East as far as Castine, at the mouth of the Penobscot, and up that river to Bangor, and was thus far on my way homeward, after spending Thanksgiving-day with the acting surgeon of Perry's fleet, Dr. Usher Parsons, at his house in Providence, Rhode Island. I had reached New London at an early hour, and, with a pleasant day before me, went out to visit places of historic interest in the town and its neighborhood. Before doing so, I called on the accomplished author of the History of New London (Miss Caulkins²), and, after the brief in-

¹ In January, 1814, Captain Moran, master of a sloop that had been captured by the blockaders, reported that Hardy, in his presence, expressed a desire that the *Macedonian* and *Stattira* should have a combat, they being vessels of equal power, but that he would not permit a challenge to that effect to be sent. Decatur at once informed Hardy (17th of January, 1814) that he was ready to have a meeting of the *Macedonian* and *Stattira*, and the *United States* and *Endymion*, and invited him to the contest. This message was sent by Captain Biddle, of the *Hornet*, who was informed that an answer would be sent the next day. The crews of the two American frigates were assembled, and when the proposition was submitted to them they received it with hearty cheers. They were eager for release, and did not doubt their ability to secure a victory. On the following day an answer came. The challenge was accepted so far as the *Macedonian* and *Stattira* were concerned, but a meeting between the *United States* and *Endymion* was declined because of an alleged disparity in strength, which would give great advantage to the American vessel. Decatur, being under sailing orders, and anxious to get his little squadron to sea, would not consent to its separation by detaching the *Macedonian* for a duel, so the matter dropped.

² Miss Caulkins is also the author of an admirable History of Norwich, Connecticut.

interview which limited time allowed, I was well prepared to find the places (and appreciate the interest attached to them) in and around that pleasant little city of ten thousand inhabitants. I shall ever remember that interview with pleasure.

Near New London is the "Cedar Grove Cemetery," in which are the graves of many of the honored dead. Among these, over which affection has reared monuments, may be found those of General Burbeck and Commodore George W. Rodgers.

COMMODORE RODGERS'S MONUMENT.

I made sketches of the monuments erected to the memory of each, and present them to the readers of these pages. Commodore Rodgers was a gallant officer of the navy, and died in the service of his country at Buenos Ayres, in South America, on the 21st of May, 1832, at the age of forty-six years. He was then in command of an American squadron on the coast of Brazil. He was a veteran officer, having been a midshipman in 1804, and a lieutenant in active service during the War of 1812.¹ By order of the Navy Department, his remains were brought home in the ship *Lexington* in 1850, and conveyed to New London in charge of Commodore Kearney. Their re-interment in "Cedar Grove Cemetery"² was the occasion of a great civic and military display, in which the Governor of Connecticut and his suite joined.³

His monument is a plain obelisk of freestone, on which is a simple inscription.

From the cemetery I rode back to the town by another way, which passed by the older part of the place, and the "Hempstead House," the last remaining of the three original houses built at New London. It was erected and occupied by Sir Robert Hempstead, whose descendants yet own it. It was fortified against the Indians at one time, and was the nearest neighbor to the mansion of Governor Winthrop, at the head of the Cove—that cove out of which, within twenty rods of the "Hempstead House," sailed the first vessel that went from New London to the West Indies.

From the "Hempstead House" I rode down to the light-house at the mouth of the Thames, sketched the view of it on page 694, and, returning, visited Fort Trumbull, so called in honor of the first Governor of Connecticut of that name. It is a most delightful drive along the river from the light-house and Pequot House to the city, and it is much traveled for pleasure during the summer season. Outward is seen the broad expanse of the Sound, with Fisher's and Gull Islands in the distance; while up the river is seen the fort and city on one side, and Fort Griswold, the Groton Monument and village, and the green hills stretching away toward Norwich on the other. Fort Trumbull is a strong work, built chiefly of granite from the quarry at Millstone Point. It is the third fortress erected on the spot. In 1775 a strong block-house was built upon that rocky point, some embankments were cast up around it, and the whole was named Fort Trumbull. In 1812 these embankments were only green mounds. These were cleared away, and a more formidable work was erected, leaving the old block-house within the lines. This fort, retaining the original name, fell into decay, and all but the ancient block-house was demolished preparatory to the commencement of the present structure. There the block-house still stands, a monument to the memory of the patriotism of our fathers of the Revolution. The

¹ He was made master commandant in 1816, and captain in 1825. One of his sons (Lieutenant Alexander P. Rodgers) was killed at the battle of Chapultepec, in Mexico, in September, 1847.

² This cemetery was laid out by Dr. Horatio Stone for an association in 1850, and consecrated in 1851. The first interment of a person living when it was laid out was that of Joseph S. Squire.—Miss Caulkina.

Block-house erected in 1812.

The old Court-house and its Associations.

Peace.

new fort was built under the superintendence of (then) Captain George W. Cullum, of the United States Engineers, and was completed in 1849, at a cost of about two hundred and fifty thousand dollars. The views from its battlements are extensive; and from the grassy esplanade sloping to the water

ANCIENT BLOCK-HOUSE, FORT TRUMBULL.

NEW LONDON HARBOR FROM FORT TRUMBULL.

southward may be obtained a very pleasant view of the harbor, the mouth of the river, and Long Island Sound beyond.

The last object of interest visited in New London was the old court-house built in 1784, three years after its predecessor was burnt at the time of Arnold's invasion.¹

It stands at the head of broad State Street, upon a rocky foundation. It had an external gallery around it at the second story, but this was removed at the beginning of the present century, and it now bears the appearance that it did at the close of the Second War for Independence, when it was the scene of joyous festivities immediately after the President's proclamation of peace reached the town in February, 1815.² Friendly greetings between the British blockading squadron and the citizens then took place. The latter soon went to sea, and the *United States* and *Macedonian* departed for New York after an imprisonment of about twenty months. Then "the last shadow of war departed from the town."

THE OLD COURT-HOUSE.

I left New London for Stonington by railway at evening, whither I shall invite the reader before long.

We have now considered the military events during the year 1813 in the North and West, on the Lakes, and along the Atlantic coast; let us now look out upon the ocean, and observe the hostile movements of the belligerents there. In the mean time sounds of war with the Indians come up from the Gulf region.

¹ See Miss Caulkins's *History of New London*, page 626.

² Admiral Hotham, whose flag-ship was the *Superb*, then commanded the blockading squadron off New London. On the 21st of February the village was splendidly illuminated. Hotham determined to mingle in the festivities. Announcing the parole on the *Superb* to be "America," and the countersign "Amity," he and his officers went ashore and mingled freely and cordially with the inhabitants. The admiral was received with distinguished courtesy, for, like Hardy, he had won the merited esteem of the citizens by his gentlemanly conduct. At about this time the *Factotum* and *Narcissus* came into the harbor, bringing Commodore Decatur and Lieutenant (now Admiral) W. B. Shubrick, who had been captured in the frigate *President*. A public reception, partaking of the character of a ball, was held at the court-house, to which all the British officers on the coast were invited. Several were present, and the guests were received by Commodores Decatur and Shaw.

CHAPTER XXXI.

"O, Johnny Bull, my joe, John, your *Peacocks* keep at home,
And ne'er let British seamen on a *Frotie* hither come,
For we've *Hornets* and we've *Wasps*, John, who, as you doubtless know,
Carry stingers in their tails, O, Johnny Bull, my joe."

BROTHER JONATHAN'S EPISTLE TO JOHNNY BULL, 1814.

"Then learn, ye comrades of the illustrious dead,
Heroic faith and honor to revere;
For Lawrence slumbers in his lowly bed,
Embalm'd by Albion's and Columbia's tear."

MONODY ON THE DEATH OF LAWRENCE.

AFTER the destruction of the *Java* off the coast of Brazil in December, 1812, Commodore Bainbridge, as we have observed, sailed for the United States,¹ leaving the *Hornet*, Captain James Lawrence, to blockade the *Bon Citoyenne*, a vessel laden with treasure, in the harbor of San Salvador.² On the 24th of January, the British ship of war *Montagu*, 74, made her appearance. She came up from Rio Janeiro to raise the blockade. The *Hornet* was driven into the harbor, but escaped during the very dark night that followed, and went cruising up the coast. She was thus employed for a month, and captured a few prizes. Finally, on the 24th of February, at half past three o'clock in the afternoon, while chasing an English brig off the mouth of the Demerara River, Lawrence suddenly discovered a vessel, evidently a man-of-war, with an English ensign set, just without the bar.² He determined to attack her. The Carobana bank lay between the *Hornet* and this newly-discovered enemy. While she was beating around this another sail was discovered, bearing down cautiously on her weather quarter. When she drew near she proved to be a man-of-war brig, displaying British colors. The men of the *Hornet* were called to quarters. The ship was cleared for action, and as the American ensign was flung out she tacked, contended for the weather-gage unsuccessfully, and then stood for her antagonist. The latter was on a like errand, and both vessels, with their heads different ways, and lying close to the wind, passed within half pistol-shot of each other at twenty-five minutes past five, delivering their broadsides from larboard batteries as the guns bore. Immediately after passing, the stranger endeavored to wear short round, so as to get a raking fire at the *Hornet*. Lawrence closely watched the movement, and promptly imitating it, and firing his starboard guns, compelled the stranger to right his helm. With a perfect blaze of fire the *Hornet* came down upon her, closed, and in this advantageous position poured in her shot with so much vigor for fifteen minutes that her antagonist not only struck her colors, but raised the union down in the fore rigging as a signal of distress. Very soon afterward the mainmast of the vanquished fell, and went over her side. Lieutenant J. T. Shubrick was sent to take possession of her, and ascertain her name and condition. She was the British man-of-war brig *Peacock*, 18, Captain William Peake. Her commander was slain, a great portion of her crew had fallen, and she was in a sinking condition. She already had six feet of water in her hold. Lieutenant David Connor and Midshipman Benjamin Cooper were immediately dispatched with boats to bring off the wounded, and endeavor to save the vessel. For this purpose both vessels were an-

The Destruction of the *Peacock*.

Conduct of Captain Lawrence.

Prowess of the Americans respected.

chored. The guns of the *Peacock* were thrown overboard, the holes made by shot were plugged, and every exertion was made to keep the battered hulk afloat until the wounded could be removed. Their efforts were not wholly successful. The short twilight closed before the work of mercy was accomplished. The vessel filled rapidly; and while thirteen of her crew and several men belonging to the *Hornet* were yet on board of her, she suddenly went down. Nine of the thirteen, and three of the *Hornet's* men,¹ perished. Connor and several other Americans, and four of the *Peacock's* crew, had a narrow escape from death. The latter saved themselves by running up the rigging to the foretop, which remained above water when she settled on the bottom, for she sunk in only about five fathoms. Four prisoners, in the confusion of the moment, had lowered the *Peacock's* stern boat and escaped to the shore. Those who were saved received every attention from the victors. The crew of the *Hornet* cheerfully divided their clothing with those of the *Peacock*; and so sensible were the officers of the latter of the generosity of the American commander and his men, that, on their arrival in New York, they expressed their gratitude in a public letter of thanks to Captain Lawrence.²

The loss of the British in this engagement, besides ship and property, is not exactly known. Captain Peake and four men were known to be killed, and four officers and twenty-nine men were found wounded. Nine others were drowned. The entire loss of life on the part of the enemy was probably not less than fifty. The *Hornet* was scarcely touched in her hull, but her sails and rigging were considerably cut, and her mainmast and bowsprit were wounded. Of her crew only one man was killed³ and two wounded in the fight, and three, as we have observed, went down with the *Peacock*.⁴ Two others were injured by the explosion of a cartridge. The strength of the *Hornet* in men and metal was slightly greater than that of the *Peacock*. She carried eighteen 32-pound carronades and two long 12's. The *Peacock* was armed with sixteen 24-pound carronades, two long 9's, one 12-pound carronade in the fore-castle, one 6-pounder, and two swivels. Her men numbered one hundred and thirty, and those of the *Hornet* one hundred and thirty-five.

Captain Lawrence found himself with two hundred and seventy-seven souls on board, and short of water. He determined to return immediately to the United States; and he did not cast anchor until he reached Holmes's Hole, Martha's Vineyard, on the 19th of March. On that day he wrote an official letter to the Secretary of the Navy giving an account of his success, and on the 25th he arrived at the Brooklyn Navy Yard. Intelligence of the exploits of the *Hornet* went over the land, and produced the liveliest joy, as well as the most profound sensation in both countries. The prowess and skill of American seamen were fully vindicated and acknowledged, and the "Mistress of the Seas" found it necessary to move with the humiliating caution of a doubter conscious of danger. "If a vessel had been moored for the sole purpose of experiment," said a Halifax (British) newspaper, "it is not probable she could have been sunk in so short a time. *It will not do for our vessels to fight theirs single-handed.* The Americans are a dead nip." The President of the United States, in his message to Congress at the special session in May, said, "In continuance of the brilliant achievements of our infant navy, a signal triumph has been gained by Cap-

¹ John Hart, Joseph Williams, and Hannibal Boyd.

² "So much," they said, "was done to alleviate the uncomfortable and distressing situation in which we were placed when received on board the ship you command, that we can not better express our feelings than by saying we ceased to consider ourselves prisoners; and every thing that friendship could dictate was adopted by you and the officers of the *Hornet* to remedy the inconvenience we otherwise should have experienced from the unavoidable loss of the whole of our property and clothes by the sudden sinking of the *Peacock*." This was signed by the first and second lieutenants, the master, the surgeon, and the purser of the *Peacock*.

³ John Place, who was in the top. It is a singular fact that there was scarcely a mark of a ball seen below the main-top. The captain's pennant was shot from the mainmast at the beginning of the action.

⁴ To this fact a poet of the time, in an elegy on the death of Lawrence, wrote:

"For 'twas the proud *Peacock* to the bottom did go;
He lost more in saving than conquering his foe."

Honors to Captain Lawrence and his Men.

Public Dinner in New York.

The Lawrence Medal.

tain Lawrence and his companions, in the *Hornet* sloop-of-war, with a celerity so unexampled, and with a slaughter of the enemy so disproportionate to the loss in the *Hornet*, as to claim for the conqueror the highest praise.¹

The Common Council of New York resolved to present the "freedom of the city," with "a piece of plate with appropriate devices and inscriptions," to Captain Lawrence, and to give a public dinner to the officers and crew of the *Hornet*.² Afterward, on January 4, 1814, when Lawrence was slain, the Congress of the United States requested³ the President to present to his nearest male relative a gold medal commemorative of his services,³ and a silver medal to each of the commissioned officers

MEAL AWARDED TO CAPTAIN LAWRENCE BY CONGRESS.

who served under him in the *Hornet*. Every where throughout the land the name of Lawrence was honored; and, as usual after a victory, Art and Song made contributions to the garland of praise with which the people delighted to crown the chief victor.⁴

¹ Message to Congress, Special Session, May 25, 1813. In the Memoirs of Sir Charles Napier may be found the following paragraph: "When in Bermuda, in 1813, with his regiment, Colonel Napier, writing to his mother, says: 'Two packets are quite fine, and we fear they have been taken, for the Yankees swarm here; and when a frigate goes out to drive them off by force they take her! Yankees fight well, and are gentlemen in their mode of warfare. Decatur refused Carden's sword, saying, 'Sir, you have used it so well I should be ashamed to take it from you.' These Yankees, though so much abused, are really fine fellows.'"

² This dinner was given at Washington Hall, on Tuesday, the 4th of May. I have before me one of the original invitations issued by Augustus H. Lawrence, Elisha W. King, and Peter Mesier, Corporation Committee. It has a small wood-cut at the head representing a naval battle, which was drawn and engraved by Dr. Alexander Anderson, who is yet (1867) engaged in his profession, though in the ninety-third year of his age. "In the evening the gallant tars were treated to a seat in the pit of the theatre," says *The War*, "by the managers, and roused the house by their jollity and applause during the performance. The representations were adapted to suit the taste of the visitors and gratify the patriotic enthusiasm of the audience. Captain Lawrence, with General Van Rensselaer, General Morton, and a number of other official characters, filled one of the side boxes, and made the house ring with hurrahs on their appearance."

³ The above is a picture of the medal, proper size. On one side is seen the bust of Captain Lawrence, with the legend "LAWRENCE DIGNI ET DECORUM EST PRO PATRIA MORI." On the reverse is seen a vessel in the act of sinking—her mizzen mast shot away; a boat rowing toward her from the American ship. Legend—"MANSUETUS MAU QUAM VICTORUM." Exergue—"INTER HORNET NAV. AMERI. ET PEACOCK NAV. ANG. DIE XXIV. FEB. MDCCCXIII."

⁴ Amos Doolittle, an engraver of New Haven, Connecticut, who engraved on copper, immediately after the skirmishes at Lexington and Concord, four illustrations of the events of that day, drawn on the spot by Earl, engraved and published a caricature concerning the fight of the *Hornet* and *Peacock*, of which the annexed picture is a miniature copy. An immense hornet, crying out "Free trade and sailors' rights, you old rascal," is seen alighting on the head of a bull (John Bull) with the wings and tail of a peacock, and, by piercing his neck with his sting, makes the mongrel animal roar "Boo-o-o-hoo!!!"

HORNET AND PEACOCK.

Cruise of the <i>Chesapeake</i> .	Her Character.	Lawrence in Command of her.	A Challenge.
-----------------------------------	----------------	-----------------------------	--------------

While the *Hornet* was making her way homeward, the *Chesapeake*, 38, Captain Evans, which had been lying in Boston Harbor for some time, was out on an extensive cruise. She left Boston toward the close of February, passed the Canary and Cape Verd Islands, crossed the equator, and for six weeks cruised in that region.

She then went to the coast of South America, passed the spot where the *Peacock* went down, sailed through the West Indies, and up the coast of the United States to the point of departure. During all that long cruise she met only three ships of war, and accomplished nothing except the capture of four merchant vessels. As she entered Boston Harbor in a gale she lost a top-mast, and several men who were aloft went overboard with it and were drowned. The *Chesapeake* had the reputation of being an "unlucky" ship before the war, and this unsuccessful cruise and melancholy termination confirmed the impression. A superstitious notion prevailed in the navy concerning "lucky" and "unlucky" vessels, and officers and seamen were averse to serving in the *Chesapeake* on account of her "unlucky" character.¹

Captain Evans was compelled to leave the service at the close of this cruise on account of the loss of the sight of one of his eyes, and danger that menaced the other. Lawrence, who had just been promoted from master commandant to captain, was assigned to the command of the *Chesapeake*. He accepted it with reluctance, because the seamen would not sail in her with the spirit that promised success.

British vessels were now blockading the harbors of Massachusetts. Hitherto that blockade had been very mild on the New England coast, for the British Cabinet believed that the people of that section, being largely opposed to the war, would, if properly cajoled, prove recreant to patriotism, and either join the enemy outright, or separate from and thus materially weaken the remainder of the States. This delusion now began to yield to the stern arguments of events, and the blockade was made more rigorous every hour. Blockading ships hovered like hawks along the New England coast, and the *Shannon*, 38, and *Tenedos*, 38, were closely watching Boston Harbor at the close of May.

The *Hornet* was now commanded by Captain Biddle, and had been placed under the orders of Captain Lawrence. They were to cruise together if possible, going eastward and northward from Boston for the twofold purpose of intercepting the British vessels bound to the St. Lawrence, and ultimately to seek the Greenland whale-fisheries. Every thing was in readiness at the close of May, when the *Shannon*, the complement in strength of the *Chesapeake*, appeared alone off Boston, in the attitude of a challenger. She was observed by Lawrence, and on Tuesday, the 1st day of June, that commander wrote as follows to the Secretary of the Navy:

"Since I had the honor of addressing you last I have been detained for want of men. I am now getting under weigh, and shall endeavor to carry into execution the instructions you have honored me with. An English frigate is now in sight from my deck. I have sent a pilot boat out to reconnoitre, and should she be alone I am in hopes to give a good account of her before night. My crew appear to be in fine spirits, and, I trust, will do their duty."² (See fac-simile on page 702.)

At a later hour Captain Philip Vere Broke, the commander of the *Shannon*, wrote a challenge to Captain Lawrence, saying: "As the *Chesapeake* appears now ready for sea, I request you will do me the favor to meet the *Shannon* with her, ship to ship, to try the fortunes of our respective flags. To an officer of your character it requires some apology for proceeding to farther particulars. Be assured, sir, it is not from

¹ "In the navy, at this particular juncture, the *Constitution*, *Constellation*, and *Enterprise* were the lucky vessels of the service, and the *Chesapeake* and *President* the unlucky. The different vessels named went into the War of 1812 with these characters, and they were singularly confirmed by circumstances."—Cooper, II., 246.

² Autograph letter in the Navy Department, Washington City. This was the last letter written by Captain Lawrence.

Frigate is now in sight
from my deck, I have
sent a pilot boat out to
reconnoiter, and should she be
alone I am in hopes to give
a good account of her before
night,

any doubt I can entertain of your wishing to close with my proposal, but merely to provide an answer to any objection which might be made, and very reasonably, upon the chance of our receiving any unfair support."

Captain Broke then, in a long appendix to his challenge, explained his object, mentioned his own strength, the disposition of other British vessels in the neighborhood,

Captain Broke's Challenge.

The Shannon.

Sir,

His Britannic Majesty's Ship
Shannon of Boston June 1813

As the Chesapeake appears now
ready for sea, I request you will do me the favor
to meet the Shannon with her, Ship to Ship, to try
the fortune of our respective flags,

FACSIMILE OF CAPTAIN BROKE'S CHALLENGE.

designated the place of combat,¹ asked for a plan of mutual signals, offered arrangements concerning the presence of other vessels, and assured him that the *Chesapeake* could not get to sea without "the risk of being crushed by the superior force of the British squadron" then abroad.²

The *Shannon* ranked as a 38-gun ship, but mounted fifty-two guns.³ According

¹ "I will send all other ships beyond the power of interfering with us, and meet you wherever it is most agreeable to you, within the limits of the under-mentioned rendezvous, viz., From six to ten leagues east of Cape Cod Light-house, from eight to ten leagues east of Cape Ann's Light, on Cashe's ledge, in lat. 43° N., at any bearing and distance you please to fix, off the south breakers of Nantucket, or the shoal on St. George's Bank."—*MS. Challenge*.

² MS. Letter, with Captain Broke's signature, in the Navy Department, Washington City. This letter was sent by the hand of Captain Slocum, of Salem. He was landed at Marblehead, and made his way to Boston as speedily as possible. The *Chesapeake* had gone to sea, and he placed the letter in the hands of Commodore Bainbridge, the commandant of the station.

³ The *Shannon* was built at Chatham, in England, in 1806. She was also known as "unlucky" by the British seamen because two ships of the same name had been previously lost. One, a 82-gun frigate, was built in 1796, and lost by shipwreck in 1800; the other, of thirty-six guns, was built in 1803, and in the same year struck the ground in a gale, and was wrecked under the batteries of Cape la Hogue.—James's *Naval Occurrences*.

Condition of the *Chesapeake*.

A mutinous Feeling discovered.

Lawrence accepts Broke's Challenge.

to Broke's challenge, she "mounted twenty-four guns on her broadside, and one light boat-gun; 18-pounders on her main-deck, and 32-pound carronades on her quarter-deck and fore-castle; and was manned with a complement of three hundred men and boys, besides thirty seamen" who had been taken out of captured vessels.¹ She was perfectly equipped, and her men were thoroughly disciplined; and officers and men had unwavering confidence in each other. Quite different was the case of the *Chesapeake*. The seamen, as we have observed, naturally superstitious, regarded her as "unlucky," and this opinion was disheartening. Captain Lawrence had been in command of her only about ten days, and was unacquainted with the abilities of her officers and men. Some of the former were absent on account of ill health. First Lieutenant Octavius A. Page, of Virginia, a very superior officer, was sick with a lung fever, of which he died in Boston soon afterward. Second Lieutenant Thompson was absent on account of ill health, and Acting Lieutenants Nicholson and Pearce were also absent from the same cause. The consequence was that Lieutenant Augustus Ludlow, who was the third officer under Evans in the last cruise of the *Chesapeake*, became Lawrence's second in command. He was very young, and had never acted in that capacity, yet he was an officer of merit, and already distinguished. There was but one other commissioned sea officer in the ship.

Captain Lawrence was beset with other difficulties. The crew were almost mutinous because of disputes concerning the prize-money won during the last cruise. There were also a large number of mercenaries on board, among them a troublesome Portuguese, who was a boatswain's mate. Many of the crew had but recently enlisted; and in every way the *Chesapeake* was wholly unprepared for a conflict with an equal in men and metal. But in armament she was almost equal to the *Shannon*. She mounted twenty-eight long 18-pounders on the main-deck, sixteen 32-lb. carronades on the quarter-deck, and four carronades of equal weight and a long 18-pounder on the fore-castle.²

After Captain Broke had dispatched his challenge to Salem he prepared his ship for combat, displayed his colors in full, and lay off Boston light-house under easy sail. Captain Lawrence understood this as a challenge, and when the pilot-boat, sent out to reconnoitre, returned with the assurance that the *Shannon* was alone, he determined to accept it. He well knew his disabilities, and told his officers that he would rather fight the *Shannon* and *Tenedos* in succession, after a twenty days' cruise, than to fight either alone on first putting to sea, when the thoughts of homes just left, seasickness, and other depressing circumstances would seriously affect his men. Yet, innately brave, and always self-reliant, he acted upon his own impulses, and, without consulting any one on shore, he weighed anchor toward noon.³

Captain Lawrence attempted to conciliate his crew by giving them checks for their prize-money, and addressed them eloquently for a few minutes. He then ran up three ensigns, one on the mizzen-royal-mast-head, another on the peak, and a third in the starboard main-rigging, and attempted to stimulate the quickened enthusiasm of his men by unfurling at the fore a broad white flag bearing the words first used on the *Essex*,⁴ FREE TRADE AND SAILORS' RIGHTS. Yet they still murmured, for the Portuguese was rebellious, and active in fomenting discontent.

¹ Captain Broke's MS. Letter to Captain Lawrence. Lieutenant George Budd, who became a purser on board the *Shannon*, said, in his dispatch from Halifax to the Secretary of the Navy, that she had, in addition to her complement, "an officer and sixteen men belonging to the *Belle Poule*, and a part of the crew of the *Tenedos*."

² The guns of the *Chesapeake* were all named. James, in his *Naval Occurrences*, page 232, has preserved the names of those composing one broadside of the main-deck, and some of those on the quarter-deck and fore-castle, as follows: MAIN-DECK—*Brother Jonathan, True Blue, Yankee Protection, Putnam, Raging Eagle, Viper, General Warren, Ma^o Anthony, America, Washington, Liberty for Ever, Dreadnought, Defiance, Liberty or Death.* QUARTER-DECK—*Bull-dog, Spit-fire, Nancy Dawson, Revenge, Bunker's Hill, Pocahontas, Towser, Willful Murderer.*

The *Chesapeake* was built at Norfolk, Virginia, in 1797, at a cost of \$221,000, and was considered one of the finest vessels of her class.

³ At nine o'clock the *Shannon* captured a small schooner off Boston Light. The *Chesapeake* saw this, fired a gun, and loosed her foretop-sail as a signal for putting to sea.

⁴ See page 441.

The *Chesapeake* goes out to fight.

Great Excitement in Boston.

Beginning of the Battle.

It was now noon—a pleasant day in early summer,^a after a chilling mist had brooded for a week over Boston Harbor. The anchor of the *Chesapeake* was lifted, and she rode gallantly out into the bay in the direction of her menacing foe, followed by the eager eyes of thousands.¹ As her antagonist was in sight, her decks were immediately cleared for action, and both vessels, under easy sail, bore away to a position about thirty miles from Boston Light, between Cape Cod and Cape Ann.²

At four o'clock the *Chesapeake* fired a gun, which made the *Shannon* heave to. She was soon under single-reefed top-sails and jib, while the *Chesapeake*, under whole top-sails and jib, was bearing down upon her with considerable speed. The breeze was freshening, and as the latter approached her movements were watched on board the *Shannon* with great anxiety, because it was uncertain on which side she was about to close upon her antagonist, or whether she might not commence the action on her quarter. Having the weather-gage the *Chesapeake* had the advantage; and "the history of naval warfare," says Mr. Cooper, "does not contain an instance of a ship's being more gallantly conducted than the *Chesapeake* was now handled."³

Onward came the *Chesapeake* until she lay fairly along the larboard side of the *Shannon*, yard-arm and yard-arm, within pistol-shot distance. It was now between half past five and six o'clock in the evening. The *Chesapeake* was luffed, and ranged up abeam, and as her foremast came in a line with the *Shannon's* mizzen mast the latter discharged her cabin guns, and the others in quick succession from aft forward. The *Chesapeake* was silent for a moment until her guns bore, when she poured a destructive broadside into her antagonist. Now came the tug with heavy metal. For six or eight minutes the cannonade on both sides was incessant. In general effect the *Chesapeake* had the best of the action at this juncture, but she had suffered dreadfully in the loss of officers and men. Compared with that of the foe, it was as ten to one.⁴

While passing the *Shannon's* broadside, after a contest of twelve minutes, the *Chesapeake's* foretop-sail-tie and jib-sheet were shot away. Her spanker-brails were also loosened, and the sail blew out. Thus crippled at the moment when she was about to take the wind out of the *Shannon's* sails, shoot ahead, lay across her bow, rake her, and probably secure a victory, the *Chesapeake* would not obey her helm; and when the sails of her antagonist filled, she by some means got her mizzen rigging foul of the *Shannon's* fore-chains. Thus entangled, the *Chesapeake* lay exposed to the raking fire of the foe's carronades. These almost swept her upper decks. Captain Lawrence was slightly wounded in the leg; Mr. White, the sailing-master, was killed; Ludlow, the first lieutenant, was badly wounded in two places by grape-shot; and Mr. Brown, the marine officer, Mr. Ballard, the acting fourth lieutenant, and Peter Adams, the

¹ There was great excitement at Boston and in its neighborhood when it was known that the *Chesapeake* had gone out to meet the *Shannon*. Thousands of hearts beat quicker with the desire that Captain Lawrence should add new laurels to those he had already won in his combat with the *Peacock*, and the harbor was soon swarming with small craft making their way out to the probable scene of action. Yet there were those who were moved by opposite feelings. The party opposed to the war was strong in Massachusetts, and when, a fortnight afterward, it was proposed in the Legislature of that state to pass a vote of thanks to the then slain Lawrence for his gallantry in the capture of the *Peacock*, a preamble and resolution were adopted by the Senate declaring that similar attentions already given to military and naval officers engaged in a like service had "given great discontent to many of the good people of the Commonwealth, it being considered by them as an encouragement and excitement to the continuance of the present unjust, unnecessary, and iniquitous war. The resolution was as follows:

"Resolved, as the sense of the Senate of Massachusetts, that in a war like the present, waged without justifiable cause, and prosecuted in a manner which indicates that conquest and ambition are its real motives, it is not becoming a moral and religious people to express any approbation of military or naval exploits which are not immediately connected with the defense of our sea-coast and soil."—June 15, 1813.

² From the high grounds near Salem the inhabitants had a distant view of the engagement, and the booming of the cannon was heard far inland.

³ Cooper's *Naval History of the United States*, ii., 248.

⁴ "Of one hundred and fifty men quartered on the upper deck," said Lieutenant Ludlow to an officer of the *Shannon*, "I did not see fifty on their legs after the first fire." The *Shannon's* topmen reported "that the hammocks, splinters, and wrecks of all kinds driven across the deck formed a complete cloud."—Statement of Captain R. H. King, of the *Royal Navy*.

Battle of the *Chesapeake* and *Shannon*.

Captain Lawrence mortally wounded.

"Don't give up the Ship."

THE CHESAPEAKE DISABLED BY THE SHANNON'S BROADSIDES.¹

boatswain, were all mortally wounded. The latter was boatswain of the *Constitution* in her action with the *Guerriere*.

When Captain Lawrence perceived the entanglement of the ships he ordered his boarders to be called up. Unfortunately, a negro bugler was employed to give the signal instead of the drummer, as usual. Dismayed by the aspect of the fight, the bugler skulked under the stern of the launch, and when called to duty he was so terrified that he could not give even a feeble blast.² Oral orders were immediately sent to the boarders, but these were imperfectly understood amid the din of battle. At that moment, while Captain Lawrence was giving directions concerning the damaged foresails, that the ship might be rendered manageable, he was fatally wounded by a musket-ball, and carried below by Lieutenant Cox, aided by some of the men.³ His last words when he left the deck were in substance, "Tell the men to fire faster and not give up the ship. Fight her till she sinks!" These words of the dying hero were remembered, and "*Don't give up the Ship*" was the battle-cry of the American Navy during the whole war. It was the motto upon the banner borne by Perry's flag-ship in battle three months later, and is still a proverbial word of encouragement to the struggling and faltering in life's various battles.⁴

The keen and experienced eye of Captain Broke quickly comprehended the weak-

¹ This is from a sketch by Captain R. H. King, of the Royal Navy, who was with Captain Broke in the *Shannon* from 1806 until 1814, excepting a short time in the spring of 1813. He rose to the rank of commander in 1828, and to captain in 1839, when he withdrew from service afloat.

² His name was George Brown. He was exchanged. Afterward he was tried at New London, found guilty of cowardice, and sentenced to the punishment of three hundred lashes on his bare back.

³ Lieutenant Cox commanded the middle division of the gun-deck. He heard the oral orders for the boarders, and ran up at the moment when Lawrence fell.

⁴ The following are the first and last stanzas of a stirring poem by R. M. Charlton :

"A hero on his vessel's deck
Lay weltering in his gore,
And tattered sail and shattered wreck
Told that the fight was o'er;
But e'en when death had glazed his eye,
His feeble, quivering lip
Still uttered, with life's latest sigh,
'Don't, don't give up the ship!'

"Oh, let these words your motto be,
Whatever ills befall;
Though foes beset, and pleasures flee,
And passion's wiles enthrall.
Though danger spreads her ready snare
Your erring steps to trip,
Remember that dead hero's prayer,
And 'don't give up the ship!'

A desperate Struggle.

Treachery of a Portuguese.

Capture of the *Chesapeake*.

ness of the *Chesapeake* at this moment, she having no officer on the quarter-deck above the rank of midshipman. He immediately ordered his boarders forward. Placing himself, with his first lieutenant, at the head of twenty of them, and passing cautiously from his fore-channels, he reached the quarter-deck of the *Chesapeake* without opposition, for the gunners, finding all their officers fallen, and themselves exposed to a raking fire without the means of returning a shot, had left the guns and fled below. Meanwhile Lieutenant Budd had ordered the boarders to follow him up. Only fifteen or twenty obeyed, and with these he gallantly attacked the British at the gangways. He was almost instantly disabled by a severe wound, and thrown down on the gun-deck. His followers were driven toward the fore-castle. These disasters aroused the severely-wounded young Ludlow. Having laid his commander in the guard-room, he hurried upon deck, where he almost instantly received a fatal sabre-wound, and was carried below.

Broke now ordered about sixty marines of the *Shannon* to join him. These kept down the Americans who were ascending the main hatchway. Provoked by a shot from below by a boy, they fired down the hatches, and killed and wounded a great many men. The victory was soon made easy by treachery. The boatswain's mate (the mutinous Portuguese already mentioned) removed the gratings of the berth-deck, and then, running below, followed by a large number of the malcontents of the morning, he shouted, maliciously, "So much for not paying men prize-money!" This act gave the British complete control of the vessel; and while a few gallant marines, animated by the injunctions of the bleeding Lawrence, were yet defending the ship, First Lieutenant Watts, of the *Shannon*, hauled down the colors of the *Chesapeake* and hoisted the British flag. At that instant he was slain by a grape-shot from one of the foremast guns of his own ship, which struck him on the head.¹

History has recorded but few naval battles more sanguinary than this. It lasted only fifteen minutes, and yet, as Cooper remarks, "both ships were charnel-houses." They presented a most dismal spectacle. The *Chesapeake* had lost forty-eight men killed, and ninety-eight wounded. The *Shannon* had lost twenty-six killed, and fifty-eight wounded. Among the killed were Lieutenant Watt, already mentioned, Mr. Aldham, the purser, and Mr. Dunn, the captain's clerk.²

Both ships presented a most dismal appearance. Marks of carnage and desolation every where met the eye.³ Captain Broke, who had ordered the slaughter to cease when the victory was gained, had become delirious. Lawrence, too severe-

PHILIP ROWES VERE BROKE.

¹ Captain Broke behaved most gallantly in this conflict. He received, according to his report, "a severe sabre-wound at the first onset while charging a part of the enemy who had rallied on the fore-castle," yet he continued his orders until he was assured of victory, when he partly fainted from loss of blood. While a seaman was tying a handkerchief around the captain's wounded head, there was a cry, "There, sir, there goes up the old ensign over the Yankee colors!" Washington Irving, in an account of the engagement, in the *Analytic Magazine*, says that Samuel Livermore, of Boston, who, from personal attachment to Lawrence, had accompanied him as chaplain, attempted to avenge his fall. He shot at Captain Broke, but missed him. Broke made a stroke at Livermore's head with his sword, which the latterwarded off, but in so doing received a severe wound in the arm.

² Captain Broke's Report.

³ There is a curious coincidence in the history of the *Shannon* and the American frigate *Constitution*. Within a few days of each other, in the summer of 1800, these two vessels, whose names are dear to their respective nations, and both, in maritime parlance, ranking as *invincible*, were equipped and sailed on a cruise. The conqueror of the *Chesapeake* left Portsmouth, England, and at about the same time the *Constitution* left Portsmouth, Virginia, on a short cruise, prepara-

ly wounded to be carried to his shattered cabin, was left in the ward-room with his own surgeon, seldom uttering a word except to indicate his wants. White lay dead,¹ Ballard,² Broome,³ and Adams were dying, and the gallant Ludlow was suffering severely from a mortal wound.

THE SHANNON AND CHESAPEAKE ENTERING THE HARBOR OF HALIFAX.⁴

As soon as the two ships were disentangled, the *Shannon* started for Halifax with her prize, where she arrived on the 7th.⁵ Lawrence had expired the day before, and his body, wrapped in the flag of the *Chesapeake*, lay upon the quarter-deck.⁵ As the ships entered the harbor, the men-of-war there manned their yards

tory to her taking her station at Annapolis as a school-ship. Each was about to be broken up many years ago, and each was saved by poetical remonstrances—*one* by Tennyson, and the other by Holmes. The stirring poem by Holmes may be found on page 437.

¹ William Augustus White was a native of Rutland, Vermont, and was only twenty-six years of age. He was represented as a noble and generous young man. His loss was greatly deplored by his friends, who regarded him as a young man of great promise. A friendly hand wrote:

"Columbia's page in gen'rous strain shall tell
Those deeds of courage where her Lawrence fell;
Honor shall gild the hero's spotless shrine,
And thine, O WHITE! with kindred lustre shine."

² Edward J. Ballard was an active and very promising young man. He was appointed a midshipman in February, 1809, and was commissioned a lieutenant on the day after the action in which he lost his life. The commission was issued before news of the action reached the Department. "Anxious to render himself useful, and to share in the glory acquired by our naval heroes," wrote a friend, "he left (though scarcely recovered from an indisposition of several months) the peaceful asylum of friendship for his home on the ocean, and terminated with honor a well-spent life of virtue."

³ James Broome, the commander of the marines, was a native of New Jersey. He was appointed a midshipman in July, 1807. Of the forty-four marines under his command on board the *Chesapeake*, twelve were killed and twenty wounded.

⁴ From a sketch by Captain R. H. King, R. N.

⁵ James Lawrence was born at Burlington, New Jersey, on the 1st of October, 1781. He was left to the tender care of two sisters, his mother having died a few weeks after his birth. He exhibited a passion for the sea at the age of twelve years, but his father designed him for the profession of the law. He entered upon a course of studies with his brother John at Woodbury at the age of fourteen years, and soon afterward lost his father. Law was distasteful to him. He longed for the sea, and his brother gave him the opportunity of acquiring preparatory knowledge. He applied for a situation in the navy at the age of eighteen years, and entered the service as a midshipman in the ship *Ganges*, Captain Tingey, in the autumn of 1798. He was transferred to the *Adams*. He was commissioned a lieutenant, and was first officer of the *Enterprise* in the war with Tripoli. Decatur, in his official reports, acknowledges his services in the bombardment of Tripoli. After his return from the Mediterranean he was for some time attached to the Navy Yard at New York. He became first lieutenant on the *Constitution*, and in succession commanded the *Vixen*, *Waep*, *Argus*, and *Hornet*. He married in New York in 1808. At the commencement of the war in 1812 he sailed in

Joy of the British.

Admiral Warren's Thanks to Captain Broke.

Effect of the Victory in England.

in honor of the conqueror. The eager inhabitants crowded to the water-side, and covered the wharves and houses. Shout after shout went up from the multitude, and joy filled every heart on shore, except of those who mourned friends among the slain.¹

The capture of a single ship of war probably never produced a greater effect upon the contending parties than this victory of the *Shannon* over the *Chesapeake*. The recent almost uninterrupted success of the little navy of the United States had made the Americans believe that it was invincible, and a similar idea was taking hold of the British mind. The spell was now broken. The Americans were desponding, the British jubilant. In his letter of thanks to Captain Broke and the men of the *Shannon*, Sir John Borlase Warren, the commander-in-chief of the British Navy on the American station, observed that they had "restored the renown which had ever accompanied the British Navy from the foul and false aspersions endeavored to be

John Lawrence

John Borlase Warren

SIGNATURE AND SEAL OF ADMIRAL WARREN.

thrown upon it by an insidious enemy, and had by their exertions added one of the brightest laurels to the wreath which had hitherto encircled the British arms."

The joy in England was intense. It was evinced by public speeches in and out of Parliament,² bonfires, and illuminations. The Tower guns were fired as in the event of a victory like those of the Nile and Trafalgar. The freedom of the city of London and a sword of the value of one hundred guineas (\$500) were voted to Captain Broke³ by the Corpora-

command of the *Hornet*, having been made master commandant in November, 1810. Off Demerara he fought the *Prezel* and sunk her. He returned to New York, where he was soon ordered to Boston to take command of the *Chesapeake*. In her he died on the 5th of June, 1813.

² Mr. Croker, principal secretary to the Lords of the Admiralty, said in his place in the House of Commons, "It was not—and he knew it was a bold assertion which he made—to be equalled by any engagement which graced the naval annals of Great Britain."

³ Philip Bowes Vere Broke was born in Suffolkshire, England, on the 9th of September, 1776. He was educated at the Royal Academy in Portsmouth, and entered the navy in 1792. He served in the war between France and England, and commanded the *Shannon* in cruises for the protection of the British whale fisheries in the Greenland seas. He was in that service when war between the United States and Great Britain was declared. He was then dispatched with a small squadron to blockade the New England ports. Because of his services in the capture of the *Chesapeake* he was raised to the dignity of baronet, and made Knight Commander of the Bath. Sir Philip married in early life Sarah Louisa, daughter of Sir William Fowle Middleton. He was one of the most active and useful officers of the British Navy un-

Honors to Captain Broke.

Silver Plate presented to him by his Neighbors.

tion of that city. He was knighted by the Prince Regent; compliments were showered upon him from every quarter; and the inhabitants of Suffolk, his native county, presented him with a gorgeous piece of silver plate as a testimonial of their sense of his eminent services.¹

SILVER PLATE PRESENTED TO CAPTAIN BROKE.

til his retirement, bearing the commission of Rear Admiral of the Red. He died in Suffolk County on the 3d of January, 1841, at the age of sixty-five years.

¹ A picture of this plate was published in London on the 2d of December, 1816, a copy of which, on a reduced scale, is given above. The plate is described as being made of silver, and forty-four inches in diameter. It was enriched with emblematical devices commemorative of the acts of the recipient on the occasion of his capture of the *Chesapeake*. These devices are described as follows: The centre, enriched with a wreath of palm and laurel leaves, with groups of Nereids and Tritons, presents the spectacle of the battle between the *Shannon* and *Chesapeake*. A deep and highly-finished border composes the exterior of the circle, in which are significant devices in four principal divisions. In the first compartment, in the form of an escalop-shell, is seen Neptune receiving the warrior. The former is issuing from the sea with his attendants, and presenting to the hero (who is borne in a triumphal car, attended by Britannia and Liberty bearing the British flag) the naval coronet. In the compartment opposite Britannia is seen on a sea-horse, holding the trident of Neptune in one hand, and with the other hurls the thunder of her power at the American eagle, which is expiring at her feet in the presence of ocean deities. In a third compartment the device represents the triumph of Victory. The winged goddess, bearing a coronal, approaches in her shell-car drawn by ocean steeds, and offers peace to the vanquished. In the fourth compartment is represented the four quarters of the world, in the form of figures, assembled under the protection of the British lion, commerce having been secured to the world by British prowess. Besides these are the figures of Fortitude, Justice, Wisdom, and Peace, intended to represent the characteristics of the British nation.

On the plate the following inscription was engraved: "Struck with the gallantry, skill, and decision displayed by Sir Philip Bowes Vere Broke, Baronet, K.C.B., commander of his Majesty's frigate, the *Shannon*, in the attack, boarding, and capture of the American frigate, the *Chesapeake*, of superior force in men and metal, and under the command of a distinguished captain of light horse, on the 1st of June, 1813, achieved in the short space of fifteen minutes, the inhabit-

Respect for the Remains of Lawrence and Ludlow. Funeral Ceremonies. The Bodies of the Slain taken to Salem.

The most gratifying respect was paid to the remains of Captain Lawrence on their arrival at Halifax, and also to those of Lieutenant Ludlow, who died there on the 13th of the month.¹ The garrison furnished a funeral party from the Sixty-fourth Regiment three hundred strong. The navy also furnished a funeral party, with pall-bearers, and at the appointed hour the body was taken in a boat from the *Chesapeake* to the King's Wharf, where it was received by the military under Sir John Wardlaw. Six companies of the Sixty-fourth Regiment preceded the corpse. The officers of the *Chesapeake* (headed by Lieutenant Budd,² who became the commander after the fall of his superiors) followed it as mourners. The officers of the British Navy were also in attendance. These were followed by Sir Thomas Saumarez, the staff, and officers of the garrison. The procession was closed by a number of the inhabitants of the town. The funeral services were performed by the rector of St. Paul's Church, and three volleys were discharged by the troops over the grave.

George Budd

The feeling of depression in the American mind passed away as soon as reflection asserted its dignity. All the circumstances were so unfavorable to the *Chesapeake* that it was reasonable to suppose that such a misfortune would not occur again. The deep mortification that assumed the features of censure was momentary, and the gallant Lawrence and his companions were honored with every demonstration of respect. The most remarkable of these was exhibited in the patriotic and successful efforts of Captain George Crowninshield, Jr., of Salem, Massachusetts, to restore the bodies of Lawrence and Ludlow to their native land. He, with others, had seen the contest in the distance from the heights around Salem, and the feelings then excited were deepened by the intelligence of the fate of the gallant Lawrence and Ludlow, and some of their companions. He opened a correspondence with the United States government, asking permission to proceed to Halifax in the brig *Henry*, of which he was master, with a flag of truce, to solicit from the authorities there the remains of the honored dead. Permission was granted. The President of the United States gave him a passport for the purpose,³ and on the 7th of August he and some associates sailed in the *Henry* from Salem for Halifax.³ He arrived there on ^{July 28,} 1813. the 10th. His errand was successful, and on the 13th of the same month he sailed from Halifax for Salem with the remains of Lawrence and Ludlow. The *Henry* reached Salem on the 18th of August, and on the following day Captain Crowninshield wrote to the Secretary of the Navy informing him of the fact, and saying, "The relatives of Captain Lawrence have requested that his remains might ultimately rest in New York, but that funeral honors might be paid here, and, accordingly, the ceremonies will take place on Monday next at Salem. Commodore Bainbridge has been consulted on the occasion."

The funeral obsequies were performed at Salem on Monday, the 23d of August. The morning was beautiful. The brig *Henry* lay at anchor in the harbor bearing her precious freight, and near her the brig *Rattlesnake*. Almost every vessel in the wa-

ants of Suffolk, the victor's native county, anxious to evince their sense of his spirited, judicious, and determined conduct in thus adding another brilliant trophy to the unrivaled triumphs of the British Navy, with a spontaneous burst of feeling voted him this tribute of their affection, gratitude, and admiration."

¹ Augustus C. Ludlow was son of Robert Ludlow, Esq., and was born at Newburg, New York, in 1792. He entered the navy as a midshipman in April, 1804, and in the summer of that year sailed in the *President* for the Mediterranean Sea. He returned home in the *Constitution*, then commanded by Captain Campbell, in 1807. He remained in her, under Commodore Rodgers, until promoted to lieutenant, in June, 1810, when he was placed in the *Hornet*. When Lawrence became her commander he was charmed with Ludlow's character, and his knowledge of his young friend's worth made him cheerfully continue him in his service on the *Chesapeake* as his first lieutenant.

² For Lieutenant Budd's dispatch to the Secretary of the Navy from Halifax, June 15, 1813, see Brannan's *Official Letters, Military and Naval*, Washington, 1823, page 167. He was appointed midshipman in the autumn of 1805, commissioned a lieutenant in May, 1812, and master commandant in March, 1820. He died on the 3d of September, 1837.

³ These were Holton J. Breed, first officer; Samuel Briggs, second officer; and John Sinclair, Jeduthan Upton, Stephen Burchmore, Joseph L. Lee, Thomas Bowditch, Benjamin Upton, and Thorndike Proctor, all masters of vessels. Mark Messurey, cook, and Nathaniel Cummings, steward.

ters, and flag-staff in the town, exhibited the American ensign at half-mast, and numerous flags were displayed in the streets through which the funeral procession was to pass. Thousands poured into the town from the surrounding country at an early hour. The streets were thronged. The Boston South End Artillery were there with the "Adams" and "Hancock," brass cannon of the Revolution, and men of distinction in every pursuit of life participated in the funeral obsequies.

At a little past meridian the bodies were taken from the *Henry* and placed in barges, accompanied by a long procession of boats manned by seamen in blue jackets and white trousers, their hats bearing the words on Lawrence's white flag, FREE TRADE AND SAILORS' RIGHTS. At India Wharf hearses were ready to receive them, and at the same time the *Henry* and *Rattlesnake* were firing minute-guns alternately.¹ The bells commenced tolling at one o'clock,² and an immense procession moved to slow and solemn music, escorted by a company of light infantry under Captain J. C. King. They passed through the principal streets to the Rev. Mr. Spalding's meeting-house.³

THE COFFINS.

The corpses were received by the clergy at the door, and placed in the centre of the large aisle by the sailors who bore them to the shore. These stood leaning upon the coffins during the services. The coffins were covered with black velvet, with the monograms of the heroes inclosed in wreaths, swords crossed, and a marginal border all embroidered in silver. The interior of the church was hung in black, and decorated with cypress and evergreens; and in front of the sacred desk the names of LAWRENCE and LUDLOW appeared in letters of gold. An eloquent and touching funeral oration was delivered by the Honorable Joseph Story, and the rites of sepulture were performed by the Masonic societies and the military, when

the bodies were placed in a vault.⁴

Preparations were soon made for removing the remains of Lawrence and Ludlow to New York. Because of some delay in procuring an extension of the passport of the *Henry* (so as to allow her to go to New York) from Acting Commander Oliver, of the British blockading squadron off New London, they were conveyed to the navy yard at Charleston on the 3d of September, and from thence taken to New York by land. They were placed on board the United States sloop of war *Alert*, lying in New York Harbor, while the city authorities made arrangements for a public funeral.⁵

¹ A company under Captain Peabody fired minute-guns in Washington Square.

² The bells in Boston, fifteen miles distant, were tolled at the same time, and the flags upon the shipping in the harbor were displayed at half-mast. Minute-guns were fired by the *Constitution* and other vessels there.

³ The committee of arrangements applied for the use of the North Meeting-house (Dr. Barnard's), "particularly on account of its size and the fine organ which it contained." They were refused, the committee of the proprietors saying that they had no authority "to open the house for any other purpose than public worship."

⁴ The death of Lawrence was the theme of several elegiac poems written and published in different parts of the country. Some of them were printed on satin, with emblematic devices, and were framed and hung up in houses. The annexed rough picture is a fac-simile of one of these devices, one third the size of the original, designed and engraved by A. Bowen, of Boston, and printed at the head of an elegy, on satin, at the office of the *Boston Chronicle*. I am indebted to the kind courtesy of Miss Caroline F. Orne, of Cambridgeport, for a copy of the original, and for other interesting papers made use of in this work.

⁵ In the arrangements made for the funeral a substantial testimonial of regard was agreed to, in the form of an appropriation of one thousand dollars each for the two children of Captain Lawrence, to be vested in the Commissioners of the Sinking Fund of the Corporation, the interest to be applied to the use of the recipients, and the principal to be given to the daughter when she should arrive at the age of eighteen years, and to the son at the age of twenty-one years.

LAWRENCE MEMORIAL.

Funeral Ceremonies in New York. Monuments to the Memory of Lawrence and Ludlow. The Inscriptions on them.

These were completed on the 14th, and on Thursday, the 16th, the remains of the gallant dead were laid in their resting-place near the southwest corner of Trinity Church burying-ground, far removed from public observation.¹ Soon after the war the Corporation of the City of New York erected an elegant marble monument over the remains of Lawrence, bearing appropriate inscriptions.² In the course of time it became dilapidated, and in 1847 the Corporation of Trinity Church resolved to remove the remains to a more conspicuous place. They were deposited near the southeast corner of the church, a few feet from Broadway, and over them the vestry erected a handsome mausoleum of brown freestone in commemoration of both Lawrence and his lieutenant.³ Eight trophy cannon were placed around the mausoleum, which, with chains attached, form an appropriate inclosure.⁴

LAWRENCE AND LUDLOW'S MONUMENT.

¹ This was the third time that funeral honors had been paid to the remains of the hero. On this occasion the procession, composed of members of both branches of the military service and civilians, was very large, and moved from the Battery through Greenwich Street to Chambers, up Chambers to Broadway, and down the latter street to Trinity Church-yard.

LAWRENCE'S MAR-
TIR MONUMENT.

² The design of the monument was simple and appropriate, for Lawrence was a young man at the time of his death. It was a broken column of white marble, of the Ionic order, the capital broken off and lying on the base. The inscription, simple and dignified, was as follows:

"In memory of Captain James Lawrence, of the United States Navy, who fell on the 1st day of June, 1813, in the thirty-second year of his age, in the action between the frigates *Chesapeake* and *Shannon*. He distinguished himself on various occasions, but particularly when he commanded the sloop of war *Hornet*, by capturing and sinking his Britannic Majesty's sloop of war *Peacock* after a desperate action of fourteen minutes. His bravery in action was only equalled by his modesty in triumph and his magnanimity to the vanquished. In private life he was a gentleman of the most generous and endearing qualities; and so acknowledged was his public worth, that the whole nation mourned his loss, and the enemy contended with his countrymen who most should honor his remains."

On the reverse were the words: "The hero whose remains are here deposited, with his expiring breath expressed his devotion to his country. Neither the fury of battle, the anguish of a mortal wound, nor the horrors of approaching death could subdue his gallant spirit. His dying words were, 'DON'T GIVE UP THE SHIP!'"

I saw fragments of this old monument lying by the side of a small building in Trinity Church-yard late in the autumn of 1862. The slabs bearing the above inscriptions were afterward deposited in the Library of the New York Historical Society, where they may now be seen carefully preserved.

³ It bears the following inscriptions: *North Side.*—"In memory of Captain James Lawrence, of the United States Navy, who fell on the 1st day of June, 1813, in the thirty-second year of his age, in the action between the *Chesapeake* and *Shannon*. He was distinguished on various occasions, but especially when, commanding the sloop of war *Hornet*, he captured and sunk his Britannic Majesty's sloop of war *Peacock* after a desperate action of fourteen minutes. His bravery in action was equaled only by his remarkable modesty in triumph and his magnanimity to the vanquished. In private life he was a gentleman of the most generous and endearing qualities; the whole nation mourned his loss, and the enemy contended with his countrymen who should most honor his remains." *East*

Side.—"The heroic commander of the frigate *Chesapeake*, whose remains are here deposited, expressed with his expiring breath his devotion to his country. Neither the fury of battle, the anguish of a mortal wound, nor the horrors of approaching death could subdue his gallant spirit. His dying words were, 'DON'T GIVE UP THE SHIP!'" *West Side.*—"A low-relief sculpture representing the hull of a double-decked ship of war. *South Side.*—"In memory of Lieutenant Augustus C. Ludlow, of the United States Navy. Born in Newburg, 1792. Died at Halifax, 1813. Scarcely was he twenty-one years of age when, like the blooming Euryslus, he accompanied his beloved commander to battle. Never could it have been more truly said, '*Etis amor unius erat pariterque in bella ruabant.*' The favorite of Lawrence, and second in command, he emulated the patriotic valor of his friend on the bloody decks of the *Chesapeake*, and when required, like him, yielding with courageous resignation his spirit to Him who gave it."

⁴ These cannon were purchased from the government by General Prosper M. Wetmore, then Navy Agent at New York, and by him presented to the Corporation of Trinity Church for the use to which they are devoted. They were

Stirring Scene in Chesapeake Bay.

Capture of the *Asp*.

The *Argus* bears Minister Crawford to France.

The loss of the *Chesapeake* was followed by the capture of the little schooner *Asp* and the sloop of war *Argus*, the former in the waters of Virginia, and the latter off the British coast. The career of each was brilliant—the former in its death-struggle, and the latter in its bold cruise just previous to its capture. Their misfortunes were so tempered, in the estimation of the American mind, with deeds of great prowess, that they did not seriously affect the hopeful feelings of the nation.

The *Asp* was one of the small vessels fitted out by the United States government for the purpose of defending the harbors and tributary streams of the Chesapeake from the British marauders. She carried three small guns, and was commanded by Midshipman Segauy. She and the *Scorpion* were in the Yeocomico Creek at the middle of June, and went out together on the morning of the 14th on a cruise of observation. At ten o'clock they were discovered by a flotilla of British light vessels, which immediately gave chase. Their number was overpowering. The *Scorpion* fled up the Bay, and escaped; but the *Asp*, being a slow sailer, ran back to the Yeocomico, hoping to find shelter in shallow waters beyond the reach of the enemy. She was followed by two hostile brigs. They anchored at the mouth of the stream, and sent armed boats after the little fugitive. She was overtaken by three of them, when a sharp fight occurred. The assailants were repulsed, and retreated to the brigs. In the course of an hour, five boats, filled with three times as many armed men as the officers and crew of the *Asp*, attacked her. A desperate engagement followed. Midshipman Segauy and one half of his companions were disabled by death or wounds. Fifty of the enemy boarded the little vessel, overpowered her people, and refused to give quarter to those who remained. The unhurt fled from her, when the enemy, in full possession, set her on fire and returned to the brigs. On their departure, Midshipman M'Clintock, the second officer of the *Asp*, who had escaped to the shore, returned to her, and, after great exertion, extinguished the flames.¹ Her commander's body was consumed on the deck where he was barbarously murdered.²

The *Argus* sailed from New York on the 18th of June,^a bearing William H. Crawford, of Georgia, who had recently been appointed resident minister at the French Court in place of Joel Barlow, deceased. She had lately returned from a cruise under the command of Lieutenant Commanding Arthur St. Clair, and was now in charge of Lieutenant William Henry Allen, a brave Rhode Islander, who had recently served in the *United States* frigate as Decatur's second in command. She was a fine vessel of her class, and carried twenty 32-pound carronades and two bow guns. She eluded the British cruisers, and, after a voyage of twenty-three days, landed

^b July 11. Mr. Crawford in safety at L'Orient.^b

At that time the merchant marine in the waters around the British Islands was under no apprehensions of danger from American cruisers, and there was no naval force in the British or Irish Channels for the protection of commerce there. Informed of this, Allen resolved to repeat the exploits of Paul Jones in the *Bonhomme Richard*. He tarried only three days at L'Orient, and then sailed on a cruise in Brit-

selected by him from among the cannon at the navy yard which had been captured from the English during the war, as most appropriate for the purpose. The strict requirements of the law were complied with in the transaction. Each gun bore its national insignia, with an inscription declaring the time and place of its capture. When the cannon were planted in the place they now occupy, the vestry of the church, with singular courtesy, put them so deep in the ground that the insignia and trophy-marks are out of sight. The reason given was that, in a community like New York, where there are so many English residents, it might seem like an unfriendly act to parade such evidences of triumph before the public eye.

¹ Midshipman M'Clintock's Letter to the Secretary of the Navy, July 13, 1813.

² Thomson, in his *Historical Sketches of the War*, page 225, says that Commander Segauy was shot through the body with a musket-ball, and was sitting on the deck against the mast when the British brought down his colors. In this attitude, and while suffering severely, he animated his men in the fight around him to repel the boarders. Seeing this, a cowardly British marine stepped up and shot him through the head, killing him instantly. Observing this, and concluding no quarter was to be given, M'Clintock ordered a retreat for shore. This was safely accomplished by about half of the twenty-one defenders of the *Asp*.

J. B. Segauy was from Boston, and had served under Lawrence in the *Hornet*. He was only about twenty-one years of age at the time of his death, and had been five years in the service.

The *Argus* in British Waters.

Her Destruction of Property there.

Her Combat with the *Pelican*.

WILLIAM HENRY ALLEN.

ish waters. He roamed the "chops" of the Channel successfully. When satisfied with operations there, he sailed around Land's End, and by celerity of movement, audacity of action, and destructive energy, spread consternation throughout commercial England.¹ In the course of thirty days he captured and destroyed no less than twenty valuable British merchantmen, valued at two millions of dollars. Too far away from friendly ports into which he might send his prizes, Allen burned them all. He was a generous foe, and elicited from the enemy voluntary acknowledgments of justice and courtesy. He allowed all non-combatant captives to remove their private property from the captured vessels before he applied the torch. All prisoners were paroled, and sent on shore as speedily as possible.

The *Argus*, after playing a winning game for a month, became the loser. On the 13th of August she captured a ship from Oporto laden with wine. Some of her cargo was taken secretly on board the *Argus* in the evening, and was so freely partaken of by her exhausted crew that many of them were disabled for a time when their best energies were required. She had set fire to her prize, and was moving away under easy sail, just before dawn, when a British brig, which had discovered her by the light of the blazing vessel, was seen bearing down upon her under a cloud of canvas. The British authorities had been aroused to vigorous action by the daring of the *Argus*, and had fitted out several cruisers to attempt her capture. The hostile vessel that now appeared was one of them, the *Pelican*, 18,² Captain J. F. Maples. She came dashing gallantly on, and Commander Allen (then master commandant by a commission dated July 24, 1813), finding it impossible to get the wind of his enemy, shortened the sail of the *Argus* to allow the brig to close. He flung out her colors, and at six o'clock wore and delivered a larboard broadside at grape-shot distance. The fire was immediately returned, and Commander Allen's left leg was carried away by a round-shot. He bravely refused to be carried below, but in a few minutes, when unconscious from loss of blood, he was taken to the cock-pit. First Lieutenant Watson took command. He too was soon disabled and carried below, having been stunned by a grape-shot that struck his head. Only one lieutenant (William Howard Allen) now remained. He continued to fight the brig gallantly under the most discouraging circumstances. Her main-braces, main-spring-stay, gaff, and try-sail mast were shot away, yet never was a vessel more admirably handled. The enemy attempted to get under the stern of the *Argus* so as to give her a raking broadside, but young Allen,³ by a skillful manœuvre, gave his antagonist a complete and damaging one. The

¹ Her operations were so alarming that for a while very few vessels left British ports, and the rates of insurance rose to ruinous prices. In several instances insurances could not be effected at all, so great was the risk considered.

² She carried one 12 and sixteen 32 pound carronades, and four long 6's.

³ William Howard Allen was not nearly, if at all, related to Commander Allen. His career in the navy was an honorable one. He was in command of the United States schooner *Alligator* in 1822, and in the autumn of that year he lost his life in a contest with pirates. The main incidents of his life are given briefly in the following inscriptions on his monument, a structure eighteen and a half feet in height, erected to his memory in the Hudson Cemetery, in the city of Hudson, Columbia County, New York, his birth-place.

West Side.—"To the memory of WILLIAM HOWARD ALLEN, Lieutenant in the United States Navy, who was killed in the act of boarding a piratical vessel on the coast of Cuba, near Matanzas, on the 9th of November, 1822, *Æ. 32.*"

⁴ On her way home, after this encounter with the pirates, the *Alligator* was wrecked. This accident was the occasion of a poem by John G. C. Brainerd.

Surrender of the *Argus*. Her Loss in Men. Monument to the Memory of Lieutenant Allen. Commander Allen.

Argus was sadly wounded, and began to reel. All her braces were shot away, and she could not be kept in position. The *Pelican* now crossed her stern and raked her dreadfully, and at twenty-five minutes past six, her wheel-ropes and nearly all her running rigging being gone, the *Argus* became unmanageable. Five minutes later Lieutenant Watson came on deck, when the *Pelican*, lying under the *Argus's* stern, was pouring in a terrific fire without resistance. Farther contest seemed useless, yet an effort was made to lay the crippled American alongside of the vigorous enemy for the purpose of boarding her. The effort failed, and, after a most determined combat for about three fourths of an hour, when the *Sea Horse*, the *Pelican's* consort, hove in sight, the colors of the *Argus* were struck. At that moment the enemy boarded her at the bow and took possession.

The loss of the *Argus* was six killed and seventeen wounded. Of the former were Midshipmen Delphy and Edwards, and of the latter Commander Allen, Lieutenant Watson, Boatswain McLeod, and Carpenter White. The *Pelican* lost two killed and five wounded. Commander Allen survived until the next day, having in the mean time been taken into Plymouth, and placed in the Mill Spring Prison Hospital with the rest of the wounded of the *Argus*. On the 21st his remains were buried in a Plymouth church-yard with military honors.¹

A month before the intelligence of the loss of the *Argus* reached the United States, a naval victory had been gained by the Americans within sight of the New England coast, which compensated, in a measure, for the loss of the *Chesapeake*. Among the smaller vessels of war, such as the *Nautilus* and *Vixen*, each 14, was the *Enterprise*, 14, whose reputation for being "lucky" has already been mentioned. Her sisters, with the *Siren*, 16, of the class of the *Argus*, had been unfortunate. The *Nautilus*, as we have observed, was captured by the enemy at the beginning of the war. The

LIEUTENANT ALLEN'S MONUMENT.

in the *Washington*. In 1805 he was acting lieutenant in the *Constitution*, under Rodgers, and was the lieutenant of the *Chesapeake* when she was attacked by the *Leopard* in 1807, who touched off, by means of a live coal, the only gun fired at the enemy on that occasion. See page 168. He was with Decatur in the capture of the *Macedonian*, and gained great credit at that time as executive officer of the ship, and for his skill and celerity in repairing the damage to the prize. See page 456. He was esteemed as one of the best men of his class in the navy. He was very gentle in his deportment, and, as we have observed in the text, he won the esteem of the British nation while spreading consternation throughout its commercial circles. That esteem won for him an honorable burial among those who were his enemies only in war. He was not quite twenty-nine years of age at the time of his death.

A London paper of August 27, 1813, contained a long account of the ceremonies on the occasion of the funeral of Commander Allen. Officers of the Royal Marines formed a guard of honor, attended by the Royal Marine Band. Eight captains of the Royal Navy were pall-bearers. Allen's own officers were chief mourners. The American vice-consul was in attendance, and a large procession of the inhabitants followed the hearse. The coffin was covered with the American flag. In the church (St. Andrew's) to which it was taken the vicar read the funeral service of the Anglican Church.

South Side.—"WILLIAM HOWARD ALLEN. His remains, first buried at Matanzas, were removed to this city by the United States government, and interred, under the direction of the Common Council of this city, beneath this marble erected to his honor by the citizens of his native place, 1833."

East Side.—"William Howard Allen was born in the city of Hudson, July 5, 1790; appointed a midshipman in 1801 and a lieutenant in 1811, he took a conspicuous part in the engagement between the *Argus* and *Pelican* in 1813, and was killed while in command of the United States schooner *Alligator*."

North Side.—"Pride of his country's banded chivalry,
His fame their hope, his name their battle-cry;
He lived as mothers wish their sons to live—
He died as fathers wish their sons to die!"

A beautiful model of this monument may be seen in the navy yard at Charlestown, Massachusetts.

William Leggett wrote a poem on the death of Allen, in which occurs the following stanza:

"Mother of Allen, weep not for your son!
His race was glorious, but too soon 'twas run.
Yet weep not! Vengeance sleeps. She is not dead;
She yet will thunder on his murderer's head.
Sisters of Allen, dry your tearful eyes;
The hero's soul hath flown to yonder skies,
And long his name, in memory's holiest shrine,
Will wear the wreath which matchless virtues twine!"

¹ William Henry Allen was born at Providence, Rhode Island, on the 21st of October, 1784. His father was an officer in the Revolution. He entered the navy in his eighteenth year (April, 1800), and made his first cruise with Bainbridge

Cruise of the *Enterprise*.

Her Combat with the *Boxer*.

Death of the two Commanders.

Vixen, after cruising a while on the Southern coast and among the islands, commanded first by Captain Gadsden, of South Carolina, and Captain Washington Reed, was captured by the *Southampton*, 74, Commodore Sir James Lucas Yeo, of Lake Ontario fame. Both vessels were soon afterward wrecked on the coast of one of the Bermuda Islands, where Captain Reed perished by the yellow fever. The *Siren* performed very little service, and in the summer of 1814, while cruising far southward, under Lieutenant Nicholson (her commander, Captain Parker, having died on the voyage), she was captured by the British ship *Medway*, 74, Captain Bruce, and taken into Cape Town, Cape of Good Hope. These, as we have seen, had won renown in the Mediterranean Sea.¹

Better was the fortune of the "lucky" *Enterprise*. She cruised for a long time off the New England coast, the terror of British provincial privateers, under Johnston Blakeley, until he was promoted to the command of the new sloop of war *Wasp*, when Lieutenant William Burrows became her commander. She continued on her old cruising ground, watching for the enemy from Cape Ann to the Bay of Fundy.

On the morning of the 1st of September^a the *Enterprise* sailed from Portsmouth, New Hampshire, and chased a schooner, suspected of being a British privateer, into Portland Harbor on the morning of the 3d. The next day she put to sea, steering eastward in quest of British cruisers reported to be near Manhegan Island, off Lincoln County, Maine. When approaching Pemaquid Point on the 5th, Burrows discovered in a bay what he supposed to be a vessel of war getting under way. He was not mistaken. She was a British brig. On observing the *Enterprise* she displayed four British ensigns, fired several guns as signals for boats that had been sent ashore to return, and, crowding canvas, bore down gallantly for the *Enterprise*. Burrows accepted the challenge, cleared his ship for action, and after getting at proper distance from land to have ample sea-room for conflict, he shortened sail and edged toward the stranger.

It was now three o'clock in the afternoon. At twenty minutes past three the brigs closed within half pistol-shot, and both vessels opened fire at the same time. The wind was light, there was little sea, and the cannonading was destructive. Ten minutes later the *Enterprise* ranged ahead of her antagonist, and, taking advantage of her position, she steered across the bows of the stranger, and delivered her fire with such precision and destructive energy that, at four o'clock, the British officer in command shouted through his trumpet that he had surrendered, but his flag, being nailed to the mast, could not be lowered until the *Enterprise* should cease firing. It was done. The brig was surrendered, and proved to be the *Boxer*, 14, Captain Samuel Blyth, who, in the engagement, had been nearly cut in two by an 18-pound ball. Almost at the moment when Blyth fell on the *Boxer*, Burrows, of the *Enterprise*, was mortally wounded. He was assisting the men in running out a carronade, and, in doing so, placed one foot against the bulwark to give lever power to his efforts. While in that position, a shot, supposed to be a canister ball, struck his thigh, and, glancing from the bone into his body, inflicted a painful and fatal wound.

Both commanders were young men of great promise, and were highly esteemed in the service to which they respectively belonged. Blyth was killed instantly. Burrows lived eight hours.² He refused to be carried below until the sword of the com-

¹ See Chapter VI.

² Portland *Argus*, September 8, 1813; Perkins, page 181.

William Burrows was born at Kenderton, near Philadelphia, on the 6th of October, 1785. His father was wealthy, and he was left mostly to the guidance of his own inclinations concerning life pursuits. He gave early indications of a love for the naval service. In November, 1799, he entered the service as a midshipman. He was in active service until the close of difficulties on the Barbary coast, and applied himself diligently to the study of his profession. He continued in service until the breaking out of the war, when, on his way to the United States from the East, he was made a prisoner. He reached home in June, 1813, and went immediately into the service. His movements with the *Enterprise* are recorded in the text. His death was a cause for sincere grief throughout the land. No portrait of the young hero was ever painted, and for that reason the medal struck in honor of the victory of the *Enterprise* does not contain his effigy, as usual.

mander of the vanquished vessel should be presented to him. He grasped it eagerly, and said, "Now I am satisfied; I die contented." Both received their death-wounds at the beginning of the action; and the command of the *Enterprise* devolved upon the gallant Lieutenant Edward R. M'Call, of South Carolina, who conducted his part of the engagement to the close with great skill and courage.¹ He took both vessels into Portland Harbor on the morning of the 7th, and on the following day the remains of both commanders were conveyed to the same cemetery, and buried side by side, with all the honors which their rank and powers could claim. The remains of Midshipman Kervin Waters, of the *Enterprise*, the only one of her people mortally wounded except her commander, were laid by the side of those of his gallant leader in less than twenty days afterward, and over the graves of all commemorative monuments have been erected.²

¹ Edward Rutledge M'Call was born at Charleston, South Carolina, on the 5th of August, 1790, and was five years the junior of his commander. He entered the navy as a midshipman at the age of fifteen years, and was first on duty in the *Hornet*, Captain Dent. He joined the *Enterprise*, under Blakeley, in 1811, as a lieutenant, and was serving in that capacity under Burrows at the time of the battle above recorded. He wrote to Commodore Hull a very interesting account of that engagement. He was afterward transferred, first to the *Ontario*, and then to the *Jana*, Commodore Perry, and with that officer cruised in the Mediterranean Sea until 1817. On his return he took command of the sloop of war *Peacock*, also preparing to cruise in the Mediterranean. In March, 1825, he was promoted to master commandant, and in March, 1835, he received the commission of captain.

² The funeral ceremonies on the occasion were solemn and imposing. I am indebted to the Honorable William Willis, of Portland, who participated in them, for much information concerning the event. At his solicitation, Mr. Charles E. Beckell, of the same city, kindly furnished me with the sketch of the tombs of Burrows, Blyth, and Waters printed below.

The two bruised vessels lay at the end of the Union Wharf, and from them the coffins of the two deceased officers were received by the civil and military procession, which had been formed at the court-house at nine in the morning of the 9th of September, under the direction of Robert Isley and Levi Cutter, assisted by twelve marshals. The coffins containing the bodies were landed from the vessels in barges of ten oars each, rowed by minute strokes of ship-masters and mates, accompanied by most of the barges and boats in the harbor. When the barges commenced to move, and during the solemn march of the procession from the wharf up Fore and Pleasant Streets to High Street, thence down Main and Middle Streets to the Rev. Mr. Payne's meeting-house, minute-guns were fired by the artillery companies of Captains Bird and Varnum. These were continued while the procession marched from the meeting-house to the Eastern Cemetery, about a mile distant. The chief mourners who followed the corpse of Lieutenant Burrows were Dr. Washington, Captain Hull, and officers of the *Enterprise*. Those who followed the corpse of Captain Blyth were the officers of the *Boxer*, on parole. Both were followed by naval and military officers in the United States service, the crews of the two vessels, civil officers of the state and city, military companies, and a large concourse of citizens. Captain Blyth was one of the pall-bearers at the funeral of Lawrence, at Halifax, a few weeks before.

The remains of Burrows, Blyth, and Waters were buried by the side of each other. Over their graves stand oblong monuments about six feet in length, two and a half feet in width, and about the same in height. Blyth's, seen nearest in the accompanying sketch by Mr. Beckell, is a brick foundation covered with a marble slab, on which is the following inscription: "In memory of Captain SAMUEL BLYTH, late commander of his Britannic Majesty's brig *Boxer*. He nobly fell, on the 6th day of September, 1813, in action with the United States brig *Enterprise*. In life, honorable; in death, glorious! His country will long deplore one of her bravest sons, his friends long lament one of the best of men! A. E.

29. The surviving officers of his crew offer this feeble tribute of admiration and respect."

Burrows's monument is composed of red sandstone, forming deep, broad panels on sides and ends, and bearing a recumbent marble slab. It is the middle one in the sketch. On the slab is the following inscription — "Beneath this stone moulders the body of WILLIAM BURROWS, late commander of the United States brig *Enterprise*, who was mortally wounded on the 5th of September, 1813, in an action which contributed to increase the fame of American valor, by capturing his Britannic Majesty's brig *Boxer* after a severe contest of forty-five minutes. A. 28. A passing stranger has erected this memento of respect to the manes of a patriot who, in the hour of peril, obeyed the loud summons of an injured country, and who gallantly met, fought, and conquered the foe-man."

GRAVES OF BURROWS, BLYTH, AND WATERS.

Medals awarded to Burrows and M'Call.

The Grave of Burrows.

On the 6th of January following,² the Congress of the United States, by joint resolution, requested the Chief Magistrate of the Republic to present to the nearest male relative of Lieutenant Burrows "a gold medal, with suitable emblems and devices, in testimony of the high sense entertained by Congress of the gallantry and good conduct of the officers and crew in the conflict with the British sloop *Boxer* on the 4th of September, 1813."¹ By the same joint resolution Congress re-

THE BURROWS MEDAL.

quested the President to present to Lieutenant M'Call, "as second in command of the *Enterprise* in the conflict with the *Boxer*, a gold medal, with suitable emblems and devices."²

In this engagement the *Boxer* was very much cut up both in hull and rigging, while the *Enterprise* suffered very little. The battle was a fair test of the comparative nautical skill and good gunnery of the combatants. Justice accords the palm for both to the Americans. A London paper, speaking of the battle, said, "The fact seems to be but too clearly established that the Americans have *some superior mode*

The "passing stranger" above mentioned was Silas M. Burrows, of New York, who, being in Portland, visited the cemetery, saw the neglected condition of the young hero's grave, and ordered a monument to be built. A poet unknown to the author afterward wrote thus:

"I saw the green turf resting cold
On Burrows's hallowed grave;
No stone the inquiring patriot told
Where slept the good and brave.
Heaven's rains and dew conspired to blot
The traces of the holy spot.
At length a 'passing stranger' came,
Whose hand its bounties shed;
He bade the sparkling marble claim
A tribute for the dead;
And, sweetly blending, hence shall flow
The tears of gratitude and woe."

The tomb of Midshipman Waters is a marble slab resting on four round sandstone pillars. On the slab is the following inscription: "Beneath this marble, by the side of his gallant commander, rest the remains of Lieutenant Kervin Waters, a native of Georgetown, District of Columbia, who received a mortal wound, September 5, 1813, while a midshipman on board the United States brig *Enterprise*, in an action with his Britannic Majesty's brig *Boxer*, which terminated in the capture of the latter. He languished in severe pain, which he endured with fortitude, until September 25th, 1813, when he died with Christian calmness and resignation, aged eighteen. The young men of Portland erect this stone as a testimony of their respect for his valor and virtues."

¹ The picture above given is the exact size of the medal. On one side is seen an urn standing upon an altar, around which are grouped military and other emblems, on one of which (a trident) hangs a victor's chaplet of laurel leaves. Upon an elliptical panel on the side of the altar is seen "W. BURROWS," in prominent letters. Around the whole is the legend "VICTORIAM TIBI CLARAM PATRIE MERUIT." On the reverse is seen the two brigs engaged in combat, the main-top-mast of the *Boxer* shot away. Over them the legend "VIVERE SUI VINCERE." Below, "ENTERPRISE NAV. AMER. BY BOXER NAV. BRIT. DIE IV SEPT. MDCCCXIII." The date should be the 5th instead of the 4th.

² On one side the bust of Lieutenant M'Call and the legend "EDWARD R. M'CALL NAVIS ENTERPRISE PRÆFECTUS." Below, "SIC ITER AD ASTRA." The reverse the same as on that of Burrows.

THE M'CALL MEDAL.

of firing, and we can not be too anxiously employed in discovering to what circumstances that superiority is owing." The loss of the *Boxer* was a great mortification; and there can be no doubt that Captain Blyth felt full assurance of victory when he went into the contest. Indicative of this was the nailing of the flag to the mast, always a most foolish and perilous boast in advance.¹ The loss of the *Boxer* was several killed besides her commander, and seventeen wounded. The *Enterprise* lost only one killed besides her commander, and ten wounded. This was the *Boxer's* last cruise as a war vessel. She was sold in Portland, and sailed from that port for several years as a merchantman. The *Enterprise* made only one more cruise during the war, under the command of Lieutenant Renshaw. She sailed southward as far as the West Indies in company with the fast-sailing brig *Rattlesnake*, Lieutenant Creighton. While off the coast of Florida she captured a British privateer, and both vessels were chased by an English seventy-four. The *Rattlesnake* soon fled from the sight of both consort and pursuer, while the *Enterprise* was hard pressed by the Englishman for seventy hours. Renshaw cast all her guns overboard in order to increase her speed. It was of little avail. Nothing saved the "lucky" little brig from capture but a favorable shifting of the wind. Not long afterward she sailed into Charleston Harbor, and was there made a guard-ship. She did not appear again at sea during the war.

The melancholy tolling of the funeral bells over the slain Burrows and Blyth had scarcely died away when merry peals of joy were heard all over the land in attestation of the delight of the people caused by Perry's victory on Lake Erie, already fully recorded in these pages. With that victory ceased rejoicings over the exploits of the vessels of the regular navy during the remainder of the year, because, with a single exception, they were not remarkable; but the privateers then swarming upon the ocean were doing excellent service every where. The history of their doings may be found toward the close of the volume.

¹ Cooper relates (II., 260, note) that, when the *Enterprise* hailed to know if the *Boxer* had struck, as she kept her flag flying, one of the officers of the British vessel leaped upon a gun, shook both fists at the Americans, and shouted "No, no, no!" at the same time using some strong opprobrious epithets. The excited gentleman's superiors were compelled to order him down. His movement created much merriment on board the *Enterprise*.

CHAPTER XXXII.

"War-doom'd the wide expanse to plow
Of ocean with a single prow,
Midst hosts of foes with lynx's eye
And lion fang close hovering by,
You, Porter, dared the dangerous course,
Without a home, without resource,
Save that which heroes always find
In nautic skill and power of mind;
Save where your stars in conquest shone,
And stripes made wealth of foes your own."

ONE TO DAVID PORTER, 1814.

When we take a survey from a stand-point at mid-autumn, 1813, we observe with astonishment only three American frigates at sea, namely, the *President*, 44; the *Congress*, 38; and the *Essex*, 32. The *Constitution*, 44, was undergoing repairs; the *Constellation*, 38, was blockaded at Norfolk; and the *United States*, 44, and *Macedonian*, 38, were prisoners in the Thames above New London. The *Adams*, 28, was undergoing alterations and repairs, while the *John Adams*, 28, *New York*, 36, and *Boston*, 28, were virtually condemned. All the brigs, excepting the *Enterprise*, had been captured, and she was not to be trusted at sea much longer. The *Essex*, Commodore Porter, was the only government vessel of size which was then sustaining the reputation of the American Navy, and she was in far distant seas, with a track equal to more than a third of the circumference of the globe between her and the home port from which she sailed. She was then making one of the most remarkable cruises on record. Let us here consider it.

We have observed the *Essex* starting from the Delaware in the autumn of 1812,² with orders to seek a junction with the *Constitution* and *Hornet*, under Commodore Bainbridge, at designated places, but allowed, in the event of failure to do so, to follow the dictates of the judgment of her commander.¹ She did not fall in with her consorts of Bainbridge's little squadron, and she sailed on a long cruise in the South Atlantic and Pacific Oceans. In anticipation of such cruise Captain Porter took with him a larger

The *Nocton* a Prize to the *Essex*.

A Search for Bainbridge.

An English Governor deceived.

number of officers and crew than was common for a vessel of that size. Her muster-roll contained three hundred and nineteen names; and her supplies were so ample that she sank deep in the water, which greatly impaired her sailing quality.

The *Essex* took a southeast course for the purpose of crossing the tracks of vessels bound from England to Bermuda, but met only a few Portuguese traders with whom she had no hostile business. On the 27th of November she sighted the bold mountains of St. Jago, and ran into the harbor of Port Praya in search of the commodore. There Porter received unbounded hospitalities from the Portuguese governor; and when he had waited a proper time for the expected arrival of Bainbridge, he departed with his ship loaded with pigs, sheep, fowls, and tropical fruits of every kind. He concealed his destination from the governor, and, sailing eastward when he left port, gave the impression that he was bound for the coast of Africa. When beyond telescopic range he changed his course, stood to the southwest, and crossed the equator on the 11th of December in longitude 30° west. On the following day he captured his first British prize, the *Nocton*, 10, a government packet, with a crew of thirty-one men, bound for Falmouth. She had fifty-five thousand dollars in specie on board. This treasure and her crew were transferred to the *Essex*, and Lieutenant Finch (afterward Captain William Compton Bolton), with a crew of seventeen men, was directed to go to the United States with her. She was captured by a British frigate between Bermuda and the Capes of Virginia. Only the specie of the *Nocton* was secured by Porter.

December 14,
1812. Two days after this victory* the pyramidal mountain peak of the dreary penal island of Fernando de Noronha, whereon no woman was allowed to dwell, loomed up sullenly from the waste of waters. This was one of the specified places of rendezvous of Bainbridge's squadron. Disguising the *Essex* as a merchantman, and hoisting English colors, Porter sailed close to the island, anchored, and sent Lieutenant Downes to the governor with a polite message, asking the privilege of procuring water and other refreshments. Downes soon returned with a present of fruit from the governor, and intelligence that only the week before the British ships *Acasta*, 44, and *Morgiana*, 20, had sailed from the island, and left with the magistrate a letter for Sir James Yeo, of His Majesty's ship *Southampton*. Porter was satisfied that the "British ships" spoken of were the *Constitution* and *Hornet*; that the writer of the letter was Commodore Bainbridge, and the Sir James Yeo addressed was himself. With this conviction, he sent Downes back to the governor with the truly English present of porter and cheese, and the assurance that a gentleman on board his vessel, intimately acquainted with Sir James, and who intended to sail directly to England from Brazil, would be happy to carry the letter to the baronet. The governor sent the letter to Porter. The latter broke the seal and read as follows:

"MY DEAR MEDITERRANEAN FRIEND,—

"Probably you may stop here. Don't attempt to water; it is attended with too much difficulty. I learned before I left *England* that you were bound to the Brazil coast; if so, we may meet at St. Salvador or Rio Janeiro. I should be happy to meet and converse on our old affairs of captivity. Recollect our secret in those times.

"Your friend of His Majesty's ship *Acasta*,
KERR."

The last clause in this letter gave Porter a needed hint. He called for a lighted candle, and, holding the sheet of paper near the flame, the following note, written in sympathetic ink,¹ was revealed by the heat:

"I am bound off St. Salvador, thence off Cape Frio, where I intend to cruise until

¹ Sympathetic ink is composed of compounds which, when written with, will remain invisible until heated. Solutions of cobalt thus become blue or green, lemon-juice turns brown, and a very dilute sulphuric acid blackens.

Failure to find Bainbridge.

The *Essex* sails for the Pacific Ocean.

Her Arrival at Valparaiso.

the 1st of January. Go off Cape Frio, to the northward of Rio Janeiro, and keep a look-out for me.
YOUR FRIEND."¹

With these instructions Porter sailed for Cape Frio. He came in sight of it three days before the *Constitution* captured the *Java*,² and for some time cruised up and down the Brazilian coast between Cape Frio and St. Catharine. He met many Portuguese vessels, but could obtain no reliable information concerning the squadron. His situation was becoming more and more perplexing. English influence was powerful all along the coasts of the South American continent, while the power of his own government was little known or respected. He was, in a degree, in an enemy's waters, with no friendly port into which he might run for shelter, carry prizes if he should catch them, or procure necessary supplies. He was compelled, as he says in his Journal, to choose between "capture, a blockade, or starvation." He was left to his own resources, for he could not find the commodore, and he resolved to sweep around Cape Horn, pounce upon the English whalers in the Pacific Ocean, and live upon the enemy. The specie obtained from the *Nocton* would be a reliable resource in an hour of need, and he could not doubt his success. With this determination he spread the sails of the *Essex* to the breeze in the harbor of St. Catharine on the 26th of January, 1813, and after a most tempestuous and périlous voyage made Cape Horn on the 14th of February. At the close of that month the pleasant southwest breezes came over the calmer ocean, and under their gentle influence the inhospitable coasts of Patagonia and Lower Chili were soon passed. On the 5th of March the glittering peaks of the Andes were seen hundreds of miles distant, and on the evening of that day the anchor of the *Essex* was cast at the island of Mocha, off the coast of Araucania, for the first time after leaving St. Catharine. Its solitary mountain peak towered more than a thousand feet in the clear blue firmament; immense flocks of birds hovered over its unpeopled shores, and in its surrounding waters shoals of seals were sporting in the surf. A joyous hunt for a day by the delighted crew brought to the ship an ample supply of coveted fresh meat, for the island, inhabited by Spaniards before the reign of the buccaneers in that region, abounded with fat wild hogs and horses. The flesh of the latter proved more savory than that of the former, and was preferred by the people of the *Essex*.

Porter had now spent two months without falling in with a hostile vessel. His supplies of naval stores were portentously diminishing, and he anxiously hoped for prey by which he might replenish his exhausted materials. With that hope he cruised northward, enveloped for several days in thick fogs, when suddenly, on the 14th of March, as the *Essex* swept around the Point of Angels, the city of Valparaiso, the chief sea-port town of Chili, burst upon the vision like the creation of a magician's wand. She had been running gallantly before a stiff breeze; now she was suddenly becalmed under the guns of a battery, so unexpectedly and near had the turning of that point brought her to the town. The harbor and its shipping were in full view. Several Spanish vessels were about departing; and an armed American brig, heavily laden, seeing the English colors at the mast-head of the *Essex*, had tried up her ports and prepared for action. Unwilling to have a knowledge of the arrival of an American frigate in those waters spread by the Spanish vessels along the coast, and perceiving a British whaler preparing for sea, Porter bore off to the northward, and in an hour or two lost sight of the town. He returned on the following day, ran into port and anchored, and soon learned two important facts, namely, that Chili had just become independent of Spain, and the people were prepared to give him a cordial reception; and that the Viceroy of Peru had sent out cruisers against the American shipping in that quarter. Porter's appearance with a strong frigate was there-

¹ *Journal of a Cruise made to the Pacific Ocean by Captain David Porter, in the United States Frigate Essex, in the Years 1812, 1813, and 1814, 1., 36.*

² See page 460.

fore exceedingly opportune, for American commerce lay at the mercy of English privateers among the whalers, and the Peruvian corsairs.

The *Essex* was welcomed by the Chilian authorities by a salute of twenty-one guns at the forts, and of nine guns from the American brig, which proved to be the *Coll*, 18; and Mr. Poinsett, the American Consul General, hastened from Santiago, the capital of Chili, to join in the festivities which had been arranged for giving Porter a formal reception. Dinners, balls, excursions on land and water followed, and the officers of the *Essex* never forgot the delightful hours which they spent with the Chilian beauties, by whom they were exceedingly petted. In this welcome, these entertainments, and the bright prospects of usefulness to their countrymen and a profitable cruise for themselves, the people of the *Essex* found full compensation for all their hardships during the terrible voyage from the stormy Atlantic around the dark cape into the Pacific Sea.

As soon as she was tolerably victualled the *Essex* put to sea, and on the 25th fell in with an American whaler, from whom Porter learned that two other vessels, the *Walker* and *Barclay*, had just been captured by a Peruvian corsair off Coquimbo, accompanied by an English ship. Porter pressed on up the coast, and soon overhauled the corsair. She was the *Nereyda*. He took from her all her captured Americans, and, after casting her cannon, ammunition, and small-arms overboard, sent her to Callao with a letter to the Peruvian viceroy, in which he denounced the piratical conduct of the commander of the cruiser, and asked for punishment due for his crime. The *Essex* then looked into Coquimbo, but, seeing nothing discernible, sailed for Callao. As she neared the harbor she recaptured the *Barclay*, and, making her her consort, sailed for the Galapagos Islands, the alleged resort of English whalers. From the master and crew of the *Barclay* Porter ascertained that there were twenty-three American and about twenty English whale-ships in that region. The latter were, in general, fine vessels of between three and four hundred tons burden, and would afford good prizes for the *Essex*. The most of them were armed, and bore letters of marque.

On his way over the quiet Pacific toward the Galapagos, Porter made preparations for fierce struggles with the armed English whalers. The ships were put in perfect order, and then seven small boats were arranged as a flotilla and placed under the command of Lieutenant Downes.¹ They made Chatham Island on the 17th of April, but found no enemy there. Similar disappointment awaited them at Charles Island on the following day. Lieutenant Downes went ashore, and found a box nailed to a post, over which was a black sign with the words HATHAWAY'S POST-OFFICE painted on it in white letters. The contents of the post-office were conveyed on board the *Essex*, and gave, by a list of English whalers that had touched there a few months before, positive evidence that those islands were a resort for British vessels in that service. With this assurance Porter cruised eagerly among the Galapagos, but almost a fortnight was spent without seeing a single vessel. On the morning of the 29th^a the welcome cry of "Sail, ho!" was heard, and a ship was seen to the westward. Soon afterward two others were observed a little farther to the south. Porter immediately gave chase to the first-seen vessel, and at nine o'clock in the morning she was his prize. She was the English whale-ship *Montezuma*, with fourteen hundred barrels of oil on board. Placing a prize-crew in her, he made sail after the other two vessels. The wind fell, and there was a dead calm. The flotilla of small boats under Downes pushed forward. They pulled for the larger of the two

¹ John Downes was born in Massachusetts. He entered the naval service as midshipman in 1802, and was active in the attack on the shipping in the harbor of Tripoli. He accompanied Porter, as lieutenant, in the entire cruise of the *Essex*, and became commander of the *Essex Junior*. In 1831 he was promoted to captain, and commanded the *Potomac* in the punishment of the Quallah Battoo people for outrages on American commerce. His last sea service was in 1834. He died in Boston on the 11th of August, 1854, and was buried with the honors due to his rank. Secretary Dobbin directed the officers of the Navy and Marine Corps to wear crape on the left arm for thirty days.

Capture of the *Georgiana* and other English armed Whaling-ships.

Porter in Command of a Squadron.

vessels, which kept training her guns upon the flotilla as it approached; but between two and three in the afternoon she surrendered without firing a shot. She was the English whale-ship *Georgiana*. Her companion was captured in like manner. She was the *Policy*, also a whaler. These three prizes furnished Porter with many needed supplies. Among these were beef, pork, cordage, water, and a large number of the huge Galapagos turtles, whose flesh is delightful to the appetite and healthful to the stomach.

Captain Porter fitted up the *Georgiana* as a cruiser. She had been built for the service of the East India Company, and had the reputation of being a fast sailer. She was pierced for eighteen guns, and had six mounted when taken. The *Policy* was also pierced for eighteen guns, and had ten mounted. These were added to the armament of the *Georgiana*, and she became a fitting consort of the *Essex*, with sixteen light guns, under the command of the gallant Lieutenant Downes, with forty-one men. He raised the American pennant over her on the 8th of May,^a and it was saluted by seventeen guns. The crew of the *Essex*, officers and men, was ^a 1813. now reduced to two hundred and sixty-four souls.

The reputation of the *Georgiana* for fleetness was unmerited, yet Porter expected to make her useful. She and the *Essex* parted company on the 12th of May, with a clear understanding concerning places for rendezvous at specified times. The *Essex*, accompanied by the *Policy*, *Montezuma*, and *Barclay*, did not cruise far from the Galapagos, and it was sixteen days before a strange sail was seen by her. On the afternoon of the 28th^b one was seen ahead, and a general chase was made. At sunset she was visible from the frigate's deck, and she was still in sight on the following morning. It was not long before the *Essex* got alongside of and captured her. She was the English whale-ship *Atlantic*, mounting eight 18-pounder carronades, and manned by twenty-three men, under the command of a renegade Nantucket captain. She was pierced for twenty guns. ^b May.

During this chase another vessel was seen. With characteristic energy, Porter placed Lieutenant McKnight, of the *Montezuma*, in command of the *Atlantic*, and ordered him to chase the newly-discovered stranger. The *Essex* also joined in the pursuit, and the *Greenwich*, a vessel little lighter than the *Atlantic*, mounting ten guns, and manned by twenty-five men, was added to the list of prizes in Porter's hands. The *Atlantic* and *Greenwich* had letters of marque, and, being fast sailers, were very dangerous to American commerce.

With all his prizes but the *Georgiana*, now five in number, Porter sailed for the mouth of the Tumbez, in the Gulf of Guayaquil, on the South American Continent, where he anchored on the 19th of June, off the miserable village of Tumbez. There the little squadron was joined by the *Georgiana*,^c bringing with her two prizes, the *Hector*, 11, and *Catharine*, 8. Downes had captured a third, the *Rose*, 8, which he had filled with the superabundant prisoners and sent to St. Helena. She was a dull sailer. He removed her oil, threw her guns overboard, and gave the prisoners the ship on condition that they should sail for that rocky isle in the Atlantic. ^c June 24.

Porter now found himself, at the end of eight months after he sailed from the Delaware, in command of a squadron of nine armed vessels ready for formidable warfare. The *Atlantic* being every way superior to the *Georgiana*, Lieutenant Commanding Downes was transferred to her, with his crew. Twenty guns were mounted in her, and she was named *Essex Junior*. She was manned by sixty picked men. The *Georgiana* was also armed with twenty guns, and converted into a store-ship, under the command of "Parson" Adams, the chaplain of the *Essex*.

The squadron left Tumbez on the 30th of June, the *Essex* and *Essex Junior* sailing in company until the 9th of July,^d when the latter was dispatched for Valparaiso with the *Catharine*, *Hector*, *Montezuma*, *Policy*, and *Barclay* in con- ^d 1813.

Capture of the dreaded *Seringapatam*. Successful cruising among the Galapagos Islands. Porter warned of Danger.

voy. The *Essex* at the same time, accompanied by the *Georgiana* and *Greenwich*, sailed westward toward the Galapagos. On the 13th^a she captured the English whale-ship *Charlton*, armed with ten guns, and manned by twenty-one men. Two other vessels had been seen in her company, the larger of which, the prisoners from the *Charlton* said, was the *Seringapatam*, mounting fourteen guns, and manned by forty men. She had been built in England for the Sultan Tippoo Saib for a cruiser, and was the most formidable enemy of American shipping in the Pacific Ocean. Porter longed for her capture, and was soon gratified. The *Greenwich* bore gallantly down upon her, and, after exchanging a few broadsides, the English vessel surrendered. She soon afterward made an unsuccessful effort to escape. The smaller vessel, called the *New Zealander*, was captured without difficulty.

Porter's prisoners were now so numerous that he was compelled to admit a large number to parole. These were placed in the *Charlton*, and sent to Rio de Janeiro under a pledge of honor. The guns were taken out of the *New Zealander* and placed in the *Seringapatam*, giving her an armament of twenty-two heavy pieces, but with an insufficient crew. She was thus converted into a formidable cruiser. The *Georgiana*, with a hundred thousand dollars worth of spermaceti oil, was sent to the United States, bearing in irons the captain of the *Seringapatam*, who was found without a commission as privateer, and liable to the penalties of piracy.

The *Essex*, with the *Greenwich*, *Seringapatam*, and *New Zealander*, now sailed for Albemarle Island, the largest of the Galapagos group. On the morning of the 28th^b they discovered a strange sail. Chase was given, and continued all day, but she eluded her pursuers during the ensuing night. This was the first time that the *Essex* had failed to place herself alongside of an antagonist since she entered the Pacific Ocean, and Porter and his people were much mortified. The cruise continued, and on the 4th of August the little squadron anchored off James's Island, a short distance from Albemarle. There they remained more than a fortnight, and on the 22d anchored in Banks's Bay, between Narborough Island and the north head of Albemarle, where the prizes were moored, and from whence the *Essex* proceeded^c on a short cruise alone. After sailing for some time along the

^a August 24. Galapagos without meeting any vessels, Porter was gratified by the apparition of a strange sail on the 15th of September, apparently lying to, far to the southward and to the windward. The *Essex*, disguised, approached her, and discovered her to be an English whale-ship engaged in the process of "cutting in," or getting on board the ship the blubber of the great fish. When the *Essex* was within about four miles of the whaler, the latter became alarmed, cast off her fish, and made sail. The *Essex* threw off her disguise and pursued, and at four o'clock in the afternoon had the stranger within range of her guns. A few shots brought her to, and she became a prize. She was the *Sir Andrew Hammond*, armed with twelve guns, and manned by thirty-one men. She was the vessel that escaped the *Essex* on the night of the 28th of July. She had on board a large supply of beef, pork, bread, wood, and water, of which the *Essex* was in need. With this prize she returned to Banks's Bay, where she was soon afterward joined by the *Essex Junior* from Valparaiso. Downes had there moored three of the prizes, and sent the fourth, the *Policy*, to the United States with a cargo of spermaceti oil.

While at Valparaiso Downes learned two important facts, namely, that the exploits of the *Essex* had produced great excitement in the British Navy, and caused the government to send out the frigate *Phoebe*, with one or two consorts, to attempt her capture; and that the Chilian authorities were becoming more friendly to the English than to the Americans. Surveying the situation in the light of this information, Porter resolved to go to the Marquesas Islands, refit his vessels, and return to the United States. His cruise had been remarkably successful. He had captured almost every English whale-ship known to be off the coasts of Peru and Chili, and had deprived

Porter, with his Squadron, sails for the Marquesas Islands. Arrival at Nooaheevah. White Residents on the Island.

the enemy of property to the amount of two and a half millions of dollars, and three hundred and sixty seamen. He had also released the American whalers from danger, and inspired the Peruvians and Chilians with the most profound respect for the American Navy. Accordingly, on the 2d of October, he spread the sails of the *Essex* to the breeze, and she sailed westward from Banks's Bay, followed by the *Essex Junior*, *Seringapatam*, *New Zealander*, *Sir Andrew Hammond*, and *Greenwich*. Most of these were slow sailers, and kept the *Essex* back. The impatient Porter, fearing the delay might cause him to miss an English vessel bound for India of which he had heard, sent the *Essex Junior* forward to the Marquesas with instructions to attempt to intercept and capture her. Meanwhile the squadron crept lazily over the calm sea, and on the 23d of October the group of the Marquesas was seen looming up from the western horizon. On the following day they neared the shores, and saw the natives thronging the beaches and swiftly navigating the waters in light canoes. After passing among the islands a few days, the *Essex* finally anchored in a fine bay of Nooaheevah with her prizes, except the *Essex Junior*, which came in soon afterward.

"The situation of the *Essex*," says Cooper,¹ "was sufficiently remarkable at this moment to merit a brief notice. She had been the first American to carry the pennant of a man-of-war around the Cape of Good Hope, and now she had been the first to bring it into this distant ocean. More than ten thousand miles from home, without colonies, stations, or even a really friendly port to repair to, short of stores, without a consort, and otherwise in possession of none of the required means of subsistence and efficiency, she had boldly steered into this distant region, where she had found all that she had acquired through her own activity; and having swept the seas of her enemies, she had now retired to these little-frequented islands to refit with the security of a ship at home. It is due to the officer who so promptly adopted and so successfully executed this plan, to add, that his enterprise, self-reliance, and skill indicated a man of bold and masculine conception, of great resources, and of a high degree of moral courage—qualities that are indispensable in forming a naval captain."

The bay in which the squadron was moored, and its surroundings, presented very picturesque scenery to the navigators. A beautiful valley was seen extending back from it among the lofty hills, and here and there a native village dotted its margins. Rich vegetation crowned the eminences, and cultivated fields smiled along the slopes and beautiful intervalles. The natives every where among the group of islands had appeared very friendly, and Captain Porter expected nothing but quiet and full success in fitting his vessels for his long homeward voyage. In this he was disappointed, for during his stay he was compelled to engage in a military campaign, and take possession of Nooaheevah by force of arms. It happened in this wise:

The anchor of the *Essex* had just been cast when a canoe shot out from the shore and came alongside the frigate. It contained three white men, one of whom was naked and tattooed like the natives. This man was an Englishman, named Wilson, and had been on the island twenty years. One of his companions was Midshipman John Maury, of the United States Navy, who had been left on the island to gather sandal-wood while the merchant vessel that bore him to it should go to China and return. He was accompanied by a seaman. These were the only white men on Nooaheevah. They informed Porter that war was raging on the island between the native tribes who inhabited the different valleys, and that it was quite fierce between the Taeahs, who dwelt in the one before them, and the Happahs over the mountains. He was farther informed that he would probably be compelled to take the part of the Taeahs against the Happahs in order to get from them such supplies as he desired and the island afforded.

Wilson understood the native language well, and became Porter's interpreter.

¹ *Naval History of the United States*, 11., 222.

With him the captain landed, and was met on the beach by a throng of men, women, and children, who not only welcomed him, but gave cordial greetings to the marines, who followed him with beating drums, and fired volleys of musketry in the air. These unusual sounds brought swarms of the Happahs to the crest of the mountain, where they brandished their spears and clubs in the most threatening manner. They had lately spread desolation through portions of the valley of the Taechs, destroying houses, plantations, and bread-fruit-trees. Porter immediately sent them word that he had come with force sufficient to take possession of the whole island, and that if they ventured into the Tienhoy Valley as enemies while he remained he would punish them severely. He gave them permission to bring hogs and fruit to the shore, and promised them protection while trafficking. This bold message delighted the Taechs, and filled the Happahs with awe, because of the powerful ally which good fortune had brought to their enemies.

Porter had just returned to his ship when he was informed that the great Gattanewa, the mighty King of the Taechs, a descendant of Oateia, or Daylight, through eighty-eight generations, had returned from a tour of inspection to one or two of his strong-holds among the mountains. A boat was sent to bring the monarch on board the *Essex*, and all hands waited in expectation of seeing a most dignified personage, for their eyes had already seen the really beautiful and stately granddaughter of the monarch. They were disappointed. Before them appeared a tottering man leaning upon a rude stick, bent with the weight of years, naked, excepting temples covered with withered palm-leaves and loins swathed in dirty *tappa* or native cloth, his skin black with tattooing, and made almost leprous in appearance by the effects of excessive indulgence in the use of *kava*, a native intoxicating drink. He was then stupefied by its effects, and it was not until after he had slept long in the cabin of the *Essex* that he was able to talk of public affairs.

THE MIGHTY GATTANAWA.

Porter agreed to assist Gattanewa against the Happahs and Typees, his chief enemies. He established a camp in a shady plain not far from the beach, and at the same time active labor was commenced in the service of preparing the *Essex* for her long voyage. Days passed on, and so peaceful did the Americans appear that the Happahs were emboldened.

Battles with the Natives.

Porter victorious.

Change in the Name of the Island and Harbor.

They poured into the valley, menaced the camp, and sent a messenger to Porter to tell him that he was a coward. The old monarch and his chief warriors urged Porter to strike a withering blow. He complied with their request. He landed a 6-pounder cannon, and the natives carried it to the summit of the mountain. He then sent Lieutenant Downes, with forty men with muskets, to attack the Happahs. They were driven from hill to hill until they reached one of their forts on the brow of an eminence. There, four thousand strong, they made a stand, and hurled spears and stones at the assailants. The fort was stormed and captured, and the awe-struck Happahs fled in every direction. Their hostility was overcome, and they hastened to send messengers with prayers for peace. Within a week envoys from almost every tribe on the island appeared bearing tribute-treasures and tokens of friendship. Porter's power was supreme. He took possession of a conical hill overlooking his encampment and the harbor, cast up a breastwork formed of water-casks filled with earth, mounted four guns upon it, raised the American flag over it, and on the 19th of November took formal possession of the island. He named Nooabeevah Madison Island, and the breastwork Fort Madison, in honor of the President of the United States; and to the beautiful expanse of water before him he gave the name of Massachusetts Bay, in token of his attachment to his birth-place. The fort was placed

THE ESSEX AND HER PRIZES IN MASSACHUSETTS BAY, NOOABEEVAH.¹

in command of Lieutenant John M. Gamble, of the Marines, and Messrs. Feltus and Clapp, midshipmen, with twenty-one men, were placed under his orders, and remained there until the squadron was ready to sail. This was wise precaution to secure the speedy repairs of the *Essex*.

The powerful Typees had remained hostile, and became more and more defiant, to the great discomfort of Gattanewa's people and the annoyance of the Americans. At length Porter resolved to make war upon them. An expedition, consisting of thirty-five Americans, including Captain Porter and five thousand Tachs and Happahs, moved against the incorrigibles. The Typees, armed with slings and spears, met them with such overwhelming numbers and fierce determination, that at the end of the first day they were compelled to fall back to the beach, and numbering among their casualties a shattered leg belonging to Lieutenant Downes, caused by a blow from a sling-man's stone. That night the valley of the Typees resounded with shouts of victory, and the sonorous reverberations of many beaten drums.

Porter renewed the attempt the next day, and led his motley army boldly over the rugged hills into the Typee Valley, in the midst of great exposure to hostile mis-

¹ From a drawing by Captain Porter.

siles from concealed foes, and many privations. Village after village was destroyed until they came to the principal town, in which were fine buildings, a large public square, temples and gods, huge war-canoes, and other exhibitions of half-savage life. These were all reduced to ashes, and by the broom of desolation that beautiful valley, four miles in width and nine in length, was made a blackened desert. The Types, utterly ruined and humbled, now submissively paid tribute, and Porter could say

"I am monarch of all I survey;
My right there is none to dispute."

MARQUEBAS DRUM.

Porter had allowed his crew full indulgence while at Nooaheevah. The natives were lavish in that species of savage hospitality which gives concubines to strangers in the persons of their wives and daughters. The women of that island were really beautiful in figure and feature, and not much darker in complexion than most Spanish women. Warm attachments were formed between them and the seamen, and when, on the eve of departure, Porter forbade his men going on shore, they were greatly discontented. For three days during this restraint they became almost mutinous. "The girls," says Porter in his *Journal*, "lined the beach from morning until night, and every moment importuned me to take the *taboos* off the men, and laughingly expressed their grief by dipping their fingers into the sea and touching their eyes, so as to let the salt water trickle down their cheeks. Others would seize a chip, and, holding it in the manner of a shark's tooth, declared they would cut themselves to pieces in their despair; some threatened to beat their brains out with a spear of grass, some to drown themselves, and all were determined to inflict upon themselves some dreadful punishment if I did not permit their sweet-hearts to come on shore."¹ Porter's men did not take the deprivation so good-naturedly. Their situation, they said, was worse than slavery; and a man named Robert White declared, on board the *Essex Junior*, that the crew of the *Essex* had come to a resolution not to weigh her anchor, or, if they should be compelled to get the ship under weigh, in three days' time after leaving the port to seize the ship and hoist their own flag. Porter thought it necessary to notice the affair. He assembled his men and addressed them kindly. He spoke of the reported threat, expressed his belief that the rumor could not be true, but added, "should such an event take place, I will, without hesitation, put a match to the magazine and blow you all to eternity." He added that perhaps there might be some grounds for the report, and said, "Let me see who are and who are not disposed to obey my orders. You who are inclined to get the ship under weigh, come on the starboard side; and you who are otherwise disposed, remain where you are." All hastened to the starboard side. The men showed great willingness to be obedient. Then White, the ringleader of the mutineers, if there were any, was called out. After informing the crew that this was the man who had slandered them, Porter sent him ashore in one of the numerous canoes in which the natives were swarming around the ship, and left him behind.

The *Essex* was thoroughly fitted for her long voyage and for encountering enemies early in December, and on the 12th^a she sailed, with her prizes, from Nooaheevah, taking with her Mr. Maury and his companion. They stretched away eastward to the South American continent, and early in January the peaks of the Andes were visible. On the 3d of February^b Porter entered the harbor of Valparaiso, exchanged salutes with the fort, went on shore to pay his respects to the governor, and on the following day received a visit from his Excellency and his wife, and some other officers. Meanwhile the *Essex Junior* cruised off the port as a scout to give warning of the approach of any man-of-war. Notwithstand-

Incidents in the Harbor of Valparaiso.

Porter's Generosity.

He tries to fight, or run the Blockade.

ing the friendly demonstrations of the governor, it was evident to Captain Porter that the English were in higher favor than the Americans with the Chilian government.

Porter had not been long in Valparaiso when two English men-of-war were reported in the offing. They sailed into the harbor all prepared for action, and seemed ready to violate the hospitalities of a neutral port. These vessels were the *Phoebe*, 36, Captain Hillyar, and the *Cherub*, 20, Captain Tucker. The former mounted thirty long 18-pounders, sixteen 32-pound carronades, and one howitzer, and six 3-pounders in her tops. Her crew consisted of three hundred and twenty men and boys. The *Cherub* mounted eighteen 32-pound carronades below, with eight 24-pound carronades and two long 9's above, making a total of twenty-eight guns. Her crew mustered one hundred and eighty. The *Essex* at this time could muster only two hundred and twenty-five souls, and the *Essex Junior* only sixty. The *Essex* had forty 32-pound carronades, and six long 12-pounders; and the *Essex Junior* bore only ten 18-pound carronades, and ten short 6's. The weight of men and metal was heavily in favor of the British vessels.

As the *Phoebe* came sweeping into the harbor with her men all at quarters, and ran close alongside the *Essex*, Porter warned Hillyar that if his vessel touched the American frigate he should open upon her, and much blood would be shed, for he was fully prepared for action. "I do not intend to board you," exclaimed the Englishman, who perceived Porter's readiness to fight, but as he luffed up his ship was taken aback, and his jib-boom was thrown across the forecastle of the *Essex* in a menacing manner. Porter summoned his men and bade them spring upon the *Phoebe*, cutlasses in hand, the moment when the two vessels should touch each other. She was completely in the power of the *Essex*, and with the aid of the *Essex Junior* the American frigate might have sunk the *Phoebe* in fifteen minutes. Hillyar saw his helplessness, and, throwing up his hands in consternation, declared that his present position was an accident. The chivalrous Porter accepted the apology, and the frightened Englishman was allowed to pass on. It was afterward generally believed that Hillyar had positive orders to attack the *Essex*, even in a neutral South American port, and that his intentions were hostile until the moment when he discovered his imminent peril in the power of the gallant American.

After obtaining some supplies, the English vessels went out and cruised off Valparaiso. During a period of more than six weeks Porter tried in vain to bring on an engagement with the *Phoebe* singly, or with the *Essex Junior* in company. On the 27th of February he felt sure of a fight, for the *Phoebe* stood close in for the harbor, displaying a banner on which were the words "God and our Country; British Sailors' best Rights; Traitors offend both." Porter accepted this as a challenge, quickly prepared his vessel, and hoisting a banner under his old motto, "Free Trade and Sailors' Rights," with the words "God, our Country, and Liberty; Tyrants offend them," he sailed boldly out. Hillyar, who had doubtless been instructed not to fight the *Essex* alone, quickly showed the stern of his ship, and ran down to the *Cherub*, to the great disgust of the Americans.

Informed that other English cruisers might be expected soon, Porter determined to run the blockade and put to sea. On the 28th of March he spread his sails to a stiff southwest breeze, and made a bold dash for the open Pacific. A heavy squall struck the *Essex* as she rounded the Point of Angels, carrying away the maintopmast, and over into the deep the men who were aloft reefing. They were lost. The British ships, lying in wait outside, immediately gave chase, while the crippled frigate crawled toward the friendly port to repair damages. She could not reach her old anchorage in time to escape the enemy, so she took shelter in a bay not far from a battery, and anchored within pistol-shot of the shore. Notwithstanding that was neutral ground, the enemy's vessels bore down upon the *Essex*, and Captain Hillyar, unmindful of the courtesy of Porter when the *Phoebe* was within his power, proceed-

The *Essex* crippled. Porter's Generosity not reciprocated. Battle between the *Essex* and two British Ships.

ed to attack her. The *Essex* prepared for conflict, and endeavored to place a spring on her cable. Before this could be accomplished the *Phoebe* got in an advantageous position, and, at a few minutes before five o'clock in the afternoon,^a opened fire upon the stern of the American frigate with his long guns. The *Cherub* at the same time assailed the starboard bow of the *Essex*, while the *Essex Junior* was unable to render her consort any assistance.

The *Cherub* was soon driven off by the bow-guns of the *Essex*, and joined with the *Phoebe* in a severe raking fire on the American. For a while the latter was unable to reply, but at length three of her long twelves were run out of her stern ports, and were handled with so much dexterity and power that, at the end of half an hour after the action commenced, both of the English ships were compelled to haul off and repair damages. The *Essex* had been much bruised in the conflict, and many of her crew were killed or wounded. Her ensign at the gaff and her battle-flag had been shot away, but her banner, inscribed "FREE TRADE AND SAILORS' RIGHTS,"¹ was still flying at the fore. Every man, from the commander down, resolved to defend her to the last.

The *Phoebe* and *Cherub* soon renewed their attack in a position on the starboard quarter of the *Essex* where she could make no effectual resistance, the distance between her and her antagonists being too great to be reached by her carronades. Their fire was very galling, and Porter was driven to the alternative of surrendering, or running down to close quarters with his enemy. He decided on the latter movement, notwithstanding his ship had suffered a farther loss of important spars and rigging. So badly was she crippled that the only sail that could be made available was the flying jib. This was hoisted, the cable was cut, and slowly the *Essex* edged away toward the *Phoebe* until she was within range of the frigate's carronades, when for a few minutes the firing on both sides was tremendous. The *Phoebe* changed her position to a long range, and kept up a terrific cannonade upon her helpless antagonist, whose deck was now strewn with the dead, her cockpit and ward-room filled with the wounded, and a portion of her hull in flames. Many of her guns were disabled; and at one of them no less than fifteen men—three entire crews—fell dead or mortally wounded. Yet she drove off the *Cherub*, and for two hours maintained the terrible combat with her principal antagonist.

Porter now perceived no chance for boarding the *Phoebe*, and the raking of her long guns was producing horrible carnage in his ship. He resolved to attempt to run her ashore, land her people, and set her on fire. The wind was favorable; but when she was within musket-shot distance from the beach, it shifted, paying the ship's head broad off, leaving her exposed to a raking fire from the *Phoebe*. At this moment of extreme peril, Lieutenant Downes came from the *Essex Junior* in an open boat to receive orders. He was directed to defend, or, if necessary, to destroy his own vessel. He returned with some of the wounded, and left three sound men who came with him.

The slaughter on the *Essex* continued, the enemy's shot hulling her at almost every discharge. Still Porter held out, hoping to lay his ship alongside the cautious *Phoebe*. He let go an anchor, by which the head of his vessel was brought round and enabled to give his enemy a broadside. It was effectual. The *Phoebe* was crippled by it, and began drifting away with the tide. Porter was hopeful of success, when his hawser parted, and the *Essex*, an almost helpless wreck and on fire, floated toward her antagonist. The flames came up both the main and forward hatchways. There was no longer a chance for saving the ship. The magazine was threatened. Already an explosion of powder had added to the confusion. Porter was unhurt. He called a council of officers. Only one man (Lieutenant Stephen D. M'Knight²) came! The

¹ See page 441.

Porter returns Home.

rest were either slain or wounded. He then told his men that those who preferred to take the risk of drowning by jumping overboard and swimming for the shore, to the certainty of being blown up, might do so. Many accepted the offer. Some reached the beach; a large number were drowned. Porter hauled down his flag. The vessel was surrendered, and the flames were extinguished. Of the two hundred and twenty-five brave men who went into the fight, only seventy-five effective ones remained. Fifty-eight had been killed, sixty-six wounded, and thirty-one were missing. The two vessels of the enemy lost, in the aggregate, only five killed and ten wounded.

ACTION BETWEEN THE *ESSEX* AND THE *FRIGATE AND CORVETTE*!

Thus ended the wonderful and brilliant cruise of the *Essex*. Her closing exploits were as gallant as her former career. "We have been unfortunate, but not disgraced," wrote her noble commander. "The defense of the *Essex* has not been less honorable to her officers and crew than the capture of an equal force; and I now consider my situation less unpleasant than that of Commodore Hillyar, who, in violation of every principle of honor and generosity, and regardless of the rights of nations, attacked the *Essex* in her crippled state within pistol-shot of a neutral shore, when for six weeks I had daily offered him fair and honorable combat."²

By an arrangement with the victorious Hillyar the *Essex Junior* was made a *cartel*, and in her Porter and his surviving companions sailed for the United States. After a voyage of seventy-three days they arrived on the coast off Long Island, and fell in with the *Saturn*, a British ship of war, whose commander (Nash) questioned the papers of the *Essex Junior*, and detained her. The indignant Porter considered this treatment a violation of his arrangements with Hillyar, and escaped in a whale-boat. After sailing and rowing about sixty miles, he landed near Babylon, on the south side of Long Island, where he was suspected of being a British officer. His commission settled the question, and he enjoyed unbounded hospitality. He made his way to New York, where he was received with demonstrations of most profound respect; and when intelligence went over the country of the exploits of the *Essex*, every city,

named James Lyman, were sent to Rio de Janeiro as prisoners of war, where they were shipped for England in a Swedish vessel. They were never heard of afterward. The vessel arrived in safety, but the captain of the vessel never gave any account of them. ¹ From a drawing by Captain Porter.

² Porter's Dispatch to the Secretary of the Navy, July 3, 1813. Porter relates that when he was about to part with Hillyar at Valparaiso, he alluded to his conduct in attacking the *Essex* under such circumstances, when the British commander, with tears in his eyes, said, "My dear Porter, you know not the responsibility that hung over me with respect to your ship. Perhaps my life depended on taking her." "I asked no explanations at the time," says Porter, when writing of the affair several years afterward. "If he can show that the responsibility rests on his government, I shall do him justice with more pleasure than I now impeach his conduct."—*Journal*, II., 157.

Honors to Commodore Porter.

His subsequent Career.

His Death and Monument.

village, and hamlet was vocal with his praises. Municipal honors were lavished upon him; and several State Legislatures and the National Congress thanked him for his services. By universal acclamation he was called the Hero of the Pacific. Philip Freneau, the popular bard of the Revolution, wrote a dull ode on "The Capture of the *Essex*;" and a livelier poet, in his "Battle of Valparaiso," thus sang:

"From the laurel's fairest bough
Let the muse her garland twine,
To adorn our Porter's brow,
Who, beyond the burning line,
Led his caravan of tars o'er the tide.
To the pilgrims fill the bowl,
Who, around the southern pole,
Saw new constellations roll,
For their guide."

This cruise was Porter's most eminent service afloat. He aided in the defense of Baltimore a few weeks after his return home; and at the close of the war he was appointed one of the commissioners on naval affairs. In 1817 he commanded a small fleet sent to break up a nest of pirates and freebooters in the Gulf of Mexico. In 1826 he resigned his commission in the navy, and afterward became the representative of the United States in Turkey,

DAVID PORTER'S MONUMENT.

as resident minister, at Constantinople. He died near that city in 1843, at the age of sixty-three years. His remains were brought to the United States; landed at Philadelphia; borne to St. Stephen's Church, South Tenth Street, wherein religious services for the occasion were performed; and he was buried on the north side of that church. They were afterward removed to the grounds of the Naval Asylum on the banks of the Schuylkill, and buried at the foot of the flag-staff. Once more they were removed, and now find a resting-place beneath a beautiful monument in Woodlawn Cemetery, Philadelphia. His countrymen remember him with just pride.¹

While Commodore Porter was in the Pacific with the *Essex*, Commodore Rodgers was on a long cruise in the North Atlantic in his favorite frigate, the *President*, 44. He left Boston on

¹ David Porter was born in Boston on the 1st of February, 1780. His first experience in the navy was in the frigate *Constellation*, in which he entered as midshipman in 1798. He was in the action between that vessel and *L'Insurgente*, in February, 1799, when his gallantry was so conspicuous that he was immediately promoted to lieutenant. He accompanied the first United States squadron that ever sailed to the Mediterranean in 1803, and was on board the *Philadelphia* when she struck on the rock in the Harbor of Tripoli. There he suffered imprisonment. In 1806 he was appointed to the command of the *Enterprise*, and cruised in the Mediterranean for six years. On his return to the United States he was placed in command of the flotilla station near New Orleans, where he remained until war was declared in 1812, when he was promoted to captain, and assigned to the command of the frigate *Essex*. His exploits in her have been recorded in the text of this chapter.

The following are the inscriptions on Porter's monument in Woodlawn Cemetery, Philadelphia:

North Side.—"COMMODORE DAVID PORTER, one of the most heroic sons of Pennsylvania, having long represented his country with fidelity as minister resident at Constantinople, died at that city in the patriotic discharge of his duty, March 3, 1843."

South Side.—"In the War of 1812 his merits were exhibited not merely as an intrepid commander, but in exploring new fields of success and glory. A career of brilliant good fortune was crowned by an engagement against superior force and fearful advantages, which history records as an event among the most remarkable in naval warfare."

West Side.—"His early youth was conspicuous for skill and gallantry in the naval services of the United States when the American arms were exercised with romantic chivalry before the battlements of Tripoli. He was on all occasions

Rodgers's unsuccessful Cruise.

Capture of Merchant Vessels and the *Highflyer*.

the 27th of April, 1813, and President Road on the 30th, in company with the *Congress*, 38, and, after a cruise of one hundred and forty-eight days, arrived at Newport, Rhode Island, having captured eleven sail of merchant vessels and the British armed schooner *Highflyer*.

Rodgers sailed northeasterly, in the direction of the southern edge of the Gulf Stream, until the 8th of May, when the *President* and *Congress* parted company,¹ the former cruising off more to the southward in quest of the British commercial ships in the West India trade. She was unsuccessful, and Rodgers turned her head in a direction that promised the good fortune of intercepting vessels trading between the West Indies and Halifax, St. John's and Quebec. Again there was no success; and after beating about among almost perpetual fogs, the *President* was off the Azores early in June. Rodgers now determined to try his fortune in the North Sea in search of British merchantmen. Much to his astonishment, he did not meet with a single vessel until he made the Shetland Islands, and there he found only Danish ships trading to England under British licenses.

Rodgers's supplies now began to fail, and he put into North Bergen, in Norway, for the purpose of replenishment. In this, too, he was disappointed. An alarming scarcity of food prevailed over all the country, and he was able to obtain only water. He put to sea, and cruised about in those high latitudes with the hope of falling in with a fleet of English merchantmen which were to sail from Archangel at the middle of July. At the moment when he expected to make prizes of some of them, he fell in with two British ships of war. Unable to contend with them, the *President* fled, hotly pursued by the foe. Owing to the perpetual daylight (the sun at that season being there several degrees above the horizon at midnight), they were enabled to keep up the chase more than eighty hours, during which time they were much nearer the *President* than was desirable on the part of the pursued. She finally escaped; and Rodgers, neither daunted nor disheartened, and having his stores somewhat replenished by those of two vessels which fell into his hands just before the appearance of the war-ships, turned westward to intercept merchantmen coming out of and going into the Irish Channel. Between the 25th of July and the 1st of August he captured three vessels, when, finding that the enemy had a superior force in that vicinity, he found it expedient to change his ground. After making a complete circuit of Ireland, and getting into the latitude of Cape Clear, he steered for the Banks of Newfoundland, near which he made two more captures. From one of these he learned that the *Bellerophon*, 74, and *Hyperion* frigate (both British vessels) were only a few miles from him. He did not fall in with them, however, and soon stood for the coast of the United States.²

On the 23d of September the *President* toward evening fell in with the British armed schooner *Highflyer*, tender to Admiral Warren's flag-ship *St. Domingo*. She was a fine vessel of her class; a fast sailer, and was commanded by Lieutenant Hutchinson. When discovered she was six or seven miles distant. By a stratagem Rodgers decoyed her alongside the *President*, and captured her without firing a gun. She did not even discover that the *President* was her enemy until the stratagem had succeeded. It was done in this wise: Previous to his departure on this cruise Rodgers was placed in possession of some of the British signals. These he had ordered to be made on board his ship, and he now resolved to try their efficacy. He hoisted an English ensign over the *President*. The *Highflyer* answered by displaying another, and at the same time a signal from a mast-head. To Rodgers's delight, he dis-

among the bravest of the brave; zealous in the performance of every duty; ardent and resolute in the trying hour of calamity; composed and steady in the blaze of victory."

East Side.—No inscription. On the upper part of the column the word "POWER," in a wreath. On the lower part a trident and anchor crossed.

¹ The *Congress* continued at sea until the 12th of December, having cruised in the far-distant waters of the South American coast. She captured several British vessels, among them two armed brigs of ten guns each.

How Rodgers captured the *Highflyer*.

Astonishment of her Commander.

Rodgers's Service to his Country.

covered that he possessed its complement. He then signaled that his vessel was the *Sea Horse*, one of the largest of its class known to be then on the American coast. The *Highflyer* at once bore down, hove to under the stern of the *President*, and received one of Rodgers's lieutenants on board, who was dressed in British uniform. He bore an order from Rodgers for the commander of the *Highflyer* to send his signal-books on board to be altered, as some of the Yankees, it was alleged, had obtained possession of some of them. The unsuspecting lieutenant obeyed, and Rodgers was put in possession of the key to the whole correspondence of the British Navy.¹

The commander of the *Highflyer* soon followed his signal-books. He was pleased with every thing on board the supposed *Sea Horse*, and admired even the scarlet uniform of Rodgers's marines, whom he mistook for British soldiers. When invited into the cabin, he placed in the commodore's hands a bundle of dispatches for Admiral Warren, and informed his supposed friend that the main object of the British naval commander-in-chief on the American station at that time was the capture or destruction of the *President*, which had been greatly annoying British commerce, and spreading alarm throughout British waters. The commodore inquired what kind of a man Rodgers was, when the lieutenant replied that he had never seen him, but had heard that he was "an odd fish, and hard to catch." "Sir," said Rodgers, with startling emphasis, "do you know what vessel you are on board of?" "Why, yes, sir," he replied, "on board His Majesty's ship *Sea Horse*!" "Then, sir, you labor under a mistake," said Rodgers. "You are on board the United States frigate *President*, and I am Commodore Rodgers, at your service!" At the same moment the band struck up Yankee Doodle on the *President's* quarter-deck, and over it the American ensign was displayed, while the uniforms of the marines were suddenly changed from red to blue!² The British commander could hardly be persuaded to believe the testimony of his own senses; and he was astounded when he found himself in the hands of Commodore Rodgers. He had been one of Cockburn's subalterns when that marauder plundered and burned Havre de Grace³ a few months before; and it is affirmed that Lieutenant Hutchinson had now in his possession a sword which he carried away from Commodore Rodgers's house on that occasion.⁴ He had been warned by Captain Oliver, when receiving his instructions as commander of the *Highflyer*, to take care and not be outwitted by the Yankees. "Especially be careful," said Oliver, "not to fall into the hands of Commodore Rodgers, for if *he* comes across you, he will hoist you upon his jib-boom and carry you into Boston!"⁵ But Rodgers treated the sinner with all the courtesy due to a prisoner of war, and he was soon allowed to go at large on parole.⁶

Three days after the capture of the *Highflyer*⁷ Rodgers sailed into Newport Harbor, accompanied by his prize, her commander, and fifty-five other prisoners. His cruise, as he said, had not been productive of much additional lustre to the American Navy, but he had rendered his country signal service by harassing the enemy's commerce, and keeping more than twenty vessels in search of him for several weeks. He had captured eleven merchant vessels, and two hundred and seventy-one prisoners. All of the latter, excepting the fifty-five, had been paroled, and sent home in the captured vessels.

¹ See a description of signals on pages 182-184.

⁵ *Niles's Register*, v., 129.

⁶ George Hutchinson entered the British navy as midshipman in 1796, and was active in the various official grades through which he passed up to that of commander in the autumn of 1821. He was commissioned a lieutenant in 1806, and in 1811 he was assigned to a station on the *St. Domingo*, preparing for the American coast. He first commanded the *Dolphin*, a vessel captured by the British from the Americans at the mouth of the Rappahannock early in April, 1813, and converted into a tender of the *St. Domingo*. See page 609. He was afterward commander of another tender of the flag-ship, the *Highflyer*, and was captured in her, as we have observed in the text, on the 26th of September, 1813. After his promotion to commander in the British navy in 1821, he retired from active service, and was yet on the half-pay list in 1849. See O'Byrne's *Naval Biography*.

⁷ This was the only man-of-war ever captured by Rodgers.

Another Cruise of the <i>President</i> .	She runs the Blockade at New York.	Honors to Commander Rodgers.
--	------------------------------------	------------------------------

Commodore Rodgers sailed from Newport on another cruise in the *President* on the 5th of December,^a with a stiff breeze from the north-northwest, and got well to sea without falling in with a British squadron, as he expected to. On the following day he captured the *Cornet*, which had been taken from the Americans by British cruisers, and then sailed southward. In the vicinity of Barbadoes he captured a British merchantman on the 5th of January,^b on the 7th another,^c and on the 9th another. He remained to the windward of Barbadoes until the 16th,^d when he ran down into the Caribbean Sea, and cruised unsuccessfully in that region for a while. He finally captured and sunk a British merchantman, and then sailed for the coast of Florida. Proceeding northward, he was off Charleston Bar on the 11th of February,^e but did not enter. He continued his voyage up the coast, chasing and being chased, and, dashing through a vigilant British blockading squadron off Sandy Hook, he sailed into New York harbor on the evening of the 18th.^f He was greeted with honors by the citizens of New York; and on the 7th of March a dinner was given in compliment to him at Tammany Hall. Most of the notables of the city were present; and it was on that occasion that Rodgers gave the following toast, which was received with great enthusiasm by the company present, and praised by the administration newspapers throughout the country: "Peace—if it can be obtained without the sacrifice of national honor or the abandonment of maritime rights; otherwise war until peace shall be secured without the sacrifice of either." More than three hundred gentlemen were at the dinner, among whom were many ship-masters. A toast to the commodore elicited eighteen cheers, and a song hastily written that morning was sung by one of the guests.²

The *President* being in need of a thorough overhauling, the Secretary of the Navy offered to Commodore Rodgers the command of the *Guerriere*, which might much sooner be made ready for sea.³ The commodore accepted the offer, and repaired to Philadelphia, where the *Guerriere*, 44, was being fitted out. Finding her not so nearly ready as he had supposed her to be,⁴ the commodore informed the secretary that he preferred to retain command of the *President*. But the Secretary, in the interim, had offered the *President* to Decatur. Rodgers courteously allowed that commander to take his choice of vessels, when he chose that which had borne the broad pennant of Commodore Rodgers for several years.⁵

Here closes the story of the naval operations of the war for the year 1813. Another field of observation now claims our consideration.

¹ Letter of Commodore Rodgers to the Secretary of the Navy, February 19, 1813.

² See *Niles's Register*, vi., 44.

³ "Commodore Rodgers," said a writer at this time, "is, we conjecture, between forty and forty-five years of age; a man of few words, and not conspicuous for the love of parade or dress; but his ship, for interior order, neatness, elegance, and taste, may vie with any that floats on the ocean. It is said that his discipline is perfect; and this, perhaps, may account for the opinion that he is distant and very reserved to those under him; but his reserve in company carries the air of the reserve of the studious man, without the least trait of haughtiness, for humanity and great attention to the care of the youth under his command is a pleasing trait in this brave man's character."—*The Polyanthus*, Boston.

⁴ The *Guerriere* was launched on the 20th of July, and was the first two-decked ship that ever properly belonged to the American Navy.—*Cooper*.

⁵ Rodgers's evasion of the blockade was a cause of deep mortification to the British, for three of their large ships of war were on the alert, the nearest of which was the *Plantagenet*, 74, Captain Lloyd. Rodgers expected a brush with them, and cleared his ship for action. He even fired a gun to windward as a proof of his willingness to fight, but he was not molested. On returning to England, Lloyd excused himself by alleging a mutiny in his ship, and on that charge several of the sailors were executed.

CHAPTER XXXIII.

"Oh, dim waned the moon through the fitting clouds of night,
With a dubious and shadowy gleaming,
Where the ramparts of Mims rose stilly on the sight,
And the star-spangled banner was streaming.

And far still that wild horde of savage birth they deem'd,
And far every fearful intrusion,
Till the war-hatchet swift o'er their fated fortress gleam'd,
Midst despair, havoc, death, and confusion."

A SOUVENIR OF FORT MIMS, BY C. L. S. JONES.

HERETO, in the course of our narrative, we have only observed hints of hostile operations in the more southern portion of the republic, beginning with the endeavors of Tecumtha to induce the Creeks, Cherokees, Choctaws, and other tribes in the Gulf region¹ to become a part of his great Indian Confederacy against the white people. We have now reached a point in the story where a consideration of the events of the war in that region is necessary to the unity of the history.

Let us first consider the geographical and political aspect of the Gulf region.

In a former chapter we have considered the purchase by and cession to the United States of the vast Territory known as Louisiana.² Eastward of that Territory, at the time of the breaking out of the war in 1812, and bordering on the Gulf of Mexico, was a region in possession of the Spaniards, known as East and West Florida. The former extended from the Perdido River (now the boundary-line between the states of Florida and Alabama) eastward to the Atlantic Ocean, including the great peninsula lying south of Georgia, and stretching over almost six degrees of latitude. The latter extended westward from the Perdido to (as the Spaniards claimed) the island of Orleans, on the Mississippi. The northern boundary was partly on and partly a little below the thirty-first parallel.

During the autumn of 1810, and winter of 1810 and 1811, movements were inaugurated which finally led to the absolute possession of both Floridas by the United States. In October, that portion of the claimed Spanish territory lying on the Mississippi became the theatre of insurrectionary operations. It was inhabited chiefly by persons of British and American birth. These seized the old fort at Baton Rouge; met in Convention; declared themselves independent of Spain; and adopted a flag with a lone star upon it, as the revolutionists in Texas did many years later.³ The

¹ These families came under the general name of Mobilian tribes; and their territory originally was next in extent to that of the Algonquians, stretching along the Gulf of Mexico from the Atlantic to the Mississippi River more than six hundred miles, up the Mississippi to the mouth of the Ohio, and along the Atlantic to the Cape Fear. It comprised a greater portion of the present State of Georgia, a part of South Carolina, the whole of Florida, Alabama, and Mississippi, and portions of Tennessee and Kentucky. The nation was divided into three grand confederacies, namely, *Muscogees* or *Creeks*, *Choctaws*, and *Chickasaws*. The Creek confederacy included the *Creeks* proper, the *Seminoles* of Florida, and the *Yamacoes*, or *Savannahs*, of Georgia.

The Creeks occupied the country from the Atlantic westward to the high lands which separate the waters of the Alabama and Tombigbee Rivers.

The Choctaws inhabited the beautiful country bordering upon the Gulf of Mexico, and extending west of the Creeks to the Mississippi.

The Cherokees were the mountaineers of the South, and inhabited the very beautiful land extending from the Carolina Broad River on the east to the Alabama on the west, including the whole of the upper portion of Georgia from the head waters of the Altamaha to those of the Tennessee. It is one of the most delightful regions in the United States.

² See page 131.

³ There was a family named Kemper in that region who had suffered much at the hands of the Spaniards. They were

West Florida claimed by the United States.	Military Movements therein.	Intermeddling of a British Official.
--	-----------------------------	--------------------------------------

Spanish Loyalists made slight resistance, but it was soon overcome; and the insurgents asked the government of the United States to give them aid and recognition. Already that government had claimed a right, under the act of cession, to the entire Territory of West Florida, and that claim was a topic for dispute between it and that of Spain. Instead, therefore, of countenancing the insurgents in their efforts to set up for themselves, the President issued a proclamation on the 27th of October, in which he declared the Territory of West Florida, as far east as the Pearl River, to be in the possession of the United States. W. C. C. Claiborne, the governor of the Orleans Territory (afterward called the State of Louisiana), then in Washington, was hurried off to take possession of it, avowedly not only as a right, but as a friendly act toward Spain, whose rights were as much jeopardized by the revolutionary movement as was those of the United States. Claiborne was clothed with powers to employ troops then in the Mississippi Territory, if necessary, to enable him to take and hold possession of the country.

Not long after this, a body of men, chiefly Americans from Fort Stoddart, on the Mobile River, led by Colonel Reuben Kemper, who professed to be acting under the authority of the Florida insurgents, menaced the port of Mobile.¹ They were driven away, but still threatened that post; and the Spanish governor, Folch, thoroughly alarmed, wrote a letter to Mr. Monroe, the American Secretary of State, in which he expressed a desire, in the event of his not being speedily re-enforced from Havana or Vera Cruz, to treat for the surrender of the whole province of Florida. At about the same time, Morier, the British Chargé d'Affaires, residing at Baltimore, formally protested against such acquisition on the part of the United States as an act unfriendly to Spain, then struggling with the gigantic power of Napoleon.

When Congress assembled in December,^a the question of the occupation of Florida by the United States had assumed a very important aspect in the public mind. The Federalists were vehemently opposed to all farther acquisition of territory; and when, early in January,^b the letter of the Spanish governor and the protest of the British *chargé* were laid before Congress, they produced considerable excitement. Morier's protest was considered simply an impertinence by the government party, while the intimations of Folch were pondered seriously, and acted upon after some debate. In secret session a resolution was adopted, in which was expressed an unwillingness on the part of the United States to allow the Territory in question to pass from the possession of Spain into that of any other power. An act was also passed in secret session^c authorizing the President to take possession of both Floridas, under any arrangement that might be entered into with the local authorities; or, in the event of an attempt to do the same by any foreign power, to take and hold possession by force of arms. It was believed, and with reason, that the British were about to assume control of that country, under the provisions of some secret arrangement with Spain; and, to fore-

daring men (Reuben and Samuel), and resolved to get rid of their hated rulers. Impatient of the delay of the United States in taking possession of West Florida, they excited the people of Bayou Sara, and others in the neighborhood, to take up arms. They assembled at St. Francisville, marched upon Baton Rouge, took it by surprise after a slight skirmish, in which Governor Grandpre was killed, and the town and fort became the possession of the insurgents. The Spaniards fled eastward, some to Mobile, and some to Pensacola. The revolutionists then assembled in Convention; prepared and issued a declaration of independence, modeled after that composed by Jefferson, and declared their right and intention to form treaties and establish commerce with other nations.

¹ His professions were true. He was dispatched to the Tombigbee by the Convention for the purpose of enlisting men to expel the Spaniards from the Mobile district. In that business he was assisted by a wealthy citizen, Colonel James Callier, who, like most of the residents in that region, hated the Spaniards. Troops were secretly raised. Flatboats, with provisions, were sent down the Tensaw River to Smith's plantation. Daring spirits gathered around the leaders; and a company of horsemen, under Captain Bernard, scoured the country for arms, ammunition, and provisions. A young man, named Sibly, was sent to demand the surrender of the fort, then commanded by Governor Folch. The invaders gathered near Mobile, and there drank and frolicked to their hearts' content. An old man, who drank their whiskey and won their confidence, betrayed their weakness to the governor. The latter sent two hundred regular soldiers, under a competent leader, who surprised them at near midnight, and broke up their camp. This was in November, 1810. Major Hargrove and nine men were captured, ironed, and sent to Havana, where they suffered five years in the dungeons of Moro Castle.—See Pickett's *History of Alabama*, ii., 235.

stall such action, Governor Claiborne had already asserted the jurisdiction of the United States over a considerable portion of Florida eastward of the Mississippi, after

Fulwar Skipwith

some opposition from Fulwar Skipwith, formerly a diplomatic agent of the United States in France, who had been elected governor of their domain by the insurgents. Finding himself supported chiefly

by the dregs of society only, Skipwith yielded, and retired to private life. Soon afterward, a small detachment of American regulars, under Captain (afterward Major General) Edmund P. Gaines, appeared before Mobile and demanded its surrender. Governor Folch refused. Presently Colonel Cushing arrived from New Orleans with gun-boats, artillery, and troops, and encamped three weeks at Orange Grove, when he marched up to Fort Stoddart, and formed a cantonment at Mount Vernon. He came professedly to defend the Spaniards against the insurgents, who made no farther efforts to obtain possession of Mobile.

Louisiana was admitted into the Union as a state on the 8th of April, 1812. By a separate act, that part of Florida, as far eastward of the Mississippi River as the Pearl River, was annexed to that new state;^a and by another act the remaining territory, as far as the Perdido River, eastward of Mobile Bay (with the exception of the post of Mobile, yet in the hands of the Spaniards), was annexed to the Territory of Mississippi,^b then asking for admission as a state.

An insurrection had broken out in East Florida in the mean time. Its chief theatre was on the coast, near the Georgia border. Brigadier General George Mathews, of the Georgia militia (a soldier of the Revolution), who had been appointed commissioner under the secret act of the session in 1810-'11, to secure the province should it be offered, was the chief instigator of the disturbance, for the Georgians were anxious to seize the adjoining territory. Amelia Island, lying a little below the boundary-line, seemed to be a good as well as justifiable base of operations. The fine harbor of its capital, Fernandina, was a place of great resort for smugglers during the days of the embargo; and, as a neutral port, might be made a dangerous place. The possession of this island and harbor was therefore important to the Americans. A pretext for seizing it was not long wanting. The insurgents planted the standard of revolt on the bluff opposite the town of St. Mary's, on the border-line, in March, 1812. Some United States gun-boats, under Commodore Campbell, were in the St. Mary's River, and Mathews had some United States troops at his command near.

J. G. Campbell

On the 17th of March^c the insurgents, two hundred and twenty in number, sent a flag of truce to Fernandina demanding the surrender of the town and island. The American gun-boats came down at about the same time. The authorities bowed in submission, and General Mathews, assuming the character of a protector, took possession of the place in the name of the United States. Commodore Campbell declared, in a letter to Don Justo Lopez, the commandant of Amelia Island, that the naval forces were not intended to act in the name of the United States, "but to aid and support," he said, "a large proportion of your countrymen in arms, who have thought proper to declare themselves independent."¹

A flag was raised over Fernandina on which were inscribed the words "*Vox po-*

¹ MS. Letter in the Navy Department.

puli lex salubris," and on the 19th the town was formally given up to the United States authorities. A custom-house was immediately established; the floating property in the harbor was considered under the protection of the United States flag, and smuggling ceased. Then the insurgents, made eight hundred strong by re-enforcements from Georgia, and accompanied by some troops furnished by General Mathews, besieged the Spanish governor in St. Augustine, for it was feared that the British might help the Spaniards in recovering what they had lost in the Territory. This was a kind of filibustering which the United States government would not countenance, and David B. Mitchell,¹ governor of Georgia, was appointed to supersede Mathews^a as commissioner. But the change of men did not effect a change of measures. Mitchell believed that Congress would sanction Mathews's proceedings. The Lower House did actually pass a bill,^b in secret session, authorizing the President to take possession of East Florida. The Senate rejected it, for it was not desirable, at the moment when war had been declared against Great Britain, to provoke hostilities with another power unnecessarily. There was inconsistency in it, which the Opposition were not slow to perceive and make use of. "Say nothing now," they said, "about Sir James Craig, of Canada, and John Henry,² or Copenhagen."³ They denounced the whole movement of the government in Florida, East and West, as dastardly—a seizure of the possessions of a friendly power "by Madison's army and navy."

^a April 10, 1812.

^b June 21.

We have observed that the United States claimed, under the act of the cession of Louisiana, all of West Florida, including Mobile; and that a large portion of that territory had been annexed to that of Mississippi. When the Congress and the Cabinet had determined upon war with Great Britain in the winter and spring of 1812, the importance of the post of Mobile to the United States was very apparent, and as early as March in that year, General Wilkinson, then in command of the United States troops in the Southwest, was ordered to take possession of it. At near the close of March^c he sent Commodore Shaw, with a detachment of gun-boats, to occupy the Bay of Mobile and cut off communications with Pensacola; and Lieutenant Colonel Bowyer, then stationed with a respectable number of troops at Fort Stoddart, about forty miles above Mobile, was ordered to march on the latter post at a day's notice, for the purpose of investing Fort Charlotte.

^c 1812.

Wilkinson left New Orleans on the 29th of March, and embarked on board the sloop *Alligator*. The troops were ordered to rendezvous at Pass Christian. The weather was unfavorable for the schooner, and the general took a barge. He came near losing his life by the upsetting of this little vessel. He and his fellow-passengers clung to its upturned keel a long time, when, exhausted and famishing, they were picked up by some Spanish fishermen, who towed their barge ashore and righted it, and allowed the rescued men to proceed. They reached Petit Coquille at midnight, and on the following morning an express was sent to Boyer with orders for him to come down the river, and take a position opposite the little village of Mobile.

The troops from New Orleans arrived in Mobile Bay on the 12th of April,^d and at two o'clock the next morning landed opposite the site of the Pavilion, not far from the fort, then commanded by Captain Cayetano Perez.⁴ The garrison was surprised. The first intimation given them of the presence of an enemy was the sounding of Wilkinson's bugles for an advance. Six hundred men, in column, appeared before Fort Charlotte at noon, and demanded its surrender. The negotia-

^d 1812.

¹ David B. Mitchell was a native of Scotland, and at this time was forty-seven years of age. He arrived at Savannah in 1788, to take possession of property there which had been bequeathed to him, where he studied law. He became solicitor general of Georgia in 1798, and for several years held various offices civil and military. He was elected governor of Georgia in 1809, and held that office until 1813. He was re-elected in 1815. He was active in public affairs until his death, which occurred in Baldwin County, Georgia. ² See pages 219 to 221 inclusive. ³ Note 4, page 177.

⁴ On the 13th, General Wilkinson issued a proclamation and sent it into the town of Mobile, in which he assured the inhabitants that he came not to injure, but to protect them, and to extend over them the rightful jurisdiction and laws of the United States. He gave permission to those who chose to leave the place, to go, with their goods, in safety.

Surrender of Mobile by the Spaniards.

Tennesseans under Andrew Jackson preparing for War.

tions to that end were short, and on the 15th the Spaniards evacuated the fort and retired to Pensacola. The Americans at once entered, took possession, and proceeded to strengthen the post. Wilkinson sent nine pieces of artillery to Mobile Point, which were placed in battery there, and, marching to the Perdido, began the construction of fortifications there under the superintendence of Colonel John Bowyer. This work was soon abandoned, and Fort Bowyer was commenced on Mobile Point by some workmen under Captain Reuben Chamberlain. Such was the beginning of movements which resulted in the acquisition of all Florida by the Americans.

When the war broke out there was an already famous militia general in Tennessee, well known all over the settled portion of the Mississippi Basin. It was Andrew Jackson, who, as we have observed, became somewhat entangled in the toils of the wily spider, Aaron Burr, for a while.¹ He was living on a fine plantation a few miles from Nashville.

War was declared on the 19th of June by the proclamation of the President. Tidings of it reached Jackson on the 26th, and on the same day he authorized Governor Blount to tender to the President of the United States the services of himself and twenty-five hundred men of his division as volunteers for the war. Under other circumstances the offer would have been rejected. Jackson was no "court favorite;" on the contrary, he was obnoxious to the President and his Cabinet. He had soundly berated the government, when Madison was chief minister, in a speech in the streets of Richmond, as the "persecutor of Aaron Burr." He had openly shown his preference for Monroe over Madison, and had called the Secretary of War an "old granny." But the government needed strength, and was not willing to reject any that might be offered. The President received Jackson's generous offer with gratitude, and accepted it, he said, "with peculiar satisfaction." The Secretary of War wrote a cordial letter of acceptance to Governor Blount,² and that officer publicly thanked Jackson and his volunteers for the honor they had done the State of Tennessee by their patriotic movement.³

For several weeks Jackson remained on his farm impatiently awaiting orders to go to the field. All was calmness in the Gulf region, for the energies of the government were bent to the one great labor, apparently, of invading and subjugating Canada. When that effort failed, and Hull's campaign ended in terrible disaster at Detroit, sagacious men believed that the British, not needing so many troops on the Northern frontier, would turn their attention to the seizure of Gulf ports and an invasion of the sparsely settled country in that region. The government was also impressed

with this surmise, and late in October^b called on Governor Blount for fifteen hundred Tennesseans to be sent to New Orleans to re-enforce General Wilkinson. Blount made a requisition upon Jackson for that purpose, and the general at once entered upon that military career which rendered his name immortal.

On the 10th of December, a day long remembered in Middle Tennessee because of deep snow and intense cold, Jackson's troops, over two thousand in number, assembled at Nashville, bearing clothing for both cold and warm weather. When organized, they consisted of two regiments of infantry of seven hundred men each, commanded respectively by Colonels William Hall and Thomas H. Benton, and a corps of cavalry six hundred and seventy in number, under Colonel John Coffee. William B. Lewis, Jackson's near neighbor and friend, was his quartermaster; and his brigade inspector was William Carroll, a young man from Pennsylvania. The troops were composed of the best physical and social materials of the state, many of the young men being representatives of some of the first families in Tennessee in point of position; and on the 7th of January, 1813, when every thing was in readiness, the little army went down the Cumberland River in a flotilla of small boats, excepting the mounted men, whom Coffee led across the country to join Jackson at Natchez, on the

The Tennesseans on the Mississippi River.

Their Treatment by the Government.

Jackson's Kindness.

Mississippi. With sly sarcasm, whose shaft was pointed at some New York and Pennsylvania militiamen on the Niagara frontier at that time, the energetic leader, in a letter to the Secretary of War, said: "I am now at the head of 2070 volunteers, the choicest of our citizens, who go at the call of their country to execute the will of the government, *who have no constitutional scruples*, and, if the government orders, will rejoice at the opportunity of placing the American eagle on the ramparts of *Mobile, Pensacola, and Fort Augustine*, effectually banishing from the Southern coasts all British influence." Jackson was then in his prime of manhood, being forty-six years of age.

After many stirring adventures among the ice in the Cumberland and the Ohio, and the floods and tempests of the Mississippi, for nine-and-thirty days, the little flotilla reached Natchez,^a a thousand miles, by the route it had taken, from February 15,
1812. its place of departure. Colonel Coffee, with his mounted men, was already near there to welcome them. The troops were in glorious spirits. The love of adventure had been heightened by its gratification, and all were impatient to push forward to New Orleans, a land of warmth and beauty as it appeared to their imaginations. The officers, especially, wished to go rapidly forward, for they dreamed of glory in the conquest of Mobile and Pensacola, and delicious resting-places among the orange groves of the Gulf shore. They were disappointed. A messenger had arrived at Natchez with orders from Wilkinson for them to remain where they were, as he had no instructions concerning them or their employment in his department, nor had he any quarters prepared for their accommodation. He was evidently fearful of being superseded by Jackson, who was a major general of volunteers in the United States service, for he said in his letter to that leader that caused him to halt, that he should not think of yielding his command until regularly relieved by superior authority. Jackson disembarked his troops, and encamped them in a pleasant spot near Natchez, to await farther orders.

February passed by, and the early flowers of March were budding and blooming, and yet the Tennessee army was at Natchez. On the first of that month Jackson wrote an impatient letter to the Secretary of War. He saw little chance for the employment of himself and his followers in the South, and suggested that they might be useful in the North. He had gone to the field as an unselfish patriot, and, as he said in his letter to Wilkinson, "had marched with the spirit of a true soldier to serve his country at any and every point where service could be rendered." Day after day he waited anxiously for orders to move. At length he was cheered by the receipt of a letter from the War Department. His heart beat quickly with the thrill of delightful expectations as he broke the seal. Icy coldness fell upon his spirits for a moment when his eyes perused the contents. It read thus:

"SIR,—The causes of embodying and marching to New Orleans the corps under your command having ceased to exist, you will, on the receipt of this letter, consider it as dismissed from public service, and take measures to have delivered over to Major General Wilkinson all the articles of public property which may have been put into its possession." To this was appended a cold tender of the thanks of the President to Jackson and his corps, and the signature of John Armstrong, the new Secretary of War, who, on the date of the letter, had been only two days in office.

That was practically a cruel letter, under the circumstances. It placed the little army in a sad plight, for it was dismissed from service without pay, sufficient clothing, means of transportation, provisions, or accommodations for the sick, more than five hundred miles from their homes by the nearest land route, which lay much of the way through a wilderness roamed by savages. Jackson instantly resolved on disobedience. He determined not to dismiss the men until they were restored to their homes; and with that decision and courage in assuming responsibility which always marked his career, he made every necessary preparation possible for a return to Ten-

Return of his Troops to Nashville.

His pecuniary Troubles on their Account.

nessee, at large expense, and without any money. He impressed wagons and teams, and gave orders for pay on the quarter-master of the Southern Department. In like manner he incurred other expenses. So confident were the merchants of Natchez in his integrity and the justice of their government, that they turned over to him large quantities of shoes and clothing, telling him to pay for them at Nashville when convenient.

Meanwhile Jackson had written fiery letters to the President, the Secretary of War, Governor Blount, and General Wilkinson.¹ He despised the latter, and suspected him of sinister designs; and when, in due time, he received a reply from that officer, in which he suggested that great public service might be rendered by promoting enlistments into the regular army, Jackson's anger knew no bounds. He watched for recruiting officers with hawk-eyed vigilance, and when one was found in his camp, he notified him that if he should catch him trying to seduce one of his volunteers into the regular army, he would have him instantly drummed beyond his lines.² The Secretary of War, on the other hand, by a courteous and explanatory letter, mollified his passion by assuring him that when he wrote the letter that appeared so cruel, he did not suppose that the little army had moved far from Nashville.

Late in March Jackson commenced his homeward movement. It was an undertaking of great hazard and difficulty, but was well accomplished in the course of a month, for they traveled at the rate of eighteen miles a day. He shared all the privations of the soldiers, and he was beloved by them as few men have ever been beloved. His endurance was wonderful during the march, and his men declared that he was "as tough as hickory." From that day until his last on earth, he was familiarly and affectionately called "Old Hickory."

Finally, on the borders of his state, Jackson sent a messenger to Washington to convey an offer of the services of himself and volunteers on the Northern frontier, whither Harrison had been sent as chief commander. No response came, and on the 22d of May he drew up his detachment on the public square in Nashville, where they were presented with an elegantly wrought stand of colors by the ladies of Knoxville.³ There they were dismissed, and dispersed to their homes with feelings of great dissatisfaction toward the national government.

Such was Jackson's first effort to serve his country in the field in the War of 1812, and it resulted in holding the fear of absolute pecuniary ruin over his head for some time. His transportation orders were dishonored, and the creditors looked to him for pay. He was prosecuted for amounts in the aggregate much larger than his entire fortune. The suits were postponed to give him an opportunity to appeal to the national government for justice and protection. The late Thomas H. Benton was his messenger and advocate on that occasion; and when it was intimated to him that nothing could be done for the general's relief, he boldly assured the President and his cabinet that if the administration desired the support of Tennessee in the war, the

¹ "These brave men," he wrote to Wilkinson, "at the call of their country, voluntarily rallied around its insulted standard. They followed me to the field; I shall carefully march them back to their homes. It is for the agents of the government to account to the State of Tennessee and the whole world for their singular and unusual conduct to this detachment."

² Parton's *Life of Jackson*, I, 380.

³ The preparation of these flags was commenced soon after the departure of the troops from Nashville. One was a simple national banner made of silk; the other was a regimental standard. The embroidery, performed by the ladies in the most exquisite manner, was on white satin. Near the top, in a crescent form, were eighteen stars in orange color, denoting the then number of states. Next below were two sprigs of laurel lying athwart. Under these were the words, "Tennessee Volunteers—Independence, in a state of war, is to be maintained on the battle-ground of the Republic. The *field is the post of honor.* Presented by the Ladies of East Tennessee, Knoxville, February 10th, 1812." Below all, implements of war were represented, beautifully wrought. The wing of the colors was beautiful fancy interstrung, dove color, ornamented with white fringe and tassels.

In reply to the presentation letter, written by the wife of Governor Blount, Jackson said: "While I admire the elegant workmanship of these colors, my veneration is excited for the patriotic disposition that prompted the ladies to bestow them on the volunteers of West Tennessee. Although the patriotic corps under my command have not had one opportunity of seeing an enemy, yet they have evinced every disposition to do so. This distinguished mark of respect will be long remembered, and this present shall be kept as a memorial of the generosity and patriotism of the ladies of East Tennessee."—*Nashville Whig*, quoted by Parton, I, 388.

The Government just.

Tecumtha in the Creek Country.

His successful Appeals to the Creeks.

government must assume the payment of the bills in question, for the volunteers under Jackson were drawn from the most substantial families in the state. This argument was convincing. The government met the draft promptly, all concerned were satisfied, and Jackson was saved from bankruptcy and ruin.

Omens of a war tempest soon appeared in the Southern firmament, and Jackson was not allowed to remain long in quiet on his plantation. British emissaries, pale and dusky, were busy among the Indians of the Gulf region, endeavoring to stir them up to war against the Americans around them, hoping thereby to divide and weaken the military power of the United States, and lessen the danger that menaced Canada with invasion and conquest. Chief among these emissaries in zeal and influence was Tecumtha, the great Shawnoese warrior, who, as early as the spring of 1811, as we have seen, had, with patriotic designs, visited the Southern tribes, and labored to secure their alliance with Northern and Western savages in a grand confederation, whose prime object was to stay the encroachments of the white man. He went among the Seminoles in Florida, the Cherokees and Creeks in Western Georgia and in Alabama, and the Des Moines in Missouri, but without accomplishing little more than sowing the seeds of discontent, which might in time germinate into open hostility. He returned to his home on the Wabash just after the battle of Tippecanoe,^a which his unworthy brother had rashly brought on, and which destroyed his hopes of a purely Indian confederacy. Thereafter his patriotic efforts were put forth in alliance with the British, who gladly accepted the aid of the cruel savages of the Northwest.

In the autumn of 1812, after the surrender of Detroit and the Michigan Territory promised long quiet on that frontier, Tecumtha went again to the Gulf region. He took his brother, the Prophet, with him, partly to employ him as an instrument in managing the superstitions of the Indians, and partly to prevent his doing mischief at home. They were accompanied by about thirty warriors. The Choctaws and Chickasaws, among whom they passed on their way, would not listen favorably to Tecumtha's seductive words; but the Seminoles in Florida and Georgia, and the Creeks in Alabama, lent to him willing ears. He was among the latter in October, where he crossed the Alabama River at Autauga, in the lower part of the present Autauga County, and there addressed the assembled Creeks for the first time. His eloquence, his patriotic appeals, and his fame as a warrior won him many followers, and with these and his own retinue he went on to Coosawda on the Alabama,¹ and at the Hickory Ground addressed a large concourse of warriors who had flocked to see and hear the mighty Shawnoese, whose exploits in the buffalo-chase, on the war-path, and in the council had filled their ears, even in boyhood, with wondrous tales of achievements won. It was a successful day, and Tecumtha was greatly encouraged. He crossed the Coosa, and went boldly forward in the direction of the great falls of the Tallapoosa (in the southwest part of the present Tallapoosa County) to Toockabatcha, the ancient Creek capital, where Colonel Hawkins, the United States Indian Agent, had called a great council of the Creeks. Hawkins was highly esteemed by them, and at his call full five thousand Indians responded in person, besides many negroes and white people mingled with them.

Tecumtha approached this great gathering with well-feigned modesty. He kept at the outer circle of spectators until the conclusion of the agent's first day's address, when, at the head of his thirty followers from the Ohio region, he marched with dignity into the square, all of them entirely naked excepting their flaps and ornaments. Their faces were painted black, and their heads were adorned with eagles' feathers, while buffalo tails dragged behind, suspended by bands around their waists. Like appendages were attached to their arms, and their whole appearance was as hideous

¹ This Indian town was at the confluence of the Coosa and Tallapoosa Rivers, where they form the Alabama. It was on the western side of the Alabama, in the southeastern part of Autauga County.

Tecumtha at a great Council.

He traverses the Creek Country.

His Threat and its Fulfillment.

as possible, and their bearing uncommonly pompous and ceremonious. They marched round and round in the square, and then, approaching the Creek chiefs, they cordially gave them the Indian salutation of a shake at arm's length, and exchanged tobacco in token of friendship. Only one chief (Captain Isaac, of Coosawda) refused to greet Tecumtha. On his head were a pair of buffalo horns, and these he shook at the Shawnoese visitor with contempt, for he said Tecumtha was a bad man, and no greater than he.¹

Tecumtha appeared in state in the square each day, but kept silence until Hawkins had finished his business and departed for the agency on the Flint River. Then he was silent no longer. That night a grand council was held in the great round-house. It was packed with eager listeners. In a fiery and vengeful speech Tecumtha poured forth eloquent and incendiary words. He exhorted them to abandon the customs of the pale-faces and return to those of their fathers. He begged them to cast away the plow and the loom, and abandon the culture of the soil as unbecoming noble Indian warriors, as they were. He warned them that servitude or extinction at the hands of the white race would speedily be their doom, for they were grasping and cruel; and he desired them to dress only in the skins of beasts which the Great Spirit had given them, and to use for weapons of war only the bow and arrow, the war-club, and the scalping-knife. He concluded by informing them that their friends, the British, had sent him from the Great Lakes to invite them out upon the war-path for the purpose of expelling all Americans from Indian soil, and that the powerful King of England was ready to reward them handsomely if they would fight under his banner. The wily Prophet at the same time, who had been informed by the British when a comet would appear, declared to the excited warriors that they would see the arm of Tecumtha, like pale fire, stretched out on the vault of heaven at a certain time, and thus they would know by that sign when to begin the war. It was almost dawn before this famous council adjourned, and then more than half of the braves present had resolved on war against the Americans.

Tecumtha, full of encouragement, went forth, visiting all of the important Creek towns, and enlisting many recruits for the British cause. Among the most distinguished of these was Weathersford, a powerful, handsome, sagacious, brave, and eloquent half-blooded chief. But others equally eminent withstood the persuasions of the great Shawnoese. One of the most conspicuous of these was the Big Warrior of Toockabatcha, whose name was Tustinuggee-Thlucco. Tecumtha was extremely anxious to win him, but the Big Warrior remained true to the United States. At length the angry Shawnoese said, with vehemence, as he pointed his finger in the Big Warrior's face, "Tustinuggee-Thlucco, your blood is white. You have taken my red-sticks and my talk, but you do not mean to fight. I know the reason. You do not believe the Great Spirit has sent me. You shall believe it. I will leave directly, and go straight to Detroit. When I get there I will stamp my foot upon the ground, and shake down every house in Toockabatcha!" The Big Warrior said nothing, but long pondered this remarkable speech.²

It was, indeed, a remarkable speech. Events soon proved it to be prophetic. Natural phenomena—one that might be foretold by astronomers, and the other always beyond the knowledge of mortals—combined to give tremendous effect to Tecumtha's words and mission. The comet, the blazing "arm of Tecumtha" in the sky, appeared; and at about the time when the common Indians, who believed in the great Shawnoese and his mystical brother, knew, by calculation, that Tecumtha must have arrived at Detroit, there was heard a deep rumbling beneath the ground, and a heaving of the earth that made the houses of Toockabatcha reel and totter as if about to fall. The startled savages ran out of their huts, exclaiming, "Tecumtha is at Detroit! Tecumtha is at Detroit! We feel the stamp of his foot!" It was the shock of an

The Creek Nation and their Position.

General James Robertson.

Choctaws and Chickasaws.

earthquake that was felt all over the Gulf region in December, 1812.¹ But it did not move the Big Warrior from his allegiance.

Tecumtha's visit proved to be a most sad one for the Creeks as a nation. It brought terrible calamities upon them—first in the form of civil war, and then in almost utter destruction at the hands of the exasperated Americans. He left seeds of discontent to germinate and expand into violent agitations. Chief was arrayed against chief, and family against family, on the question of peace or war with the Americans. They were strong as a nation, numbering about thirty thousand souls, of whom at least seven thousand were warriors; yet peace was the guarantee of their existence. They were hemmed in by powerful and rapidly-increasing communities of white people, and between them and the Northern tribes were the Choctaws and Chickasaws,² over whom that grand old patriot, General James Robertson, held a powerful sway, like that of a kind father over loving children.³ These stood as a wall of separation between the actual followers of Tecumtha north of the Ohio, and those in the Gulf region whom he was endeavoring to seduce from the pursuits of peace into the war-path under the British banner. They were not only opposed to an alliance with the British, but were ready to fight for the Americans. "My heart is straight," said the brave Tootumastubble, the "medal chief" of the Choctaws, "and I wish our father, the President, to know it. Our young warriors want to fight. Give us guns and plen-

J. Robertson SL

¹ See Pickett's *Alabama*, ii., 246. Drake, in his *Book of the Indians of North America*, eleventh edition, page 624, mentions that circumstance as occurring in December, 1811, and cites Francis M'Henry as denying that it ever took place. But Mr. Pickett, in his carefully-prepared work, says this earthquake was remembered by all the old settlers, and places the date in December of 1812, which agrees with the incidents of Tecumtha's mission there.

² The Choctaws inhabited the country along the Mississippi from the northern borders of the Choctaw domain to the Ohio River, and eastward beyond the Tennessee to the lands of the Cherokee and Shawnee.

³ James Robertson, who has justly been called the Father of Tennessee, was a native of Virginia. He emigrated to the rich regions beyond the mountains about the year 1760, and on the banks of the Watauga, a branch of the Tennessee, he made a settlement, and lived there several years. He was often called upon to contend for life with the savages of the forest. In 1776 he was chosen to command a fort built near the mouth of the Watauga. In 1779, Captain Robertson was at the head of a party emigrating to the still richer country of the Cumberland, and on Christmas eve of that year they arrived upon the spot where Nashville now stands. Others joined them, and in the following summer they numbered about two hundred. A settlement was established, and Robertson founded the city of Nashville. The Cherokee Indians attempted to destroy the settlement, but, through the skill and energy of Robertson and a few companions, that calamity was averted. They built a log fort on the high bank of the Cumberland, and in that the settlers were defended against full seven hundred Indians in 1781. The settlement was erected into a county of North Carolina, and Robertson was its first representative in the State Legislature. In 1790 the "Territory south of the Ohio River" was formed, and Washington appointed Robertson brigadier general and commander of the militia in it. In that capacity he was very active in defense of the settlements against the savages. At the same time he practiced the most exact justice toward the Indians, and when these children of the forest were no longer hostile, his kindness toward the oppressed among them made him very popular. At length, when the emissaries, white and red, from the British in the North began to sow the seeds of discontent among them at the breaking out of the war in 1812, the government wisely appointed General Robertson agent to the Chickasaw tribe. He was ever watchful of the national interest. As early as March, 1813, he wrote: "The Chickasaws are in a high strain for war against the enemies of the country. They have declared war against all passing Creeks who attempt to go through their nation. They have declared, if the United States will take a campaign against the Creeks (because of some murders committed by them near the mouth of the Ohio), that they are ready to give them aid." A little later he suggested the employment of companies of Chickasaws and Choctaws to defend the frontiers and to protect travelers, and he was seconded by Pitchlyn, an active and faithful Indian.

During the war General Robertson remained at his post among the Indians, and invited his aged wife to share his privations by quietly saying to her by a messenger, "If you shall come this way, the very best chance for rest and sleep which my bed affords shall be given you, provided always that I shall retain a part of the same." He was then

ty of powder and lead, we fight your enemies. We fight much; we fight strong. . . . Our warriors good Americans—fight strong. You tell him so. You, General Robertson, know me; my heart straight. Choctaw soldiers good soldiers. Give epaulettes, guns, and whisky—fight strong.”

Tecumtha had enjoined the leaders of the war-party to keep their intentions secret, and for many months, while civil war was kindling in the bosom of the Creek nation because of a powerful and zealously-opposing peace-party, and the land was filled with quarrels, fights, murders, and violence of every kind, it was difficult for the public authorities to determine with any certainty whether or no any considerable number of the Creeks would join the British standard. Colonel Hawkins, the agent, believed that nothing more serious than a war between native factions would ensue. It was well known that Peter M'Queen, a half-blood of Tallahassee, who was one of the leaders of the war-party, was doing every thing in his power to accomplish that result, while Big Warrior was equally active in efforts to avert so great a calamity. On one hand was seen the hideous “war-dance of the Lakes,” taught them by Tecumtha, and on the other the peaceful, quiet, anxious, determined deportment of men resolved on peace. The whole Creek nation became a seething caldron of passion—of angry words and threatenings, which were soon developed into sanguinary deeds.

On account of the civil war raging here, and there, and every where in the Creek country, the white settlers were placed in great peril. In the spring of 1813 they were made to expect an exterminating blow. They knew that a British squadron was in the Gulf, and in friendly intercourse with the Spanish post at Pensacola. They knew that the fiery M'Queen and other leaders had gone to that post with about three hundred and fifty warriors, with many pack-horses, intended doubtless for the conveyance of arms and supplies from the British to the war-party in the interior. Every day the cloud of danger palpably thickened, and the inhabitants of the most populous and more immediately threatened districts of the Tombigbee and Tensaw petitioned the governor of Mississippi for a military force sufficient for their protection. The governor was willing, but General Flournoy, who succeeded General Wilkinson in command of the Seventh Military District, persuaded by Colonel Hawkins, the Indian agent, of the civilization and friendly disposition of the Creeks, would not grant their prayer.¹

Left to their own resources, the inhabitants of the menaced districts prepared to defend themselves as well as they might. They sent spies to Pensacola, who returned with the positive and startling intelligence that British agents, under the sanction of the Spanish governor, were distributing supplies freely to M'Queen and his followers, that leader having exhibited to the chief magistrate of Florida a list of Creek towns ready to take up arms for the British, in which, in the aggregate, were nearly five thousand warriors. On hearing this report, Colonel James Caller, of Washington, called on the militia to go out and intercept M'Queen and his party on their return from Pensacola. There was a prompt response, and he set out with a few fol-

seventy-one, and she sixty-three years of age. She went to him, and was at his side when he died at his post in the Indian country the year following. His death occurred on the 1st of September, 1814, and on the 2d his remains were buried at the Agency. In 1826 they were removed to Nashville, and, in the presence of a large concourse of citizens, were reinterred in the cemetery there. A plain tomb covers the spot. The remains of his wife rest by his side, and the observer may there read the following inscriptions:

“GENERAL JAMES ROBERTSON, the founder of Nashville, was born in Virginia, 28th June, 1743. Died 1st September, 1814.

“CHARLOTTE R., wife of James Robertson, was born in North Carolina, 2d January, 1751. Died 11th June, 1848.”

She was then ninety-two years of age. Their son, Dr. Felix Robertson, who was born in the fort, and the first white child whose birth was in West Tennessee, died at Nashville in 1864.

¹ Thomas Flournoy was a native of Georgia, and a distinguished member of the bar at Augusta, his place of residence. He was in feeble health at this time, and his force was inadequate to perform the arduous services required of them. He was commissioned a brigadier general on the 18th of June, 1812, and resigned in September, 1814. When Wilkinson was summoned to the Northern frontier, Flournoy was made his successor in the Gulf region. In 1819-'20 he was a commissioner to treat with the Creek Indians.

The Militia in the Field.

March of M'Queen and his Followers from Pensacola.

Battle of Burnt Corn Creek.

lowers, crossed the Tombigbee into Clarke County, passed through Jackson, and bivouacked on the right bank of the Alabama River, at Sisemore's Ferry, opposite the southern portion of the present Monroe County, Alabama. He crossed the river on the following morning,^a and marched in a southeasterly direction across the Escambia River into the present Conecuh County, Alabama, toward the Florida frontier. He had been joined in Clarke County by the famous borderer, Captain Sam Dale, and fifty men, who were engaged in the construction of Fort Madison, toward the northeast part of Clarke, and was

Sam Dale

now re-enforced by others from Tensaw Lake and Little River, under various leaders, one of whom was Captain Dixon Bailey, a half-blood Creek, who had been educated at Philadelphia. Caller's command now numbered about one hundred and eighty men, divided into small companies, well mounted on good frontier horses, and provided with rifles and shot-guns. During that day they reached the Wolf Trail, crossed Burnt Corn Creek, and bivouacked.

On the morning of the 27th Caller reorganized his command. Captains Phillips, M'Farlane, Wood, and Jourdan were appointed majors, and Captain William M'Grew was created lieutenant colonel.¹ They were now on the main route for Pensacola, and were moving cheerily forward, down the east side of Burnt Corn Creek, when a company of fifteen spies, under Captain Dale, who had been sent in advance to reconnoitre, came galloping hurriedly back with the intelligence that M'Queen and his party were only a few miles distant, encamped upon a peninsula of low pine barrens formed by the windings of Burnt Corn Creek, engaged unsuspectingly in cooking and eating. A hurried council was held, and it was determined to attack them. For this purpose Caller arranged his men in three columns, the right led by Captain Smoot, the left by Captain Dale, and the centre by Captain Bailey. They were upon a gentle height overlooking M'Queen's camp, and down its slopes the white men moved rapidly, and fell upon the foe. M'Queen and his party were surprised. They fought desperately for a few minutes, when they gave way, and fled toward the creek, followed by a portion of the assailants.

Colonel Caller was brave but overcautious, and called back the pursuers. The remainder of his command were engaged in capturing the well-laden pack-horses of the enemy, and when those in advance came running back, the former, panic-stricken, turned and fled in confusion, but carrying away their plunder. Now the tide turned. M'Queen's Indians rushed from their hiding-places in a cane-brake with horrid yells, and fell upon less than one hundred of Caller's men at the foot of the eminence. A severe battle ensued. Captain Dale was severely wounded by a ball that struck his breast-bone, followed the ribs around, and came out near the spine, yet he continued to fight as long as any body. Overwhelming numbers at length compelled him and his companions to retreat. They fled in disorder, many of them leaving their horses behind them. The flight continued all night in much confusion. The victory in the *Battle of Burnt Corn Creek*—the first in the Creek war—rested with the Indians. Only two of Caller's command were killed, and fifteen wounded. The casualties of the enemy are unknown. For some time it was supposed that Colonel Caller and Major Wood had been lost. They became bewildered in the forest, and wandered about there some time. When they were found they were almost starved, and were

¹ The principal subordinate officers were Phillips, Wood, M'Farlane, Jourdan, Smoot, Dixon, Heard, Cartwright, Creagh, May, Bradberry, Robert Caller, and Dale.

nearly senseless. They had been missing fifteen days! Caller's command never re-assembled. M'Queen's retraced their steps to Pensacola for more military supplies.¹ But for the fatal word "retreat" the Indians might have been scattered to the winds.

While these events were transpiring in the Indian country above Mobile, General F. L. Claiborne,² who had been a gallant soldier in Wayne's army in the Indian country north of the Ohio, was marching, by orders of General Flournoy, from Baton Rouge to Fort Stoddart, on the Mobile River, with instructions to direct his principal attentions to the defense of Mobile. He reached Mount Vernon, in the northern part of the present Mobile County, three days after the battle of Burnt Corn Creek.³ He found the whole population trembling with alarm and terrible forebodings of evil. Already a chain of rude defenses, called forts, had been built in the country between the Tombigbee and Alabama Rivers, a short distance from their confluence where they form the Mobile River,³ and were filled with affrighted white people and negroes, who had sought shelter in them from the impending storm of war.

Claiborne's first care was to afford protection to the menaced people. He was anxious to march his whole force into the heart of the Creek nation, in the region of the Coosa and Tallapoosa Rivers, but this Flournoy would not allow. "If Governor Holmes [of the Mississippi Territory] should send his militia into the Indian country," he wrote, "he must, of course, act on his own responsibility; the army of the United States, and the officers commanding it, must have nothing to do with it." Claiborne was compelled to do nothing better than to distribute his troops throughout the stockades for defensive operations. He sent Colonel Carson, with two hundred men, to the confluence of the Tombigbee and Alabama Rivers, and dispatched Captain Scott with a company to St. Stephen's, in the northeast part of Washington County, where they occupied an old Spanish block-house. Major Hinds, with dragoons, was ordered to scour the country in various directions for information and as a check; and some of the militia of Washington County were placed in the stockades in Clarke County, between the Tombigbee and Alabama. Captain Dent was sent to Okeatapa, within a short distance of the Choctaw frontier, and assumed the command of a fort there.

Previous to Claiborne's arrival, wealthy half-blood families had gone down the Alabama in boats and canoes, and secreted themselves in the thick swamps around Tensaw Lake. There they united with white refugees in constructing a strong stockade around the house of Samuel Mims, an old and wealthy inhabitant of that region, situated a short distance from the Boat-yard on Tensaw Lake, a mile east from the Alabama River, ten miles above its junction with the Tombigbee, and about two miles below the Cut-off.⁴ The building was of wood, spacious in area, and one story in height. Strong pickets were driven around it, and fence-rails placed between them; and, at an average distance of three feet and a half from the ground, five hundred port-holes for musketry were made. The pickets inclosed an acre of ground, and the stockade was entered by two ponderous gates, one on the east and the other on the west. Besides Mims's house there were several other buildings within the pickets;

¹ Pickett's *Alabama*, ii., 255. *Life and Times of General Sam Dale*, by J. F. H. Claiborne, pages 65 to 82 inclusive.

² Ferdinand Leigh Claiborne, a brother of William C. C. Claiborne, at that time governor of the Orleans Territory, was born in Sussex County, Virginia, in 1773. His family was one of the oldest in that commonwealth. In his twentieth year he was appointed an ensign in Wayne's army, and became much attached to Major Hamtramck. One of his sons, now (1864) living, bears the major's name. He was in the battle of the Fallen Timbers, at the Rapids of the Maumee, in 1794. He was stationed at Richmond and Norfolk after the war, holding first the rank of lieutenant and then of adjutant. In 1799 he was promoted to captain, and was active as such, and adjutant general in the Northwest, until 1802, when he was ordered to Natchez. He resigned, settled in the Mississippi Territory, presided over the deliberations of its Legislature, and in 1811 was appointed brigadier general of the Mississippi militia. In March, 1813, he was commissioned a brigadier general of volunteers in the United States Army, and ordered to the command of the post at Baton Rouge. He was active, as the text avers, during the Creek War. He was a legislative councillor of the Mississippi Territory immediately after the close of the Creek War in 1814, and died the following year.

³ These were Forts Curry, Madison, Revier, Sinquefield, and White, situated upon a curve sweeping eastward of Bassett's Creek and across its head waters.

Fort Mims and its Occupants.

also cabins and board shelters. At the southwest corner was a partially-finished block-house. The whole work, which was called Fort Mims, was upon a slight elevation, yet not eligibly situated; but such confidence had the people of the surrounding country in its strength, that, as soon as it was finished, they poured into it in large numbers with their effects. It soon became the scene of a terrible tragedy that dispelled the pleasant dream of Creek civilization and friendship, and inflamed the people westward of the Alleghanies, who had suffered much from savage cruelty and treachery, with a thirst for vengeance.

Claiborne's Anxiety about the Settlers. Rumors of impending Indian Hostilities. Pacification of the Choctaws.

Two days after he reached Mount Vernon General Claiborne asked Flournoy's permission to call for the militia. "I am not myself authorized to do so," his commander replied, "as you will perceive if you turn to the late regulations of the War Department." Again foiled in his generous endeavors by official interference, Claiborne resolved to do what he might in strengthening Fort Mims. Already Lieutenant Osborne, and sixteen soldiers under him, had taken post there.^a He now dispatched Major Daniel Beasley thither, with one hundred and seventy-five volunteers, who was accompanied by Captains Jack, Batchelder, and Middleton. They found seventy citizens there on volunteer duty,^b under Captains Dunn and Plummer, who were inexperienced officers. On the following day^c the little garrison was cheered by the presence of General Claiborne, who had come to make a personal inspection of the fort. He saw its weakness, and issued orders for it to be strengthened by the addition of two block-houses. "To respect an enemy," he said, wisely, "and prepare in the best possible way to receive him, is the certain means of success." He also authorized Major Beasley to receive any citizens who would assist in the defense of the station, and to issue rations to them with the other soldiers under his command. Under this order the seventy citizens just mentioned were enrolled, and they immediately elected the brave Dixon Bailey their captain—the half blood who distinguished himself at the battle of Burnt Corn Creek. Claiborne also organized a small company of scouts under Cornet Rankin, composed of that officer, one sergeant, one corporal, and six mounted men.

Every day the war-cloud thickened. Rumors came to Claiborne from the northward that there was growing disaffection among the powerful Choctaws, and he perceived the value of an immediate blow at the Creeks before they should be ready to strike one themselves, or draw over to the interest of the war-party their more peaceably-inclined neighbors. He again applied to Flournoy for permission to penetrate the heart of the Creek nation, but with no better success than before. "I have to entreat you," Flournoy wrote to Claiborne, "not to permit your zeal for the public good to draw you into acts of indiscretion. Your wish to penetrate into the Indian country with the view of commencing the war does not meet my approbation, and I again repeat, our operations must be confined to defensive operations."¹ Flournoy was impressed with the belief that the hostile movements in the Creek country were only feints in the interest of the Spaniards, to draw the American troops from Mobile, so that the former might, while that post was weakened and uncovered, attempt its capture with a chance of success.

Again foiled, Claiborne addressed himself to the important task of securing the neutrality, at least, of the Cherokees, for every day gave signs of their constantly-growing disaffection. A belief was gaining ground, and with good reason, that a general Indian war in the southwest was possible, and even probable, and the whole country from the Perdido to the Mississippi was filled with alarms. The stockades were crowded with refugees from their menaced homes early in August, and doubt, and dread, and great fear filled the hearts of the white people. Claiborne went up to St. Stephen's, and from thence dispatched a deputation to Pushmataha, the principal chief of the Choctaws, who was balancing between equally powerful inclinations toward peace and war. He listened, and was finally induced to visit Claiborne's head-quarters at Mount Vernon.^d The general received him with much military pomp, and presented him with the uniform and other insignia of a brigadier general.² By this means his friendship was secured, and he and a band of his Choctaws—chosen warriors—immediately prepared for the war-path under the flag of the United States, while the rest of the nation agreed to remain neutral.

¹ Flournoy to Claiborne, August 10, 1813, from "Bay St. Louis." See Claiborne's *Life of General Sam Dale*, page 98.

² He gave him a suit of rich regimentals, gold epaulettes, sword, silver spurs, and hat and feather, ordered from Mobile at a cost of three hundred dollars.

Stockades threatened. Fort Mims crowded with Refugees. Warnings of Slaves unheeded. Indians near the Fort.

Having accomplished the pacification of the Choctaws, the energetic Claiborne turned his attention to the defense of the several stockades in the Indian country. Late in August,^a while he was at St. Stephen's, he was informed that four hundred Creek warriors were about to fall upon Fort Easley, a feeble ^{August 23, 1813.} post sixty miles nearer the enemy than Fort Mims, and that Fort Madison would be next attacked. The women and children in Easley had only about a dozen defenders, and Claiborne resolved to hasten to their relief. He left the camp at Mount Vernon in charge of Captain Kennedy, and, with twenty mounted dragoons, and sixty men from the companies of Captains Dent and Scott, he pushed on toward Easley Station, or Fort Easley. Major Beasley, in the mean time, finding Fort Mims too small for the swelling multitude that flocked into it, commenced its enlargement by driving a new row of pickets sixty feet beyond the eastward end. The work went on slowly and carelessly. Every day, and sometimes several times a day, the inmates were alarmed by rumors of approaching savages, until they became indifferent, in the belief that they were all false.

On the morning of the 29th of August, two slaves (one of them belonging to John Randon, and the other to a man named Fletcher), who had been sent out a short distance from the fort to attend to some beef-cattle, came rushing through one of the wide-open gates almost out of breath, and their eyes dilated with mortal fear. They declared that they had counted four-and-twenty painted savages on the edge of a swamp. Captain Middleton was immediately sent out with two mounted men to reconnoitre, but returned at sunset without seeing any trace of hostile Indians. Beasley charged the negroes with lying, and ordered them to be severely flogged for raising a false alarm. Randon's negro received the lashes, but Fletcher, who believed the story of his slave, refused to have him flogged. This so exasperated Beasley that he ordered Fletcher to leave the fort, with his large family, by ten o'clock the next day. At that time there were five hundred and fifty-three souls within the stockade, consisting of white people, Indians, officers, soldiers, and negroes. Many of them were sick, for there arose around them continually the malaria of Alabama swamps sweltering in the rays of an August sun. Most of them were non-combatants, for the infatuated Beasley, who believed himself and charge to be perfectly secure, had greatly weakened the garrison by sending men to neighboring posts from which came piteous cries for aid and protection.

The morning of the 30th was clear and sultry. The alarm caused by the story of the negroes on the previous day had subsided, and Fletcher, the owner of one of them, had consented to have his slave whipped rather than be driven from the fort with his family. Full of confidence, Beasley at ten o'clock had dispatched a messenger with a letter to General Claiborne, in which he assured his commander of his perfect safety, and his "ability to maintain the post against any number of Indians."¹ The women in the stockade were preparing dinner; the soldiers were loitering listlessly about, or were playing cards, or lying on the ground asleep; and almost a hundred children were playing gleefully among the cabins and tents. Young men and maidens were dancing, and every appearance gave promise of an evening of sweet repose. Nothing marred the happy aspect of the scene but the form of Fletcher's poor negro, who was tied up and his back bared for the lash because he had told a terrible truth, and it was believed to be a lie. But it was a moment of awful peril. In a shallow ravine, overshadowed by trees and filled with luxuriant vegetation, lay almost a thousand Creek warriors, not more than four hundred yards from the eastern gate, preparing, like fierce and famished tigers, to spring upon their prey at the first opportune moment. They were mostly naked excepting the usual "flap." Many of them were hideously painted, and all were well armed. The prophets, in whose care were the superstitions of the dusky horde, lay with the warriors, their heads covered

---------------------	-----------------------------------	---

with feathers, their faces painted black, and their medicine-bags and magic rods by their sides. It was a host devilish in appearance, and on a demoniac errand. Whence came they? Let us see.

We have observed that M^cQueen and his followers, after the battle of Burnt Corn Creek, went back to Pensacola, where they were again well supplied with provisions and ammunition, and instructed by the British and Indian agents there to fight the Americans, and, in the event of their being defeated, to send their women and children to Pensacola. "If you should be compelled to fly yourselves," they said, "and the Americans should prove too hard for both of us, there are vessels enough to carry us off altogether to Havana."¹

M^cQueen was associated with Josiah Francis and William Weathersford, both half-bloods; the former a son of a Creek woman by a Scotchman named Francis,² and the latter a child of Charles Weathersford, of Georgia, by the beautiful Sehoya, a half-sister of General M^cGillivray, of the Creek nation.³ Weathersford was an extraordinary man; commanding in person, powerful in physical strength, honorable, and as humane as circumstances would allow. He was the superior of M^cQueen and Francis in ability; and when, after the return of the well-supplied Indians from Pensacola, there was a great gathering of warriors at Toockabatcha, on the Tallapoosa, and preparations were made for opening the war by an incursion into the country on the Lower Alabama, he became the principal leader.⁴

¹ August 20,
1813. Late in August^a Weathersford conducted his followers to the plantation of Zachariah M^cGirth, not far from the site of the present village of Claiborne, in Monroe County, Alabama, ninety miles below Montgomery. There he captured some negroes, and from them learned the condition of Fort Mims. One of his captives escaped, and bore to Major Beasley intelligence of impending danger, while Weathersford for several days deliberated and prepared for an exterminating blow. As the Indians did not make their appearance, Beasley supposed the negro fugitive's story to be a mere fabrication; and, as we have observed, the commander and the inmates of the fort were resting in fancied security, when, on the 29th, Weathersford and his host approached the ravine in which they lay on the morning of the 30th. There they were again seen by the slave, who had been whipped for supposed lying on the previous day. He might have warned Beasley, which warning, if heeded, might have saved the fort; but his back was yet smarting from the severe flogging, and, fearing a repetition of it, he fled to Fort Pierce, a stockade about two miles from Fort Mims.

At noon the garrison drum at Fort Mims beat for dinner. The eastern gate stood wide open, with some drifted sand against it. The first tap was the signal for the savages to rise from their cover and rush to the fort; and the first intimation of their presence was a horrid yell,⁵ that filled the air as they came streaming over a field to

¹ Pickett's *Alabama*, ii., 267, note.

² Francis assumed to be a prophet inspired by the Shawnee seer, Tecumtha's one-eyed brother. He placed Francis in a cabin by himself, around which he danced and howled for ten days. Then, he said, Francis was blind, but that he would again see, and then he would know all of things future. At the expiration of ten days the Prophet led him forth, and Francis walked like a blind man all day. Toward night his sight came to him suddenly, when he became the greatest prophet in the Creek nation, with the power to create lesser prophets. That power he used freely.

³ Alexander M^cGillivray was the head chief of the Creek nation during Washington's administration. He was a son of a Creek woman by a Scotch Tory of Georgia, whose property was confiscated at the close of the old War for Independence. This son took refuge among the Creeks, and became the "beloved man," or head chief. He was an educated man; brave, fluent in speech, and personally popular. The Spanish authorities honored him with the commission of a colonel; and he was received in New York in 1790 with great honors when he came, with a retinue of followers, to negotiate a treaty between the Creeks and the United States—the very treaty whose spirit his countrymen were now about to violate. His mother's family were among the first in the Creek nation; and his half sister, Sehoya, Weathersford's mother, was celebrated for her beauty and mental excellence. Weathersford was born at the Hickory Ground, near Coosawda, on the Alabama.

⁴ Warriors from thirteen Indian towns marched in a southward direction, while others from Tallahassee, Auttose, and Ockfuske formed a corps of observation in another direction, to conceal the movement.

⁵ There seem to have been no sentinels on duty, for the Indians were within thirty steps of the fort before they were discovered.—Letter of Fletcher Cox to General Claiborne, in *Life of General Sam Dale*, page 100.

Sudden Appearance of the Indians.

Furious Assault on the Fort.

A terrible Battle in Fort Mims.

ward the open gate. Beasley flew to close it, and his soldiers rushed with their arms to the port-holes, while the unarmed men, and the women and children, huddled, pale and trembling, and almost paralyzed with sudden fear, in the houses and cabins within the main inclosure. Beasley was too late. Before he could remove the drifted sand and shut the gate, the savages were upon him. He was felled by clubs and tomahawks; and over his dying body the dusky torrent rushed into the new inclosure, where Captains Middleton and Jack were on duty. He crawled behind the gate and soon expired, using his latest breath in exhorting his men to fight valiantly.

The Indians soon filled the outer inclosure, while the field beyond swarmed with a yelling multitude of blood-thirsty men. Their prophets commenced incantations and dances. They had assured the warriors that the white men's bullets would split harmlessly on the sacred bodies of the seers and the multitude behind them. The delusion was soon dispelled. Five of the invulnerable prophets were shot dead. The dismayed savages recoiled for a moment in doubt and fear. Many rushed wildly out of the gate, but others filled their places, and, with yells and howls, they poured a deadly fire upon the inmates of the fort through the port-holes of the old pickets and the outside stockades. The poor bound negro, who was awaiting the lash, was shot dead on the spot where he was to have been punished for doing all in his power to avert the dreadful calamity then impending. Captain Middleton, who was in charge of the eastern section, was slain, with all of his command. Captain Jack, in the south wing, with a rifle company, maintained the conflict nobly. Lieutenant Randon fought from the guard-house on the west; and Captain Dixon Bailey, the gallant half-blood, on whom the command of the garrison devolved after the fall of Beasley, was seen in every part of the fort, directing the military and encouraging the other inmates.

The situation was terrible. There were two inclosures, separated by a row of log pickets with port-holes, and an open gate. On one side were unarmed men, women, and children, thickly crowded, with few soldiers, for a larger portion of them were in the outer inclosure with Middleton and Jack. On the other side were lusty savages, maddened by the sight of blood and ravenous for plunder; and all around were human fiends filling the open field and eager for slaughter and spoils. Victory or death was the alternative offered to the inmates of the fort. After the first shock of surprise their courage returned, and, under the direction of the intrepid Bailey, those who had arms manned the dividing pickets, and through the port-holes poured volleys that made wide lanes in the thick ranks of the foe. These, however, were immediately filled, and the terrible conflict went on. Sometimes the guns of a Christian and pagan would cross in a port-hole, and both would fall. Old men, and even women and boys, fought with desperation. Bailey's voice constantly encouraged them. "Hold on a little longer," he said, "and all will be well. The Indians seldom fight long at a time." He endeavored to induce some of them to join him in a sortie and a dash through the enemy to Fort Pierce to procure re-enforcements, and, returning, attack the enemy in the rear and raise the siege. The movement seemed too perilous and hopeless, and none would follow him. He determined to go alone, and was actually climbing the picketing for the purpose when his friends pulled him back.

The horrid battle raged for three hours, when, as Bailey expected, the Indians began to tire. Their fire slackened, their howlings were less savage, and they began to carry off plunder from the head-quarters of Major Beasley and the other buildings in the outer inclosure. The people in the main fort were thrilled with a hope that the savages were about to depart. That hope was soon extinguished. Weathersford was not a man to accept of half a victory when a complete one was within his grasp. He beheld with scorn the conduct of many of his warriors who were more intent on plunder than conquest. Seated upon a fine black horse, he rode after the departing braves, addressed them vehemently with words of rebuke and persuasion, and soon

led them back to complete the business in hand. With demoniac yells the savages resumed the work of destruction. They soon filled the outer inclosure again, but were kept at bay by brothers of Captain Bailey and other sharpshooters, who had made port-holes in Mims's house by knocking off some shingles, and from thence sent deadly bullets into many a lusty warrior who was endeavoring to press through the inner gate. But very soon, under the direction of Weathersford, fire was sent to Mims's roof on the wings of arrows, and it burst into a flame. Some of the scorched inmates of the house fled to other buildings, and some were roasted in the horrid oven. The house was soon in cinders, with its extensive sheds and out-buildings. The fire spread to other buildings, and in a few minutes almost the entire area of the fort was scathed by the crackling flames. The shrieks of women and children added to the horrors of the scene.

Only one place of refuge now remained, and to it the doomed people rushed frantically. It was Patrick's loom-house (7 in the diagram below), on the north side of the fort, which had been inclosed with strong pickets, and called the Bastion. This was Captain Bailey's original stand, and there he and the survivors of his company now took position and poured fatal volleys upon the savages.

The assailants were now in the main fort, and every inmate pressed frantically toward the Bastion. In doing so many were killed by the Indians, while the weak, wounded, and aged were trampled under foot and pressed to death. The venerable Samuel Mims, when tottering toward this last place of refuge, was shot, and while he was yet living the knife of his assassin was passed around his head, and his scalp, with its hoary locks, was waved exultingly in the air.

FORT MIMS.¹

The fire and the savages attacked the Bastion at the same time. The former was more merciful than the latter. The Indians broke down the pickets, and butchered the inmates in cold blood. The children were seized by the legs, and their brains knocked out against the stockades. Women were disemboweled, and their unborn children were flung in the air. The British agent at Pensacola had offered five dollars apiece for scalps, and the long tresses of women, as well as the coverings of men's heads, were speedily in the hands of the savages as marketable commodities in a Christian mart! In the midst of the performance of these horrid deeds Weathersford rode up. Like Tecumtha, he was noble and humane. He reproached his followers for their cruelty, and begged them to spare the women and children at least. His interference nearly cost him his life. Many clubs were raised threateningly over his head, and he

was compelled to retire. In after years the scenes he then witnessed filled him with

¹ The above plan of Fort Mims was found among the manuscripts of General Claiborne, and first published by Pickett in his *History of Alabama*, ii., 295. It may also be found in Claiborne's *Life and Times of General Sam Dale*, page 112, and is printed here by permission of the author. The following is an explanation of the reference figures: 1. Block-house; 2. Pickets cut away by the Indians; 3. Guards' station; 4. Guard-house; 5. Western gate, but not up; 6. This gate was shot, but a hole was cut through by the Indians; 7. Captain Bailey's station; 8. Steadham's house; 9. Mrs. Dyer's house; 10. Kitchen; 11. Mims's house; 12. Randon's house; 13. Old gateway, open; 14. Eusign Chambilla's tent; 15. Randon's; 17. Captain Middleton's; 18. Captain Jack's station; 19. Port-holes taken by Indians; 20, 21. Port-holes taken by Indians; 22. Major Beasley's cabin; 23. Captain Jack's company; 24. Captain Middleton's company; 25. Where Beasley fell; 26. Eastern gate, where the Indians entered.

----------------------	--	--------------------------	---------------------

remorse, for he was chief author of the calamity. He had raised the storm, but he was unable to control it. "My warriors," he said, "were like famished wolves, and the first taste of blood made their appetites insatiable."¹

At noon on that fatal 30th of August, when the drum was beaten for dinner, there were five hundred and fifty persons in Fort Mims, happy in the belief that they were secure from danger; at sunset of the same day four hundred of them were dead! Not one white woman nor one child escaped. Every avenue of flight from the horrid slaughter-pen was sentineled. Yet twelve men of the garrison did cut through the pickets and escape to the swamp. Among these was Captain Bailey; but he was severely wounded, and died by the side of a cypress stump.² Hester, a negro woman, who had received a ball in her breast, had followed them out. She reached a canoe in Tensaw Lake, paddled it into and down the Alabama to Fort Stoddart, which she reached on Tuesday night,³ and was the first to give information to General Claiborne of the horrible tragedy. Most of the negroes were spared by the Indians, and were made their slaves. August 31,
1813.

The battle lasted from twelve o'clock until five, when the fort was a smoking ruin. The savages then retired about a mile east of the fort, where they slept that night, after smoking their pipes and trimming their scalps. They had suffered severely, for the garrison had sold their lives as dearly as possible. Not less than four hundred Creek warriors were slain or wounded. On the morning after the conflict they commenced burying their dead, but soon abandoned the labor. Putting their wounded into canoes, a part of the warriors went up the river; some staid in the neighborhood to plunder and kill,³ and others went to Pensacola, with their trophy-scalps on poles, to receive their reward from the British agents there.

Ten days afterward, Major Kennedy, who had been sent by General Claiborne to bury the dead at Fort Mims, arrived there.^b His eyes met a sad and horrid spectacle. The air was filled with gluttonous buzzards who had come to feast on the dead bodies, and a large number of dogs were disputing with the fowl birds for the banquet. The mutilated remains of the dead were buried in two pits.⁴ "Indians, negroes, white men, women, and children," Kennedy said in his report, "lay in one promiscuous mass. All were scalped; and the females of every age were butchered in a manner which neither decency nor language will permit me to describe. The main building was burned to ashes, which were filled with bones. The plains and the woods around were covered with dead bodies. All the houses were consumed by fire except the block-house and a part of the pickets. The soldiers and officers, with one voice, called on Divine Providence to revenge the death of our murdered friends."⁵ September 9.

The massacre at Fort Mims created the most intense excitement and alarm throughout the Southwest. This was increased by the operations of the powerful prophet, Francis, who at the same time was spreading destruction and consternation over the country between the Alabama and Tombigbee Rivers, from the forks northward, now Clarke County, in Alabama. The little stockades were filled with the affrighted in-

¹ Claiborne's *Life of General Sam Dale*, page 128.

² When the flames began to reach the people in the Bastion, Dr. Thomas G. Holmes, an assistant surgeon of the garrison, seized an axe, cut some pickets in two, but left them standing till an opportunity for escape offered. Bailey now cried out, "All is lost!" and begged the people to escape. The pickets were thrown down, but, as we have observed, only twelve escaped. Bailey's little sick son, only thirteen years of age, was carried safely to the woods by his negro man Tom, who, half mad with fear and dire confusion, ran back with the boy to the Indians. The savages took the child by the legs, and while he cried "Father, save me!" they dashed out his brains. The following are the names of the persons who escaped from the fort and lived: Dr. Thomas G. Holmes; Hester, a negro woman; Socca, a friendly Indian; Peter Randon, lieutenant of citizens' company; Josiah Fletcher; Sergeant Mathews; Martin Rigdon; Samuel Smith, a half-blood; — Mourrice and Joseph Perry, of the Mississippi Volunteers; John Hoven; — Jones; and Lieutenant W. R. Chambliss, of the Mississippi Volunteers.—Pickett's *Alabama*, ii., 276. See diagram on opposite page for the houses of the Steadhams and Randons, and the tent of Lieutenant Chambliss.

³ The inmates of Fort Pierce, a small stockade two or three miles from Fort Mims, fled down the river and reached Mobile in safety.

⁴ Two hundred and forty-seven bodies were buried.

⁵ Kennedy's MS. Report to General Claiborne, quoted in Pickett's *Alabama*, ii., 282.

habitants, and sickness and death were their constant companions. The distress in the Creek country can scarcely be imagined. A fearful cry for help went northward, not, as it would now, on the wings of the lightning, but by couriers on swift horses. Yet they were tardy messengers measured by travel-speed to-day. It took thirty-one days to carry the news to the city of New York, where it produced very little sensation, for the heart of the whole country was then yet tremulous with the joyous emotions created by the recent victory won by Perry on Lake Erie, and excited by intense interest in the movements of General Harrison, who was then penetrating Canada, and nobly retrieving the national misfortunes at Detroit the previous year. These absorbed the public attention northward of the Ohio and eastward of the Alleghany Mountains, while the fiercely-kindled Creek War equally absorbed the attention and awakened the most fervid sympathies and hottest indignation of the people of the Mississippi and Gulf regions.

The sons of Tennessee quickly and nobly responded to the cry for help from below. Governor Blount promised to do what he might, but General Jackson was then too ill to take active measures in the same direction immediately, but he assured his fellow-citizens that he would do so as speedily as possible. He was then lying at the Nashville Inn, prostrated by the effects of serious wounds received from the late Thomas H. Benton in an affray in the streets of Nashville with deadly weapons. He was convalescing, and, full of the "fire of the flint," he issued a stirring address to those volunteers who followed him a thousand miles to Natchez a year before. He begged them to go forward in a cause "so worthy the arm of every brave soldier and true citizen;" and expressed his regret that he was not able to go with them, at the same time assuring them of his belief that he might soon join them, which he did.

Jackson's appeal touched the hearts of the Tennesseans; and the action of the Legislature, then in session, was consonant with the wishes and feelings of the people.

On the 25th of September^a they authorized Governor Blount to call out three thousand five hundred volunteers, in addition to fifteen hundred already mustered into the service of the United States, the commonwealth of Tennessee guaranteeing their pay and subsistence, and appropriating three hundred thousand dollars for the payment of expenses to be immediately incurred. On the same day General Jackson issued another spirited address, calling his division to the field. He ordered them to assemble on the 4th of October at Fayetteville, near the northern boundary of Alabama. Already his first address had set the military spirit of the state ablaze;

now a letter-writer at Nashville declared^b that "in a few days there will be but few young men left in town. Nearly all have volunteered—some have gone, and others are getting ready. . . . Colonel John Coffee has already started with the cavalry. Infantry and mounted volunteer companies are flocking to the standard every day. Had not General Jackson been confined by his wound, I think all would have been on the way by this time."¹

On the 26th General Jackson dispatched the energetic Colonel Coffee, with his regiment of dragoons, five hundred strong, and as many mounted volunteers as could join him immediately, to take post at Huntsville,² in Northern Alabama, for the encouragement and protection of the inhabitants there, and to cover a dépôt of supplies which he intended to establish on the Tennessee River south of Huntsville, at Ditto's Landing. Coffee pushed forward with celerity, and reached Huntsville on the 4th of October. His force had been augmented almost hourly on the way by volunteers who flocked to his standard, and he found himself on the borders of the Creek country with full thirteen hundred men. Jackson meanwhile, with his arm in a sling and suffering intensely, was making his way to the prescribed rendezvous of his troops

¹ *The War*, II., 73.

² Huntsville is the present capital of Madison County, Alabama, one of the finest regions of that state, at the foot of the mountain slopes which there gradually melt into the level Gulf region.

Jackson in the Field.

Mobile threatened, but saved.

JOHN COFFEE.

at Fayetteville, on the 4th of October, full eighty miles south from Nashville. He could not reach there at the prescribed time, but sent forward a spirited address to the soldiers, to be read to them on that day. It was an appeal to their pride and patriotism; and called upon them, in an especial manner, to be obedient to discipline, for it was essential in preparing them for the noble task before them.

While these movements were in progress in West Tennessee, others of like character and importance were going on in East Tennessee, where General John Cocke was in command. Under the direction of Governor Blount, he ordered his division to rendezvous at Knoxville; and so promptly did they respond, that he wrote to General Jackson on the 2d of October² that his

men, twenty-five hundred in number, were ready to march, and that he could doubtless contract for a thousand barrels of flour to be sent to Ditto's Landing immediately.

Jackson reached Fayetteville on the 7th of October, where he remained a week waiting for the arrival of troops, organizing them, and making arrangements for supplies. He was greeted by cheering news from Coffee. It was generally supposed that the Indians would hasten to the capture of Mobile, under the auspices and direction of the Spaniards, after the destruction of Fort Mims. It might have been an easy matter; but they lingered, as usual, after their victory, and then pushed northward.¹ This good news came from Coffee, and Jackson, acting upon it, was making vigorous preparation to meet them, when, on Monday, the 11th of October,² a courier came dashing into his camp with intelligence from Coffee that the sav-

¹ The Indians, as usual, stopped to enjoy their victory after it was achieved, instead of securing its solid advantages. Such consternation was produced by the massacres on Tensaw that Mobile might have become an easy prey to the savages. But while they lingered, the Spanish accomplices at Pensacola appeared to have become alarmed lest the savages might destroy Mobile, which they hoped to recover uninjured. Governor Manrique accordingly wrote to Weatherford and his associates on the subject. After congratulating them on their success at Fort Mims, assuring them of friendship and a desire to aid them, and thanking them for their offers of assistance in the recapture of Mobile, the governor dissuaded them from attacking it, or at least destroying it. "I hope," he wrote, "you will not put in execution the project you tell me of to burn the town, since these houses and properties do not belong to the Americans, but to true Spaniards."—Letter dated Pensacola, September 29, 1813, quoted by Pickett in his *History of Alabama*. It is among the Claiborne papers already alluded to. It is positive proof of the complicity of the Spanish authorities at Pensacola with the British and Indians in waging an exterminating war against the people of the Mississippi Territory, and justified the seizure of Pensacola by the Americans which occurred afterward.

Jackson's impatient waiting for Supplies. Cries for Help from the Coosa. Jackson marches in that Direction.

CHAPTER XXXIV.

"Alas for them! their day is o'er;
Their fires are out from shore to shore;
No more for them the wild deer bounds—
The plow is on their hunting-grounds.
The pale man's axe rings through their woods—
The pale man's sail skins o'er their floods."

CHARLES SPRAGUE.

JACKSON'S little army, under his immediate command, was now about twenty-five hundred strong, and the difficulties of the campaign, with all their gloomy suggestions, arose in colossal proportions before his judgment and experience. His supplies, promised by General Cocke, had not arrived, and before him was an untried wilderness filled with hostile savages. Twenty-five hundred men and thirteen hundred horses must be fed.

"Such a body," says a late writer, "will consume ten wagon-loads of provisions every day. For a week's subsistence they require a thousand bushels of grain, twenty tons of flesh, a thousand gallons of whisky, and many hundred weight of miscellaneous provisions." Jackson was grievously disappointed, and stormed furiously at fate, the shallow Tennessee (on which the provision vessels would not yet float), the contractors, and even at General Cocke. Then he sent his quartermaster, Major W. B. Lewis, to Nashville for supplies, and Colonel Coffee, with six or seven hundred mounted men, to scour for food the country watered by the Black Warrior River, an important tributary of the Tombigbee. He was cheered by information that General White, with the advance of General Cocke's division of East Tennesseans, had already passed the site of Chattanooga and the now famous Look-out Mountain—made famous by the events of the great Civil War, which occurred there in the autumn of 1863—and would probably join him in the course of a few days.

Jackson set about drilling his troops thoroughly, and while engaged in that duty a Creek chief of the peace-party informed him that a large number of his nation were preparing to attack a fort filled with friendly Indians at the Ten Islands of the Coosa River. The general immediately broke camp upon the bluff,¹ and with immense labor and fatigue² made his way twenty-two miles in that direction along the course of the Tennessee to Thompson's Creek, one of its tributaries, all the while watching anxiously, through the eyes of scouts, for the appearance of the expected supply flotilla. But they did not come. He wrote to friends and public authorities in every direction, and the burden of his letters were, "Give me food, and I will end this savage war in a month." And yet he did not wait for the expected supplies to begin it, for such piteous entreaties came from the Coosa that he resolved to press forward at all hazards. He established a depository for supplies at the mouth of Thompson's Creek, cast up fortifications to defend them which he named Fort Deposit, and on the evening of the 24th of October he started for the Ten Islands of the Coosa, fifty miles distant, with only two days' supply of bread and six of meat, swearing that he would "neither sound a retreat nor suffer a defeat"³ before the

¹ The country in that region is exceedingly rough and mountainous, and the troops were compelled to endure the most appalling labors. "We have cut our way," wrote Major Reid, Jackson's aid-de-camp, "over mountains more tremendous than Alps."

² Letter of Major John Reid to Quartermaster W. B. Lewis, October 24, 1813, quoted by Parton, I., 422.

The Army threatened with Famine. Affairs in the lower Creek Country. Courage and Honor of Captain Dale.

savages. Coffee, who in the space of twelve days had marched two hundred miles, burned Black Warrior's Town and another Indian village on the Black Warrior River, and collected about three hundred bushels of corn, had joined him, and the whole army went cheerily forward toward the Coosa. He cut his way over the rugged mountains with indomitable perseverance to Wells's Creek,^a where his supply of bread failed, and he remained encamped for several days, that his foraging parties might collect provisions. His little army was there threatened with actual starvation, for the contractors had entirely failed to meet their engagements. The foragers were usually successful. One party, under Colonel Dyer, two hundred strong, fell upon the Indian village of Littefutchee, at the head of Canoe Creek, twenty miles from the camp, captured twenty-nine prisoners and a good supply of corn, and laid the town in ashes.^b Then the army marched on, and in less than a week afterward it was encamped on the right bank of the Coosa, not far from the Ten Islands and the mouth of the Canoe or Littefutchee Creek. Let us here leave the resolute invaders a few moments, and consider the condition of affairs in the Creek country.

We have observed that the massacre at Fort Mims spread consternation over the whole region, and white people and friendly Indians sought shelter in the stockades or safety in flight toward the Gulf. Sickness prevailed in all the stockades, and there was distress every where. Murders, robberies, and conflagrations were seen on every hand. Claiborne was harassed with almost hourly messages bearing piteous importunities for help, and from none more loudly than from St. Stephen's, one of the most important posts in the country.¹ Information had reached the general that the garrison and refugees in Fort Madison, in the eastern part of Clarke County, were likely to share the horrid fate of those in Mims from a combined attack of the savages. Under the direction of General Flournoy, he ordered Colonel Carson, the commander, to abandon the fort and hasten to the relief of St. Stephen's, if his judgment should sanction such movement. Carson left Madison reluctantly, followed by about five hundred settlers of both sexes, and all ages and conditions, and marched westward. He had arrived on the banks of the Tombigbee, on his way to St. Stephen's, when another letter from Claiborne reached him, in which he was urged "not to abandon the fort [Madison] unless it was clear that he could not maintain it." It was too late. He crossed the river and entered St. Stephen's.

Fort Madison was not wholly abandoned. There were bold men there who resolved to remain and defend it, together with Fort Glass, a small stockade only a fourth of a mile distant. The leader was Captain Sam Dale.² He was still suffering from the effects of his wound received at Burnt Corn Creek. When Carson's drum beat for his troops to march, Dale beat his for volunteers to remain; and when the last of the United States soldiers marched out of the fort, Dale marched in at the head of eighty brave citizens, among them Captain Evans Austill. Dale received a note from General Flournoy advising him to repair to Mount Vernon, as he was sure to be attacked by an overwhelming force. Dale replied that he had sworn to defend the women and children under his charge; that he had a "gallant set of boys" under him; and that when the general should hear "of the fall of Fort Madison, he would find a pile of yellow-hides to tan if he could get his regulars to come and skin them!"³ Dale maintained his position with boldness, and was not attacked.⁴

¹ See page 750, and Map on page 751.

² *Life and Times of General Sam Dale*, pages 116 and 117. Dale says Flournoy was opposed to the stockade system, and was determined to concentrate his troops at Mobile, Mount Vernon, and St. Stephen's. Claiborne's order for the evacuation of Fort Madison, inspired by Flournoy, was cursed by the settlers in the forks of the Alabama and Tombigbee, who considered themselves cruelly abandoned.

³ "During the day," says Dale, "sentinels were posted around the fort. At night I illuminated the approaches for a circuit of one hundred yards by a device of my own. Two poles, fifty feet long, were firmly planted on each side of the fort; a long lever, upon the plan of a well-sweep, worked upon each of these poles; to each lever was attached a bar of iron about ten feet long, and to these bars were fastened with trace-chains huge fagots of light wood. The illumina-

² See page 749.

While there was still a doubt in every mind whether the Choctaws would remain friendly to the Americans, Pushmataha removed every suspicion by suddenly appearing at St. Stephen's and offering to enlist several companies of his warriors to take up arms under the banner of the United States. He was conducted to Mobile by George S. Gaines, where he had an interview with General Flournoy. That strangely blind officer declined the chief's offer, and Gaines and Pushmataha went back to St. Stephen's filled with mortification and disgust. The assembled citizens had begun to curse the commanding general without stint, when a courier appeared riding in haste. He bore authority from Flournoy for Gaines to recruit in the Choctaw nation. His advisers had caused him to repent of his folly in refusing the generous offer of Pushmataha.

Gaines and the brave chief started northward for the Choctaw country. They were met at John Peachland's by Colonel John M'Kee, agent of the Chickasaws, with whom they held a consultation. Pushmataha and Gaines then went forward. The former called a council of his people of the eastern district of the nation.¹ He harangued the assembled multitude in an admirable speech; and it was so effective that when, at the conclusion, he said, "If you have a mind to follow me, I will lead you to glory and victory," a warrior arose, slapped his hand upon his heart, and said, "I am a man! I am a man! I will follow you!" All the others did likewise, and raised a shout that filled the heart of Gaines with joy.² Colonel M'Kee was equally successful with the Chickasaws. A large body of them volunteered to follow him, and did so to the Tuscaloosa Falls, for the purpose of attacking a Creek town there. They found it in ashes, and the centre of a solitude wherein no Indian was visible. M'Kee returned to Peachland's, at the mouth of the Octibaha, where his dusky followers separated, some going to their homes, and others making their way to join the standard of General Claiborne, then at St. Stephen's.³

It was while the consternation of the inhabitants on the Alabama and Tombigbee was most intense that Jackson was making his way toward the sanguinary theatre on which, as we have seen, he appeared at the close of October. He now became chief actor in the terrible drama.

On his arrival upon the Coosa, Jackson was informed that the Creeks were assembled at Tallasehatche, a town in an open woodland only thirteen miles from the camp.⁴ He resolved to attack them at once, and on the morning of the 2d of November he summoned the stalwart Coffee to his presence. That brave officer had lately been promoted to the rank of brigadier.⁵ He was anxious to be on the wing with his mounted men, and was soon gratified. The commanding general ordered him to take one thousand horsemen, and fall suddenly and fiercely upon the offending town in which blood-thirsty enemies were harbored, and destroy it. He left camp for the purpose toward evening, his troops accompanied by Captain Richard Brown and a company of friendly Creeks and Cherokees, whose

tion from such an elevation was brilliant, and no covert attack could be made upon my position. As a precaution against the Indian torch, I had my block-houses and their roofs well plastered with clay. We displayed ourselves in arms frequently, the women wearing hats and the garments of their husbands, to impress upon the spies that we knew were lurking around an exaggerated notion of our strength. For provisions we shot such cattle and hogs as grazed within the range of our guns, but I carefully noted the marks and brands, and afterward indemnified the owners."—*Life of Dale*, page 117.

¹ The Choctaw nation was then composed of three distinct governments. The *Eastern* district was ruled over by Pushmataha, the *Western* by Puckshenubbee, and the *Northwestern* by Mushelatlubba.

² "You know Tecumtha," said Pushmataha. "He is a bad man. He came through our nation, but did not turn our heads. He went among the Muscogees (Creeks), and got many of them to join him. You know the Tensaw people. They were our friends. They played ball with us. They sheltered and fed us whenever we went to Pensacola. Where are they now? Their bones rot at Sam Mims's place. The people at St. Stephen's are also our friends. The Muscogees intend to kill them too. They want soldiers to defend them. [Here he drew his sword and flourished it.] You can all do as you please. You are all freemen. I dictate to none of you. But I shall join the St. Stephen's people. If you have a mind to follow me, I will lead you to glory and victory."—Pickett's *Alabama*, ii., 291.

³ Pickett's *Alabama*, ii., 292.

⁴ Not far from the present village of Jacksonville, the capital of Benton County, Alabama, on the southeast side of Tallasehatche Creek.

Battle of Tallasehatche.

Annihilation of the Town and the Warriors.

Jackson's Army on the Coosa.

heads were tastefully ornamented with white feathers and deer's tails. They forded the Coosa at the Fish Dam, four miles above the Ten Islands, and at dawn on the morning of the 3d halted within half a mile of the doomed town. There Coffee quickly divided his forces into two columns, the right composed of cavalry, commanded by Colonel Allcorn, and the left of mounted riflemen, under Colonel Cannon. With the latter the newly-made general marched. Allcorn was directed to encircle one half of the town with his cavalry, while Cannon and his riflemen should encircle the other half. This was promptly accomplished at sunrise, when the foe sallied out with beat of drums and savage yells, their prophets being in the advance.

The battle that speedily began was brought on at about eight o'clock by the companies of Captain Hammond and Lieutenant Patterson, who had made a manoeuvre for the purpose of deceiving the foe from the shelter of their houses. It was successful. The Indians fell upon them furiously, when the two companies, according to instructions, fell back, pursued by the enemy, until the latter encountered the right of Coffee's troops. These first gave the Indians a deadly volley of bullets, and then charged them violently, while the left division closed in upon the doomed foe. Never did men fight more gallantly than did the Creeks. Inch by inch they were pushed back to their houses by the ever-narrowing circle of assailants. They fought desperately and with savage fury. They were shot and bayoneted in and out of their houses. Not one would ask for quarter, but fought so long as he had strength to wield a weapon. None survived. Every warrior was killed. In falling back to their dwellings they mingled with the women and children, and in the fury of the contest some of these were slain. The victory for the assailants was complete; and at the close of this short, sharp battle, one hundred and eighty-six Indian warriors lay dead around the victors.¹ It was believed that full two hundred perished. Eighty-four women and children were made prisoners. The loss of the Americans was only five killed (no officers) and forty-one wounded, most of them slightly.

Having destroyed the town and buried his dead, the victorious Coffee marched back in triumph to the camp on the Coosa, followed by a train of sorrowful captives. It was a terrible sight for the eye of Pity. Retributive justice, evoked by the slain at Fort Mims, was satisfied. Tallasehatche was wiped from the face of the earth, and every survivor was sent a prisoner to Huntsville.² Thus commenced the fearful chastisement of the infatuated Creeks who had listened to the siren voice of Tecumtha, and the wicked suggestions and false promises of the Spaniards and British at Pensacola.

Jackson now made his way over the Coosa Mountains to the Ten Islands, and on the right bank of the Coosa commenced the construction of a second fortified deposit for supplies. Strong pickets and block-houses soon began to rise, and the work was well advanced when, just at sunset on the 7th of November, an Indian chief from the Hickory Ground, who, by stratagem, had made his way from the beleaguered fort, came with swift foot and informed the general-in-chief that one hundred and sixty

¹ General Coffee said in his report (November 4, 1813): "They fought as long as one existed; and when the last of the devoted band, still struggling for the mastery, had fallen beneath the hatchets and hunting-knives of his enemies, one hundred and eighty-six warriors were stretched lifeless on the fine open woodland in which their village was situated."

² A touching tale of truth is told in connection with the battle of Tallasehatche. Among the slain was found an Indian mother, and upon her bosom lay her infant boy, vainly endeavoring to draw sustenance from the cold breast. The orphan was carried into camp, and Jackson tried to induce some of the mothers among the captives to give it nourishment. "No," they replied; "all his relatives are dead, kill him too." The little boy was taken to the general's own tent, fed on brown sugar and water until a nurse could be procured at Huntsville, when it was sent to Mrs. Jackson. The general was a childless man, and he adopted the forest foundling as his son. Mrs. Jackson watched over him with a mother's care, and he grew to be a beautiful youth, full of promise. But consumption laid him in the grave among the shades of the "Hermitage" before he reached manhood, and his foster-parents mourned over him with a grief as sincere as that of consanguinity.

This boy was no exception to the rule of Indian instinct for wild and forest life. He delighted to roam in the woods, decorate his head with feathers, and start out from ambush and frighten children with loud yells and horrid grimaces. He was apprenticed to a harness-maker in Nashville.

Fort Strother in Peril.

Jackson goes to the Relief of Talladega.

He surrounds the Besiegers at Talladega.

friendly Creek warriors, with their families, were hemmed in at Talladega, in Lashley's Fort,¹ thirty miles distant, with no hope of escape. The besiegers were a thousand strong, and they so completely surrounded the little stockade that no man could leave it unobserved. The inmates had but little food and water, and must soon perish. The foe was well provided, and, feeling sure of their prey at the hands of Famine if by no quicker way, were dancing around the doomed people with demoniac joy. This messenger, who was a prominent man, had made his escape by covering himself with the skin of a hog, and in the darkness of night, while imitating its gait, and grunting, and apparent rooting, was allowed to pass slowly through the hostile camp until he was beyond the reach of their hearing and arrows. Then he cast away his disguise, and with speed heightened by desperation, he fled to Jackson's camp on the Coosa.

The commander-in-chief resolved to give immediate relief to the people at Talladega. He had just heard of the near approach of General White with the van of General Cocke's division of East Tennessee troops, so he ordered his whole force, excepting a small guard for the camp, the sick and the wounded, to make immediate preparations for marching. He wrote a hasty note to General White, informing that officer that he should expect him to protect Fort Strother and its inmates during
^a November 8, his absence, and at little past midnight^a he commenced fording the Coosa
 1813. a mile above the fort, with twelve hundred infantry and eight hundred mounted men, each of the latter taking a foot-soldier on his horse behind him. All were across at four o'clock in the morning, and then they commenced a very wearying march through a perfect wilderness. At sunset they were within six miles of Talladega, when the general commanded his followers to seek repose, for active work would be required of them in the morning.

The chief slumbered not. All night long he was on the alert for the reports of spies whom he sent out on scouting expeditions. At midnight he received a note by an Indian runner from General White, telling him that General Cocke had recalled him, and he would not be able to protect Fort Strother. Jackson was perplexed. Strother and Talladega both needed his presence. He resolved to rescue the latter, and then fly to the defense of the former. Silently his troops were put in motion in

^b November 9. the dark, and before four o'clock in the morning^b they had made a wide circuit and surrounded the enemy, who, a thousand and eighty strong, were concealed in a thicket that covered the margins of two rivulets flowing out from springs.^c

Jackson disposed his troops for action so as to inclose the foe in a circle of armed men. The infantry were in three lines, the militia on the left, and the volunteers on the right. The cavalry formed the two extreme wings, and were ordered to advance in a curve, keeping their rear connected with the advance of the infantry lines, so that there should be no break in the circle. In this position were the troops at sunrise, when Colonel William Carroll was sent forward with the advanced guard, composed of the companies of Captains Dederich, Caperton, and Bledsoe, to commence the attack. He delivered a heavy fire, when the savages rushed forth, with horrid yells and screams, in the direction of the militia under General Roberts, from whose brigade

¹ This fort was a little eastward of the Coosa River, in Talladega County, Alabama; and a portion of its site is now covered by the pleasant village of Talladega, the capital of the county, which had a population of about two thousand when the late Civil War broke out in 1861. It is in a delightful valley, with very attractive scenery in view.

² The order of march is seen in the upper part of the diagram on page 765. The cavalry were commanded by Colonel Alcorn, and the mounted riflemen by Colonel Cameron. The infantry were commanded by Brigadier Generals Hall^a and Roberts,† assisted by Colonels Bradley, Pillow, M'Crosney, Carroll, and Dyer. The position of the troops in the attack, when they had surrounded the enemy, is seen in the lower part of the diagram, commencing with the reserves under Colonel Dyer. This diagram is copied, by permission, from Pickett's *History of Alabama*, ii., 292.

^a William Hall had been a colonel in the Tennessee militia who followed Jackson from Nashville to Natchez and back, and was made brigadier general of three-months' volunteers on the 26th of September, 1813.

† Isaac Roberts. He was commissioned brigadier general of three-months' Tennessee Volunteers on the 4th of October, 1813.

Temporary Panic among the Militia.

Battle at Talladega.

Destruction of the Indians.

Carroll had been detached, and who, pursuant to orders, had fallen back, so as to bring the enemy upon the main body. Their horrid noise and devilish appearance so terrified the militia that some of them gave way. Seeing this, Jackson ordered Colonel Bradley to fill the chasm with his regiment, which was lagging behind the line. Bradley failed to obey, and Lieutenant Colonel Dyer, in command of reserves composed of the companies of Captains Smith, Morton, Axune, Edwards, and Hammond, was ordered to that duty with his men. These were immediately dismounted, and met the yelling savages so resolutely that the fugitive militia took courage, resumed their station, and fought gallantly. The battle now became general, and had lasted about fifteen minutes, when the Indians, who had fought well, suddenly broke, and fled in all directions toward the surrounding mountains.

But for the giving way of the militia, and the forming of a gap in the circle by the tardiness of Bradley, and a too wide circuit made by Allcorn and his cavalry, it is believed that not a warrior would have escaped. They were hotly pursued, and the woods for miles became a resting-place for the bodies of dead savages. Two hundred and ninety of the slain were counted. Many were, doubtless, not seen. The number of the wounded could not be ascertained, but they were numerous. The loss of the Americans amounted to fifteen killed and eighty-five wounded. Four were badly hurt, and only two of the latter died from the effect of injuries received. Among the wounded were Colonels William Pillow and James Lauderdale, Major Richard Boyd, and Lieutenant Samuel Barton, the last mortally.¹ These and other wounded men were placed on litters, and when the dead were all buried the victorious little army marched with the maimed to Fort Strother, followed by the grateful rescued Creeks.² Among the few trophies of victory borne back to the Coosa was a coarse banner on which were the Spanish arms. This evidence of the complicity of the Spaniards with the hostile Creeks was sent by Jackson to the ladies of East Tennessee, who, as we have observed, presented a stand of colors to the Tennessee Volunteers.³

When Jackson and his troops reached Fort Strother, wearied and half famished, they found the place almost destitute of provisions. None had been brought in during the absence of the little army, and now starvation threatened all. Almost mutinous

¹ General Jackson's Dispatch to Governor Blount, November 11, 1812. Report of Adjutant General Stiller, November 15.

² These consisted of one hundred and sixty friendly Creek warriors, with their wives and children. The crushing blow was to have fallen upon them on that very day. They were almost ready to die of thirst. Their gratitude and joy were commensurate with the distress from which they had been relieved.

³ See page 744. The following note (printed in Parton's *Life of Jackson*, I, 448) accompanied the colors, and contains a history of the affair:

"General Andrew Jackson, with compliments to Governor Blount, requests him to inform the ladies of East Tennessee, who presented the colors to the Tennessee Volunteers, that Captain Deaderick, who, with Captain Bledsoe's and Captain Caperton's companies, under the direction of Major Carroll, were sent to bring on the attack, and lead the enemy, by a regular retreat, on the strongest point of my infantry, went into action with their colors tied round him, and that they were well supported. And, in return, I send you a stand of colors (although not of such elegant stuff or magnificent needle-work) taken by one of the volunteers, which I beg you to present to them as the only mark of gratitude the volunteers have it in their power to make. With his own hand he slayed the bearer. They will be handed by Mr. Fletcher, who I send for that purpose." A letter dated Nashville, November 17, 1812, said, "Mr. Thomas H. Fletcher, of this town, has just arrived from General Jackson's army. He was the bearer of a stand of colors taken from the enemy, and bearing the Spanish cross."

A divided Command. The Indians, dispirited, sue for Peace. Separate Action of General Cocke and his Command.

murmurs were heard among the suffering soldiers, but their general's words and example kept them within the bounds of obedience. He was ever cheerful, and shared with his soldiers in all their privations, eating, like them, the acorns found in the forest, to sustain life. It was a very critical period in the campaign, but it was passed in safety and honor to all concerned.

The severe chastisement administered upon the Creeks at Tallasehatche and Talladega had an immediate and powerful effect upon the spirit and temper of the savages, and promised a speedy termination of the war. That desired end was postponed by an unfortunate circumstance growing out of the ever-dangerous fact of a divided command in the campaign. There was an existing jealousy between the East and West Tennessee troops; and, notwithstanding Jackson was the senior officer, and properly commander-in-chief of the campaign against the Creeks, General Cocke maintained, up to the time in question, a separate and independent command, and attempted to operate against the hostile Indians at first even without consultation with General Jackson. This produced trouble, as we shall observe presently.

Many of the warriors who fought at Talladega were from the Hillabee towns on the Tallapoosa River, in the present Cherokee County, Alabama. Those who escaped to the mountains on that dreadful morning were so thoroughly convinced of the futility and danger of making farther resistance to the Tennesseans, that they resolved to sue for peace and reconciliation. For this purpose they sent Robert Grayson, an aged Scotchman and old resident among them, to make peaceful propositions to General Jackson at Fort Strother. Jackson cordially responded to the proposition, but at the same time told the messenger, in firm language, that he had come to chastise those who had committed gross wrongs toward the white people and friendly Indians in the Creek country, and that he must have full evidence of the sincerity of peace professions before he would consent to stay his hand. "The prisoners and property which they have taken from us and the friendly Creeks," he said, "must be returned; the instigators of the war and the murderers of our citizens must be surrendered; the latter must and will be made to feel the force of our resentment. Long shall they remember Fort Mims in bitterness and tears. Upon those who are disposed to remain friendly I neither wish nor intend to make war."

Grayson hastened back with the conciliatory message. It was never delivered, for destruction had fallen upon the Hillabee people while the messenger was away on his errand. That destruction came from the East Tennesseans under Generals Cocke and White, who had come down in a separate column, and encamped on the bank of the Coosa, seventy miles above Fort Strother, late in October. There Cocke, with the main body, awaited supplies and built a fort, which he named Armstrong, in honor of the then Secretary of War. It was in the present Cherokee County, Alabama, not far westward of the Georgia line. But the supplies came not. The continued low water in the Tennessee would not allow the contractor to fulfill his promises. Famine stared the little army in the face. Cocke was sorely perplexed. He knew that Jackson, who depended upon the same source of supplies, must be as much embarrassed as himself by lack of food. What shall be done? was a very serious question that needed an immediate answer. Jackson had called for a junction of the armies. Shall we go forward and increase the dangers of famine by having a combined army of five thousand men in the wilderness? was another pertinent and important question. A council of officers was held. The question, Shall we follow Jackson? was decided in the negative by unanimous vote. Shall we cross the Coosa and proceed to the Creek settlements on the Tallapoosa? was a second question, and it was unanimously decided in the affirmative. General White was then within a day's march of Jackson's camp, and Cocke sent an order for him to return immediately to Fort Armstrong. "It is the unanimous wish of the officers and men also," he said. "If we follow General Jackson's army," he continued, "we must suffer for

General Cocke falls upon a Hillabee Town.

Massacre of its People.

Exasperation of the Indians.

supplies; nor can we expect to gain a victory. Let us, then, take a direction in which we can share some of the dangers and glories of the field." This message, and the note from General Jackson, already mentioned, urging him to hasten to the protection of Fort Strother, reached White at the same time. He considered his obedience due first to his immediate superior, General Cocke, and he marched his half-starved brigade back to Fort Armstrong.

General Cocke, too remote from General Jackson to act in concert with him, was, consequently and unfortunately, ignorant of the peaceful mood of the Hillabee people. He had been informed that one of the most energetic of the Creek leaders (Bill Scott, who commanded the Indians at Talladega), was among them, filled with the hellish purpose of massacring every white person and friendly Creek in all that region. He accordingly dispatched General White, with some mounted men and a band of Cherokee allies, to attack the Hillabee town. White took only three days' rations with him, and marched with great rapidity toward the principal village of the Hillabee, on the border between the present Talladega and Randolph Counties, Alabama, full a hundred miles from Fort Armstrong. He spread desolation in his path. Ockfuske and Genalga, two deserted towns, one of thirty and the other of ninety houses, were laid in ashes, and at dawn on the morning of the 18th of November—the very day when Grayson left Jackson's camp—White appeared before the chief village. The inhabitants were unsuspecting of danger, and made no resistance; and yet White, for the purpose of inspiring terror in the minds of the Creek nation, fell furiously upon the non-resistants, and murdered no less than sixty warriors before his hand was stayed. Then, with two hundred and fifty widows and orphans as prisoners in his train, he returned to Fort Armstrong, without a drop of a Tennessean's blood being shed.

The inhabitants of the other Hillabee towns, ignorant of any other commander than General Jackson, regarded this massacre as the most foul perfidy on his part, and were intensely exasperated. They felt that their humble petition for peace had been cruelly responded to only by the sword and bullet, and thenceforth they carried on hostilities with the most malignant feelings and fearful energy.

Jackson's anger against General Cocke was equally hot. In the absence of correct information, he regarded him as a rival, willfully withholding supplies, and seeking glory on his own account. This was unjust, and the irate commander was convinced of the fact in the course of two or three weeks, when, in a friendly letter, he invited the East Tennessean to join him with his army at Fort Strother on the 12th of December. Cocke cheerfully complied, and was there on the appointed day, having in the mean time scoured the Cherokee country for provisions, and caused a considerable quantity of supplies to be hauled from the Tennessee to the Coosa for the use of the combined army. He found that of Jackson greatly demoralized. Disappointed, starving, inactive, the troops at Fort Strother were dreadfully homesick, and filled with a mutinous spirit. This the courage and tact of the commander controlled, but with great difficulty. The militia, on one occasion, prepared to go back to the settlements. They started in a body, when the yet faithful volunteers, with Jackson at their head, stood in their path. Then the volunteers attempted to leave the camp and go home—the very men to whose fortunes their leader had so tenaciously adhered at Natchez the year before—when the militia, with Jackson at their head, stood in the path of the new mutineers. At length almost the entire army of West Tennessee, despairing of relief, determined to abandon the expedition and go home. Some of the militia actually started, and the volunteers were about to follow. The general had no sufficient force to restrain them, and he was compelled to rely upon himself alone. He mounted his horse, seized a musket with his right hand, while the disabled arm was yet in a sling, and, placing himself in front of the malcontents, with the weapon resting upon his horse's neck, he declared that he would shoot the first

Matineers checked.

The Creek Country invaded from Georgia.

Battle of Auttose.

man who should take a step in advance. Amazed at his boldness, they gazed at him in silence. Fortunately, at that moment, Coffee and two companies of faithful mounted men came up, and the mutineers, after consultation, agreed to return to duty. Yet discontent was not allayed, and Jackson finally allowed all volunteers so disposed to return to their homes, and he organized a force out of other materials. Could he have had sufficient supplies after the battle at Talladega, and been met by immediate concert of action by the East Tennessee troops, he might have ended the war within a fortnight. It was protracted for months; and for ten long and weary weeks he was compelled to lie in idleness at Fort Strother, suffering the vexations which grew out of positive demonstrations of discontent.

In the mean time the Creek country was invaded from another quarter. The cry for help had filled the ears of the Georgians, and late in November, Brigadier General John Floyd, at the head of nine hundred and fifty militia of that state, and four hundred friendly Indians, guided by Mordecai, a Jew trader, entered the region of the hostiles from the east. He crossed the Chattahoochee into the present Russell County, Alabama, on the 24th of November,¹ and pushed westward toward the Tallapoosa, where he was informed a large number of hostile Indians had collected in the village of Auttose, on the "holy ground," on which the prophets had taught the Indians to believe no white man could set foot and live. This town was on the left bank of the Tallapoosa, about twenty miles above its confluence with the Coosa, at the mouth of the Calebee Creek. Floyd encamped within a few miles of it on the evening of the 28th, and at an hour past midnight marched to the attack. At dawn he was before the town with his troops arranged for battle in three columns. The right was composed of Colonel Booth's battalion; the left of Colonel Watson's; and the centre of the rifle companies of Captains Adams and Merriweather, the latter commanded by Lieutenant Hendon. The artillery, under Captain Thomas, was posted in front of the right column. The friendly Indians were led by William M'Intosh,¹ a half-blood, and a chief called The Mad Dog's Son.

Floyd intended to surround the town, but the morning light revealed the fact that there were two villages in front of the invading column, and that it was necessary to change at once the disposition of the forces. This was skillfully done. One town was below the other, a hundred rods apart. To the lower one three companies of infantry, Merriweather's rifles, and two troops of dragoons, under Irwin and Steele, were sent, while the remainder of the troops marched upon the upper town. Immediately after the attack commenced the battle became general. The Indians appeared at all points, and fought gallantly for a while, when the booming of heavy artillery, and a furious bayonet charge, so terrified them that they fell back and sought shelter in the out-houses, thickets, and copses in the rear of the towns. Overpowering numbers pushed them hard, and they at length fled to cane-covered caves cut in the bluffs of the river. Their dwellings, about four hundred in number, some of them commodious and containing valuable articles, were fired and destroyed, and the poor smitten and dismayed savages were hunted and butchered with a fiendish barbarity which ought to have made the cheeks of the actors burn with the blushes of shame. It was estimated that full two hundred Indians were murdered. Floyd lost eleven killed and fifty-four wounded.² The loss of the friendly Indians, who held back at the beginning, but fought bravely toward the last, is not mentioned in the official reports.

¹ William M'Intosh was the chief of the Coweta tribe of the Creek nation. He was the son of a Scotchman by a Creek woman. He was conspicuous in the memorable battle at Horse-shoe Bend in March, 1814. In 1823 he lost cast with his people because of his having evidently been bribed to make a certain treaty for the giving up of Creek territory. He and an adherent were afterward shot as they attempted to escape from M'Intosh's dwelling, which some exasperated Indians had fired. His residence was on the Chattahoochee. See Drake's *Book of the Indians*, eleventh edition, page 891.

² General Floyd's dispatch to Major General Pinckney, the commander-in-chief of the Southern Department, December 4, 1813; Pickett's *History of Alabama*, ii., 300.

Claiborne ordered into the Creek Country.

Expedition under Captain Dale.

Scene on the Alabama.

In the space of seven days Floyd had marched one hundred and twenty miles and committed the massacre. He was now sixty miles from a deposit of provisions, and his rations were nearly exhausted; so, after burying his dead and preparing litters for his wounded, he hastened back to Fort Mitchell, on the Chattahoochee. On his departure, and when a mile eastward of the ruined towns, his rear was attacked by some desperate survivors of Auttose, who were dispersed after receiving a few volleys.

While these events were transpiring in the upper country of the Creeks, stirring scenes were witnessed in the present Clarke County, in the forks of the Tombigbee and Alabama, and vicinity. The Indians, under the direct influence of Weathersford and the British and Spanish officers, were very active and sanguinary in that region, and General Flournoy, who had kept General Claiborne on the defensive, was at last aroused to a sense of the necessity of offensive measures. Accordingly, on the 12th of October, he ordered that officer to advance with his army into the heart of the Creek country for the purpose of defending the citizens while gathering their crops yet in the field; "to drive the enemy from the frontiers; to follow them up to their contiguous towns, and to kill, burn, and destroy all their negroes, horses, cattle, and other property that could not conveniently be brought to the dépôts." This sanguinary order was justified by the Georgia general, by the conduct of Great Britain, and the acts of her Indian allies.

Claiborne instantly obeyed. He crossed the Tombigbee from St. Stephen's, and scoured the country on its eastern side in all directions with his detachments, meeting and dispersing bands of Indians here and there, but without bringing them to battle any where. In the mean time Captain Sam Dale, who had recovered from his wounds, was preparing for active operations. He had held Fort Madison; and, on the return of Colonel Carson to that post early in November, he had obtained his leave to go out and drive the small bands of marauding savages from the frontier. He was joined by a detachment of thirty of Captain Jones's Mississippi Volunteers, under Lieutenant Montgomery, and forty Clarke County militia, having for his lieutenant Gerrard W. Creagh, who was attached to his company in the battle of Burnt Corn Creek. They marched southeasterly to a ferry, where Cæsar, a free negro of the party, had two canoes concealed. In these the party crossed the river, and on a frosty night, with very thin clothing, they lodged in a cane-brake. At dawn^a they marched up the river, the boats in charge of five picked men each, and keeping abreast of the party on shore. Some Indians were soon encountered on land and water, and, after a brisk skirmish, the dusky foe fled up the stream out of sight. Dale's party were then separated, some following the trail on the east side of the river, and others following that on the west side. At half past ten they reached Randon's Landing,¹ where they found evidences of Indians near. Directly a large canoe, made from the trunk of an immense cypress-tree, came floating down the stream, bearing eleven naked and hideously-painted savages. They were about to land at a cane-brake, when Dale, calling his men to follow, dashed for the spot to contest their landing. They shot two of the Indians, and the others backed the great canoe out into deep water, three of the Indians swimming on the side not exposed to the bullets, and the remainder lying flat on its bottom.

A stirring scene now ensued. One of the warriors in the water called out to Weathersford, who was in the neighborhood, for help. Dale stopped his voice by putting a bullet in his brain, when the great canoe, deprived of the guidance of the three Indians in the stream, who had been killed, floated sluggishly down with the current. Dale ordered six men on the eastern bank to fetch the boats for the pur-

¹ On the bluff above this landing Fort Claiborne was afterward built, on or near the site of the village of Claiborne, in Monroe County, Alabama. The picture on page 770, Randon's (now Claiborne) Landing, is from a sketch by the Author, made from the deck of a steamer in April, 1866. The covered way is for cotton-bales and other things to slide down from the summit of the bluff, two hundred feet, to the margin of the river, whence merchandise and agricultural products are taken on board of steamers. Here was the scene of the canoe fight recorded in the text.

A terrible Encounter in Canoes.

Dale's hand-to-hand Fight.

He wins the Victory.

RANDON'S OR CLAUDORNE LANDING.

menced a furious contest. Austill and Smith joined in the fray with clubbed muskets, but Cæsar could not hold the boats together, the current was so strong. They parted, leaving Dale alone in the canoe of the savages, one of whom lay wounded in the stern, and four others, strong and fierce, confronted him as he stood defiantly in the middle of the great canoe.¹ Two warriors lay dead at his feet.

At the instant when Dale planted himself in the middle of the great canoe, the savage nearest to him directed a terrible blow at his head, which the soldier parried skillfully with the barrel of his gun, and, as quick as lightning, slew his assailant with his bayonet. The next one instantly sprang forward, when a bullet from Austill's rifle, sent from the boat that was drifting a few yards off, pierced his heart, and he fell in the bottom of the canoe. The third then made for Dale with his tomahawk, when he too fell, pierced by the brave captain's bayonet. The last warrior was Tar-cha-chee, a noted wrestler of powerful frame. He and Dale were old acquaintances. As the savage's keen glance met that of Dale, he shook himself, gave the horrid war-whoop, and then cried out, "Big Sam, I am a man—I am coming—come on!" He then bounded over his dead companions with a terrific yell, and directed a furious blow at the head of Dale with his clubbed rifle. Dale dodged it, but it fell upon and dislocated his shoulder. At the same moment Dale darted his bayonet into the body of the Indian, who exclaimed, as he tried to escape, "Tar-cha-chee is a man! He is not afraid to die!" Dale then turned to the wounded warrior, who had been snapping his piece

¹ It was dug out of a huge cypress-tree. It was between thirty and forty feet long, four feet deep, and three feet abeam. It had been used for the special purpose of transporting corn.

pose of attacking the Indians in their huge craft. As they approached and looked into it, one of them screamed, "Live Indians, by God! Back water, boys! back water!" and they went back to the place of embarkation faster than they came. Dale was exasperated by their cowardice, and quickly ordered Cæsar to bring a canoe. He jumped into it, followed by Jeremiah Austill and James Smith. It would hold no more safely. Cæsar paddled it within forty yards of the craft of the savages, when Dale and his companions rose to pour a volley into the great canoe. Each gun missed fire. Water had spoiled the priming. A moment afterward and the two vessels were side by side, when the stalwart Dale, ordering Cæsar to hold them together, clubbed his musket, and, placing one foot in his own canoe and the other in that of the enemy, commenced

Fame of the "Canoe Fight."	Construction of Fort Claiborne at Randon's Landing.	Austill and Dale.
----------------------------	---	-------------------

at him during the whole conflict, and was now defiantly exclaiming "I am a warrior! I am not afraid to die!" and pinned him to the canoe with his bayonet. "He followed his ten comrades to the land of spirits," said the rugged Indian fighter afterward.¹

Thus resulted, after a struggle of about ten minutes, one of the most remarkable of naval and personal combats on record. Just as it ended, Dale's men came running to the bank, and shouted "Weathersford is coming!" He immediately crossed with his whole party, and made his way with them safely to Fort Madison. The fame of this exploit made Dale a hero of history, and the "canoe fight" is yet a theme for romance and song among the common people in the Southwest.²

At about this time Claiborne pushed across Clarke County to the Alabama for the purpose of establishing a deposit for supplies at Randon's Landing,³ awaiting there the arrival of Georgia and Tennessee troops, and to act as much as possible on the defensive, as circumstances might require. He marched with three hundred volunteers, some dragoons and militia, and a band of Choctaw Indians under General Pushmataha and Chief Mushullatubba. He crossed the Alabama on the 17th of November and encamped, and there he was joined on the 28th by the Third Regiment of national troops, under Colonel Gilbert C. Russell, from Mount Vernon. There Claiborne constructed a strong stockade two hundred feet square, with three block-houses and a half-moon battery that commanded the rear. It was intended as a deposit of provisions for the Tennessee troops above. It was completed before the close of November, when it received the name of Fort Claiborne, in honor of the commander. On its site, as we have observed, stands Claiborne, the capital of Monroe County, Alabama. From that point early in December Claiborne apprised General Jackson and Governor Blount of the establishment of this dépôt, and also of the arrival of more English vessels in Pensacola Bay, with many soldiers and Indian supplies. He said he "wished to God that he was authorized to take that sink of iniquity [Pensacola], the dépôt of Tories and instigators of disturbances on the Southern frontier."⁴

Claiborne now determined to penetrate the Creek country toward its heart, and share with Jackson and Coffee the honors of bringing the savages into subjection.⁵

¹ Pickett's *History of Alabama*, ii., 309. Claiborne's *Life and Times of General Sam. Dale*, page 121. When Claiborne wrote in 1860, Jeremiah Austill, one of Dale's companions, was a highly-esteemed commission merchant in Mobile, and he was still living when the writer of these pages visited that city in the spring of 1866. He had been a state senator of that district. All of the circumstances of the canoe fight here given were verified before the Alabama Legislature in 1821. Austill is a native of Pendleton District, South Carolina, where he was born on the 10th of August, 1794, and was only nineteen years of age at the time of the canoe fight. He is a son of Captain Evans Austill, already mentioned as one who remained with Dale in Fort Madison. He afterward became colonel of the militia, and is represented as a powerful man physically. James Smith, his companion in the canoe with Cæsar, was a native of Georgia, and was then twenty-five years of age. He was a daring frontier man, and died in East Mississippi several years ago. He and Austill tried hard to bring their canoe into the fight in aid of Dale, but the current prevented. "Their guns had become useless, and their only paddle had been broken," said Dale. "Two braver fellows," he continued, "never lived. Austill's first shot saved my life."

² Samuel Dale was a remarkable man. He was of Irish extraction, and was born in Rockbridge County, Virginia, in 1772. His father removed with his family to Glade Hollow, on the Clinch River, in 1776, and in 1784 emigrated to the vicinity of Greensburg, Georgia. Not long afterward Dale and his wife died, leaving eight children, Samuel being the eldest. He took part in movements for keeping in check the hostilities of the Creek Indians in the time of Washington's administration. He became a famous borderer and Indian fighter, and afterward a trader among the Creeks and the Cherokees. He was also a guide to parties emigrating to the Mississippi Territory from Georgia. During the war the Creeks now under consideration, he was very active and efficient. He received the commission of brevet brigadier general. After the war he settled at Dale's Ferry, on the Alabama, and engaged in merchandising. In 1816 he was a member of the Convention called to divide the Mississippi Territory, and the following year he was a delegate to the first General Assembly of the Territory of Alabama—the eastern portion of Mississippi. He served several terms in the Legislature of Alabama, and in 1824 he was on a committee of the body appointed to escort Lafayette to the capital of the state. He was engaged much in public life until his death, which occurred at his residence in Daleville, Lauderdale County, Mississippi, on the 24th of May, 1841, when he was in the seventieth year of his age.

³ See note 1, page 769. This was named from its owner, who perished in Fort Mills. It was in the county whence the hostile Indians procured most of their supplies.

⁴ This enterprise was deemed so hazardous that a memorial against it was signed by nine captains, eight lieutenants, and five ensigns of the Mississippi Volunteers in behalf of themselves and their men. They urged the feeble condition of the men, lack of provisions, clothing, blankets, and shoes, the inclemency of the weather, and the want of transportation through a country where there was not even a hunter's trail. Yet they expressed their willingness to follow the general if he should resolve to proceed. He did so resolve, and they cheerfully followed. "Not a murmur was heard; not a complaint was made," said General Claiborne afterward. "Subordination to their officers marked

⁵ Pickett's *Alabama*, ii., page 320.

Claiborne traverses the Creek Country.

Battle of Econochaca.

Escape of Weathersford.

On the 12th of December he left Fort Claiborne with a little army about one thousand strong, and marched in a northeasterly direction toward the present Lowndes County, Alabama. His force consisted of a detachment of Colonel Russell's regulars; Major Cassell's battalion of horse; a battalion of militia under Major Benjamin Smoot, of which Patrick May was adjutant, and Dale and Heard captains; the twelve months' Mississippi Volunteers under Colonel Carson; and one hundred and fifty Choctaws under General Pushmataha. After marching eighty miles he halted, and built a station for provisions, which he called Fort Deposit. It was in the present Butler County, Alabama. When this was completed, he pushed on nearly thirty miles farther through a pathless wilderness, with as little baggage and provisions as possible, and approached Econochaca, or Holy Ground, which was situated upon a bluff on the left bank of the Alabama, just below the present Powell's Ferry, in Lowndes County. The village had been built in an obscure place by Weathersford a few months before, and dedicated by the Shawnoese prophets whom Tecumtha had left to inflame the Creeks as a place of refuge for the wounded and dispersed in battle, fugitives from their homes, and women and children. No path or trail led to it, and the prophets assured their dupes that the ground on which Econochaca, like that of Auttose, stood, was so holy that no white man could tread upon it and live. There these savage priests performed horrid incantations, and in the square in the centre of the town the most dreadful cruelties had been already perpetrated. White prisoners, and Creeks friendly to them, had been burned to death there by the directions of those ministers of the Evil Spirit.

Claiborne was before Econochaca in battle order on the morning of the 23d of December.^a It was pretty strongly guarded in the Indian manner, and the inmates had no suspicion of danger. The prophets were busy with their incantations, and at that very hour a number of friendly half-bloods of both sexes were in the square, surrounded by resinous wood, ready to be consumed!

The troops advanced in three columns, with mounted men under Captains Lester and Wells acting as reserves. The right column was commanded by Colonel Carson, and consisted of twelve-months' volunteers; the centre was composed of a detachment of the Third Regiment United States Infantry, and some mounted riflemen under Lieutenant Colonel Russell; and the left of militia, and some Choctaws under Major Smoot. Their duty was difficult, for the town was almost surrounded by swamps and deep ravines, and the Indians, regarding the place as holy, and having property there of great value, were prepared to fight desperately. They had, on the approach of the invaders, conveyed their women and children to safe places in the thick forests of what is now known as the Dutch Bend of Autauga County, and they had no hinderances to a vigorous defense.

The three columns closed upon the town by a simultaneous movement. Carson's came in sight of it at noon, and was furiously attacked. It resisted the assault with great spirit, and before those of Russell and Smoot could get fairly into the fight, the dismayed Indians broke and fled. A larger portion of them escaped, owing to the failure of Major Cassell to occupy the bank of the Alabama, westward of the town, with his battalion of horse. They fled in droves along the bank of the river, and by swimming and the use of canoes, escaped to the other side, and joined their families in the Autauga forests. Weathersford, when he found himself deserted by his warriors, fled swiftly on a fine gray horse for the salvation of his own life. He was hotly pursued to a perpendicular bluff flanked by ravines, when his powerful steed made a mighty bound from it, and horse and rider disappeared beneath the water. They immediately rose, Weathersford grasping his horse's mane with one hand, and his

their every act, and no suffering could seduce them from their duty. Their patience was equal to their courage." Most of them were young men accustomed to the comforts and luxuries of life. Among them were Gerard W. Brandon and Abraham N. Scott, both afterward governors of the state.—Claiborne's *Life of Dale*, page 138.

rifle with the other. He regained his saddle in a moment, and the noble animal bore him safely to the Autauga shore.¹

General Claiborne laid Econochaca in ashes after it was plundered by the Choctaws. At least two hundred houses were destroyed and thirty Indians killed. The loss of the assailants amounted to only one killed and six wounded. After spending a day and two nights in the vicinity, completing the work of destruction and dispersion, and suffering much from wet and cold, the little army turned southward, and on the 29th^a reached Fort Claiborne. They had suffered much on the way, the officers and men alike subsisting chiefly on boiled acorns until they reached Fort Deposit.

^a December, 1813.

The term of Carson's Mississippi Volunteers and cavalry had now expired, and they were mustered out of the service. By this process the little army of volunteers and militia melted away, and on the 23d of January General Claiborne was compelled, in writing to the Secretary of War from Mount Vernon, to say that he had only sixty men left, and their time would soon expire. Colonel Russell and his regulars garrisoned Fort Claiborne, and did what they could in furnishing supplies to the Tennessee troops above; at the same time they made some unimportant raids in the Indian country, but without accomplishing any great results.

Let us now observe the movements of Jackson in the region of the Coosa and Tallapoosa Rivers. We left him at Fort Strother, comparatively inactive because of a lack of supplies and the discontents of his troops. Nor was this all. The terms of enlistment of most of his men were near expiration, and he saw before him, in the temper of his troops, the inevitable disintegration of his army at the moment when their services were most needed. He was urged by his chief, General Pinckney, to hold all the posts in his possession, for it was of vital importance to deprive the British of these new Indian allies. The skies at that moment appeared lowering. Seven sail of British vessels, with troops and two bomb-ships, were off Pensacola. New Orleans was menaced, and Mobile was in imminent danger. St. Augustine would doubtless be soon occupied by a British force, with the consent of the treacherous Spaniards; and in every direction clouds seemed gathering, portentous of dismal events in the southwest.

Thus closed the year 1814, while Jackson, with his army substantially disbanded, was looking anxiously toward Tennessee for another. He had written most stirring appeals for men and food, and the patriotic Governor Blount was doing all in his power to provide both. General Cocke had gone back to East Tennessee with orders to raise fifteen hundred men and rejoin Jackson in the Creek country; and a band of Cherokee Indians were garrisoning Fort Armstrong, on the upper waters of the Coosa. Jackson himself was continually in motion. Almost alone he traversed the wilderness between the Coosa and Tennessee, backward and forward, in endeavors to hasten onward supplies for the new army. At length the advance of that army began to appear. First came two (mostly mounted) regiments to Fort Strother, commanded by Colonels Perkins and Higgins, numbering about nine hundred men, who had been enlisted for only sixty days. They were raw recruits, yet Jackson determined to put them in motion toward the banded enemy immediately. That enemy, recovered somewhat from the late disasters, was showing an aggressive disposition which must be checked; and accordingly, on the 15th of January,^b Jackson led his new troops across the Coosa to the late battle-field at Talladega, where he was joined^c by two hundred Cherokee and Creek Indians, and Chief Jim Fife. He had brought with him an artillery company who had remained at Fort Strother when the other troops left, and a six-pounder. His whole force, exclusive of the Indians, was nine hundred and thirty. With these he made a raid ("excursion" the general called it) toward the Tallapoosa, preceded by two com-

^b 1814.

^c January 18.

panies of spies. He was accompanied by General Coffee, whose men had all deserted him but about forty, who now followed as volunteers. He reached the Hillabee Creek, on the eastern line of the present Talladega County, on the 20th, and encamped that night at Enotochopeo, in the southern part of Randolph County. On the following morning^a he pushed forward toward Emucfau, twelve miles distant, on the bend of the Tallapoosa, and toward evening, when near Emucfau Creek, fell upon a much-beaten trail, which indicated the proximity of a large force of Indians. Jackson thought it prudent to halt and reconnoitre. He disposed his troops in a hollow square, doubled his sentinels, sent out spies, and in every way took measures to meet an attack during the night. Toward midnight the savages were observed prowling about, and at the same time the general was informed that a large body of Indians were encamped within three miles of him, some engaged in a wardance, and others removing the women and children. An immediate attack seemed impending, and Jackson, fully prepared, calmly awaited it.

^b January 22. The night wore away, and the dawn approached, when, at six o'clock,^b the Indians fell suddenly and with great fury upon the left flank of Jackson's camp, occupied by the troops under Colonel Higgins. General Coffee was with them, and, under his direction, assisted by Colonel Sitler, the adjutant general, and Colonel Carroll, the inspector general, these new recruits fought gallantly, and kept the assailants in check. At dawn, when the whole field might be seen, they were reinforced by Captain Ferrill's company of infantry, and the whole body were led to a vigorous charge upon the savages by General Coffee, supported by Colonels Higgins and Carroll, and the friendly Indians. The savages were discomfited and dispersed, and fled, hotly pursued by the Tennesseans, with much slaughter, for full two miles.

Inspired by this success, Jackson immediately detached General Coffee, with four hundred men and the whole body of the Indians, to destroy the encampment of the foe at Emucfau. It was found to be too strongly fortified to be taken without artillery, so Coffee marched back for the purpose of guarding the cannon on its way to a position to bear upon the town. This retrograde movement encouraged the Indians, and a strong party of them fell upon the right of Jackson's encampment. Coffee at once asked and obtained leave to lead two hundred men to the support of that wing, and to fall upon the left of the foe, while the friendly Indians should fall upon their right flank at the same moment. By some mistake only fifty-four men followed Coffee. The gallant general fell upon the Indians with these, and Jackson ordered two hundred of the friendly Indians to co-operate with him by attacking the right flank of the savages. "This order was promptly obeyed," said Jackson in his report, "and on the moment of its execution what I expected was realized. The enemy had intended the attack on the right as a feint, and, expecting to direct my attention thither, meant to attack me again, and with their main force, on the left flank, which they had hoped to find weakened and in disorder. They were disappointed." The general, with wise discretion, had not only ordered his left to remain firm, but had repaired thither himself, and directed a part of the reserves, under Captain Ferrill, to hasten to its support. In this way the whole main body met the advancing enemy. They gave the foe two or three volleys, and then charged them vigorously with the bayonet. The Indians broke, and fled in confusion, hotly pursued some distance; and the friendly Indians, unable to withstand the temptation, left their post on the right flank and joined in the chase, all the while pouring a harassing fire upon the fugitives.

General Coffee in the mean time was struggling manfully against the assailants on the right of the encampment. The desertion of his Indian supporters placed him in a critical situation, for the odds were greatly against him. He was soon relieved by the return from the chase of Jim Fife and a hundred of his warriors, who were immediately summoned to his support. The aid was timely. Coffee and his little party

Jackson's retrograde Movement.

Battle on Enotochopco Creek.

A severe Contest.

charged the savages vigorously, who, dispirited by the flight of their main body, gave way, and ran for their lives in every direction, many of them falling before the destructive weapons of the pursuers. The victory, in the form of a repulse, was complete, but it had been won at the cost of a severe wound in his body by General Coffee, and the loss of his aid-de-camp, Colonel A. Donelson, and two or three others. Several of the privates were also wounded.

Jackson was astonished at the courage and bravery of the Creeks, and thought it prudent to abandon any farther attempts to destroy the encampment at Emucfau. His movement was simply a raid, with the twofold object of striking a quick and destructive blow at the enemy, and to make a diversion in favor of General Floyd, then in the vicinity of the Chattahoochee. He therefore determined to return to Fort Strother.

At ten o'clock on the morning of the 23d the retrograde march commenced, and the little army reached Enotochopco Creek before sunset, and there planted a fortified camp for the night. Great vigilance was exercised, and no serious molestation was observed during the darkness. Well rested, the troops moved forward early the next morning. The savages, who had interpreted this movement as a flight, had followed stealthily, and, just as the advanced guard and part of the flank columns, with the wounded, had crossed the creek,^a they appeared suddenly in force on their rear. The firing of an alarm-gun brought them to a halt, when Jackson immediately changed front, and prepared to meet the foe in good battle order. He placed Colonel Carroll at the head of the centre column of the rear-guard, its right commanded by Colonel Perkins, and its left by Colonel Stump. He chose his own ground for battle, and expected to have entirely cut off the enemy by wheeling the right and left columns on their pivots, recrossing the creek above and below, and falling in upon their flanks and rear. To Jackson's great astonishment, his troops, who had behaved so well at Emucfau, now failed; and when the word was given for Carroll to halt and form, and a few guns had been fired, the right and left columns of the rear-guard precipitately gave way and made a disastrous retreat. They drew along with them a greater part of the centre column, leaving not more than twenty-five men to support Carroll. These maintained the ground gallantly, and order was soon restored. The battle was now sustained by only this handful of the rear-guard under Captain Quarles, the artillery company under Lieutenant Robert Armstrong, and Captain Russell's company of spies. The solitary 6-pounder that composed the heavy ordnance of the expedition was dragged to the top of a hill in the midst of a galling fire from ten times the number of the Tennesseans engaged, when they poured upon the foe a storm of grape-shot that sent them yelling with affright in every direction.¹ They were pursued more than two miles by Colonels Carroll and Higgins, and Captains Elliott and Pipkin. The venerable Judge Cocke, then sixty-five years of age, was in the engagement, and joined in the pursuit with all the ardor of youth. The slaughter among the Indians was heavy, while that among the Tennesseans was comparatively light. The exact number of casualties among the latter was not recorded. Captain Hamilton, from East Tennessee, was killed, and Lieutenants Robert Armstrong, Bird Evans, Hiram Bradford, and Jacob M'Givock, and Captain Quarles, were wounded. Evans and Quarles soon afterward died. In the two engagements, Emucfau and Enotochopco, Jackson's entire loss was twenty killed and seventy-five

¹ The gallantry of two young men in this engagement deserves a record. These were Constantine Perkins and Craven Jackson. The former was a graduate of Cumberland (Tennessee) College, was with Jackson at the battle of Talladega, and was one of the few who refused to desert him at Fort Strother. In the hurry and confusion in separating the cannon from the limber, the rammer and picker of the piece were left behind. In the midst of the shower of bullets from the Indians, Jackson coolly pulled out his iron ramrod from his musket and used it as a picker, primed with a cartridge from his side, and fired the cannon. Perkins then slipped off his bayonet, used his musket for a rammer, and drove down the cartridge for another discharge. These two brave young men kept the field-piece working, and drove the savages to the deep forest. Armstrong lay wounded near by, and called out to those around the piece, "My brave fellows, some of you may fall, but you must save the cannon!"

Jackson at Fort Strother.

Battle on the Calebee River.

The Georgians retire to their Frontier.

wounded. The loss of the enemy was not accurately ascertained. One hundred and eighty-nine of their warriors were found dead.¹

Jackson made his way back to Fort Strother^a after an absence of twelve days, not perfectly satisfied with the results of his raid, yet he presented it to the public in the best aspect possible. His force was almost double that of the Indians, for at that time the larger proportion of them were below, watching the movements of Floyd and his Georgians, while a considerable force were strongly fortifying the Horseshoe, and other places, preparatory to a desperate defensive war. His expedition, however, had been useful, and General Pinckney, in a letter to the War Department,^b said, "Without the personal firmness, popularity, and exertions of that officer, the Indian War on the part of Tennessee would have been abandoned, at least for a time."

We will leave Jackson at Fort Strother a few moments while we consider the movements of Floyd below. We left that officer at Fort Mitchell, on the Chattahoochee.

Floyd reposed more than six weeks awaiting supplies, and during that time recovered of his wound received at Auttose. Then he marched toward Toockabatcha, on the Tallapoosa, with over twelve hundred Georgia volunteers, a company of cavalry, and four hundred friendly Indians. He established communicating posts on the way, and at length, on the night of the 26th of January, encamped on the Calebee or Chalibee River, on the high land bordering the swamp of that name, in Macon County, Alabama, fifty miles west of Fort Mitchell. The camp was carefully watched, but in the gloom, more than an hour before the dawn of the following morning, a band of Creeks, who had stealthily assembled in the swamp during the night, shot the sentinels, and pounced like fierce tigers on Floyd's front and flank. The attack was sudden, yet not unprepared for, and the savages were gallantly opposed, in the front, by the artillery under Captain Jett Thomas, riflemen commanded by Captain William E. Adams, and a picket-guard led by Captain John Broadnax.

The foe rushed desperately up within thirty yards of the cannon, and smote the troops severely. Broadnax and his party were cut off from their companions for a while, but with the aid of the half-blood chief Timpoochy Barnard, leader of some Uchees, they cut their way through the encircling savages. Most of the other Indians took shelter in the camp, and were scarcely felt in the battle, which was contested fiercely in the darkness, which was rendered more intense by the umbrageous branches of the heavy pine forest in which they were fighting. When daylight came, and Floyd was enabled to survey the field of action, the contest was soon ended. The general ordered the right wing of his little army, composed of the battalions commanded by Majors Booth, Cleveland, Watson, and Freeman, and a troop of cavalry under Captain Duke Hamilton, to charge on the foe. The Indians were dismayed by the glittering bayonets, and fled in great terror. The infantry pursued, and the cavalry joined in the exciting chase, followed by the friendly Indians and Meriweather's and Ford's riflemen. They were chased through the swamp, and many of the fugitives were slain. They left thirty-seven dead in the pathway of their flight. The Georgians lost seventeen killed and one hundred and thirty-two wounded, and the friendly Indians had five men killed and fifteen wounded. Colonel Newman, a gallant officer, was wounded by three bullets and disabled, at the beginning of the action.

Floyd's wounded were so many, and the hostile Indians in his vicinity were so numerous, and might be speedily re-enforced, that he prudently concluded not to penetrate the country farther, but to fall back to the Chattahoochee. On the day of the battle he retired to Fort Hull, one of his newly-erected stockades, and on the following day the Indians occupied the late battle-field. Leaving a small garrison at Fort

East Tennesseans on their Way to the Creek Country. The Choctaw Allies in Arms. Preparation of the Creeks.

Hull, the general continued his retrograde movement to Fort Mitchell, where his men were honorably discharged, their term of service having expired. No other expedition against the Creeks was organized in Georgia.

Let us now return to Jackson at Fort Strother.

On his return from his twelve days' "excursion" or raid to the Tallapoosa, Jackson set his few militia that remained to constructing flat-boats in which to bring supplies down the Coosa, and to transport them to regions below, where materials for his new army were rapidly approaching from Tennessee. He discharged the troops who had been with him on the late expedition, their term of service being about ready to expire. They left for home full of admiration of and enthusiasm for their general, and their return gave a new impetus to volunteering. At the beginning of February two thousand troops from East Tennessee were in the shadows of Lookout Mountain, pressing on toward the Coosa, and at about the same time as many more West Tennesseans arrived at Huntsville.

Intelligence of these approaching troops filled Jackson's heart with gladness. His joy was increased by the arrival on the 6th, at Fort Strother, of Colonel Williams and the Thirty-ninth Regiment of the United States Army, six hundred strong, who had been induced to hasten to the relief of Jackson by the late Honorable Hugh L. White, of East Tennessee. Very soon afterward a part of Coffee's brigade of mounted men came into Fort Strother, and also a troop of East Tennessee dragoons. The Choctaw Indians now openly espoused the cause of the United States; and before the close of February Jackson found himself at the head of an army of five thousand men, lacking nothing to enable them to sweep the whole Creek country with the besom of destruction but adequate supplies of food. Great exertions were put forth successfully to that end, and at the middle of March every thing was in readiness for a forward movement.

The hostile Creeks were aware of the formidable preparations for their subjugation, and were, at the same time, taking measures to avert, if possible, the impending blow. They had suffered severely at the hands of Jackson, Floyd, and Claiborne, and had already begun to have such premonitions of national disaster that they determined to concentrate their forces, and rest their fortunes upon the cast of the die of a single battle with the foe. For this purpose the warriors of the Hillabee, Ockfuske, Eufaulahache, New Youka, Oakchoie, Hickory Ground, and Fish-pond towns had gathered in the bend of the Tallapoosa, in the northeast part of Tallapoosa County, Alabama, called Tohopeka, or the Horseshoe, the river there assuming the shape of that object, forming a peninsula of about one hundred acres. By the aid of white men from Pensacola, and some hostile half-bloods, they built a very strong breastwork of logs across the neck of the peninsula, and pierced it with two rows of port-holes arranged in such manner as to expose the assailants to a cross-fire from within. Back of this breastwork was a mass of logs and brush; and at the bottom of the peninsula, near the river, was a village of log huts, where hundreds of canoes were moored at the banks of the stream, so that the garrison might have the means of escape if hard pushed. A greater portion of the peninsula was covered with forest. The Indians had an ample supply of food for a long siege. Their number was about twelve hundred, one fourth being women and children. There the Indians determined to defend themselves to the last extremity. They regarded their breastwork as impregnable, and were inspired by recent events at Emuckfau (about four miles distant) and Enotochopco.

When Jackson was informed by some friendly Indians of the gathering of the Creeks at the Horseshoe, he resolved to march thither immediately and strike an exterminating blow. He sent his stores down the Coosa in flat-boats, in charge of Colonel Williams and his regiment of regulars, and leaving a garrison of four hundred and fifty men in Fort Strother, under Colonel Steele, he commenced his march with

Jackson marches upon the Savages at the Horseshoe.

A desperate Battle there.

Bravery of both Parties.

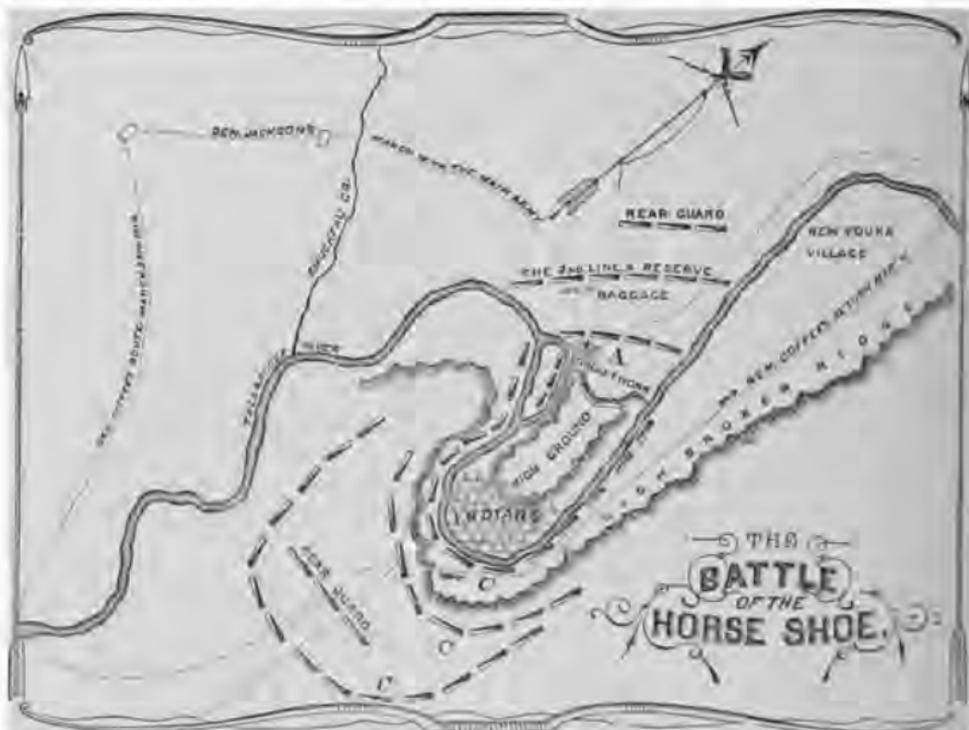

journey was slowly performed, for much of the way a road had to be cut through the woods. On the 21st they were at the mouth of Cedar Creek, where they were joined by the supply-boats the next day, and there Fort Williams was built to keep open the communication with Fort Strother. Then Jackson pushed on eastward, and early on the morning of the 27th halted within a few miles of the breastworks at the Horseshoe, and sent out parties to reconnoitre. His army now numbered about two thousand effective men.

Jackson's spies informed him of the position of the Indians, and he at once comprehended the folly which had permitted them to assemble in a pen, as if offering facilities for him to carry out his threat of extermination. He sent General Coffee, with all the mounted men and friendly Indians, to cross the river about two miles below the Bend, and take position on the bank opposite the village and boats. When, by signal, he was certified of the execution of his order, he went forward with the main body of his army toward the peninsula, and planted two field-pieces upon a little hill within eighty yards of the nearest point of the fortifications on the neck. At a little past ten o'clock these opened fire on the works, under the direction of Captain Bradford, chief engineer, but without seriously affecting the wall. As the small balls were buried in the logs and earth, the Indians set up a shout of derision, and the general was fairly defied.

Simultaneously with the attack on the Indians' breastworks, some of the Cherokees with Coffee swam across the river, seized the canoes, paddled back in them, and full two hundred men were at once conveyed over the stream, and, under the direction of Colonel Morgan and Captain Russell, set the little town on fire, and moved against the enemy in the rear of their works. The smoke from the burning huts assured Jackson that all was going on well in that quarter, but the slackening of the assailants' musketry gave evidence that they were too few to dislodge the savages, and were probably in peril. The general at once determined to storm the breastworks which he had been battering for full two hours with cannon-balls almost in vain. The Thirty-ninth United States Infantry, under Colonel Williams, formed the van of the storming party. They were well supported by General James Doherty's East Tennessee brigade under Colonel Bunch, and the whole assailing party behaved most gallantly. They pressed steadily forward in the face of a deadly storm of bullets and arrows, and maintained for some time a hand-to-hand fight at the port-holes. This desperate conflict lasted several minutes, when Major L. P. Montgomery leaped upon the breastwork, and called upon his men to follow. They did so, and at the same moment he fell dead with a bullet in his head. Ensign Sam Houston, a gallant youth at his side, was severely wounded in the thigh at the same time by a barbed arrow, but he leaped boldly down among the savages, and called upon his companions to follow. They did so, and fought like tigers. Very soon the dexterous use of the bayonet caused the Indians to break, and flee in wild confusion to the woods and thickets. They had fought bravely under great disadvantages, and believing that torture awaited the captive, not one would suffer himself to be taken, or asked for quarter. Some attempted to escape by swimming across the river, but were shot by the unerring bullets of the Tennesseans. Others secreted themselves in thickets, and were driven out and slain; and a considerable number took refuge under the river bluffs, where they were covered by a part of the breastworks and felled trees. To the latter Jackson sent word that their lives should be spared if they would surrender. The summons was answered by a volley that sent the messenger (an interpreter) back bleeding from severe wounds. A cannon was then brought to bear upon the stronghold, but it made little effect. Then the general called for volunteers to storm it, and the wounded Ensign Houston¹ was the first to step out. While reconnoitring

the position above, he received from the concealed savages two bullets in his shoulder, and he was borne helpless away. Others lost their lives in attempts to dislodge the foe. It was conceded that the place was impregnable to missiles, so the torch was applied, and the savages, as they rushed wildly from the crackling furnace, were shot down without mercy by the exasperated riflemen. The carnage continued until late in the evening, and when it was ended five hundred and fifty-seven Creek warriors lay dead on the little peninsula. Of the thousand who went into the battle in the morning not more than two hundred were alive, and many of these were severely wounded.¹ Jackson's loss was thirty-two killed and ninety-nine wounded. The Cherokees lost eighteen killed and thirty-six wounded. Among the slain were Major Montgomery² and Lieutenants Moulton and Somerville. The spoils of victory were over

lature of the United States. He was a remarkable man. He was born in Rockbridge County, Virginia, on the 2d of March, 1793, and, while yet a child, he went with his widowed mother to Tennessee. He spent several years with the Cherokee Indians, and became enamored with their roving, restless life. He enlisted in the army in 1813, and at the close of the war had reached the position of lieutenant. Then he studied law at Nashville, and there commenced his long political life. In 1823 he was elected to Congress, and continued in that body until 1827, when he became Governor of Tennessee. Before the expiration of his term he resigned, and took up his abode among the Cherokees in Arkansas, where he befriended them much in their intercourse with dishonest agents of the Government. He became commander-in-chief of the little army of revolutionists in Texas, which achieved its independence in 1836. He was twice elected president of that republic, and when Texas was annexed to the United States he was sent as her representative to the Senate, where he remained until just before the breaking out of the great Civil War, when he was Governor of Texas. He died in November, 1863, aged seventy years.

¹ Pickett relates (*History of Alabama*, ii., 343) that many suffered long from grievous wounds. "Manowa," he says, "one of the bravest chiefs that ever lived, was literally shot to pieces. He fought as long as he could. He saved himself by jumping into the river where the water was four feet deep. He held to a root, and thus kept himself beneath the waves, breathing through the long joint of a cane, one end of which he held in his mouth, while the other end came above the surface of the water. When night set in, the brave Manowa rose from his watery bed, and made his way to the forest, bleeding from many wounds. Many years after the war we conversed with the chief, and learned from him the particulars of his remarkable escape. His face, limbs, and body, at the time we conversed with him, were marked with scars of many horrible wounds."

² Lemuel Purnell Montgomery was born in Wythe County, Virginia, in 1786, and was distantly related to the hero of

Jackson retires from the Fields of Conflict. The subdued Indians sue for Peace. Weathersford in Jackson's Tent.

three hundred widows and orphans who were made prisoners. The blow was appalling, and fatal to the dignity and power of the Creek nation.

On the morning after the battle^a at the Horseshoe Jackson commenced a retrograde march toward Fort Williams, carrying his wounded with him on litters, and leaving the bodies of most of his dead beneath the waters of the Coosa, safe from desecration by savage hands. They were five days on the way, and during as many more they rested there. They encountered some hostile Indians on the march, but they generally fled at their approach. The spirit of the proud Creeks was broken, and they had no heart to make a defensive stand any where.

From Fort Williams Jackson pushed on toward the Hickory Ground of the Creeks, at the confluence of the Coosa and Tallapoosa Rivers, over a country flooded by spring rains and swollen streams, and halted at the head of the peninsula, where the rivers approach each other within six hundred yards before uniting four miles below. There, on the sight of Fort Toulouse, erected by Governor Bienville a hundred years before, he built a stockade, cleaned out and deepened the old French entrance, and raised the national standard over a fortification named, in his honor, Fort Jackson. Thither deputation after deputation of humiliated Creek chiefs made their way to sue for pardon and peace in behalf of themselves and their people. They were received with courtesy, yet with sternness. "Give proof of your submission," said the general, "substantially by going and staying above Fort Williams, where you will be treated with, and the final demands of my Government will be made known to you. But you must first bring in Weathersford, the cruel leader of the attack on Fort Mims, who on no account can be forgiven." They cheerfully complied; but little did Jackson know the true character of Weathersford, or the plasticity of his own nature at that time.

Weathersford did not wait to be caught and dragged like a felon to the feet of the leader of the pale faces. He was a stranger to fear, and sagacious in plans. He saw clearly the flight of hope for his nation, at the Horseshoe, and resolved to submit. Mounting his fine gray horse, with whom he leaped from the bluff at the Holy Ground,¹ he rode to Jackson's camp. He arrived just at sunset.^b The general was alone in his tent when the chief entered it, drew himself up to his full height, and, folding his arms, said, "I am Weathersford, the chief who commanded at Fort Mims. I have nothing to request for myself. You can kill me if you desire. I have come to beg you to send for the women and children of the war-party, who are now starving in the woods. Their fields and cribs have been destroyed by your people, who have driven them to the woods without an ear of corn. I hope that you will send out parties who will conduct them safely here, in order that they may be fed. I exerted myself in vain to prevent the massacre of the women and children at Fort Mims.² I have come now to ask peace for my people, but not for myself."³ Jackson expressed astonishment that one so guilty should dare to appear in his presence and ask for peace and protection. "I am in your power; do with me as you please," the chief haughtily replied. "I am a soldier. I have done the white people all the harm I could. I have fought them, and fought them bravely; and if I had an army I would yet fight, and contend to the last. But I have none. My people are all gone. I can now do no more than weep over the misfortunes of my nation."

the same name who fell at Quebec at the close of 1775. His family settled originally in North Carolina, and were Scotch-Irish. In early life the major became a resident of East Tennessee, near Knoxville. He studied law, and became a rival of the eminent Felix Grundy. He was a daring horseman, and full of soldierly qualities. President Madison appointed him major of the Thirty-ninth Regiment, and he fell at their head when storming the breastworks at the Horseshoe, as we have observed in the text. Jackson wept over his body like a child, and exclaimed, "I have lost the flower of my army!" He was buried near where he fell, and in long after years the citizens of Tallapoosa County honored his memory by exhuming his remains, and burying them with military ceremonies at the capital of the county. The County of Montgomery and the political capital of the State of Alabama were named in honor of this brave soldier.—Pickett.

¹ See page 772.

² See an account of his exertions on page 756.

³ Weathersford's appeal for the women and children was kindly responded to, and not only to the women and children, but to the remnant of the nation succor was given. For a considerable part of the ensuing summer, five thousand Creek Indians drew rations from the public stores. But for this aid a large number of them must have perished by starvation.

Weathersford's manly Talk.

Jackson admires and releases him.

The Creek Nation ruined.

Here was a man after Jackson's own heart. A patriot who loved his people, had fought to protect the land of his birth from the invader, and now fearlessly expressed his patriotism in the presence of one who had power over his life. Jackson immediately informed him that submission and the acceptance of a home beyond the Mississippi for his nation was the only wise policy for him to pursue. He added, "If, however, you desire to continue the war, and feel prepared to meet the consequences, you may depart in peace, and unite yourself with the war-party, if you choose." Half scornfully, half sorrowfully, Weathersford replied, "I may well be addressed in such language now. There was a time when I had a choice and could have answered you; I have none now—even hope is ended. Once I could animate my warriors to battle, but can not animate the dead. My warriors can no longer hear my voice. Their bones are at Talladega, Tallasehatche, Emucfau, Econochopco, and Tohopeka. I have not surrendered myself thoughtlessly. While there was a chance for success I never left my post nor supplicated peace. But my people are gone, and I now ask it for my nation, not for myself. On the miseries and misfortunes brought upon my country I look back with deepest sorrow, and wish to avert still greater calamities. If I had been left to contend with the Georgia army, I would have raised my corn on one bank of the river and fought them on the other. But *your* people have destroyed my nation. You are a brave man; I rely upon your generosity. You will exact no terms of a conquered people but such as they should agree to. Whatever they may be, it would now be folly and madness to oppose. If they are opposed, you will find me among the sternest enforcers of obedience. Those who would still hold out can be influenced only by a mean spirit of revenge, and to this they must not and shall not sacrifice the last remnant of their country. You have told our nation where we might go and be safe. This is good talk, and they ought to listen to it. They *shall* listen to it."¹

Thus spoke the truly noble Weathersford for his nation. Words of honor responded to words of honor, and Weathersford was allowed to go freely to the forest to search for his scattered followers and counsel peace. But there was no safety for him in that region, for the relatives of those massacred at Fort Mims sought to kill him. He fled, and remained away until the end of the war, when he returned, and became a respected citizen of Alabama.²

General Pinckney arrived at Fort Jackson on the 20th of April with troops from North and South Carolina. Informed of the general submission of the Creeks, and considering the war virtually at an end, he directed the West Tennesseans to march home, and four hundred of General Doherty's brigade to garrison Fort Williams. The order to the West Tennesseans was so gladly and promptly obeyed that within ^{April 21,} two hours after its utterance¹⁸¹⁴ they were in motion up the Coosa. They pushed forward with great celerity, crossed the Tennessee River, and at Fayetteville were discharged. There Jackson bade them farewell in a stirring address, and then hastened to his own home at the "Hermitage," near Nashville, and indulged a short time in needed repose.

Here we will leave the consideration of the fearfully-smitten Creeks for the present, with the remark that they showed themselves to be a brave people, and, on many accounts, deserving of the respect of mankind.

¹ Drake's *Book of the Indians*, eleventh edition, page 390.

² Weathersford settled upon a farm in Monroe County, Alabama, well supplied with negro slaves, where he maintained the character of an honest man. Soon after his return he married, and General Sam Dale, frequently mentioned in this chapter, was his groomsman. His birth-place was the Hickory Ground, but he could not live there. He said that his old comrades, the hostile Creeks, ate his cattle from starvation, the peace-party ate them from revenge; and the squatters because he was "a damned Red-skin;" so, he said, "I have come to live among gentlemen."—See *Life of General Sam Dale*, page 120. Weathersford died from the effects of fatigue produced by a desperate bear-hunt in 1836.

CHAPTER XXXV.

" Farewell Peace ! Another crisis
Calls us to ' the last appeal,'
Made when monarchs and their vices
Leave no argument but steel.
Let not all the world united
Rob us of one sacred right :
Every patriot heart's delighted
In his country's cause to fight."—OLD SONG.

IT is proper here, before resuming a narrative of military events in the North, to take a brief survey of civil affairs in 1813.

In conformity to a law passed in February^a pre-
ceding the inauguration of Mr. Madison, the Thir-
teenth Congress assembled on the 24th of May, when Henry Clay was chosen Speaker of the House of Representatives. In that body ardent young men like Cheves, Calhoun, Lowndes, Grundy, and Troup had become leaders. Quincy had declined a re-election, but the extreme Federalists were well represented

^a February 26, 1813.

by the venerable patriots of the Revolution, Timothy Pickering and Egbert Benson. There was a strong administration working party in both houses, and the President felt well supported, notwithstanding there had been decided gains for the peace-party in New England at the spring elections. But in New York, where the Federalists were expecting a triumph, they had been defeated, and New Jersey, and Pennsylvania, and all of the slave-labor states, and their children in the Mississippi Valley, were decided friends of the administration.

With his message the President sent into Congress a letter from the Emperor of Russia offering his mediation. The President stated that it had been accepted by the government; that commissioners had been appointed to conclude a treaty of peace with persons clothed with like powers on the part of the British government, and that two of the American commissioners (Albert Gallatin and James A. Bayard) had already departed for St. Petersburg, there to meet John Quincy Adams, a third commissioner. While the President expressed a hope that a speedy peace might be the result, he conjured Congress to shape legislation as if the object might be obtained only by a vigorous prosecution of the war. He called attention, in a special manner, to the national finances, which were not in a promising condition, and laid before Congress an estimate of expenses for the year 1813, to the amount of about thirty million dollars.¹

The subject of an increase of internal revenue and of direct taxation had been agitated a little, but was deferred until after the Presidential election. Now the administration party felt strong enough to try these measures. Bills for the imposition of taxes and excise were adopted, and a new loan was authorized. No effort was spared for providing adequate means for the vigorous prosecution of the war, and only in New England was a voice of serious opposition heard. Governor Strong, of Massachusetts, denounced the war as cruel and unjust, and urged the Legislature to adopt measures for bringing about a speedy peace. The two houses being in political accord with the governor, they agreed to a remonstrance, in which they, too, declared

¹ The civil list for the year, \$900,000; payment of principal and interest on the national debt, \$10,510,000; and for the War and Navy Departments, \$17,820,000; making a total of \$29,230,000.

The War Policy denounced. Illicit Traffic considered. Recent Events auspicious. The Peace Party.

the farther prosecution of the war to be impolitic and unjust, and implored Congress to adopt measures for arresting it. They declared that they were influenced only by a sense of duty to the Constitution and the country, and appealed to God as a witness of the rectitude of their intentions. This remonstrance was presented to the

^a June 19, 1813, House of Representatives^a by Timothy Pickering. It was courteously received on account of that venerable man, when it was laid on the table, and there remained during the rest of the session, but excited much remark and severe condemnation throughout the country.¹

During the session effectual measures were taken for stopping a traffic carried on extensively by American merchant vessels, disguised as neutrals, with the British West India Islands and ports of Spain under licenses issued by the British government, by which they gave aid and comfort to the enemy, and injured their country. Congress also considered the charges of cruel and unusual conduct on the part of the British in making war, and a committee was appointed, with the eminent Nathaniel Macon, of North Carolina, as chairman, to gather information on the subject. Their

Nathaniel Macon

report, now on file at the national capital, is a melancholy picture of wrongs and outrages, especially in the Northwest where savages were employed, and on the Virginia coast.²

The special business of Congress at this early session was the providing of means for prosecuting the war vigorously. This was accomplished before the close of July, and that body adjourned on the 2d of August^b to reassemble on the 6th of ^c 1813. December. Before that meeting very important events had occurred, which have already been recorded in these pages, such as Harrison's campaign for the recovery of Michigan; Perry's victory on Lake Erie; Chauncey's operations on Lake Ontario; victories on the ocean; Wilkinson's unfortunate campaign on the St. Lawrence border; and Jackson's operations in the Creek country. England had refused to accept the mediation of Russia on the terms proposed, and peace seemed more remote than ever; and the National Legislature perceived that the honor, prosperity, and perhaps the very existence of the republic depended upon a vigorous prosecution of the war. This conviction was forcing itself upon every thoughtful mind even in New England, and the opposition of magistrates and law-makers was severely condemned as unpatriotic and shameful. The nation was involved in a war with a powerful, truculent, and haughty foe, and every right-minded man felt that it was the duty of every good citizen to lay aside his political prejudices, and to do all in his power to extricate his country from its serious trouble by first vanquishing the enemy with vigorous blows, and then treating with him as an equal for an honorable peace. Yet the peace-party was powerful and active in New England, and endeavored to convince the people of that section that the administration was a tyrant intent upon their injury. They pointed to the sad fact of the interference with their commerce, navigation, and fisheries; and the people were reminded that for years the Government, under the guidance of Virginia politicians, had been controlled by the planting interest in the slave-labor states by whom the war had been kindled. They justly complained that the statesmen of the free-labor states, and especially of New England, had been proscribed, and denied a share in the management of public affairs,

¹ Compare this action of the Massachusetts Legislature with a statement of its doings recorded in note 1, page 706.
² See page 683.

A revolutionary Proposition.

Condition of the Country.

A new Embargo Act.

and that the national government had left them wholly unprotected while war was at their doors, their coasts blockaded, and their sea-port towns exposed to instant destruction. In view of these undeniable facts, some of the popular leaders suggested the propriety of the New England States taking care of themselves, irrespective of the national welfare, by concluding a separate peace with Great Britain, and allowing the states beyond and south of the Hudson River to fight as long as they pleased. This revolutionary proposition did not find favor among patriotic men.

Such was the general aspect of public affairs when Congress met in December. The tone of the President's message to that body was hopeful and even joyous, for the late achievements of the national power gave promises of great good. Financial matters were quite as favorable as when Congress adjourned in August. Abundant harvests had rewarded the labors of the husbandman. The people were becoming more and more a unit in opinion concerning the righteousness of the war on the part of the Government, and its beneficial effects in developing the internal resources of the country; also in demonstrating the ability of a free government to protect itself against a powerful foe. "The war," said the President in his message, "is illustrating the capacity and the destiny of the United States to be a great, a flourishing, and a powerful nation, worthy of the friendship which it is disposed to cultivate with all others, and authorized by its own example to require from all an observance of the laws of justice and reciprocity."

In a confidential message^a the President recommended the passage of an Embargo Act to prevent supplies being furnished to the enemy from American ports by unpatriotic men, and the introduction of British manufactures in professedly neutral vessels. Such traffic was extensively carried on, especially in New England, where the magistrates were often willingly lenient toward violators of restrictive laws already in operation. A bill, in accordance with the President's suggestions, was passed by both houses of Congress on the 17th,^b the provisions of which were excessively stringent. It was provided that the act should remain in force until the 1st of January, 1815, unless hostilities should sooner cease.¹

^a December 9, 1813.

^b December.

¹ It prohibited, under severe penalties, the exportation, or an attempt at exportation, by land or water, of any goods, produce, specie, or live-stock; and, to guard as fully as possible against evasions, even the coast-trade was so entirely prohibited that it became necessary to pass an act afterward to prevent the crews of coasters, intercepted by the embargo when away from home, to employ their empty vessels as vehicles for their return to port. This provision bore very severely on the towns of the New England sea-board, for many of them depended on the coasting vessels for fuel, and other necessary articles. Their supply was suddenly stopped by it in the heart of winter. No transportation was allowed even on inland waters excepting by the special permission of the President. Wide latitude was given to custom-house officials and cruisers in the seizure of suspected goods; and fishermen were not allowed to go out without giving bonds not to violate the Embargo Act. "The effect of the measure," said the *National Intelligencer* of December 23, "will be to curtail our enemies of necessary supplies precisely to the amount of our exports, except the very small proportion of them which found their way to the ports of France. It can essentially injure no honest man—no man who would disdain to afford aid and comfort to the enemies of his country. . . . Speculators, knaves, and traitors shall no longer enrich themselves at the expense of the community."

A spirited caricature of the effect of this Embargo Act was designed and engraved by Dr. Alexander Anderson (see note 1, page 787) for David Longworth, a highly-esteemed publisher of New York. It will be recollected that a former embargo, during Jefferson's administration (see page 162), was called by the Opposition, or Federalist party, "a rapist policy." That idea is embodied in the caricature before us, in which the Embargo Act of 1813 is personified by a

Napoleon humbled.

Rumors of Peace.

Repeal of the Embargo Act.

Very soon after the promulgation of the Embargo Act, intelligence came from Europe which caused a change in the views of the administration concerning the necessity for the measure. An English flag of truce schooner arrived at Annapolis, Maryland, at the close of December, with the news of great disasters to Napoleon in the field. His triumphant march toward the German Ocean and the Baltic had been checked in a great battle at Leipsic, and he had been compelled to fall back across the Rhine with his magnificent army sadly shattered. Thoughtful men supposed the hour of the conqueror's downfall to be near, and reasonably concluded that such an event would allow the British government to withdraw its soldiers from the Continent and send them hither. The schooner also brought official assurance to our government that the British Cabinet was willing to treat for peace, and accept the mediation of Russia upon certain conditions. In his letter to Secretary Monroe communicating this fact, Lord Castlereagh was careful to say that his government was willing to treat with that of the United States "upon principles of perfect reciprocity *not inconsistent with the established maxims of public law¹ and with the maritime rights of the British empire.*" The Prince Regent, in his speech at the opening of Parliament, had used similar language on the subject.² He was willing to treat directly with the United States government through commissioners, but was unwilling to "accept the interposition of any friendly power *in the question which formed the principal object of dispute between the two states.*" Notwithstanding it was evident that the British government did not mean to recede a line from its assumptions concerning the right of search and impressment, and proposed the opening of negotiations at London, or at some point on the Continent near Great Britain, the President, sincerely desiring peace on honorable terms, acceded to the proposition of the prince, and nominated Henry Clay and Jonathan Russell as additional commissioners; and the five,³ by the concurrent action of the Senate in January,⁴ were duly commissioned to treat for peace, at Gottenburg, with British representatives.⁴

This movement toward peace, and the prospect of a general pacification of Europe, made the Opposition clamorous for a repeal of the Embargo Act. These considerations, and a desire to increase the revenue by impost duties so as to fully sustain the public credit, caused the President to recommend^b such repeal. That recommendation was hailed with great delight throughout the country, and an act of Congress for the repeal of the measure became a law on the 14th of April

huge terrapin, who seizes a violator of the law by the seat of his breeches. It was aimed at the New England people, who, it was alleged, were continually supplying the British cruisers with provisions, and thereby saving their coast from that devastation to which those of the Delaware and Chesapeake Bays had been subjected, and also putting money in their pockets by the infamous traffic. A British vessel of war is seen in the distance, with a boat, on the arrival of the knave with a barrel of flour, marked "superfine." The Embargo terrapin seizes him, and the fellow cries out, "Oh! this cursed O-grab-me!" the word embargo spelled backward, making these words. The government official, who has charge of the arresting terrapin, calls out in high glee, "Damn it, how he nicks 'em." One claw of the terrapin is upon a "license," such as the British authorities gave to professed neutrals. The designer and engraver of this caricature is yet (close of 1867) engaged in the practice of the art of engraving on wood at the age of almost ninety-three years. The copy of the caricature, seen on the preceding page on a reduced scale, was redrawn and engraved by him at the age of eighty-eight years.

¹ See note 1, page 84.

² In this speech the Prince Regent said: "I am happy to inform you that the measures adopted by the United States for the conquest of Canada have been frustrated by the valor of his majesty's troops, and by the zeal and loyalty of his American subjects." It was a singular coincidence that in the *London Courier*, November 4, 1813, in which this speech was printed, was an account of the signal victory of Perry, and the capture of the entire British fleet on Lake Erie, which was immediately followed by the conquest of all Canada west of the Grand River, an event that had already happened when that paper was printed. In the same issue of the paper was Lord Castlereagh's letter to Monroe proposing negotiations for peace.

³ Albert Gallatin, James A. Bayard, John Quincy Adams, Jonathan Russell, and Henry Clay.

⁴ Clay and Russell sailed on their mission from New York on the 23d of February, in the ship *John Adams*, which had been fitted out as a *cartel*. They were instructed to insist upon a cessation, on the part of the British, of the degrading practices of search and impressment of seamen. "Our flag," said the instructions, "must protect the crew, or the United States can not consider themselves an independent nation." And to remove all pretenses on the part of Great Britain for evading this demand, the President expressed a willingness to exclude all British seamen, and all natives of Great Britain, excepting the few already naturalized, from American vessels. Thus armed with righteous weapons, the envoys went forth on their errand of peace.

Provisions for the Increase of the Army.

The Navy neglected.

"Death of the Embargo."

following. This was claimed to be a victory for the Federalists—an evidence that the wisdom of the peace-party was perceived by the people and Congress.¹

The providing of recruits for the army and its permanent increase was really the most important business of the session of Congress whose doings we are now considering. Expectations concerning the increase of the army had not been realized. Sixty-one thousand men was the intended number of the regular force: at the beginning of 1814 it was but a trifle more than half that number. Something must be done speedily, or the cause would be lost. Short enlistments, as usual, had proved disastrous, and provision was made for engaging men for five years. Volunteers were to be accepted for a less term. Liberal bounties were to be offered; and power was given to the President to call out the militia of the country for six instead of three months, if he should consider it necessary. Provision was made for a large increase of the navy by a bill passed by the lower house, but it was lost in the Senate, where only an appropriation of five hundred thousand dollars was authorized for the construction of a steam frigate, or floating battery, for harbor defense, suggested by Robert Fulton. The subject of finance occupied much of the time of the session;²

¹ The claim was not valid. There had, indeed, been many violent, threatening, unparliamentary words spoken throughout New England against the government, more especially in Massachusetts, where the extreme doctrines of state sovereignty, on which the rebels in 1860-'61 founded their claims to the right of secession, were iterated and reiterated a thousand times. Even open defiance had been hurled in the face of the national government, and menaces of dissolution had been uttered daily; yet there was a war-party in New England altogether too powerful and restraining to cause the President to be affected by any apprehensions of secession or serious obstructions to the machinery of the national government. This was more eloquently proclaimed by acts than words. Notwithstanding the unpopularity of the war in that region, and especially in Massachusetts, that state furnished, during the year 1814, over fourteen thousand recruits, to whom two millions of dollars in bounties were paid. Indeed, Massachusetts furnished more recruits than any single state, and lukewarm New England more than all the hot slave states, who were ever clamorous for war, put together.

The "Death of the Embargo" was celebrated in verses published in the *Federal Republican* newspaper of Georgetown, in the District of Columbia. These were reproduced in the *New York Evening Post*, with an illustration designed by John Wesley Jarvis, the painter, and drawn and engraved on wood by Dr. Anderson. The picture was redrawn and engraved by Dr. Anderson, on a reduced scale, for this work, after a lapse of exactly fifty years. The lines which it illustrates are as follows:

TERRAPIN'S ADDRESS.

"Reflect, my friend, as you pass by,
As you are now, so once was I:
As I am now, so you may be—
Laid on your back to die like me!
I was, indeed, true sailor born;
To quit my friend in death I scorn.
Once Jemmy seemed to be my friend,
But basely brought me to my end!
Of head bereft, and light, and breath,
I hold *Fidelity* in death:
For 'Sailors' Rights' I still will tug;
And Madison to death I'll bug,
For his perfidious zeal displayed
For 'Sailors' Rights and for Free Trade.'
This small atonement I will have—
I'll lug down Jemmy to the grave,
Then trade and commerce shall be free,
And sailors have their liberty.
Of head bereft, and light, and breath,
The Terrapin, still true in death,
Will punish Jemmy's perfidy—
Leave trade and brother sailors free!"

DEATH OF THE TERRAPIN, ON THE EMBARGO.

PASSSENGER'S REPLY.

"Yes, Terrapin, bereft of breath,
We see thee faithful still in death.
Stick to 'Free Trade and Sailors' Rights.'
Hug Jemmy—press him—hold him—bite.
Never mind thy head—thou'lt live without it;
Spunk will preserve thy life—don't doubt it.
Down to the grave, 't' alone for sin,
Jemmy must go with Terrapin.

Bear him but off, and we shall see
Commerce restored and *sailors free*!
Hug, Terrapin, with all thy might—
Now for 'Free Trade and Sailors' Right.'
Stick to him, Terrapin! to thee the nation
Now eager looks—then die for her salvation.

"FLORIAN REEFERIGER."

² *Banks of Goose Creek, City of Washington, 12th April, 1814.*

³ A bill, authorizing a loan not exceeding twenty-five millions of dollars in amount, was offered in the House on the 14th of February. The debates on the subject took a very wide range, and the causes, origin, conduct, and probable results of the war were freely and sometimes acrimoniously discussed. Much that was said, especially by the Opposition, was irrelevant. The bill finally passed both houses of Congress by a large majority, and became a law by the approval of the President on the 15th of March. Then commenced among the leaders of the peace-party, or more ultra Federal-

and that concerning the exchange of prisoners became a very interesting topic. Difficulties, as we have observed, in regard to such exchange, appeared at the beginning of hostilities, caused by the British refusing to consider the Irishmen captured at Queenston as prisoners of war, claiming them to be British subjects. These were sent to England to be tried for treason. Scott then told the British authorities at Quebec that he should lay the matter before his government, and that an equal number of British prisoners should be held as hostages for their lives and freedom. He did so, and Congress, early in 1813, vested the President with the power of retaliation.¹

ists, a factious and at times treasonable efforts to destroy the public credit, and to so paralyze the sinews of war as to compel the government to make peace on any terms which the enemy might dictate. Of these efforts and their results I shall hereafter write.

¹ See page 409. Scott was faithful to his promise. As adjutant general and chief of Dearborn's staff, he selected from the prisoners captured by himself at Fort George [see page 599] twenty-three men as hostages for the unfortunate Irishmen sent over the sea. These were placed in close confinement, to await the action of the British government, and to be treated accordingly. Sir George Prevost immediately communicated this fact to the home government, and at the same time addressed a note to our government through General Dearborn. The latter was so negligent that it was three months before his letter reached Washington. Of this Sir George complained, and had even commenced sending prisoners to Halifax because of his inability to keep the large number which had accumulated on his hands in Canada while waiting a reply from our government. This neglect caused distress and inconvenience to the prisoners in Canada. They complained of their long detention, and Prevost gave them proof that Dearborn alone was to blame.

² August 19, 1813. Then General Winder, who was captured at Stony Creek [see page 604], wrote to the Secretary of War on the subject. After expressing a hope that Prevost would be promptly answered, he said, "But such unaccountable neglect or omission in answering the communications of Sir George has already taken place on the part of General Dearborn that I feel fearful that the same fatality may also attend that last communication." Winder's letter stirred the government to action, for already, as we have observed, prisoners had been sent to

³ August 9. Halifax from Canada,³ and Sir George Prevost threatened to send a large number to England. The whole business concerning the exchange of prisoners was placed in charge of General J. Mason, commissary general of prisoners, under the direction of the Secretary of State. That officer at once dispatched the now [1867] venerable Colonel Charles K. Gardner to Canada as agent for the prisoners, empowered by the proper authorities to negotiate their exchange.

While these movements were in progress, an order for retaliation came to Sir George Prevost from the Prince Regent, through Earl Bathurst, Secretary of State. It was promulgated at Montreal on the 27th of October⁴ 1813.

by a proclamation from the baronet, in which he stated that he was commanded "forthwith to put in close confinement forty-six American officers and non-commissioned officers, to be held as hostages for the safe keeping of the twenty-three British soldiers stated to have been put in close confinement by order of the American government." He was also instructed to apprise General Dearborn that "if any of the said British soldiers shall suffer death by reason that the soldiers now under confinement in England have been found guilty, and that the known law, not only of Great Britain, but of every independent state under similar circumstances, has been in consequence executed, he has been instructed to select out of the American officers and non-commissioned officers put into confinement as many as double the number of British soldiers who shall have been so unwarrantably put to death, and cause such officers and non-commissioned officers to suffer death immediately." He further stated that he was commanded to declare that instructions had been sent to the British commanders on land and sea "to prosecute the war with unmitigated severity against all cities, towns, and villages

Prevost obeyed orders, and imprisoned forty-six American officers in Beauport jail, near Quebec. Among these was Major C. Van De Venter (afterward chief clerk in the War Department), who was captured with General Winder. He and two room companions escaped, and had almost reached the State of Maine, when they were

captured and taken back. Under the humane care of General Glasgow, these and the other prisoners were well treated, but chafed under the long detention while the two governments were menacing the prisoners of each with peril. Madison responded to the order of the Prince Regent

⁴ November 17. by directing⁴ the imprisonment of a like number of British officers. This fact was communicated to Prevost at Montreal by Colonel Macomb, who had been sent for the purpose by General Wilkinson under a flag of truce. Wilkinson assured the baronet that the American government intended to adhere strictly to the principles and purposes avowed in relation to the twenty-three Irishmen sent to England; whereupon Prevost, by a general order by Adjutant General Baynes, on the 12th of December, directed all American officers, without distinction of rank, then prisoners in his department, to be placed in close confinement. Hitherto Generals Winchester, Chandler, and Winder had been allowed a wide parole around Beauport; now they were commanded not to go beyond the premises of their respective boarding-houses in that village, which lies on the St. Lawrence, in full view of Quebec.*

* Letter of General Winder to the Secretary of War.

Campaign on the Northern Frontier. Proposed Expedition to the Upper Lakes. Preparations on Lake Champlain.

Let us now consider the military events of 1814, which occurred more in accordance with the necessities of developing exigencies as the seasons passed on than with that of any well-digested plans excepting as to the Northern frontiers. It had been agreed in cabinet council that an expedition under Colonel Croghan, the hero of Fort Stephenson, with the co-operation of Commodore Sinclair, should proceed against the British on the upper lakes, and attempt the recovery of Mackinaw and St. Joseph's, which were lost at the beginning of the war.¹ An army, under Major General Brown, was to be collected on the desolated Niagara frontier of sufficient strength to seize the Canadian peninsula between Lakes Ontario and Erie, while General Izard, in command in the Lake Champlain region, should cut the connection on the St. Lawrence between Montreal and Kingston.

It was at the close of March^a when the campaign was opened on the Northern frontier by the incompetent General Wilkinson, who, we have observed, ^a 1814. took post with a part of the Army of the North, at Plattsburg, when the cantonment at French Mills was broken up.²

There were indications that efforts would be made in the spring by the British in Canada to gain possession of Lake Champlain, penetrate the State of New York to the valley of the Hudson, and attempt, by a movement similar to the one unsuccessfully put in operation by Burgoyne in 1777, to separate the New England commonwealths (where, they foolishly supposed, an overwhelming majority of the people were their friends) from the rest of the Union. To meet and frustrate such efforts countervailing measures were adopted. Vessels of war were constructed at the mouth of the Onion River, in Vermont, under the superintendence of Captain Macdonough; and General Wilkinson sent Captain Totten, of the Engineers, to select a site for a strong battery at or near Rouse's Point for the purpose of keeping the little British squadron, then lying at St. John's, on the Sorel, within the limits of Canada. Before this work could be accomplished, the breaking up of the ice in the streams earlier than common changed the aspect of affairs materially. Intelligence reached Wilkinson that a British force of twenty-five hundred men was about to be concentrated

^b These retaliatory measures were relaxed toward spring.^b At the middle of January Sir George Prevost allowed General Winder to go home on parole, with a promise not to reveal any thing of obvious disadvantage to the British, and to return to Quebec by the 15th of March. The general took that occasion to communicate freely in person with his government on the subject of an exchange of prisoners. He deprecated the retaliatory measures, and through his influence the Senate, first on the 2d of February and then on the 9th of March, by resolution, requested the President to cause to be laid before them such information as he might possess concerning the subject of prisoners and retaliatory measures, and "of the cases, with their circumstances, in which any civilized nation had punished its native subjects taken in arms against, and for which punishment retaliation had been inflicted by the nation in whose service they had been taken." Also, "on what grounds, and under what circumstances, Great Britain has refused to discharge native citizens of the United States impressed into her service; and what has been her conduct toward American seamen on board her ships of war at and since the commencement of the present war with the United States."^b 1814.

This was a task of no ordinary labor; and the Secretary of State, to whom the resolutions were referred, remarked, in a report which he submitted on the 14th of April, that a full answer from him on the subject of retaliation would require more extensive research into the history and jurisprudence of Europe than proper attention to his official duties would allow before the close of the session—an event then just at hand. He gave reasons, however, in justification of the course of the United States in the matter so satisfactory that a bill was introduced similar to the one at the last session of the Twelfth Congress giving the President full powers to retaliate. For reasons then presented, it did ^c April 18. not become a law. ^c Four days after the presentation of this report Congress adjourned.^d

General Winder promptly returned to Quebec at the middle of March, bearing to Sir George Prevost from Mr. Monroe, Secretary of State, a letter, dated the 9th of March, in which a mutual exchange of prisoners was solicited. General Winder was clothed with full powers to negotiate for such exchange. Prevost met the proposition with a friendly spirit, and appointed Colonel Baynes, his adjutant general, a commissioner for the purpose. The negotiation was commenced, but temporarily suspended, when, in a letter to General Winder, dated the 22d of March, Mr. Monroe positively prohibited any consent to the release of the twenty-three British prisoners who were held as hostages for the Irishmen sent to England eighteen months before, unless it should be stipulated that they, too, should be released. The negotiation was resumed, and on the 15th of April Winder and Baynes signed articles of a convention for the mutual release of all prisoners of war, hostages or others, except the twenty-three Queenston prisoners, the twenty-three Fort George prisoners held by the Americans in retaliation, and the forty-six American officers who were held for the last-named twenty-three. The mutual release took place on the 15th of May. Soon after that, Mr. Beasley, agent for the American government in England, sent word that no proceedings had ever been instituted against the Queenston prisoners, and that they were restored to the condition of ordinary prisoners of war. The hostages on both sides were immediately released, and early in July a cartel for the exchange of prisoners was ratified and executed. Thus ended a controversy unwarrantably begun by Great Britain, and which had produced much suffering. The just position taken by our government was firmly maintained. ^d See page 270. ^e See page 687.

Wilkinson crosses the Canada Border.

The British at La Colle Mill.

Positions of the opposing Forces.

at La Colle Mill, on La Colle Creek, a small tributary of the Sorel, three or four miles below Rouse's Point.

For the purpose of preparing for a march on Montreal, and to confront the expected force at La Colle, Wilkinson advanced his little army to Champlain, and on the 30th of March* crossed the Canada border, and pressed on toward La Colle.

* 1814. It was composed of about four thousand effective men. Five miles from Champlain, at a hamlet called Odelltown, the army stopped for refreshments; and, on resuming their march, they encountered the enemy's pickets, and drove them back. At about three o'clock in the afternoon they came in sight of La Colle Mill, a heavy stone structure, with walls eighteen inches in thickness, and its windows barricaded with heavy timbers, through which were loop-holes for muskets. It stood on the southern bank of La Colle Creek, at the end of a bridge. On the opposite bank was a block-house and a strong barn, and around them were intrenchments. For two hundred yards southward from the mill, and half that distance northward from the block-house, was cleared land, surrounded by a thick primeval forest which covered the country in every direction. The flat ground was half inundated by melting snows, and the highway was so obstructed by the enemy with felled trees and other hinderances that the Americans were compelled to diverge some distance to the right of it.

The advance of Wilkinson's army was commanded by Colonel Isaac Clark and Major (at that time lieutenant colonel by brevet) Benjamin Forsyth. These were followed by Captain M'Pherson, with two pieces of artillery, covered by the brigades of Generals Smith and Bissell. General Alexander Macomb commanded the reserves under Colonels Melancthon Smith and George M'Feely. Clark and Forsyth, with portions of their commands, crossed La Colle Creek some distance above the mill, followed by Colonel Miller's regiment of six hundred men, and took post in the rear of the enemy to cut off his retreat.

At this time the British garrison at the mill consisted of only about two hundred men, chiefly regulars, under Major Hancock, of the British Thirteenth. Re-enforcements were on the way, and it was important for Wilkinson to dislodge the enemy at the mill before their arrival. Macomb endeavored to send forward an 18-pound cannon to breach the walls, but failed on account of the softness of the ground. Hoping to perform the same service with M'Pherson's heavy guns, which consisted of a 12-pound cannon and a 5½-inch mortar, these were placed in battery at the dis-

Wilkinson attacks the British Garrison. The Latter re-enforced. The Americans repulsed. The Battle-ground.

tance of two hundred and fifty yards from the mill. They opened fire upon that citadel, but their missiles were harmless. They were responded to by Congreve rockets; and the whole American line, being in open fields, was exposed to the galling fire of the enemy. M'Pherson was wounded under the chin, but fought on until his thigh-bone was broken by a musket ball, when he was carried to the rear. Lieutenant Larrabee, his next in command, was shot through the lungs, and Lieutenant Sheldon kept up the fire with great gallantry. The conduct of these officers was so conspicuous as to attract the admiration and comment of their brethren in arms.

While this contest was waging, two flank companies of the British Thirteenth, under Captains Ellard and Holgate, arrived from *Isle aux Noix*, seven miles distant, and gave much strength to the beleaguered garrison. Major Hancock now determined to storm the American battery, and gave orders for an immediate and vigorous *sortie* by the two companies just arrived. They made several desperate charges, and were as often repulsed by the infantry supports of the artillery under Smith and Bissell. They were finally driven back across the bridge, and compelled to take refuge in the block-house on the northerly side of the stream. There they were soon joined by some Canadian Grenadiers and Voltigeurs from Burtonville, only two miles distant. These joined the companies of Ellard and Holgate in another *sortie* more desperate than the first, which, after a severe struggle, was repulsed by the covering brigades, and the cannonade and bombardment went on. They made no impression, however, upon the walls of the mill. The garrison had been augmented by re-enforcements to almost a thousand men, and, after a contest of two hours, Wilkinson withdrew, having lost thirteen killed, one hundred and twenty-eight wounded, and thirteen missing. The enemy lost eleven killed, two officers and forty-four men wounded, and four missing.

I visited the scene of this conflict on a pleasant evening toward the close of July,* 1860. I had been to French Mills (Fort Covington) in the morning, and had arrived at Rouse's Point, as before observed (page 665), toward evening. In a light wagon, behind a fleet horse, I rode from the village to La Colle Mill in time to make a sketch of the scene—the bridge, and the block-house, then part

LA COLLE MILL AND BLOCK-HOUSE.

of a dwelling, the property of Mr. William Bowman—and to obtain from that gentleman so exact a description of the form and size of the old mill, which had been de-

Graves of the Slain in the Battle. End of Wilkinson's military Career. Brown ordered to the Niagara Frontier.

molished only two years before, as to enable me, by observing the relative position of its ruins to the bridge, to reproduce the likeness of it given in the picture on the preceding page. Mr. Bowman accompanied me to the Ferry-road, opened by himself, a little southward of the bridge, where, about thirty rods southeast from the highway, might be seen the mounds which cover the remains of the slain in the battle there. Those of the Americans were buried on the right side of the road, and those of the British on the left side, about twenty feet from each other. Only one grave was made for the dead of each nation.

At twilight I passed through La Colle village and Odelltown, the road running through a level, well-cultivated region, which was covered by forest at the time of the war. I spent the night at an indifferent inn at Rouse's Point village, and on the following morning journeyed to Champlain and Plattsburg. Of this journey I shall hereafter write.

With the discreditable affair at La Colle Mill the military career of General Wilkinson was closed. By an order from the War Department, issued a week previous to that affair,^a he was relieved of the command of the army in the Department of the North, and his conduct while in command of that district was subsequently committed to the scrutiny of a court-martial. He proved that during the most important operations of the disastrous campaign, which ended at French Mills, the War Department, in the person of Minister Armstrong and Adjutant General Walbach, was on the Northern frontier, and that he acted under the Secretary's immediate instructions; that the failure of Hampton to meet him at St. Regis' justified his abandonment of an attack on Montreal; and that his encampment and stay at, and departure from French Mills, was in accordance with the views of the Secretary of War. These proofs being positive, Wilkinson was acquitted, and the public placed the chief blame, where it seemed to properly belong, on the War Department. Like Harrison, who had felt the baleful effects of the administration of that department, Wilkinson threw up his commission in disgust.

Many official changes were necessary. Dearborn was in retirement on account of ill health; Hampton had left the service in disgrace; and Winchester, Chandler, and Winder were still prisoners of war in the hands of the enemy in Canada. On the 24th of January Brigadier Generals Brown and Izard were commissioned major generals; and Colonels Macomb, T. A. Smith, Bissell, Scott, Gaines, and Ripley were appointed brigadiers. On the retirement of Wilkinson, Brown became chief commander in the Northern Department.

General Brown, as we have seen, left French Mills with a division of the army for Sackett's Harbor at about the middle of February.² He arrived there on the 24th, after a rather pleasant march for that season of the year. There he received a letter from the Secretary of War, dated on the 28th,^b informing him that Colonel Scott, who was a candidate for a brigadiership, had been ordered, with the accomplished Major Wood, of the Engineers, to the Niagara frontier. "The truth is," Armstrong said, "public opinion will not tolerate us in permitting the enemy to keep quiet possession of Fort Niagara. Another motive is the effect which may be expected from the appearance of a large corps on the Niagara in restraining the enemy's enterprises to the westward." After expressing doubts concerning the ability of the force under Scott to recapture Fort Niagara, the Secretary, "by command of the President," as he said, directed Brown to convey, with the least possible delay, the brigades which he brought from French Mills to Batavia, where "other and more detailed orders" would await him.³ On the same day, by another dispatch, the Secretary directed Brown to cross the ice at the foot of the lake, and attack the enemy at Kingston, if, on consultation with Chauncey, it should be considered practicable.

³ See page 657.

Brown moving toward the Niagara. Ridiculous Orders from the War Department. Public Property in Danger.

In that event he was directed to use the instructions in the first letter of that date as a mask.

The two commanders considered the force of four thousand men at the Harbor insufficient for the capture of Kingston under the circumstances; and, mistaking the real intentions of the government, which was to make the movement on Kingston the *main object*, and that toward Niagara a *feint*, Brown put his troops in motion toward the latter at the middle of March. They numbered about two thousand, consisting of the Ninth, Eleventh, Twenty-first, and Twenty-fifth Regiments of Infantry, the Third Regiment of Artillery, and Captain Towson's company of the Second Artillery.¹ These troops had reached Salina, in Onondaga County, and Brown was at Geneva, when General Gaines thought he discovered his commander's mistake. Brown acquiesced in his opinion, and resolved to retrace his steps. He hastened back to Sackett's Harbor "the most unhappy man alive."² There Chauncey "and other confidential men" convinced him that his first interpretation of the Secretary's instruction was correct. "Happy again," he hastened back to his troops, and resumed the march westward. At the close of the month they arrived at Batavia, where they remained about four weeks, when they moved toward Buffalo. In the mean time Armstrong had written a soothing letter to the perturbed Brown, saying, "You have mistaken my meaning. . . . If you hazard any thing by this mistake, correct it promptly by returning to your post. If, on the other hand, you left the Harbor with a competent force for its defense, go on and prosper. Good consequences are sometimes the result of mistakes."³

While at Batavia and vicinity Brown was made very uneasy by alarming letters from Chauncey, and also from General Gaines, who had been placed in command at Sackett's Harbor. The British were in motion at Kingston early in April, the ice having broken up, and there were indications of another attack on the Harbor. With this impression, and feeling the responsibility laid upon him by the grant of discretionary power given him by the Secretary of War, Brown hastened back to that post, leaving General Scott in command of the troops on the Niagara frontier during his absence. Observation soon taught him that an attack on the Harbor was "more to be desired than feared,"⁴ and that the real point of danger was Oswego, at the mouth of the Oswego River. At the Great Falls of that stream, twelve miles from the lake, where the village of Fulton now stands, a large quantity of naval stores had been collected during the autumn and winter for vessels on the stocks at Sackett's Harbor. These would be very important objects for the British to possess or destroy; and, excepting the partly-finished vessels at Sackett's Harbor, they formed the most attractive prize for Sir James Yeo, the British commander on Lake Ontario. For the protection of this property, Lieutenant Colonel Mitchell, with a battalion of light artillery, was sent to garrison the fort at Oswego.

At the beginning of May Sir James Yeo sailed out of Kingston Harbor with an effective force of cruising vessels. Chauncey was not quite ready for him. Both parties, one at Kingston and the other at Sackett's Harbor, had been bending all their energies during the preceding winter in making preparations for securing the command of Lake Ontario, an object considered so important by the two governments

¹ MS. Letter to Colonel E. Jenkins, March 12, 1814.

² MS. Letter to the Secretary of War, March 24, 1814.

³ MS. Letter, March 20, 1814. It must be confessed that many of the orders issued from Washington at this time were exceedingly perplexing to the officers in the field. A great portion of the frontier was yet in a wilderness state, and the topography and geography of the country was very imperfectly known. In a letter before me from the venerable John R. Kellogg, of Allegan, Michigan, dated 15th March, 1864, some amusing anecdotes bearing upon this subject are given. He says that he heard Captain (afterward Commodore) Woolsey relate to Chauncey and other officers, in the old two-story wood tavern at Oswego, the fact that he had received the following order from Washington: "Take the *Lady of the Lake* and proceed to Onondaga, and take in, at Nicholas Mickle's Furnace, a load of ball and shot, and proceed at once to Buffalo." In other words, go over Oswego Falls, then up the Oswego and Seneca Rivers to Onondaga Lake to Salina or Syracuse, and then two miles south of that city by land, where the furnace was situated, and, returning to Oswego, proceed to the Niagara, and up and over Niagara Falls to Buffalo!

⁴ MS. Letter to the Secretary of War, April 25, 1814.

that they withdrew officers and seamen from the ocean to assist in the lake service. The American government also added twenty-five per cent. to the pay of those engaged in that service.

In February Henry Eckford¹ had laid the keel of three vessels, one a frigate designed to carry fifty guns, and two brigs of five hundred tons each, to carry twenty-two guns. Deserters who came in reported heavy vessels in great forwardness at

CHAUNCEY'S DISMANTLED FLAG-SHIP SUPERIOR.

Kingston; and Chauncey, who returned from the national capital at the close of February, ordered the size of the frigate to be increased so as to carry sixty-six guns. The brigs, named respectively *Jefferson* and *Jones*, were ready for service, except their full armament, at the close of April; and the frigate, which was named *The Superior*, was launched on the 2d of May, just eighty days after her keel was laid.² But the naval stores and heavy guns designed for her were yet at Oswego Falls, to which point they had been carried by tedious transportation from Albany up the Mohawk, and through Wood Creek and Oneida Lake into the Oswego

River, the roads across the country from Utica to Sackett's Harbor being impassable with heavy ordnance. They were kept at the Falls for security from the enemy, until schooners employed by Captain Woolsey for the purpose could be loaded and dispatched singly from Oswego.

The ice, as we have remarked, broke up earlier than usual, and the British made attempts to destroy the large frigate at the Harbor. On the night of the 25th of April, Lieutenant Dudley, while out with two guard-boats, discovered three others in Black River Bay. Not answering his hail, he fired. They fled. On searching, six barrels of gunpowder were found, each containing a fuse, and slung in pairs by a rope in a way that a swimmer might convey them under a ship's bottom for the purpose of explosion. A few days afterward the British squadron was seen in sailing trim at Kingston; and on the 4th of May Lieutenant Gregory, in the *Lady of the Lake*, saw six sail of the enemy leave Kingston Harbor and move toward Amherst Bay. This was the squadron of Sir James Yeo, bearing a little more than one thousand land troops, under Lieutenant General Sir George Gordon Drummond. The active cruising force of Sir James consisted of eight vessels, ranging from 12 to 62 guns, making in the aggregate 222 pieces of ordnance, besides several gun-boats and other small craft, whose armament, added to the others, gave to the British much superiority in the weight of metal.

When Sir James sailed his squadron was so much superior in strength to the one that Chauncey could then put to sea that the latter prudently remained in Sackett's Harbor, and the enemy moved unimpeded against Oswego on the morning of the 6th of May. His vessels were seen at *reveillé* from that port, and preparations were speedily made to dispute his landing. The village, standing on the west side of the har-

¹ See page 615.

² On the 1st of June the American squadron consisted of the following vessels: *Superior*, 65, Lieutenant Elton, Chauncey's flag-ship; *Pike*, 28, Captain Crane; *Mohawk*, 42, Captain Jones; *Madison*, 24, Captain Trenchard; *Jefferson*, 23, Captain Ridgely; *Jones*, 22, Captain Woolsey; *Sylph*, 14, Captain Elliott; *Onida*, 15, Lieutenant Commandant Brown; and *Lady of the Lake*, 2, Lieutenant Mix, a look-out vessel. Besides these were several gun-boats and other small craft, among the best known of which were the *Governor Tompkins*, 6, Midshipman Elliott; *Pert*, 3, Lieutenant Adams; *Conquest*, 2, Lieutenant Wells; *Fair American*, 2, Lieutenant Wolcott; Chauncey; *Ontario*, 2, Sailing-master Stevens; *Aep*, 2, Lieutenant Jones; *Hamilton*, 5, *Grosvler*, 5; *Julia*, 2; *Elizabeth*, 1; and bomb-vessel *May*. The aggregate number of guns was 292.

Attack on Fort Ontario.

Landing of British Troops.

bor formed by the mouth of the Oswego River, contained less than five hundred inhabitants. Upon a bluff on the north side of the river was old Fort Ontario, partly built in colonial times, spacious, but not strong. It then mounted only six old guns, three of which were almost useless because they had lost their trunnions. The garrison consisted of Mitchell's battalion of less than three hundred men. The schooner *Growler*, having on board Captain Woolsey and Lieutenant Pearce, of the Navy, was in the river for the purpose of conveying guns and naval stores to the Harbor. To prevent her falling into the hands of the enemy she was sunk, and a part of her crew under Lieutenant Pearce joined Mitchell, who had sent out messengers to arouse and bring in the neighboring militia.

SIR JAMES LUCAS YEO.

Mitchell had too few troops for the defense of both the village and the fort, so he ordered all the tents in store there to be pitched near the town, while with his whole force he took position at the fort. The deception had the desired effect. To the enemy the military array seemed much stronger on the side of the village than at the fort, and the British proceeded to assail the latter position. Leaving the absolutely defenseless village unmolested, the British troops, in fifteen large boats, covered by the gun-boats and small armed vessels, moved toward the shore, near the fort, early in the afternoon, while the cannon on the larger vessels opened fire on the fort. Meanwhile Captain James A. Boyle and Lieutenant Thomas C. Legate had been sent down to the shore with an old iron 12-pounder, and as soon as the enemy's boats were within proper distance they opened on them with deadly effect. Some of the boats were badly injured; some were abandoned, and all of the remainder hastily retired to the ships. Just then a heavy breeze sprung up, and the entire squadron put to sea. Drummond, in a general order, stated that he did not intend to attack on that day. He was only feeling the position and strength of the Americans.

On the morning of the 6th the fleet again appeared off Oswego, and the larger vessels immediately opened a heavy fire on the fort. The *Magnet* took station in front of the village, and the *Star* and *Charcell* were towed in near the mouth of the river for the purpose of covering the spot selected for the landing of troops. Under this shield were landed the flank companies of De Watteville's regiment, under Captain De Bersey; a light company of the Glengary Regiment, under Captain M'Millan; a battalion of marines under Lieutenant Colonel Malcolm; and two hundred seamen, armed with pikes, under Captain Mulcaster. The whole force, about twelve hundred in number, was commanded by Lieutenant Colonel Fischer. A reserve of troops was left on the vessels.

The enemy effected a landing early in the afternoon, and were compelled to ascend a long, steep hill in the face of a heavy fire of the Americans in the fort, and of a small body of the militia, who had been hastily summoned, and were concealed in a wood.¹ These, however, fled when the enemy had secured a footing on the shore. Finding it impossible to defend the fort with so few men, Mitchell left the works, and met the invaders in fair fight, covered only by woods. With the companies of Captains Romeyn and Melvin, he gallantly moved forward and attacked the front of the

The Fort dismantled and Barracks burned.

Conduct of Yeo and Drummond.

ATTACK ON OSWEGO.—(From an old Print.)

enemy, while the remainder of his command, under Captains M'Intyre and Pierce of the heavy artillery, annoyed them prodigiously on the flank. By desperate fighting the enemy was kept in check for a long time, but overwhelming numbers finally compelled Mitchell to fall back. The British took possession of the fort and all the works and stores in the vicinity. Mitchell retired up the river to a position where he might protect the naval stores should the enemy attempt to penetrate to the Falls in search of them.

In this gallant but hopeless defense the Americans lost the brave Lieutenant Blaney, and five killed, thirty-eight wounded, and twenty-five missing. The British lost nineteen killed and seventy-five wounded. Among the latter were Captain Mulcaster, of the *Princess Charlotte*, severely, and Captain Popham, of the *Montreal*, slightly.

At five o'clock on the morning of the 7th the invaders withdrew, after having embarked the guns and few stores found there, dismantled the fort, and burned the barracks. They also raised and carried away the *Grounder* and two sunken boats; and, under circumstances not at all creditable to Sir James Yeo as an officer and gentleman, several citizens, who had been promised protection and exemption from all molestation, were abducted and borne away by the squadron. Among these was the after-

Alvin Bronson

ward eminent merchant of Oswego, Honorable Alvin Bronson, who was then the public store-keeper, and who is still (1867) a resident of that place.¹ After the capture of the post, and while Yeo was personally superintending the load-

ing of his boats with salt and public stores, that officer applied to Mr. Bronson for pilots to conduct the boats out to the squadron. When he replied that all the men had left the place, and that he had none under his control, Sir James angrily growled out, with an oath, "Go yourself, and if you get the boat aground I'll shoot you." The gallant and gentlemanly Colonel Harvey, who was standing on the bank above,

¹ His clerk, Carlos Colton, then a boy, was taken with him. Mr. C. was clerk of the County of Monroe, Michigan, in 1856.

Firmness of Store-keeper Bronson.

His Captivity and Release.

Survivors of the War in Oswego.

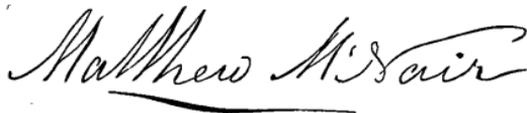

called out to Sir James, "That, sir, is the public store-keeper, and may be useful to us." Sir James called Mr. Bronson back, and said, "You are my prisoner, and I shall expect you to inform me what stores have recently been forwarded for the army and navy, what remains in the rear of the post, and what, if any, are secreted in its neighborhood. "My books and papers," replied Mr. Bronson, have been removed for safety, and I can not, therefore, give you the desired information; nor would it be proper for me to do so if I could." Sir James threatened to take him off with him if he withheld the coveted information. "I am ready to go, sir," was Mr. Bronson's calm reply. This was followed by an order to Captain O'Connor to take him on board the flag-ship *Prince Regent*. At midnight the naval and military officers came on board the *Regent*. Among them was General Sir George Gordon Drummond, who lavished upon the captive store-keeper such coarse and vulgar abuse that Colonel Harvey, as soon as an opportunity was afforded, apologized for the brutality of his superior officers, of whom he was evidently ashamed.¹ Mr. Bronson was confined a short time in the guard-house at Kingston, and again taken to the squadron when it proceeded to the blockade of Sackett's Harbor. He was well treated, and associated familiarly with the subordinate officers. He was soon afterward released.

Among the survivors of the war, besides Mr. Bronson, whom I had the pleasure of meeting in Oswego, were the late Henry Eagle and Matthew M'Nair; the venerable bookseller James Sloan; the lively but aged light-house-keeper Jacob M. Jacobs; and the late Abram D. Hugunin. Mr. Eagle was a Prussian by birth, and possessed a fine figure when more than threescore and ten years of age. He learned the busi-

ness of a ship-carpenter of a Scotchman on the border of the Baltic Sea, and worked his passage to America as such. He was the constructor of the *Oneida* at Oswego in 1808, and he accompanied Eckford to the frontier in 1812-'13. He became purser at the Navy Yard at Sackett's Harbor, where he was very active. He gave me many interesting particulars concerning the building of the *New Orleans*. Five hundred and fifty-three men were employed on her. The timber for her masts was cut near Watertown, in Jefferson County, and the cost of their transportation to the Harbor was one hundred and sixty dollars apiece. They were afterward used in the construction of the ship-house.

Mr. M'Nair, a Scotchman, was government commissary at Oswego, and had a store-house there and at the Falls. At the time of the British attack he had twelve hundred barrels of bread and other provisions in store at Oswego, and a quantity

of whisky.² These became spoils for the enemy. Mr. Jacobs had been a companion in cruises with Commodore Rodgers, and went to Lake Ontario in 1812 with a midshipman's warrant. Although, when I last saw him [1864], he was eighty-eight years of age, his complexion was so fresh and his step so elastic that he appeared like a man less than sixty years old. Mr. Sloan was Macdonough's clerk on the *Saratoga* at

¹ Colonel Harvey was as generous as he was brave. He was governor of Nova Scotia in 1839 when General Scott was sent by his government to settle the dispute concerning the boundary-line between that country and the State of Maine either by arms or negotiation. Scott and Harvey were adjutant generals in their respective armies on the Niagara frontier, and at that time formed an intimacy which ripened into friendship. On going to the capital of Maine, Scott opened a friendly correspondence with Governor Harvey, which resulted in an amicable settlement of a difficulty which threatened to involve the United States and Great Britain in war.

² Mr. M'Nair died at Oswego on the 31st of March, 1862, at the age of eighty-eight years. He had resided in Oswego sixty years.

The British return to Kingston.

Sackett's Harbor blockaded.

Woolsey's Expedition.

the time of the battle of Plattsburg in the autumn of 1814. Mr. Hugotin, who died at Oswego in February, 1860, had lived in that place since 1805. He was in the military service when Oswego was captured in 1814, and was made a prisoner.

The conduct of Lieutenant Colonel Mitchell in his defense of Oswego received the commendation of his superiors. His prudence and gallantry secured the large amount of ordnance and naval stores at the Falls,¹ and the British derived very little advantage from their attack. With their small booty they returned to Kingston, and Oswego was not again attacked during the war. The dilapidated fort was repaired, the garrison strengthened, and the enemy was defied. For many years that fort has been a strong and admirably-appointed fortress, but without a garrison, and in charge of a sergeant. Its situation and appearance, as seen from the lantern of the light-house, is given in the little engraving below from a sketch made in 1855. The place where the British landed is seen at the point on the extreme left of the picture.

FORT AT OSWEGO IN 1855.

The British troops were landed at Kingston, and the vessels were thoroughly overhauled during the succeeding fortnight. On the 19th the renovated squadron again weighed anchor, and, a few hours afterward, drove Chauncey's look-out, *Lady of the Lake*, into Sackett's Harbor, and established a strict blockade of that port, to the great discomfort of the American commander, who was making untiring efforts to get his squadron, and especially the *Superior*, ready for sea. Heavy guns and cables destined for her were yet at the Oswego Falls. The roads were in such condition that they could not be taken to the Harbor by land, and the blockade made a voyage thither by water extremely perilous. But something must be done, or Sir James Yeo would roam over Ontario unrestricted lord of the lake. The ever-active and gallant Woolsey was sufficient for the occasion. He declared his willingness to attempt carrying the ordnance and naval stores to Stony Creek, three miles from Sackett's Harbor, where they might be carried across a narrow portage to Henderson Harbor, and reach Chauncey in safety. The commodore gave Woolsey permission to attempt the perilous adventure, and before the close of May he had a large number of the heavy guns sent over the Falls in scows, preparatory to an embarkation when the vigilance of the blockading squadron should be relaxed.

At sunset on the 28th of May Woolsey was at Oswego with nineteen boats heavily laden with twenty-two long 32-pounders, ten 24's, three 42-pound carronades, and twelve cables. One of the latter, destined for the *Superior*, was an immense rope. The flotilla went out of the harbor at dusk, and bore Major Appling and one hundred and thirty riflemen under his command. About the same number of Oneida Indians were engaged to meet the flotilla at the mouth of Big Salmon River, near the present village of Port Ontario, and traverse the shore abreast of it, to assist in the event of an attack by the British gun-boats.

Woolsey found it unsafe to attempt to reach Stony Creek, for the blockaders were

¹ The public store-houses at the Falls (now Fulton) were on the east side of the river, a little above the Cascades. The surrounding land belonged to the government. When I visited the spot in 1854, the land belonged to Timothy Pratt, Esq., a large land-holder at the Falls. The stores were demolished after the war, and not a vestige of them now remains.

Woolsey's Force on Big Sandy Creek.

The confident British in Pursuit.

Preparations to receive Them.

rigilant, so he determined to run up Big Sandy Creek, within a few miles of the Harbor, and debark the precious treasures there. The night was very dark, and there was little danger of discovery under its friendly shadows. By dint of hard rowing, all the boats reached the Big Salmon at dawn excepting one which had fallen out of the line during the night. It was bewildered in the fog, and was captured by the British at sunrise the next morning. The Oneidas were there, and flotilla and Indians moved on toward the Big Sandy, where they all arrived at noon.⁴ Sir James, meanwhile, had gained information of the flotilla from the crew of the lost boat. He immediately sent out two gun-boats, commanded respectively by Captain Popham, of the *Montreal*, and Captain Spilsbury, also of the Royal Navy, accompanied by three cutters and a gig, to intercept them. They cruised all day in vain, but at evening learned that Woolsey and his boats had gone up the Big Sandy. Confident of their ability to capture the whole flotilla, and ignorant of the presence of Major Appling and his riflemen, or of the Indians, the British cruisers lay off the mouth of the creek all night, and entered it early in the morning. In the door of a fisherman's house (yet standing when I visited the spot in 1860) Popham saw a woman, and ordered her to have breakfast ready for himself and officers when they should return. She knew how well Woolsey was prepared to receive his pursuers, and said, significantly, "You'll find breakfast ready up the creek." The British passed on in jolly mood up the creek, but soon became very serious.

PLACE OF BATTLE AT SANDY CREEK.

For two miles or more the Big Sandy winds through a marshy plain, and empties into the lake through a ridge of sand dunes cast up by the winds and waves of Ontario. That plain is now barren of timber, but at the time we are considering the stream was fringed with trees and shrubbery. In these, about forty rods below a bend in the creek, seen in the engraving, and half a mile below where the flotilla was moored, Major Appling ambushed his riflemen and the Indians. At the same time, a squadron of cavalry under Captain Harris, and a company of light artillery under Captain Melvin, with two 6-pound field-pieces and some infantry, about three hundred in all, whom General Gaines had sent down from Sackett's Harbor, were stationed near Woolsey's boats.

The confident and jolly Britons approached with little caution, and when they came

⁴ This view is from the bridge, about one hundred and fifty rods above the point where the engagement took place. The stream is about eight rods wide, and the portion of it seen in the foreground was the position of the flotilla. The light strip seen in the extreme distance is Lake Ontario, and the irregular shore-line shows the sand dunes spoken of. The fisherman's house alluded to is seen between two of them, toward the extreme left of the picture.

Battle on Big Sandy Creek. The British defeated and captured. John Otis. The great Cable for the *Superior*.

in sight of the flotilla they commenced hurling solid shot upon it, but with slight effect. At the same time strong flanking parties were landed, and marched up each side of the stream, their way made clear, as they supposed, by discharges of grape and canister shot into the bushes from the gun-boats. These dispersed the cowardly Indians, but the gallant young Appling's sharpshooters were undisturbed.¹

It was now ten o'clock. When the invaders reached a point within rifle range of the ambuscade, Appling's men opened destructive volleys upon them, and occasional shot came thundering from Melvin's² field-pieces, stationed on the bank, near the present bridge. So furious and unexpected was the assault on front, flank, and rear, that the British surrendered within ten minutes after the first gun was fired in response to their own. They had lost Midshipman Hoare and seventeen men killed, and at least fifty men dangerously wounded. The Americans lost one rifleman and one Indian warrior wounded, but not a single life. They gained the British squadron,³ with officers and men as prisoners, in number about one hundred and seventy. A negro on one of the gun-boats, who had been ordered to throw the cannon and small-arms overboard in case of danger, did so when the fight was ended. The Americans called on him to desist or they would shoot him. He paid no attention to them, and, with a sense of duty, had cast overboard one cannon and many muskets, when he fell dead, pierced by twelve bullets.

The wounded British were taken to the house of John Otis, yet standing,⁴ and still occupied by the then owner when I visited the spot in

July 20, 1860. It was the second house above the

1860. bridge. Otis, a venerable man when I saw him, gave Woolsey the first notice of the presence of pursuers. He had been out upon the lake since midnight, watching for the enemy, and, discovering them at early dawn making for the mouth of the creek, he hastened up the stream with the information. He pointed out to me the place, near a large chestnut-tree in a lot adjoining his garden, where the British dead were buried. He took care of many of the wounded for more than a fortnight, for which service and expenses his country rewarded him after a lapse of forty-three years. In 1857 Congress voted him a little more than nine hundred dollars; but one of those harpies known as lobby agents, who know how to approach legislators of easy virtue, took one half of it as compensation for his services in procuring the "appropriation."

The cannon and cables were landed safely from the flotilla, and transported by land sixteen miles to the Harbor. The great cable for the *Superior* had occupied, in ponderous coils, one of the boats of ten tons burden. The cable was twenty-two inches in circumference, and weighed nine thousand six hundred pounds. No vehicle could be found to convey it over the country to the Harbor; and, after a delay of a week,

OTIS'S HOUSE, SANDY CREEK.

¹ Daniel Appling was born in Columbia County, Georgia, in 1787, and entered the army as second lieutenant of rifle-men in 1808. He was promoted to captain in the spring of 1812, and major of the First Rifle Corps in April, 1814. For his gallant conduct at Sandy Creek he was breveted lieutenant colonel in August. He was breveted colonel for distinguished services at Plattsburg in September following. He was retained on the peace establishment in 1815, but resigned in June the following year. He died at Montgomery, Alabama, in March, 1817, at the age of only thirty years.

² George W. Melvin was a native of Georgia. He entered the military service as second lieutenant of artillery at the close of 1808. In August, 1812, he was commissioned captain. He was retained on the peace establishment, and resigned in August, 1820.

³ One of the boats mounted a 68-pound carronade; one a long 32-pounder; one a long 24; one two long 12's, and another two small brass howitzers.

⁴ Dr. Alfred Ely, who was an assistant of Surgeon Amasa Trowbridge, was at Sandy Creek, and attended the wounded British at the house of Mr. Otis. I had the pleasure of meeting him at the inauguration of the statue of Perry, at Cleveland, in September, 1860. He is now (1867) a resident of Oberlin, Ohio.

Carrying the great Cable to Sackett's Harbor. Visit to the Sandy Creek Region. Survivors of the War met there.

men belonging to the militia regiment of Colonel Allen Clark, who had hastened to the creek on hearing the din of battle, volunteered to carry it on their shoulders. About two hundred men were selected for the labor. They left the Big Sandy at noon, and arrived at the Harbor toward the evening of the next day. They carried it a mile at a time without resting. Their shoulders were terribly bruised and chafed by the great rope. They were received by loud cheers and martial music. A barrel of whisky was rolled out and tapped for their refreshment, and each man received two dollars extra pay. In less than a fortnight from the time of the battle all the cannon and naval stores were at Sackett's Harbor.² But many difficulties had to be overcome, and the fleet was not ready to leave the Harbor on a cruise until the 1st of August.

* June 10,
1814.

It was a sultry morning in July when I visited the theatre of events just described. I arrived at Little Sandy Creek Village on the previous evening, and there met Har-

Harmon Ehle

mon Ehle, a sprightly little man, now (1867) eighty-seven years of age, who was one of the two hundred who carried the great cable to

Sackett's Harbor. From him I learned most of the facts concerning it just related. I spent the evening very pleasantly with him. For forty-nine years he had lived there, and had seen the country transformed from a wilderness to the pleasant abode of civilized man.¹ The night succeeding our interview was tempestuous. At dawn a heavy thunder-shower drenched that whole region; yet at an early hour I started in a light wagon for Sackett's Harbor, on the road that would lead to the battleground on the Big Sandy. When within about a mile of it, we saw standing at a rustic gate, resting upon crutches, a venerable man of seventy-five years, with palsied legs, beard of a fortnight's growth, a slouched felt hat on his head, and a blue linen sack covering all that we could see of him. It was Jebaziel Howard, a native of Vermont, an old seaman of the lake, who was with Woolsey at the time of the battle of the Big Sandy. He had been with him since early in the war, and was with Chauncey at the taking of Fort George.² He saw the negro shot on the British gun-boat in the Big Sandy, and assisted in taking the British wounded to Otis's. Bidding him good-morning, we rode to the bridge, where I made the sketch on page 799. There we spent half an hour with Mr. Otis, and then rode on to Ellisburg, where we breakfasted between nine and ten o'clock. Meanwhile very heavy clouds were gathering in the west, and we had ridden only two or three miles from the village, through the "garden of Jefferson County," when a thunder-storm burst upon us with great fury. We took refuge in a tavern by the way-side, and arrived at Sackett's Harbor at little past meridian, in pleasant sunshine, as already mentioned.³

JEBAZIEL HOWARD.

Let us now leave the more easterly shores of Lake Ontario, and consider events on the Niagara frontier, where the broom of destruction during the year 1813 had swept away almost every thing worth contending for excepting territory. But Canada was to be conquered by one party and defended by the other, if possible, and the possession of the Ontario and Erie peninsula was of vast importance to the contestants. For that possession the military movements we are about to consider were commenced.

¹ In February, 1861, Congress granted Mr. Ehle a pension of \$15 a month during his natural life.
² See page 599. ³ See page 615.

We left a portion of the Army of the North on its march from Batavia to Buffalo, under the command of Brigadier General Scott, while Major General Brown, the commander-in-chief, hastened back to menaced Sackett's Harbor. That post and others on Lake Ontario were soon considered safe from attack, and, with the bulk of his army, Brown stood on the east bank of the Niagara River at the close of June, 1814. He made Buffalo his head-quarters, and on the 1st of July he found himself at the head of a military force strong enough, in his judgment, to carry out the orders and wishes of the War Department by invading Canada. His army consisted of two brigades of infantry, commanded respectively by Generals Scott and Ripley, and to each of these was attached an efficient train of artillery, commanded by Captain Nathan Towson and Major Jacob Hindman, and a small squadron of cavalry under Captain Samuel D. Harris. These troops were well equipped and highly disciplined. They were the regulars. There was also a brigade of miscellaneous troops, composed of five hundred Pennsylvania Volunteers; six hundred New York Volunteers, of whom one hundred were mounted; and between five and six hundred Indian warriors, embracing almost the entire military force of the Six Nations then remaining in the United States. These had been aroused to action by the stirring eloquence of the then venerable Red Jacket, the great Seneca orator, chief, and sachem,² whose in-

¹ General Scott had taken special pains to discipline these troops thoroughly. General Jesup (then major), in a manuscript "Memoir of the Campaign on the Niagara" now before me, says that "he [Jesup] began, under the orders of General Scott, a course of instruction, and kept his command (Twenty-fifth Infantry) under arms from seven to ten hours a day. A similar course was pursued by the chiefs of other corps. The consequence was, that when we took the field in July our corps manœuvred in action and under the fire of the enemy's artillery with the accuracy of parade."

² Sa-go-ye-wat-lis, or Red Jacket, was born about the year 1759 where the city of Buffalo now stands, that being the chief residence of the leaders of the Seneca tribe of the Six Nations. He was a swift-footed, fluent-tongued being. During the Revolution he, in common with his tribe, took part with the British and Tories. His business was more in the way of arousing his people to action by his eloquence than the performance of great actions himself. Indeed, Brant spoke very disparagingly of him, and called him a traitor and dishonest man; and he was charged with having been found in a place of safety cutting up a cow belonging to another Indian (which he had killed) while Sullivan was marching through the Seneca country in 1779, fighting the warriors whom Red Jacket had aroused by his eloquence. He first appears conspicuous in history at the treaty of Fort Stanwix (now Rome, New York) in 1784, when, by certain concessions of territory by the Six Nations, those of the tribes who had not emigrated to Canada were brought under the protection of the government of the United States. It was on that occasion that Red Jacket's fame as a great orator was established. Two years afterward he was prominent at a council held at the mouth of the Detroit River; and in all the disputes between the white people and Indians respecting land-titles in Western New York Red Jacket was ever the eloquent defender of the rights of his race. His paganism never yielded to the influence of Christianity, and he was the most inveterate enemy to all missionary efforts among the Senecas. Under his leadership the Senecas became the allies of the Americans against the British in the War of 1812, and in the battle of Chippewa in the summer of 1814 he behaved well as a soldier, although he seems to have been constitutionally timid, and always braver in council than in the field. For many years he was the head chief of the Senecas. The influence of Christianity and the civilization that affected his people disturbed the latter years of his life, and he was made more unhappy by the intemperate use of intoxicating liquors. So great and disgusting became his excesses that in 1827 he was formally deposed by an act in writing signed by twenty-six of the leading men of the Senecas. This blow was severe. He went to the National capital for redress, and he returned to his people with such evidences of reform that he was reinstated. But he soon became an imbecile, and in a journey to the Atlantic sea-board he permitted himself to be exhibited for money. How his proud spirit in its vigor would have scorned such degradation! He died on the 29th of January, 1836, at the age of almost eighty years. His remains were buried in the church-yard of the Seneca mission, three or four miles from Buffalo, and over his grave Henry Placide, the comedian, furnished with funds by a subscription which he set on foot among the actors connected with the Buffalo theatre, placed a slab of marble in 1889, upon which were engraven these words: "SAGOYEWATHA (He-keeps-them-awake), Red Jacket; chief of the Wolf Tribe of the Senecas; the friend and protector of the people. Died January 29, 1836, aged seventy-eight years."

RED JACKET'S MEDAL.

Toward the close of the Revolution a British officer gave the young chiefs richly-embroidered scarlet jackets, from the wearing of which he derived his English name. In his later years he wore, with pride, a large medal, which was presented to him by President Washington in 1793 on the conclusion of a treaty of peace and amity between the

The Volunteers and Indians.

Chief Engineer M'Ree.

Fort Erie and the Invasion of Canada.

RED JACKET.

fluence among his people had been very great since the close of the Revolution, in which he took a part, not, however, very much to his credit as a soldier.

The volunteers and Indians were under the chief command of General Peter B. Porter, who was then quarter-master general of the New York Militia, and, as we have seen, was not only an eloquent advocate of the war in Congress¹ before it was commenced, but a ready and patriotic actor in its more stirring and dangerous scenes in the field. The accomplished Major William M'Ree, of North Carolina, was the chief engineer in Brown's army,² and he was assisted by the equally accomplished and gallant Major Eleazer D. Wood, with whom we have

Wm M'Ree

become well acquainted while following General Harrison in his campaign in the far Northwest.

On the Canada shore, at the foot of Lake Erie, nearly opposite Buffalo, stood Fort Erie, then garrisoned by one hundred and seventy men, mostly of the One Hundredth Regiment, under the command of Major Buck, of the British army. It was the most serious impediment in the way of our invasion of Canada in that quarter; but when, on the 1st of July, Brown received orders from the Secretary of War to cross the river, capture Fort Erie, and march on Chippewa, at the mouth of Chippewa Creek, where some fortifications had been thrown up, menace Fort George, and, if assured of the co-operation of Chauncey's fleet, and its capability of with-

United States and the Six Nations after the Revolution. It is made of silver, with a heavy rim, and is five inches in width, and nearly seven inches in length. The devices upon it were engraved, it is said, by the eminent David Rittenhouse, the philosopher, who, as a jeweler in his younger days, had acquired some facility in the use of the burin. It will be observed that the painter of the above portrait did not correctly draw the device on the medal which is given in the engraving on the preceding page from a photograph. The medal is now (1867) in the possession of Bravet Brigadier General Parker, of General Grant's staff, chief Sachem of the Six Nations. I saw it in his possession at City Point in 1864. Red Jacket's children being all dead at the time of his death, this insignia of leadership passed out of the possession of his immediate family. The stricken chief regarded the death of his eleven children as a punishment for his drunkenness. The late venerable Mr. Hosmer, of Avon, Livingston County, told the writer in 1855 that on one occasion a lady at his table with Red Jacket, who did not know of his bereavement, inquired after his children. The old chief, with deep sadness, replied with unsurpassed eloquence, "Red Jacket was once a great man and in favor with the Great Spirit. He was a lofty pine among the smaller trees of the forest. But, after years of glory, he degraded himself by drinking the fire-water of the white man. The Great Spirit has looked down upon him in his anger, and his lightning has stripped the pine of its branches."¹

¹ See page 212.

² William M'Ree was born in Wilmington, North Carolina, on the 13th of December, 1787. He was of Irish descent. His father was an active officer in our old War for Independence, and this son was educated at the Military Academy at West Point. He entered the corps of Engineers in 1805, and was commissioned a major, and assigned to the duty of chief engineer of the Northern Army in 1813. He was conspicuous in the events on the Northern and Niagara frontier during the war, at the close of which his government sent him on a tour of military inspection in Europe. After serving on a commission of engineers to determine upon a system of fortifications for the United States, he retired from the army in 1819. He became United States surveyor general, and was almost continually in public employment until his death, which occurred at St. Louis, Missouri, in May, 1833. He was never married. The silhouette from which the above engraving was made is the only likeness of him extant. I am indebted for its use to his nephew, Griffith J. M'Ree, of Wilmington.

Plan of the new Invasion of Canada. General Ripley. American Troops cross the Niagara. Major Gardner.

standing that of Sir James Yeo, to seize and fortify Burlington Heights, at the head of Lake Ontario, he did not hesitate a moment to set about its execution. If these results could be obtained, the Americans would not only hold the peninsula in their grasp, but might proceed leisurely to the conquest and occupation of all Upper Canada.

In obedience to his instructions, General Brown issued orders on the 2d of July for his troops to cross the Niagara River from Black Rock. Accompanied by Generals Scott and Porter, he made a reconnaissance of Fort Erie and the upper part of the Niagara, and concerted a plan of attack. His means of transportation were few. The arrangements for embarking and debarking were made with the brigadiers and the senior engineers, M'Ree and Wood. General Scott was to cross with one division through a difficult pass in the Black Rock Rapids, and land about a mile below Fort Erie, and at the same time General Ripley was to cross from Buffalo, and land at the same distance above the fort. This was to be accomplished by the dawn of the 3d, and the fort was to be immediately invested. The boats that conveyed these divisions were to return immediately to Black Rock, and transport the residue of the army, ordnance, and munitions of war to the Canada shore.¹

Toward the evening of the 2d, when the arrangements were all completed, General Ripley expressed a desire for a change. He believed that his division would have to bear the brunt of battle should the enemy oppose the crossing, and he asked for a larger number of troops. He complained that he could not cross with sufficient force to promise success; and when General Brown, who knew that delay would be perilous, endeavored to convince him that his force would be adequate, and assured him that no change could then be made in the arrangement, Ripley was angry, and tendered his resignation. It was not accepted, and the movement went on.

General Scott crossed the river while it was yet dark on the morning of the 3d, with the Ninth, Eleventh, part of the Twenty-second, and the Twenty-fifth Regiments, and a corps of artillery under Major Hindman, and landed below Fort Erie unmolested. His movements were so prompt that in less than two hours after he embarked, his brigade was formed on the Canada shore. General Brown, with his suite, consisting of his adjutant general (the now venerable Colonel Charles K. Gardner, of Washington City²), Major Jones, the assistant adjutant general, Majors M'Ree and Wood, of the Engineers, and Captains Austin and Spencer, his aids-de-camp, prepared to follow in a small boat. He would have landed on the Canada shore as early as the rear of Scott's division did, had not Ripley been tardy in his obedience of orders. It was broad daylight before that officer's brigade was embarked. Brown was disappointed. He pushed across the river, leaving orders for Ripley to follow as soon as possible, and join Scott, who by that time had formed his troops on the Canadian beach.

¹ In his general orders announcing the contemplated invasion General Brown prescribed stringent rules for his troops in the treatment of the inhabitants and their property. All found in arms were to be treated as enemies, and all others as friends. Private property was to be held sacred, and public property, when seized, was to be disposed of by the commanding general. He prescribed the punishment of death for all plunderers.

² Charles K. Gardner was born in Morris County, New Jersey, in 1787, and in 1791 removed with his parents to Newburg, on the Hudson, where he finished his education. He was a student of medicine with Dr. Hosack, in New York, when he received the appointment of ensign in the old Sixth Regiment of Infantry in 1808. In the following year, while on duty at Oswego, he was appointed adjutant of his regiment. He served as such at various points, and at Baton Rouge, Louisiana, General Wade Hampton appointed him his brigade inspector. In July, 1812, he was appointed captain of the Third Artillery, and in the following month General Armstrong, then in command at New York, made him his brigade inspector. In March, 1813, he was in charge of the adjutant general's office at Washington as assistant, but was soon afterward promoted to major of the Twenty-fifth Infantry, and ordered to the Northern frontier at Sackett's Harbor. He was in the battle of Chrysler's Field. In the following spring he accompanied General Brown's division first from French Mills to Sackett's Harbor, and then to Buffalo, and in April received the appointment of adjutant general, with the rank of colonel. For distinguished services on the Niagara frontier he was breveted lieutenant colonel, but, being then colonel, he declined it. In May, 1816, he was recommissioned adjutant general of the Army of the North, and in 1818 he married and resigned. In 1822-'3 he edited the *New York Patriot*, and was appointed corresponding clerk in the Post-office Department. In 1829 he became assistant postmaster general. He became auditor of the treasury for the Post-office Department in 1836, and was afterward postmaster at Washington City, and surveyor general of Oregon. Colonel Gardner is now (1867) a resident of Washington City. He is the author of a *Compend of Infantry Tactics*, and a very comprehensive *Dictionary of the Army*.

Fort Erie captured by the Americans.

Re-enforcements for it sent too late.

General Riall

Ch Gardner

Brown ordered Scott to push forward a battalion nearer the fort, to observe the movements of the garrison. This battalion, consisting of light troops and a few Indians, were under the command of Major Jesup, of the Twenty-fifth. They drove in the enemy's pickets; and so favorable to success was every appearance, that Brown resolved to invest the fort with Scott's brigade, without waiting for the landing of Ripley's. Taking with him a corps just formed by Major Gardner, he pushed into the woods, in the rear of the fort, where he seized a resident, and compelled him to act as guide. He then directed Gardner to press forward through the forest to the lake shore above the fort, extend his left so as to connect with Jesup's command, and in that manner inclose the post. This movement was accomplished before Ripley, at a late hour, crossed the river with the Nineteenth, Twenty-

first, and Twenty-third Regiments, and met at the landing the adjutant general with orders for his brigade to take the investing position in connection with Scott's forces. This was promptly done.

No time was lost in crossing the ordnance and selecting positions for batteries under the direction of Chief Engineer M'Ree. A long 18-pound cannon was mounted and ready for action upon an eminence called Snake Hill, when Brown demanded the surrender of the fort, giving the commander, Major Buck, two hours for consideration. Very soon afterward a white flag came out, and was received by Major Jesup; the fort, which was in a very weak condition, was surrendered; and at six o'clock in the evening the British soldiers, almost two hundred in number, including seven officers, marched out and stacked their arms, became prisoners of war, were sent across the river, and posted immediately for the Hudson. During the morning the British had fired cannon from the fort, which killed four Americans, and wounded two or three others. When the pickets were driven in the British had one man killed. These were all the casualties attendant upon the capture of Fort Erie.

Prompt measures were taken to secure the advantage gained by the capture of Fort Erie. Had Ripley's desire for delay prevailed, the prize would not have been won, for the British commander on the frontier, General Riall,¹ had been apprised of the danger impending over the fort, and at eight o'clock that morning had sent forward five companies of the Royal Scots to re-enforce it. In front of Chippewa they were met and checked by intelligence of the surrender of the fort. General Riall then determined to make an immediate attack on the Americans, but was induced to forbear by the assurance that the Eighth Regiment was hourly expected from York, now Toronto. He agreed to postpone the attack until the next morning.

P Riall

¹ History is almost silent concerning the character of General Riall. A contemporary, who served under him at the time we are now considering, speaks of him as a gallant man, but possessed of very little military skill: who had "attained his rank by the purchase of all purchasable grades." He was from Tipperary, in Ireland, a little less than middle age, and a man of fortune.

Scott moves down the Niagara.

Preparations for Battle at Street's Creek.

Origin of the "Cadet's Gray."

To confront and drive back this force of British regulars, Scott was sent toward Chippewa with his brigade, accompanied by Captain Towson's artillery corps, on the morning of the 4th. It was late in the afternoon before the second brigade, under Ripley, and Hindman's artillery, were prepared to move. Scott marched down the

STREET'S CREEK BRIDGE.

Canada shore of the Niagara River to a position on a plain behind Street's Creek, opposite the lower end of Navy Island, and little more than a mile above Chippewa. On the way he met a considerable British force under Lieutenant Colonel Pearson, and, after a sharp skirmish, he drove them be-

yond Street's Creek. In fact, the march, for sixteen miles, according to Jesup, was "a continual skirmish,"² chiefly with the British One Hundredth Regiment, under the Marquis of Tweeddale, who were driven to their intrenchments beyond the Chippewa. Believing Scott's troops to be only "Buffalo militia," the marquis could account for their bravery only by the fact of its being the anniversary of American Independence, which gave them patriotic inspiration and courage. He was undeceived on the following day.³ On the plain between Street's Creek and the Chippewa River, Captain Turner Crooker, of the Ninth, with a detachment of light infantry, received and repulsed a detachment of the Nineteenth British Dragoons. Finding the enemy strongly posted beyond the Chippewa, General Scott called in his light troops, and took a position behind Street's Creek, where he encamped for the night. At about midnight the main body of Brown's army, embracing Ripley's brigade, a field and battery train, and Major Hindman's artillery corps, came up, accompanied by the commanding general. With only the small creek between them, the belligerent armies slumbered that hot July night.

The morning of the 5th of July dawned gloriously. The positions of the two armies were simple. On the east was the Niagara River, along the margin of which was a road. On the west was a heavy wood, and between the parties coming in from the woods were two streams, namely, Street's and Chippewa Creeks, the latter, sometimes called the Welland Creek, being the larger in volume.⁴ Below the Chippewa, and about two miles from Scott's camp, was that of Riall. On one side of it was a block-house, and on the other was a heavy battery. At the mouth of the Chippewa, on the south side, some fortifications had been thrown up to cover the bridge, called a *tête-de-pont* (or head of the bridge) battery, whose ruins are still (1867) visible. A little farther up the river the British had a small navy yard and some barracks.

¹ This is a view of the bridge at the mouth of Street's Creek looking up the Niagara, from a sketch made by the author in the summer of 1860. On the extreme right is seen a chimney, which composes the remains of the house of Mr. Street, from whom the stream derives its name. In the distance, on the left, is seen Grand Island.

² Jesup's MS. Memoir, etc.

³ General Scott explained to the writer the cause of the marquis's mistake. While at Buffalo Scott wrote to the quartermaster for a supply of new clothing for his regulars. Word soon came back that blue cloth, such as was used in the army, could not be obtained, owing to the stringency of the blockade and the embargo, and the lack of manufactures in the country, but that there was a sufficient quantity of gray cloth (now known as "Cadet's Gray") in Philadelphia. Scott ordered it to be made up for his soldiers, and in these new gray suits they marched down the Niagara on Canada soil. Believing them to be only militia, Riall regarded them with contempt when preparing for battle on the 5th. Because of the victory, won chiefly by them, at Chippewa on the 5th, and in honor of Scott and his troops, that style of cloth was adopted at the Military Academy at West Point as the uniform of the cadets. It has been used ever since, and is known to be the best color for field service.

⁴ The Chippewa is navigable with small boats for about forty miles. It is obstructed, however, by its connection with the Welland Canal, about nine miles from its mouth.

Scott re-enforced.

British light troops and Indians dislodged by Porter.

Captain Joseph Treat.

REMAINS OF TÊTE-DE-PONT BATTERY.¹

At about noon of the 5th Scott was joined by three hundred Pennsylvania Volunteers, and about four hundred Indians under Captain Pollard and the famous Red Jacket. The whole were commanded by General Porter, who had been accompanied from Black Rock by Majors Wood and Jones, of Brown's staff. The British were re-enforced during the night by the expected Eighth, or King's Regiment, from York or Toronto, and small parties went out from their line at dawn on the beautiful plain between the Chippewa and Street's Creek—a plain then bounded on the west, three fourths of a mile from the river, by a dense wood. For several hours the belligerents were feeling each other, the pickets and scouts of each keeping up a desultory fire all the morning.² Finally the American pickets on the extreme left of Scott's line became so annoyed by a heavy body of British light troops and Indians in the woods, that at four o'clock in the afternoon General Porter was sent with his corps to dislodge them. He was successful. The enemy fled in affright toward Chippewa, dreadfully smitten by the pursuers. There Porter found himself within a few yards of the entire British force advancing in battle order.

In this affair, up to the meeting of the British in force, the Indians behaved well. They were in the woods, on the left of Porter's column, with Red Jacket on their extremity in the forest. Porter, with Captain Pollard, the Indian leader, took post in the edge of the woods, between the pale and dusky soldiers. The Indians, led by

¹ The engraving represents the remains of this battery when I visited the spot and sketched them in the summer of 1860. In the front, between the two figures and the mounds, are seen the waters of the feeder of the Welland Canal. On the left is the mouth of Chippewa Creek, and beyond, the Niagara River at the head of the Great Rapids. Beyond that is the New York shore; and to the left, looking by the head of Goat Island, is seen Niagara Falls Village. Over the most westerly point of the remains of tête-de-pont battery, on the New York shore, is seen the residence of Colonel Peter Augustus Porter, son of the general, who accompanied me at that time. This gentleman lost his life while at the head of his regiment fighting for the republic in the Battle of the Wilderness, Virginia, in 1864.

² It was during these movements early in the morning that Captain Treat, in command of a picket-guard of forty men and a patrol of ten, "retired disgracefully, leaving a wounded man on the ground," as General Brown said in his report. For this alleged offense, Brown ordered Treat, on the spot, to retire from the army; and, in his report of the affair, he advised the dismissal of the captain and one of his lieutenants from the service. "This punishment," says Brown, in a manuscript "Memorandum of Occurrences, etc., connected with the Campaign of Niagara," "though severe, was just, and at the moment indispensable. It had the happiest effect upon the army."

This affair gave rise to much feeling in and out of the army. Captain Treat was a most valuable officer, and had been highly esteemed by General Brown. On the day after his disgrace he called on General Brown and demanded a court-martial. It was finally granted, after long and tedious delays, but the result was not reached until the 5th of May, 1815, when the court declared, "After mature deliberation on the testimony deduced, the court find the accused, Captain Joseph Treat, not guilty of the charge or specification preferred against him, and do honorably acquit him." This finding of the court was approved by Major General Brown at Rackett's Harbor on the 3d of July following. At about the same time Captain Treat published a vindication "against the atrocious calumny," which was dedicated to President Madison. It contains a report of the proceedings of the court-martial, and occupies sixty-two pages. The vindication of his character as a soldier was triumphant.

Captain Treat was the son of one of the earliest settlers on the Penobscot, in Maine. He entered the army as captain of the Twenty-first Regiment of Infantry in the spring of 1812. With his company, recruited chiefly at Bangor, he joined the Northern Army. On the day of his disgrace on Chippewa Plain he volunteered to fight as a private; and such was the confidence of Major Vose, of the Twenty-first Regiment, in Captain Treat, that he requested him to take command of a platoon in the fight. He declined, but fought bravely in the ranks. He became brigadier general of militia in his native state in 1820, and the memory of General Treat is cherished with the most cordial respect.

Joseph Treat

Porter's Troops and the Indians retreat. Scott advances to meet the British. Composition of the British Force.

their war-chiefs, were allowed to conduct their share of the battle as they pleased; and, when the enemy had delivered his fire, they rushed forward with horrid yells, spreading consternation in the ranks of the foe, and making fearful havoc with tomahawk and scalping-knife. They fought desperately, hand-to-hand in many instances, and in every way they won the applause of their commanding general. But the tide of fortune soon changed. The heavy line of the foe, after an exchange of two or three rounds of musketry, charged Porter's troops with the bayonet furiously. Hearing nothing of General Scott, and finding no support against an overwhelming force near, Porter gave an order to retreat and form on the left of Scott's brigade, beyond Street's Creek. The retreat became a tumultuous rout.

Riall, it seems, had intended to fall upon the American camp with his whole force, and for that purpose he had led it across Chippewa Creek. There Porter had confronted it, as we have observed. General Brown was on the extreme left, watching Porter's movements at this time, and, seeing an immense cloud of dust in the direction of Chippewa, at once comprehended its meaning. He correctly supposed the whole force of the enemy to be advancing, and at once dispatched Colonel Gardner with an order to General Ripley to put in motion the Twenty-first Regiment of In-

fantry and Biddle's Battery. He also ordered Captain Ritchie, with his artillery company, to follow him to the plain, where he properly posted him, and then rode to the quarters of General Scott to direct him to cross Street's Creek at once with his whole brigade and Towson's artillery to meet the advancing foe. He found Scott almost ready, with his horse

STREET'S CREEK BRIDGE, LOOKING NORTH.¹

before his tent, to lead his brigade over for the purpose of drilling them on the plain. He did not believe the enemy to be so near in force, but, like a true soldier, he obeyed the order promptly, rather captiously remarking that he would march and drill his brigade, but did not believe he would find three hundred of the enemy there.² Just then Porter's flight was observed. It uncovered Scott's left, and exposed it to great peril; but Ripley had been ordered to advance cautiously through the woods, under the direction of Colonel Gardner, and produce a diversion in Scott's favor by falling on the rear of the British right.

General Riall's advancing army was composed of the One Hundredth Regiment, commanded by the Marquis of Tweeddale; the First, or Royal Scots, under Lieutenant Colonel Gordon; a portion of the Eighth, or King's Regiment, under Major Evans; a detachment of the Royal Artillery, under Captain Macconnochie; and also of the

¹ This is a view of the bridge over Street's Creek, looking down the Niagara River. Across the Niagara, in the extreme distance, immediately to the right of the figures on the bridge, is seen Schlosser Landing, and, nearer, the foot of Navy Island. The house beyond the willow-tree, on the left, is on a portion of the battle-ground, and belonged, when I was there, to Mr. William Gray. It was the scene of a tragedy during the troubles in Canada in 1837 and 1838. Some miscreants came over from Navy Island one night (among them the scoundrel Lett, who destroyed Brock's Monument), and, after enticing a Mr. Edgeworth Usher, who was at this house, to come to the door, shot him through the side-lights as he was seen approaching with a candle in his hand.

Beginning of the Battle of Chippewa.

Charge of the Eleventh Regiment.

Nathan Towson.

Royal Nineteenth Dragoons, under Major Lisle; a regiment of Lincoln militia, under Lieutenant Colonel Dixon, and a body of Indians. These were supported by a heavy battery of nine pieces. He advanced from his intrenchments at Chippewa in three columns, his vanguard being composed of light companies of the Royal Scots and of the One Hundredth Regiments, and the Second Regiment of Lincoln militia. These were commanded by Lieutenant Colonel Pearson. On his right, in the edge of the woods, were about three hundred Indian warriors. It was these, with the vanguard, who fell upon Porter. On the road that skirts the Niagara River, Riall placed two light 24-pounders and a 5½-inch howitzer.

Scott in the mean time had crossed Street's Creek over the bridge with the greatest coolness, in the face of a heavy cannonade from the enemy's full battery within point-blank range, and formed in battle order with the Ninth and part of the Twenty-second Regiment, under Major Leavenworth, covered by Towson's artillery, on the extreme right, the Eleventh Regiment, under Major M'Neil (Colonel Campbell, its commander, having received a severe wound in the knee), in the centre, and the Twenty-fifth Regiment, commanded by Major Jesup, on the extreme left. In this movement Scott was greatly aided by Towson,¹ whose artillery, placed near the bridge, kept the enemy at bay, and at times caused him to slacken his cannonade.

When Porter's corps came flying in confusion from the enemy's right, they were partially checked by Captain Harris's cavalry behind a ravine fronting Brown's camp, and Jesup, by an oblique movement, covered Scott's left, while Ripley was making unavailing efforts to gain the position to which he was ordered by Brown. Jesup was joined by Porter and his staff, and some of the more courageous volunteers, and as the conflict became general, the major engaged and held in check the enemy's right wing. The battle raged with fury along the entire line of both armies. Several times the British line was broken, and then closed up again; and it often exposed as many flanks as it had regiments in the field. This unskillful manoeuvring had been observed by Scott, who had advanced, halted, and fired alternately, until he was within eighty paces of his foe. Observing a gap in his lines which made a new flank, he ordered a quick movement in that direction by M'Neil's Eleventh Regiment. He shouted with a voice that was heard above the din of battle, "The enemy say that we are good at long shot, but can not stand the cold iron! I call upon the Eleventh instantly to give the lie to that slander! *Charge!*"² This movement was immediately made, with the most decisive effect. A similar charge was made by Leavenworth,

GENERAL TOWSON'S GRAVE.

¹ Nathan Towson was one of the most useful officers of the army at this time. He was born in Maryland in 1784, and was appointed captain in the Second Regiment of Artillery in March, 1812. He aided Lieutenant Elliott, of the navy, as we have seen (page 286), in capturing the *Coloche* at Fort Erie in October of that year, and for his gallant conduct there he was brevetted a major. In repelling the attack of the British on Fort George, Upper Canada, in July, 1813, he was wounded. He greatly distinguished himself under Brown as an artillery officer, and was brevetted lieutenant colonel for his good conduct in the battle of Chippewa. He performed equally distinguished service at Niagara and Fort Erie. In the latter a bastion was named in his honor, after the Americans took possession of it, early in July, 1814. He was retained in the service at the close of the war, and was made paymaster general in 1819. In 1834 he was brevetted brigadier general; and for his distinguished services in the Mexican War he was brevetted major general in March, 1840. He died in Washington City on the 20th of July, 1854, at the age of seventy years. His remains lie interred on a pleasant slope in Oak Hill Cemetery, Georgetown, District of Columbia, by the side of those of his wife, and over them is a beautiful white marble monument on which is the following simple inscription: "NATHAN TOWSON, Brevet Major General and Paymaster General, United States Army. SOPHIA TOWSON, wife of Nathan Towson."

NOTE.—The above map indicates the movements of the troops in the battle of Chippewa. A H show the position of M'Neil and Leavenworth when they made the final charge. a, a, a, the point to which Porter drove the British and Indians (see page 807). b, Street's barr.

missing. The British lost two hundred and thirty-six killed, three hundred and twenty-two wounded, and forty-six missing.¹ The horrors of the battle-field were

who held an oblique position on the American right. At the same time Towson's battery poured in an oblique fire of murderous canister-shot, after silencing the enemy's most effective battery by blowing up an ammunition-wagon; and presently the whole left and centre of the British broke and fled in confusion. That effective flank movement by M'Neil was the one, there can be no doubt, which gave the victory to the Americans. "He deserved," said General Scott in his report, "every thing which conspicuous skill and gallantry can win from a grateful country." He was soon afterward breveted a lieutenant colonel "for his intrepid behavior on the 5th day of July, in the battle of Chippewa."

At this time Jesup, hotly pressed by the British right, and finding his men falling thickly around him, ordered his soldiers to "support arms and advance!" In the face of a deadly and destructive fire this order was obeyed, and a more secure position was gained, when Jesup opened such a terrific fire on the enemy that they broke and fled toward their intrenchments beyond the Chippewa. Captain Ketchum, with one of the light companies of the Twenty-fifth, hotly pursued the fugitives, and halted only when within half musket-shot of Chippewa Bridge, where they received some damage from the *tête-de-pont* battery. They captured many prisoners. The British did not cease their flight until they were fairly behind their breastworks below Chippewa Creek, and taken up the planks of the bridge. The plain was strewn with the dead and the dying of both nations. The American loss during the morning skirmishing and in the evening battle on that long, hot July day, was sixty-one killed, two hundred and fifty-five wounded, and nineteen

¹ The American musketry was very effective. Over each ball, in loading, the Americans placed three buckshot, which scattered and did severe execution. The British lost largely in officers. A member of the Marquis of Tweeddale's One Hundredth Regiment afterward stated that two officers of that regiment were killed and twenty wounded. Among the latter was the marquis himself. Fourteen of the British were made prisoners. These, added to the prisoners captured at Fort Erie two days before, made the number 151. The writer above alluded to says that the American officers were seen on the field freely exposing themselves in front of their men. "As to General Riall, as soon as his line fled, he

Bravery of Adjutant O'Connor. The British Position at Chippewa. The Americans fall back. Indians disheartened.

mitigated by a gentle shower, that came like an angel of mercy at the close of the conflict to cool the throbbing temples and moisten the feverish lips of the wounded.

At the close of the battle on the plain, when Scott was about to commence a vigorous pursuit of the enemy, Porter was ordered forward to his support with two hundred Pennsylvania militia who had been left in camp as reserves. These took post on Scott's left, where they awaited the arrival of Ripley's brigade, which had not reached the field in time to participate in the action. The gallant Adjutant O'Connor¹ dashed forward alone to reconnoitre the enemy's position. He saw them tearing up Chippewa Bridge, and comprehended the situation at a glance. Having satisfied himself, he wheeled his horse and galloped back to the lines, followed by several bullets from the men at the bridge, which did no harm. Scott pressed forward, and at a point of woods came into an open field in full view of the enemy. The guns at the *tête-de-pont* battery and at the British camp opened upon them, the corps of Porter receiving the first discharge. Just then a building near the bridge, touched by a British torch, burst into flame; and at the same moment a thunder-gust, followed by gentle rain, went skurrying up the river, filling the air with blinding clouds of dust. The commanding general resolved to bring up all his ordnance, and force the enemy's position by a direct attack, when Major Wood, of the Engineers, and Captain Austin, the general's aid, who had been forward and made observations, assured him that the position of the enemy was too strong to be easily moved. This report, and the advice of Scott and Wood, caused the general to issue an order for a retrograde movement. The victorious little army marched slowly back through mud where deep dust had lain only an hour before, and at sunset reached their encampment behind Street's Creek. On that eventful night Chippewa Plains were deserted, and the two armies occupied the same relative position which they did at dawn. In the morning General Brown had assured General Porter that not a British regular would be seen on the south side of the Chippewa that day, and in this belief Scott had shared.² But they had been there, left a sanguinary record, and were gone; and the stars looked down that night on a scene of repose, tranquil and profound, where the horrid detonations of fierce conflict had been heard, and the smoke of battle had obscured the light of the evening sun.

There was joy in the American camp that night. A decisive battle had been fought by small numbers,³ and gallantly won by the Americans. The chief glory properly belonged to General Scott, whose brigade was the principal instrument in the achievement.⁴ It was very important in its results—more important, perhaps, than any preceding battle of the war. The Indian allies of the British were disheartened. Their disaffection, begun at the Thames, was now made complete. Nearly all of the sav-

rodé up straight to the enemy's line, as if to court death; but, as is usual in such cases, he failed to find it, while his fashionable and well-dressed aid-de-camp, obliged to accompany him in what he must have thought not a very agreeable enterprise, was seriously wounded in the thigh."—See *The Spirit of our Times*, Montreal, March 16, 1861.

Among the American officers who were wounded was Colonel Campbell, and Captains King, Read, and Harrison. The first-named fell, as we have seen, at the very beginning of the action. Captain Harrison had his leg shot off by a cannon-ball, but heroically refused to allow a man to be taken from the ranks to bear him off until the British retreated. Lieutenants Palmer, Barron, De Witt, Patchin, and Brimhall were also wounded.

¹ John Michael O'Connor was a native of New York. He was commissioned first lieutenant in the Third Artillery in March, 1812. He was soon afterward appointed regimental quartermaster, and in the spring of 1813 was promoted to captain. On the 20th of June, 1814, he was appointed assistant adjutant general, under Gardner, on General Brown's staff, and held that office at the time of the battle of Chippewa. He was retained in the army at the close of the war, and left it in 1821. In 1824 he translated for the Military Academy at West Point Guy de Vernon's *Science of War and Fortifications*.

² Manuscript Narrative of the Battles of Chippewa and Niagara, by General Porter. General Brown expressed this belief to General Porter while the latter was marching from Black Rock to Scott's encampment. He informed Porter that the British militia and Indians were annoying his pickets very much, and when proposing to that officer to employ his Indians in driving the former from the woods he promised him ample support, and gave him the assurance that no regulars would be seen.—See Stone's *Life of Red Jacket*, page 257.

³ According to the most careful estimates, the whole number of troops actually engaged in the battle did not exceed 2000, namely, 1300 Americans and 1700 British.

⁴ "Brigadier General Scott," said Brown, in his report to the Secretary of War on the 7th of July, "is entitled to the highest praise our country can bestow; to him more than any other man I am indebted for the victory of the 5th of July. His brigade has covered itself with glory. . . . The family of General Scott were conspicuous in the field—Lien-

ages, who had been a terror to all in every district in the West in which military movements occurred, now left the British army and returned to their homes. The victory also gave a needed impetus to enlistments. It created great joy throughout the country. The people were amazingly inspired, and recruiting became so active that almost any number of men might have been added to the army for another campaign. This victory also won more genuine respect for the Americans from the enemy than had ever been accorded before; and among the peevish expressions of mor-

tenant Smith, of the Sixth Infantry, major of brigade,* and Lieutenants Worth† and Watts,‡ his aids. From General Ripley and his brigade I received every assistance that I gave them an opportunity of rendering." He gave equally warm praise to General Porter and his command, and all the other officers and troops. Of Gardner and Jones,‡ of his own military family, he made particular mention, and said, "I shall have occasion again to speak to you."

* Gerard D. Smith, who was made adjutant in 1813, was now Scott's brigade major, having been appointed in March. He was a native of New York. He had been promoted to captain in June, but his commission had not yet been made known to General Brown. In the battle of Niagara he so distinguished himself that he was breveted a major. He was wounded there, with his chief. He was retained in the army at the peace, but resigned in 1819.

† William Jenkins Worth was a native of Columbia County, New York, and died a major general by brevet in the army of the United States. He entered the army as first lieutenant, and was aid-de-camp to Major General Lewis in 1813. In March, 1814, he became aid to Brigadier General Scott, and was breveted captain for his gallant services in the battle of Chippewa. For his distinguished conduct in the battle of Niagara, twenty days later, he was breveted a major. In that battle he was severely wounded. He was com-

missioned a captain the next month, and was retained in the service at the close of the war. In 1842 he was breveted brigadier for his valuable services in Florida, having previously attained to the rank of full colonel of the Eighth In-

JONES'S MONUMENT.

duct on the field of battle—at Chippewa and the sortie at Fort Erie. A brave soldier and a good man."

For his services at Chippewa Jones was breveted a major, and at Fort Erie lieutenant colonel. He was retained in the army, and was made aid-de-camp to General Brown in June, 1815. He was appointed adjutant general, with the rank of colonel, in 1818, and in 1824 was breveted colonel for ten years' faithful service. In June, 1832, he was breveted a brigadier general, and relinquished his rank in line in 1835. He engaged in the Mexican War, and for his services there was breveted major general in March, 1849.

On the west side of Jones's monument are the names of the battles in which he was engaged in the War of 1812, namely, Fort George, Stony Creek, Chippewa, Niagara, and Fort Erie sortie. On the east side of the obelisk is sculptured, in high relief, a straight sword, garlanded by laurel and olive leaves.

1848, offering to surrender the capital. He died at his head-quarters at San Antonio, Texas, on the 7th of May, 1849. Nine years afterward, a monument, composed of Quinsey granite, fifty-one feet in height, on which is inscribed the names of the several battles in which he had been engaged, was erected in the city of New York, at the junction of Broadway and Fifth Avenue. Anthony Street, in the same city, was named Worth Street at about the same time, in honor of the hero.

‡ George Watts, who was a native of New York, greatly distinguished himself on this occasion. In a letter to General Brown, written ten days after the battle, General Scott spoke in the highest terms of Worth and Watts. "They both rendered essential services," he said, "at critical moments, by assisting the commandant of corps in forming the troops under circumstances which precluded the voice from being heard. Their conduct has been handsomely acknowledged by the officers of the line, who have joined in requesting that it might be particularly noticed." Young Watts was breveted first lieutenant for his good behavior on that occasion. He belonged to the First Light Dragoons, of which he was third lieutenant. In Brown's sortie from Fort Erie, a few weeks later, he distinguished himself. He was retained in the army as first lieutenant of infantry in 1815, but resigned the following year. A fine portrait of him is in the possession of General J. Watts Depeyster, of Tivoli, New York.

‡ Roger Jones was a native of Virginia. On the southern border of the Congressional Burying-ground at Washington City, overlooking the eastern branch of the Potomac, is a beautiful clouded Italian marble monument, erected to his memory, upon which is inscribed the following brief history of his life: "Born in Westmoreland County, Virginia; died at Washington on the 15th day of July, 1852, in the 64th year of his age. He entered the service of his country as a lieutenant of marines in 1809, and was appointed captain of artillery at the commencement of the war with Great Britain, and served with honor 43 years. He was twice breveted for distinguished gallantry and con-

WORTH'S MONUMENT.

Brown expects the Co-operation of Chauncey. Preparations to cross the Chippewa. Tardiness of General Ripley.

tification which it elicited from English writers and speakers were found honorable acknowledgments of the prowess and genius of American soldiers.¹

It was late in the evening after the battle^a before the wounded of both armies could be taken care of.² The dead remained unburied all night, but early on the morrow they were sought for over the open battle-field and in the woods, and committed to the earth with great respect. Much of the 6th and 7th^b was occupied in this business, while General Brown was impatient to advance, for he expected the arrival of Chauncey at the mouth of the Niagara River to co-operate with him. He was satisfied that the passage of the Chippewa Bridge in the face of the intrenched enemy would be too hazardous to warrant the undertaking, and, informed that an interior route for Queenston would lie through a heavy forest, almost impassable because of a lack of roads and paths, he sent a small reconnoitring party in search of a place to cross the Chippewa not far above the camp of the enemy. An inhabitant informed them that an old and deserted timber road, seen at the rear of Street's house, led by a circuitous route to the Chippewa, at the mouth of Lyon's Creek, about a mile above the British camp. Early on the morning of the 7th,^c General Brown, accompanied by General Porter and Colonel M'Ree, the senior engineer, went out to explore it, and were satisfied that it might soon be made passable for artillery. A heavy detail was sent out for the purpose, and before evening the way from Street's to Lyon's Creek was ready for the contemplated movement.

Anxious to diffuse the right spirit of emulation throughout his army, General Scott resolved to send Ripley in advance, as he was not able to participate in the fatigues and honors of the battle on the 5th, while Scott, who had already won laurels, should keep the left of the enemy at Chippewa Bridge in check. Ripley was accordingly ordered to lead his own brigade and that of Porter, with two companies of artillery under Hindman, to the extreme right of the enemy, cross the Chippewa at the mouth of Lyon's Creek, and fall upon his flank. This order did not suit General Ripley, and he hesitated in obedience.

The day was rapidly wearing away, and General Brown, impressed with the importance of a prompt movement, rode to the front and took command in person. The materials for the construction of a temporary bridge over the Chippewa were soon

MOUTH OF LYON'S CREEK IN 1860.

on its southern bank, and Hindman posted his artillery on a rise of ground so as to cover the field of operations.³

Riall in the mean time had discovered Brown's movement, and perceived his own peril involved in it; and while a few troops, with some field-pieces, that were sent up

¹ "The important fact is," said an English writer quoted by Mansfield, "that we have now got an enemy who fights as bravely as ourselves. For some time the Americans cut no figure on land. They have now proved to us that they only wanted time to acquire a little discipline. They have now proved to us what they are made of; that they are the same sort of men as those who captured whole armies under Burgoyne and Cornwallis; that they are neither to be frightened nor silenced."

² Among the British officers who were wounded was the present (1867) Sir James Wilson, governor of Chelsea Hospital. He received five wounds in the battle of Chippewa. He has been over sixty years in the British military service.

³ When I visited the spot in 1860, the rise of ground on which Hindman placed his guns was occupied by the steam saw-mill of Mr. Barnabas Crane, whose smoke-stack is seen in the above picture rising like a steeple above the trees of an intervening orchard. Lyon's Creek, a small stream named after the first settler there, is seen in the foreground, making its way through a boggy swale, and the Chippewa beyond the two trees. This is about a mile from the mouth of Chippewa Creek.

Passage of the Chippewa.

Riall re-enforced.

Brown advances toward Fort George.

to oppose the passage of the Chippewa by the Americans, were performing that duty, he broke camp and fled with his whole army to Queenston. Brown's opponents, after a brief cannonade, retired, the bridge-building was abandoned, and Ripley's brigade was marched down the Chippewa and formed a junction with Scott's, which had advanced to the southern margin of the stream. The British had destroyed the Chippewa Bridge, but by the use of boats both brigades and some of the artillery crossed the stream before the morning of the 8th.^a On that day the whole American force under Brown, excepting Porter's brigade, which was left to guard the baggage and rebuild Chippewa Bridge, pursued the flying enemy down the Niagara River. They encamped at Queenston on the 10th,^b and toward the evening of that day Porter, who had been re-enforced by some New York Volunteers, came into camp with the baggage from Chippewa. Riall had retired on the approach of Brown, thrown part of his troops into Forts George and lately-constructed Mississauga, and established his head-quarters at Twenty-mile Creek. Brown resolved to wait at Queenston for the arrival of Chauncey, for he could draw no supplies from the Genesee or Sodus without the fleet. The government had assured him of its co-operation, and the 10th of July was the day appointed for its arrival. The general anxiously watched from the heights of Queenston for its approach, and hour after hour he spent in expectation of seeing its white sails on the waters of Ontario, which were only seven miles distant. But word soon came that Chauncey was sick, and his fleet blockaded in Sackett's Harbor. Expected re-enforcements were also detained there.

Riall in the mean time had marched with fifteen hundred men for Burlington Heights, at the head of Ontario, leaving some veteran soldiers of the Forty-first and Eighth Regiments, and seamen and marines from two of Yeo's vessels in the Niagara River, to garrison the forts. Riall expected to be re-enforced at Burlington, and was agreeably surprised by meeting the One Hundred and Third, and the flank companies of the One Hundred and Fourth Regiment on the way. He turned back, took position at Fifteen-mile Creek (only thirteen miles from Brown's camp), and there watched the movements of his foe.

At that time General Brown was contemplating an advance upon Fort George. On the 14th he called a council of officers to consider the matter. A majority were in favor of attacking Riall that very night, before he should receive re-enforcements; while the minority, coinciding with the wishes of the commanding general, advised an immediate investment of Fort George, notwithstanding there was no competent siege-train with the army, nor provision made for the safe transportation of supplies from Buffalo.¹ In the mean time foraging and reconnoitring parties were out continually. One of the latter, composed of the venerable John Swift, of the New York militia, and one hundred and twenty volunteers, advanced toward Fort George to obtain information. They captured a picket-guard of five men near an outpost of the fort,^c and Swift was conducting them back to head-quarters, when one of them, who had begged and obtained quarter, murdered the general by shooting him through the breast. The discharge of this gun brought out fifty or sixty of the enemy. Terribly wounded as he was, the brave Swift, who had served his country in the field during the entire War of the Revolution, formed his men, and advanced at their head to attack the foe. He fell, exhausted. The enemy were driven back to Fort George, and the dying general was conveyed to Queenston.² "After serving his country seven years in the War of the Revolution," said General Porter in his brigade order the next day, "he again stepped forward as a volunteer to give

¹ According to Wilkinson (*Memoirs*, i., 609 and 671), Brown's engineers (M'Ree and Wood), and Generals Ripley and Porter, advised an immediate attack on Riall, while General Scott and Adjutant General Gardner advised an investment of Fort George. Major Hindman declined to give any opinion.

² General Porter's Brigade Orders, dated Queenston, July 13, 1804. General Swift was a brother of the late General Joseph G. Swift, the accomplished engineer officer in the War of 1812.

St. David's Village burnt.

Fort George approached.

Brown falls back to Chippewa.

the aid of his experience in support of the violated rights of his country; and never was that country called on to lament the loss of a firmer patriot or braver man."

A few days after this sad occurrence, Colonel Stone, of the New York militia, while out on a foraging expedition, wantonly burned the little village or hamlet of St. David's, a short distance from Queenston; and similar unwarrantable acts caused great exasperation against the Americans. General Brown promptly dismissed Stone from the service as a punishment for his crime, in accordance with the sentence of a court-martial.¹

While Brown's council of officers were debating, word came of the retrograde movement of Riall to Fifteen-mile Creek, but no intelligence was received of his re-enforcements. Brown evidently did not believe that any were near, for on the preceding day he wrote to Chauncey, saying, "All accounts agree that the force of the enemy in Kingston is very light. Meet me on the lake-shore north of Fort George with your fleet, and we will be able, I have no doubt, to settle a plan of operations that will break the power of the enemy in Upper Canada, and that in the course of a short time. . . . I doubt not my ability to meet the enemy in the field, and to march in any direction over his country, your fleet carrying for me the necessary supplies. We can threaten Forts George and Niagara, and carry Burlington Heights and York, and proceed directly to Kingston and carry that place. For God's sake let me see you. Sir James will not fight."

July 13,
1814.

With such opinions and expectations General Brown prepared to invest Fort George. Generals Porter and Ripley were ordered to reconnoitre the position of the enemy, one along the river, and the other in the interior, by way of St. David's; and on the 20th the military works at Queenston were blown up, and the whole army left that post and advanced toward Fort George. There Brown was apprised of the arrival of Riall's re-enforcements, when he withdrew, and occupied his old position at Queenston on the 22d.

On the morning of the 23d Brown received a letter from General Gaines at Sackett's Harbor apprising him of the sickness of Chauncey, the blockade of the fleet, and the peril to be apprehended to re-enforcements that might be sent by water in small vessels hugging the coast. Abandoning all hope of co-operation by the fleet, or the speedy reception of re-enforcements, the general changed his plan of operations, and at once ordered a retreat to the Chippewa, there to be governed by circumstances. He expected by this retreat to draw Riall on to the Niagara again, or, failing in this, to draw a small supply of provisions from Schlosser, on the opposite shore, disencumber his army of all baggage which could possibly be dispensed with, march against Riall by way of Queenston, and fight him wherever he might be found. The army reached the Chippewa on the 24th, encamped on the south side of it, on the battleground of the 5th, and prepared to make the 25th a day of rest. On the night of the 24th, General Scott, ever anxious for duty and ambitious of renown, requested leave to lead his brigade immediately in a search for Riall, not doubting his ability to win victory for his troops, glory for himself, and renown for the army. He repeated the request on the morning of the 25th, and was vexed because General Brown would not consent to divide his army.² He had an opportunity to try his powers and skill in combat with the enemy sooner than he expected, and in that trial he won fadeless laurels. The story is told in the following chapter.

¹ "The militia have burnt several private dwelling-houses," wrote the gallant Major Daniel M'Farland, of the Twenty-third Infantry, who was killed a few days afterward at Niagara Falls, "and on the 19th burnt the village of St. David's, consisting of about thirty or forty houses. This was done within three miles of the camp. . . . I never witnessed such a scene; and had not the commanding officer, Colonel Stone, been disgraced and sent out of the army, I should have resigned my commission."

² General Brown's manuscript *Memorandum of Occurrences of the Campaign on the Niagara Frontier.*

CHAPTER XXXVI.

"O'er Huron's wave the sun was low,
The weary soldier watch'd the bow
Fast fading from the cloud below
The dashing of Niagara.
And while the phantom chain'd his sight,
Ah! little thought he of the fight—
The horrors of the dreamless night,
That posted on so rapidly."—*OLD SONG.*

BEAUTIFUL to the senses was the morning of the 25th of July, 1814, on the banks of the Niagara River—a day memorable in the annals of the Republic. It was serene and sultry. Not a cloud appeared in the heavens, nor a flake of mist on the waters. The fatigued American army lay reposing upon the field of its late victory, with the village of Chippewa in front, and had enjoyed half a day of needed rest, when a courier came in haste with intelligence from Colonel Philetus Swift at Lewiston that the enemy were in considerable force at Queenston and on the Heights; that five vessels of Yeo's fleet had arrived during the night; and that a number of boats were in sight moving up the river. A few minutes afterward another courier arrived from Captain Denman, of the quartermaster's department, with a report that the enemy, a thousand strong, were landing at Lewiston, and that the American baggage and stores at Schlosser were doubtless in imminent danger of capture.

These rumors were true only in part. Vessels had arrived in the river, boats had ascended it, and a considerable British force was occupying Queenston. Lieutenant General Sir George Gordon Drummond had arrived with re-enforcements from Kingston, composed in part of some of Wellington's veterans, and landed at Fort Niagara, and in boats many of them had gone up and disembarked at Queenston. In the mean time the troops under Riall had been put in motion. Loyal Canadians had early informed him of the retreat of the Americans to Chippewa; and at near midnight of the 24th he sent forward a column under Lieutenant Colonel Pearson, composed of a regiment of the ever-active Glengary militia, commanded by Lieutenant Colonel Battersby; the incorporated and sedentary militia, under Lieutenant Colonels Robinson (late chief justice of Canada) and Parry; detachments from the Royal Artillery, with two 24-pounders, three 6-pounders, and a howitzer; and the One Hundred and Fourth Infantry, under Lieutenant Colonel Drummond, and a troop of the Nineteenth Light Dragoons. Pearson moved forward with celerity, and at seven o'clock on the morning of the 25th took position on an eminence in and near Lundy's Lane, a public highway leading directly westward into the heart of the peninsula and the head of the lake from the road along the river from Chippewa to Queenston. The position was a short distance from the great cataract of Niagara, and a commanding one.

Of Pearson's movement Brown seems to have had no intelligence, and his efforts to counteract the supposed invasion at Lewiston were rather tardily begun. He heard of the invasion at noon, but it was quite late in the afternoon before he ordered a forward movement of any of his troops. At two o'clock Major Jesup, who had crossed Chippewa Bridge, brought him word from Lieutenant Colonel Leavenworth,¹

¹ Henry Leavenworth was born in Connecticut, December 10, 1783, and was made captain in the Twenty-fifth Regiment United States Infantry in April, 1812. He was promoted to major in the Ninth Infantry in August, 1813. For

Scott ordered to march on Fort George. The Widow Wilson's Story. Scott suddenly confronted by the British.

the officer of the day, that a considerable body of the enemy had been seen at Niagara Falls, not more than two miles distant;¹ but so impressed was the general with the idea that the enemy were after his supplies at Schlosser that he would not believe that more than a few light troops on a reconnoissance were in front. Conceiving the best plan for recalling the foe would be a menace of the forts at the mouth of the Niagara River, he ordered General Scott to march rapidly upon them with his brigade, Towson's artillery, and all the cavalry and mounted men at command. This order was issued between four and five o'clock in the afternoon,² and within twenty minutes afterward the impatient Scott had all his troops in motion. He crossed Chippewa Bridge between five and six o'clock, and pushed on toward the great cataract, fully impressed with the belief that a large force of the enemy was on the other side of the river, and not directly before him. His battalion commanders were Lieutenant Colonel Leavenworth, Major McNeil, Colonel Brady, and Major Jesup. Towson was with his artillery, and Captains Harris and Pentland commanded the mounted men. The whole force numbered full twelve hundred persons.

A widow named Wilson lived in a pleasant white house at the great Falls, near Table Rock; and when the vanguard of Scott's command came in sight of her dwelling they discovered a number of British officers there, who mounted their horses and rode hastily away after surveying the approaching column of Americans with their glasses.³ The widow, with the skill of a diplomat, assured Major Wood, of the Engineers, who were in the van, that she extremely regretted their tardiness, as they might have captured General Riall and his staff, whom they had seen riding off. She also assured them, with more truthfulness, that eight hundred regulars, full three hundred militia, and two pieces of artillery were just below a small strip of woods near. Scott, who had come up with his staff and heard her story, did not believe it. Had not the British army been beaten on the 5th? And was there not in the possession of the commander-in-chief positive information that a large part of that army had been thrown across the Niagara at Lewiston? He believed that only a remnant of it was in his front, and he resolved to obey his instructions to "march rapidly on the forts." He sent a message to his general by Lieutenant Douglass, to inform him of the appearance of the enemy, and then dashed gallantly into the woods to disperse the foe. What was his astonishment on finding the story of the widow literally true! Riall had been re-enforced, and there he was, with a larger number of troops than Scott had encountered twenty days earlier, drawn up in battle order in Lundy's Lane—a highway, as we have observed, running from the Niagara River to the head of Lake Ontario. His position was one of extreme peril. To stand still would be fatal; to retreat would be very hazardous. The latter movement might jeopardize the whole army by the creation of a panic, especially among the reserves under Ripley, who were not in the former battle. There was no time for reflection, for a heavy fire of musketry and cannon had been opened upon him. From that wonderful wealth of resource, at the moment of great need, which always distinguished him, Scott drew immediate inspiration, and resolved to fight the overwhelming number of the enemy, and impress Riall with the conviction that the whole American army was at hand.

his bravery at Chippewa he was breveted lieutenant colonel, and for his distinguished services at the battle of Niagara Falls he was breveted colonel. He was retained in the army, and made lieutenant colonel of the Fifth Infantry in February, 1818. He performed able service in the wilderness westward of the Mississippi, far up the Missouri, and a fort in that region bears his name. In July, 1824, he was breveted brigadier general for ten years' service, and the following year he was made full colonel. He died near the Cross Timbers, on the False Washita River, July 21, 1834.

¹ Jesup's Manuscript *Memoir*, etc.

² Within three or four days the British had erected beacons in this vicinity in order to give alarms. These were constructed under the direction of Lieutenant Colonel Myers, an officer who was made prisoner at Fort George the year before, and afterward exchanged. Writing to Captain James Cummings (now of Chippewa) on the 21st of July, he said, "The best place at Wilson's is on the cleared point, near the paling of Wilson's garden, and not far from the head of the path that goes down to the Table Rock."—*Autograph Letter*.

Junction of British Forces.	Their Line of Battle.	Scott attacked.	The British flanked.
-----------------------------	-----------------------	-----------------	----------------------

Trusting to rumor instead of actual observation through scouts, Brown was wholly uninformed, or at least misinformed, concerning the movements of the British. Not a soldier of that army had been sent across the Niagara at Lewiston. Every man left fit for service since the late battle was with Riall preparing for this advance movement. On the night of the 24th Lieutenant General Sir George Gordon Drummond, as we have observed, had arrived at the mouth of the Niagara River in the British fleet from Kingston. He brought eight hundred men with him, and sent Lieutenant Tucker, with about five hundred of them and a body of Indians, to disperse or capture a small American force at Lewiston. This movement gave rise to the report of invasion. Drummond had apprised Riall of his intentions; and these officers, with their respective commands, had formed a junction on the Niagara without discovery by General Brown. These united forces, not less than four thousand five hundred strong, with the exception of a portion of the re-enforcements, were confronted by Scott and his "twice six hundred men," with two field-pieces. When, forty minutes before sunset, the battle began, the line that opened fire on Scott was full eighteen hundred in number, well-posted on the slope and brow of an eminence over which Lundy's Lane passed.

The enemy's line was a little inclined to a crescent form, the wings being thrown forward of the artillery in the centre. Its left rested on the Queenston Road, and

VIEW AT LUNDY'S LANE IN 1860.

extended over the hill, on the brow of which was planted a battery of seven guns, nearly in the rear of the Methodist church on Lundy's Lane, and not far south of the house of Mr. Fraleigh when I visited the spot in 1860. Into the bowl of this crescent Scott suddenly found himself advancing with his little force, within canister-shot distance of a greatly superior army and powerful field-battery. His quick eye instantly discovered a

blank space between the British extreme left and the river of two hundred yards, covered with brushwood. He saw the advantage it afforded, and directed Major Jesup to creep cautiously behind the bushes in the twilight, with his command, and attempt to turn the enemy's left flank. Jesup obeyed with alacrity. In the mean time Scott was hotly engaged with the British veterans, some of them from Wellington's army, while the battery on the hill poured destruction upon his men. Towson, with his little field-pieces right gallantly handled, could make but a feeble impression. Brady, and Leavenworth, and M'Neil managed their battalions with skill, and fought bravely themselves; not, however, with the expectation of conquering the enemy, but only of keeping him in check until the reserves should come up. This was done, and more. There they stood, the brave Ninth, Eleventh, and Twentieth, mere skeletons of regiments, hurried into battle without warning or preparation, while Jesup's Twenty-fifth, unaided, was battling manfully and successfully with more than a thousand of the enemy to gain possession of the Queenston Road.

Capture of General Riall.

Brown advances from Chippewa.

He orders a formidable Battery to be taken.

The sun went down, the twilight closed, and the darkness of night, relieved by a waning moon, enveloped the combatants. Jesup had gallantly turned the British left, gained his rear, kept approaching re-enforcements of Drummond in check, and secured many prisoners. Among the latter was General Riall, several officers of his staff, and one of General Drummond's aids, Captain Loring. Their capture was an accident. One of Riall's aids saw one of Jesup's flanking parties, commanded by Captain Ketchum, and, mistaking them for a company of their own troops, called out, "Make room there, men, for General Riall!" Captain Ketchum immediately replied, "Ay, ay, sir!" allowed the aid to pass by, and then directed a portion of his own men, with fixed bayonets, to surround the general and his officers, seize the bridles of their horses, and make them prisoners. Riall was astonished, but made no resistance. He was, indeed, quite badly wounded. Ketchum delivered him to General Scott in person, who ordered him to be taken to the rear, and every attention to be given to his comfort. Jesup, perceiving that his own position was not tenable, gallantly charged back through the British line, and took his place in that of the Americans.

It was now nine o'clock in the evening. The British right, which made a furious assault, had been driven back by General Scott with a heavy loss; their left had been turned and cut off by Jesup's bold movement, and their centre, on the ridge, supported by the artillery, alone remained firm. The most of Drummond's re-enforcements had come up, and the remainder were only a short distance off, and pressing forward.

Let us leave the battle-field a moment and turn back to Chippewa. We have seen that a messenger had been sent to apprise General Brown of the presence of the enemy. This messenger was immediately followed by another (Major Jones), who bore the startling intelligence that the whole British army was within two miles, and that General Scott had attacked them to keep them in check. Already the cannonade and musket-firing had been heard in the camp, and General Brown had ordered General Ripley, with his brigade and all the artillery reserve, to press forward to the support of Scott. Mounting his horse, and leaving Adjutant General Gardner to see that his orders were promptly executed, he rode forward, and met Major Jones near the Falls with the exciting message from Scott. Brown ordered Jones to continue his journey to the camp with directions for Porter and his volunteers to follow Ripley as speedily as possible.

On his arrival upon the battle-field, accompanied by Major Wood, General Brown sought and obtained correct information of the situation of affairs from General Scott himself. By this time Jesup had accomplished his bold operations on the enemy's left, and Ripley's brigade was near. Convinced that the men in action were greatly exhausted, and knowing that they had suffered severely, the commanding general determined to form and interpose a new line with the fresh troops, disengage General Scott, and hold his brigade in reserve for rest. Orders to this effect were given to General Ripley, and the second brigade advanced in the pale moonlight on the Queenston Road toward the enemy's left. It was now perceived that the key of the enemy's position was their battery on the hill, and Colonel M'Ree assured General Brown that he could not hope for success until that height was carried and the cannon taken. General Brown instantly turned to the gallant Colonel Miller (now of the Twenty-first, and former leader of the Fourth in the campaigns under Hull and Harrison) and said, "Colonel, take your regiment, storm that work, and take it." "I'll try, sir," responded Miller, promptly, and immediately moved forward to the perilous task.¹ At that moment the First Regiment, under Lieutenant Colonel

¹ "Who gave this order to Miller?" has been an unsettled question. A late writer on this battle says, "I am constrained to believe, on the testimony of Colonel Miller himself, as well as that of Captain M'Donald, that the idea on which was based the assault was General Ripley's; that he ordered its execution; and that the troops had moved to execute it before General Brown knew any thing about the matter." I have before me an autograph letter of General Miller, written to his wife three days after the battle from Fort Erie, in which he says, "Major M'Ree, the chief engineer, told

James Miller

Nicholas,¹ which had arrived that day, and was attached to neither of the brigades, and which had been ordered to draw the fire of the enemy and direct his attention from Miller's movement, gave way. Miller paid no attention to that disaster, but moved steadily forward up the hill with less than three hundred men, mostly concealed by an old rail fence, along which was a growth of thick, low shrubbery. They approached undiscovered to a point within two rods of the battery, where the gunners were seen with their lighted matches waiting for the word to fire. In whispers Miller ordered his men to rest their pieces across the fence, take good aim, and shoot the gunners. This was promptly done, and not a man was left to apply the matches. Miller and his men followed the volley with a shout, and, rushing forward, were in the very centre of the park of artillery before the enemy had a chance to resist. A British line, formed for the protection of the cannon,

were lying near in a strong position, and immediately opened a most destructive enfilading fire, which slew many of the gallant Miller's men. They then attempted to charge with their bayonets, but the Americans returned their fire so warmly that they were kept in check. Hand-to-hand the combatants fought for some time, and so closely that the blaze of their guns crossed. The British were finally pushed back,

General Brown he could do no good until that height was carried, and those cannon taken or driven from their position. It was then night, but moonlight. General Brown turned to me and said, "Colonel Miller, take your regiment and storm that work, and take it!" General Brown, in his Manuscript *Memorandum*, etc., says, "The commanding general rode to Colonel Miller, and ordered him to charge and carry the enemy's artillery with the bayonet. He replied, in a tone of good-humor, that he would *try* to execute the order." See, also, Stillman's *Gallop among American Scenery*. This positive testimony of the chief actors settles the question. It was General Brown, and not General Ripley, who gave the order. Miller's modest response, "I'll try, sir," is one of the sayings which Americans delight to remember, and History loves to repeat.

James Miller was born in Peterborough, New Hampshire, on the 25th of April, 1776, and was thirty-eight years of age at this time. He was educated for the bar, but in 1808 he entered the United States Army as major of the Fourth Regiment of Infantry. In 1810 he was made lieutenant colonel, and, as we have already observed in this work, performed gallant services under Harrison in the campaign that ended at the battle of Tippecanoe. In August, 1812, he was brevetted as colonel for his distinguished services near Detroit, which we have already recorded; and in May of the following year he commenced an equally distinguished series of services on the Niagara frontier in the Sixth Regiment. In March, 1814, he was promoted to full colonel of the Twenty-first Regiment, and accompanied General Brown, in the brigade of General Ripley, in the invasion of Canada in July. He fought gallantly at the battles of Chippewa and Niagara Falls, and also at Fort Erie; and for his services in capturing the battery in Landy's Lane, and general good conduct on the Niagara frontier, he was brevetted a brigadier general, and received from Congress a gold medal, with suitable emblems and devices, delineated in the engraving on the opposite page. General Miller resigned his commission in the army in 1819, when he was appointed governor of Arkansas Territory. He held that office until March, 1820, when he was appointed collector of the port of Salem, Massachusetts, which position he held twenty-four years, or until 1840, when he was prostrated by paralysis. He had a second stroke of paralysis on the morning of the 4th of July, 1851, and died on the 7th at the age of seventy-five years. He was then living at Temple, New Hampshire, where part of his family still reside.

The gold medal presented by Congress is the size delineated on the following page. On one side is a bust of General Miller, with his name and title, and the words "E PLURIBUS UNUM." On the other, a battle scene on a slope and embankment as at Landy's Lane. Troops are seen advancing in the distance. Over the scene are the words "EVOLUTION OF GUNNERS, NOVEMBER 8, 1814." Below, the words "BATTLE OF CHIPPEWA, JULY 8, 1814; NIAGARA, JULY 25, 1814; FORT MONTGOMERY, SEPTEMBER 17, 1814."

¹ Robert Carter Nicholas, of Kentucky, entered the army as captain of the Seventh Infantry in 1808. He became a major in 1810, and lieutenant colonel of the First Infantry in August, 1812. After the battle of Niagara he was promoted to colonel of the Nineteenth (September, 1814), and was retained at the peace. He resigned in 1819, and in 1821 became United States Indian Agent for the Chickarawa.

and compelled to abandon their whole artillery, ammunition-wagons, and every thing else. Seven splendid brass cannon remained with Miller, one of which was a 24-pounder with eight horses, some of them killed. Twice the British attempted to expel Miller from the height, but were repulsed, when Ripley, with the First and Twenty-third Regiments, came gallantly to his aid. At that moment the last of Drummond's re-enforcements, which had been rapidly advancing from Queenston under Colonel Scott, nearly fifteen hundred in all, came up, when the enemy rallied, and made a fourth unsuccessful attempt to drive the victors from the heights and regain their battery.¹

MAJOR JOHN M'NEIL.

The exploit of Miller elicited universal admiration. The American officers declared that it was one of the most desperate and gallant acts ever known. "It was the most desperate thing we ever saw or heard of," said the British officers, who were made prisoners. The moment that General Brown met Miller afterward, he said, "You have immortalized yourself! My dear fellow, my heart ached for you when I gave you the order, but I knew that it was the only thing that would save us."²

Meanwhile the first brigade, commanded by General Scott, had maintained its position with the greatest pertinacity under terrible assaults and destructive blows. The gallant Eleventh Regiment lost its commander, Major John M'Neil, by severe wounds,³ and all of its captains. Its ammunition became spent, and as a regiment

¹ Autograph Letter of General Miller to his Wife from Fort Erie, July 28, 1814.

² Miller's Autograph Letter.

³ John M'Neil was born in New Hampshire in 1784. He very early evinced a taste for military life. At the age of seventeen years he was an ensign, and soon afterward a captain of a grenadier company in his native state, which was remarkable for its physical vigor. His youth and early manhood were spent in rural labors and sports. In March, 1812, he entered the army as captain of the Eleventh Infantry, and in August the next year he was promoted to major. For his gallant conduct at Chippewa, where he commanded his regiment, he was breveted lieutenant colonel, and for similar conduct in the battle of Niagara he was breveted colonel. In that battle he behaved with the greatest gallantry. When the Twenty-second Regiment broke and was about to flee in disorder, M'Neil spurred his horse in front of them, and, with his tremendous voice uttering persuasions and threats, he succeeded in rallying them and leading them into action. His horse was killed under him, and he was wounded in both legs by canister-shot. A six-ounce ball passed through and shattered his right knee, and nearly carried away the limb. But he continued to fight until, be-

A desperate struggle in Darkness.

Both Parties re-enforced.

Sketches of Colonels Brady and Jesup.

it retired from the field, its more gallant spirits rallying around the flags of the Ninth and Twenty-second as volunteers. Very soon Colonel Brady, of the Twenty-second, was severely wounded,¹ with several of his subordinates. Its ammunition became exhausted, and it, too, dissolved, and its remnant clung to the banner of the Ninth, commanded by the brave Lieutenant Colonel Leavenworth, as volunteers. This was now the only regiment remaining of the first brigade, and it fought with a courage that partook of the character of desperation. The three skeleton regiments were consolidated, and contended fearfully in the darkness. Finally Scott ordered them to charge, and they were moving gallantly forward for that purpose when the taking of the battery turned the current, and the order was countermanded. They took their old position at the foot of the slope, ready for any emergency.

It was now about half past ten o'clock at night. The troops were enveloped in thick darkness, for the smoke of battle, untouched by the slightest breeze, hung like a thick curtain between them and the pale light of the moon. Around the tattered colors of the Eleventh the shattered fragments of the first brigade were rallied, commanded by the officers of the Ninth who remained unhurt. The Twenty-fifth, under Jesup,² with their regimental banner pierced with scores of bullet-holes received at Chippewa and in this engagement, reposed a moment after their victory on the river side of the Queenston Road, where the village of Drummondville now stands, while the second brigade, skillfully handled by Ripley, bore the brunt of the battle in the fierce contention for the battery on the height. Yet the others were by no means idle. Every corps was engaged in the desperate struggle, which had continued for more than two hours, the way of the combatants lighted only by fitful gleams of the moon darting through the murky battle-clouds, and the lurid flashes of exploding powder.

THE FLAG OF THE TWENTY-FIFTH.³

Both parties were re-enforced during the struggle; the British by Colonel Scott's

coming faint from loss of blood, he was carried off the field, a cripple for life, and his iron constitution shattered. He was retained in the army at its reduction as major of the Fifth Infantry, and served upon the Western frontier. He was breveted brigadier general in 1824, and in 1826 promoted to the rank of full colonel. He was appointed an Indian commissioner in 1829. In 1830 he resigned his commission, and was appointed by President Jackson surveyor of the port of Boston, which office he held until his death at Washington City, on the 23d of February, 1850. He married a half-sister of Franklin Pierce, the fourteenth President of the United States. He was a powerful man, standing six feet six inches in his stockings.

¹ Hugh Brady was a Pennsylvanian by birth, and was born in Northumberland County in 1768. He entered the army as ensign in 1792, and served in the Northwest under General Wayne. He was captain of the Fourth Infantry in 1799, and was out of service from June, 1800, until July, 1812, when he was commissioned colonel of the Twenty-second Infantry. He was distinguished at both Chippewa and Niagara Falls. He was retained in 1815, and in 1821 was breveted a brigadier general. He was in the war with Mexico, and for meritorious conduct there, at the age of eighty years, he was breveted major general. He died at Detroit on the 16th of April, 1851, aged eighty-three years.

² Thomas Sidney Jesup was a native of Virginia, and was born in 1788. He entered the army as second lieutenant of infantry in May, 1808. He was General Hull's brigade major in the campaign of 1812, in which he was also acting adjutant general. He was promoted to captain in January, 1813, and major of the Nineteenth Infantry in April following. Early in 1814 he was transferred to the Twenty-fifth—a regiment which he had raised mostly by his own exertions in Hartford, Connecticut, and its vicinity. For his gallant conduct at Chippewa he was breveted lieutenant colonel, and for like distinguished conduct in the battle of Niagara, where he was wounded, he was breveted colonel. He was retained in the army in 1815, and was made lieutenant colonel of the Third Infantry in 1817. The following year he was made adjutant general, with the rank of colonel, and shortly afterward quartermaster general, with the rank of brigadier general. In May, 1828, he was breveted major general for ten years' faithful service. In 1836 he was appointed to the command of the army in the Creek Nation, and the same year succeeded General Call in command of the army in Florida. He was active during the war with the Seminole Indians, and was wounded in one of the battles. He was succeeded by Colonel Zachary Taylor, and retired to the duties of the quartermaster general's department, in the performance of which he continued until his death at Washington City, at the age of seventy-two years, on the 16th of June, 1860.

³ This picture of the tattered banner and its broken staff of the Twenty-fifth Regiment, as it appeared on the day after the battle of Niagara Falls, is from a drawing made then, belonging to the Rochester Light Guard, and hanging in their armory in the spring of 1862, when a careful copy was kindly sent to me by Mr. Jeremiah Watts, one of the members of the Guard. The flag was white silk, with a yellow fringe, and the words "THE TWENTY-FIFTH REGIMENT OF U. S. INFANTRY" were inscribed upon a blue ribbon, with gilt scrolls at each end.

Generals Brown and Scott wounded. The Troops fall back to Chippewa. Injurious Tardiness of General Ripley.

command, as we have seen, and the Americans by a part of Porter's brigade, which took post on Ripley's left, and participated in the closing events of the battle. The enemy was beaten off by sheer hard blows given by the muscle of indomitable Perseverance, but at the expense of precious blood. Generals Brown and Scott were severely wounded and borne from the field, and the active command devolved on General Ripley, the senior officer on duty.¹

When the absolute repulse of the enemy was manifest, and General Brown observed great numbers of stragglers in all directions from the broken regiments, he ordered the new commander to fall back with the troops to Chippewa, there reorganize the shattered battalions, give them a little rest and refreshments, and return to the field of conflict by daydawn, so as to secure the fruits of victory by holding the ground and securing the captured cannon, which, on account of a lack of horses, harness, or drag-ropes,

could not be removed at once. Ripley had not moved from Chippewa when the day dawned, and Brown, disappointed and angered by his tardiness, ordered his own staff to go to the commanders of corps and direct them to be promptly prepared to march. It was sunrise before the army crossed the Chippewa, and they were halted by Ripley at the Bridgewater Mills, a mile from the battle-ground, where he was informed that the enemy was again in possession of the heights of Landy's Lane and his cannon, had been re-enforced, and was too strong to be attacked by a less force than the entire army of the Niagara with any promise of success. With this information Ripley returned to head-quarters. The commanding general was irritated. He resolved not to trust the brigadier with the command of the army any longer than necessity required; and he dispatched a courier to Sackett's Harbor with an order for General

¹ The gallant Major M'Farland was mortally wounded while fighting at the head of his battalion of the Twenty-third Regiment. Daniel M'Farland was a Pennsylvanian, and entered the army as captain in the Twenty-second Infantry in March, 1812. In August, 1812, he was promoted to major in the Twenty-third, and was killed in the battle of Niagara Falls.

Captains Biddle and Ritchie, of the artillery, were both wounded in that battle early in the action, and the brunt of the artillery service fell on Towson. Thomas Biddle, Junior, was a gallant officer from Pennsylvania. He entered the army as captain of infantry in the spring of 1812, but joined the Second Artillery soon afterward. He was distinguished in the capture of Fort George, and also at Stony Creek in May and June, 1813. In September he was brigade major under General Williams. He was slightly wounded at Niagara, and for gallant service at Fort Erie afterward he was breveted a major. There he was again wounded. In December following he was aid-de-camp to General Izard. He remained in the army some years, and was finally killed in a duel at St. Louis, Missouri, August 29, 1831.

John Ritchie, who was also in this battle, was a Virginian. He entered the army in the spring of 1812 as captain in the Second Artillery. Although severely wounded in the battle of Niagara Falls, he stuck to his gun, and was killed. He had declared that he would never leave his piece, and, true to that declaration, he fell by it, covered with wounds.

Circumstances of the Battle of Niagara. Number of Troops engaged in it. The Victory claimed by both Parties.

Gaines to come and take the temporary leadership of the Niagara forces.¹ Ripley's delay had doubtless deprived the Americans of all the substantial advantages of victory, for the enemy was allowed to return, reoccupy the field of battle, and retake the captured cannon, excepting one beautiful brass 6-pounder, which was presented to Colonel Miller's regiment on the spot. This they bore away with them as a precious trophy of their prowess. The remainder were retaken by the British a few hours afterward.²

Thus ended the sanguinary BATTLE OF NIAGARA FALLS, sometimes called *Lundy's Lane*, and sometimes *Bridgewater*.³ It has few parallels in history in its wealth of gallant deeds. It was fought wholly in the shadows of a summer evening between sunset and midnight. To the eye and ear of a distant spectator it must have been a sublime experience. Above was a serene sky, a placid moon in its wane, and innumerable stars—a vision of Beauty and Peace; below was the sulphurous smoke of battle, like a dense thunder-cloud on the horizon, out of which came the quick flashes of lightning and the bellowing of the echoes of its voice—a vision of Horror and Strife. Musket, rocket, and cannon cracking, hissing, and booming; and the clash of sabre and bayonet, with the cries of human voices, made a horrid din that commingled with the awful, solemn roar of the great cataract hard by, whose muffled thunder-tones rolled on, on, forever, in infinite grandeur when the puny drum had ceased to beat, and silence had settled upon the field of carnage. There the dead were buried, and the mighty diapason of the flood was their requiem.

According to the most careful estimates, the number of troops engaged in the battle of Niagara Falls was a little over seven thousand, the British having about four thousand five hundred, and the Americans a little less than two thousand six hundred. Both parties lost heavily. The Americans had one hundred and seventy-one killed, five hundred and seventy-one wounded, and one hundred and ten missing—a total of eight hundred and fifty-two. The British lost eighty-four killed, five hundred and fifty-nine wounded, one hundred and ninety-three missing, and forty-two prisoners—a total of eight hundred and seventy-eight. A large proportion of those taken by Jesup on the British left, and by Miller on the height, escaped during the night.

Both parties claimed a victory, the Americans because they drove the enemy from the field and captured his cannon, and the British because their foe did not retain the field and the cannon he had won. While the American people rejoiced over the affair as a genuine triumph, as it undoubtedly was, as a victory in battle, the governor general of Canada was right in complimenting his troops for their steadiness and valor; and the Prince Regent did a proper thing when he gave permission to one of the regiments to wear the word NIAGARA upon their caps.

Major General Brown was twice severely wounded, yet he kept the saddle until the victory was won. First a musket-ball passed through his right thigh; and a few

¹ General Brown's *Manuscript Memoir*, etc. He says, "General Brown entertained no doubt of the intelligence or bravery of General Ripley," but his conduct on the morning of the 26th was such that "his confidence in him as a commander was sensibly diminished. The general believed that he dreaded responsibility more than danger. In short, that he had a greater share of physical than moral courage."

² Miller's Autograph Letter to his Wife, July 28. Brown's *Memorandum*, etc., and his Official Report to the Secretary of War, dated "Buffalo, August, 1814." In that report the commanding general spoke in the highest terms of all his officers and troops. He particularly mentioned the gallant services of Scott, Porter, Jesup, Towson, Hindman, Biddle, Ritchie, Gardner, his adjutant general, M'Ree and Wood, his engineers, his aids-de-camp Austin and Spencer, and Lieutenant Randolph, of the Twentieth Regiment, "whose courage was conspicuous." "The staff of Generals Ripley and Porter," he said, "discovered great zeal and attention to duty."

³ The battle was fought within sight and hearing of the great Falls of Niagara, and should bear that dignified name. It was so called in one of the first published accounts of it. "The battle of NIAGARA," said the Albany Argus at the beginning of August, "commands, like the achievements of our naval heroes, the admiration of all classes of the American people, a few excepted." The hottest of the contest having occurred in the struggle for the battery in *Lundy's Lane* caused the battle to be called after the name of that road. About a mile above the field of battle, on the banks of the Niagara, were mills called *The Bridgewater Mills*. A person attached to the American army, but not in the battle, wrote while it was in progress to some friend in the interior of New York, saying that a great battle was then raging near the Bridgewater Mills. This letter was published extensively, and the conflict was called the *Battle of Bridgewater*. It was so announced in Niles's *Register*, August 13, 1814.

Officers wounded in the Battle of Niagara.

Scott proceeds to Washington.

Honors conferred upon him.

minutes afterward the gallant Captain Spencer, his aid-de-camp, received a mortal wound.¹ Then came a ball of some kind which struck Brown in the side, not lacerating, but severely contusing it. Both hurts were so severe that the general felt doubtful of his ability to keep his seat, and so informed Major Wood, his confidential friend. That brave officer, deeply engaged in the battle, exclaimed, "Never mind, my dear general, you are winning the greatest battle ever gained for your country!" The enemy were soon repulsed, and the general, supported by Captain Austin, his only remaining aid, moved from the field, leaving the command, as we have seen, with General Ripley. Brown rapidly recovered, and was able to resume the command of the army of the Niagara early in September.

General Scott was wounded by a bullet that entered his left shoulder while he was conversing with Major Jesup on the extreme right. He had been exposed to death on every part of the field, and had two horses shot under him. He was spared until the last struggle of the battle, when his aid, Lieutenant Worth, and Brigade Major Smith, were very severely wounded. His own hurt was so great that he could no longer remain on the field, and he was borne first to the Chippewa camp, then to Buffalo, and finally to Williamsville, a hamlet in the east part of the present town of Java, Wyoming County, New York. At the latter place he found the wounded General Riall well-cared for.

Scott suffered intensely, and for a month his recovery was considered doubtful. He was finally removed to the house of a friend (Mr. Brisbane) in Batavia, where kind nursing made his convalescence rapid. At length, when able to bear the motions of a litter, he was carried on the shoulders of gentlemen of the country from town to town, to the house of a friend (Mr. Nicholas) in Geneva, where he remained until he was able to resume his journey, when he went to Philadelphia, and placed himself in charge of the eminent Doctors Physic and Chapman, of that city. He was everywhere received with demonstrations of the warmest respect and admiration for his personal achievements, and as the representative of the now glorious army of the Niagara.² From Philadelphia he passed on to Baltimore early in September, then threatened by the British, who had just destroyed the public buildings of the national capital; and on the 16th of October he was so far recovered as to be able to take command of the Tenth Military District, whose head-quarters were at Washington City. Honors were conferred upon him by public bodies in many places. The Congress of the United States, by a resolution on the 8th of November, 1814, voted him the thanks of the nation, and requested the President to have a gold medal, with suitable devices, struck in his honor, and presented to him.³ The Legislatures of

¹ Ambrose Spencer, of New York, was commissioned a first lieutenant in the Twenty-ninth Infantry in April, 1813, and promoted to captain in February, 1814. He had been made aid to General Brown in August, 1814, and remained in his family until his death. He was greatly distinguished in the battle of Niagara Falls. General Brown relates, in his *Manuscript Memoir*, etc., already cited, that when the last heavy re-enforcements of the British were coming up in the dim moonlight, and he was watching them with intense interest, Captain Spencer suddenly put spurs to his horse, and rode directly to the front of the advancing foe. Then, turning to the enemy's right, he inquired, in a firm, strong voice, "What regiment is that?" He was promptly answered, "The Royal Scots, sir." "Halt! Royal Scots," he replied, and they obeyed. With this information he returned to his general, and soon afterward received a wound which caused his death, at Fort Erie, on the 5th of August. General Drummond had sent a message to Brown asking an exchange of their aids. Spencer was mortally wounded, but Loring was well. Affection for his aid caused Brown to depart from the usages of war, and he complied. On the very day that Spencer was brought to Fort Erie he died, and Captain Loring was sent back to his general.

² It was the annual Commencement at the College of New Jersey, at Princeton, when General Scott arrived there on his way to Philadelphia. The faculty of the college invited him to attend the ceremonies at the church. He was carried thither on a litter, pale and emaciated from suffering, and was placed upon the stage among the professors and invited guests. He was greeted by both sexes with the greatest enthusiasm. The orator of the day was the now deceased brother of Bishop M'Ilvaine, of Ohio, and his subject happened to be "The public duties of a good citizen in peace and war"—an appropriate one for the occasion; and toward its close he turned to Scott and pronounced a most touching eulogy of his conduct. This compliment was followed by the conferring upon the wounded hero the honorary degree of Master of Arts. With grateful heart Scott passed on, and was met, when approaching Philadelphia, by Governor Snyder and a division of militia.—See *Mansfield's Life of Scott*, Chapter XI.

³ Her engraving on the following page is a representation of the medal, a trifle smaller than the original. On one side is a bust of General Scott, with his name. On the other side, surrounded by a wreath, composed of palm and olive leaves entwining a snake, emblem of youth and immortality, are the words "RESOLUTION OF CONGRESS, NOVEMBER 8,

Medal awarded to Scott. Other Gifts. Biographical Sketch. Appointed Brevet Lieutenant General.

GOLD MEDAL AWARDED TO GENERAL SCOTT.

* February 12, 1816. Virginia^a and New York^b thanked him, and each voted him an elegant sword.¹ The Society of the Cincinnati, founded by Washington and his companions in arms, elected him an honorary member,^c and many towns and counties were named in his honor in the course of time. He was breveted a major general; and for almost fifty years longer he served his country actively in its military operations, ten of them as general-in-chief. When, in the autumn of 1861, the great Civil War assumed immense proportions, the Nestor of the republic, feeling the disabilities of increasing physical infirmities, retired from active service, bearing the commission given him a few years before of lieutenant general.²

1814. BATTLES OF CHIPPEWA, JULY 5, 1814; NIAGARA, JULY 25, 1814." This medal was not presented until about the close of Mr. Monroe's administration (February 26, 1825), when the President, in the presence of his cabinet, handed it to him with a brief address. Many years afterward, while it was in the City Bank for safe keeping, the safe of that corporation was entered one night by robbers. They carried off \$250,000, but left the medal. Several years afterward, one of the rogues, when on trial for another offense, said that "when he took the money from the City Bank he saw and well knew the value of the medal, but scorned to take from the soldier what had been given by the gratitude of his country." The profile of General Scott on the medal is said to be the best likeness extant of the hero at the time he won the honor.

¹ The New York sword was presented to General Scott by Governor Tompkins in the City Hall, New York, on "Evacuation Day" (November 25), 1816. The Virginia sword was not presented until 1825, when it was bestowed by Governor Pleasants. It was an elegant weapon, with suitable devices on the scabbard, hilt, and blade. On one side of the blade is seen Scott, just as Miller had carried the Lundy's Lane battery, mounting a charger, another having been torn in pieces under him. Below this is an eagle between two scrolls, bearing the names and dates of his two battles. On the opposite side of the blade are the words "Presented by the Commonwealth of Virginia to General Winfield Scott, 12th February, 1816;" and below this the arms of Virginia.

² Winfield Scott was born in Petersburg, Virginia, on the 13th of June, 1784. He was left an orphan in his boyhood, and was educated, under the care of friends, at William and Mary College. He chose the law for a profession, but soon changed it for that of arms. He entered the United States Army as a captain of light artillery in 1803, and was stationed at Baton Rouge, Louisiana, under General Wilkinson. He had some difficulty with that officer, and during a temporary suspension from duty returned to his profession in his native state. He rejoined the army, and, as lieutenant colonel, went to the Canada frontier in 1812. His career there until the close of the battle of Niagara Falls has been delineated in the text of this work. As we have observed, he took command

Winfield Scott

of the Tenth Military District, with his head-quarters at Washington City, late in the autumn of 1814, when he held the commission of major general by brevet. His wound was very severe. It was in the left shoulder, and his arm was left partially disabled. He was offered and declined a place in the cabinet as Secretary of War. After assisting in the reduction of the army to a peace establishment, he was sent to Europe in a military and diplomatic capacity, where he met some of the most distinguished of Napoleon's generals. He compiled some useful military text-books, and was in active service wherever there was a speck of war until that with Mexico broke out, in which he was chief actor on the part of the United States. He was then general-in-chief of the armies of the United States, with the rank of major general. For his distinguished services in that war he received many civic honors. In 1862 he was an unsuccessful candidate for the Presidency of the United States. In 1856 the brevet rank of lieutenant general was revived and conferred upon him. When the great Civil War broke out he was found, unlike a great proportion of the officers of the regular army who were born in the Slave-labor states, a powerful supporter of his government, and by his skill and courage secured the peaceful inauguration of Mr. Lincoln as President of the United States at a time when the national capital and the life of the chief magistrate elect were menaced by banded rebels. He retired from active service in the autumn of 1861, and died at West Point, on the Hudson, May 29, 1866.

Visit to the Niagara Frontier.

Colonel Cummings.

Battle-ground of Niagara at Lundy's Lane.

I visited the theatre of events described in this and a part of the preceding chapter in the summer of 1860. I was at Niagara Falls, as already observed (page 412), on the evening of the 16th of August. On the following morning, accompanied by Peter A. Porter, Esq., son of General Peter B. Porter (and conveyed in his carriage), I crossed the Niagara on the great Suspension Bridge, and rode up to the Chippewa battle-ground. We went over the great chasm at about ten o'clock, and halted at Chippewa Village, where we were joined by Colonel James Cummings, a venerable Canadian, seventy-two years of age, who was an aid to General Riall in the battle of the 5th of July, 1814.¹ He seemed as vigorous as most men at sixty, and we were fortunate in having the company of so good a cicerone, for he was familiar with every place and event of that battle. He owns a part of the land whereon it was fought; has resided near there for more than fifty years, and is full of reminiscences of the past. He cherishes, as a precious heir-loom for his family, the cocked hat and plume which he wore when he was fighting for his king and country.

After viewing the different portions of the battle-ground at Street's Creek and Chippewa Plains, and making the sketches printed on pages 806, '7, and '8,² we returned to the village, where I made a drawing of the remains of the *tête-de-pont* battery,³ not far from the mansion of Colonel Cummings. There we partook of some refreshments, and, accompanied by the colonel, rode up to the mouth of Lyon's Creek, where the Americans prepared to cross the Chippewa and flank the British, causing Riall, as we have observed,⁴ to hasten back to Queenston. On returning to Chippewa we spent an hour with Colonel Cummings and his family, and then left with enduring recollections of time spent pleasantly and profitably. We rode slowly by the great cataract, observing the site of the Widow Wilson's house, near Table Rock, the stupendous falls, and the grand flood as it rushes in wild and resistless energy toward the great bend in the river at the seething whirlpool.

At Drummondville, a pleasant little town of about five hundred inhabitants, skirting the highway from Chippewa to Queenston, we turned into Lundy's Lane, and rode to the top of the hill on which stood the British battery captured by Miller. It is a pleasant spot, and sufficiently elevated to command extensive views of the country in Canada and New York. On the crown of the hill was the dwelling of Mr. Fraleigh and a Methodist church; and on the slope toward Drummondville was a small cemetery, a view of which may be seen on page 818. A little to the left of the large tree in that picture was the site of the British battery taken by Miller. Near the middle of that cemetery was the grave and monument of Lieutenant Colonel Bisshopp, delineated on page 628; and on its western margin, close by the fence, was the grave of Captain Abraham F. Hull, who appears somewhat conspicuously in the narrative of the surrender of Detroit by his father, General William Hull, in the summer of 1812. On the spot where he fell, gallantly fighting in the battle of Niagara, the brother officers of Captain Hull erected a wooden slab, with a suitable inscription, to mark the spot;⁵ and in after years his friends erected the one of marble, which, with an

¹ Colonel Cummings is yet (1867) living at Chippewa, at the age of eighty years. He entered the military service as lieutenant of a volunteer flank company in 1812, and was stationed on the spot where the battle of Chippewa was fought two years later. He was promoted to the cavalry, but was soon called to Fort George by General Brock, and appointed deputy quartermaster general of militia, with the rank of captain. He was in the battle at Stony Creek, the taking of Berstler at the Beaver Dams, and was the one who received Colonel Chapin's sword when he surrendered there. He was with Lieutenant Colonel Bisshopp at the taking of Black Rock, and was near him when he fell. He was in several skirmishes, and participated in the battles of Chippewa and Niagara as aid to General Riall. He was an active officer, and between these battles had charge of the establishing of beacons between Chippewa and Queenston, under the direction of Lieutenant Colonel Christopher Myers. These beacons were made by setting up a pole, from which was suspended an iron basket filled with resinous bark.

² Nothing of Samuel Street's house was left but the chimney, as delineated on page 806. His orchard, on the south side of the stream, which was young at the time of the battle, now appeared venerable, but vigorous.

³ See page 807.

⁴ See page 818.

⁵ The cut on the following page represents the board slab which I found near the grave of Captain Hull, on which

James Cummings

Observatory at Lundy's Lane. Objects seen from it. Daring Feats at the Niagara Suspension Bridge.

inscription, now (1867) stands at the head of his grave, seen near the fence in the picture on page 818.¹

Fronting on Lundy's Lane, a little northwestward of the position of the British battery, was an observatory, made of timbers, and latticed. It was one hundred and thirty feet in height, and was ascended on the interior by one hundred and twenty-five steps. We climbed wearily to the top, and were richly rewarded for the toil by a magnificent panoramic view of the surrounding country, including in the vision, by the aid of a telescope, the statue of Brock on its lofty pedestal on the Heights of Queenston. Westward we looked far over the Canadian peninsula to the broken country around the Beaver Dam region, and eastward as far over the cultivated lands of the State of New York, while at our feet was the great cataract, which gave a tremor to the pile of timber work on which we stood, and formed a conception in the mind of the amazing power of that mighty pouring flood. An elderly man, who acted as guide to the surrounding scenery as seen from the observatory, ascended with us, and, in monotonous tone, began his well-learned task of repeating the record of historical events there. We only wanted to know the exact locality of certain incidents of the battle, and, after four times preventing him going farther in his tedious details than the words "In the year one thousand eight hundred and fourteen," we obtained what we wished, and descended. We climbed into the little cemetery, and I sketched the tomb of Bisshopp and the view on page 818, and at the same time Mr. Porter made a neat pencil drawing for me of a small house in Drummondville, which was used as a hospital after the battle, as seen from Bisshopp's grave. It is copied in the annexed engraving.

HOSPITAL NEAR LUNDY'S LANE.

On returning to the Suspension Bridge to recross the river, we observed large crowds of people on both banks, above and below the aerial highway, who had come to see the perilous feats of Blondin and a rival upon slack ropes stretched across the river from bank to bank. They were both performing at the same time, cheered on by their respective friends, one above and the other below the bridge. Beneath these daring acrobats was the foaming river, rushing down hill to the great whirlpool at the rate of thirty miles an hour. It was an unpleasant spectacle, for a sense of fearful danger oppressed the mind of the beholder. We rode slowly across the bridge, viewing the foolish and yet heroic performances of both young men, and arrived at Niagara Falls village in time for a late dinner. Toward evening I rode down to Queenston, behind a blind horse, to make the visits on the Canadian peninsula described in preceding chapters.²

Let us now resume the narrative of events in which the Army of the Niagara was engaged in the summer and early autumn of 1814.

General Ripley's tardiness, if not absolute disobedience, as we have observed, left the battle-field of Niagara, so gloriously won by the Americans, in the possession of

WOODEN SLAB.

was the following inscription: "This was erected by his brother officers to mark the spot where Captain Hull, U. S. Army, fell in the memorable action at Lundy's Lane, 25th July, 1814, gallantly leading his men to the charge."

¹ This is a plain stone, two and a half feet in height, which bears the following inscription: "Here lies the body of Abraham Hull, captain in the Ninth Regiment U. S. Infantry, who fell near this spot in the battle of Bridgewater (see note 3, page 824), July 25, 1814, aged twenty-eight years."

² Captain Abraham Fuller Hull entered the army as captain in the Ninth Infantry on the 14th of April, 1812, and was with his father during the march of the army from Dayton to Detroit. He was made *ad-de-camp* to his father in May, 1812, and served as such until the surrender in August. When he again assumed his place in the line, he took command of his old company in the Ninth, under Major Leavenworth. He was an excellent officer, and his loss was much lamented.

³ See page 412.

Ripley attempts to abandon Canada.

Brown's Indignation.

He orders the Army to Fort Erie.

the foe on the morning of the 26th of July. At that time Generals Brown and Scott, Major Jesup, and other wounded officers, were placed in boats for conveyance to Buffalo, and they departed with the expectation that Ripley would hold the strong position at Chippewa until the arrival of re-enforcements. The commanding general had scarcely disappeared behind Navy Island in his upward voyage when Ripley ordered the destruction of the military works and bridge, and some of his own stores at Chippewa, and made a precipitate flight with the whole army to the Black Rock Ferry, a short distance below Fort Erie. His intention was to lead the whole army across the river, and utterly abandon Canada. This design would have been accomplished had not the firmness of the principal officers, by a vehement opposition, prevented. Ripley crossed the river to Black Rock, where Brown lay, to get from him an order for the army to pass over; but that indignant commander not only refused, but treated the brigadier with scorn.¹ Ripley returned, and, by order of General Brown, he led the army to a good position, just above Fort Erie, along the lake shore, encamped it there, and proceeded to strengthen the old works, and to construct new and more extensive ones preparatory to an expected siege.² General Porter, at about the same time, issued a stirring appeal to his fellow-citizens, asking for four thousand volunteers.

The labor at Fort Erie for that purpose was commenced with great zeal and energy by the engineers, and from the 27th of July until the 2d of August the troops were employed in the business day and night, casting up intrenchments, constructing redoubts, making traverses, and preparing *abatis*. Fortunately for the Americans, Drummond did not know their real weakness, and he remained quietly at Lundy's Lane and vicinity, resting his men and receiving re-enforcements for two or three days. Finally, on the 29th, having been re-enforced by about eleven hundred men of General De Watteville's brigade, he prepared to push forward and invest Fort Erie.

At this time Fort Erie was an indifferent affair, small and weak, standing on a plain about twelve or fifteen feet above Lake Erie, at its foot. Efforts to strengthen it having been made ever since it was captured at the beginning of July, it was beginning to assume a formidable appearance. On the extreme right of the American encampment, and near the lake shore, a strong stone work had been erected, and two guns mounted on it, *en barbette*, or on the top without embrasures. It was called the Douglass Battery, in honor of Lieutenant David B. Douglass, of the Engineer corps, under whose superintendence it was built. From the left of this battery to the right of the old fort continuous earthworks were thrown up, seven feet in height, with a

¹ "While the wounded," says Major Jesup, "were moving by water to Buffalo, the army abandoned its strong position behind the Chippewa, and, after destroying a part of its stores, fell back, or, rather, fled to the ferry opposite Black Rock, but a short distance below Fort Erie; and General Ripley, but for the opposition made by M'Ree, Wood, Townson, Porter, and other officers, would have crossed to the American shore. Had the enemy availed himself of this blunder, not a man of our army could have escaped. . . . The American general could have maintained his position [at Chippewa], and have held General Drummond in check during the remainder of the campaign."—Jesup's Manuscript *Memoir of the Niagara Campaign*.

Early on the morning of the 27th the commanding general at Black Rock "was advised that the army had fallen back in haste, and was then near him on the opposite side of the strait. This movement was unexpected, and greatly affected the general. General Ripley intended to have proceeded with the army immediately to the American side of the strait, but the honorable stand taken by the officers whom he consulted induced him to shrink from this intention. Majors M'Ree, Wood, and Townson, as well as General Porter, deserve particular honor for their high-minded conduct on this occasion. General Ripley left the army, and came to General Brown with a hope of obtaining an order for him to cross with the forces. No proposition could have been more surprising to the major general; and perhaps, at this interview, he treated General Ripley with unjustifiable indignation and scorn."—General Brown's Manuscript *Memoir of Occurrences connected with the Campaigns of Niagara*.

² When General Ripley left General Brown's chamber and went below, he remarked to persons there that he would not be responsible for the army if it remained in Canada, and insisted that a written order should be given him. When informed of this, Brown sent to Ripley the following note:

"Head-quarters, Buffalo, 27th July, 1814.

"Sir,—All the sick and wounded, and the surplus baggage, will be immediately removed to this place. Those men who are sound and able to fight will encamp at Fort Erie, so as to defend that post, and, at the same time, hold the ferry below until the wounded, sick, and surplus baggage have crossed. You will send Major Wood or Major M'Ree to me immediately."—General Brown's Manuscript Letter-book.

REMAINS OF DOUGLASS'S BATTERY AND FORT ERIE.¹

ditch in front and slight *abatis*; and from the left of the fort, and in a line nearly parallel with the lake shore, strong parapet breastworks were commenced, with two ditches and *abatis* in front. At the southwestern extremity of this line of works, on a natural sand-mound called Snake Hill,

a sort of bastion, twenty feet in height, was cast up, five guns mounted on it, and named Towson's Battery, in honor of the gallant artillery captain in whose charge it was placed. From this battery to the lake shore, near which lay at anchor the three armed schooners *Porcupine*, *Somers*, and *Ohio*, was a line of *abatis*, thus completing the inclosure of the American camp, with defenses on land and water, within an area of about fifteen acres. All of these works, excepting old Fort Erie, were incomplete when, on the 2d of August, it was discovered that the British army was approaching. They moved steadily onward in considerable force, drove in the American pickets, and in the woods, two miles from Fort Erie proper, formed a camp, and commenced casting up double and irregular lines of intrenchments, and constructing batteries in front at points from which an effectual fire might be poured upon the American works.

Drummond perceived the importance of capturing the American batteries at Black Rock, and seizing or destroying the armed schooners in the lake, before proceeding to the business of besieging Fort Erie; and before dawn on the morning of the 3d of August, he sent over Lieutenant Colonel Tucker with a detachment of the Forty-first Regiment, in nine boats, to attack the batteries. They landed about half a mile below Shogeoquady Creek, where they found themselves unexpectedly confronted by a band of riflemen, two hundred and forty in number, and a small number of militia and volunteers, under Major Morgan. That officer had been intrusted with the defense of Buffalo. He had perceived the advance of the British on the 2d, and believing their intention to be to feign an attack on Fort Erie, but really to attempt the capture of Buffalo and the public stores there, and the release of General Riall, he had hastened to Black Rock, destroyed the bridge over the creek, and during the night had thrown up a breastwork of logs.

Morgan's movement was timely and fortunate. When the British commenced an attack at dawn, and a party moved forward to repair the bridge, the Americans offered very little resistance until the foe were within full and easy range of their rifles, when they poured upon them such destructive volleys that the invaders recoiled. In the mean time Drummond sent over re-enforcements, which swelled the number of Tucker's troops to about twelve hundred. With these he attempted a flank movement, but was gallantly met at the fords of the creek by a small party under Lieutenants Ryan, Smith, and Armstrong, who disputed their passage with success. After a severe contest the British fell back, withdrew to Squaw Island, and with all possible dispatch recrossed the Niagara and joined in the investment of Fort Erie. The British lost a considerable number, of which no official record seems to have been given. The Americans lost two private soldiers killed, and Captain Hamilton, Lieutenants Wadsworth and McIntosh, and five private soldiers wounded.

While Tucker was busy in the invasion at Black Rock, Drummond opened fire with some 24-pounders in front of Fort Erie; but from that time until the 7th can-

¹ This little sketch shows the general appearance of the remains when I visited the spot in the summer of 1860. In the front, on the extreme right, are the crumbled walls of Douglass's Battery, and in the extreme distance those of Fort Erie. Intermediately are seen the mounds of the intrenchments which connected the old fort with Towson's Battery.

nonading was seldom heard. Both parties were laboring intensely in preparing for the impending battle, Drummond in constructing works for a siege and assault, and Ripley in preparations for a defense. On that day most of the new works about Fort Erie were completed. Towson's and Douglass's batteries were in readiness for action. The parapeted breastworks from Fort Erie to Towson's Battery were completed; two ditches were dug in front of them, and *abatis* were laid in continuous line from Douglass's Battery around the front of the fort and breastworks to Towson's, and from thence to the lake shore. Between Towson's and the old fort two other batteries had been constructed. One, mounting two guns, was placed in command of Captain Biddle, and the other, also two guns, was put in charge of Lieutenant Fontaine. The dragoons, infantry, riflemen, and volunteers were encamped between the southwestern ramparts and the water; and the artillery, under Major Hindman, were stationed in the old fort.¹

General Gaines² arrived at the camp at Fort Erie on the 5th,³ and was welcomed with delight by the little army. He immediately assumed the chief command, and his presence inspired them with confidence and courage. General Ripley, who had labored faithfully in preparations for defense, yet not without gloomy forebodings, resumed the command of his brigade, and perfect good feeling prevailed.

Gaines soon made himself acquainted with the condition and position of his force, and on the morning of the 6th⁴ he sent out

Major Morgan and his riflemen (who had been called over from Buffalo) to reconnoitre the enemy, and, if possible, draw him out from his intrenchments. Morgan soon encountered some of the British light troops, and attacked and drove them back to their lines; and for two hours he manœuvred in a way calculated to draw the main body out, but without success. He returned to the camp with a loss of five men killed and four wounded.

This reconnoissance was followed by the British, early on the morning of the 7th,⁵ hurling a tremendous storm of round shot upon the American works from five of their heavy cannon. This drew from the assailed a severe response from all their heavy guns that could be brought to bear on the enemy, and from that day until the 13th the siege went slowly and steadily on, the garrison, on all occasions, behaving most gallantly. Having on that morning completed

Edmund P. Gaines

¹ See map on page 839.

² Edmund Pendleton Gaines was born in Culpepper County, Virginia, on the 29th of March, 1777. At the close of the Revolution his father returned to North Carolina, where he had resided, and there the son toiled on a small farm. When he was about thirteen years of age the family emigrated to Tennessee, and at the age of eighteen young Gaines was raised in the army six years, and then became collector of the port of Mobile. He was promoted to captain in the army, and in that capacity was placed in command of Fort Stoddart, and was active in the arrest of Burr (see page 137). He was commissioned a major in 1812, and rose through the various grades to brigadier general in March, 1814. He was breveted a major general for his gallant conduct at Fort Erie, where he was wounded. Congress rewarded him with thanks and a gold medal. He was retained in 1816. He was active in the Southern Indian country, particularly in the Seminole War. He died at New Orleans on the 6th of June, 1849, at the age of seventy-two years. The signature here given is from a letter to Judge Hugh L. White, dated "Fort Erie, Upper Canada, August 24, 1814.

Attack on Fort Erie. Preparations to receive an Assault. Situation of the American Troops. Secret Order.

the mounting of all his heavy ordnance, Drummond commenced a cannonade, bombardment, and rocketeering, which was continued throughout the day, and renewed on the morning of the 14th. It ceased at seven o'clock in the evening, when very little impression had been made on the American defenses.

Gaines was convinced that Drummond intended to resort to a direct assault should his cannonading prove ineffectual, and, with this impression, he kept the garrison continually on the alert. Men were detailed for night service in such manner that part were resting and part were under arms continually. The guns in the batteries had been charged afresh several evenings in succession with a variety of shot; dark lanterns were kept burning, and linstocks ready for firing were near every cannon. The engineers and the commanding officer watched every movement with the eyes of experts, and they agreed in the belief that an assault would be made on the night of the 14th. On that evening Gaines visited and inspected every part of the works, gave explicit directions to every officer, and words of encouragement to the men; and Engineers M'Ree and Wood examined every part of the intrenchments most carefully. In the mean time, while the garrison were on evening parade, a shell came screaming across the space between the hostile camps, fell within the American lines, and lodged in an almost empty magazine, which was blown up with a tremendous report. The enemy huzzaed long and loud, supposing they had destroyed one of Gaines's chief magazines. Hoping to profit by the confusion and loss, they prepared at once to assail the American works. Their gun-flints were removed from their muskets, scaling-ladders were collected, and the arrangements of the columns for attack were carefully made in accordance with a secret order¹ issued by Drummond, and special secret instructions given to Lieutenant Colonels Scott, Fischer, and Drummond.

At that time the Americans were situated as follows: Small, unfinished Fort Erie, with a 24, 18, and 12-pounder, forming the northeast angle of the intrenched camp, was under the command of Captain Williams, with Major Trimble's Nineteenth Regiment of Infantry. The Douglass Battery, with an 18 and 6 pounder, and forming the southeast angle, was commanded by Lieutenant Douglass, whose own name it bore. On the left, forming the southwest angle, was Towson's Redoubt Battery, on the little

¹ Three copies were made of this secret order by Lieutenant Colonel Harvey, Drummond's assistant adjutant general, for the use respectively of Lieutenant Colonel Drummond, Lieutenant Colonel Fischer, and Colonel Scott. A copy of the one given to Drummond is before me. It is in the handwriting of Harvey, and was found on the body of Drummond after his death, with another paper mentioned in the subjoined paragraph in a letter of General Gaines to Judge Hugh L. White, of Tennessee, the original of which is also before me. It is dated at Fort Erie, August 24, 1814. General Gaines says: "The inclosed papers, numbers one and two, were in the pockets of Colonel Drummond. The ball that killed him passed through the latter, and a bayonet through the former. I send them to you as trophies, and curiosities which I wish preserved." The paper number one, through which the bayonet was thrust, was the secret order above mentioned. Number two is a rough topographical pencil-sketch of Fort Erie, the position of the British works, that of the three vessels on the lake, and the relative position of Buffalo and Black Rock. Through this the fatal bullet went, and left a fracture in each of its four folds, around which the blood-stain may be still seen, having the appearance of sepia in color. These interesting mementoes of the sanguinary field of Erie are in the possession of Samuel Jaudon, Esq., of New York, a relative of Judge White by marriage, to whose courtesy I am indebted for their use.

In the secret order is the following paragraph, of which I have made a fac-simile: "The lieutenant general most strongly recommends a free use of the bayonet." The bayonet that wounded Drummond passed through the paragraph

*The Lieut General's
most strongly recommends
a free use of the Bayonet*

immediately above this, and left a fracture in the paper about an inch in length and half an inch in width. In the secret order the parole was "Steel," and the countersign "Twenty."

Fort Erie Garrison expecting an Attack.

The Fort assailed.

The British repulsed.

eminence called Snake Hill; and the two two-gun batteries in front, already mentioned, were in charge of Captains Biddle and Fanning, the latter outranking Fontaine. The whole of the artillery was in charge of Major Hindman. Parts of the Ninth, Eleventh, and Twenty-fifth Regiments (the remnants of Scott's veteran brigade) were posted on the right, under the command of Lieutenant Colonel Aspinwall. General Ripley's brigade, consisting of the Twenty-first and Twenty-third, was posted on the left, and General Porter's brigade of New York and Pennsylvania Volunteers, with the riflemen, occupied the centre.

An ominous silence prevailed in both camps at midnight of the 14th. It was the lull before the bursting forth of the tempest in its fury. It was not the silence of inactivity on the part of the British; on the contrary, there was uncommon but cautious stirring within their lines. In the American camp alone, where, as the night wore away, a doubt of immediate danger and the effects of great fatigue were wooing the garrison to slumber, did the quiet of rest prevail. It was soon broken. At two o'clock in the morning an alarm came from a picket-guard of one hundred men, commanded by Lieutenant Belknap, of the Twenty-third Infantry, who were posted in the direction of the enemy's camp to watch their movements. The duties of this picket were important and perilous, but were intrusted to good hands. Belknap managed the affair with skill and bravery.¹ The sky was overhung with clouds. Sound, not sight, gave intelligence of the approach of the enemy. Belknap fired an alarm, and then fell steadily back to camp. The enemy came dashing on in the gloom, full fifteen hundred strong, under Lieutenant Colonel Fischer, and charged furiously upon Towson's Battery and the *abatis* on the extreme left, between that work and the lake shore. They expected to find the Americans asleep, but were mistaken. Colonel Miller's brave Twenty-first Regiment, then in charge of Major Wood, of the Engineers, was behind the *abatis*, and Towson's artillerymen, gallantly supported on the right by the Twenty-third Regiment, were on the alert. At a signal, Towson's long 24-pounders sent forth such a continuous stream of flame from the summit of Snake Hill that the foe called it the "Yankee Light-house." At the same instant a bright flame beamed forth from the line of the Twenty-first, and sent a brilliant illumination high and far, and revealed the position of the enemy to the garrison. It was as evanescent as the light of the Roman candle of the pyrotechnic, and in a few moments heaviest gloom settled upon the scene, relieved only by the flashes of the cannon and musketry.

While one assailing column was endeavoring by the use of ladders to scale Towson's embankment, the other, failing to penetrate the *abatis*, waded in the shallow water of the lake under cover of darkness, and attempted to charge the Twenty-first in the rear. But both columns failed. After a desperate struggle, they were repulsed and fell back. Five times they came gallantly to the attack, and were as often driven away. Finally, having suffered great loss, chiefly from the destructive effects of grape and canister shot, they abandoned the enterprise.

Almost simultaneously with this movement on the extreme left, an assault was

¹ William Goldsmith Belknap was born in Newburg, Orange County, New York, on the 14th of September, 1794. He entered the army as third lieutenant in the Twenty-third Regiment of United States Infantry in the spring of 1814, and in the following autumn was in Wilkinson's expedition down the St. Lawrence. He followed the fortunes of General Brown, and was with him on the Niagara frontier in 1814. His services at Fort Erie, where he was severely wounded, received the warm commendations of his superior officers.* He was retained in the army at the peace as first lieutenant in the Second Regiment, Colonel Brady. At the reduction of the army in 1821 he was transferred to the Third, and the following year was promoted to captain. He was promoted to major in 1842, and, having been active and useful in the Seminole War in Florida, he was breveted lieutenant colonel. He was with General Taylor in Texas and Mexico, and in the battles of Palo Alto and Resaca de la Palma he gallantly commanded a brigade. During the remainder of the service he was Taylor's inspector general. For his gallant conduct at the battle of Buena Vista he was breveted brigadier general. He was with General Taylor in all his battles. From December, 1848, to May, 1851, General Belknap was in command of Fort Gibson, in the Cherokee nation, and his memory is cherished with gratitude by that people. He died near Preston, Texas, on the 10th of November, 1851.

* In a letter to Major Belknap in 1841 (kindly placed in my hands by a daughter of that gallant officer), Brigadier General Towson gave most interesting details of the operations of the picket and the attack of the enemy.

made on the right by five hundred infantry and artillery, with a reserve of Indians, composing the centre and left columns of the enemy, under Lieutenant Colonels Drummond and Scott. They advanced rapidly, under a blaze of fire from cannon and musketry—Drummond toward old Fort Erie, which the mortified British had determined to recover at all hazards, and Scott toward the Douglass Battery and the connecting intrenchments. The latter were received by the veteran Ninth, under the command of Captain Foster, and Captains Broughton and Harding's companies of New York and Pennsylvania Volunteers, aided by a 6-pounder between Douglass Battery and the lake shore, managed by Major M'Ree, the chief engineer. The enemy was soon repulsed in this quarter; but the centre, led by Lieutenant Colonel Drummond, was not long kept in check. It approached every assailable point of the fort at once. They brought scaling-ladders, and, with the greatest coolness and bravery, attempted to force an entrance over the walls. Captain Williams, and Lieutenants Macdonough and Watmough, in the fort, met them gallantly, and twice repulsed them. Then Drummond, taking advantage of the covering of a thick pall of gunpowder smoke which hung low, went silently around the ditch, and with scaling-ladders ascended to the parapet with great celerity, and gained a secure footing there with one hundred of the Royal Artillery before any effectual opposition could be made. Already the exasperated Drummond, goaded almost to madness by the murderous repulses which he had endured, had given orders to show no mercy to the "damned Yankees," and had actually stationed a body of painted savages near, with instructions to rush into the fort when the regulars should get possession of it, and assist in the general massacre.² Finding himself now in actual possession of a part of the fort, he instantly directed his men to charge upon the garrison with pike and bayonet, and to "show no mercy." Most of the American officers and many of the men received deadly wounds. Among the former was Lieutenant Macdonough. He was severely hurt, and demanded quarter. It was refused by Lieutenant Colonel Drummond. The lieutenant then seized a handspike, and boldly defended himself until he was shot down with a pistol by the monster who had refused him mercy, and who often reiterated the order, "Give the damned Yankees no quarter!" He soon met his deserved fate, for he was shot through the heart, was severely bayoneted, and fell dead by the side of his own victim.³

The battle now raged with increased fury on the right, while on the left the enemy was repulsed at every point and put to flight. Thence, and from the centre, Gaines promptly ordered re-enforcements. They were quickly sent by Ripley and Porter, while Captain Fanning kept up a spirited cannonading on the enemy, now to be seen approaching the fort, for the day had dawned. The enemy still held the bastion, in spite of all efforts to dislodge them. Hindman and Trimble had failed in their attempts to drive them out, when Captain Birdsall, of the Fourth Rifle Regiment, rushed in through the gateway, and with some infantry charged the foe. They were repulsed, and the captain was severely wounded. Then a detachment from the Eleventh, Nineteenth, and Twenty-second Infantry, under Captain Foster, of the Eleventh, was introduced into the interior bastion for the purpose of charging the enemy. The movement was gallantly made—Foster was accompanied by Major Hall, the assistant inspector general—but, owing to the narrowness of the passage, it failed. It was often repeated, and as often checked; yet these attacks greatly diminished the number of combatants in the bastion. A more furious charge was about to be made, when, says an eye-witness, "Every sound was hushed by the sense of an unnatural

¹ "I several times heard," says General Gaines in his report to the Secretary of War, "and many of our officers heard, orders given 'to give the damned Yankee rascals no quarter!'"

² Statement of "A Veteran of 1812, in Porter's Corps," who was a participant in the fight, writing from Troy, New York. See *Old Soldiers' Advocate*, Cleveland, Ohio, October, 1859. Alluding to the capture of Lieutenant Fontaine, of the artillery, who fell among the Indians, and was kindly treated by them, General Gaines in his report said, "It would seem, then, that these savages had not joined in the resolution to give no quarter."

³ General Gaines's official Dispatch to the Secretary of War.

A Bastion, with the British, blown up.

The Actors in the Matter.

An American marauding Party.

tremor beneath our feet, like the first heave of an earthquake. Almost at the same instant the centre of the bastion burst up with a terrific explosion, and a jet of flame, mingled with fragments of timber, earth, stone, and bodies of men, rose to the height of one or two hundred feet in the air, and fell in a shower of ruins to a great distance all around."¹

This explosion, so destructive and appalling, was almost the final and decisive blow to the British in the contest.² It was followed immediately by a galling cannonade, opened by Biddle and Fanning, and in a few moments the British broke and fled to their intrenchments, leaving on the field two hundred and twenty-one killed, one hundred and seventy-four wounded, and one hundred and eighty-six prisoners. Some of their slightly wounded were borne away. The loss of the Americans was seventeen killed, fifty-six wounded, and eleven missing. Among the officers lost were Captain Williams and Lieutenant Macdonough, killed; Lieutenant Watmough, severely wounded, and Lieutenant Fontaine, who was blown into the ranks of the Indians when the bastion exploded, but was not severely hurt. These were of the artillery, and were all injured in defending the bastion. Captain Biddle, of the artillery, had been previously injured, and Watmough had also received a contusion. Of the infantry officers injured were Captain Birdsall, Lieutenants Bushnell and Brown, and Ensign Cisna, wounded in defending the fort, and Lieutenant Belknap, wounded in defending the picket-guard which he commanded.

General Gaines called the affair a "handsome victory," not merely a defense and a repulse,³ and in this opinion the impartial historian must agree. He spoke in highest terms of all his officers and men, and particularly of the good conduct of Generals Ripley and Porter, Captain Towson, and Majors Hindman, McRee, and Wood. The intelligence of the event was received with great joy throughout the country; and for his gallant conduct and valuable services at this time, and in the second siege of Fort Erie, which soon followed, General Gaines received substantial honors. On the 14th of September he was breveted a major general, and on the 3d of November the President approved of the action of the national Congress in voting him the thanks of the nation and ordering a gold medal, with suitable devices (see next page), to be struck and presented to him. The three great states of New York, Virginia, and Tennessee each rewarded him with resolutions and an elegant sword.

There were drawbacks upon the joy and the honors of the victory besides those of the loss of life in the conflict, for two of the three schooners that lay at anchor off the fort, as we have observed, were captured by the enemy, and on the day succeeding the victory a marauding party brought dishonor upon the American name at Port Talbot, on the Canada shore. The schooners *Ohio* and *Somers* were captured on the night of the 12th of August by Captain Dobbs, of the Royal Navy, and seventy-five men in nine boats. They were taken down the river half way to Chippewa and secured, but the *Porcupine* beat off her assailants.⁴ The marauders referred to

¹ Manuscript Reminiscences of Major (then Lieutenant) Donglass, quoted by Dawson in his *Battles of the United States by Sea and Land*, ii., 368.

² "The cause of this explosion," says an eye-witness (one of Porter's men), "has never been officially explained. History ascribes it to accident; and perhaps it would not be proper for me to state what I learned at the time. Even if it was design, I think the end justified the means. It was that mysterious explosion which, through Providence, saved our gallant little army from the horrors of a general massacre."

The venerable Jabez Fisk, now (1867) living near Adrian, Michigan, who was in the fight, is not so reticent concerning the explosion. In a letter to me, dated May 20, 1863, he writes: "Three or four hundred of the enemy had got into the bastion. At this time an American officer came running up, and said, 'General Gaines, the bastion is full. I can blow them all to hell in a minute!' They both passed back through a stone building, and in a short time the bastion and the British were high in the air. General Gaines soon returned, swinging his hat, and shouting 'Hurrah for Little York!'" This was in allusion to the blowing up of the British magazine at Little York, where General Pike was killed. See page 539.

³ Letter of General Gaines to the Secretary of War, August 26, 1814. "It is due," he said, "to the brave men I have the honor to command that I should say that the affair was to the enemy a *sore beating* and a *defeat*; and it was to us a *handsome victory*."

⁴ In this affair the Americans lost one seaman killed, and three officers and four seamen wounded. The enemy lost two seamen killed and four wounded. The *Porcupine* sailed for Erie.

GENERAL GAINES'S MEDAL.¹

were a party of one hundred Americans and Indians, who landed at Port Talbot on the night of the 16th, and robbed about fifty families of valuable property, such as horses, household furniture, and wearing apparel, and several respectable citizens were carried off as prisoners of war; one of them, Mr. Barnwell, was a member of the Canadian Assembly. As a dutiful historian I record the affair, but with shame. Happily, such conduct on the part of the Americans was so rare that these pages have not been often stained by the recital.

Both parties at Fort Erie immediately prepared for another struggle, and during the remainder of August and until the middle of September each received and created strength by the arrival of re-enforcements and completing of their respective defenses. The Americans had by that time mounted twenty-seven heavy guns, and had over three thousand men behind them. Drummond also received re-enforcements a few days after his defeat on the 15th, and from some new batteries he opened a cannonade and bombardment of Fort Erie with the design of compelling the Americans to evacuate it. Almost daily, until the close of August, he threw hot shot, shells, and rockets into the fort, and annoyed the garrison much; and finally, on the 28th, a shell fell through the roof of Gaines's quarters, destroyed his writing-desk, and, exploding at his feet, injured him so severely that he was compelled to relinquish his command and retire to Buffalo.

When General Brown, then at Batavia, heard of this accident, he became exceedingly uneasy, and with shattered health and unhealed wounds he hastened to Buffalo, and on the 2d of September crossed over to Fort Erie. He found the garrison in charge of Colonel James Miller, whose rank was not sufficient for the position. Unable to remain himself with safety, he at once issued an order for General Ripley, the senior officer, to take command; and, returning to Buffalo, he established there the head-quarters of the Army of the Niagara, of which he now resumed control. Some of his officers followed him directly, and gave him such assurance of the unpopularity of Ripley with the army, and the dangers therefrom to be apprehended, that, though weak and suffering much, he returned to Fort Erie, and assumed the command in person.

The fort was still closely invested, and Brown perceived that peril was impending.

¹ On one side of the medal is the bust, name, and title of General Gaines, and on the other a figure of Victory standing on a shield, under which is a flag and a halbert. She holds a palm branch in one hand, and with the other is placing a laurel wreath on the end of a cannon which is standing upright, its muzzle downward. Around it is a scroll, inscribed "ERIE." On one transept rests British colors, and from the other is suspended a broadsword. By the side of the cannon lies a howitzer, helmet, and balls. Behind the cannon is seen a halbert. Around the whole are the words "RESOLUTION OF CONGRESS, NOVEMBER 5, 1814; and below, "BATTLE OF ERIE, AUGUST 15, 1814."

British Works and Fort Erie.

Brown determines on a Sortie.

Preparations for it.

ing. The British camp was in a field encircled by woods, two miles from their works, beyond the range of shot and shell from the fort or Black Rock. The army was divided into three brigades of from twelve to fifteen hundred men each; and one of these, daily relieved by another, was constantly at the works, with artillery. These works had now been advanced to within four or five hundred yards of the old fort, and at that distance two batteries had already been completed, and a third, from which almost certain destruction might be hurled, was nearly finished. Brown saw this impending danger, and took measures to avert it. Circumstances were favorable: Heavy and continuous rains had flooded the country for several days. Drummond's camp was on low, marshy ground; and stragglers from it, who had been picked up by the American pickets and deserters, informed Brown that the British force was so much weakened by typhoid fever that the lieutenant general was contemplating a removal of the camp to some healthier position. So broken was his power by camp sickness that for several days he had been unable to make an offensive movement.

Now was Brown's golden opportunity, and he improved it. A sortie was planned, and the time appointed for its execution the morning of the 17th of September. He resolved, as he said, "to storm the batteries, destroy the cannon, and roughly handle the brigade upon duty before those in reserve [at the camp] could be brought into action."¹ His preparations were made with great secrecy. He knew the hazards of the enterprise, and desired the full co-operation of his officers. He sounded their opinions as well as he might without fully disclosing his designs. They were not in consonance with his own; and he made his preparations in a manner to conceal his intentions from the army until all should be in readiness, for he determined to attempt the bold design as soon as Porter should join him with his militia re-enforcements.² These came, two thousand strong, and on the morning of the 17th the commanding general explained his plans to General Ripley (his second in command), his adjutant general, and engineers. All evinced a desire for hearty co-operation excepting General Ripley, who considered the enterprise a hopeless one, and desired to have nothing to do with it.³

Toward noon Brown's sallying troops were in motion in the friendly and fortunate obscurity of a thick fog. They were separated into three corps. One, under General Porter, and composed of his Volunteers, under the immediate command of Major General Davis, of the New York militia; detachments from the First and Fourth Rifle Regiments, under Colonel Gibson; detachments from the Twenty-first and Twenty-third Infantry, and a few dismounted dragoons acting as infantry, under Major Wood, of the Engineers, was directed to move from the extreme left of the American camp, by a circuitous route, through the woods (which had been stealthily marked and prepared by Lieutenants Riddle and Frazer), of the Fifteenth Infantry, to within pistol-shot distance of the enemy's right wing, and attack the British right flank. The second division, composed of fragments of the Ninth, Eleventh, and Nineteenth Regi-

¹ General Brown's Letter to the Secretary of War, September 29, 1814.

² The council of officers was held on the 9th. Major Jesup, then recovering from his wounds, was at Buffalo, and was invited to participate in the conference. The lake was so rough that he did not get over until after the meeting had broken up. "General Brown," says Jesup in his manuscript *Memoir*, etc., "was evidently much disappointed at the result of the council. In the course of the evening he expressed himself with great warmth in regard to his disappointment, and in relation to some of the officers who had been present at the council. But he added, in a manner peculiarly emphatic, 'We must keep our own counsels; the impression must be made that we are done with the affair; but, as sure as there is a God in heaven, the enemy shall be attacked in his works, and beaten too, as soon as all the volunteers shall have passed over!'" "From this time," says the manuscript *Memoir* already quoted, "the major general acted and spoke as though he relied for safety on the defense of his camp; and, to confirm this opinion in the army, he took measures to floor the tents, and in every way to improve the condition of his forces in quarters, as if they were to remain stationary for a long time." He sent spies, as deserters, to the British camp to give information of these movements in the American camp; and so adroitly was the whole affair managed, that a spy was sent on the day of the sortie, at the very hour when the American forces moved, and was received by the British without suspicion.

³ "General Ripley contented himself with saying that the enterprise was a hopeless one, and he should be well satisfied to escape from the disgrace which, in his judgment, would fall upon all engaged in it."—Brown's Manuscript *Memoir*, etc.

Brilliant Success of General Porter.

Death of valuable Officers.

Biographical Sketch of Porter.

ments (the first commanded by Lieutenant Colonel Aspinwall, and the last by Major Trimble), under James Miller (who had been breveted a brigadier general three days before for his gallantry in the battle of Niagara Falls), was ordered to move from the right by way of a ravine between Fort Erie and the enemy's batteries, and attack the British centre. The remainder of the Twenty-first Regiment, commanded by General

Ripley, was posted as a reserve near the fort, and out of sight of the enemy's works.

General Porter¹ and his command moved from the encampment at noon, and, following Lieutenants Riddle and Frazer through the woods, reached a position within a few rods of the British right wing at a quarter before three o'clock, before their movement was even suspected by the enemy. An assault was immediately commenced. It was a complete surprise, and the startled enemy on that flank fell back and left the Americans in possession of the ground. The batteries Nos. 3 and 4 were immediately stormed, and, after a close and fierce contest for about thirty minutes, both were carried. This triumph was

Peter B. Porter

followed by the capture of the block-house in the rear of No. 3. The garrison were made prisoners, the cannon and carriages

were destroyed, and the magazine blown up. Porter's victory was complete, but it was obtained at a fearful cost. His three principal leaders, namely, General Davis, Colonel Gibson, and Lieutenant Colonel Wood, all fell mortally wounded; and the commands of the two latter officers devolved respectively on Lieutenant Colonel McDonald and Major Brooks.

¹ Peter Buel Porter was born in Salisbury, Connecticut, on the 14th of August, 1773. He was graduated at Yale College with high honors, studied law, and entered upon its practice in his native town. He removed to Western New York in 1796, was elected to Congress in 1808, and in that body, as we have observed (page 212), he became prominent as a supporter of the administration, and conspicuous as a member of the Committee on Foreign Relations when the country was approaching a war with England. His residence was at Black Rock, near Buffalo, on the Niagara River, when the war broke out, and he at once engaged in the military service of his country. He was appointed by Governor Tompkins Major General of New York Volunteers in July, 1815, and in that capacity he performed signal service for his country during that and the succeeding year, as our record in the text attests. In 1815 he was again elected to Congress, and was appointed a commissioner to run the boundary-line between the United States and Canada. He remained in public life much of the time until 1829, when, having served a year in J. Q. Adams's Cabinet as Secretary of War, he left government employment for the quiet of private life. He possessed large estates on the Niagara frontier, and the wealth accumulated thereby is now enjoyed by his descendants. His name and services are identified with the growth and prosperity of Western New York. He died at his residence at Niagara Falls on the 20th of March, 1844, in the seventy-first year of his age. His remains rest in a quiet cemetery there, under a beautiful monument, on which is the following inscription: "PETER BUEL PORTER, a pioneer in Western New York; a statesman eminent in the annals of the nation and the state; a general in the armies of America, defending in the field what he had maintained in the council. Born in Salisbury, Connecticut, August 14, 1773. Died at Niagara Falls, March 20, 1844, known and mourned throughout that extensive region which he had been among the foremost to explore and to defend." I am indebted to the pencil of his son, the late Colonel Peter Augustus Porter, for the accompanying sketch of the monument.

PORTER'S TOMB.

EXPLANATION OF THE ABOVE MAP.—A, old Fort Erie; a, a, demi-bastions; b, a ravelin, and c, c, block-houses. These were all built by the British previous to its capture at the beginning of July. d, d, bastions built by the Americans during the siege; e, e, a redoubt built for the security of the demi-bastions, a, a.

B, the American camp, secured on the right by the line g, the Douglass Battery, i, and Fort Erie; on the left, and in front, by the lines f, f, f, and batteries on the extreme right and left of them. That on the right, immediately under the letter l in the words LEVEL PLAINS, is TOWSON'S; h, h, etc., camp traverses; n, main traverse; o, magazine traverse, covering also the head-quarters of General Gaines; p, hospital traverse; q, grand parade and provost-guard traverse; r, General Brown's head-quarters; s, a drain; t, road from Chippewa up the lake.

C, the encampment of Volunteers outside of the intrenchments, who joined the army a few days before the sortie.

D, D, the British works 1, 2, 3, their first, second, and third battery. v, the route of Porter, with the left column, to attack the British right flank on the 17th; x, the ravine, and route of Miller's command.

I am indebted to the late Chief Engineer General Joseph G. Totten for the manuscript map of which this is a copy.

In the mean time, General Miller, aided by the gallant Lieutenant Colonel Upham, had executed his orders well. He penetrated between the British first and second batteries, and, by the aid of Porter's successful operations, carried them both, and block-

Result of the Sortie at Fort Erie.

The Hopes of the British blasted.

The American People Inspired.

houses in the rear. One was abandoned before the assailants reached it. Within forty minutes after the attack commenced by Porter and Miller, four batteries, two block-houses, and the whole line of British intrenchments were in the possession of the Americans. Just after the explosion of the magazine, and at near the close of the action, General Ripley was ordered up with his little band of reserves, and while engaged in observations he received such a severe and dangerous wound in the neck that he fell to the ground. His aid, Lieutenant Kirby, caused him to be removed to the fort, and the command of the reserves was given to Lieutenant Colonel Upham.

Notwithstanding Drummond sent strong re-enforcements from his camp to the imperiled British line of action, the object of the *sortie* was fully accomplished. The British advanced works were captured and destroyed, and Fort Erie was saved, with Buffalo and the public stores on that frontier, and possibly all Western New York.¹

In this memorable *sortie* the Americans lost almost eighty killed, and more than four hundred wounded and missing. The loss of the British in killed, wounded, and missing was about five hundred, exclusive of three hundred and eighty-five who were made prisoners. "Thus," said General Brown, in his letter to the Secretary of War twelve days afterward, "one thousand regulars, and an equal portion of militia, in one hour of close action, blasted the hopes of the enemy, destroyed the fruits of fifty days' labor, and diminished his effective force one thousand men at least."

The "hopes of the enemy" were indeed "blasted;" and, after hastily collecting his scattered forces, Drummond broke up his encampment on the night of the 21st, and retired to Riall's old and partially demolished intrenchments behind Chippewa Creek. So sudden and precipitate was his flight that he abandoned some of his stores in front of Fort Erie, and destroyed others at Frenchman's Creek, on the line of his retreat. It has been said, in praise of British courage and pugnacity, that they "never know when they are whipped," and such seems to have been the case in the present instance, for General L. De Watteville, writing in the camp two days after the action, spoke of the "repulse of the Americans at every point;"² and General Drummond, in a later dispatch, also spoke of a "repulse of an American army of five thousand men by an inconsiderable number of British troops."³

This victory, following so soon those at Chippewa and Niagara Falls, and occurring so nearly simultaneously with the glorious one on land and water at Plattsburg, and the expulsion of the enemy from before Baltimore, diffused unusual joy throughout the country, and dispelled, in a measure, the gloom which had overspread the whole

land because of the capture of the national capital by the British less than a month before.⁴

General Brown, in his official report of the affair,⁵ gave a generous list of heroes, with allusions to their gallant deeds,⁶ and the loyal public hastened

WOOD'S MONUMENT.

¹ Major Jesup, in his *MS. Memoir*, etc., says: "The *sortie* from Fort Erie was by far the most splendid achievement of the campaign, whether we consider the boldness of the conception, the excellence of the plan, or the ability of the execution. No event in military history, on the same scale, has ever surpassed it. The whole credit is due to General Brown. The writer was in a situation to know that the conception, plan, and execution were all his own."

² L. De Watteville to General Drummond, September 19, 1814.

³ Thomson's *Historical Sketches of the late War*, page 527.

⁴ See Chapter XXXIX.

⁵ General Brown spoke in terms of warm eulogy of his engineers M'Fee and Wood. "No two officers of the grade," he said, "could have contributed more to the safety and honor of this army. Wood, brave, generous, and enterprising, died as he had lived, without a feeling but for the honor of his country and glory of her arms. His name and example will live to guide the soldier in the path of duty so long as true heroism is held

Honors awarded to General Brown. The Freedom of the City of New York conferred on him. The Certificate, etc.

to honor them individually and collectively. The national Congress, by a resolution, approved by the President of the Republic on the 3d of November,³ awarded the thanks of the nation and a gold medal, with suitable devices, to each of the general officers.¹ To General Brown, of whom it has been truthfully said

GENERAL BROWN'S MEDAL.

that "no enterprise undertaken by him ever failed,"² the Corporation of the City of New York gave him the honorary privilege of the freedom of the city in a gold box;³

in estimation." The general not only admired Wood as a soldier, but loved him as a friend; and he caused a handsome marble monument to be erected at West Point (see opposite page) in his memory, with the following inscription upon it:

North Side: "To the memory of Lieutenant Colonel E. D. Woon, of the corps of Engineers, who fell while leading a charge at the sortie of Fort Erie, Upper Canada, 11th September, 1814, in the thirty-first year of his age." *West Side:* "He was exemplary as a Christian, and distinguished as a soldier." *South Side:* "A pupil of this institution, he died an honor to his country." *East Side:* "This memorial was erected by his friend and commander, Major General Jacob Brown."

On the uneven north slope of West Point, near the Laboratory Buildings, this monument is seen, upon a grassy knoll, shooting up from a cluster of dark evergreen trees.

¹ On one side of the commanding general's medal is the bust and name of Major General Brown. On the other the Roman fasces, indicative of the Union, the top encircled with a laurel wreath, from which are suspended three tablets bearing the inscriptions CHIPPEWA, NIAGARA, and ERIE, surrounded by three stands of British colors. Below is seen a mortar, cannon-balls, and bomb-shells, and in front of all is the American eagle with wings outspread as if about to soar. Below these are the names and dates of the above battles.

² See *Memoirs of the Generals and Commodores, and other Commanders, etc., of the American Army and Navy*, by Thomas Wyatt, A.M., page 133.

³ The certificate of that freedom and the gold box with which it was presented are in the possession of his widow, yet (1867) living. The box, delineated in the engraving, is of fine gold, elliptical in form, three inches in length, two and a half in width, and three fourths of an inch in depth. On the under side of the lid is the following inscription: "The Corporation of the City of New York to Major General Jacob Brown, in testimony of the high sense they entertain of his valor and skill in defeating the British forces, superior in number, at the battles of Chippewa and Bridgewater, on the 5th and 25th of July, 1814."

The following is a copy of the certificate, or diploma (entirely executed with a pen), giving General Brown the freedom of the city of New York. At the head is a fancy design of the battle of Chippewa, and then the words:

"To all to whom these presents shall come, De Witt Clinton, Esq., Mayor, and the Aldermen of the City of New York, send greeting: At a meeting of the Common Council, held at the Common Council Chamber in the City Hall of the City of New York, the following resolutions were unanimously agreed to:

"Whereas the Corporation of the city entertains the most lively sense of the late brilliant achievements of General Jacob Brown on the Niagara frontier, considering them an

proud evidences of the skill and intrepidity of the hero of Chippewa and his brave companions in arms, and affording ample proof of the superior valor of our hardy farmers over the veteran legions of the enemy.

"Resolved, That, as a tribute of respect to a gallant officer⁴ and his intrepid associates, who have added such lustre to our arms, the freedom of the city of New York be presented to General Jacob Brown, that his portrait be obtained and placed in the gallery of portraits belonging to this city,[†] and that the thanks of this Corporation be tendered to the officers and men under his command."

"Know ye that Jacob Brown, Esquire, is admitted and allowed a freeman and a citizen of the said city, to have, to hold, to use, and enjoy the freedom of the city, together with all the benefits, privileges, franchises, and immunities whatsoever granted or belonging to the said city.

"By order of the Mayor and Aldermen.

"In testimony whereof the said Mayor and Aldermen have caused the seal of the said city to be hereto affixed.

"(Witness), DE WITT CLINTON, Esquire, Mayor, the fourth day of February, in the year of our Lord one thousand eight hundred and fifteen, and of the Independence and Sovereignty of the United States the 39th.

De Witt Clinton

¹ J. MORRIS, Clerk."

² The following inscription is upon the scabbard:

³ Presented by his Excellency Daniel D. Tompkins, Governor of the State of New York, pursuant to resolutions of the Senate and Assembly of the said state, as a testimony of gratitude, to Major General Jacob Brown, for his eminent services, and as a memorial of the repeated victories obtained by him over the enemies of his country." On the other side, "Major General Jacob Brown, U. S. Army."

⁴ On one side of Porter's medal is his bust in profile, name, and title, and on the other the figure of Victory, standing, holding in one hand a palm branch and wreath, and in the other three little flags, on which are the names respectively of CHIPPEWA, NIAGARA, and ERIE. Sitting near, the Muse of History is recording the events. Around are the words "RESOLUTION OF CONGRESS, NOVEMBER 3, 1814," and below the names and dates of the three battles.

⁵ On one side of Ripley's medal is his bust, name, and title in profile, and on the other a figure of Victory holding up a tablet among the branches of a palm-tree, inscribed with the words CHIPPEWA, NIAGARA, and ERIE. In her right hand, which is hanging by her side, are seen a trumpet and a laurel wreath, and around the whole and below, the same inscriptions as upon Porter's medal.

Eliaser Wheelock Ripley was born in Hanover, New Hampshire, in 1782, and was a grandson of the Rev. Dr. Wheelock (whose name he bore), the founder of Dartmouth College. He was a lineal descendant of Miles Standish. He was

But few of the Army of the Niagara now alive.

Two remarkable Survivors.

How they were wounded.

GENERAL RIPLEY'S MEDAL.

the Army of Niagara at that time, and of nearly all of the subordinate officers, have passed away from earth, but their memories are cherished with honor and affection. And of all the rank and file of that army, whose existence as an organization ended soon after the siege and defense of Fort Erie, very few remain among us, and these are men "with the snow that never melts" upon their heads. Fifty-three years or more have elapsed since they were there in arms for their country.¹

Major General George Izard, who was in command on Lake Champlain, having, as

educated at Dartmouth, and was graduated in the year 1808. He adopted law as a profession, and in 1807 was elected a member of the Massachusetts Legislature, he being a resident of Winslow, in that state. He succeeded the late Judge Story as its speaker. He entered the army as lieutenant colonel of Infantry in March, 1812. He rose to brigadier general in the spring of 1814, and was breveted major general for his gallant conduct in the battle of Niagara. He was severely wounded at Fort Erie, when he was removed to Buffalo. For three months his life was despaired of. He was a brave, skillful, and patriotic soldier. He did not do himself or his country justice on the Niagara frontier owing to a very serious misunderstanding between himself and General Brown, which became an open quarrel after the war. General Ripley was retained in the army at its reduction, but resigned in 1820. He became a resident of Louisiana, and represented that state in Congress. He died at West Feliciana on the 2d of March, 1859, at the age of fifty-seven years.

¹ There are two survivors of that army yet (1867) living with whom I have had correspondence, who are worthy of notice here because of their remarkable escapes from death, having been wounded so desperately that no hope could have been entertained of their recovery. Yet for over fifty years since they have lived as useful members of society. I refer to Robert White, of Morrisson, Whiteside County, Illinois, and Jabes Fisk, mentioned in note 2, page 825, living near Adrian, Michigan. The former had both arms shot off above the elbows, and the latter was shot through the neck and cut upon a brush-heap as a dead man. White was wounded on the evening of the 10th of August, Fisk during the sortie on the 17th of September. "Just at twilight," says White, in a letter to a friend (Lorenzo D. Johnson), "as my arms were extended in the act of lifting a vessel on the fire, a 24-pounder came booming over the ramparts and struck off both my arms above my elbows! The blow struck me so numb that at first I did not know what had happened, and the dust and ashes raised by the force of the ball so filled my face that I could not see. My left arm, as I was subsequently informed, was carried from my body some two rods, and struck a man in his back with such force as nearly brought him to the ground. This same shot took off the right arm of another soldier standing not far from me, and, passing on to the other side of the encampment, killed three men! It was the most destructive shot of any that the enemy sent into our works."

Fisk, who was with General Porter, says in a letter to me in May, 1863, "Immediately after attacking the block-house General Porter was taken prisoner. The companies of Captains Harding [in which Fisk was] and Hall rushed forward and retook him. In this manoeuvre I was shot through the neck. The ball passed between the windpipe and the gut, cut, cutting both. Passing obliquely, it came out near the backbone. All appeared dark as midnight. I was conscious, but thought I was dead and in the other world. I was thrown on a brush-heap, and should have found a final resting-place in a mud-hole near by had not Solomon Westbrook, a member of our company, discovered and taken me to the fort."²

² When the surgeons dressed Mr. Fisk's wounds they had no idea that he would survive until morning; but he rapidly recovered. He was taken to the general hospital at Williamsville, and then to Batavia, where he was discharged, and, weak and penniless, started for his home in Tioga County, New York. He worked and begged his way. He was afterward pensioned, and received bounty-land. On the latter he settled, and now owns it. He was born in Franklin County, Massachusetts, and is the son of a Revolutionary soldier. His family moved to Albany in 1802, and soon afterward settled in Tioga County. There he enlisted in Captain Harding's company, under General Porter. He was with the Army of the Niagara during the entire campaign of 1814 until he was wounded. He was present when General Smith was shot at Fort George, and assisted in carrying him back to Queenston. "Every member of Captain Harding's company is in heaven," Mr. Fisk writes in a letter to me in May, 1863, "excepting Solomon Westbrook and myself." He visited Mr. Westbrook, in the State of New York, in 1862. They had not met since the latter bore young Fisk from the battle-field. Mr. Fisk is now nearly eighty years of age, and is full of vigor of body and mind.

Robert White, an armless Soldier.

General Izard sends Troops to the Niagara Frontier.

he believed, a competent force to protect that frontier, moved toward Sackett's Harbor early in September, under the direction of the Secretary of War, with about four thousand troops, either to divert the British from their evident purpose of heavily re-enforcing Drummond, by menacing Kingston and the St. Lawrence communication with Montreal, or moving on to the aid of General Brown. At the Harbor he received a letter from the latter, dated the 10th of September,^a stating the effective force on the Niagara frontier to be not much more than two thousand men, and urging him to move on with his troops and form a junction with the Army of the Niagara at Buffalo. Porter, he said, would probably raise three thousand volunteer recruits; but, said he, "I will not conceal from you that I consider the fate of this army very doubtful unless speedy relief is afforded."

Izard's division arrived at Sackett's Harbor on the very day of the successful sortie at Fort Erie,^b and at the same time he received a dispatch from General Macomb giving an inspiring account of the repulse of the British from Plattsburg. He at once resolved to move westward, and on the 21st he embarked on Chauncey's fleet twenty-five hundred infantry, at the same time directing his mounted and dismounted dragoons and light artillery to move by land by way of Onondaga.

White was then about twenty years of age. His wounds were dressed by the late Dr. Simon Hunt,* of Rochester, New York, and a week afterward he was taken to Buffalo and placed in the care of Jeremiah Johnson, who was then in charge of the hospital at that place. That kind-hearted gentleman nursed him tenderly and became his benefactor, and he was chiefly instrumental in procuring for the maimed young soldier a generous life-pension of four hundred and eighty dollars a year. After the war he settled in Vermont and married the widowed daughter of Mr. Johnson (whose young husband was killed at Fort Erie), who is still (1867) his excellent companion. They are the parents of a large family, all of whom are useful members of society in the West. Three of their sons are eminent ministers of the Gospel.

Mr. White contrived an apparatus, composed of a pen fixed in a triangular piece of wood, by which, holding it between his teeth, he was soon enabled to write not only with facility, but with remarkable clearness. His penmanship failed in excellence only when he lost his teeth. I give below a fac-simile of a part of a note written to me in March, 1866, and a part of a letter written twenty years before, to which he alludes. He has always worn tin arms and hands, so that, with long-sleeved coats, a stranger would not detect his mutilation. The engraving was made from a daguerreotype kindly procured for me by L. D. Johnson, Esq., of Washington City, son of the benefactor of Mr. White already mentioned.

Izard takes Command of the Army of the Niagara. He assumes the offensive. Bissell's Victory at Lyon's Creek.

Izard and his infantry reached the Genesee River on the 21st, where they disembarked the next day. They could

Geo. Izard.

not commence their march until the 24th, when they moved slowly, it being wilderness most of the way, and heavy rains were falling. They finally arrived at Lewiston on the 5th of October; and so unexpected was their appearance to the enemy that, if they could have procured boats, they might have surprised and captured a British battalion at Queenston. On that evening Izard was visited by Generals Brown and Porter. His design was to attack Fort Niagara, but it was agreed to form a junction of the two armies southward of Chippewa. Izard moved up to Black Rock, crossed there on the 10th and 11th, and encamped two miles north of Fort Erie. Ranking General Brown, he assumed chief command of the combined forces, and the latter retired to his old post at Sackett's Harbor.

General Izard was soon in command of almost eight thousand troops, and prepared to march upon Drummond. Leaving Lieutenant Colonel Hindman and a sufficient garrison to hold Fort Erie, he moved with his army toward Chippewa, and vainly endeavored to draw the enemy out. He was informed that there was a considerable quantity of grain belonging to the British at Cook's Mill; on Lyon's Creek, and on the morning of the 18th of October he sent General Bissell, with about nine hundred of his own brigade, a company of riflemen under Captain Irvine, and a squadron of dragoons commanded by Captain Anspaugh, with instructions to capture or destroy it. They reached the vicinity of the mill that night, and encamped. Two companies, under Captain Dorman and Lieutenant Horrel, with Irvine's riflemen, were sent across the creek as pickets for the security of the main body, and Lieutenant Gassaway,¹ at the head of a small party, was posted still more in advance, on the Chippewa Road. At midnight a detachment of Glengary infantry attacked these pickets, and were repulsed; and early in the morning Colonel Murray, with detachments from three regular regiments, the Glengary infantry, some dragoons and rocketeers, and a field-piece, renewed the attack. For fifteen minutes these gallant few of Bissell's men maintained their ground, when his main body came up to their support. Colonel Pinckney, with his Fifth Regiment, was ordered to turn the right flank of the enemy, and cut off his field-piece, while Major Barnard advanced in front with instructions to make free use of the bayonet. These orders were quickly and effectively carried into execution, and, after some very sharp fighting by both parties, the British fell back in confusion and fled, leaving their killed and many of their wounded in the field, with a few prisoners. The fugitives were pursued some distance, when Bissell called back his men. The British fled to the main camp at Chippewa, and the Americans destroyed about two hundred bushels of wheat at the mill. The loss of the former was not exactly ascertained, but is supposed to have been about one hundred and fifty in killed, wounded, and prisoners. The Americans lost twelve killed, fifty-four wounded, including five officers, and one man made prisoner. Satisfied that he could not withstand the increased power

¹ John Gassaway was a native of Maryland, and served with honor during the whole war.

Canada abandoned by the Americans. Fort Erie blown up. Disposition of the Troops. Commodore Champlin.

of the Army of Niagara, physically and morally, Drummond now fell back to Fort George and Burlington Heights.¹

General Izard clearly perceived that farther offensive operations on the peninsula so late in the season would be imprudent, and perhaps extremely perilous to his army. He fell back from Street's Creek to the Black Rock Ferry. Soon afterward the whole army crossed to the American side and abandoned Canada. General Winder, who had lately arrived from Baltimore, led General Brown's infantry to Sackett's Harbor. About a thousand men were sent to Greenbush, opposite Albany, on the Hudson; some of the troops commenced the erection of huts for winter quarters, and the remainder, excepting the Seventeenth and Nineteenth Regiments under General Miller, who went to Erie, were cantoned in that vicinity.² Knowing Fort Erie to be of little service, Izard, after consulting Major Totten, of the Engineers, and others, caused it to be mined, and on the 5th of November it was blown up and laid in ruins. So it has remained until now.³

RUINS OF FORT ERIE, 1860.

I was at Fort Erie and other distinguished places near, and in Buffalo, a day or two before I visited the battle-grounds of Chippewa and Niagara in August, 1860. It was my good fortune to have the company, on that occasion, of the venerable and war-scarred soldier of 1812, Captain (now Commodore) Stephen Champlin, of the United States Navy, whose gallant exploits on Lake Erie with the brave Perry have been already recorded in this work.⁴ When he learned my errand he seemed to forget his painful wound, unhealed since he received it in the naval service in 1814, and, order-

¹ General Izard's Official Correspondence, page 164; General Bissell's Report to General Izard, October 22, 1814; Izard's General Order, October 23, 1814.

² To cover and protect the stores at Batavia, Major Helms was stationed there with a battalion of dismounted dragoons. Lieutenant Colonel Eastle, with a battalion of light artillery, was stationed at Williamsville to guard the extensive hospital there. Colonel Ball's squadron of dragoons were stationed on the Genesee River, near the village of Avon, for the convenience of forage; and the whole of the remaining infantry were cantoned on the margin of the water between Buffalo and Black Rock.—Izard's Letter to the Secretary of War, November 26, 1814.

³ Our engraving shows the appearance of the ruins of Fort Erie from Towson's Battery on the southwestern angle, looking toward Buffalo, which is seen in the extreme distance toward the right. The water in the foreground is in the ditch. This was its appearance when I visited the spot in 1860. The main portion of the ruins, seen toward the right, with windows, is that of the mess-house built by the British. This was not fortified by them, but was intrenched by the Americans. On the left is seen the ruins of the magazine, between which and the mess-house a portion of Buffalo appears. Just back of Towson's Battery, a part of which is seen in the foreground on the left, Lieutenant Colonel Drummond and others were buried.

⁴ See Chapter XXIV., and his portrait and biography on page 623.

Visit to Fort Erie and historic Places in and near Buffalo. Veterans of the War in that City. Forest Lawn Cemetery.

ing his light carriage, he took me to every place of interest to the historian, the student, and the stranger.

We first rode to Fort Erie, crossing the head of the swift-flowing Niagara River from the Frontier Mills at the old Black Rock Ferry to the village of Fort Erie, which was once called Waterloo. The ruins of the fort are some distance up the Canada shore from the village. On our way we passed old Fort Erie Mill, on the margin of the foot of the lake, which stood there during the war, as many scars and ball-holes still in its clap-boards fully attest. On the left of the mill, delineated in the engraving, across the river, upon a high bank, is seen Fort Porter, and in the extreme distance on the right is seen the wharf of the Buffalo and Lake

FORT ERIE MILLS, FORT ERIE.

Huron Railway Company. On our right, as we passed on to the fort, an elevated ridge was pointed out, on which the British batteries were erected for the siege of Fort Erie. No. 1 (see map on page 830), nearest the fort, was on property belonging to Captain Murray, of the Royal Navy, and No. 2 on the premises of Mr. Thompson. I did not ascertain on whose land were the mounds of No. 3. The ruins of all were quite prominent.

We spent about two hours in the hot sun on the site of Fort Erie and the battles, examining the theatre of scenes described in this chapter, and sketching some of the ruins; and, returning to Black Rock, we visited the site of the old navy yard,¹ a little way up Shogeoquady Creek, and called on the venerable James Sloan, the last survivor of the captors of the *Caledonia* and *Adams* in the autumn of 1812.² He was then past seventy-one years of age. From his lips we heard an interesting narrative of some of the events of that daring enterprise, illustrative of the courage, fortitude, and skill of the actors.

Leaving Mr. Sloan, we rode to the office of Dr. Trowbridge, of whom I have already spoken as a physician in Buffalo when the British destroyed it. He was seventy-five years of age, yet vigorous in mind and body. He gave us some interesting particulars of his own experience, and the bravery of the widow St. John. His son accompanied us to the room of the City Councils, where we saw the portrait of Mrs. Merrill (Miss Ransom), who was the first white child born in Western New York, on the domain of the Holland Land Purchase. At a late hour we returned, heated and weary, to the delightful residence of Captain Champlin, in the midst of gardens, and dined. There I saw the elegant straight sword presented to the hero,³ and the richly-carved easy-chair made of the wood of the *Lawrence*, Perry's flag-ship, delineated on page 542.

On the following morning⁴ I rode out with Captain Champlin to a beautiful depository of the dead in the suburbs of Buffalo, called Forest Lawn Cemetery. The ground is pleasantly undulating, is much covered with trees of the primeval forest, and is really a delightful resort during the heats of summer for those

¹ See page 286.

³ The following is the inscription on one side of the blade of the sword: "STEPHEN CHAMPLIN, ACTING SAILING MASTER, LAKE ERIE, 10TH SEPTEMBER, 1813." On the other side, "ALTUS IDEUST QUE AD SUMMA NITENTUR."

⁴ August 16, 1860.

SOLDIERS' MONUMENT.

who are not saddened by the sight of graves. There, in an elevated open space, within ground one hundred feet square, slightly inclosed, stands a fine monument of marble, twenty-two feet in height, which was erected by the corporate authorities of Buffalo in the autumn of 1852 in commemoration of several officers of the United States Army who were engaged in the War of 1812; also of a celebrated Indian chief, and to mark the spot where the remains of over one thousand persons, which were removed from the city, lie buried.¹ Near the monument (and seen in the foreground on the right) is a tomb of brick, bearing a recumbent slab of marble, over the grave of Captain Williams, who lost his life at Fort Erie. The inscription on it is historical and briefly biographical.² Southward of this

is a handsomely-carved slab, lying on the ground, placed there in commemoration of a Connecticut soldier killed in the battle of Niagara.³ Northeasterly of the monument is another slab, over the grave of Captain Wattles;⁴ and south of it is another over the grave of Captain Dox.⁵

Not far from this public monument, on a gentle, shaded slope, is the grave of General Bennet Riley, who was a soldier in the War of 1812, and was distinguished in the Seminole War and the contest with Mexico. Over it is a handsome marble monument, bearing a brief inscription.⁶ Near this, in the cool shadows of the trees, we

¹ The following are the inscriptions on the monument: *West Side*.—"In memory of Major Lodowick Morgan,* Captain Alexander Williams, Captain Joseph Kenney, Captain Simeon D. Wattles, Captain Myndert M. Dox, and Sergeant Taylor,† officers of the United States Army, who were engaged in the War of 1812." *North Side*.—"Farmer's Brother, Chief of the Seneca Nation of Indians." *South Side*.—"The remains of 1158 persons are buried in this lot, all of which were removed from the old burial-ground on the west side of Delaware Street, between Church and Eagle Streets, in the city of Buffalo." *East Side*.—"Erected October, 1852, by the Common Council of the City of Buffalo.—Hiram Barton, Mayor."

² The following is a copy of the inscription: "Sacred to the memory of Captain Alexander John Williams, of the Twenty-first Regiment United States Artillery, son of General Jonathan and Marianne Williams, of the city of Philadelphia, who was killed in the night attack by the British on Fort Erie, August 14-15, 1814. In the midst of the conflict, a lighted port-fire in front of the enemy enabled them to direct their fire with great precision upon his company. He sprang forward, cut it off with his sword, and fell mortally wounded by a musket-ball. He sacrificed himself to save his men. Born October 16, 1790. Died August 15, 1814. *Fratri Dilecto*."

³ His name is on the monument. The following inscription is on the slab: "Memorial tribute to Joseph Kinney, of Norwalk, Connecticut, senior captain in the Twenty-fifth Regiment United States Army, shot through the breast at the battle of Bridgewater, July 25, 1814. To the friendship of George Colt, Esq., his relatives are indebted for his burial at this place. Erected by a brother, July, 1829."

⁴ His name is on the monument. The following is the inscription on the slab: "In memory of Captain Simeon D. Wattles, of the United States Army, who was killed in the memorable sortie of Fort Erie on the 17th of September, 1814, *E.* 33 years. As a Christian, he was pious and exemplary; as a Soldier, brave and magnanimous; as a Citizen, benevolent and sincere." Below this was a verse of poetry, but it was too much effaced to be deciphered.

⁵ His name is on the monument. The following is the inscription on the slab: "The grave of Myndert M. Dox, late captain in the Thirteenth Regiment United States Army, son of Peter and Catharina Dox, of Albany. Born January 4, 1790. Died September 5, 1830, in the forty-first year of his age."

⁶ The following is the inscription: "Major General Bennet Riley, United States Army. Died June 9, 1853, in the sixty-sixth year of his age."

General Riley was a native of Maryland, and entered the army as ensign in a rifle corps in January, 1813. He re-

* Lodowick Morgan was a native of Maryland, and entered the army as second lieutenant in a rifle corps in May, 1806. He was promoted to captain in July, 1811, and to major in January, 1814. He was a very efficient officer, and received the highest praise for his conduct in repelling the British invasion near Black Rock on the 3d of August, 1814, already mentioned in the text. He was killed, as we have seen, in a skirmish before Fort Erie on the 12th of the same month.

† The graves of all of these, excepting Morgan and the sergeant, as observed in the text, are marked by inscribed slabs.

‡ Ho-na-ye-woo, or Farmer's Brother, was a conspicuous contemporary of Cornplanter and Red Jacket. He was esteemed as one of the noblest of his race. He was a warrior on principle and practice, spurning every art of civilized life. He was probably born about the year 1730. He was in the battle with Braddock in 1755, and during his whole life he was a foremost chief among the Senecas. He was eloquent in speech, and brave on the war-path. He died in the autumn of 1814.

§ He was long at the head of the Engineer Department of the United States Army, and was one of the founders of the Military Academy at West Point. See page 235. He superintended the construction of many fortifications.

Expedition of Captain Holmes into Canada.

Battle at the Longwoods.

Lost Posts to be recaptured.

lingered some time, when a thunder-peal from the direction of Lake Erie warned us of the approach of a summer shower. We rode back to the city delighted with the morning's experience, and between two and three o'clock I left for Niagara Falls in a railway coach, where I arrived, as before observed, in the midst of a heavy thunder-storm.

While the events we have been relating were occurring on the Niagara frontier, others of great importance were occurring in other portions of the wide field of action, especially on Lake Champlain, and on and near the sea-coasts. Before we proceed to a consideration of these, let us take a hasty glance at movements in the Northwest, which closed active military operations in the region of the upper lakes.

For many weeks after Harrison's victory on the Thames nothing of great importance occurred in that region. The most stirring event was an expedition under Captain Holmes, a gallant and greatly beloved young officer, sent out by Lieutenant Colonel Butler in February,^a where he was in temporary command at Detroit. It consisted of one

hundred and sixty men, including artilleryists, with two 6-pounders, and its object was the capture of Fort Talbot, a British outpost a hundred miles down Lake Erie from Detroit. Difficulties caused Holmes to change his destination, and he proceeded to attack another outpost at Delaware, on the River Thames. In that movement, too, he was foiled by the watchfulness and strategy of the foe, who lured him from his expected prey. Finally they came to blows toward the evening of the 3d of March,^b at a place called the Longwoods, in Canada, where they fought more than an hour, and then each gladly withdrew under cover of the night-shadows. In this affair the Americans lost seven men in killed and wounded, while the enemy's loss, including the Indians, was much greater.^c The expedition was fruitless of good to any body.^d

In former chapters we have a record of the capture of Fort St. Joseph and the post and island of Michillimackinack, or Mackinaw, by the British, immediately preceding (and partly inducing) the fall of Detroit in the summer of 1812.^e The latter post, with all Michigan, as we have observed,^f was recovered from the British in 1813. For the better security of these acquisitions against British and Indian incursions, General M'Arthur, the commandant of the Eighth Military District, caused works to be erected at the foot of Lake Huron, or head of the Straits or River St. Clair. It was called Fort Gratiot, in honor of the engineer of that name who superintended its construction.

The Americans were not contented with the recovery of Michigan only, but determined to recapture Mackinaw and St. Joseph. The latter was the key to the vast traffic in furs with the Indians of the Northwest, and the British, knowing its importance in its commercial and political relations to their American possessions, as resolutely resolved to hold it. Accordingly Lieutenant Colonel M'Donnell was sent thither with a considerable body of troops (regulars and Canadian militia) and sea-

GENERAL BILEY'S MONUMENT,
BUFFALO.

^a remained in the army, and in 1828 was breveted a major for ten years' faithful service. He was breveted a colonel for good conduct in Florida, brigadier general for his bravery at Cerro Gordo, and major general for his gallant conduct at Contreras. He was made military commander of the Department of Upper California, and was *ex officio* governor in 1849 and 1850.

^b A similar expedition had been sent out by Butler a short time before. Butler was informed that a considerable number of regulars, Canadians, and Indians were collected on the River Thames, not far from Chatham. He sent Captain Lee with a party of mounted men to reconnoitre, and, if feasible, to attack and disperse them. Lee gained the rear of the enemy unobserved, fell upon them, and scattered them in all directions. He took several of them prisoners. Among them was Colonel Babie (pronounced Bawbee), whose house, we have observed, was the head-quarters of General Hull, and yet standing in the village of Windsor, opposite Detroit. See page 262. Colonel Babie had been a leader of Indians in the invasion of the Niagara frontier at the close of 1813.

^c See Chapter XIV. ^d See page 507.

Expedition to the Upper Lakes.

Operations at the Saut St. Marie.

Battle on Mackinaw Island.

men, accompanied by twenty-four bateaux laden with ordnance. There he found a large body of Indians waiting to join him as allies.

The Americans planned a land and naval expedition to the upper lakes; and so early as April, when M'Douall went to Mackinaw, Commander Arthur St. Clair was placed in charge of a little squadron for the purpose, consisting of the *Niagara*, *Caledonia*, *St. Lawrence*, *Scorpion*, and *Tigress*, all familiar names in connection with Commodore Perry on Lake Erie. A land force, under Lieutenant Colonel Croghan, the gallant defender of Fort Stephenson, was prepared to accompany the squadron.

Owing to differences of opinion in Madison's Cabinet, the expedition was not in readiness until the close of June. It left Detroit at the beginning of July. Croghan had five hundred regular troops and two hundred and fifty militia; and on the arrival of the expedition at Fort Gratiot on the 12th he was joined by the garrison of that post, composed of a regiment of Ohio Volunteers, under Colonel William Cotgreave. Captain Gratiot also joined the expedition. They sailed for Matchadach Bay to attack a newly-established British post there. A lack of good pilots for the dangerous channels among islands, rocks, and shoals leading to it, and the perpetual fogs that lay upon the water, caused them to abandon the undertaking after a week's trial, and the squadron sailed for St. Joseph, in the direction of Lake Superior. It anchored before it on the 20th. The post was abandoned, and the fort was committed to the flames. This accomplished, Major Holmes, of the Thirty-second Infantry, and Lieutenant Turner, of the Navy, were sent with some troops and cannon to destroy the establishment of the British Northwest Company at the Saut St. Marie, or Falls of St. Mary. That company had been from the beginning, because of its vital interest in maintaining the British ascendancy among the Indian tribes, with whom its profitable traffic was carried on, the most inveterate and active enemy of the Americans. Its agents had been the most effective emissaries of the British authorities in inciting the Indians to make war on the Americans; and, in every way, it merited severe chastisement at the hands of those whose friends had suffered from the knife and hatchet of the cruel savages.

^a July, 1814. Holmes arrived at St. Mary's on the 21st.^a John Johnson, a renegade magistrate from Michigan, and an Indian trader, who was the agent of the Northwest Company at that place, apprised of his approach, fled with a considerable amount of property, after setting on fire the company's vessel above the Rapids. She was saved by the Americans,¹ but every thing valuable on shore that could not be carried away was destroyed. Holmes then returned to St. Joseph, when the whole expedition started for Mackinaw, where it arrived on the 26th.^b It was soon ascer-

^b July. tained that the enemy there were very strong in position and numbers, and the propriety of an immediate attack was a question between Croghan and St. Clair. The post could not be carried by storm, nor could the guns of the vessels easily do much damage to the works, they were so elevated. It was finally decided that Croghan should land with his troops on the back or western part of the island, under cover of the guns of the ships, and attempt to attack the works in the rear. This was done at Dowsman's farm on the 4th of August, without much molestation, but Croghan had not advanced far before he was confronted by the garrison under M'Douall, who were strongly supported by Indians in the thick woods. M'Douall poured a storm of shot and shell from a battery of guns upon the invaders, when the savages fell upon them. A sharp conflict ensued, carried on chiefly on the part of the enemy by the Indians under Thomas, a brave chief of the Fallsovine tribe, when Croghan

¹ They endeavored to bring this vessel away with them, but she bilged while passing down the Rapids, and was then destroyed.

Blockade of Mackinaw.

Capture of the blockading Vessels.

Commander Champlin wounded.

was compelled to fall back* and flee to the shipping, with the loss of the much-beloved Major Holmes, who was killed, and Captains Van Horn and Desha, and Lieutenant Jackson, who were severely wounded. He also lost twelve private soldiers killed, fifty-two wounded, and two missing. The loss of the enemy is unknown.

Croghan and St. Clair abandoned the attempt to take Mackinaw; and as they were about to depart, they heard of the successful expedition of Lieutenant Colonel M^cKay, who, with nearly seven hundred men, mostly Indians, had gone down the Wisconsin River and taken from the Americans the post at Prairie du Chien, at the mouth of that stream.^a Yet they were not disheartened, and resolved not to return ^{July 17,} to Detroit empty-handed of all success. They proceeded to the mouth of ^{1814.} the Nautawassaga River, assailed and destroyed a block-house three miles up from its mouth, and hoped to capture the schooner *Nancy*, belonging to the Northwest Company, and a quantity of valuable furs. They failed. The furs had been taken to a place of safety, and the schooner was burnt by order of Lieutenant Worseley, who was in command of the block-house.

Very soon after this the squadron sailed for Detroit, with the exception of the *Tigress*, Captain Champlin, and *Scorpion*, Captain Turner, which were left to blockade the Nautawassaga, it being the only route by which provisions and other supplies might be sent to Mackinaw. They cruised about for some time, effectually cutting off supplies from Mackinaw, and threatening the garrison with starvation. Their useful career in that business was suddenly closed early in September, when they were both captured by a party of British and Indians, sent out in five boats (one mounting a long 6, and another a 3 pounder) from Mackinaw to raise the blockade, under the general command of Lieutenant Bulger, his second being Lieutenant Worseley. They fell first upon the *Tigress*, off St. Joseph's, when her consort was understood to be fifteen miles away. She was at anchor near the shore. The attack was made at nine o'clock in the evening of the 3d of September. It was intensely dark, and they were within fifty yards of the *Tigress* when discovered. The assailants were warmly received, but in five minutes the vessel was boarded and carried by overwhelming numbers, her force being only thirty men, exclusive of officers, and that of the assailants about one hundred. "The defense of this vessel," said Bulger, in his report of the affair, "did credit to her officers, who were all severely wounded."¹ Her officers and crew were sent prisoners of war to Mackinaw the next morning.²

Bulger and his men remained on board the *Tigress*. Her position was unchanged, and her pennant was kept flying. On the 5th the *Scorpion* was seen approaching. Bulger ordered his men to hide. The unsuspecting vessel came within two miles, and anchored for the night. At dawn the next morning^b the *Tigress* ^{September 6.} ran down alongside of her, and then the enemy, starting from his concealment, rushed on board, and in a few minutes the British flag was floating over her. The loss on each side in these captures was slight. Vessels and prisoners were taken to Mackinaw, and their arrival produced great joy there. So exhausted were the supplies of the garrison that starvation would have compelled a surrender in less than a fortnight. These captures were announced with a great flourish by the British authorities; and Adjutant General Baynes actually stated, in a general order, that the vessels "had crews of three hundred men each!" He only exaggerated five hundred and seventy in stating the aggregate of the crews of the two schooners.

Croghan and St. Clair reached Detroit, on their return, late in August, and for a while no military movement was undertaken in that region. At length General

¹ Lieutenant Bulger to Lieutenant Colonel M^cDonall, September 7, 1814. Captain Champlin had his thigh-bone shattered by a ball in that fight, and he has not only been a cripple ever since, but a painful sufferer from a seldom-healed wound. In the year 1863 several pieces of bone were taken from his thigh.

² Champlin's Report to Lieutenant Turner, commanding.

M'Arthur made a terrifying raid into Canada. He had been ordered to raise mounted men for the purpose of chastising the Indians around Lake Michigan, and on the 9th of October he had arrived at Detroit with about seven hundred mounted men from Kentucky and Ohio, accompanied by Major Charles S. Todd as adjutant general. The critical situation of the American army under General Brown, at Fort Erie, at that time induced M'Arthur first to make a diversion in favor of that general. Accordingly, late in the month, he left Detroit with seven hundred and fifty men and five field-pieces, and, to mislead the enemy, passed up Lake and River St. Clair toward Lake Huron. On the morning of the 26th he suddenly crossed the St. Clair River into Canada, pushed on to the thriving Baldoon settlement of Scotch families, and then made his way as rapidly as possible to the Moravian Towns, on the scene of Harrison's exploits a year before, spreading great alarm in his path. On the 4th of November he entered the village of Oxford. He came unheralded, and the inhabitants were greatly terrified. He disarmed and paroled the militia, and threatened instant destruction to the property of any one who should give notice to any British post of his coming. Two men did so, and their houses were laid in ashes. On the following day he pushed on to Burford, where the militia were casting up intrenchments. They fled at his approach, and the whole country was filled with alarm. Fear magnified the estimate of his number, and the story went before him that he had two thousand men in his train.

M'ARTHUR'S RAID.

Burlington, at the head of Lake Ontario, was M'Arthur's destination. On he pressed from Burford, but when he arrived on the bank of the Grand River, at Brantford, he found his passage of that considerable stream disputed by a large force of the Six Nations who resided near, with militia and dragoons. He was informed that Major Muir was not far distant, in a dangerous defile on the road to Burlington, with a considerable force of regulars and Indians, and some cannon. M'Arthur concluded it would not be prudent to attempt to go farther eastward, so he turned down the Long Point Road, and proceeded to attack some militia, who had a fortified camp at Malcolm's Mill, on the Grand River. They fled at his approach, and in his pursuit of them M'Arthur killed and wounded seven, and took one hundred and thirty-one prisoners. His own loss was only one killed and six wounded. The mill was burned, with all the property in it. This accomplished, the invaders pushed on to Dover, destroying several mills on the way, which were making flour for Drummond's army. There he was informed of the evacuation of Canada by Izard, and of a web of perils that were gathering around; so he turned his face westward, and hastened toward Detroit, by way of St. Thomas and the Thames, pursued some distance by eleven hundred British regulars. He arrived at Sandwich on the 17th of November, and there discharged his brave band.

M'Arthur's raid was one of the boldest operations of the war. For almost four weeks he had skurried hundreds of miles through the enemy's country, spreading alarm every where, and keeping the militia from Drummond's ranks; destroying property here and there that might be useful to the enemy, and then returning to

M'Arthur's Bravery and Generosity.

the place of departure with the loss of only one life!¹ He was generous as well as bold; and he publicly acknowledged that much of his success was due "to the military talents, activity, and intelligence of Major Todd," his adjutant general, who yet [1867] lives in his native Kentucky, in the vigor of a green old age.

GENERAL WINFIELD SCOTT IN 1869.

CHAPTER XXXVII.

"Hail to the day which, in splendor returning,
Lights us to conquest and glory again!
Time, hold that year! Still the war-torch was burning,
And threw its red ray on the waves of Champlain.
Roused by the spirit that conquered for Perry,
Dauntless Macdonough advanced to the fray:
Instant the glory that brightened Lake Erie
Burst on Champlain with the splendor of day.
Loud swells the cannon's roar
On Plattsburg's bloody shore,
Britons retreat from the tempest of war,
Prevost deserts the field,
While the gallant ships yield:
Victory! glory, Columbians, hurra!"

OLD SONG—EISE AND CHAMPLAIN.

FROM the Niagara frontier and the portion of the Army of the North engaged there we will now turn to the consideration of the events upon Lake Champlain and its vicinity during the year 1814, where the other portion of that army was in active service. We have already taken a brief glance at military operations in that quarter to the close of the campaign of the previous year, when General Wilkinson, relieved of command, retired from the army, and General Hampton, another incompetent, also left the service for his country's good.¹ His lieutenant, General George May 4, Izard, of South Carolina, was soon afterward² placed in command of the right 1814. wing of the Army of the North, with a competent staff,³ and made his headquarters at Plattsburg.

Since the opening of the campaign in the spring a great change had occurred in the aspect of foreign affairs—a change which made a deep impression on the American mind in its contemplations of the war. We have already alluded to the disasters of Napoleon at Leipsic in the autumn of 1813. Notwithstanding brilliant achievements on his part after that, the Allied Powers finally pushed him back, and not only confined him to the soil of France, but hemmed him and his army almost within the walls of Paris. There was no chance for his escape. On the 31st of March, 1814, the Emperor of Russia and the Duke of Wellington entered the city as conquerors, and on the 11th of May Napoleon abdicated the throne of France and retired to the island of Elba.⁴ His downfall was hailed with great joy, not only in Europe, but by the great Federal party in the United States,⁵ who considered his ruin as the most

¹ See page 691.

² Brigadier General Winder, just exchanged, was appointed his chief of staff; Alexander McComb and Thomas A. Smith were his brigadier generals; William Cumming was adjutant general, and Major Joseph G. Totten was chief engineer.

³ The sickle populace of Paris received the conquerors of Napoleon with acclamations of joy, and the French Senate, lately Napoleon's pliant instrument, now declared that, by arbitrary acts and violations of the Constitution, he had forfeited his right to the throne.

⁴ The Washington Benevolent Societies* (Federalist associations) had made Napoleon's disasters the subject of orations

* These Washington Benevolent Societies originated in Philadelphia very soon after the declaration of war in the summer of 1812. They were political organizations, with attractive social and benevolent features. The first organization was fully completed on the 22d of February, 1813, under the title of the Washington Benevolent Society of Pennsylvania, and each member was required to sign the Constitution and the following declaration: "We, each of us, do hereby declare that we are firmly attached to the Constitution of the United States and to that of Pennsylvania: to the principles of a free republican government, and to those which regulated the public conduct of GEORGE WASHINGTON; that we will, each of us, to the best of our ability, and so far as may be consistent with our religious principles

The Downfall of Napoleon celebrated.

English Troops released for Service in America.

damaging blow that could be given to their political opponents and the war party. Pulpits, presses, public meetings, and social entertainments were pressed into the service as proclaimers of their satisfaction, notwithstanding it was evident that the release thereby of a large British army from service on the Continent would enable the common enemy to send an overwhelming force across the Atlantic that might crush the American armies, and possibly reduce the states to British provinces. Their hopes and the limit of their wishes doubtless were that the changed aspect of foreign affairs, and the consciousness of the great peril that might reasonably be apprehended, would cause the administration to seek peace on any terms. They were mistaken, as the sequel will show.

The retirement of Napoleon to Elba did release from Continental service a large body of English troops, and several thousands of them were immediately dispatched to Canada to re-enforce the little army there. They were sent from the Garonne, in Spain, and many of them were Wellington's veterans, hardy and skillful. They arrived at Quebec late in July and in August,^a and were rapidly pushed up to Montreal. In the mean time, the forces under Prevost, the Governor of Canada and general-in-chief, had been very busy in preparations for an invasion of New York, and the little flotilla in the Richelieu, or Sorel River, had been greatly augmented in numbers and strength during the winter and spring.^b

On the 9th of May^c General Izard was informed that the enemy were in motion below. Captain Pring, of the Royal Navy, was moving up the Sorel in the brig *Linnet* as his flag-ship, accompanied by five armed sloops and thirteen row-galleys. On the following day he anchored his flotilla behind Providence Island, in Lake Champlain, where he remained until the 13th,^d preparing for an attack on the American flotilla, then nearly ready for sea at Vergennes, in Vermont, at the head of the navigation of Otter Creek.¹ Captain Macdonough, who was in command of the little squadron, was apprised of this movement, and sent Lieutenant Cassin, with a party of seamen, to re-enforce Captain Thornton, who had been ordered from Burlington with a detachment of light artillery to man a battery of seven 12-pounders

and toasts on the anniversary of Washington's birthday (22d of February, 1814); and in Albany, where the Dutch element was very predominant in the population, the emancipation of Holland from his thrall was celebrated. Religious services were held in the Dutch church on the occasion, and a sermon was preached by the pastor, Rev. Dr. Bradford. These were followed by a dinner at the Eagle Inn. General Stephen Van Rensselaer presided, assisted by John H. Wendell as vice-president. Several songs were sung, and toasts given, in Dutch.

In June and July following, the downfall of Napoleon was celebrated in several of the commercial cities of the United States. In Boston and New York it was celebrated by religious ceremonies and public dinners. In New York the dinner was in the Washington Hotel, then the principal public house in the city, which stood on the site of Stewart's marble store, on Broadway, between Chambers and Reade Streets. It was on the 29th of June. Three hundred gentlemen sat down to the table. Rufus King presided. The vice-presidents were Generals Nicholas Fish, Ebenezer Stevens, Mr. Clarkson, John B. Coles, and Cornelius J. Bogart. All the foreign consuls but the French were present. Richard Stockton, of New Jersey, gave as a toast: "Louis XVIII., King of France and Navarre, heir-at-law to American gratitude."

On the 4th of July the event was celebrated by religious services and public dinners. Rev. Timothy Dwight, President of Yale College, presided at a dinner at Butler's Hotel, in Hartford, where one hundred gentlemen were assembled at table. Among the toasts were the following:

"*The Minority in Congress.*—Had they appealed to patriots they would have been heard."

"*The Administration.*—Prodigal enough, but too proud to return."

"*The Royal Family of France.*—Our friends in adversity, we rejoice at their prosperity."

"*The Democratic Party of America.*—If not satisfied with their own country, they may seek an asylum in the island of Elba."

¹ The flotilla then at Vergennes consisted of the following vessels: 1 ship of 26 guns, 1 schooner of 20 guns, 2 sloops of 8, 6 row-galleys of 2, and 4 gun-boats of 1 each.

respectively, preserve the rights and liberties of our country against all foreign and domestic violence, fraud, and usurpation; and that, as members of the Washington Benevolent Society, we will in all things comply with its regulations, support its principles, and enforce its views."

The funds of the society were used for the purposes of charity among its members and their families, and for other purposes which might be prescribed. They had anniversary dinners on the birthday of Washington. Such economy was used that all the members might afford to participate in the festivities. The cost of the dinner to each, with a bountiful supply of beer and choice ardent spirits, was seventy-five cents. They built Washington Hall, on the west side of Third Street, between Walnut and Spruce Streets. It was dedicated with religious ceremonies, led by Bishop White, in the autumn of 1816. These associations rapidly multiplied throughout the country during the war, but disappeared with the demise of the old Federalist party.

Skirmish at Otter Creek, Vermont.

The British repulsed.

Struggle for the Control of Lake Champlain.

M'Donough

on sea-carriages at the mouth of the creek. Governor Chittenden also ordered out a brigade of Vermont militia to oppose the threatened invasion; and when, on the morning of the 14th, eight of Pring's galleys and a bomb-sloop anchored off the mouth of the creek, they found ample preparations for their reception. A brisk fire was opened from the battery. It was answered from the water, and for more than an hour a cannonade was kept up, when the British vessels were driven off. They then entered the Bouquet River for the purpose of destroying flour at the falls of that stream. On their return they were compelled to run the gauntlet of a shower of bullets from some militia who had hastily assembled. Many of the British were killed and wounded. Foiled and disheartened,

Pring returned to *Isle aux Noix* a wiser man, for he had learned that even in Vermont, whose governor was a zealous member of the "Peace Party," the people were ready to fight the

common enemy any where. A few days afterward Macdonough sailed out of the creek with his flotilla, and anchored it in Cumberland Bay, off Plattsburg.

Both parties now prepared for a struggle for supremacy on Lake Champlain. The British, as we have observed, had adopted in a degree the plan of Burgoyne for separating New England from the rest of the Union, while the Americans were as determined to resist the meditated invasion at the very threshold, and defend the lake region and the valley of the upper Hudson at the gates of Canada. Both parties were also re-enforced during the remainder of May, and General Izard caused a battery of four 18-pounders to be planted on Cumberland Head instead of at Rouse's Point, at the entrance to the Sorel River, as directed by the Secretary of War,¹ and urged by Major Totten, his chief engineer.

At the middle of June Izard disposed his troops for a movement into Canada. He sent Brigadier General Thomas A. Smith, with a light brigade of about fourteen hundred men, to occupy the village of Champlain,² five miles below the Canada line. Colonel Pearce, of the Sixteenth, was at Chazy with about eight hundred men composed of consolidated regiments, and about twelve hundred men occupied the cantonment at Plattsburg, on the peninsula between the lake and the Saranac, the works on Cumberland Head, and a position at Dead Creek, about two miles below Plattsburg. Macdonough, with his flotilla, was below Cumberland Head, watching the little British squadron, which lay at the *Isle aux Têtes*. The British had thirty-six hundred troops at La Colle; Meuron's Swiss regiment, a thousand strong, was at L'Acadie, and two brigades of artillery and three hundred cavalry were at Chambly, making a total of five thousand five hundred and fifty men. There was also a reserve of two thousand regulars at Montreal.

There was feverishness among the people and the soldiery along the Canada border, which was frequently manifested. The armed belligerents were eager for a trial

¹ Letter of the Secretary of War, May 25, 1814, in Izard's *Official Correspondence*, page 23.

² This brigade was composed of the Fourth and Tenth Regiments consolidated, and commanded by Colonel Purdy, the Twelfth, under Major Morgan, Lieutenant Colonel Forsyth's riflemen, and a company of artillery under Captain Branch.

Invasion of Canada. Death of Forsyth. Vengeance. Preparations to meet an Invasion from Canada.

of prowess. Finally, on the 22d of June, Lieutenant Colonel Forsyth, the accomplished partisan commander, with seventy riflemen, crossed the frontier line, and at a little hamlet northwesterly from Rouse's Point, called Odell Town, he was attacked by two hundred of the enemy's light troops. Forsyth beat them off, and retired in good order to Champlain with the loss of one man killed and five wounded. A few days afterward he was again sent in that direction for the purpose of drawing the enemy across the lines. He formed an ambuscade, and then sent a few men forward as a decoy. They were soon met, and immediately fell back, followed by Captain Mahew and one hundred and fifty Canadians and Indians. When the pursuers were near the ambuscade, Forsyth stepped upon a log to watch the movement, when he was shot through the breast by an Indian. His men immediately arose, and poured such a deadly fire upon the foe that they retreated in wild confusion, leaving seven-teen of their dead upon the field.

JUDGE MOORE'S HOUSE.

Forsyth was greatly beloved by his followers. Hotly incensed because of the employment of savages by the British, they resolved to avenge the death of their own leader by taking the life of the leader of the Indians. A few days afterward some of them crossed the line and shot Mahew, that leader. He was taken to the house of Judge Moore, in Champlain,¹ where he died about a week afterward.²

Skirmishing along the border was a frequent occurrence, but no movement of importance took place until the close of July, when General Macomb's brigade, composed of the Sixth, Thirteenth, Fifteenth, Sixteenth, and Twenty-ninth Regiments, embarked in boats at Cumberland Head* for Chazy Landing, at the mouth of Chazy Creek. On the same day
July 31, 1814. General Bissell's brigade, composed of the Fifth, Fourteenth, Thirtieth, Thirty-first, Thirty-fourth, and Forty-fifth Regiments, started for Chazy Village by land. Two hundred effective men and a corps of invalids of Macomb's brigade were left to complete the works on Cumberland Head, and a fatigue party four hundred strong, taken from Bissell's brigade, was left in command of Colonel Fenwick to complete three redoubts on the peninsula between the lake and the Saranac River at Plattsburg. There were now four thousand five hundred effective men at Champlain, within five miles of the Canada border. But these were few compared to the numbers of the enemy, which were constantly augmenting. During the months of July and August not less than fifteen thousand troops, chiefly veterans from Wellington's armies, as we have observed, arrived at Montreal. Only one brigade was sent westward, and the remainder were kept in reserve for the contemplated invasion of New York, in such overwhelming force as to overbear all op-

¹ This house, the residence of the late Judge Pliny Moore, is a fine old mansion on a pleasant shaded slope in the village of Champlain, not far from the banks of the Big Chazy, just north of the bridge, in the village. It was the headquarters of the British commander whenever that village was occupied by him; and Dearborn, Wilkinson, and Izard were in turn sojourners under its roof. This is from a sketch made by the author in 1860. It was then the residence of Pliny, son of Judge Moore.

Indications of an Advance of the British Army.

Position of American Works at Plattsburg.

cupied as a tavern, about eight miles from Plattsburg. Captain Pring, with the British squadron, moved at the same time, anchored off *Ile la Motte*, and on the west side of that island erected a battery of three long 18-pounders to cover the landing of supplies for Prevost's troops. Macomb, at the same time, was straining every muscle at his command in preparations for defense, for the impressment of trains by the British at Champlain and Chazy, and loading wagons with heavy baggage, indicated a speedy advance upon Plattsburg. By great exertions (the soldiers working day and night), the redoubts and block-houses were completed and manned before the enemy appeared before them, for he made short and cautious marches. These were on the high level peninsula between the Saranac and the lake, gently sloping toward the latter. The redoubts were on a curved line across the neck of the peninsula, and were named respectively Forts Brown, Moreau,¹ and Scott. The first-named stood on the bank of the river, at its head, about half way between the lower

bridge at the village and near its mouth, and the upper bridge, a mile higher up, on the road leading to the Salmon River. Fort Moreau, the principal work, was half way between the river and the lake, fifty rods eastward of Fort Brown; and Fort Scott was near the bank of the lake. Northward of it were store-houses and a hospital. Between the lower bridge, and some distance above Fort Brown, the right bank of the Saranac is steep, and from fifty to sixty feet in height; and about sixty rods above the lower bridge it is cleft by a deep ravine that extends from the river almost to the lake. Near this ravine a block-house was built, and on the point near Foquet's Hotel, overlooking the modern steam-boat landing, was another block-house. At the mouth of the river, a short distance from the lower bridge, stood (and yet stands) a stone mill, which served an excellent defensive purpose.

To create a spirit of emulation and zeal among the troops, General Macomb di-

¹ Fort Moreau was named by Izard in honor of a celebrated French general of that name, whom Bonaparte exiled from France because of his supposed complicity with Pichegru and others in a conspiracy against the newly-created emperor. He remained in the United States nine years. The Emperor Alexander invited him to Russia, and while engaged in his military service, near Dresden, a cannon-ball from Napoleon's guard broke both his legs, from the effects of which he died. Macomb gave the names of Brown and Scott to the other two redoubts, in honor of those two officers, whose gallantry on the Niagara frontier had won his admiration.

Occupants of the Plattsburg Forts.

Position of the Troops.

The British advance on Plattsburg.

vided them into detachments, declaring in orders that each detachment was the garrison of its own work, and bound to finish it and defend it to the last extremity. Colonel Melancthon Smith,¹ with the Sixth and Twenty-ninth Regiments, was placed in command of Fort Moreau. Fort Brown was intrusted to Lieutenant Colonel Storrs, with detachments of the Thirtieth and Thirty-first Regiments; and Major Vinson, with the Thirty-third and Thirty-fourth Regiments, garrisoned Fort Scott. Captain Smith, of the Rifles, with a part of his company and the convalescents, occupied the block-house near the ravine; and Lieutenant Fowler, with a detachment of artillery, held the block-house on the Point. The light artillery, under Captain Leonard, were ordered to annoy the enemy whenever and wherever an opportunity should offer. The main body of Macomb's army lay within the triangular portion of the peninsula formed by the ravine, the river, and the lake.

When the British advanced to Chazy, Macomb ordered Captain Sproull to take a position near Dead Creek Bridge, on the lake road, with two hundred of the Thirtieth Regiment² and two field-pieces, while Lieutenant Colonel Appling, the hero of Sandy Creek, was sent farther in advance, with a little more than a hundred riflemen, and a troop of New York Cavalry under Captain Stafford and Lieutenant M. M. Standish. Their business was to watch and annoy the enemy, and obstruct his march by felling trees in the road. It was their appearance that caused his halt at Sampson's. General Mooers had called for the entire militia force of his district to repel the invasion, and Macomb made an earnest appeal for troops to Governor Chittenden, of Vermont.

On the evening of the 4th Mooers had seven hundred men under his command, and with them, by order of Macomb, he advanced a few miles northward on the Beekmantown Road, on an errand similar to that of Sproull and Appling. He was instructed to watch the enemy, skirmish with his vanguard, break up the bridges, and obstruct the roads with felled trees. He went forward on the morning of the 5th, and bivouacked that night near the stone church in Beekmantown.

On the morning of the 6th the British army, full fourteen thousand strong, mostly veteran troops, marched upon Plattsburg in two columns from their encampment near Sampson's, the right crossing over to the Beekmantown Road, and the left following the lake shore that led to Dead Creek Bridge. General Edward Baynes was the adjutant general, and Sir Sidney Beekwith, who was conspicuous at Hampton and in Hampton Roads the previous year,³ was quartermaster general. The right column was composed of General Powers's brigade, supported by four companies of light infantry and a half brigade under Major General Robinson. The left was composed of General Brisbane's brigade, and was led by

¹ Melancthon Smith was commissioned a major of the Twenty-ninth Infantry on the 20th of February, 1813, and was promoted to colonel on the 12th of April following. He left the army at the close of the war, and died at Plattsburg on the 18th of August, 1818. In the eastern extremity of the old burial-ground at Plattsburg I found his grave in 1860, and at the head of it an elaborately-wrought tombstone, of blue limestone, on which is the following inscription: "To the memory of Colonel MELANCTHON SMITH, who died August 18, 1818, aged 36 years. As a testimony of respect for his virtues, and to mark the spot where rests the ashes of an excellent Father, this stone is erected by his son RICARDA. United with many masculine virtues, he had a tear for pity, and a hand open as day for melting charity."

² This was always a famous regiment. We first met portions of it following the gallant Captain Wool up Queenston Heights. See page 397. At this time (1867) only three of its officers survive, namely, Major General Wool, Dr. McCall (then surgeon's mate, and now superintendent of the Lunatic Asylum at Utica), and Captain Myers, mentioned in the note on page 654.

³ See page 663.

Engagement on Culver's Hill.

him in person. The whole were under the immediate command of Major General De Rottenburg.

Macomb was informed of this movement being in contemplation on the evening of the 5th, and prepared to meet it. The gallant Major John E. Wool, ever ready for a daring enterprise, volunteered to lead some regulars to support the militia and oppose the advance of the foe. At about the time in the early morning of the 6th when the British broke camp at Sampson's, Wool moved from Plattsburg with two hundred and fifty regular infantry and thirty volunteers, with orders to set the mi-

IRA HOWE'S, BEEKMANTOWN.¹

litia an example of firmness. This was done. He reached Beekmantown before the enemy appeared, and took position near the residence of Ira Howe. There the first collision occurred. The enemy came marching on rapidly, anticipating no resistance, when they were suddenly checked by a heavy volley of musketry from Wool's little corps. The militia broke and fled toward Plattsburg, but the regulars stood firm. The enemy was in over-

whelming numbers, but Wool moved slowly back toward Culver's Hill, disputing the way inch by inch in desperate skirmishing. On that hill, a short distance below Beekmantown, he made a stand, and as the British advance ascended the slope, filling the entire road, he made another gallant attack upon them. Some of the militia had been rallied, and were in position behind the stone wall that bounded the road.² The enemy's advance was driven back upon the main body, and their leader, Lieutenant Colonel Willington, of the Third Regiment of Buffs, and Ensign Chapman of the same regiment, were killed.³ Captain Westropp, of the Fifty-eighth, was severely wounded. Captain Partridge, of the Essex militia, and several other Americans, were killed. The fight was severe, but very short. The heavy column of the enemy came pressing steadily onward with irresistible force, filling the entire roadway. At the same time Wool discovered a formidable movement to turn his flank and gain his rear, when he again fell back in order to Halsey's Corners, within a mile and a half of Plattsburg Bridge. There he was joined at about eight o'clock in the morning by Captain Leonard with two pieces of artillery. These were immediately placed in battery at an angle in the road. They were masked by Wool's infantry and a small body of militia, and as the enemy came steadily on in heavy mass, Leonard opened upon them, and his balls cut fearful lanes through their ranks.

Three times that battery hurled its deadly missiles through the lines of the foe, yet it did not check them. The British bugles sounded, and the men, throwing away their knapsacks, rushed forward at double quick to charge with the bayonet. Leonard was compelled to fly toward the village. He carried his guns with him, turning

¹ This house was the residence of Mr. Joel Smith when I visited Beekmantown in 1860. It was used as a hospital, with others, after the skirmish there and at Culver's Hill.

² This heavy stone wall, built by some Vermonters before the war, was yet standing when I rode over Culver's Hill in the summer of 1860.

³ To Samuel Terry, who was living at Peru, Clinton County, New York, is awarded the fame of having shot Willington.

Loss of the British. They press on to Plattsburg. Fight in and near the Village. Stone-mill Citadel.

them occasionally upon the pursuing foe, and, crossing the Saranac at the lower bridge, he planted them in battery on a gentle eminence in the road, near the stone mill, to cover the crossing of the rest of the Americans if they should find it necessary to retreat. In the affair at Halsey's Corners several of the British were killed. Among them was Lieutenant Kingsbury, of the Third Buffs, who was mortally wounded, and taken into the farm-house of the now (1867) venerable Isaac C. Platt, Esquire, near by, where he soon afterward died.¹

The more rapid march of the British right column imperiled the detachments of Appling and Sproul, who were awaiting the approach of the left. Macomb perceived this, and ordered them to

ISAAC C. PLATT'S RESIDENCE.²

fall back toward Plattsburg, and attack the enemy's flank. They did so, and their riflemen galled the foe severely. They reached the lower bridge just in time to avoid being cut off by the British right, and to cross it with Wool's retiring troops. When all were safely over, the bridge was torn up in the face of a heavy fire from the head of the enemy's right, which had reached the little village. The militia in the mean time had fled across the upper bridge, and destroyed that in the same way. The British left column soon afterward appeared. It crossed the Dead Creek Bridge, and, while making its way along the beach of Plattsburg Bay to unite with the right, it was severely harassed by an enfilading fire from some of Macdonough's galleys which had been sent to the head of the bay for the purpose. A heavy blow came on, and Macdonough sent Midshipman Silas Duncan in a gig to order the galleys to return to the fleet. His boat was fired upon by the enemy, and he was severely wounded, but he delivered the order and escaped with his life.

The British were checked at the village by the destruction of the lower bridge, whose timbers were used in the construction of a breastwork for the infantry. They took position in some store-houses near the Saranac. Upon these Captain Brooks hurled some hot shot, and burned out the enemy. Their light troops endeavored during the day to force a passage of the Saranac, but were each time repulsed by the guards at the bridge and a small company known as Aiken's Volunteers, of Plattsburg, who were stationed in the stone mill (see engraving next page) already mentioned. These young men had been out on the Beekmantown Road in the morning and behaved gallantly, and they garrisoned that mill-citadel most admirably.³ In the mean time a division of the British had pressed toward the upper bridge, where General Mooers and his militia, as we have observed, crossed the bridge, tore it up,

¹ *Palmer's History of Lake Champlain*, page 192. Statement to the author by Mr. Platt in 1860.

² This was the appearance of Mr. Platt's house in 1860. The main building is of brick. The immense butternut-tree near the house was a fine bearing tree at the time of the battle, and two bullet scars upon its trunk were pointed out to me. We shall notice this house and its owner hereafter.

³ The following are the names of these young men, or rather lads, for none of them were old enough to be legally called into the military service: Martin J. Aiken, Azariah C. Flagg, Ira Wood, Gustavus A. Bird, James Trowbridge, Hazen Mooers, Henry K. Averill, St. John B. L. Skinner, Frederick P. Allen, Hiram Walworth, Ethan Everest, Amos Soper, James Patten, Bartimene Brooks, Smith Bateman, Melancthon W. Travis, and Flavius Williams. They were highly praised by Macomb for their gallantry, and he promised that each of them should receive a rifle. This promise Congress redeemed in 1826 by ordering a rifle to be presented to each member of that little volunteer company. Several of these lads afterward became distinguished men.

The British checked at the Bridge in Plattsburg.

Preparations for Battle on Land and Water.

OLD STONE MILL.²

and used its timbers for a breastwork. The enemy made extraordinary efforts to force a passage there, but Mooers and his men stood firm, and kept them at bay. Finding the passage of the stream impossible under the circumstances, Prevost ordered his troops to encamp upon an elevated ridge about a mile back from the river, and upon the high ground north of the village. He made his head-quarters at Allen's farm-house on the ridge,¹ and gave orders for vigorous preparations for attack. Notwithstanding he was at the head of overwhelming numbers, the events

* September 6, 1814. of that day^a convinced him that the task before him was not a light one. He had lost, in killed and wounded, since the dawn, over two hundred men, while the loss of the Americans did not exceed forty-five.³

Prevost employed the time between the 7th and 11th in bringing up his battering trains and supplies, and in erecting several works that might command the river, the bay, and the American forts and block-houses on the peninsula.⁴ The Americans in the mean time were not idle. They labored without ceasing in strengthening their works. They removed their sick and wounded to Crab Island, two miles distant, in the lake, and there erected a two 6-pound gun battery, and manned it with convalescents.

While these preparations were under way on land, the belligerents were making ready for a combat on the water. A greater portion of the British flotilla, under Captain Pring, had advanced, as we have seen, to *Isle la Motte*, where they were joined^b by the remainder of the squadron and Captain George Downie, of the Royal Navy, late of the *Montreal* on Lake Ontario. Macdonough, at the same time, had the American squadron at anchor in Plattsburg Bay, and calmly awaited the approach of his enemy.

For almost five days the seamen waited for a general movement of the landmen, which was to be a signal on the part of the British for the weighing of anchors and

¹ This was a large two-storied frame house, nearly square, and stood on the site of the residence of John H. Sanborn, Esquire, in 1860, when I visited Plattsburg. It was on a little hill west of the village. General Robinson made his head-quarters at the house of the Honorable William Bailey, not far distant. Judge Bailey (mentioned in the note on page 650) took refuge, with his family, in the house of Dr. Man (mentioned in the same note), some distance from Plattsburg. Judge Bailey married the daughter of Zephaniah Platt, a patentee of Plattsburg, and was the father of Admiral Bailey, of our navy, who performed gallant service in the battle of Forts Jackson and Philip, below New Orleans, in the spring of 1862.

² This was the appearance of the old stone mill when the writer sketched it in 1860 from the gallery of the United States Hotel. On the left is seen a portion of Plattsburg Bay, and Cumberland Head in the distance.

³ Palmer's *History of Lake Champlain*, page 194.

⁴ These consisted of three block-houses erected at points within range of the American works; a battery on the lake shore, just north of the mouth of the Saranac; another on the steep bank above the mill-pond; a third near the burial-ground; and one for rocketeers on a hill opposite Fort Brown.

Brave Exploit of Captain M'Glassin.

A British Battery captured.

VIEW UP THE SARANAC, FROM FORT BROWN.¹

preparing ships for action, and during that time no military operation of great importance occurred. There were some minor movements worthy of notice. One of them, on the part of the Americans, was a bold one. On the night of the 9th there was tempestuous weather. There was lightning, and rain, and wind, and thick darkness. The British had been seen at sunset busily engaged in the erection of the rocket battery opposite Fort Brown. Captain M'Glassin, who was described to me as a "little beardless Scotchman" anxious to distinguish himself, asked General Macomb to allow him to lead fifty men that night to an attack on the builders. Macomb complied, and M'Glassin, who had arisen from a sick-bed, sallied out in the gloom with his men, from whose gun-locks the flints were removed, crossed the Saranac about half way between Fort Brown and the upper bridge, and, unobserved, reached the foot of the hill on which the battery was rising. There he divided his men into two parties. One went to the rear of the battery by a circuitous route, and, when all was ready, he shouted "Charge! men, charge! upon the front and rear!" His men rushed forward with frightful yells. The British, believing overwhelming numbers were upon them, fled precipitately to their main body. The work was taken, the guns were spiked, and M'Glassin returned without the loss of a single man. Over three hundred veteran troops had been surprised and frightened into flight by only fifty men, and Sir George Prevost was much mortified.

The morning of the 11th dawned brightly, and at an early hour in the forenoon the British land and naval forces were in motion for a combined attack on the Americans. Prevost had arranged the movement with Downie. It was agreed that when the British squadron should be seen approaching Cumberland Head, the advance of the army, under Major General Robinson, should press forward, force the fords of the Saranac, climb the steep banks, and with ladders escalate the American works on the peninsula, while the several batteries around Plattsburg village should open a brisk fire.

Between seven and eight o'clock the squadron was seen advancing, and at eight it rounded Cumberland Head. It consisted of the frigate *Confiance*, 38, Downie's flagship; the brig *Linnet*, 16, Captain Pring; the sloops *Chub*, Lieutenant M'Ghee, and *Finch*,² Lieutenant Hicks, carrying 11 guns each; and twelve gun-boats, manned by

¹ This view is from the mounds of Fort Brown, looking up the Saranac. The buildings in the extreme distance are at the upper bridge, where Mooers's militia were stationed. M'Glassin forded the Saranac at the point indicated by the drift-wood lodged in the stream. He crossed the little narrow plain where the cattle are seen, and up the slope to the right.

² These were the *Eagle* and *Groucer*, captured from the Americans on Lake Champlain by the British, who changed their names to *Chub* and *Finch*.

about forty-five men each. Eight of them carried 2 guns, and four of them 1 gun each. At that moment Macdonough's squadron lay in Cumberland or Plattsburg Bay, on a line north from Crab Island, and almost parallel with the shore, at an average distance of two miles from it. On the extreme left, and at the head of the line, were two galleys at anchor, and next to them lay the brig *Eagle*, 26, Captain Henley, just within the point of Cumberland Head. Next south of her was the *Saratoga*, 26, Macdonough's flag-ship; and the next in line was the schooner *Ticonderoga*, 17, Lieutenant Cassin. Next southward in the line lay the *Preble*, Lieutenant Charles Budd, armed with 7 guns.¹ This vessel lay so near the shoal extending northeast from Crab Island, that it was impossible for the enemy to turn that end of the line. In the rear of these larger vessels were ten gun-boats or galleys, six of them mounting one long 24-pounder and one 18-pound Columbiad each, and the other four carrying each a 12-pounder. These were so arranged as to fill up the openings between the larger vessels in the line, making the order of battle in two lines, about forty rods apart. The larger vessels were at anchor, while the gun-boats were kept in position by the use of oars.²

The American line of battle had been formed with great skill by the young commander, reference being had to the conformation of the land. It extended completely across the entrance to Plattsburg Bay from Crab Island to Cumberland Head, and the enemy, rounding the latter, was compelled to approach the American squadron with his bows on, giving the latter a great advantage at the beginning.³ The first vessel that made its appearance was a sloop, which, it is said, carried a company of amateurs, who kept out of the action that ensued. It was immediately followed by the *Finch*, which led the van of the British squadron, and made for the right of the American line, in the direction of the *Preble*, near Crab Island. At the same time the *Chub* moved toward the head or left of the Americans, near Cumberland Head, keeping well to the windward of the *Eagle*, to support the *Linnet* in a direct attack on that vessel, while the gun-boats coming up in order, their commanders received from Commodore Downie final instructions for action. He then attempted to lay the *Confiance* athwart the *Saratoga*, while the *Finch* and the gun-boats should attack the *Ticonderoga* and *Preble*. He was baffled by shifting winds, and was compelled to anchor his vessel within two cables' length of its antagonist.

Macdonough, in the mean time, had thoroughly prepared to receive the enemy. When his vessels were cleared for action, springs placed on his cables, and all was in readiness, he knelt upon the deck of the *Saratoga*, near one of its heaviest guns, with his officers and men around him, and, in few words, asked Almighty God for aid, and committed the issue into his hands.⁴ He arose with assured courage, and as the enemy came bearing down upon him, his vessels sprang their broadsides to bear, and the *Eagle* opened the action by hurling the first shot. It discharged in quick succession its four long 18-pounders in broadside. This was followed by the fire of a long 24-pounder on the *Saratoga*, which the young and gallant commodore had sighted himself. The ball entered the outer hawse-hole of the *Confiance*, the enemy's flag-ship, and went crashing through every obstacle the entire length of her deck, killing

¹ The *Saratoga* was built at Vergennes in the spring of 1814. The *Ticonderoga* was in course of construction for a steam-boat when she was taken for the public service by Macdonough and converted into a sloop-of-war. The *Eagle* was also built at Vergennes in the summer of 1814. So rapid was her construction that she was launched in nineteen days after her keel was cut in the woods. She joined the squadron early in August.

² The American force consisted of one ship, one brig, one schooner, one sloop, and ten gun-boats, carrying 80 guns in all, and manned by 882 men. The British had one frigate, one brig, two sloops, and twelve gun-boats, carrying in all 96 guns, and manned by a little more than 1000 men. The metal of each was unusually heavy. That of the Americans was as follows: Fourteen long 24's, six 42's, twenty-nine 32's, twelve long 18's, twelve long 12's, seven long 9's, and six 18-pound Columbiads. The British had thirty-one long 24's, seven 18's, sixteen 12's, five 6's, twelve 32-pound carronades, six 24's, seventeen 18's, and one 18-pound Columbiad.

³ See Map on page 871.

⁴ At a public dinner given to Macdonough at Plattsburg a few days after the battle, the following toast was offered after he had left the table: "The pious and brave Macdonough—the professor of the religion of the Redeemer—preparing for action, he called on God, who forsook him not in the hour of danger: may he not be forgotten by his country."

Cock crowing on Macdonough's Flag-ship.

Fight between the Flag-ships.

The Battle general.

several men on its way, and demolishing the wheel. The *Linnet*, as she was passing to attack the *Eagle*, gave the *Saratoga* a broadside, but without serious effect. One of her shots demolished a hen-coop on the *Saratoga*, in which was a young game-cock which some of the seamen had lately brought on board. The released fowl, startled by the noise of cannon, flew upon a gun-slide, and, clapping his wings, crowded lustily and defiantly. The sailors cheered, and the incident, appearing to them as ominous of victory for the Americans, strengthened the courage of all.¹

The *Confiance* made no reply to the *Saratoga's* savage 24-pounder until she had secured a desirable position, notwithstanding the entire American line had become engaged in the combat. When ready, she exhibited a sheet of flame. Her entire larboard broadside guns, consisting of sixteen 24-pounders, double-shotted, leveled point-blank range, coolly sighted, and favored by still water, were discharged at one time. The effect was terrible. The *Saratoga* shivered from round-top to hull as with an ague, and forty of her people, or almost one fifth of her complement, were disabled. But the stunning blow was felt only for a moment. Almost immediately Macdonough resumed the conflict, and the fire of the *Saratoga* was steady, and gallantly conducted. Among her lost was her first lieutenant, Peter Gamble, who was on his knees sighting a bow-gun, when a shot entered the port, split the quoin, drove a part of it against his breast, and laid him dead without breaking the skin. Fifteen minutes afterward an American ball struck the muzzle of a 24-pounder on board the *Confiance*, dismounted it, sending it bodily inboard against the groin of Commodore Downie, killing him also without breaking the skin.²

The battle had now become general, steady, and active between the larger vessels. The *Chub*, while manœuvring near the head of the American line, received a broadside from the gallant Henley,³ of the *Eagle*, which so crippled her that she drifted helplessly, and, after receiving a shot from the *Saratoga*, she struck, and was taken possession of by Mr. Platt, one of the midshipmen of that vessel,⁴ who had her towed

¹ Statement to the author by Commodore Samuel L. Breese, who was commander of the gun-boat *Nelley* in the action,* and James Sloan, of Oswego, who, as we have observed [page 797], was Macdonough's clerk, and was a witness to the affair. He says that some of the sailors were fond of cock-fighting. This particular bird, owned on shore, had been a formidable antagonist, and, by "hook or by crook," they had obtained possession of him.

The following allusion to this event is contained in a rhyming "*Epistle of Brother Jonathan to Johnny Bull*," said to have been written at near the close of 1814:

"O, Johnny Bull, my Joe, John,
Behold on Lake Champlain,
With more than equal force, John,
You tried your fist again;
But the cock saw how 'twas going,
And cried 'Cock-a-doodle-doo,'
And Macdonough was victorious,
O, Johnny Bull, my Joe!"

² Cooper's *Naval History of the United States*, ii., 434.

³ Robert Henley was born in James City County, Virginia, on the 6th of January, 1783. He was educated at William and Mary College. He obtained a midshipman's warrant in 1799, and made his first cruise with Commodore Truxton in the *Constellation*. He showed much gallantry in several engagements, especially with *La Vengeance* (see page 104), when Truxton said, "That stripling is destined to be a brave officer." He was appointed to the command of the *Eagle* in the spring of 1814, and after the battle of Plattsburg in September, his commander, Macdonough, said, in his official report: "To Captain Robert Henley, of the brig *Eagle*, much is to be ascribed; his courage was conspicuous, and I most earnestly recommend him as worthy of the highest trust and confidence." The National Congress thanked him, and gave him a gold medal.† He was also promoted to captain. He died at Charleston, South Carolina, in the year 1829.

⁴ The late Commodore Charles T. Platt, who died at Newburg, New York, on the 12th of December, 1860. He was a native of Plattsburg, and a gallant officer. He entered the navy as midshipman in 1812 on Lake Champlain. During the battle here recorded he passed three times through the line of the enemy's fire in an open boat carrying orders. He was promoted to lieutenant, and accompanied Commodore Porter to the West Indies in 1822, in command of the schooner

* Samuel L. Breese is a native of New York. He entered the navy as midshipman in December, 1810. He was promoted to lieutenant in the spring of 1816; to commander in December, 1835; to captain in September, 1841; and to rear admiral in 1862. He is on the retired list, and is now (1867) light-house inspector.

† The picture on the next page is a representation of Henley's medal. On one side is a bust of Captain Henley in profile, with the legend, "ROB. HENLEY, EAGLE PREFECT. PALMA VIRTU. PER ÆTERNIT FLORIBIT." On the reverse is a representation of a fleet engaged before a town (Plattsburg), enveloped in smoke. Several small boats are seen on the lake. Legend—"UNO LATERE PERCUSO. ALTRUM. SUPERAVIT." Exercus—"INTER CLASS. AMERI. ET BRIT. DIE XI. SEPT., MDCCCXIII."

into Plattsburg Bay, and anchored near the mouth of the Saranac. She had suffered very severely. Almost half of her people were killed or wounded. An hour later the *Finch* was driven from her position by the *Ticonderoga*, commanded by the intrepid Lieutenant Cassin; and, being badly injured, drifted upon Crab Island shoal

CASSIN'S MEDAL.

of rocks, and grounded. The invalid corps on the island brought their little two-gun battery to bear on her, when she struck, and surrendered to this small band of convalescents.¹

The British gun-boats now entered vigorously into the action, and soon compelled the *Preble*, Lieutenant Budd, to cut her cables and flee to a safer place near the shore, where she anchored, and was of no farther service in the fight. This success emboldened the British galleys, and they made a combined and furious attack on the *Ticonderoga*, fourteen in number, with an average of fifty men in each.² Cassin walked the taffrail in a storm of grape and canister shot, watching the movements of the assail-

er Boagle. In this war against the pirates Platt distinguished himself. He was attached to the steam frigate *Fulton* when she blew up, and was severely injured. His last service was in command of the Navy Yard at Memphis.

¹ That inaccurate historian, Sir Archibald Alison, in his *History of England*, in writing of this event, remarks, "The *Finch*, a British brig, grounded out of shot, and did not engage!" Again, he speaks of her getting on rocks, and not being able to engage in the action. Her commander, Captain Pring, in his official report, says truly that she struck on a reef of rocks to the eastward of Crab Island, about the middle of the engagement, which prevented her rendering such assistance, etc., etc. Alison, with these facts before him, calls a sloop-of-war with eleven guns and forty men a brig, and keeps her from action altogether!

² Statement to the author by Admiral Paulding.

Victory doubtful. The Flag-ships disabled. Surrender of the *Confiance*. Cassin and Paulding.

ants, and directing effective discharges of musket-balls and other light missiles, which kept the enemy at bay.¹ Several times they were within a few feet of the sides of the *Ticonderoga* with the intention of boarding her. They behaved with the utmost gallantry, but with equal gallantry the Americans repulsed them. The *Ticonderoga* maintained her position, and covered her extremity of the line to the last, winning from the commodore and all beholders unqualified praise for her commander and people.²

While the fortunes of the day were thus fluctuating at the lower end of the line, the Americans were suffering at the other extremity. The *Eagle* lost the springs of her cable, and became exposed to the combined fire of the *Linnet* and *Confiance*. Henley at once dropped her between and a little astern of the *Saratoga* and *Ticonderoga*, and, anchoring her there, opened his larboard guns afresh on the *Confiance* and the British galleys. But the *Saratoga* was left exposed to the whole fire of the *Linnet*, which sprang her broadsides in such a manner as to rake the bows of her antagonist.

Very soon the two flag-ships became disabled. The *Saratoga* had not a single serviceable starboard gun left, and was silent. The *Confiance* was not much better off. Now was the moment for Macdonough to exhibit his splendid seamanship. He did so, quickly and effectively. With the aid of Philip Brum, his skillful sailing-master, he wound the ship, by means of a stream anchor and hawsers, so that he brought the guns of his larboard quarter to bear on the *Confiance*, which had vainly endeavored to imitate the movement. Under the direction of Acting Lieutenant Lavallette, these poured such a destructive fire on the British flag-ship that she soon surrendered. The *Saratoga's* fire was then directed upon the *Linnet*, and in the course of

¹ Stephen Cassin, son of Commodore John Cassin, of the navy, was born in Philadelphia on the 16th of February, 1753. He entered the navy as a midshipman in the year 1800, and was in the *Philadelphia* with Decatur in the Mediterranean. He was active, and behaved bravely in the naval operations in that quarter from 1801 to 1804-'5. He was appointed to the command of the *Ticonderoga* in the spring of 1814, and Macdonough, in his official report of the battle off Plattsburg, in September of that year, said, "The *Ticonderoga*, Lieutenant Commandant Stephen Cassin, gallantly sustained her full share of the action." For his good conduct on that occasion Cassin was promoted to a post captaincy, and received from Congress a vote of thanks and a gold medal. The latter is delineated in the engraving on the opposite page. On one side is a bust of Cassin in profile, with the legend "STEP. CASSIN TICONDEROGA PRÆFECT. QUÆ REGIO IN TERRIS NOST. NON PLENA LAG." On the reverse is the same design, legend, and exergue as on that of Captain Henley.

² Among the brave spirits on board the *Ticonderoga* was Midshipman Hiram Paulding, now (1867) a rear admiral. He was then a lad not seventeen years of age, but, for want of officers, he was placed in command of a division of eight guns. When the British galleys approached it was discovered that the matches for firing the cannon were useless. Young Paulding saw no resource but the flash of a pistol, and with his own hand he thus fired the guns of his section during a combat of more than two hours: and in the interval of the cannon-firing, when the enemy were within pistol-shot, he discharged his weapon against them. These facts I had from the lips of the late Commodore Tattnall.

Hiram Paulding, a son of one of the captors of André, was born in Westchester County, New York, on the 11th of December, 1797. His first service in the navy was as a midshipman, at thirteen years of age, on Lake Ontario, in 1812. During the remainder of the war he was confined to Lake Champlain. In 1815 he accompanied Decatur in the *Constellation* frigate to the Mediterranean. He was promoted to lieutenant, and served under Bainbridge and Downes. He was on shore for some time in 1821 engaged in study preparatory to a more useful career in the navy. He accompanied Porter in his expedition against the West India pirates, and from that time until 1865, he was in active, arduous, and most useful service, afloat and ashore, as subordinate and commander, having been promoted to captain in 1848. He took an active interest in the suppression of the rebellion that broke out in the Slave-labor states in 1861, and in 1862 (when the annexed portrait was drawn) was promoted to rear admiral. He was the first American commander who received a full admiral's salute. It was given by a French frigate lying in New York Harbor, August 1, 1862, on the occasion of the admiral's visit to that vessel.

H. Paulding

fifteen minutes she too struck her colors. The British galleys in the mean time had been driven by the *Ticonderoga* half a mile in the rear of their stately associates, and they lay scattered, and giving feeble aid to them. Seeing the colors of the larger vessels go down, they too dropped their ensigns, and at a little past noon not one of the sixteen national flags which were so proudly floating over the British squadron when it rounded Cumberland Head could be seen.

Finding they were not likely to be pursued, the galleys bent their sweeps with energy and escaped down the lake, followed by a store-sloop which had been lying during the battle near the point of Cumberland Head on which the light-house now stands. The American vessels were too much crippled to follow, and were, moreover,

VIEW AT THE LIGHT-HOUSE ON CUMBERLAND HEAD.¹

engaged in the humane business of saving the survivors of the *Confiance* and the *Linnet*, which were reported to be in a sinking condition.² "I could only look at the enemy's galleys going off in a shattered condition," Macdonough wrote to the Secretary of War,³ "for there was not a mast in either squadron that could stand to make sail on; the lower rigging, being nearly all shot away, hung down as if it had just been placed over the mast-heads." "Our masts, yards, and sails were so shattered," wrote Midshipman Lee, of the *Confiance*, who was wounded in the action, "that one looked like so many bunches of matches and the other like a bundle of rags."³

For two hours and twenty minutes this severe naval battle raged, while the thunder of cannon, the hiss of rockets, the scream of bombs, and the rattle of musketry were heard on the shore. It was a sublime sight, and was beheld by hundreds of spectators on the headlands of the Vermont shore, who greeted the victory with shouts.⁴ It was a battle characterized by a vigor and destructiveness not excelled

¹ This view is from the light-house on Cumberland Head, and includes the theatre of the battle of Lake Champlain. The island in the centre of the picture is Crab Island, and the one nearer the left is Valcour Island, near which Benedict Arnold's famous naval battle was fought in 1776. The hills in the distance are the lofty Adirondack Mountains.

² This is the accepted reason for the flight of the gun-boats. Cooper says that, after the surrender, a cannon on board the *Confiance* was accidentally discharged, and in the direction of Cumberland Head. Up to that time, he says, the British galleys appeared to have been waiting to be taken possession of. They regarded this gun as a signal for escape, and they acted accordingly. Macdonough made a signal for his gun-boats to follow, but they were recalled to the relief of the *Linnet* and *Confiance*.

PLAN OF THE NAVAL ACTION ON LAKE CHAMPLAIN.¹

by any during the war, indeed seldom equaled any where or at any time.² The victory for the Americans was complete and substantial; and from the *Saratoga*, half an hour after the *Linnet* struck and the galleys fled, Macdonough sent the following dispatch ashore in a gig, to be forwarded to the Secretary of the Navy:

"SIR,—The Almighty has been pleased to grant us a signal victory on Lake Champlain in the capture of one frigate, one brig, and two sloops of war of the enemy."³ Two days afterward he sent Lieutenant Commanding Cassin to the Secretary of the Navy with a more detailed yet brief account of the battle, in which he stated that the *Saratoga* had fifty round shot in her hull, and the *Confluence* one hundred and five. He added, "The *Saratoga* was twice set on fire by hot shot from the enemy's ship."⁴

Very few officers or men on the *Saratoga* and *Confluence* were uninjured. Indeed, the same might be said of those of the other large vessels of both parties. Macdonough was twice prostrated upon the deck, and his venerable sailing-master, Peter Brum, had his clothes nearly torn off by a splinter while winding the ship.⁵ Acting

¹ This map was compiled from a large one in the Engineer Department, Washington City, and a rough pen-and-ink sketch made at the time of the battle by the late Chancellor R. H. Walworth, then Macomb's adjutant general. The coast lines are from the report of the Coast Survey.

² "The havoc on both sides was dreadful," Midshipman William Lee wrote. "I don't think there are more than five of our men, out of three hundred, but what are killed or wounded. Never was a shower of hail so thick as the shot whistling about our ears. Were you to see my jacket, waistcoat, and trowsers, you would be astonished to know how I escaped as I did, for they are literally torn all to rags with shot and splinters; the upper part of my hat was also shot away. There is one of the marines who was in the Trafalgar action with Lord Nelson, who says it was a mere flea-bite in comparison with this."—Letter to his Brother, December 14, 1814. Midshipman Lee rose to the rank of lieutenant, and died "on the 24th of February, 1817, at the Telegraph, West Square."—*O'Byrne's Naval Biography*.

³ Mr. James Sloane, of Oswego, informed me that, a few days before the battle, he gave one of the seamen a very nice glazed hat. After the battle was over the sailor came to him with the hat in his hand, having a semicircular cut in the side and crown made by a cannon-shot while it was on his head. "Look here, Mr. Sloane," said the sailor, "how the damned John Bulls have spoiled my hat." He did not seem to reflect for a moment how nearly the cannon-ball came to spoiling his head.

⁴ On page 872 is a fac-simile of this paragraph of the dispatch, copied from the original in the archives of the Navy Department, Washington City. When the *Confluence* was captured she was found to have ovens for heating shot. There were no others in any vessel on the lake.

⁵ Macdonough sighted a favorite gun much of the time during the action. While doing so at one time, bending his body, a shot cut the sparker-boom in two, and it fell upon his back with such force as to prostrate him senseless on the deck. The cry went through the ship that the commodore was killed. He soon recovered and resumed his station. A few minutes afterward a shot droye the head of the captain of his favorite gun in upon him, and knocked him senseless into the scuppers, when his death was again announced; but he speedily recovered. Mr. Brum had a splinter

The Saratoga was twice set on fire by hot Shot from the Enemy's Ship.

FAC-SIMILE OF A PART OF MACDONOUGH'S DISPATCH.

Lieutenant Lavallette had a shot-box, on which he was standing, driven from under him by a ball, and was knocked down by the flying head of one of the seamen.¹ Lieutenant Gamble, as we have seen, was killed at the beginning of the action. Lieutenant Stansbury suddenly disappeared from the bulwarks, and two days afterward his body, cut in two, rose to the surface. Joseph Smith, first lieutenant of the *Eagle*, received a severe wound, but returned to his quarters during the action.² The British officers suffered severely. Commodore Downie, Captain Anderson, of the Marines, Midshipman Gunn, of the *Constance*, and Lieutenant Paul and Boatswain Jackson, of the *Linnet*, were also killed, and many others were wounded. The wife of the steward of the *Constance* was also killed.³ The entire loss of the Americans was one hundred and ten, of whom fifty-two were killed. The total British loss was more than two hundred.⁴

Joseph Smith

Macdonough received the officers of the captured vessels with great courtesy of manner and speech. When they offered him their swords, he instantly replied,

"Gentlemen, your gallant conduct makes you worthy to wear your weapons; return them to their scabbards." They did so, and they all walked the deck of the victori-

driven so near his body as to strip off his clothes and prostrate him senseless. He soon gained his feet, and, making an apron of his handkerchief, continued his labors. See Cooper's *Naval History*, II., 444, note.

¹ Elie A. F. Lavallette is a native of Virginia. He entered the naval service as sailing-master a week after the declaration of war in June, 1812. He was acting lieutenant in the battle of Lake Champlain, and received a commission as full lieutenant at the middle of December following as a slight reward for his gallant conduct. In March, 1821, he was promoted to commander, and in 1822 to rear admiral. He is now (1867) on the retired list and awaiting orders.

² Joseph Smith, now (1867) rear admiral on the retired list, has been chief of the Bureau of Yards and Docks for several years. He is a native of Massachusetts, and entered the navy as midshipman in January, 1809. When he was about to go to Lake Champlain he had an order to get a clerk. He found Sloane (already mentioned) in a bookstore in Boston, and persuaded him to go with him. Smith behaved most gallantly on the *Eagle* in the battle of Lake Champlain. He had been appointed lieutenant in July, 1813. He was promoted to commander in 1827, and to captain in 1837. He was created rear admiral in 1862.

³ Letter to Niles's *Weekly Register*, vii., 45. Mr. Sloane informed me that, while she was stooping in the act of binding up the wounded leg of one of the men, a cannon-ball came through the side of the ship, carried away both of her breasts, and, driving her across the vessel, killed her instantly.

⁴ Macdonough's official Letter to the Secretary of the Navy, September 13, 1814; Letter of Captain Pring to Sir James L. Yen, September 12, 1814; Cooper's *Naval History*, II., 420 to 441, inclusive; Palmer's *History of Lake Champlain*, pages 197 to 208, inclusive.

End of the Battle of Lake Champlain.

Movements of the land Troops.

The British cross the Saranac River.

ous *Saratoga*, American and English officers, more in the character of friends than of enemies. Lieutenant Lavallette, who had taken formal possession of the *Confiance*, was soon directed to prepare the prisoners for Crab Island, and before sunset all was quiet on the lake. Thus ended the famous BATTLE OF LAKE CHAMPLAIN. The British vessels were taken to Whitehall, at the head of the lake, and scuttled. The *Saratoga* shared the same fate afterward. I saw the remains of this vessel and the *Confiance* there as late as 1850.

We have observed that while the roar of the battle-storm was heard on the water, its thunders were bellowing over the land. According to arrangement, when the pennants of the British fleet were seen over Cumberland Head, a part of the British land force, under Major General Robinson, moved in three columns to force their way across the Saranac at the site of the two bridges, and a ford at Pike's cantonment, three miles from the mouth of the stream, and carry the American works by storm.¹ When the first gun was fired on the lake, the British land batteries were opened, and, under cover of the shot and shell which they hurled toward the American works,

BATTLE OF PLATTSBURG. (FROM AN OLD PRINT.)²

their three assailing columns moved. At the lower bridge they were repulsed by the guards, block-houses, and artillery of the forts, served by Captains Brooks, Richards, and Smith, and Lieutenants Mountfort, Smyth, and Cromwell. At the upper bridge the riflemen and pickets, under Captain Grosvenor and Lieutenants Hamilton and Riley, aided by some militia, successfully disputed their passage. They were a little more successful at the upper ford, where the Clinton and Essex militia, under Major General Mooers and Brigadier General Wright, were stationed. After being driven back several times with considerable loss, some companies of the British pushed across the stream, then shallow and rapid, firing briskly by platoons as they advanced, but doing very little harm.³ The militia fell back. They were soon joined by a large detachment of Vermont Volunteers, and a party of artillery with a field-piece, under Lieutenant Sumter.

The flying companies were now rallied, and drawn up in battle array to meet the pursuing foe, when Walworth, one of Mooers's aids,⁴ came dashing up, his horse

¹ These troops consisted of "light infantry companies, 3d battalion Twenty-seventh and Seventy-sixth Regiments, and Major General Powers's brigade, consisting of the 3d, 6th, and 1st battalion of the Twenty-seventh and Fifty-eighth Regiments."—Sir George Prevost to Earl Bathurst, September 11, 1814.

² This view is from the right bank of the Saranac, at its mouth. Toward the left is the three-storied stone mill, and in the distance Fort Brown. A portion of the lower bridge, from which the planks were torn up, is seen. Some of the British are attempting to ford the stream. The court-house is seen on fire. The church observed in the picture was saved, and survived until September, 1867, when it perished in a great conflagration in the village.

³ Participants in the fight told Mr. Palmer, the historian of Lake Champlain, that most of the enemy's bullets struck the trees above them "at least fifteen feet from the ground."

⁴ Neuben B. Walworth was born in Bozrah, Connecticut, October 26, 1789. His parents removed to Hoosick, New York, where his early years were spent. He received only a common school education, and at the age of seventeen

British Troops recalled.

Their Leader alarmed.

Uprising of the People.

THE SARANAC AT PIKE'S CANTONMENT.

flecked with its own foam, and gave them the joyful intelligence that the British fleet had just surrendered. These glad tidings were greeted with three hearty cheers. At the same moment they observed the pursuers with their backs turned, and making their way in haste toward the Saranac. Sir George Prevost, who always played the coward when near danger, according to British historians, had become terribly alarmed, and recalled these vigorous and only successful troops. He had experienced "the extreme mortification," he said, "to hear the shout of victory from the American works" when the fleet surrendered on the lake. They had been loud and mighty cheers, iterated

and reiterated by corps after corps, as the eye and ear caught knowledge of the victory; and Sir George wisely saw, as he said, that "farther prosecution of the service was become impracticable." He had assumed the position of co-operator with the fleet rather than principal, leaving to Downie the brunt of the service, but ready to receive and wear the garlands of honor which might be won. Seeing the British flags humbled on all their ships, and their gun-boats fleeing, he resolved to fall back toward the Canada border, and halt until he should ascertain the use the Americans intended to make of their naval ascendancy just acquired on Lake Champlain.¹ It was a wise determination. Notwithstanding his number was overwhelming,² Prevost was really in peril. He might have crushed Macomb and captured the post at Plattsburg, but it would have been at the expense of many lives without obtaining any permanent advantage. The British had lost the lake absolutely, and without any fair promise of its recovery; and the militia of all that region were thoroughly aroused, and were rapidly gathering. Governor Chittenden, of Vermont, had issued a patriotic address at the beginning of the invasion, calling upon the militia of his state to hasten to the aid of their brethren across the lake. It had been heartily responded to, and at the close of the memorable day of the battle not less than twenty-five hundred Green Mountain boys were on the Saranac, under Major General Strong. The militia of Washington and Warren counties were also streaming toward Plattsburg at the call of General Mooers, and re-enforcements of regulars were on their way. Prevost's army would very soon have been equaled in numerical strength, and perhaps surrounded and supplies from Canada cut off. He perceived these dangers when the navy was lost, and the moment the forces under General Robinson returned to camp, he made preparations to abandon the siege, notwithstanding General Brisbane offered to cross the Saranac in force and carry the American works in twenty minutes. The fire from his batteries were kept up until sunset, and Fort Brown, under the immediate command of Lieutenant Mountfort,³ sent back responses with great

commenced the study of law. He settled in Plattsburg for its practice, and in 1811 was appointed a Master in Chancery. He was the favorite aid of General Mooers, of whose division the late Colonel David B. M'Neil was Inspector General. He was a member of Congress twelve consecutive years. He became a judge; and in 1828 he was appointed Chancellor, then the highest judicial office in the state. He held it twenty years. After he left office he resided at Saratoga Springs until his death late in 1867. He was long identified with the leading religious and benevolent movements of his day.

¹ Sir George Prevost to Earl Bathurst, September 11, 1814.

² The British had 14,000 troops and the Americans 4700 on the eventful day of the battle. The former consisted of Robinson's brigade, 3700; Powers's, 3600; Brisbane's, 3100; light troops, 2800, composed of Neuron's Swiss regiment, Canadian chasseur, voltigeurs, and frontier light infantry; a troop of light dragoons, 300; Royal Artillery, 400; rocketeers, sappers and miners, 100. The Americans had 1500 regulars, commanded by leaders of various ranks; 2000 Vermont Volunteers, under Major General Strong; and 700 Clinton and Essex militia.

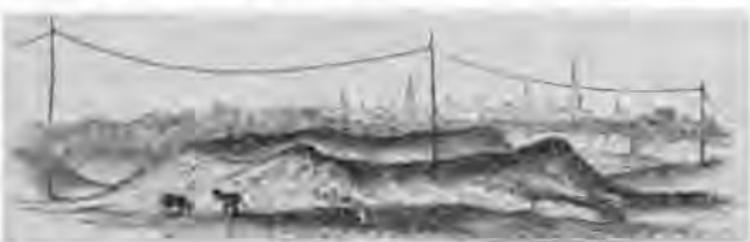

³ John Mountfort was born in Boston in November, 1790, and was the son of a patriot of the Revolution. He en

Flight of the British from Plattsburg.

Cause of their great haste.

spirit.¹ So excellent was the firing that the British believed that French artilleryists were employed by the Americans.

REMAINS OF FORT MIFFLIN.²

When night fell Prevost caused

his cannon to be withdrawn from the batteries. At nine o'clock in the evening he sent them Canada-ward, with all the baggage for which he could find transportation, and at two o'clock in the morning of the 12th the entire army fled with a precipitation wholly unaccountable at the time.³ The sick and wounded, and a vast amount of munitions of war, were left behind; and the foe reached Chazy, eight miles distant, before the Americans were apprised of the movement. Light troops, volunteers, and militia, under General Mooers,⁴ at once started in pursuit. They made a few prisoners, but heavy rains compelled them to relinquish the chase. Prevost halted and encamped at Champlain, and on the 24th left the territory of the United States, and retired to Montreal with the main army. Thus ended the BATTLE OF PLATTSBURG and the second invasion of New York. Many of the British deserted, and the loss of Sir George after he crossed the frontier line, in killed, wounded, missing, and

tered the army as second lieutenant of the Third Artillery in March, 1812, and was promoted to first lieutenant in May, 1813. This was won by his gallantry at York, where, in consequence of the absence of his superior officer, he commanded his company. He assisted in the capture of Fort George. After that he and his company acted as marines in Chauncey's fleet, volunteering for the service. He accompanied Wilkinson down the St. Lawrence, and behaved so gallantly at Plattsburg that he won the promotion to captain. He was major of artillery in the Florida War, under General Gaines, and afterward was the commander of several forts in succession. He left the army in 1852, and in 1851, just as he was about to leave for Europe with his family, he died. His death occurred on the 22d of October. While I was in Boston in the autumn of 1860, his brother, George Mountfort, Esq., showed me a gunner's quadrant, still smeared with gunpowder and blood, which the gallant officer took from under the slain soldiers in one of the British redoubts at Plattsburg. The engraving is a representative of it. It is a graduated quadrant of six-inch radius, attached to a rule a little more than twenty-three inches in length, and all made of brass. It has a plumb-line and bob. The quadrant is applied either by the longer branch to the face of the piece, or this branch is run into the bore parallel with the axis. It was in the original oaken case in which it was carried by the gunners of the Royal Artillery.

Mountfort was always cool. A fellow-soldier (Robert Keith, of Boston), in a communication before me, has related an example. During the battle, he says, he saw a small bomb-shell fall at the feet of the gallant lieutenant, when he caught it, threw it over the parapet, and said, "Don't be alarmed, boys, it is nothing but a humbug."

¹ During the hostilities at Plattsburg, from the 6th until the evening of the 11th, scarcely a building in the village escaped injury of some sort. Many houses were completely riddled. Nine dwellings, thirteen stores and shops, and the court-house and jail, were burned. Some of these were destroyed when the enemy were burned out by Brooks's hot shot, as mentioned on page 863.

² These mounds are on the banks of the Saranac. Plattsburg is seen in the distance across the river.

³ The late Reverend Eleazer Williams (see page 377), who was in the military service of the United States at Plattsburg as commander of the Secret Corps of Observation, informed me that Sir George, naturally timid, was intensely alarmed by a clever trick arranged by Williams. Colonel Fassett, of Vermont, came over from Burlington on Friday before the battle, and assured Macomb that the Vermont militia would cross the lake to aid him in spite of Governor Chittenden. Williams suggested to the general after Fassett left that a letter from that officer, declaring that a heavy body of the militia were about to cross the lake, sent so as to fall into the hands of Prevost, would have a salutary effect. Macomb directed Williams to carry out the plan. He went over to Burlington, and received from Fassett a letter to Macomb, in which he said that Chittenden was marching with ten thousand men for St. Albans; that five thousand more were marching from St. Lawrence County; and that four thousand from Washington County were in motion. This letter was placed in the hands of a shrewd Irish woman on Cumberland Head, who took it to Prevost. The alarmed baronet immediately ordered the flight spoken of in the text, and at a little past midnight his whole army was on the wing. The trick played upon Hull at Detroit (see note 1, page 285) was repeated upon Prevost with equal success.

⁴ Benjamin Mooers was a soldier of the Revolution. He was born in Haverhill, Massachusetts, in 1761, and entered the military service in 1775, at the age of fifteen years. He was commissioned first an ensign, and then first lieutenant, and was an active officer during all the later years of the Revolution. When summoned to the field in 1813 he was fifty-six years of age, and living in quietude on the borders of Plattsburg Bay. He obeyed the summons with alacrity, and performed his duties nobly. He died at his residence on Cumberland Head on the 28th of February, 1838, at the

Rejoicings because of the Victory at Plattsburg. Public Dinner given to Macdonough. Song, "Siege of Plattsburg."

deserters, did not fall much short of two thousand, according to careful estimates made at the time. The American loss was less than one hundred and fifty. Only one commissioned officer, Lieutenant George W. Runk, was mortally wounded. He died the next day.

The events on land and water at Plattsburg on the 11th of September, 1814, produced a thrill of intense joy throughout the country, and with delight the people read the stirring General Orders in which, on the 14th of September, Macomb announced the result to his little army.¹ Spontaneous honors and praises were given by the people to him and Macdonough conjointly.² Bonfires and illuminations blazed in almost every city and village in the land, and the recent disaster at the national capital was almost unthought of for the moment. Legislative resolves, artillery, oratory, and song³ were pressed into the service of rendering homage to the two heroes and their men. The newspapers teemed with eulogies, and at all public gatherings and entertainments their names and deeds were mentioned with applause. Governor

GENERAL MOWERS'S GRAVE.

age of seventy-seven years. His remains are in the Plattsburg burying-ground; and at the head of the grave, near the entrance to the cemetery, is a handsomely-wrought commemorative slab of marble with the following inscription: "In memory of General BENJAMIN MOWERS, who died February 28, 1838, aged seventy-seven years. He served as lieutenant and adjutant in the Revolutionary War. He commanded the militia at the battle of Plattsburg, September 11, 1814. He was the first settler in this county, and for thirty years county treasurer. He repeatedly represented this section of country in the Assembly and Senate of the State, and discharged the important duties which devolved upon him as a citizen, as a soldier, and a Christian, with fidelity to his country and integrity to his God."

¹ After alluding to the designs of Prevost, he said "he brought with him a powerful army and flotilla—an army amounting to fourteen thousand men, completely equipped, and accompanied by a numerous train of artillery, and all the engines of war—men who had conquered in France, Spain, Portugal, the Indies, and in various other parts of the globe, and led by the most experienced generals of the British army. A flotilla, also superior to ours in vessels, men, and guns, had determined at once to crush us both by land and water." He then spoke of the boasts of the governor general, and his attempts to seduce the Americans from their allegiance, and then gave a concise history of the battle and the precipitate flight of the enemy.

² A few days after the battle, the citizens of Plattsburg, who had returned to their homes, resolved, in public meeting, to give a public dinner to Commodore Macdonough. A committee, of which Henry De Lord was chairman, waited upon the hero on board his ship with an invitation. It was accepted, and on Tuesday, the 23d instant, at three o'clock P.M., the commodore, with Generals Macomb and Mowers, and other officers of the army and navy, who were invited guests, and a number of citizens, sat down to a bountiful dinner at the United States Hotel, kept by Thomas Green, and yet standing in 1860, between the stone mill and the bridge over the Saranac, in Plattsburg. General Macomb's band furnished the music on the occasion. Peter Salliey, Esq., presided. Seventeen regular toasts were drunk. The distinguished guests, as they retired, were toasted; and one was given in respectful silence to "The memory of Commodore Downie, our brave enemy." The fallen brave of Macdonough's fleet were also remembered in the regular toasts. "Much credit," says a writer who was present, "is due to Mr. Green for the excellent dinner which he provided for the occasion, it being generally conceded to be the best that was ever given in Plattsburg." A full report of the proceedings was published in a hand-bill, a copy of which is before me.

UNITED STATES HOTEL.

This is a view of the United States Hotel at Plattsburg as it appeared in 1814. The clap-boards on the visible gable exhibited the perforations of bullets from British muskets on the left bank of the Saranac when I saw it in 1860. On the right is seen Plattsburg Bay, and Cumberland Head in the distance.

³ The victories of Macdonough and Macomb were the subject of one of the most popular songs written and sung during the war. It was written by Micajah Hawkins for the proprietor of a theatre in Albany, and sung by him in the character of a negro sailor. Governor Tompkins was present when it was first sung. Hawkins gained great applause and a prize by his performance. He was afterward a grocer in Catharine Street, New York. The following is a copy of the famous ballad:

SIEGE OF PLATTSBURG.

Tune—Boyno Water.

"Backside Albany stan' Lake Champlain,
Little pond half full o' water:
Plat-te-burg dar too, close 'pon de main;
Town small—he grow bigger, do', hereafter.

On Lake Champlain Uncle Sam set his boat,
An' Massa Macdonough he sail 'em;
While General Macomb make Plat-te-burg his home
Wid de army, whose courage nebber fail 'em.

Tompkins, in the name of the State of New York, presented General Macomb with a superb sword. De Witt Clinton, Mayor of New York, presented him, in the name of the Corporation, the "freedom of the city" in a gold box similar in character to the one given to General Brown;¹ and he was requested by the same body to sit for his portrait, to be placed in the gallery of distinguished men. Congress gave him the thanks of the nation, and voted him a gold medal.² He was commissioned by the President major general by brevet. When he returned to his family at Belleville, New Jersey, the village was illuminated, and he was received with the most gratifying tokens of respect. "Never, on the return of any hero to the peaceful bosom of his family," said the New York *Evening Post*, an opposition paper, "was evinced so universal a sense of sincere joy and heartfelt satisfaction."

"On 'tebenth day Sep-tem-ber,
In eighteen hun'ed and fourteen,
Gub'nern' Probosc and he British soj-er
Come to Plat-te-burg a tea-p'arty courtin';
An' he boat come too, arter Uncle Sam boat.
Massa 'Donough, he look sharp out de winder;
Den G'nral Macomb (ah! he always a-bome)
Cotch fire too, sirs, like a tinder.

"Bang! bang! bang! den de cannons 'gin to roar,
In Plat-te-burg and all 'bout dat quarter;
Gub'nern' Probosc try he han' 'pon de shore,
While he boat take he luck 'pon de water;

But Massa Macdonough knock he boat in he head,
Break he heart, break he shin, 'love he caff in,
An' G'nral Macomb start ole Probosc home—
'To't me soul den I muss die a laffin'.

"Probosc scare so he lef' all behine,
Powder, ball, cannon, tea-pot, an' kittle;
Some say he cotch a cole—trouble in he mine
'Cause he cat so much raw an' cole vittle.
Uncle Sam berry sorry, to be sure, for he pain,
Wish he muss heseif up well an' hearty.
For G'nral Macomb and Massa 'Donough home
When he notion for anudder tea-party!"

¹ See page 617.

² A representation of this medal is given on the next page. On one side is a bust of Macomb in profile, with his name and title. On the reverse a battle on land, in sight of a large town, troops crossing a bridge, and war-vessels fighting on a lake. Above this scene are the words "RESOLUTION OF CONGRESS, NOV. 3, 1814." The exergue—"BATTLE OF PLATTSBURG, SEPT. 11, 1814."

Alexander Macomb was the son of a fur merchant of Detroit, who married one of the highly respectable family of Navarre. Their son was born in Detroit on the 3d of April, 1782. He became a resident of New York in infancy, and was educated in New Jersey. He was a member of the "New York Rangers," a volunteer corps raised in 1779, when war with France was expected. General North, of the Revolution, placed him on his staff. He became permanently attached to the army as a dragoon, and was very useful. He was with Wilkinson in the Southwest, and, being afterward attached to a corps of engineers as first lieutenant, he was sent to West Point, where he compiled a treatise on martial law. He became captain in 1805, and was ordered to superintend the erection of fortifications on the frontiers. He was promoted to major in 1808, and when the war commenced in 1812 he was placed in command of an artillery corps. We have already met him several times in the course of this narrative of the war. His crowning achievement was at Plattsburg. After the war he was stationed at Detroit. He was made chief engineer in 1821, and removed to Washington. He remained in that bureau until 1825, when, on the death of General Jacob Brown, he was promoted to general-in-chief of the army of the United States. He died at Washington City on the 25th of June, 1841, aged fifty-nine years. He was buried with military honors in the Congressional Burying-ground at Washington, and over his grave now stands a beautiful white marble monument bearing the following inscriptions:

West Side.—"ALEXANDER MACOMB, Major General Commanding-in-chief United States Army. Died at Washington, the seat of government, 25th June, 1841."

East Side.—"It were but small tribute to his memory to say that, in youth and manhood, he served his country in the profession in which he died, during a period of more than forty years, without stain or blemish upon his escutcheon."

South Side.—"The honors conferred on him by President Madison, received on the field of victory for distinguished and gallant conduct in defeating the enemy at Plattsburg, and the thanks of Congress, bestowed with a medal commemorative of this triumph of the arms of the Republic, attest the high estimate of his gallantry and meritorious services."

On the west side, over his name, is an olive wreath; on the south side an hour-glass with wings, and a

serpent; on the east side a simple cross, and on the north side a serpent and battery.

In the above sketch, the little monument to Commodore Patterson is seen in an iron railing. Over one corner of it, in the distance, is seen William Wirt's monument, and between it and Macomb's is seen that of Commodore Chauncey.

MACOMB'S MONUMENT.

MACOMD'S MEDAL.

Macdonough, too, was nobly honored. The State of New York gave him two thousand acres of land. The State of Vermont purchased two hundred acres on Cumberland Head and presented it to him. It was on the borders of Cumberland, or Plattsburg Bay, and the farm-house upon it overlooked the scene of his gallant exploits. The cities of New York and Albany each gave the hero a valuable lot of land. "Thus," said Macdonough to a friend, while tears stood in his eyes, "in one month, from a poor lieutenant I became a rich man." Congress gave him the thanks of the nation, and with his brave commanders, Henley and Cassin, voted him a gold medal, with suitable devices and inscriptions.¹

MACDONOUGH'S MEDAL.

¹ See page 868. The above is a representation of the medal given to Macdonough. On one side is a bust of the hero in profile, with the legend "THO. MACDONOUGH, STAGNO CHAMPLAIN CLAS. REG. BRIT. SUPERAVIT." The reverse bears the same device and inscriptions as those of Henley and Cassin, given on page 868.

Thomas Macdonough was born in the county of New Castle, Delaware, on the 23d of December, 1783. His father was a physician, and a major in the Continental army. Thomas entered the navy as midshipman in 1798. He was with Decatur in the Mediterranean, where he behaved with great gallantry, especially in the affair of the *Philadelphia*. See page 120. His spirit was shown in the harbor of Gibraltar on one occasion. He was then first lieutenant of the *Siren*. Near her lay an American merchant brig. A boat from a British man-of-war went alongside of her, and its crew seized a seaman who was claimed as a British subject. Macdonough saw it. His commander was absent. He instantly armed and manned his gig and gave chase. He overhauled the boat under the guns of the British frigate, released him, and took him back to the merchant vessel. The British captain, in great rage, appeared on the *Siren*, and inquired of Macdonough how he dared to take a man from his boat. "He was under the protection of my country's flag, and it was my duty," was the reply. With warm oaths the captain swore he would lay his frigate alongside and sink the *Siren*. "While she swims you shall not have the man!" said Macdonough. "You'll repent of your rashness, young man," rejoined the Englishman. "Suppose I had been in that boat, would you have dared to commit such an act?"

The Cost of Prevost's Expedition.

Effect of the Victory at Plattsburg.

Graves of British Officers.

The result of the battle of Plattsburg was deeply mortifying to the British. The Canadian newspapers offered many jeremiads, and Sir George Prevost was censured in unmeasured terms for his incompetency and cowardice. It was estimated that he left behind him in his flight munitions and stores

worth almost one hundred thousand pounds sterling, and that his fruitless expedition cost at least five hundred thousand pounds, or two million five hundred thousand dollars. It was disheartening to the enemy, and was a powerful instrumentality in the speedy restoration of peace. Prevost abandoned all idea of renewing the attempt at invasion, and retired to Quebec. He was soon afterward dismissed and dishonored by his government, and he did not long survive the anxiety it occasioned and his efforts to get home to England and vindicate his character.

DOWNIE'S GRAVE.²

MACDONOUGH'S FARM-HOUSE ON CUMBERLAND HEAD.¹

Three days after the battle, when it was ascertained that the British were making their way toward the St. Lawrence, General Macomb discharged the New York and Vermont militia, and the solemn rites of burial were accorded to the dead of both nations. Fifteen officers, including Commodore Downie, were laid in the Plattsburg Burying-ground, and a neat marble slab, with the name of the commemorated cut upon it, was placed at the head of each grave. On each side of Downie's grave a pine-tree was planted. These were noble in stature when I made the annexed sketch, but one has since disappeared. A few years ago a near relation of the British commander laid a recumbent marble slab, suitably inscribed, upon brick walls, over his remains.² Around it are the graves of the other officers.

¹ "I should have made the attempt, sir!" "What! would you interfere if I were to impress men from that brig!" "You have only to try it, sir," was Macdonough's cool reply. He did not try it.

Macdonough was sent to Lake Champlain when the War of 1812 broke out. There he won unfading laurels, as we find recorded in the text. From the close of the war his health gave way, yet he lived for more than ten years with the tooth of consumption undermining the citadel of his life. On the 10th of November, 1825, he died in Middletown, Connecticut, where he married his wife, the excellent Miss Shaler, and who had died only a few months before. He was only forty-two years of age. His portrait on page 856 is from the one painted from life by John Wesley Jarvis for the Corporation of the City of New York, and now occupies a place in the Governor's Room.

² This picture is from the title-page of the twelfth volume of the *Analectic Magazine*. On page 88 is some poor verse intended as an accompaniment. In the distance is seen the mouth of the Saranac and the village of Plattsburg. On Cumberland Head at that time was the Plattsburg port of entry, and the leading men of that section resided on that pleasant promontory. Among them was General Melancthon Woolsey (whose house is yet standing), General Mooers, Peter Salley, Major Adams, and others.

³ The following is a copy of the inscription: "Sacred to the memory of GEORGE DOWNIE, Esq., a post captain in the Royal British Navy, who gloriously fell on board his B. M. S. the *Confiance* while leading the vessels under his command to the attack of the American flotilla at anchor in Cumberland Bay, off Plattsburg, on the 11th of September, 1814.

"To mark the spot where the remains of a gallant officer and sincere friend were honorably interred, this stone has been erected by his affectionate sister-in-law, MARY DOWNIE, 1851."

⁴ In the above picture Downie's tomb is seen between the trees. The head-stones of the other officers are seen

I visited the theatre of the British invasion of Northern New York, and points of interest at Plattsburg and in the vicinity, in August, 1860. I have already mentioned the passing of a night at Rouse's Point¹ Village after visiting La Colle Mill, and journeying on the next morning toward Plattsburg.² I went to Champlain, five miles south of the Canada border, by railway, and there strolled over the place of Dearborn and Wilkinson's encampments on the hill eastward of the railway station, then (1860) the land of Francis Nye. I also went to the site of Izard's encampment, on rising ground south of the village, and of his battery on the brow of a hill, then (1860) the property of Noadiah Moore. After sketching the mansion of Judge Moore, which was used for officers' quarters by both parties,³ I left for Plattsburg in a light wagon, accompanied by a very intelligent elderly gentleman of Champlain,⁴ whose name I regret I can not now recall. He was familiar with the whole region, and the events and localities which make it notable.

VIEW IN BEEKMANTOWN.

We passed through Chazy, upon the Little Chazy River. Just before reaching it, we saw at his house Captain Hiram Ferris, an old lake pilot, who gave us some of his reminiscences of adventure as commander of a sloop in which Vermont militia were taken across the lake to Plattsburg before the battle. We rode on to Sampson's,

grouped around it. The annexed diagram shows the position of each of the graves, indicated by numerals as follows: 1. Commodore Downie; 2. Boatswain Charles Jackson; 3. Lieutenant William Gunn; 4. Lieutenant William Paril; 5. Captain Alexander Anderson, of the Marines; 6. Captain John Purchase. These were of the British Navy, except Purchase, who was of the British Army. 7. Pilot Joseph Barron; 8. Lieutenant Peter Gamble; 9. Lieutenant John Stansbury; 10. Sailing-master Rogers Carter; 11. Midshipman James M. Baldwin. These were of the American Navy. 12. Lieutenant George W. Rusk, of the American Army; 13. Colonel Willington; 14. Lieutenant John Chapman, of the British Army. A, A, the pine-trees.

I am indebted to Captain J. Van Cleave for the diagram. It was made by him in 1856. He has omitted the grave of Lieutenant R. Kingsbury, of the British Army. It is near No. 13 in the diagram.

¹ Named from Jacques Rouse, a French Canadian, who settled there in 1783.

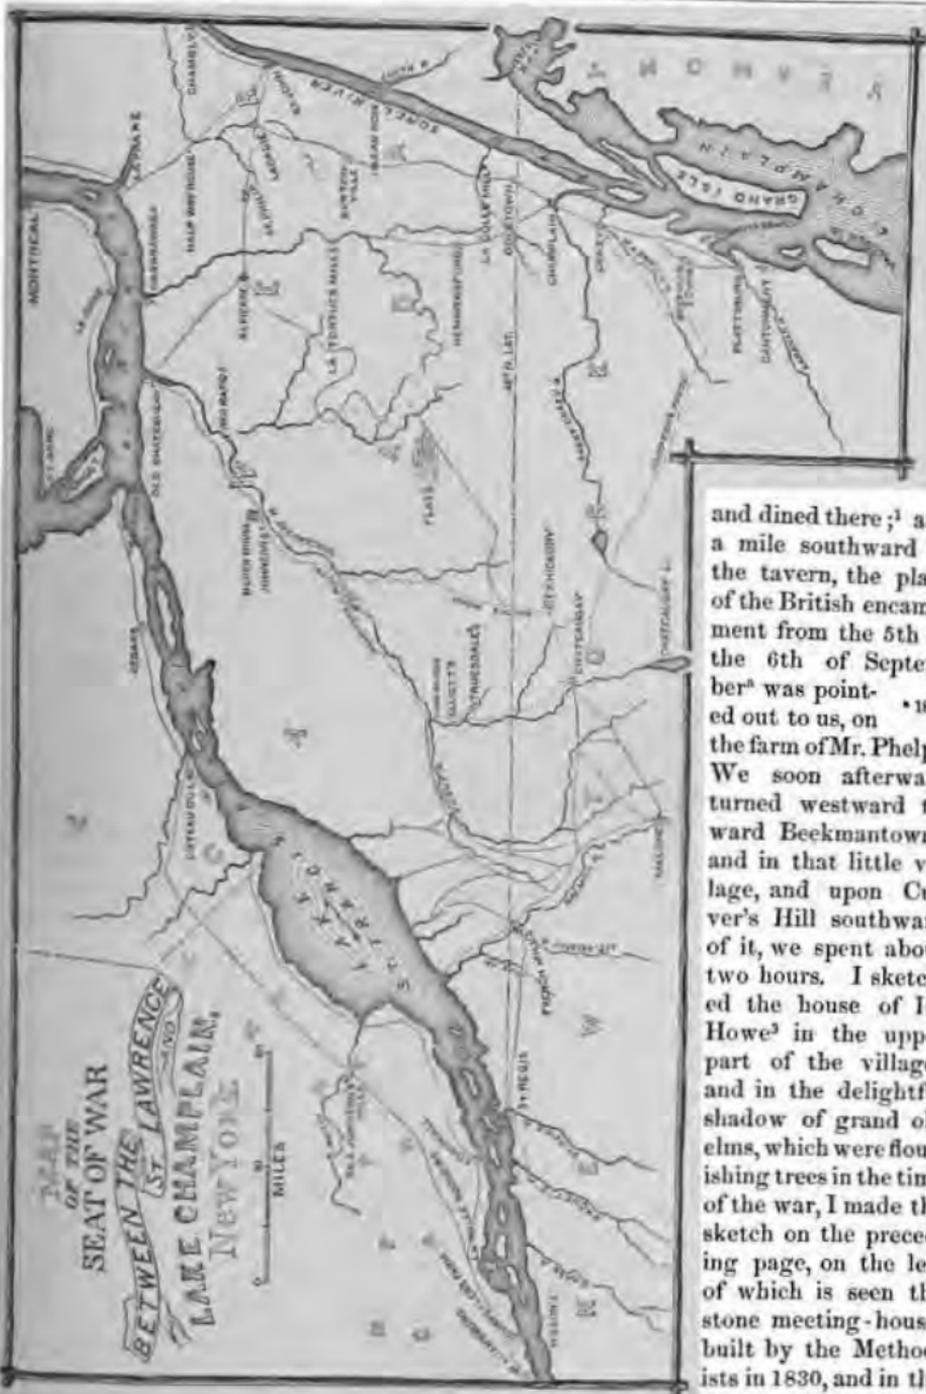

² See engraving on page 857.

³ See page 192.

⁴ Champlain is a lively post-village of less than two thousand inhabitants, on the Chazy River, or Creek, and contains fine water power. It is the southern terminus of the Northern Railroad from Ogdensburg, and from it most of the lumber brought down on that road is shipped.

Ride through Beekmantown and over Culver's Hill.

The Seat of War in Northern New York.

and dined there;¹ and a mile southward of the tavern, the place of the British encampment from the 5th to the 6th of September² was pointed out to us, on the farm of Mr. Phelps. We soon afterward turned westward toward Beekmantown,² and in that little village, and upon Culver's Hill southward of it, we spent about two hours. I sketched the house of Ira Howe³ in the upper part of the village; and in the delightful shadow of grand old elms, which were flourishing trees in the time of the war, I made the sketch on the preceding page, on the left of which is seen the stone meeting-house, built by the Methodists in 1830, and in the distance the road passing

ing over Culver's Hill, on which Wool fought his second battle with the invaders

¹ See sketch of the house on page 859.

² Named in honor of William Beckman, to whom, with twenty-nine others, the township was granted in the spring of 1769.

³ See page 862.

Battle-ground on Culver's Hill.

Arrival at Plattsburg.

Visit to Cumberland Head.

September, 1814, on the morning of the 6th.¹ A little south of the church (at a spot indicated by the two figures), we were shown a spring, by the side of the road, near which Colonel Willington was buried; and directly in front of Francis Culver's house, on Culver's Hill, a flat rock was pointed out as the spot where Willington fell.¹ It is said that the stains of his blood were upon it a long time. There, too, we saw the moss-covered stone fence, built before the war, which formed an admirable shelter for the American militia during the fight on the hill.²

Plattsburg was now eight miles distant, and the long summer day was passing away. We rode on, without stopping, by Halsey's Corners, where Leonard made a stand with his cannon,³ and at near sunset entered Plattsburg. I became the guest of a kinsman (Philander C. Moore), and passed a part of the evening profitably with P. S. Palmer, Esq., the historian of Lake Champlain.

At an early hour the next morning, accompanied by my kinsman, I went out to visit the historical localities in and about Plattsburg; and just at twilight, after a day of incessant labor, we returned, having fully accomplished the object of my errand. We first rode up to the site of Pike's cantonment (where the British forced a passage of the Saranac), crossing the river at the upper bridge, and traversing a rough road most of the way for about two miles. The cantonment was on a low, narrow plain at the foot of rapids in the river, which are seen in the little sketch on page 874.

We returned on the lake road by the United States military station, visiting the

remains of Forts Moreau, Brown, and Scott, and sketching the old store-houses on the margin of the lake, which were erected in 1813 for the use of the American troops. We rode back to the village, and, after sketching the stone mill⁴ and the United States Hotel,⁵ we crossed the Saranac, and made our way

along the lake shore road toward Cumberland Head. Soon after crossing Dead Creek

Bridge over the sluggish stream, and among sand dunes drifted by southerly winds from the bay shore, we passed the site of Macdonough's farmhouse,⁶ on a rise of ground at the left of the road, a mile and a half from the light-house. The place of the cellar was marked by a luxuriant growth of weeds and bushes. Near there we met a farmer on his way to Plattsburg, who, to our mutual surprise, proved to be Mr. J. J. Mosher, who was my school-master when I was a boy twelve years of age. It was an agreeable meeting. He turned back, accompanied us to various places of interest on the Head (where he has a farm), and en-

STORE-HOUSES.

GENERAL MOORE'S HOUSE, CUMBERLAND HEAD.

Residences of Mooers and Woolsey.

Remains of "Wilkinson's Folly."

Mr. Platt and his Reminiscences.

tertained us with an excellent dinner and pleasant intercourse with his family.

Taking the inner road to the light-house on the extreme point of the Head, we passed the pleasantly situated old mansion of General Mooers (page 882), where he lived many years, and where he died. It overlooks the bay and the lake. We visited and sketched the light-house, and from its lofty gallery obtained a fine panoramic view of the entire theatre of the naval battle near.¹ Passing along the lake side of the Head, in full view of Grand Island and the Green Mountains, we came, at the distance of a mile from the light-house, to the residence of General Woolsey, father

WOOLSEY HOUSE.

of the active commander on Lake Ontario. Near it was Colonel Durand's, the deputy collector (when this was the place of the Plattsburg port of entry), which was the custom-house; and between Woolsey's and the light-house is the dwelling of Mr. Mosher. It was a tavern during the war, and in front of it was the landing-place of the troops brought over by Captain Ferris. When the British galleys were escaping down the lake, and were passing this tavern, several men were sitting on its porch. One of them called out to the fugitives in derision, when a British marine fired a musket-ball at the group. It passed just over their heads, and through a door, which Mr. Mosher preserves as a memento of the incident.

About three fourths of a mile from the light-house, on the farm of J. T. Hagar, we saw the prominent remains of the ramparts and ditch of a large redoubt cast up by Hampton, and which received the name of "Wilkinson's Folly." It is about forty rods from the lake, on high ground, and on the shore in front of it was a water battery. Its ramparts were of earth and stone. From its top we had a fine view of the surrounding country, and we lingered some time in the shadow of a tree that overhung one of its bastions. The day was now far spent, and we turned back toward Plattsburg, where we arrived at dusk, well satisfied with our day's excursion.

On the following morning I visited the venerable Isaac C. Platt, then in his eightieth year, whose residence is on the Beekmantown road, not far from Halsey's Corners. He was living there at the time of the British invasion, and took his family over to Middlebury, in Vermont. On his return the skirmish had occurred at Halsey's Corners. He found his house in possession of the enemy, and used as a sort of hospital.² He asked and obtained from General Brisbane protection for himself and his property. That officer gave him a general parole of honor to go where he pleased. When the British fled they left about forty horses in his fields, and these he considered a fair equivalent for hay and other property which they had appropriated to their own use. The British behaved very honorably, he said, generally paying for whatever they procured from the inhabitants. During a delightful interview of an hour with the humorous octogenarian, he related many stirring incidents of the invasion, which limited space will not allow me to record. He still [1867] lives in the enjoyment of good health.

Leaving Mr. Platt's, we passed a huge old butternut-tree between his house and Halsey's Corners, its trunk terribly scarred by the passage of one of Leonard's cannon-balls completely through it. It stands as a memento of the affair at that point. We passed on to the burial-ground, and visited and sketched the freestone memorials of Downie and the slain, already mentioned; of Colonel Melancthon Smith; and of

The Grave of Miss Davidson.

A Shot in Macomb's Head-quarters.

Chauncey kept from active Service.

General Benjamin Mooers.¹ There, too, I found the grave of the wonderfully precocious child-poet, Lucretia Maria Davidson, who was the author of a volume entitled *Amir Khan, and other Poems*,² and yet she died before she was seventeen years of age. A neat white marble monument marks the resting-place of her remains, and bears those beautiful lines written by William Cullen Bryant on the occasion of her burial:

"In the cold moist earth we laid her when the forest cast its leaf,
And we wept that one so lovely should have a lot so brief;
Yet not unmeet it was that one, like that young friend of ours,
So gentle and so beautiful, should perish with the flowers."

In the course of the day I called on General A. C. Moore, whose fine mansion, not far from the old stone mill, was the head-quarters of General Macomb before the battle. In the hall, near the foot of the staircase, and protruding from the upper edge of the wainscoting, was a 24-pound iron ball, which British cannon hurled across the Saranac. It had come crashing through the house, and lodged there. With good taste and patriotic feeling, it had been left undisturbed. It was painted black and varnished, and on it, in white letters, were the words *September 11, 1814*.

BALL IN MOORE'S HOUSE, PLATTSBURG.

Toward evening of the same day I embarked at Plattsburg in a steamer for Whitehall, and on the following evening I was at my home on the Hudson.

With the flight of Prevost and his army from Lake Champlain ended all military movements of importance on the Northern frontier. Hostilities soon afterward ceased on the Niagara frontier, as we have observed; and during the entire season, Chauncey, one of the most vigilant and active of naval commanders, had been compelled by circumstances to remain almost inactive at Sackett's Harbor a greater part of the time. He was blockaded by a British squadron until early in June, when the completion of the armament of the *Superior* made Sir James Yeo prudently withdraw his blockading vessels. And when the *Mohawk*,³ which was launched⁴ in thirty-four working days after her keel was laid, was prepared for sea, and the movements on the Niagara frontier with which Chauncey was to co-operate had commenced, that commander was prostrated by severe illness at the Harbor. His re-enforcements came tardily, while the enemy was increasing his strength in vessels, arms, and men. It was the last of July before the squadron was ready for sea.

Meanwhile Chauncey had set in motion minor operations. Supplies for the British were continually ascending the St. Lawrence in small boats. He resolved to attempt the capture of some of them, and sent Lieutenant (late Rear Admiral) Francis H. Gregory,⁵ with Sailing-masters Vaughan and Dixon, in three gigs, for that pur-

¹ About a rod north of General Mooers's grave is that of Samuel Norcross, who, with two other unarmed citizens, met three British soldiers on the retreat on the morning of the 12th, and simultaneously sprang upon them and seized their guns. A desperate struggle ensued. His antagonist wrenched the gun from Norcross, and with it shot him, killing him almost instantly. This occurred not far from the place where his body was buried.

² This volume was published in 1829, and contained a biographical sketch of the author by Professor Samuel F. B. Morse. She was born in September, 1808; was educated at Mrs. Willard's seminary in Troy, and died in August, 1826. She was very beautiful.

³ Francis H. Gregory was born at Norwalk, Connecticut, on the 9th of October, 1789. He entered the merchant service in 1802, and the navy as a midshipman in 1809 in the *Revenge*, commanded by Lieutenant O. B. Perry. He was promoted to acting master in 1811, and in the spring of 1812 he was placed under Chauncey's command on Lake Ontario. In that service he performed many gallant exploits as acting lieutenant, for his skill and bravery were so conspicuous that he was employed in the most dangerous and difficult service. In August, 1814, he was captured and sent to England a prisoner of war, and was kept there until the close of the contest; not in close confinement, but on wide parole in Devonshire, where the "vivacious little Yankee" was a great favorite with the ladies, and graced many a festal occasion. In 1828 Lieutenant Gregory commanded the *Brandywine* when she conveyed Lafayette to this country; and in

Exploits of Lieutenant Gregory.

Its Composition.

pose at the middle of June. They lay in ambush among the Thousand Islands, below Alexandria Bay, on the 19th. They were discovered, and a British gun-boat sent to attack them. They did not wait for her approach, but boldly dashed upon and captured her. She was the *Black Snake*, Captain Landon, carrying an 18-pound carronade and eighteen men, chiefly Royal Marines. Gregory returned to the Harbor with his prisoners, but was compelled to destroy the *Black Snake* to prevent her recapture. For this gallant service the National Congress, thirty years
 *May 4, 1854. afterward,^a gave Gregory and his companions three thousand dollars.¹ Ten days afterward, Gregory and the same assistants started in two gigs for Nicholas Island, seven miles from Presque Isle, on the Canada coast, to intercept some transports expected to pass there for York and Fort George. They did not come; so, finding his presence was known to the British authorities, Gregory landed at Presque Isle, burned a schooner pierced

for fourteen guns and nearly ready to be launched, and a building containing her stores, crossed the lake, and reached Sackett's Harbor on the 6th of July^b * 1814. without the loss of a man.

Chauncey was carried on board the *Superior* in a convalescent state on the 31st of July, and on that day his squadron left the Harbor. It consisted of the flag-ship *Superior*, 62, Lieutenant Elton; *Pike*, 28, Captain Crane, Chauncey's second in command;² *Mohawk*, 42, Captain Jones; *Madison*, 24, Captain Trenchard; *Jefferson*, 22, Captain Ridgeley; *Jones*, 22, Captain Woolsey; *Sylph*, 14, Captain Elliott; *Oneida*, 16, Lieut. Commanding Brown; and the look-out boat *Lady of the Lake*. They appeared off the mouth of the Niagara River (then in possession of the British) on the 5th of August.^c Leaving the *Jefferson*, *Sylph*, and *Oneida* to blockade some British vessels in the

¹⁸⁵⁶ he commanded the 64-gun ship sent to the Greeks from New York. He was promoted to commander in 1828, and was in active service afloat until 1852, when he was placed in charge of the Boston Navy Yard. When the Rebellion broke out he was anxious to enter into active service, but he was more usefully employed as general superintendent of the construction of the iron-clad or armored vessels engaged in the Civil War. He was promoted to the rank of rear admiral in 1862, and died in Brooklyn, October 4, 1866, at the age of seventy-seven years. Few men hold a more worthy place on the records of our navy.

^a Hough's *History of Jefferson County*, page 518.

² Mr. Crane was one of Chauncey's most intimate friends and active commanders. He was born in Elizabethtown, New Jersey, on the 1st of February, 1784, and was a son of General William Crane, who was one of Montgomery's army, and made a prisoner in Quebec. He entered the navy in 1799 as midshipman, and was in active service in the Mediter-

Americans prepare to match her.

river, Chauncey crossed the lake with the remainder of the squadron, looked into York, and then sailed for Kingston,² where, with four of his vessels, he blockaded the squadron of Sir James Yeo for six weeks. He vainly tried to draw him out for combat;¹ and in the mean time, as we have seen, he conveyed a part of Izard's troops to the Genesee River.² During this blockade, Lieutenant Gregory, while reconnoitring, was captured.

At the close of September it was ascertained that the *St. Lawrence*, pierced for one hundred and twelve guns, which had been all the season in preparation at Kingston, was ready for sea. Chauncey prudently raised the blockade, retired to Sackett's Harbor, and prepared for attack. On the 15th of October the *St. Lawrence* sailed, bearing Sir James Yeo and more than a thousand men.³ She was accompanied by four ships, two brigs, and a schooner, and from that time the baronet, with his great ship, was lord of the lake. The Americans resolved to match the *St. Lawrence* before the opening of the lake the following spring, and the keels of two first-class frigates were speedily laid—one at Sackett's Harbor, to be called the *New Orleans*, and another at Storrs's Harbor, farther up the bay, to be called the *Chippewa*. Of the former we have already taken notice on page 616. These vessels were partly finished, when the proclamation of peace caused work upon them to cease, as well as all farther hostilities in that quarter.

Yeo did not venture to attack Chauncey⁴ in Sackett's Harbor; but so imminent

CRANE'S MONUMENT.

ranear early in the present century. He was promoted to lieutenant in 1803, and rose to the rank of captain in 1804. He was in command of the *Nautilus* when she was captured (see page 486), and after his exchange was in continual service on Lake Ontario. He was in the service of his government, afloat and ashore, until his death, when he was chief of the Bureau of Ordnance and Hydrography.

Commodore Crane was buried with naval honors in the Congressional Burying-ground in Washington City, and over his remains is a fine white marble monument with the following inscriptions:

West Side.—"Sacred to the memory of WILLIAM MONTGOMERY CRANE, a captain in the navy, who was born in Elizabethtown, New Jersey, on the 1st of February, 1784, and died at Washington on the 15th of March, 1846." *South Side.*—"Endowed with uncommon judgment, skill, and ability, he was conspicuous amongst the most distinguished of his professional compeers." *East Side.*—"The many qualities which he on all occasions exhibited endeared him to his associates, and forty-seven years of arduous service proved his devotion to his country." *North Side.*—"In the war with France, with the Barbary Powers, and with England, he was actively engaged, and with undiminished reputation."

¹ The fact that Sir James Yeo, after boasting of his desire to meet Chauncey's fleet, and his look-outs often feigning a design to encounter the *Lady of the Lake*, Chauncey's gallant little scout, caused many squibs. Among others was a short poem entitled "*The Courteous Knight, or the Flying Gallant.*" After stating that a British knight (Sir James) of high reputation had jilted an American lady who had already made some noise in the world (*Lady of the Lake*), the poet said:

"He fled like a truant; the lady in vain
Her ogling and glances employed:
She aimed at his heart, and she aimed at his brain,
And she vowed from pursuing she ne'er would refrain—
The knight was most sadly annoyed.
At length from love's fervor the recreant got clear,
And may have for a season some rest;
But if this fair lady he ever comes near,
For breaking his promise he'll pay very dear,
The price gallant Chauncey knows best."

See epigraph at the head of Chapter XXIX.

² See page 584.

³ Soon after the *St. Lawrence* sailed, Mr. M'Gowan, a midshipman, accompanied by William Johnston, the "Hero of the Thousand Islands" (see page 662), went with a torpedo to Kingston Harbor to blow her up. Her departure foiled the enterprise. See Cooper's *Naval History*, ii., 423.

⁴ Isaac Chauncey was a native of Fairfield County, Connecticut, and was born in 1773. He went to sea early in life from the port of New York, and was master of a vessel at the age of nineteen years. He made several successful voyages to the East Indies in vessels belonging to John Jacob Astor, and in 1798 he entered the navy of the United States with a Lieutenant's commission under Truxtun. He behaved gallantly in the Mediterranean, and for his good conduct there Congress presented him with an elegant sword. He was promoted to commandant in 1804, and in 1806 he received the commission of captain. He was appointed to the command of the embryo navy on the Lakes at the beginning of the War of 1812, and by his gallant and judicious conduct there he won imperishable fame. He commanded a squadron in the Mediterranean after the war. He returned to the United States in 1818, and was soon afterward called to the post of navy commissioner at Washington City. He was afterward commander of the naval station at Brooklyn, but was appointed navy commissioner again in 1833, which office he held until his death, when he was president

militia were disbanded, and the war was closed on the Canada frontier.

seemed the danger, when it was known that the *St. Lawrence* was ready for sea, that a request was made by the commanding officer at that post, of Governor Tompkins, to send thither some militia re-enforcements, the entire military strength which had been left there by Izard being some artillery under Lieutenant Colonel Mitchell, and two battalions of infantry, commanded respectively by Majors Malcolm and Brevoort. The governor at once sent his aid, Colonel Washington Irving,¹ with orders for the commandant at the Harbor to make such requisition on the militia as he should think best. The result was that General Collins called out the entire body of the militia of Herkimer, Oneida, Lewis, and Jefferson counties, and at the close of October the military force at Sackett's Harbor was about six thousand. When the lake closed, and all apprehensions of an attack by the British subsided, the

of the board. He died at Washington City on the 27th of January, 1840, at the age of about sixty-five years. He was interred with appropriate honors in the Congressional Burying-ground, upon the slope overlooking the East Branch of the Potomac, and over his grave stands a superb monument made of white clouded marble. On the pedestal, in relief, is the name CHAUNCEY. On another part are the names of several of his family. On the east side is the following inscription: "ISAAC CHAUNCEY, United States Navy, died in this city January 27th, 1840, while President of the Board of Navy Commissioners, aged sixty-seven years." The monument is about eighteen feet in height. Upon the obelisk is a wreath of laurel and a sword, cut in relief.

¹ This was the beloved Washington Irving, one of the purest of the planetary lights of American literature. Mr. Irving was at that time editor of the *Analectic Magazine*, for which he had furnished some brilliant biographies of the heroes of the war. Naturally peaceful and retiring, he felt no special ambition to become a conspicuous actor; yet his soul was full of patriotic flame. It was increased intensely by a circumstance which occurred on a Hudson River steam-boat late in August, 1814, when the news of the capture and destruction of the national capital was filling all loyal men with sadness. His biographer thus relates the story: "It was night, and the passengers had taken themselves to their settees to rest, when a person came on board at Poughkeepsie with the news of the inglorious triumph, and proceeded, in the darkness of the cabin, to relate the particulars: the destruction of the President's House, the Treasury, War, and Navy Offices, the Capitol, the Depository of the National Library and Public Records. There was a momentary pause after the speaker had ceased, when some paltry spirit lifted his head from a settee, and, in a tone of complacent disdain, 'wondered what Jimmy Madison would say now?' 'Sir,' said Mr. Irving, glad of an escape to his swelling indignation, 'do you seize on such a disaster only for a sneer? Let me tell you, sir, it is not now a question about Jimmy Madison or Johnny Armstrong. The pride and honor of the nation are wounded; the country is insulted and disgraced by this barbarous success, and every loyal citizen would feel the ignominy, and be earnest to avenge it.' 'I could not see the fellow,' said Mr. Irving, but I let fly at him in the dark.'—*The Life and Letters of Washington Irving*, by his nephew, Pierre M. Irving, i, 311. The fellow was cowed into silence. He was a prototype of a small class which obtained the name of *Copperheads* during the late Civil War, to whom the loyal men of the nation administered a similar rebuke.

Mr. Irving's feelings were so much stirred by the incident that, on his arrival in New York, he offered his services to Governor Tompkins as his aid. They were accepted, and he became his excellency's aid and secretary, with the rank of colonel. His name first appears attached to a general order dated September 2, 1814. He remained on the governor's staff until the close of the war, a few months afterward.

CHAUNCEY'S MONUMENT.

CHAPTER XXXVIII.

“Then, warriors on shore, be brave,
Your wives and homes defend;
Those precious bonus be true to save,
And hearts and sinews bend.
Oh, think upon your fathers' fame,
For glory marked the way;
And this foe aimed the blow,
But victory crowned the day.
Then emulate the deeds of yore,
Let victory crown the day.”—OLD SONG.

NEW ENGLAND experienced very little actual war within its borders, yet it felt its pressure heavily in the paralysis of its peculiar industries, the continual drain upon its wealth of men and money, and the wasting excitement caused by constantly impending menaces and a sense of insecurity. From the spring of 1813 until the close of the contest, British squadrons were hovering along its coasts, and, in connection with the Embargo Acts, were double-barring its sea-ports against commerce, and threatening the destruction of its maritime cities and villages.

The year 1814 was a specially trying one for New England. The British government, as we have observed, had determined and prepared, at the beginning of that year, to make the campaign a vigorous, sharp, and decisive one on land and sea. Hitherto the more northerly coasts of the United States had been very little molested by the enemy excepting by threatenings, for Commodore Hardy's blockade of New London and its vicinity had been so mild that it was practically little more than a jailor's custody of two prisoners—Decatur's vessels—above that town. Now a system of petty invasions commenced, and were followed by more serious operations.

The blockade of New London was kept up in 1814, and as early as April a party of British seamen and marines, in several small vessels (each armed with a 9 or 12 pounder), under the command of Lieutenant Coote, of the Royal Navy, went up the Connecticut River in the evening, and at four o'clock the next morning^a landed on Pautopaug Point, seven miles from the Sound, spiked the heavy guns found there, and destroyed twenty-two vessels, valued at one hundred and sixty thousand dollars. At ten o'clock they went down the river two or three miles to Brockway's Ferry, where they indulged in similar incendiary sport. In the mean time a body of militia, with some marines and sailors from Decatur's vessels in the Thames, under Captain Jones and Lieutenant Biddle, gathered on the shore and endeavored to cut off their retreat, but, under cover of darkness that night, and with the silence of muffled oars, they escaped.

At about this time Commodore Lewis made his appearance in the Sound with thirteen American gun-boats for the protection of the coast-trade against the *Liverpool Packet* privateer, which was cruising very mischievously all along the Connecticut shore. She fled eastward at Lewis's approach, and when he reached Saybrook he found more than fifty vessels there, afraid to weigh anchor for fear of this corsair. Lewis told them to follow his flotilla, and he would endeavor to convoy them safely to New London. The entire fleet sailed on the 25th,^b and during the afternoon Lewis had a sharp engagement with a British frigate, sloop, and tender.

^a April, 1814.

Lewis attacks the Blockaders. Amphibious Warfare on the New England Coast. New Bedford and Fair Haven.

The merchant fleet entered the Thames in safety, and Lewis, inspired by his success, determined to attack the blockading squadron with his gun-boats. He began by hurling hot shot, which set the British vessels on fire. He soon disabled the sloop, which, with the frigate, had attacked him while convoying the coasting vessels. He so maimed the frigate that she was on the point of surfendering, when night set in and the fire of the gun-boats ceased. It was excessively dark, and at dawn Lewis saw the enemy in the far distance towing away the wounded vessel. He was about to pursue, when several other frigates made their appearance, and he prudently abandoned the design.

Early in June the enemy commenced depredations on the coasts of Massachusetts. On the 13th a detachment of two hundred men, in six barges, were sent from the *Superb* and *Nimrod*, then lying in Buzzard's Bay, to destroy the shipping at Wareham, a village at the head of the bay. The elevated rocky neck at the mouth of the Narrows concealed the approach of the barges, and the inhabitants were taken by surprise. The enemy fired a ship, brig, and several schooners and sloops. The ship was partially saved, and so also was a cotton factory, which was set on fire by a Congreve rocket. The estimated value of the loss was \$40,000. Quite a number of the leading inhabitants were seized and carried away as hostages, so as to prevent the militia from firing on the vessels. These were released when the ships arrived at their anchorage. Similar destruction was inflicted at Scituate and smaller places. Sometimes the militia would meet the marauders and drive them away, but in most cases the blow would be struck before a foil could be raised to avert it.

On the 16th of June the *Bulwark*, 74, Captain Milne, carrying about ninety guns, anchored off the mouth of Saco River, in Maine, and her commander sent one hundred and fifty armed men, in five large boats, to destroy property on the Neck belonging to Captain Thomas Cutts. That gentleman met them with a white flag, and proposed a money commutation. The matter was referred to Captain Milne, who soon afterward came ashore in his gig. He assured Cutts that he had positive orders to destroy, and could not spare. The torch was then applied, and two vessels (one finished, the other on the stocks), valued at \$15,000, were destroyed, and another one taken away, which the owner afterward ransomed for \$6000. They also plundered Mr. Cutts's store of goods to the amount of \$2000.¹

At about the same time the *Nimrod* and *La Hogue* were blockading New Bedford and Fair Haven, little villages on each bank of the Acushnet River, an inlet from Buzzard's Bay. They lay in Tarpaulin Cove, watching vigilantly the privateer *Yankee*, belonging to De Wolfe, of Bristol, Rhode Island, the great slave-merchant. This vessel, and all others of her class, were unwelcome to the New Bedford people, who were Federalists, but right welcome to those of Fair Haven, who were Democrats—a difference of opinion which led to the separation of the two towns. The Fair Haven people cherished all privateers and other enemies of the British, and had, moreover, a fort on their Point, built in the time of the threatened war with France in 1798 on the site of a battery of the Revolution. It now had about a dozen iron cannon on its ramparts, and was guarded by a small garrison under Lieutenant Selleck Osborne, the poet.² Of course, the British blockaders did not like the Fair Haven folk, and one dark night they planned an attack on the fort and the destruction of the village. Every thing was ready long before daylight, and the *Nimrod* was to be the executor of the plan. Just then the tin horn of a solitary mail-carrier was heard, and the clatter of his horse's feet as he galloped across the Acushnet bridge and causeway sound-

¹ History of Saco and Biddeford, by George Folsom, page 309.

² Selleck Osborne was a native of Connecticut, and a printer by trade. He printed a paper in Litchfield about the year 1806. He was afterward an editor in Wilmington, Delaware. He was commissioned first lieutenant of light dragoons in July, 1808, and made captain in 1811. His company was disbanded in May, 1814, and he was acting as lieutenant in garrison at Fair Haven. He went to Lake Champlain, and was engaged in the battle of Plattsburg. In 1823 he published a volume of poems. He died in Philadelphia on the 1st of October, 1826.

Sea-port Towns of New England blockaded. Appearance of Hardy's Squadron. The British capture Eastport.

ed loudly upon the night air. The horn was mistaken for the braying of a trumpet sounding an advance, and the rattle of hoofs was interpreted as the forerunner of the approach of a large American force. The *Nimrod* hastened to withdraw to a safe distance from the fort, and New Bedford and Fair Haven were spared the notoriety of a battle. The fort and its iron cannon yet (1867) remain, monuments of the wisdom of ample preparation for evil.

Other places were menaced, and some were attacked. Formidable squadrons were kept before New York, New London, and Boston. Eastport and Castine fell into the hands of the British, and Stonington became the theatre of a most distressing bombardment. All along the eastern coast, from the Connecticut to the St. Croix, the enemy carried on this kind of warfare, in most cases marauding on private property in a manner which degraded the actors in the eyes of all honorable men to the level of mere freebooters. The more respectable portion of British writers condemned the policy, for it was damaging to the British interest. Hitherto lukewarm New England now became intensely heated with indignation against the common enemy, and burned with a war-fever which made the peace party in that region exceedingly circumspect.

A more serious invasion of the New England coast now occurred. Early in July ^{July 5, 1814.} Sir Thomas M. Hardy sailed secretly from Halifax^a with a considerable force for land and sea service. His squadron consisted of the *Ramillies*, 74, his flag-ship; the sloop *Martin*, brig *Borer*, the *Bream*, the bomb-ship *Terror*, and several transports with troops, under Colonel Thomas Pilkington. The squadron entered Passamaquoddy Bay on the 11th, and anchored off Fort Sullivan at Eastport,¹ which was then in command of Major Perley Putnam, of Salem,² with a garrison of fifty men and six pieces of artillery. The baronet demanded an instant surrender of the post, giving the commander only five minutes for consideration. Putnam promptly refused compliance, but, on account of the vehement importunities of the alarmed inhabitants, who were indisposed to resist, he yielded his own judgment, and gave up the post on condition that while the British should take possession of all public property, private property should be respected. When this agreement was signed, a thousand armed men, with women and children, a battalion of artillery, and fifty or sixty pieces of cannon, were landed on the main, and formal possession was taken of the fort, the town of Eastport, and all the islands and villages in and around Passamaquoddy Bay. Declaration was made that these were in permanent possession of the British,³ and the inhabitants were called upon to take an oath of allegiance within seven days, or leave the territory.⁴ Two thirds of them complied. The custom-house was opened under British officials;⁵ trade was resumed; the fortifications around Eastport were completed, and sixty pieces of cannon were mounted; and an arsenal was established. Several vessels, and goods valued at three hundred thousand dollars, accumulated there to be smuggled into the United States, were made prizes of by the British. The enemy held quiet possession of that region until the close of the war.

Having established British rule at Eastport, and left eight hundred troops to hold

¹ Eastport is on Moose Island, in Passamaquoddy Bay, which the British claimed as belonging to New Brunswick under the treaty of 1783.

² After the declaration of war in June, 1812, the United States kept a garrison at Fort Sullivan. At first there were two militia companies, from General Blake's brigade on the Penobscot, under the command of Major Ulmer. The United States afterward took possession, and substituted regular troops for militia. In the autumn of 1813 Major Putnam was appointed to the command there.

³ It was declared that "the object of the British government was to obtain possession of the islands of Passamaquoddy Bay, in consequence of their being considered within their boundary-line."—Letter from Lieutenant Colonel J. Fitzherbert to General Brewer, of the Washington County Militia, July 12, 1814.

⁴ A "royal proclamation" to this effect was made by Commodore Hardy on the 14th, in which notice was given that "all persons at present on the island are to appear before us on Saturday next, at ten o'clock in the forenoon, on the ground near the school-house [at Eastport], to declare their intentions," etc.

⁵ They took all the public property from the custom-house, and vainly endeavored to compel the collector to sign unfinished treasury notes of the value of \$9000. He refused, saying "hanging will be no compulsion."

The British Squadron off Portsmouth.

Vigilance of General Montgomery.

Attack on Boston expected.

the conquered region, Hardy sailed westward with his squadron, spreading alarm along the coast. Preparations for his reception were made every where. Vigilant eyes were watching, and strong arms were waiting for the appearance of the foe at Portsmouth, where little Fort Sumner was manned. The energetic General Montgomery,¹ of New Hampshire, ordered every tenth man of his brigade to repair to Portsmouth for its defense, and there he commanded in person. Little Fort Lilly, at Gloucester, was armed. Fort Pickering, near Salem, and Fort Sewall, at Marblehead, were strengthened and garrisoned. Fort Warren, on Governor's Island, and Fort Independence, on Castle Island, in Boston Harbor, were put in readiness for action, and well garrisoned by Massachusetts militia.

An attack upon the important city of Boston was confidently expected after intelligence was received of the bombardment of

John Montgomery

FORT PICKERING.²

Stonington,³ which we shall presently consider. It was the capital of New England, and the moral effect of its capture or destruction would be great. It was a place for the construction of American war-vessels, which the enemy feared more than armies. On this account its destruction was desirable. It was also a wealthy town, and offered a rich harvest for plunderers. It was well known, too, that it was almost defenseless, for it was not until the descent of the enemy upon Eastport, and his hostile operations elsewhere, had aroused the authorities of Massa-

* August 9, 1814.

¹ John Montgomery was born in Massachusetts in 1760, and was a relative of General Montgomery who was killed at Quebec. He became a spirited and successful merchant, and when the War of 1812 broke out he had just sent a heavy consignment of goods abroad, which were totally lost to him. At that time he was a brigadier general of New Hampshire militia. He was a Federalist in politics, but when his country was in danger he gave the government his support, and when Portsmouth was threatened by the British squadron, he took command in person at that place, and there he remained until the danger disappeared.

General Montgomery married a daughter of General Henry Knox, of the Revolution, by whom he had six children, all daughters. He died at Haverhill, New Hampshire, on the 29th of February, 1825, at the age of fifty-six years. I am indebted to his daughter, Mrs. Samuel Bachelder, of Cambridge, for the above portrait.

² This view is from the slope back of the fort, looking seaward. On the extreme left, in the distance, is seen Beverly. A little to the right, Misery Island. Still farther toward the right, Baker's Island light-house. On the extreme right is Marblehead Point.

Alarm in Boston.

Preparations for the Defense of the City.

Citizens at Work on Fortifications.

chusetts from their dreams of peace that any important preparations were made to repel an attack.¹ The people had seen the blockading squadrons from the tops of their houses, and trembled for the safety of the town, but it was not until the close of August that any energetic measures were taken by the leading men of the city toward providing for its defense. Then^a a public meeting was called to consider the matter; and a committee, consisting of Harrison Gray Otis, James Lloyd, Thomas H. Perkins, and others, were appointed to wait on the governor, and present to him an address on the defenseless state of the city. They assured him that the people were ready to co-operate in any way for the security of the capital and the state.

Governor Strong, whose opposition to the war was intense, listened to this appeal, and at once instituted measures for the defense of the whole line of the coast of Massachusetts and of the District of Maine, its dependent. The high ground on Noddle's Island (now East Boston), known as Camp Hill,² was chosen for the site of a new and heavy fort, and it was resolved to place its erection under the supervision of Laommi Baldwin, a graduate of Harvard College, as engineer. He issued his first official notice on the 10th of September, when he asked for tools and volunteers to work on the fortification. The response was patriotic. Large numbers of the inhabitants might be seen, day after day, toiling like common laborers with pickaxe, spade, shovel, and barrow. Every class of citizens was represented. "I remember," says an eye-witness, "the venerable Rev. Dr. Lathrop, with the deacons and elders of his church, each shouldering his shovel and doing yeoman's service in digging, shoveling, and carrying sods in wheelbarrows."³ The volunteers were soon numbered by hundreds. A regular system of employment was adopted, confusion was avoided, and the work went on rapidly.⁴ The fort was completed at the close of October. On the 26th of that month it was formally named, in honor of Governor Strong, Fort Strong, Lieutenant Governor Phillips officiating as the chief actor in the ceremonies. The flag was hoisted amid the roar of artillery from Noddle's Island, North Battery, and India Wharf, and on the 29th the Selectmen of Boston announced that "the important post of Fort Strong was completed," to the great joy of the people.⁵ Happily, it was never needed.⁶ A battery of heavy guns was placed on Dorchester Heights (South Boston), and other defenses were prepared on prominent points at Roxbury and Cambridge.

When Commodore Hardy left Eastport he rejoined the blockading squadron off New London. He was not long inactive. He was charged with a part of the duty enjoined in the terrible order of Admiral Cochrane, *to destroy the coast towns and ravage the country*, and on the 9th of August^b he appeared off the bor-

¹ The demonstrations near Saybrook and in Buzzard's Bay had caused some alarm in Boston early in the summer; and on the 16th of June the governor and council appointed the Honorable David Cobb, John Brooks, and Timothy Pickering commissioners for the defense of the sea-coast.

² On the crown of present Webster Street, East Boston, near Belmont Square. The fort was between the square and brow of the hill, near the dwelling of Mr. Lamson in 1860.

³ Funeral sermon at the burial of Dr. Lathrop, by his successor, Reverend Dr. Parkman.

⁴ A superintendent was appointed, who entered in a register the names of the inhabitants who offered their services. The laborers were classified, and particular days assigned for particular classes. The newspapers of that period were filled with accounts of the patriotic ardor of the people of all classes. Notices like the following appeared: "Twenty-five mechanics from each ward in this town will labor on the fortifications on Noddle's Island. This day (September 14) to embark from the ferry ways at half past six o'clock."—*Sentinel*, September 14. "Dealers in dry goods and in hardware to meet the next Thursday (20th) to do a day's work on Fort Strong," the name which it had already been determined to give the new fortification. Other industrial pursuits, trades, and professions, as well as military and civil organizations, were continually represented on the work. Citizens also came from the interior. The *Boston Gazette* of October 3 has the following paragraph: "Fort Strong progresses rapidly. On Saturday the citizens of Concord and Lincoln, to the number of two hundred, performed labor on it; the punctuality of the patriotic husbandmen deserved the highest praise of their fellow-citizens of the metropolis. The volunteers from wards 1, 3, and 4, together with others, amounted yesterday to five hundred."

⁵ Sumner's *History of East Boston*, page 418.

⁶ Governor Strong had called an extraordinary session of the Legislature on the 5th of October, and in his short message to that body, after giving the General Government a blow, he said: "But, though we may be convinced that the war in its commencement was unnecessary and unjust," etc., "and though, in a war thus commenced, we may have declined to afford our voluntary aid to offensive measures, yet I presume there will be no doubts of our rights to defend our dwellings and possessions against any hostile attack by which their destruction is menaced."

The British Squadron off Stonington.

Surrender of the Town demanded and refused.

It is bombarded.

ough of Stonington, in Connecticut, for that purpose, with the *Ramillies*, 74, *Pactolus*, 44, bomb-ship *Terror*, the brig *Dispatch*, 22, and barges and launches. He anchored his little squadron within two miles of the town at four o'clock in the afternoon, a mile and a half being the nearest point to the village which the depth of water would allow the flag-ship to approach. He then sent a flag of truce ashore, bearing to the selectmen of the town the following message, dated half past five o'clock P.M.: "Not wishing to destroy the unoffending inhabitants residing in the town of Stonington, one hour is granted them from the receipt of this to remove out of the town."¹ "Will a flag be received from us in return?" inquired the magistrates of the bearer of Hardy's letter. "No arrangements can be made," was the reply; and in answer to a question whether it was the commodore's intention to destroy the town, they were assured that it was, and that it would be done effectually. Satisfied that no accommodation could be effected, the magistrates returned the following answer: "We shall defend the place to the last extremity; should it be destroyed, we will perish in its ruins!"

The inhabitants were now in a state of great consternation. The sick and infirm, the women and children—all who were incapable of bearing arms, left the village, and the most valuable articles were immediately removed or concealed. A few militia under Lieutenant Hough were stationed on the point of the narrow peninsula on which Stonington stands, to watch the enemy and give notice of his nearer approach; a precaution adopted none too soon, for toward sunset they reported the *Terror* moving nearer the town by warping, accompanied by barges and launches each carrying a carronade. At eight o'clock the bomb-ship commenced throwing shell from a 13 and a 15 inch mortar, and the launches hurled rockets. This assault, grand in appearance but terrible in fact, was kept up until midnight, when it ceased, and it was ascertained that no life had been lost, and no serious damage inflicted on the shore.

In the mean time an express had been sent to General Cushing, the United States commander of the district, who regarded the movement as a feint to cover a real attack on Fort Griswold, at Groton, and an attempt to seize Decatur's frigates in the Thames above New London. He made corresponding arrangements with General Williams, the commander of the militia of the district. A regiment was ordered to Stonington; another to the head of the Mystic, to oppose the landing of the enemy there; a company of artillery and one of infantry were sent to a point on the Thames above the frigates; and another company of artillery and a regiment of infantry were ordered to re-enforce the garrison of Fort Trumbull, for the protection of New London. These prompt dispositions of troops disconcerted the enemy's movements toward the Thames, if he ever had a design of making any.

During the bombardment on the evening of the 9th, some bold spirits at Stonington took measures for opposing the landing of the enemy. The only ordnance in the place consisted of two 18, one 6, and one 4 pound cannon. They dragged the 6 and one 18 pounder down to the extreme point of the peninsula, cast up some breastworks, and placed them in battery there. The other 18-pounder was left in a slight battery on the southwest point, near where the present breakwater leaves the shore. By the streaming light of the rockets they watched the approach of the enemy, reserving their fire until the barges and a launch came in a line near the southeast point of the peninsula, when they opened upon them with serious effect. The guns, loaded with solid balls, were double shotted, and these so shattered the enemy's vessels that the little flotilla retreated in confusion toward the larger warriors. From midnight until dawn quiet prevailed, and during that time considerable numbers of militia and volunteers assembled in the neighborhood.

At daylight on the morning of the 10th the frigate *Pactolus* and brig *Dispatch* were seen making their way up nearer the town, and at the same time the barges and

¹ This was received by two magistrates, and Lieutenant Hough of the militia.

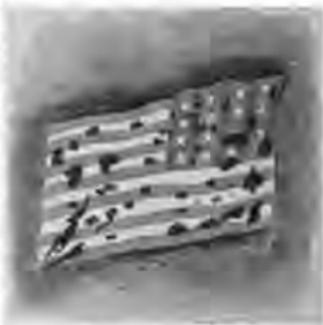

a launch had approached the eastern side of the peninsula, out of reach of the battery, and commenced throwing rockets. A number of volunteers, with muskets and the 4-pounder, immediately crossed the peninsula to oppose an expected landing of the enemy, but they could effect little. The *Dispatch* came beating up, the *Terror* hurled her shells, and the rocketeers of the barges were industrious. The *Pactolus* grounded too far distant to hurt or to be hurt, and she was not engaged in the fight that ensued. So severe was the bombardment of the *Terror* that the militia and volunteers who had assembled dared not enter the town. Most of the missiles went over the borough, but some of them went crashing through the village. One of them, called a carcass,¹ unexploded, may still (1867) be seen on a granite post on the corner of Main and Harmony Streets, in Stonington. It weighs two hundred and fifteen pounds.²

CARCASS.

At about six o'clock in the morning some bold volunteers came over from Mystic, among whom was the now (1867) venerable Captain Jeremiah Holmes, who had been a prisoner in a British war-ship some years before, and had learned the art of gunnery well. He and his companions made their way to the battery on the point, when Holmes took charge of the old 18-pounder. At that moment the *Dispatch* was making her last tack preparatory to anchoring. Holmes sighted the gun, which was double-shot with solid round balls, and at a favorable moment gave the word to fire. Both shots struck the hull of the brig. She at once cast anchor, with springs on her cable, and opened fire with 24-pound shot. The *Terror* sent shells in quick succession, while Holmes and his companions kept the old iron cannon busy. The fight was now fairly opened, and it continued briskly for about an hour, when Holmes's ammunition gave out, and the borough was searched in vain for more. At eight o'clock he ceased firing; and to prevent the great gun, which they could not drag away, being turned upon the town by the enemy, he had it spiked.

Stonington was now wholly defenseless, for the militia were at a respectful distance from danger. It was at the mercy of the invaders, and a timid citizen, who was at the battery, proposed a formal surrender by lowering the color that was floating over their heads. "No!" shouted Captain Holmes, indignantly, "that flag shall never come down while I am alive!" And it did not, in submission to the foe. When the wind died away, and it hung drooping by the side of the staff, the brave captain held out the flag on the point of a bayonet that the British might see it, and while in that position several shots passed through it. To prevent its being struck by some coward, Holmes held a companion (J. Dean Gallup) upon his shoulders while the latter nailed it to the staff. It was completely riddled by the British balls fired at the battery. I saw it in Stonington in the autumn of 1860, and the above engraving is a correct sketch of its appearance.

STONINGTON FLAG.

The old cannon was not long silent. Six kegs of powder, taken from the privateer *Halka*, and belonging to Thomas Swan, had been concealed by sea-weed behind a

¹ These carcasses were generally made of iron hoops, canvas, and cord, of oblong shape, and filled with combustibles for burning towns and ships. This one is of cast-iron, and was one of the missiles filled with fetid substances, and called "stink-pots."

² Their weight varied from sixteen to two hundred and sixteen pounds. One of the carcasses was set on fire, and burned with a flame ten feet in height and emitting a horrible stench. Some of the rockets were sharp-pointed, others not, and all were made of thick sheet-iron, with a fuse. The rocket (which is still in use in modified form) contains in its cylindrical case a composition of nitre, charcoal, and sulphur, proportioned so as to burn slower than gunpowder. The head is either a solid shot, shell, or spherical case-shot. It has a guide-stick attached, like the common rocket in pyrotechnic displays.

Captain Holmes reopens fire on the British.	A Deputation sent to Hardy.	The Result.	Parting Shots.
---	-----------------------------	-------------	----------------

rock. Their hiding-place was revealed by a lad, and at about nine o'clock the powder was placed in care of Captain Holmes. The cannon was dragged by oxen to the blacksmith-shop of Mr. Cobb, the spiking taken out, and then it was drawn back again to the little redoubt and placed in position. To the astonishment of the British, it reopened fire vigorously. The gun was always double-shotted, and so telling were its missiles that by noon the *Dispatch* was so much injured that she slipped her cables and hauled off to a place of safety. The *Terror* kept throwing shells until night, but she was out of reach of the little battery.

During the day quite a number of militia assembled at Stonington, and General Isham took chief command. Order was soon restored, and many of the inhabitants, somewhat reassured, came back to their homes. During the afternoon, a deputation, consisting of Colonel Williams and William Lord, went with a flag to the *Ramillies* as bearers of a note from the authorities of the borough (signed Amos Denison, burgess, and William Lord, magistrate), in which Hardy was informed that all unoffending inhabitants had left the village, and asked what was to be the fate of the place. They gave him assurances that no torpedoes had been fitted out from that port, and that none should be in the future; and he agreed to cease hostilities and spare the town on condition that they should send on board the flag-ship, by eight o'clock the next morning, Mrs. Stewart, a resident of New London, and wife of James Stewart, the late British consul at that place, who was then in the squadron. The deputation returned, and the *Ramillies* and *Pactolus* took station within cannon-shot of the village to await an answer, Hardy having threatened, in the event of noncompliance with his demand, to lay the village in ruins.

At eight o'clock on the morning of the 11th, the authorities, under the direction of General Isham, sent a message to Commodore Hardy,¹ saying (what he already knew) that the borough of Stonington had no power to comply with the requisition. "I will wait till twelve o'clock to-day," said Hardy, "and if the lady shall not be on board my ship at that hour I shall renew the assault on the town."

At three o'clock the *Terror* resumed the bombardment, and threw shells until evening. A sufficient military force had now arrived to prevent the landing of the enemy, but they could do his shipping no harm.

The night of the 11th was an anxious one for the inhabitants of Stonington. There was an ominous quietude on the water. It was broken at sunrise,^a when the *Terror* opened her mortars again. The *Ramillies* and *Pactolus* warped up near the town, and at eight o'clock opened fire. At this time an order was given by General Isham for the cannon on the Point to be removed to the north end of the town, where it was supposed the enemy would attempt to land. About twenty of the Norwich artillery, under Lieutenant Lathrop, volunteered to perform that perilous service. They did so without the slightest accident.

In the mean time the *Ramillies* and *Pactolus* had given three tremendous broadsides with spiteful vigor, which proved to be a parting salute, and quite harmless. They then withdrew, but the *Terror* kept up a bombardment until past noon. At four o'clock the assailants all withdrew, and the little squadron anchored far away toward Fisher's Island.²

During this whole series of assaults not a single life was lost. One person was mortally wounded,³ and five or six slightly. Among the latter was Lieutenant

¹ It was signed Isaac Williams, William Lord, Alexander G. Smith, magistrates; John Smith, ward; George Hubbard, Amos Denison, burgesses.

² Perkins's *History, etc., of the last War*; Reverend Frederick Denison's paper on the *Bombardment of Stonington*, in *The Mystic Pioneer*; Oral statements to me by Captain Jeremiah Holmes; Report of General Cushing.

³ This was Frederick Denison, from Mystic Bridge, a highly-respected young man, nineteen years of age, who was in the battery with Captain Holmes. While outside of the battery relieving the match-rope with which to fire the old cannon, he was struck by a ball from the *Dispatch*, which shattered his knee. He lingered in pain many weeks, and then died. Over his grave was placed a stone with the following inscription: "If thy country's freedom is dear to thee, contemplate here congenial virtue. His life was short, but its sacrifice deserves a grateful recollection. His

Effects of the Bombardment at Stonington. The Numbers engaged in the Affair. The Impotency of the Attack.

THE COBB HOUSE.

Hough. About forty buildings were more or less injured, and two or three were nearly ruined. The rockets and shells set several of them on fire, but the flames were extinguished. Among the four houses then on the Point, only one remained unaltered when I visited the spot in 1860. This was known as the "Cobb House." It was ancient in form, covered on the sides with shingles instead of clap-boards, and presenting many a scar of wounds received during the bombardment. It stood on Water Street, not far from the site of the battery, and was owned in 1814 by Elkanah Cobb. Of my visit at Stonington and in its vicinity in the autumn of 1860 I shall write presently.

The repulse of the British at Stonington was one of the most gallant affairs of the war, and the spirit there shown by the few who conducted the defense caused Hardy and his commanders to avoid all farther attempts to capture or destroy Connecticut sea-port towns. The assailing squadron had about fifteen hundred men, while the number actually engaged in driving them away did not exceed twenty.¹ It was computed that the British hurled no less than fifty tons of metal on to the little peninsula during the three days.² The loss to the British was twenty lives, over fifty wounded, and the expenditure of ten thousand pounds sterling. The affair spread a feeling of joy throughout the whole country, and the result was a deep mortification of British pride. The impotence of the attack was the point of many a squib and epigram.³

Hardy's easy conquest at Eastport and its vicinity encouraged the British to attempt the seizure of the whole country lying between Passamaquoddy Bay and the

body moulders beneath this stone, but his spirit has fled to the seat of immortality.

"There the brave youth, with love of virtue fired,
Who gallantly in his country's cause expired,
Shall know he conquered."

In 1856 the State of Connecticut caused a handsome marble monument, eighty feet in height, to be erected over his grave in the cemetery at Mystic, on which are the following inscriptions:

Eastern Side: "Frederick Denison, died Nov. 1, 1814, aged 19. He was mortally wounded by a shot from the enemy's brig-of-war *Dispatch* while acting as a volunteer in the defense of Stonington against the attack of the British squadron, August 10, 1814." *Northern Side:* "Erected by the State of Connecticut, 1856, that the deed of patriotic devotion may be handed down to other generations, inspiring them with fidelity to our liberties, and prompting them to such sacrifices as shall win their country's meed." *Southern Side:* "His life was his legacy, and his country his heir." The tablet with the earlier inscription was lying near this monument.

DENISON'S MONUMENT.

Young Denison was born in Stonington township on the 27th of December, 1795. He heard the roar and saw the smoke of battle from Mystic on the morning of the 10th, and, borrowing a gun, he crossed the river in a canoe, stopped a moment to speak with his sick father at the homestead, and hastened to the post of danger, where he received his death-blow.

¹ The following are the names which have been preserved of the most prominent of the defenders of Stonington: Jeremiah Helmes, George Fellows, Simon Haley, Amos Denison, J. Deane Gallup, Isaac Minor, Isaac Denison, Horatio Williams, Jeremiah Haley, Asa Lee, William Lord, Nathaniel Clift, Ebenezer Denison, Frederick Denison, — Potter, John Miner.

² About fifteen tons were picked up by the inhabitants of Stonington, and sold to the United States government. The following advertisement appeared in a New York paper on the 19th of November following:

"Just received, and offered for sale, about THREE TONS of BROWN SNOW, consisting of 6, 9, 12, 18, 24, and 32 pounds, very handsome, being a small proportion which were fired from his Britannic majesty's ships on the unoffending inhabitants of Stonington in the recent brilliant attack on that place. Likewise a few carcasses, in good order, weighing about 200 pounds each. Apply to S. THURMELL, 41 Peck Slip."

³ The occasion was the theme of one of the most popular ballads of the time, written by Philip Freneau, the bard of the Revolution, in which the impotence of the attack was set forth in the following verses:

"The bombardiers, with bomb and ball,
Soon made a farmer's barrack fall,
And did a cow-house sadly maul
That stood a mile from Stonington.

"They killed a goose, they killed a hen,
Three hogs they wounded in a pen—

They dashed away—and, pray, what then?
That was not taking Stonington.

"The shells were thrown, the rockets flew,
But not a shell of all they threw,
Though every house was full in view,
Could burn a house in Stonington."

A British land and naval Expedition leaves Halifax.

It appears off Castine, at the Mouth of the Penobscot.

Penobscot River. For this purpose a British fleet, consisting of the *Bulwark*, *Dragon*, and *Spencer*, 74 guns each; the frigates *Bacchante* (late from the Mediterranean) and *Tenedos*; sloop-of-war *Sylph* and *Peruvian*; and schooner *Picton*, with ten transports, sailed from Halifax on the 26th of August, 1814.¹ The latter bore almost four thousand troops, under the command of Lieutenant General Sir John Cope Sherbrooke, governor of Nova Scotia, assisted by Major General Gerard Gosselin and Colonel Douglass. The fleet was in command of Rear Admiral Edward Griffith.

It was the intention of Sherbrooke and Griffith when they sailed to stop and take possession of Machias; but on the 30th² they learned from the commander of the brig *Rifleman*, with whom they fell in, that the United States corvette *John Adams*, 24, Captain Morris, had gone up the Penobscot, so they hastened to the mouth of that river to blockade her. Passing up the Green Island channel, they arrived in the fine harbor of Castine, off Cape Bigaduce,² on which the pleasant village of Castine now lies, on the morning of the 1st of September. Lieutenant Lewis, of the United States Army, with about forty men, was occupying a half-moon redoubt

J. C. Sherbrooke

HALF-MOON REDOUBT.—FORT PORTER.³

which the Americans had erected in 1808. That redoubt, whose embankments were

¹ The troops consisted of the 1st company of Royal Artillery; two rifle companies of the 7th battalion of the Sixtieth Regiment; detachments from the Twenty-ninth, Sixty-second, and Ninety-eighth Regiments—the whole divided into two brigades.

² This is a corruption and diminutive of *Majabigouane*, the Indian name of the peninsula, which the Baron Castine, of whom I shall presently write, wrote *Marché-biguinus*, the *u* in the last syllable being pronounced long. It is on the east side of Penobscot Bay, in full view of the ocean.

³ The engraving is a view of the remains of the Half-moon Redoubt as it appeared when I visited the spot in the autumn of 1860, looking southward. On the extreme left, in the distance, are Noddie's Island, Cape Rozier, and Hook's Island. Directly over the redoubt is seen the ocean; on the right, the main, with a portion of the Camden Mountains. A little to the right of the redoubt is seen a small beacon at the entrance to the *Marché-biguine*, or Castine Creek. This redoubt was to command that entrance.

very conspicuous on the edge of the water southward of the village when the writer was there in 1860, was armed with four 24-pounders and two field-pieces. Lieutenant Colonel Nichols, of the Royal Engineers, who had been sent in a small schooner to reconnoitre, sent a summons to Lewis, at sunrise, to surrender. Lewis saw that resistance would be vain, so he resolved to flee. He gave Nichols a volley from his 24-pounders, then spiked them, blew up the redoubt, and, with the field-pieces, he and the garrison fled over the high peninsula to its neck, and escaped up the Penobscot. Colonel Douglass immediately landed from the fleet at the back of the peninsula with a detachment of Royal Artillery and two companies of riflemen, and took quiet possession of Castine, and with it the control of Penobscot Bay. The number of troops landed was about six hundred. Governor Sherbrooke made the house of Judge Nelson his head-quarters, and the court-house and other suitable buildings were occupied as barracks for the soldiers. A number of women also were lauded.¹

The *John Adams* had just arrived from a successful cruise, and on entering Penobscot Bay in thick weather had struck a rock and received so much injury that it was found necessary to lay her down for repairs. She was taken as far out of harm's way as possible. It was with great difficulty that she was kept afloat until she reached Hampden, a few miles below Bangor, when she was moored at Crosby's Wharf, with several feet of water in her hold. Some of her crew were disabled by scurvy, and she was almost helpless. This condition and position of the *Adams* was made known to Sherbrooke on landing at Castine, and he and Griffith immediately detached a land and naval force to seize or destroy that vessel, and treat the inhabitants of the towns on the Penobscot as circumstances might seem to require. The expedition consisted

Robt. Barrie

of the *Sylph* and *Peruvian*, a small schooner as a tender, the transport brig *Harmony*, and nine launches, commanded by Captain Robert Barrie, of the Royal Navy (commander of the *Dragon*, 74), who acted as commodore. The land forces,

seven hundred strong, were under the command of Lieutenant Colonel Henry John, assisted by Major Riddle. The expedition sailed in the afternoon of the day of the
 • September 1, arrival at Castine,^a and, passing Buckston at twilight, anchored for the
 1814. night in Marsh Bay. In the mean time Sherbrooke and Griffith had issued a joint proclamation, assuring the inhabitants of their intention to take possession of the country between the Penobscot and Passamaquoddy, and offering them protection on condition of acquiescence. All persons taken in arms were to be punished, and those who should supply the British with provisions should be paid and protected.

There was no disposition among the inhabitants along the Penobscot to submit quietly unless absolutely compelled to. On the day when the expedition sailed up the river, information of the fact was conveyed by express to Captain Morris, at Castine, and he at once sent word to Brigadier General John Blake, at his home in Brewer, opposite Bangor, asking him to call out the militia immediately.

Blake mounted his horse, and late in the afternoon was at Bangor, issuing orders for the assembling of the brigade of

GENERAL BLAKE'S RESIDENCE.

¹ On the 1st and 5th of September Sherbrooke and Griffith issued joint proclamations assuring the inhabitants ample protection and quietude if they should conduct themselves peaceably.

The *John Adams* at Hampden.

Preparations there to oppose the British.

Gathering of the Militia.

the tenth Massachusetts division, of which he was commander, and the same evening he rode down to Hampden. There he found Captain Morris engaged in preparations for defense. He had dismantled the *John Adams*, dragged her heavy guns to the summit of the high right bank of the Soadabscook, fifty rods from the wharf, and placed them in battery there, so as to command the river approaches from below. On the following morning Blake held a consultation with Morris, and citizens of Bangor and Hampden, on the best methods of defense, but opinions were so various that no specific determination was arrived at. Morris had not much confidence in the militia, and declined any immediate co-operation with them. He approved of a proposition to meet the foe at his landing-place, wherever that might be, and expressed his resolution to destroy the *Adams* should the militia retreat.

On the morning of the 2d, Belfast, on the western side of Penobscot Bay, was taken possession of by General Gosselin, at the head of six hundred troops, without resistance; and, at the same time, the expedition under Barrie and John, after landing a detachment from the Sixtieth and Ninety-eighth Regiments at Frankfort, at the head of Marsh Bay, proceeded up the river. The detachment marched up the western side of the Penobscot unmolested, and the little squadron arrived at Bald Hill Cove, near Hampton, at five o'clock in the evening. The troops and about eighty marines were landed, and bivouacked there during the night in the midst of a drenching rain-storm.

During the 2d, about six hundred raw militia, who had never seen any thing more like war than their own annual parade, assembled at Hampden, and General Blake posted them in an admirable position on the brow of the hill, where the residence of Mr. James A. Swett was standing when I visited Hampden in 1860. He had been joined by Lieutenant Lewis and forty regulars who fled from Castine. The artillery company of Blake's brigade, commanded by Captain Hammond, was there with two brass 3-pounders; and an iron 18-pound carronade from Morris's vessel was placed in battery in the highway near the meeting-house, in charge of Mr. Bent, of the artillery. Many of the militia were without weapons and ammunition, and these were supplied, as far as possible, by Captain Morris. Such was Blake's position on the dark and gloomy morning of the 3d.

Morris in the mean time had mounted nine short 18-pounders from the *Adams* upon his redoubt on the high bank over Crosby's Wharf, and placed the battery in charge

GROSBY'S WHARF.

of Lieutenant Wadsworth, the first of the *Adams*, assisted by Lieutenants Madison and Purser. With the remainder of his guns he took position in person on the wharf, with about two hundred seamen and marines and twenty invalids, prepared to defend his crippled ship to the last extremity.

¹ This is a view of Crosby's Wharf from the mouth of the Soadabscook Creek, north side, looking south. The place where the *Adams* lay is indicated by the vessel at the end of the wharf. Hampden is seen in the distance over the wharf. Toward the right is Crosby's old store-house, and the cleared spot to the right and above it is the place where Morris's battery was planted. It is the property of the Honorable Hannibal Hamlin, late (1864) Vice-President of the United States. Another store-house, like the one seen in the picture, stood on the end of the wharf, and was burnt when the *John Adams* was destroyed.

The British arrive at Hampden.

Panic and Flight of the Militia.

The British march on Bangor.

The whole region of the Penobscot was enveloped in a dense fog on the morning of the 3d. The British at Bald Hill Cove had been joined by the detachment who landed at Frankfort, and at five o'clock all were in motion toward Hampden. They moved cautiously in the mist, with a vanguard of riflemen. On the flanks were detachments of marines and sailors, with a 6-pound cannon, a 6½-inch howitzer, and a rocket apparatus. The British vessels moved slowly up the river at the same time, within supporting distance.

Blake had dispatched two flank companies to watch and annoy the approaching enemy. Between seven and eight o'clock they reported them crossing the little stream that divides Hampden Corners from Hampden, and ascending the hill to attack the Americans. The fog was so thick that no enemy could be seen, but Blake pointed his 18-pounder in the direction of the foe, and with his field-pieces blazed away with considerable effect, as was afterward ascertained. He had resolved to reserve his musket-firing until the enemy should be near enough to be seriously hurt, but the ordeal of waiting, without breastworks in front, was too severe for the untried militia. The enemy suddenly advanced at a "double-quick," firing volleys in rapid succession. The militia, panic-stricken, broke and fled in every direction, leaving Blake and his officers alone. Lieutenant Wadsworth, at Morris's upper battery, perceived the disaster in its full extent, and communicated the fact to his chief on the wharf. Morris knew the impending danger. His rear and flank were exposed, and he saw no other way for salvation than flight. He ordered Wadsworth to spike his guns, and with his men retreat across the bridge over the Soadabscook while it was yet open, for that stream was fordable only at low water, and the tide was rising. Wadsworth did so, his rear gallantly covered by Lieutenant Watson with some marines. The *John Adams* was fired at the same time, the guns on the wharf were spiked, and the men under the immediate command of Morris retreated across the Soadabscook bridge. Their commander was the last man to leave the wharf. Before he could reach the bridge the enemy were on the bank above him. He dashed across the stream, arm-pit deep, under a galling musket-firing from the British, unhurt, and, joining his friends on the other side, retreated, with Blake, his officers, and a bare remnant of his command, to Bangor. From there Morris soon made his way to Portland overland.

The British took possession of Hampden without farther resistance, and a part of their force, about five hundred strong, with their vessels, pushed on toward Bangor. They met a flag of truce a mile from the town, with a message from the magistrates asking terms of capitulation. No other was

¹ Charles Morris was born in Woodstock, Connecticut, on the 20th of July, 1784. He was one of the most useful men in the American Navy. He entered the service as midshipman in July, 1799, and from that day until his death, a period of fifty-seven years, his furlongs and absences from active duty amounted only to two years. He was distinguished in the Mediterranean during the wars with the Barbary powers; and as a volunteer with Decatur in the de-

P plundering at Bangor.	Destruction of Vessels.	Outrages at Hampden.	Commodore Morris.
-------------------------	-------------------------	----------------------	-------------------

promised excepting respect for private property. They entered the village at about ten o'clock,¹ when Commodore Barrie gave notice that, if required, supplies should be cheerfully sent in, the inhabitants should be unharmed in persons and property. This assurance was scarcely uttered before Barrie gave tacit license to his sailors to plunder as much as they pleased; and almost every store on the western side of the Kenduskeag Creek, which there enters the Penobscot, was robbed of all valuable property. Colonel John, on the contrary, did all in his power to protect the inhabitants.

The British remained at Bangor thirty-one hours, during which time they were quartered on the inhabitants, and compelled them not only to bring in and surrender all their arms, military stores, and public property of every kind—even a few dollars in the post-office—but to report themselves prisoners of war for parole, with the agreement that they would not take up arms against the British. They compelled General Blake to come to Bangor, surrender himself as a prisoner, and sign the same parole. One hundred and ninety citizens were thus bound to keep themselves from hostilities. When this work was accomplished, the selectmen were required to give a bond, in the penal sum of \$30,000, as a guaranty for the delivery of vessels on the stocks at Bangor to the commander at Castine by the end of October. The speedy appearance of peace canceled this bond.

Having finished their work, and despoiled the inhabitants of property valued at \$23,000, and destroyed several vessels,² the marauders left Bangor, and spent the 5th in similar employment at Hampden. There the soldiers and sailors, unrebuked by Barrie, performed scenes which had been enacted at Havre de Grace under the eye of Cockburn. They committed the most wanton acts of destruction. The village meeting-house (now the town-house—see engraving, next page) was desolated. They tore up the Bible and Psalm-books, and demolished the pulpit and pews. They destroyed cattle and hogs as at Havre de Grace. They carried away much private property, and compelled the selectmen to sign a bond for \$12,000 as a guaranty for the delivery of vessels at Hampden to the commander at Castine.³ This bond shared

struction of the *Philadelphia*, he was the first on her deck. He was a lieutenant when the War of 1812 broke out, and was the executive officer of the *Constitution* at the time of her escape from a British squadron (see page 49), and her capture of the *Guerricre*. In that action he was shot through the body by a musket-ball. He was promoted to post captain in September, 1813, for special services, and took command of the *John Adams* sloop-of-war. The following year, as we have seen in the text, he was compelled to destroy his vessel. The war closed soon afterward, and he was employed in important services. He was captain of the *Brandwine* when she conveyed La Fayette back to France in 1825, and he afterward commanded squadrons on the Brazil and Mediterranean stations. His last cruise was in the *Delaware* in 1844, after which he was almost continually at the head of one of the bureaus in the Navy Department at Washington. At the time of his death, which occurred at Washington on the 27th of January, 1856, he was chief of the Bureau of Hydrography and Repairs. No man in the navy ever stood higher in the estimation of his countrymen for wisdom and integrity. He was buried, with appropriate honors, upon a beautiful wooded slope in Oak Hill Cemetery, near Georgetown, in the District of Columbia, and over his grave is a beautiful white marble monument, delineated in the engraving, with this simple inscription on its western side, under an anchor entwined: "COM. CHARLES MORRIS. BORN JULY 26, 1784. DIED JANUARY 27, 1856."

¹ The number of vessels burned was fourteen, and six were carried away. The entire property destroyed or carried away from Bangor was valued at \$46,000.—Williamson's *History of Maine*, II., 648, note 4.

² *History of Acadie, Penobscot Bay and River, etc.*, by Joseph Whipple, 1810; *MS. History of the British Operations on the Penobscot*, by the late William D. Williamson, author of a *History of the State of Maine*.

COMMODORE MORRIS'S MONUMENT.

Loss of Property at Hampden.

General Blake censured, but acquitted.

Castine in the Revolution.

OLD MEETING-HOUSE (NOW TOWN-HOUSE), HAMPDEN.²

the fate of the one given at Bangor. The total loss of property at Hampden, exclusive of a valuable cargo of brandy, wine, oil, and silk which they found on board the schooner *Commodore Decatur*, was estimated at \$44,000.¹

The indignant sufferers charged a greater portion of

their misfortunes to the feeble resistance made by General Blake at Hampden. His tardiness; his non-compliance with the wishes of Morris and others to attack the enemy at their landing-place; his neglect to throw up breastworks on the ridge at Hampden, and other evidence of inefficiency, were regarded as crimes; and he was charged with cowardice, and even treason. The clamor against him was vehement for some time. He was hung, shot, and burned in effigy;³ and for a while his personal safety was not considered secure in some districts. The public indignation finally cooled, and sober judgment, on considering the crude materials of his little force, acquitted him of every other fault but a lack of competent military ability and experience for the extraordinary occasion. A court of inquiry investigated his conduct, and acquitted him of censure or suspicion.⁴

On the 12th of September Sherbrooke and Griffith, with most of the troops and a greater part of the fleet, left Penobscot Bay, and, after capturing Machias,⁵ returned to Halifax. General Gerard Gosselin, a gentleman in manners and a brave soldier, was left in command at Castine, and immediately prepared to maintain his position by thoroughly repairing the fortifications there. Old Fort George, in the centre of the peninsula, which was built by the British in 1779,⁶ was repaired, fraised, and

¹ In the midst of the rapine a committee waited on Barrie, and told him that the people expected at his hands the common safeguards of *humanity*, if nothing more, when the brutal officer replied, "I have none for you. My business is to burn, sink, and destroy. Your town is taken by storm, and by the rules of war we ought both to lay your village in ashes and put its inhabitants to the sword. But I will spare your lives, though I don't mean to spare your houses." — *Williamson's History of Maine*, ii., 646.

² This is a view of the old meeting-house, now used as a town-house, as it appeared in the autumn of 1860. On the left is seen the old hearse-house, and in the distance is seen the dwelling of Mr. Swett, mentioned on page 892 as the position of General Blake when attacked by the British on the morning of the 3d of September.

³ A small building was yet standing in Hampden when I was there in 1860, in which the effigy of General Blake was made. It was a cabinet-maker's shop, the property of George C. Reed, standing about ninety rods from the town-house. In one corner of it I saw a post into which a cannon-ball entered during the action, and was still lodged. In the shop was a rude candelabra, used on the occasion of exhibiting the effigy. That shop is one of the scarred relics of the fight, and is represented in the annexed engraving.

⁴ *Williamson's History of Maine*, ii., 649.

⁵ Machias is on the west branch of the Machias River, and capital of Washington County, Maine. At the time we are considering, the fort at that place was garrisoned by fifty United States troops and ten militia, under the command of Captain Leonard. When the British appeared, and it was evident that the fort could not be held, it was blown up, and the garrison retreated to the block-house near. They were forced to fly from that, and escaped.

⁶ In 1779, the British, under General Francis M'Lean, took possession of the peninsula of Blandage (see note 2, page 897), and commenced the erection of a fort on the high central part of the land. The people of Massachusetts resolved to expel them, for they were on their territory, Maine being then a dependent of the Old Bay State. They sent a fleet of nineteen armed vessels and twenty-four transports, with almost four thousand men. Commodore Saltonstall was the naval commander, and General Lovell led the troops. M'Lean was informed of this expedition four days before its arrival in Penobscot Bay, and prepared to receive the Americans. They arrived on the 25th of July, and landed on the 28th. They at once commenced a siege of the fort, and continued it until the 13th of August, when Lovell was informed of the arrival of Sir George Collier with a heavy naval force. He immediately re-embarked his troops on the transports, and had the flotilla drawn up in crescent form across the Penobscot, to dispute the passage until the troops in the boats could flee up the river. Collier sailed boldly in, chased the Americans up the river, destroyed all their vessels, and compelled them to find their way home through the wilderness. The British then completed the fort, which they named *George*, in honor of the king.

The Twenty-ninth British Regiment, that was at the taking of Castine, was the same that was stalled at Boeslog

An Oath of Allegiance exacted.

Popularity of General Gosselin.

armed. The half-moon redoubt was rebuilt. In various parts of the peninsula new works were thrown up;¹ and through the Neck, from Hatch's Cove to Perkins's Back Cove, a canal was cut. General Gosselin issued a proclamation,² by which he directed all the male inhabitants between the Penobscot and the boundary-line of New Brunswick, above sixteen years of age, to take an oath of allegiance to his majesty,³ and also of neutrality. By the latter they agreed that they would peaceably and quietly demean and conduct themselves while in that territory; that they would not carry arms, harbor British deserters, nor give intelligence to the king's enemies during the current war.⁴ The selectmen of different towns were authorized to administer these oaths of allegiance and neutrality; and the permanent occupation of the country by the British was quietly accepted by the inhabitants as an inevitable necessity.

REMAINS OF FORT GEORGE.

arms, harbor British deserters, nor give intelligence to the king's enemies during the current war.⁵ The selectmen of different

towns were authorized to administer these oaths of allegiance and neutrality; and the permanent occupation of the country by the British was quietly accepted by the inhabitants as an inevitable necessity.

General Gosselin made himself very popular at Castine. The officers were quartered in private houses, and paid fairly for all they received from the inhabitants.⁶ The soldiers were housed in the court-house and public school building. The barn of Mr. Hook, the collector of the port,⁷ was converted into a theatre, and play-actors from Halifax afforded much amusement. Had these new-comers been friends instead of enemies, the inhabitants of Castine would have enjoyed their visit, notwithstanding the citizens suffered many inconveniences. It was not very long. Peace was proclaimed early in 1815, and on the 25th of April⁸ the British sailed out of Penobscot Bay.⁹ The event was celebrated by the people with festivities

at the time of the "massacre" there in 1778. The celebrated Sir John Moore, whose burial was the subject of Wolfe's immortal poem, commencing

"Not a gun was heard, nor a funeral note," etc.,

was an ensign in this regiment, and, in a letter to a friend, said that the first time he ever heard an enemy's gun was at Castine on the occasion in question. He then commanded a picket.

¹ The following defensive works garnished the peninsula at the close of the year: Fort George; batteries Sherbrooke, Gosselin, Penobscot, Griffith, Furiense, Castine, and United States; a redoubt called Fort Anne; little batteries on North and West Points, and a block-house. Battery Castine was old Fort Castine, now in the village, and Battery United States was the half-moon redoubt blown up by Lewis. It was originally called Fort Porter, it having been constructed by an officer of that name in 1808.

² The following was the form of the oath of allegiance, copied from an original, in manuscript, before me:

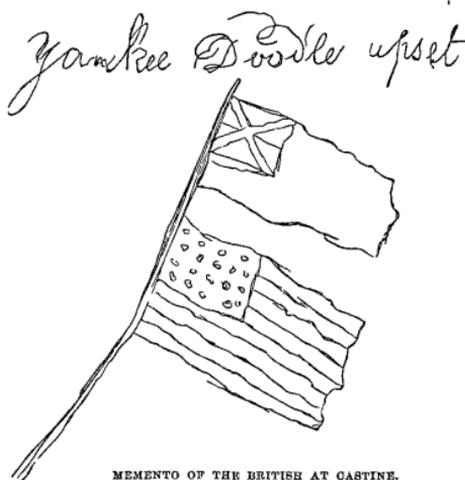

"I, A. B., do swear that I will be faithful, and bear true allegiance to his majesty King George the Third. So help me God."

³ The seal and signature of General Gosselin above given I copied from his proclamation in manuscript.

⁴ See note 1, page 904.

⁵ Mr. Hook had the good fortune to escape from Castine with the public papers before the British landed.

⁶ *History of Acadia, Penobscot Bay and River*, by Joseph Whipple, 1816; *History of the State of Maine*, by William D. Williams, in two volumes, 1-32; *MS. Narrative of the War in Maine*, placed in the author's hands by the Hon. Joseph Williamson, of Belfast; Oral and written statements to the author by Dr. John Mason and the widow of the Rev. Wil-

MEMENTO OF THE BRITISH AT CASTINE.

and rejoicings. Within a few days afterward not an armed enemy remained westward of the St. Croix River and Passamaquoddy Bay. Peace, joy, tranquillity, and prosperity came with the birds and blossoms in the spring of 1815; and from that day until now no foreign enemy has ever appeared on our coast with hostile intentions, and probably never will.¹

I visited most of the places mentioned in this chapter in the month of November, 1860. Leaving New York in the afternoon of the 16th, I arrived in Boston at midnight, and spent three days there visiting men and places associated with the War of 1812, in company with a friend,² to whom I had been indebted for kind attentions and information while

seeking materials for my *Pictorial Field-book of the Revolution* twelve years before.

In East Boston³ we visited Mr. Samuel Dillaway, who was a soldier and a privateer in the war. He was captured on board the privateer *Sine qua non*, put into a prison-ship at Gibraltar, sent to England, and finally exchanged. He informed us that the authorities in charge of the exchange of prisoners, and sending them in *cartel* ships to America, generally subjected their victims to as much annoyance as possible. They were in the habit of sending prisoners whose homes were in the Northern States to some Southern port, and those from Southern States to Northern ports. This produced exasperation, and in many instances the prisoners rose and took possession of the ship. That was the case when Mr. Dillaway came in the brig *Shakespeare*. The captain was ordered to a Southern port. The prisoners took possession of the ship and sailed her into Boston.

We went to the site of Fort Strong, in East Boston,⁴ saw some of its remaining mounds, and then started to visit Fort Warren, on Governor's Island, which became famous as a prison for political offenders during the late Civil War. The sea was too rough for a skiff, and we contented ourselves with gazing at the venerable fortress from the highest part of East Boston. We turned, and in a two-wheeled chaise rode over to Charlestown, dined with Mr. Frothingham, the accomplished author of *The Siege of Boston*,⁵ who then lived in the shadow of Bunker's Hill Monument, on Monument Square, and with him visited Mr. Byron, one of the last survivors of the crew of the frigate *Constitution*. He was a Baltimorean and a musician. He entered the land service, but, preferring the sea, became a fier on board the *Constitution*, and was made a "minute-man;" that is to say, one ready to fight at a moment's warning. As such he fought gallantly in the actions of that vessel, and was highly commended by his superiors. Mr. Byron was lively and fluent in conversation, and entertained us for an hour with grave and humorous narratives of his experience in the service. He has passed away since my visit.

Hiam Mason, of Bangor; Major Crosby and Mrs. Stetson, of Hampden; Dr. Joseph L. Stevens and Samuel T. Noyes, of Castine, and Judge Williams, of Belfast.

¹ A curious memento of the British at Castine was yet in existence when I visited that place in 1860. It was an outline of the British flag above that of the American flag, and the words "Yankee Doodle upset," cut by Lieutenant Elliot, of the British Army, with a diamond on a window-pane in the house of Mrs. Whitney, where some of the officers were quartered. That pane of glass was the only one in the sash at the time of my visit that was not badly cracked. The above engraving is a fac-simile of the diamond-etching, slightly reduced.

² Noddle's Island. It contained 25,000 inhabitants in 1860.

FORT PICKERING, NEAR SALEM, IN 1800.

and South Rivers, as the estuaries are called which embrace the peninsula. Its embankments, composed of earth and stone, excepting the brick wall in the rear (see picture on page 891), were about eight feet in height, and well preserved. The officers' quarters (seen on the right), built of brick, and shaded by balm of Gilead trees, were well preserved. There the keeper, Sergeant Reuben Cahoon, resided. He was seventy-one years of age when I was there. He was a soldier on the Northern frontier in 1812, and yet

carried a ball in his leg which he received at the battle of Plattsburg. His wife was his only companion.

Not far from Fort Pickering we passed the remains of Fort Lee, near the house of Mr. Welch, at the western end of the causeway leading to Winter Island. It was an irregular work, built at the beginning of the War of 1812, and occupied a very commanding position, especially as the guardian of Beverly Harbor. It also commanded Salem Harbor, in a degree. From its mounds, now eight or ten feet in height, we obtained fine views of Salem, Beverly, and the whole outer harbor. The water which it was chiefly designed to watch over and protect was the estuary called Bass River. It extends up to Danvers, or Old Salem Village,¹ and was the one spanned by the famous "Leslie Bridge"² of the Revolution.

REMAINS OF FORT LEE, SALEM.

Returning to Salem, we rode out to Marblehead. After passing a fine avenue skirted with lofty elms, we crossed the Forest River, near the Forest City Mills, and, ascending the gentle slope of Marblehead promontory, soon came to the village lying at the head of a bay in which there is a good harbor. The village is situated among rocks, and the street lines are so irregular in some places that it appears as if the houses might have dropped from the clouds, and the ways among them had been laid out afterward. It was quite natural for the celebrated Whitefield, on entering the

¹ At Danvers Governor Endicott and his associates made the first settlement in 1628. There was the scene of "Salem Witchcraft," and there the famous General Israel Putnam was born. A pear-tree planted by Governor Endicott yet (1867) bears fruit. It was planted at about the time the Stuyvesant pear-tree in the city of New York, that died in 1866, was brought from Holland.

² See Lossing's *Field-book of the Revolution*, II, 374, note 2.

Fort Sewall and its Keeper,

A Family of Soldiers.

Marblehead during the Revolution.

town, and seeing no verdure as indicative of soil, to inquire, "Pray, where do they bury their dead?"¹ It was inhabited chiefly because of its advantages and convenience as a fishing port, a character which it has always borne.² Its trade was almost wholly destroyed during the Revolution,³ but it revived soon afterward.

MARBLEHEAD HARBOR.¹

The harbor of Marblehead is quite spacious, with many rocky islands at its entrance. On the high promontory near the village was Fort Sewall, built in the year 1800,

and rebuilt early in the War of 1812. When I visited it Mrs. Maria T. Perkins was the United States Agent in charge of the property there, having been a resident of Fort Sewall since 1835. She was an energetic woman, and with the greatest courtesy she received and entertained us. On the floor of one of her rooms was a carpet of which she was justly proud. It was made entirely of the clothes of her father (Sergeant Stephen Twist,

FORT SEWALL.²

of the Continental Army) and her two brothers, worn by them during the War of 1812. They were ever afterward in the military service of the United States up to 1857.⁴ She was engaged in piecing it during twenty years. The carpet was woven by Mrs. Perkins and her daughter, in Fort Sewall, a few months before my visit, and took a premium at a Fair in Boston.

On returning to Salem I had the pleasure of meeting Dr. Benjamin F. Browne, a native of that place, who entered the naval service as surgeon's mate in the privateer *Alfred*, in September, 1812, when he was only nineteen years of age. While in the schooner *Frolic*, in the West Indies, he was captured, taken to Barbadoes, sent to En-

¹ Barber's *Historical Collections of Massachusetts*, page 291, note.

² A hundred years ago there were between thirty and forty ships, scows, and topsail-schooners owned in Marblehead, and engaged in foreign trade; and in 1770 it contained a greater number of inhabitants than any town in Massachusetts excepting Boston.

³ The inhabitants were very patriotic. In 1774, when the port of Boston was closed by order of Parliament, the inhabitants offered the use of their harbor to the Boston merchants. They also furnished an entire regiment, fully officered, for the Continental Army. Elbridge Gerry, one of the signers of the Declaration of Independence, was born at Marblehead.

⁴ This sketch was made from the gravelly beach. On the left is seen Fort Sewall, and on the extreme right, in the distance, Marblehead Point. Toward the left, and extending behind Fort Sewall, is seen Lowell Island.

⁵ In this view, from the entrance to the fort, with back to the harbor, is seen the row of bomb-proof casemates, with arched windows and doors. Above them is seen the officers' quarters, built of brick, in which Mrs. Perkins resided.

⁶ The aggregate time of military service by her father and two brothers was about one hundred years.

Benjn. F. Browne

gland, and confined six months in the notorious Dartmoor prison, of which I shall write hereafter. The cartel ship *Anne*, in which he was sent home, was ordered to Norfolk. Most of the prisoners were from New England and New York. They seized the ship, and sailed into New York in June, 1815. Dr. Browne was in the Dartmoor prison at the time of the massacre there, and published an interesting sketch of it in the *Democratic Review*, 1845.¹ The prisoners were chiefly privateersmen, and a very large proportion of them were from New England. He furnished me with a list of the names of more than one hundred survivors known to be living in the vicinity of Salem at the time of my visit.

In the evening I had an interview with Mr. William Leavitt, a teacher of navigation at Salem, who was living there during the war, and saw the *Constitution* chased into Marblehead by the

British frigates *Junon* and *Tenedos*, early in April, 1814. Mr. Leavitt was a careful investigator and chronicler; and he furnished me with a most interesting list of all the privateers fitted out at Salem during the war, and of the names, armament, tonnage, commanders, etc., of all the prizes taken by them during that period.

I passed the night at Salem, returned to Boston the next day, and toward evening departed on a visit to the theatre of the stirring historic scenes on the Penobscot Bay and River, in Maine, in the year 1814. I traveled on the Eastern Railway to Portland, one hundred and seven miles, where I embarked for Belfast, at ten o'clock in the evening, in the steamer *Daniel Webster*. It was a rough and stormy night on the Atlantic, but we made the voyage of one hundred and thirty miles in good time. When we entered Penobscot Bay at dawn, the storm-clouds had passed away, and the sun shone out brilliantly when we landed at Belfast between seven and eight

* November 19, 1869. o'clock in the morning.² Soon after breakfast I sailed in the little packet *Spy* (formerly a Boston pilot-boat), with raking masts and schooner-rigged, for Castine, on the eastern side of Penobscot Bay. A stiff breeze had sprung up from the northwest, and before it we ran across the bay, thirteen miles, in little more than an hour. It was an exhilarating voyage. We entered the picturesque harbor of Castine at eleven o'clock, and, after a pleasant and profitable interview with Dr. Joseph L. Stevens and Samuel T. Noyes, Esq. (the former a physician and the latter a ship-builder of Castine), I rambled over the interesting peninsula with an intelligent lad who was familiar with the historical localities. A portion of the peninsula is high, rocky, and covered with evergreens, while its southwestern slope is wet and spongy, bare, and abounding in juniper bushes. The village of Castine is beautifully situated on a slope overlooking several picturesque islands. It is said to be the wealthiest town in Maine in proportion to its size, and is the seat of customs of the Penobscot district.²

¹ Dr. Browne was a member of the Massachusetts Legislature in 1831, and of the State Senate in 1843. He was in the enjoyment of remarkable health, having never been sick in his life.

² Castine is a pleasant town of about fifteen hundred inhabitants, whose principal business is fishing and ship-build-

(then the property of David Sears, of Boston), near the centre of the picture, is seen the mouth of the Penobscot River. On the extreme left, over the cedar-covered point of land called Banks's Head, is seen Belfast, thirteen miles distant.

REMAINS OF FORT GRIFFITH.¹

From Fort George we went down the northwestern slope toward the Neck to the remains of Fort Griffith, one of the larger redoubts built by the British, and named in honor of the English admiral. It was intended to guard the Neck. There was another, called Fort Gosselin in honor of the general, just above the

present bridge over the canal. After sketching the remains of Fort Griffith, we visited those of two or three others, and then hastened back to Castine, and embarked in the *Spy* for Belfast. It was toward evening, and the light wind was directly ahead. The voyage was long and tedious, and it was almost eight o'clock before I was admitted to the comforts of a warm supper at our destined haven, where I had the pleasure of meeting Judge Joseph Williamson, son of the historian of Maine, and to whom I am indebted for valuable information.

On the morning of the 21st I left Belfast for Hampden on the steamer *Sanford*, Captain C. B. Sanford, which plied between Boston and Bangor. The voyage up the Penobscot—the winding, picturesque Penobscot—was a delightful one, and was made particularly instructive to me by Captain Sanford, who kindly pointed out every place and object of interest on the way. Fourteen miles from Belfast we passed Fort Point, a bluff with a lighthouse upon it.²

FORT POINT.

Opposite Bucksport, on the rugged hills, the solid masonry of a stupendous fortifica-

tion, called Fort Knox, in process of erection, was seen, with the small village of Prospect nestled near. A little above we passed Indian Point, made famous as the site of a conflict between the savages and Captain Church, the decapitator of the slain King Philip. Farther on we entered Marsh Bay, in which the British invading squadron lay one night on their way toward Hampden.³ It is an expansion of the Penobscot, and at its head lies the pretty little village of Frankfort. Westward rises the Musquito Mountain, a huge mass of granite, where, it seems, quarrying might be carried on for a thousand years. In Frankfort, McGlathry's store-house was pointed out as the recipient of a British cannon-ball when the invaders landed there in September, 1814;⁴ and about a mile above the landing my attention was called to a thick Norway pine, the only one in that region, which bears the name of "The Bacon Tree." It is a round, compact tree, its short trunk composed apparently of a group of smaller ones, and the limbs so near the ground that it is difficult to get under it.

¹ On the left is seen Banks's Head, on which were batteries. One was named *Furieuse*, as it was armed with cannon taken from a French vessel of that name, by the English. On the right is Brigadier Island and mouth of the Penobscot.

² For the protection of the Penobscot River, Governor Pownall caused a fort to be built on this point in 1795. He made an expedition from Boston for the purpose with three hundred and thirty-three men. It was completed in July at a cost of nearly £5000. It was named Fort Pownall. Some remains of it may yet be seen. It was garrisoned until the Revolution, when it was betrayed into the hands of the British by a Tory commander. ³ Page 898. ⁴ Page 899.

I had a good view of it through a telescope, by which I was enabled to make the annexed sketch. It derived its name from the circumstance that when the British landed, a citizen of Frankfort, having a large quantity of bacon, carried it to this tree, and hung the pieces in the branches to conceal them from the foe. The measure was successful. The British passed along the road a short distance from the tree without observing its savory fruit, and the man saved his bacon. In a cove off Oak Point, two or three miles above Frankfort, we saw the ribs of the *Warren*, one of the Massachusetts vessels destroyed by the British when they took Castine in 1779.¹

THE BACON TREE.

We landed at Hampden at an early hour, and I went immediately in search of the historical localities of that pleasant town. I called on the venerable Mrs. Stetson with a letter of introduction from a friend in Boston. She was then eighty-seven years of age, and lived in a fine old mansion in the Upper Town, not far from the Soadabscook. Her husband was one of the citizens who was confined as a prisoner on board the *Decatur*.² She gave me a most vivid description of events in Hampden at the time of the invasion; and she furnished me with such directions that, with the aid of a young man whom I had engaged to take me to Bangor in a light wagon, I experienced no difficulty in finding all I had come to see. I went down the winding road to the mouth of the Soadabscook, and sketched Crosby's Wharf,³ climbed to the place of Morris's hill battery, and visited the meeting (now town) house and the site of Blake's brief encounter with the invaders near the Lower Town. When these pleasant tasks were accomplished, we dined at the hotel, near which I saw a small building, with a little weather-beaten sign-board over the door, that was innocent of all paint excepting the black letters which composed the name of HANNIBAL HAMLIN. It was the law office⁴ of that distinguished United States Senator, who a few weeks before had been elected Vice-President of the Republic.

At three o'clock in the afternoon I left Hampden for Bangor, following the road which the British traveled in their march to that place.⁵ I spent the remainder of the afternoon in rambling about that fine inland city of the picturesque State of Maine, and was surprised by the great number of schooners that lay in the Penobscot and in the mouth of the Kenduskeag. There were no less than two hundred and thirty. It was the

VIEW AT THE MOUTH OF THE KENDUSKEAG.

¹ Note 6, page 502.

² Crosby's Wharf (see picture on page 899) was erected by General John Crosby, one of the early settlers, who came from Woolwich in 1775. He entered into commercial business there, and carried on an extensive trade with Europe and the West Indies. He was a friend and correspondent of Washington during the Revolution. General Crosby died at Hampden in May, 1843, at the age of eighty-six years. For a more minute account of Hampden and its people, see Coolidge and Mansfield's *History and Description of New England—Maine*.

³ Mr. Hamlin settled in Hampden as a lawyer in the year 1832.

⁴ Bangor is a fine city of about seventeen thousand inhabitants. It is a port of entry and a great lumber dépôt. It is about thirty miles from the mouth of the Penobscot, and was originally called Kenduskeag, from the Indian name of the stream that there enters the river.

⁵ Page 902.

time for these vessels, engaged in the lumber-trade, to lay up for the winter, and they were rapidly filling the stream below the bridge.

I remained in Bangor two days, and spent a greater part of the time in the company and under the hospitable roof of Dr. John Mason. With him I visited places of interest about Bangor; rode over to Brewer, and sketched the residence of General Blake,¹ and spent some time in the humble dwelling of Henry Van Meter, a remarkable black man, then ninety-five years of age. He was a slave to Governor Nelson, of Virginia, during the Revolution, became a seaman in long after years, and was one of the crew of the privateer *Lawrence* which sailed from Baltimore in 1814.² He was captured, sent to Plymouth, and confined in the Dartmoor Prison, where he saw the massacre in the spring of 1815. Van Meter's history, as he related it to me, was an eventful one.³ His mind seemed clear, and his body not very feeble; and when I had finished the annexed sketch of him, he wrote his name, with my pencil, under it, as well as he could without glasses.

Henry Van Meter

[•] November, 1860. I left Bangor on the morning of the 23d,⁴ and, traveling by railway, reached Boston the same evening. A few days afterward, just at twilight, I arrived at New Bedford,⁵ spent the evening with Dr. Charles L. Swasey, and made arrangements for a ride the next morning to the old fort near Fair Haven, across the Acushnet, spoken of on page 889 as having been saved from an attack by the British on a dark night in 1814 by the blast of a postman's tin-horn and the clatter of his horse's hoofs, which frightened them away. A heavy storm of wind and rain arose during the night; nevertheless we made the journey, and at ten o'clock

¹ About a mile and a half above Bangor, on the same side of the Penobscot, was the residence of General Joseph Treat. See note 2, page 807.

² See page 1006.

³ Henry remembered seeing Washington many times. When Governor Nelson's estate was sold after the war to pay his debts, Henry became the property of a planter beyond the Blue Ridge, on the extreme frontier. He was discontented, and wished to leave, notwithstanding his master was kind. He wished Henry to marry one of his slave girls, and raise children for him, offering, if he would do so, to order in his will that he should be made a free man at his death. "I didn't like the gals," said Henry, "and didn't want to 'wait for dead men's shoes.' So master sold me to a man near Lexington, in Kentucky, and there was only one log house in that town when I went there." He was soon sold to one of those vile men engaged in the slave-trading business, who treated him shamefully. Henry mounted one of his master's horses one night, and fled to the Kentucky River, where he turned him loose, and told him to go home if he had a mind to, as he didn't wish to steal him. Some benevolent white people helped him on to the Ohio, and at Cincinnati, then a collection of horses around Fort Washington, he took the name of Van Meter, borne by some of the family of his kind master of the Shenandoah Valley.

Henry became a servant of an officer in St. Clair's army, and served in the company, in the Northwest, with that commander and General Wayne. After the peace in 1795, he was living in Chillicothe, and came East with some Englishmen with horses, by way of Wheeling, to Philadelphia. In the latter city some Quakers sent him to school, and he learned to read and write. When the war broke out he shipped as a common sailor in the privateer *Lawrence*, having previously been to Europe several times in the same capacity, and when cast into Dartmoor he held a prize ticket which was worth, when he got home, one thousand dollars. He let a captain have it as security for sixteen dollars. The man died of yellow fever in the South, and Henry never recovered his ticket.

⁴ The half-shire town of Bristol County, Massachusetts, on the west side of the Acushnet River, an arm of Buzzard's Bay. It is beautifully situated upon rising ground, and is the child of the whale-fishery, that, and other branches connected with it, having been from the beginning the chief business of the inhabitants. During the Revolution it was a great resort for privateers. A force of four thousand men, under General Grey, fell upon it, and destroyed buildings, wharves, vessels, and merchandise to the amount of more than \$320,000.

The Fort at Fair Haven.	Captain Lemuel Akin.	Providence.	New London.	Stonington.
-------------------------	----------------------	-------------	-------------	-------------

rode into the parade of the ruined fortress as far as the rocks would allow. The remains of the fort were upon a very rough cape opposite New Bedford, and a mile below the Acushnet Bridge and causeway. It was called Fort Phoenix, and was little more than an 8 or 10 gun battery, whose walls were of hewn stone and earth. Several of the iron cannon (24-pounders) with which it was armed were lying within it, never having been removed since they were placed there in 1812.

The storm was beating so furiously as it came driving in from the sea that our horse became very restive;

so the kind Doctor stood out in the blinding tempest, and held him in quietude while, under the cover of the little carriage, I made the annexed sketch of the interior of the fort with all possible dispatch.¹ Then we returned to Fair Haven village, and rode out to the residence of Captain Lemuel Akin, an exceedingly intelligent and well-read gentleman, whose home had been on the sea during a large portion of his long life.² For

REMAINS OF FORT PHOENIX, FAIR HAVEN.

the good cheer with which he welcomed us, and for much valuable information which he gave me then, and afterward in letters, I feel grateful. While at his house the storm abated somewhat. We rode back to New Bedford, and in the afternoon I traveled by railway to Providence, Rhode Island, where I passed Thanksgiving Day most profitably with Dr. Usher Parsons, the surgeon of the *Lawrence*, Perry's flagship at the time of the battle of Lake Erie, whose name and record of services are familiar to the readers of this volume. From this last survivor of Perry's commissioned officers I received much valuable and minute information concerning the army and navy on the Niagara frontier and on Lake Erie.³ Dr. Parsons is still (1867) living, in the enjoyment of excellent health of body and mind.

Early on the morning of the 29th* I left Providence for New London, on the Thames, fifty miles westward, where I spent the day, as already recorded in the latter part of Chapter XXX. of this work. At sunset I left for Stonington, a few miles eastward, and became the guest of Dr. George E. Palmer, whose house bears evidence of the cannonade in 1814. On the following morning, accompanied by Dr. Palmer, I visited places of interest about Stonington, among others the old arsenal at the upper end of Main Street, in which were two or three cannon. It

* November, 1860.
¹ Between the walls of the fort and the wooden building more in the foreground is seen Ceres Island, with the city of New Bedford beyond. Since my visit the fort has been revived. "For five months," Dr. Swasey wrote to me in September, 1861 (six months after the great Civil War had begun), "the old fort has been thoroughly repaired, and garrisoned by the Home Guard of New Bedford and Fair Haven. How little did you or I dream of the events and necessities which have brought about this change, as we stood on that old place that day when you sketched the fort! How mild and gentle was even that storm that beat on our unsheltered heads compared with the tempest of war that has since burst over our beloved land!"

² Mr. Akin was engaged in the merchant service. He was captured off the Carolina coast by the British frigate *Severn*, taken to Amelia Island, and sent from there to Bermuda, where he was exchanged. Captain Akin died in 1867, at the age of seventy-five years.

³ See Chapter XXV.

ARSENAL AT STONINGTON.

was a brick building, somewhat altered since the war, when the door was in the centre where the arch is seen. Toward noon we rode over to Mystic, to visit the venerable hero, Captain Holmes, who performed so conspicuous a part in the defense of Stonington, as already related in this chapter. We found him and his aged wife in the enjoyment of good health of mind and body, and such is still their condition.²

* December,
1867.

Mrs. Holmes is a small woman, and retains many marks of the beauty of her earlier years. She was as energetic and patriotic as her husband, and did all a woman could do at the trying time when Stonington was attacked. When, several months after-

ward, the joyful news of peace came, and the men of Stonington and Mystic were celebrating the event at a public dinner, Mrs. Holmes, justly considering her sex entitled to recognition in the public demonstrations of delight, procured some powder, and, with the aid of other young women, loaded and fired, with her own hands, a heavy cannon, in joyful commemoration of the great event. She bears the distinction of having fired the first salute in that region as a voice of welcome to Peace.

While at Mystic we

Juniah Holmes

Ann B. Holmes

DENISON'S GRAVE, MYSTIC.

visited the beautiful Elm Grove Cemetery, in which, as we have observed in note on page 896, the State of Connecticut erected a monument to the memory of Frederick Denison, who lost his life in defense of Stonington. Near that monument was one (delineated in the annexed engraving) in commemoration of the first of his family who resided in that vicinity;¹ and near it (seen to the left of the monument in the picture) was the first tombstone erected in the town of Stonington.² It is of dark

² It bears the following inscription: "Here lies y^e body of ANN DENISON, who died Sept. y^e 26th, 1712, aged 97 years." This stone is about twenty inches in height. The modern monument is of granite, fifteen feet in height.

Baron de Steuben's Gold Box.

The faithful Daughter.

Return Home.

slate, with the cherub on the arched upper part, which was a fashionable ornament a hundred and fifty years ago.

We returned to Stonington toward sunset, and called on the Rev. Mr. Weston, of the Protestant Episcopal Church, where we saw the beautiful gold box in which the freedom of the city of New York was publicly presented to the Baron de Steuben by the hands of his old friend and aid-de-camp, General North. Around its edge was the following inscription: "*Presented by the Corporation of the City of New York, with the Freedom of the City.*" On the lid are the arms of the city, engraved by Maverick. We also saw, in the course of the evening, the famous Stonington flag, delineated on page 894, bearing sixteen stars, the then number of States in the Union. It is bunting, about six yards in length and three yards and a half in width. It was in the possession of Captain Francis Amy, of Stonington.

During that evening I heard many relations of stirring incidents connected with the attack on Stonington. I will repeat only one, a touching narrative of a dying mother and her faithful daughter. The mother (Mrs. Hall) was a poor woman, living in the old barracks near the "Cobb House" (page 896), in the last stages of consumption, and exposed to the British balls when they were hurled upon the town. The people had fled in terror, and none but Huldah, the daughter of the dying woman, remained. She was faithful. Sometimes, when the balls came crashing through the building, she would fly to the cellar, and sometimes to the garret, and then immediately return to the bedside of her mother. At length two or three soldiers rushed into the building, and bore the poor woman away on her bed to the burying-ground near the present Watawanuc¹ Institute, by the railway, where they thought she would be safe. Just as they had laid her on the greensward, a bomb-shell struck near and exploded, by which a deep trench was scooped from the earth. The shock was too much for the poor woman, and she expired. In the grave dug by the shell she was hastily buried, and then the faithful Huldah hurried away to a place of greater safety.

At a late hour in the evening I bade adieu to Dr. Palmer and his excellent family, rode over to New London, and then embarked in a stanch steamer for New York, where we arrived the next morning at the beginning of the first snow-storm of the season. I had seen snow but once before since my departure from the city, and that was on the summits of the lofty Katahdin mountains of Maine, while viewing them from the hills around Bangor at a distance of almost a hundred miles in the far north-east.

So ended a delightful and instructive visit to the eastern coast district of New England, where I gleaned much valuable materials for History, and enjoyed open-handed hospitality that can never be forgotten by the recipient.

¹ Watawanuc was the Indian name for the site of Stonington.

CHAPTER XXXIX.

"A veteran host, by veterans led,
With Ross and Cockburn at their head,
They came—they saw—they burned—and fled!
They left our Congress naked walls—
Farewell to towers and capitols!
To lofty roofs and splendid halls!
To conquer armies in the field
Was, once, the surest method held
To make a hostile country yield.
The warfare now the invaders make
Must surely keep us all awake,
Or life is lost for freedom's sake.

PHILIP STUART.

WHILE the events recorded in the preceding chapter were occurring on the New England coast, others of a more important character in the vicinity of Chesapeake Bay were attracting public attention. We have already observed how audaciously the British operated along the shores of the Chesapeake and Delaware Bays during the year 1813, continually menacing not only the smaller coast villages, but the larger cities. The national capital itself, situated at the head of the navigation of the Potomac, was in peril at times, and yet the government seemed to have been paralyzed by a strange delusion—a conviction that the British would never attempt to penetrate the country so far as the city of Washington, and that the archives of the nation were safe there. Tokens of danger were not wanting. First came intelligence, late in January, that four thousand British troops destined for the United States had landed at Bermuda. This was followed by the appearance of Admiral Cockburn, the marauder, in Lynnhaven Bay, on the 1st of March, with a 74 line-of-battle ship, two frigates, and a brig, and who commenced at once the practice of his wicked amphibious warfare. At the close of April a vessel from Europe brought the startling news of the downfall of Napoleon; and soon afterward came the announcement of his abdication and retirement to Elba, and the probable release of a large British force that might be sent to America.

For several months previous to the advent of Cockburn, thoughtful men had called the attention of the President and his constitutional advisers to the exposed state of the entire District of Columbia, and especially the capital, and to the importance of adopting vigorous measures for its defense.¹ The President appears to have feared danger, but his cabinet were unmoved. Even when the foe was so near that the booming of his cannon could almost be heard, they could not be impressed with a sense of impending danger; and on the 14th of May the government organ (*National Intelligencer*²) said: "We have no idea of the enemy attempting to reach the vicinity of the capital; and if he does, we have no doubt he will meet such a reception as

¹ So early as the middle of July, the previous year, when the enemy were no nearer the capital than at the time in question, General Philip Stuart, of the Maryland militia, offered a resolution in Congress for the distribution of arms among the people of the District of Columbia and the members of Congress for the defense of the capital.

² This paper is still (1867) published at Washington City, and, until recently, by Gales and Seaton, the proprietors in 1814.

Philip Stuart

A Dearth of Troops for the Defense of Washington. The Government alarmed. The President's Plan for Defense.

he had a sample of at Craney Island. The enemy knows better than to trust himself abreast of or on this side of Fort Washington." This idle boast and the government apathy were terribly rebuked a little more than three months afterward by British arms and British torches. At that very time hostile marauders were in the waters of the Potomac, and their leaders, employing competent spies, had made themselves perfectly acquainted with the condition of the country, and of military affairs around Washington.

June came, and yet there was strange apathy in official circles, and very little preparation for defense. In the entire Fifth Military District, of which the District of Columbia was a part, there were only two thousand one hundred and fifty-four effective enlisted men, of whom one half were at Norfolk, one quarter at Baltimore, and

the remaining quarter divided between Annapolis, Fort Washington, and St. Mary's. There were, besides, only a company of marines in the barracks at Washington, and a company of artillery at Fort Washington (late Fort Warburton), on the Potomac, twelve miles below the capital. Five hundred recruits for the regular army from North Carolina, under Lieutenant Colonel Clinch,¹ who had been in camp near Washington for the purpose of drill and exercise, were allowed to leave for the Northern frontier quite late in June, when the public mind was filled with alarm because of the menaces of the enemy.

At length the government was aroused to a sense of danger and responsibility by intelligence that a number of the largest class of transports had been fitted out at Portsmouth, England, "as well as all troop-ships in that port," for the purpose, it was believed, of going to Bordeaux and taking on board there the most effective of Wellington's reg-

iments and conveying them to the United States. This was confirmed at near the close of June by the arrival at New York of a cartel from Bermuda, which brought intelligence that she left at that port "a fleet of transports, with a large force, bound to some port in the United States, probably the Potomac." Official intelligence of this fact reached the government on the 26th, and on the 1st of July the President called a cabinet council and laid before them a well-considered plan of defense against threatened invasion, which had been suggested, if not actually prepared, by General William H. Winder, who had lately been exchanged, and had returned from Canada.² It contemplated the establishment of a camp of regular troops, two or three thousand strong, somewhere between the Eastern Branch of the Potomac and the Patuxent Rivers, in Maryland, and the concentration of ten thousand militia in the vicinity of Washington City.

D. F. Clinch

¹ Duncan L. Clinch was one of the most meritorious officers in the United States service. He was a native of North Carolina, and entered the army as first lieutenant of infantry in 1806, and was soon made regimental paymaster. He was promoted to captain in 1810, and lieutenant colonel in August, 1813. At the close of the war he was retained in the army, and was promoted to colonel in 1819. In 1829 he was breveted brigadier general for ten years' meritorious services. He was an efficient officer in the war with the Seminoles in 1835 and 1836. He resigned in September, 1836. From 1840 to 1845 he was a representative in Congress from Georgia. He died at Macon, Georgia, on the 25th of October, 1849. He was a brave soldier and noble-hearted man. I am indebted to his daughter, the wife of General Robert Anderson, of Fort Sumter fame, for the above portrait.

² Letter to the Secretary of War, June 30, 1814, in Winder's Letter-book.

Wm H Winder

The Cabinet approved the President's plan.¹ A new military district, entitled the Tenth, was formed, comprising Maryland, the District of Columbia, and the portions of Eastern Virginia lying between the Potomac and Rappahannock Rivers. Brigadier General Winder² was appointed to the command of it, and the government made a requisition upon the several States for militia to the aggregate of ninety-three thousand men, who were to be organized at home and held in readiness.³ The District of Columbia and the State of Maryland were called upon to furnish their respective quotas immediately, the former being two thousand men and the latter six thousand. Pennsylvania was directed to send five thousand and Virginia two thousand to the militia rendezvous at once. The naval defenses were intrusted to Commodore Barney, a veter-

eran commander, who was in the Patuxent with a small flotilla of gun-boats.

In official orders there appeared an army of fifteen thousand militia for the defense of Washington, and General Winder was envied as the fortunate commander of a larger force than had yet appeared in the field. But that army remained hidden in

¹ The Secretary of War could not be made to believe, even as late as August, when the enemy was almost at the door of the capital, that Washington City was his object. "What the devil will they do here?" was his question to one who expressed a belief that the capital was in danger. "No, no; Baltimore is the place, sir; that is of so much more consequence."—Statement of General Van Ness before a Committee of Inquiry. In his *Notices of the War of 1812*, the Secretary says that the attack on Washington was an after-thought of Admiral Cochrane when he had caused the destruction of Barney's flotilla. Cochrane, in a letter to the Board of Admiralty in September, said that the presence of a flotilla at the head of the Patuxent gave him a "pretext for ascending that river," while "the ultimate destination of the combined force was Washington, should it be found that the attempt might be made with any prospect of success." And at the beginning of August, a letter, written by some one on compulsory duty in the British fleet in the Chesapeake, dated July 27th, was placed in Winder's hands, and submitted to the Secretary of War, in which the intentions of the enemy to rush to the capital were fully revealed. "The manner in which they intend doing it is," said the writer, "to take advantage of a fair wind in ascending the Patuxent, and, after having ascended it a certain distance, to land their men at once and to make all possible dispatch to the capital, batter it down, and then return to their vessels immediately. In doing this there is calculated to be employed upward of seven thousand men."—*Winder Papers*.

On the contrary, Mr. Gleig, the now (1867) venerable chaplain general of the British Army, who accompanied the invaders, says that the destruction of Barney's flotilla was the *sole* object of the passage up the Patuxent, and that the capture and destruction of Washington was suggested by Cockburn, the marauder, when that work was accomplished.

² William H. Winder was born in Somerset County, Maryland, on the 15th of February, 1775. His ancestors were among the earliest settlers in that state, and were influential men. He was graduated at the University of Pennsylvania, studied law, and entered upon its practice. He went to Nashville, Tennessee, to settle, but found so little encouragement that he returned to his native state. At the age of twenty-three he was elected a member of the Maryland Legislature. In 1802 he took up his residence in Baltimore, and soon stood in the foremost rank at the bar in that city, where his rivals and friends were William Pinkney, Luther Martin, and men of that character. In March, 1812, he received the commission of lieutenant colonel of infantry, and was promoted to colonel in July following, and with troops from his state performed eminent service on the Niagara frontier. He was commissioned a brigadier in March, 1813, and in June following he was captured at Stony Creek, in Canada, and held as a prisoner of war until the spring of 1814. In May of that year he was appointed adjutant and inspector general, and at the beginning of July he was assigned to the command of the Tenth Military District. He was active in efforts to defend Washington City, and afterward Baltimore. After the retirement of the British he was ordered to the Northern frontier. He left the army in 1815, and returned to the practice of his profession with a ruined constitution. He was twice elected state senator. His health finally gave way, and he died in Baltimore on the 24th of May, 1824, at the age of forty-eight years. He was Grand Master of the Masonic Order in Maryland. No private citizen was ever before or since honored with such a funeral as his; and the pen of William Wirt indited a most eloquent eulogy of his character.

³ The requisition upon the several States was as follows: New Hampshire, 3500; Massachusetts, 10,000; Rhode Island, 500; Connecticut, 3000; New York, 13,600; New Jersey, 6000; Pennsylvania, 14,000; Delaware, 1000; Maryland, 6000; Virginia, 12,000; North Carolina, 7000; South Carolina, 5000; Georgia, 3500; Kentucky, 5500; Tennessee, 2000; Louisiana, 1000; Mississippi Territory, 500. Of this force \$400 were to be artillery, and the remainder infantry.

Tardiness of the Secretary of War.

Apathy of the People.

Winder's Advice and Warnings.

official paragraphs, and only a small portion of it confronted the invader, for he came before the States on whom the government had made a requisition for militia had moved in the matter. There was extraordinary tardiness every where, and indications of the most fatal official apathy or weakness. The Governor of Maryland, residing within an easy day's ride of the War Office, did not receive a copy of that requisition until six days after it was ordered; and the Governor of Pennsylvania did not receive his until ten days afterward. And it was not until the day when the British appeared in heavy force in Chesapeake Bay (July 12, 1814) that the Secretary of War placed a copy of it in the hands of General Winder, and then it was accompanied by a cautious order directing him, in the event of an invasion, to call for a part or the whole quota required of Maryland, but to "be careful to avoid unnecessary calls, and to apportion the call to the exigency."¹ Five days afterward another order from the War Department reached him, which gave him authority to draw, in addition to the Maryland quota, two thousand men from Virginia and five thousand from Pennsylvania, and assuring him that the whole of the militia of the District of Columbia, amounting to about two thousand, were kept in a disposable state, and subject to his orders.

General Winder had comprehended the difficulties of the situation from the beginning. As early as the 9th of July, before he had received notice of his appointment to the command, he wrote a letter to the Secretary of War, full of sound advice, wholesome warning, and sagacious predictions, but that functionary never deigned to reply to it.² He issued orders in accordance with his own judgment alone, and with an apparent obliviousness to stern facts—orders which implied the organization and readiness of the troops mentioned when there was not a shadow of such force in existence. The Governor of Maryland (Levin Winder), after issuing drafts for three thousand men, found that scarcely so many hundreds could be collected; and the Governor of Pennsylvania informed the Secretary of War that, in consequence of the defect of the militia laws of that commonwealth, the executive had no power to enforce the draft.

General Winder entered upon his duties with alacrity, under the inspiration of seductive promises by the government; and, notwithstanding he was soon made to feel that he was the victim of official incompetency, he was untiring in his exertions to make the defense of the District a certainty. He visited every part of the region to be defended, inspecting every fortification under his command, and reconnoitring every position thought to be favorable for the defense of the capital.³ He was in daily communication with the government, giving information, sounding notes of alarm, and making wise suggestions. "The door of Washington" (meaning Annapolis), he wrote on the 16th of July, "is wide open, and can not be shut with the few troops under my command." Fort Madison there was utterly defenseless, and too unhealthful for a garrison to occupy it. He warned the government that its heavy armament might be easily seized by the invaders, and turned upon the town and Fort Severn with fatal effect.⁴ He begged in vain for efforts to save that post, and made stirring appeals to the people to come forward for the defense of the state. Yet, notwithstanding the danger that threatened, and his great personal popularity, heightened by good deeds on the Northern frontier, Winder was compelled to report on the 1st of August that he had actually in camp only one thousand regulars, and about

¹ The Secretary of War, as we have seen, did not believe that the British would attempt to penetrate to Washington; and on the day when he gave this cautious order, the *National Intelligencer* (the government organ) said, "It is not probable they will be required to be embodied unless the enemy should attempt to execute his threats of invasion."

² Autograph Letter, Winder Papers; Report of an Investigating Committee of Congress.

³ It is related that a farmer living near Bladensburg, who having, with some of his neighbors, followed some directions for deep plowing given in a book, struck the gravel below his soil, and allowed all his manure to leach through and thus ruin his land, saw General Winder one day, when the British were near, with a map in his hand, inspecting that region. "He'll be whipped," said the farmer. "Why?" asked a by-stander. "Because he's going to book-fighting the British, as we have been book-farming, and got whipped."

⁴ Autograph Letter.

The British appear in Chesapeake Bay.

Barney's Flotilla.

General Winder's Calls for Troops.

four thousand militia enrolled, a larger proportion of them yet to be collected. The government had neglected to call for cavalry and riflemen, very important branches of the service.

While these feeble efforts were in operation the enemy appeared in strong force. On the 16th of August the small British squadron in the Chesapeake was re-enforced by a fleet of twenty-one vessels under Admiral Sir Alexander Cochrane, the senior commander on the American station. These were soon joined by another under Commodore Sir Charles Malcolm. These vessels bore several thousand land troops commanded by General Ross, an Irish officer, and one of Wellington's most active leaders. Washington and Baltimore appear to have been chosen objects of attack simultaneously. A part of the British naval force, under Captain Gordon, went up the Potomac, and another portion, under Sir Peter Parker, went up the Chesapeake toward Baltimore.

At that time Commodore Barney, with a flotilla of thirteen armed barges and the schooner *Scorpion*, with an aggregate of about five hundred men, was in the Patuxent River. His vessels had been chased out of the Chesapeake, and blockaded in St. Leonard's Bay. Of this confinement

Henry Carbery

they were relieved by some artillery under Colonel Henry Carbery,¹ with which he drove away the *Loire*, the blockading frigate, when the released

flotilla went up the Patuxent, first to Benedict, and then to Nottingham, that it might be within co-operating distance of both Washington and Baltimore. Seeing this, the British determined to capture or destroy it, and on the 18th of August a force of a little more than five thousand men, composed of regulars, marines, and negroes,² went up the Patuxent, and landed at Benedict with three cannon under cover of an armed brig. Most of the other large British vessels were below, some of them aground, and all too heavy to ascend the comparatively shallow stream.

Barney, then at Nottingham,³ promptly informed the Navy Department of this movement, and of a boast of the British admiral that he would destroy the American flotilla, and dine in Washington the following Sunday. General Winder, by direction of the War Department, immediately ordered General Samuel Smith's division (the Third) of the Maryland militia into actual service. He also called upon General John

^a August 18, P. Van Ness,⁴ commander of the militia

of the District of Columbia, for two brigades, to be encamped near Alexandria; and he sent a

John P. Van Ness

^b August 19. circular letter^b to all

the brigadiers of the Maryland militia, asking for volunteers to the amount of one half of their respective commands. By his orders, his adjutant general, Hite, issued a stirring appeal to the citizens to come forward, "without regard to sacrifices and privations," in defense of the national capital. Winder also asked General Stricker, of Baltimore, to send to Washington his volunteer regiments of infantry and his rifle battalion. These calls for volunteers were approved by the Secretary of War, who enjoined Winder so to word the requisition as "to guard against interfering with the legal draft."⁴

¹ Henry Carbery was a captain in the American Navy in 1792, and resigned in 1794. He entered the military service in Maryland in the spring of 1813 as colonel. He died on the 26th of May, 1822.

² These "disciplined negroes" had been forced by threats, and bribed by promises of freedom, to enter the British service.

³ Barney had been very active with his flotilla in opposing the marauding expeditions of the British. On the 9th of July he wrote from Nottingham to a friend, saying, "Six times in one month I have beat the enemy, always increasing in their force, so that I believe they are tired of me. They now lie at the mouth of the Patuxent."—Autograph Letter.

⁴ Autograph Letter, Winder Papers.

Gathering of Troops.

The British in the Patuxent.

Destruction of Barney's Flotilla.

The veteran patriot, General Smith, promptly responded to the call of the government. He at once issued a division order,^a in which he gave notice of the invasion, and directed the whole of General Stansbury's brigade (the ^{August 19, 1814.}

Tob. E. Stansbury

Third) to be held in readiness for active service, adding, "The third brigade is now under the pay of the United States, in its service, and subject to the Ar-

ticles of War."¹ That corps General Smith declared to be "the finest set of men he ever saw."² They paraded at four o'clock the same day, and on the following morning General Stansbury³ left Baltimore for Washington with thirteen hundred of his corps. Another force, under Lieutenant Colonel Joseph Sterett, consisting of the Fifth Regiment of Baltimore Volunteers, Major Pinkney's⁴ rifle battalion, and the artillery companies of Captains Myers and Magruder, left Baltimore on the evening of the 20th, and joined Stansbury on the evening of the 23d. With wise precaution, General Smith ordered^b the eleventh ^{August 20.} brigade and Colonel Moore's cavalry to hold themselves in readiness to march to Baltimore at a moment's warning, for it seemed probable that the enemy would strike at both cities simultaneously. They were ordered to Baltimore on the 23d.

Joseph Sterett

The British in the mean time had moved up the Patuxent from Benedict, the land troops being accompanied by a flotilla of launches and barges that kept abreast of them. The naval forces were under the command of the notorious marauder, Cockburn. They reached Lower Marlborough on the 21st, when Barney's flotilla, then in charge of Lieutenant Frazier and a sufficient number of men to destroy it if necessary, moved up to Pig Point, where some of the vessels grounded in the shallow water. Barney had landed with four hundred seamen and pushed on toward Winder's head-quarters, then at the Wood Yard, on the road between Upper Marlborough and Washington, and twelve miles from the latter, where he had established a slightly-intrenched camp. Frazier was instructed to destroy the flotilla at Pig Point rather than allow it to fall into the hands of the foe. This order was obeyed, and the flotilla was blown up on the morning of the 22d, when the enemy moved up from Notting-ham in forty barges, and commenced firing upon it with cannon and rockets.⁵ They found only the ruins of Barney's vessels at Pig Point. Their land force pressed forward to Upper Marlborough, whence a road led directly to Washington City, and there encamped, leaving Cockburn and the British flotilla at Pig Point.

Now let us see what forces were at the disposal of General Winder for the defense of Washington. There were two small brigades of District troops. One of these comprised the militia and volunteers of Washington and Georgetown, arranged in two regiments under Colonels Magruder and Brent, and was commanded by General Walter Smith, of Georgetown. Attached to the brigade were two companies of light

¹ General Smith's MS. Order-book. I am indebted to the kind courtesy of General John Spear Smith, of Baltimore, son of General Samuel Smith, and his aid-de-camp in 1814, for the use of his father's military papers of this period.

² Autograph Letter to General Winder.

³ Tobias E. Stansbury lived to the great age of ninety-three years. He was an active public man from the commencement of the Revolution almost to the time of his death, which occurred in Baltimore County, Maryland, on the 25th of October, 1849. He was repeatedly a member of the Maryland Legislature, and was Speaker of its House of Delegates. He always enjoyed the perfect confidence of his fellow-citizens.

⁴ See sketch of William Pinkney on page 148.

⁵ Barney's autograph Letter to the Investigating Committee, October 30, 1814.

The Forces gathered for the Defense of Washington and Baltimore.

artillery, commanded respectively by Major George Peter, of the regular army, and Captain Benjamin Burch, a soldier of the Revolution. There were also two rifle companies under Captains Doughty and Stull. This brigade numbered, on the morning of the 21st of August, one thousand and seventy men. The second brigade was commanded by General Robert Young, and numbered five hundred men. It comprised a company of artillery led by Captain Marsteller. It was chiefly employed in defending the approaches to Fort Washington, about twelve miles below the capital. Brigadier General West, of Prince George's County, had troops on the look-out toward the Potomac.

The troops from Baltimore comprised a greater portion of the brigade of General Stansbury, formed in two regiments under Lieutenant Colonels Ragan and Schutz, thirteen hundred and fifty in number; and the Fifth Regiment, under Colonel Sterett, with artillery and riflemen already mentioned, the latter under the celebrated William Pinkney. The whole force from Baltimore was about two thousand two hundred, commanded by General Stansbury as chief. Besides these there were various detachments of Maryland militia, under the respective command of Colonels W. D. Beall (of the Revolution) and Hood, Lieutenant Colonel Kramer, and Majors Waring and Maynard—in all less than twelve hundred. There was also a regiment of Virginia militia under Colonel George Minor, six hundred strong, with one hundred cavalry. The regular army contributed three hundred men from the Twelfth, Thirty-sixth, and Thirty-eighth Regiments, under Lieutenant Colonel William Scott. To these must be added the sailors of Barney's flotilla, four hundred, and one hundred and twenty marines from the navy yard at Washington, furnished with two 18-pound-

ers and three 12-pounders. There were also various small companies of volunteer cavalry from the District, Maryland, and Virginia, under Lieutenant Colonel Tilghman, and Majors O. H. Williams and Charles Sterett, three hundred in number, and a squadron of United States dragoons commanded by Major Laval. The whole force was about seven thousand strong, of whom nine hundred were enlisted men. The cavalry did not exceed four hundred in number. The little army had twenty-six pieces of cannon, of which twenty were only 6-pounders. This force, if concentrated, would have been competent to roll back the invasion had the commanding officer been untrammelled by the interference of the President and his Cabinet.

Winder's vigilance was sleepless after the appearance of the invaders in the Patuxent. He was actively employed with the cavalry in reconnoitring; and on the morning of the 22d he ordered Lieutenant Colonel Scott's command, Laval's cavalry, Major Peter's artillery, and the rifle company of Stull, and another under Captain Davidson, acting as riflemen, with several field-pieces, numbering about eight hundred men, to proceed immediately to Nottingham, where the enemy had encamped during the night just passed, and reconnoitre and harass them. The remainder of Winder's force in hand was directed to follow in their support. The general himself, accompa-

The British move on Washington.

Alarming Note from Secretary Monroe.

Removal of the Public Records.

nied by his limited staff, proceeded in advance of the troops, and soon discovered the enemy moving up the river. He was convinced that an encounter with that overwhelming force would be perilous, and he ordered Scott and Peter to fall back to the Wood Yard and wait for him. The main body of the troops, under General W. Smith, had arrived in the mean time within two miles of the advance; and the whole American force, then within five miles of the invaders, including Barney's men and marines from the Washington Navy Yard, numbered about twenty-five hundred, fairly armed with muskets and rifles, and five pieces of heavy artillery.

On arriving at the junction of the roads leading respectively to Marlborough and the Wood Yard, General Ross, who led the British column in person, turned into the latter with the seeming intention of pushing on toward Washington. He was induced to do so by Cockburn, who thirsted for plunder, and who argued that the prestige which the British would acquire by the capture of the metropolis of the republic would be of immense advantage to the cause, and that no doubt the government, to save the city, would make a liberal offer of money, a circumstance that would greatly increase the marauder's amount of prize-money. After proceeding a short distance, Ross changed his course and proceeded toward Marlborough. Winder deemed it prudent to avoid an encounter, and in the afternoon he retreated toward the capital, and encamped at a place called Long Old Battalion Fields, about eight miles from the city, where he might be within easy striking distance of Bladensburg, the bridges over the East Branch of the Potomac, and the road leading to Fort Washington.¹

Colonel James Monroe, the Secretary of State, who had been several days with Winder reconnoitring the enemy, and watching all military movements, believed that Washington was in great peril, for he well knew the weakness of the American forces. While Ross was yet advancing, and before he retraced his steps and went toward Marlborough, Monroe sent the following dispatch to the President:

"The enemy are advanced six miles on the road to the Wood Yard, and our troops are retiring. Our troops were on the march to meet them, but in too small a body to engage. General Winder proposes to retire till he can collect them in a body. The enemy are in full march to Washington. Have the materials prepared to destroy the bridges.
J. MONROE.

"P.S.—You had better remove the records."²

This message produced the wildest excitement in the national capital, then a straggling town of between eight and nine thousand inhabitants, and caused a sudden and confused exodus of all the timid and helpless ones who were able to leave.

Winder's situation was an unenviable one. With a comparatively strong foe on his front, ready to fall upon him or the capital he was expected to defend, he had only about twenty-five hundred armed and effective men in camp, and many of these had been from their homes only three or four days. They were undisciplined and untried, and surrounded and influenced by a crowd of excited civilians, to whose "officious but well-intended information and advice" the general was compelled to listen. In addition to this intrusion and interference of common men, he was embar-

¹ See Map on page 929.

² Mr. S. Pleasanton, then employed in the office of the Secretary of State, made immediate arrangements for the removal of the books and papers of the State Department. He had linen bags made in which they were placed, and then conveyed in carts across the Chain Bridge, over the Potomac, two miles above Georgetown, to the grist-mill of Edgar Patterson, in Virginia. Considering them unsafe there, Mr. Pleasanton had them conveyed to Leesburg, thirty-five miles from Washington, where they were locked up in an unoccupied house, and the keys given to the Rev. Mr. Littlejohn, who had been one of the collectors of the internal revenue. Thus the precious documents of the Revolutionary period and other valuable papers now in the Office of the Rolls at Washington City were saved from destruction.—Autograph Letter of S. Pleasanton to General Winder, August 7, 1848. Mr. Pleasanton, in his account of this transaction, says: "While engaged in the passage-way of the buildings with the papers, the Department of State being on this side, and the War Department on the other side of the passage, General Armstrong, then Secretary of War, on his way to his own room, stopped a short time, and observed to me that he thought we were under unnecessary alarm, as he did not think the British were serious in their intentions of coming to Washington." To this belief the Secretary adhered until they were in full march upon the capital.

rassed by the presence and suggestions of the President and his Cabinet ministers, the most of them utterly ignorant of military affairs. Better would it have been for Winder and the country if these civilians, from the President down, had kept away from the camp and the field, and prudently preserved silence.

The fatigued little army at Long Old Fields had reposed but a short time when, at two o'clock in the morning (August 23), a timid sentinel gave a false alarm, and they were summoned to their feet in battle order. They were soon dismissed, and slept on their arms until dawn. At sunrise they were ordered to strike their tents, load the baggage wagons, and have every thing in readiness to move within an hour. When every thing was prepared for marching they were reviewed by President Madison. In the mean time Winder had ascertained from scouts that the British were resting quietly in their camp at Upper Marlborough, and he resolved to concentrate all the troops within his reach at some point between his present camp and that of the enemy. He accordingly sent orders to General Stansbury, at Bladensburg, to march with his own and Lieutenant Colonel Sterett's troops, and take position in the road within seven miles of Marlborough. The same order was sent to Lieutenant Colonel Beall, supposed to be then approaching with his corps from Annapolis. A detachment from General Walter Smith's brigade, under Major Peter, composed of the same companies as the detachment sent forward the day before, was ordered to move from camp in the same direction and for the same purpose—to approach as near the enemy as possible without incurring too much risk, and annoy him whether in motion or at rest. General Winder himself, accompanied by a troop of Laval's cavalry, started for Bladensburg at noon for the purpose of holding a conference with General Stansbury. When within four or five miles of that place, he was overtaken by Major McKenney with intelligence that Major Peter had met and skirmished with the vanguard of the advancing enemy, two or three miles from Marlborough, on the road toward the Wood Yard, had been driven back toward the Old Fields, and that General Smith had sent off the baggage toward Washington across the Eastern Branch, and had drawn up his own troops and Barney's seamen in battle order to await an attack from the foe. Winder immediately sent orders to Stansbury, now moving forward, to fall back toward Bladensburg, take the best position possible with his own and Sterett's troops in front of that village, and resist the enemy if attacked.

If driven, he was to retreat toward the capital. He then hastened back to the Old Fields, where he found Smith and Barney well posted. Stansbury's force took position in an orchard (near a mill yet standing near Bladensburg) on a gentle eminence, and there, behind a slight breastwork, he placed six heavy guns in position to command the pass into the town and the bridge southwestward of it. About one hundred yards in the rear

OLD MILL NEAR BLADENSBURG IN 1861.

* This is a sketch of the old mill made near the close of 1861. Bladensburg and the bridge are seen in the distance.

Advance of the British.

Retreat of the Americans.

Winder invites the Government to a Council.

of this position, in the small dwelling on Tournecliffe's farm, the surgeons of the command were placed, to receive and take care of the wounded soldiers.¹

General Ross rested at Upper Marlborough until after noon of the 23d, when, being joined by Cockburn and his seamen and marines, he moved forward at two o'clock, and, as we have observed, encountered and drove back Major Peter and his command. He then pressed steadily on unmolested to the junction of the roads leading respectively to Washington City and the Alexandria Ferry, on the Potomac River, not far above Fort Washington. There they halted. The Americans were puzzled. Some believed that an attack on Fort Washington in the rear, simultaneously with an assault by the British fleet in front, was contemplated; but more, and among these General Winder and Colonel Monroe, believed the national capital to be the prize sought to be won. Impressed with this conviction, Winder issued orders toward sunset for the troops to retire across the Eastern Branch Bridge and take position on the borders of the city, where greater facility would be afforded for assisting General Young, who was covering Fort Washington with a small force, and for drawing to himself Stansbury and Sterett if the enemy should advance rapidly upon the capital. Late at night the troops, greatly wearied and dispirited, encamped within the limits of the city. "Thus," said General Smith, "terminated the four days of service of the troops of this District. They had been under arms, with but little intermission, the whole of the time, both night and day; had traveled, during their different marches in advance and retreat, a considerable tract of country, exposed to the burning heat of a sultry sun by day, and many of them to the cold dews of the night, uncovered. They had in this period drawn but two rations, the requisition therefor in the first instance being but partially complied with, and it being afterward almost impossible to procure the means of transportation, the wagons employed by our quartermaster for that purpose being constantly impressed by the government agents for the purpose of removing the public records when the enemy's approach was known, and some of them thus seized while proceeding to take in provisions for the army."

The night of the 23d of August was marked by great excitement in the National capital. The President and his Cabinet indulged in no slumbers, for Ross, the invader, was bivouacked at Melwood, near the Long Old Fields, about ten miles from the city, and Winder's troops, worn down and dispirited, were fugitives before him. Laval's horsemen were exhausted, and Stansbury's troops at Bladensburg were too wearied with long marching to do much fighting without some repose. What the morning would reveal no one could tell, and the dark hours were passed in great anxiety by the troops and people. The Secretary of State was in his saddle half the night; and at midnight he had visited the head-quarters of Stansbury, acquainted him with the relative positions of Winder and Ross, and advised him to fall in the rear of the latter. Fortunately the military leader did not follow the advice of the civilian.

Winder's head-quarters were at Combs's, near the Eastern Branch Bridge, and at dawn the President and several of his Cabinet ministers were there.² Before their arrival, General Winder (who was greatly fatigued in body and mind, and had received a severe injury from a fall during the night) had sent a note to the Secretary of War, expressing a desire to have the counsel of that officer and of the government. This was a mistake. He had had too much of that bane to success already, and it was now administered too liberally for the good reputation of himself and his country. These government officers were so officious as well as fickle—fickle, because impulse, and not judgment, guided them—that the general's thoughts and plans were

¹ I have before me a very interesting narrative in manuscript of the events of the battle, which came under the observation of Dr. Samuel B. Martin, one of the surgeons stationed at Tournecliffe's house, where he was made a prisoner at the close of the battle.

² Secretaries of War, Navy, and Treasury, and the Attorney General.

interfered with at a moment when one mind should control all movements, and that mind be free to act untrammelled and unbiased.¹

While Winder and the government were in council, Ross moved toward Bladensburg. Laval's scouts first brought intelligence of the fact to head-quarters. They were soon followed by an express from Stansbury, giving positive information that the British were marching in that direction, with the view, no doubt, of crushing the little force of Baltimoreans near the Bladensburg Mill. Up to that moment the council believed that Ross would move on Fort Washington, or on the city by the very bridge near which they were in consultation. This delusive idea now vanished, and government, general, and troops all moved off toward the point of danger. Winder had now under his command at Washington and Bladensburg five thousand one hundred effective men. The force of the enemy was about the same.

It was ten o'clock in the morning when Winder ordered General W. Smith, with the whole of his troops, to hasten toward Bladensburg. Barney was soon afterward ordered to move with his five hundred men, and the Secretary of State, who had seen some military service in the Revolution, was requested by the President and General Winder to hasten to Stansbury and assist him in properly posting his troops. Mr. Monroe was immediately followed by General Winder and his staff. The Secretary of War then followed; and lastly the President and Attorney General, accompanied by some friends, all on horseback, rode on toward the expected theatre of battle.² Stansbury seems not to have been well pleased with the aid of the Secretary of State, for he afterward intimated that "somebody," without consulting him, changed and deranged his order of battle. That "somebody" was Colonel Monroe, as we shall presently observe.

Let us for a moment take a glance at the theatre on which the opposing forces were soon to meet face to face. It was the slopes and plain around Bladensburg, then a little straggling village at the head of small-craft navigation on the Eastern Branch of the Potomac, up which for four miles vessels of largest class might ride. The village is about six miles from Washington by the old post-road from that city to Baltimore. Another road from Georgetown joined the Washington Road at an acute angle a few yards from the bridge less than a hundred feet long, that spanned the stream at Bladensburg. Above the bridge the creek was every where fordable.

In the triangular field formed by the two roads just mentioned, and near the mill, General Stansbury's command was posted on the morning of the 24th. On the brow of a little eminence in that field, three hundred and fifty yards from the Bladensburg Bridge, between a large barn³ and the Washington Road, a barbette earth-work had been thrown up for the use of heavy cannon. Behind this work were the artillery companies from Baltimore, under Captains Myers and Magruder, one hundred and fifty strong, with six 6-pounders. These were too small for the high embankment, and embrasures were cut so that they might command the bridge and both roads. Major Pinkney's riflemen were on the right of the battery, near the junction of the

¹ It appears from contemporaneous testimony that, at the interview at Winder's head-quarters that morning, it was resolved by the President to give the supreme control of military affairs to the Secretary of War, but that in a short time the President changed his mind, who told the Secretary that "the military functionaries should be left to the discharge of their own duties on their own responsibilities."—See General Armstrong's account of the matter in his *Notices of the War of 1812*. The now (1887) venerable Jacob Barker, of New Orleans, who was at the seat of government at this time, in an interesting narrative of these events, says: "The President left Washington at about 9 A.M. [August 24], in great haste, to recall General Armstrong, who had preceded him about an hour with the President's order to supersede General Winder in the defense of the capital, and reaching the ground a few minutes before the fight began, said to General Armstrong, 'It is too late to make any change. Come with me, and leave the defense with the military authorities, where it belongs.'"—Letter to Mr. Carroll, February 8, 1848, in reply to one from that gentleman in the *New York Herald*, December 1, 1847. General Armstrong was offended, and, as he says in his narrative, "now became, of course, a mere spectator of the combat."

² Richard Rush, then Attorney General, says that the President informed him, when they were riding out toward Bladensburg, that one motive that caused his going to the field was to be on hand to give the requisite sanction to the claims to superior command of General Armstrong.

³ This barn, on the Georgetown Road, was yet standing in 1861. A small drawing of it is seen in the corner of the smaller section of the map on page 929.

Arrangements for Battle near Bladensburg.

THE BRIDGE AT BLADENSBURG IN 1861.¹

roads, and concealed by the shrubbery on the low ground near the river. Two companies of militia, under Captains Ducker and Gorsuch, acting as riflemen, were stationed in the rear of the battery, near the barn and the Georgetown Road. About fifty yards in the rear of Pinkney's riflemen was Sterett's Fifth Regiment of Baltimore Volunteers, while the regiments of Ragan and Schutz were drawn up *en echelon*,² their right resting

ing on the left of Ducker's and Gorsuch's companies, and commanding the Georgetown Road. The cavalry, about three hundred and eighty in all, were placed somewhat in the rear, on the extreme left, and seem not to have taken any part in the battle that ensued.

This, all things considered, seems to have been a judicious arrangement; but Colonel Monroe, without consulting General Stansbury, and in face of the enemy, then on the other side of the Eastern Branch, proceeded to change it, by moving the Baltimore regiments of Sterett, Ragan, and Schutz a quarter of a mile in the rear of the artillery and riflemen, their right resting on the Washington Road. This formed a second line in full view of the enemy, within reach of his Congreve rockets, entirely uncovered, and so far from the first line as not to be able to give it immediate support in case of an attack. This was a blunder that proved disastrous, but it was made too late to be corrected, the enemy was so near.

General Winder in the mean time had arrived on the field, and posted a third and rear line on the crown of the hills, near the residence of the late John C. Rives, proprietor of the *Washington Globe*, about a mile from the Bladensburg Bridge. This line embraced a regiment of Maryland militia, under Colonel

RESIDENCE OF THE LATE JOHN C. RIVES.³

¹ This view is from the right bank of the Eastern Branch, on the road leading to Washington.

² See note 4, page 652.

³ This mansion stands between the Baltimore and Washington Railway and the turnpike leading from Washington to Bladensburg. It is about four miles from the national capital. Mr. Rives, who died there on Sunday, the 10th of April, 1864, at the age of sixty-nine years, was one of the founders of the *Washington Globe*, the official organ of President Jackson. His partner in the establishment of that paper, Mr. Blair, survives him. Mr. Blair was the editor of the *Globe*, and Mr. Rives was the business manager. The latter was the publisher of the *Globe* at the time of his death. He was a noble and generous citizen. For a long time during the great Civil War he gave from his private purse about \$1000 a month to the families of the volunteer soldiers in the District of Columbia.

Duelling-ground at Bladensburg.

Beall, which had just arrived from Annapolis, and was posted on the extreme right; Barney's flotilla-men, who formed the centre on the Washington Road, with two 18-pounders planted in the highway a few yards from the site of Rives's barn, a portion of the seamen acting as artillerists; and Colonel Magruder's District militia, regulars under Lieutenant Colonel Scott, and Peter's battery, who formed the left. About five hundred yards in front of this position the road descends into a gentle ravine, which was then, as now, crossed by a small bridge (Tournecliff's), on the north of which it widens into a little grassy level, and formed the duelling-ground where De-

DUELING-GROUND NEAR BLADENSBURG.¹

ecatur and others lost their lives. Overlooking it, about one hundred and fifty yards from the road, is an abrupt bluff, on which the companies of Captains Stull and Davidson were posted in position to command that highway. Lieutenant

John Davidson

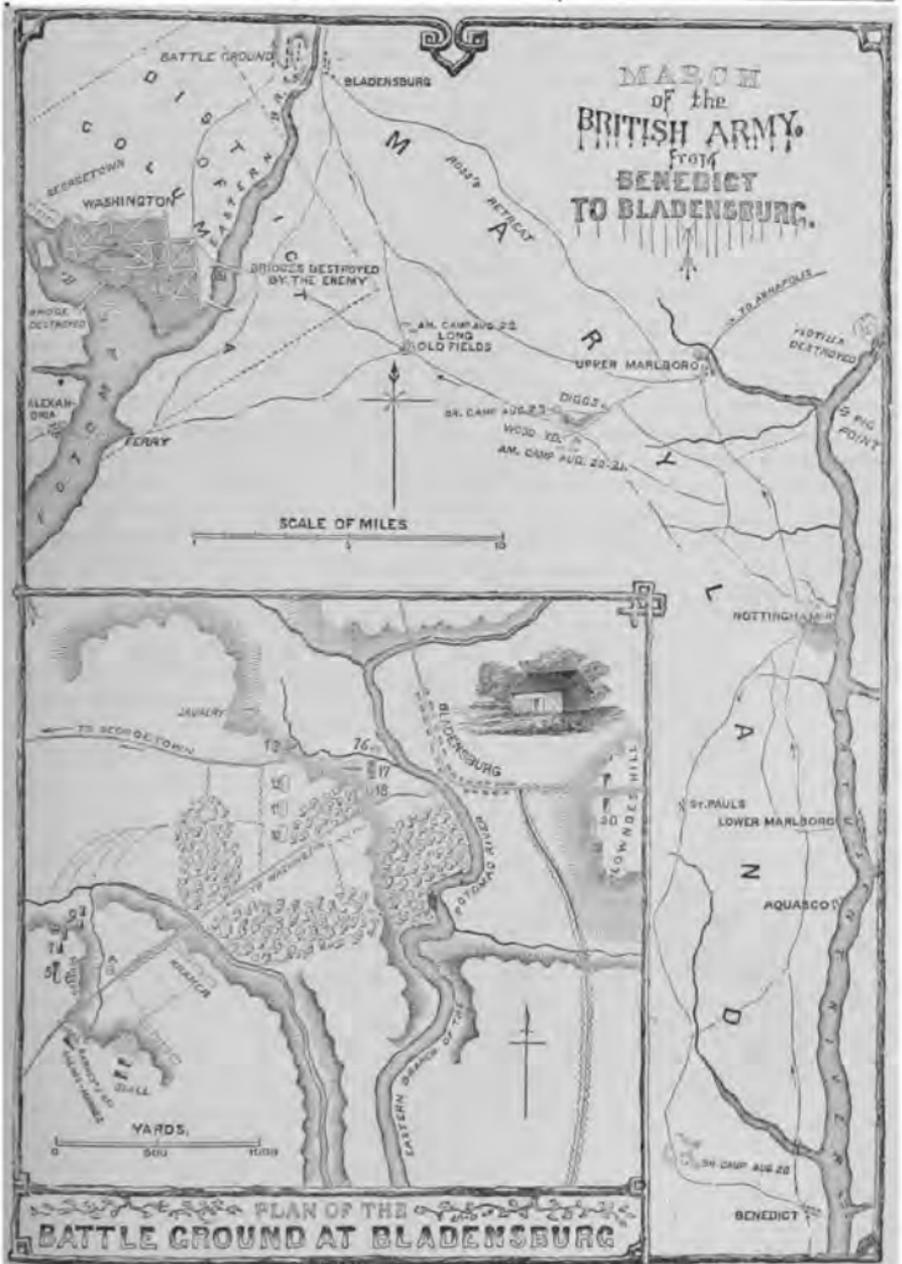

Colonel Scott, with his regulars, Colonel Brent, with the Second Regiment of General Smith's brigade, and Major Waring, with the battalion of Maryland militia, were posted in the rear of Major Peter's battery. Magruder was immediately on the left of Barney's men, his right resting on the Washington Road; and Colonel Kramer, with a small detachment, was thrown forward of Colonel Beall.

Such was the disposition of Winder's little army when, at noon, the enemy were seen descending the hills beyond Bladensburg, and pressing on toward the bridge. At half past twelve they were in the town, and came within range of the heavy guns

¹ This is a view of Tournecliff's Bridge and the Duelling-ground from the north side of the road from Washington to Bladensburg. The place where Decatur and Barron fought was on the low ground by the creek, seen immediately over the two figures in the picture, nearest the left of it. These officers fought with pistols on the 22d of March, 1810, when Decatur was mortally wounded, and died in the arms of his distracted wife at Kalorama, near Georgetown, the same night, at the early age of forty years. The event is elsewhere mentioned in this volume. Here, also, a duel was fought by Jonathan Cilley, of Maine, and W. J. Graves, of Kentucky (both members of Congress), on the 24th of February, 1828. They fought with rifles at eighty yards' distance. Cilley was mortally wounded at the third fire. The higher ground seen toward the right of the picture is the place where Captains Davidson and Stull were posted.

Other duels have been fought on this ground. The first was in 1814, when one of the parties (Edward Hopkins) was killed. The next was in 1819, by A. T. Mason and John M'Carty. Mason was killed. Decatur and Barron fought there the next year. In 1822, Midsheptan Locke, and Gibson, Chief Clerk of the Treasury Department, fought there. Gibson was shot. Key and Sherborn fought there in 1833, when Key was killed. The duel of Graves and Cilley, as we have seen, was in 1828. There was a duel there in 1845, when a lawyer named Jones killed Dr. Johnson. Hoole and Dallas exchanged shots there in 1850 or 1851.

Battle-ground at Bladensburg.

of the first American line.¹ The British commenced hurling rockets at the exposed Americans, and attempted to throw a heavy force across the bridge, but were driven back by their antagonists' cannon, and forced to take shelter in the village and behind Lowndes's Hill, in the rear of it.² Again, after due preparation, they advanced in double-quick time; and, when the bridge was crowded with them, the artillery of

Battle near Bladensburg.

Gallant and effective Stand by Commodore Barney.

Winder's first and second lines opened upon them with terrible effect, sweeping down a whole company. The concealed riflemen, under Pinkney, also poured deadly volleys into their exposed ranks; but the British, continually re-enforced, pushed gallantly forward, some over the bridge, and some fording the stream above it, and fell so heavily upon the first and unsupported line of the Americans that it was compelled to fall back upon the second. A company, whose commander is unnamed in the reports of the battle, were so panic-stricken that they fled after the first fire, leaving their guns to fall into the hands of the enemy.

The first British brigade were now over the stream, and, elated by their success, did not wait for the second. They threw away their knapsacks and haversacks, and pushed up the hill to attack the American second line in the face of an annoying fire from Captain Burch's artillery. They weakened their force by stretching out so as to form a front equal to that of their antagonists. It was a blunder which Winder quickly perceived and took advantage of. He was then at the head of Sterett's regiment. With this and some of Stansbury's militia, who behaved gallantly, he not only checked the enemy's advance, but, at the point of the bayonet, pressed their attenuated line so strongly that it fell back to the thickets on the brink of the river, near the bridge, where it maintained its position most obstinately until re-enforced by the second brigade. Thus strengthened, it again pressed forward, and soon turned the left flank of the Americans, and at the same time sent a flight of hissing rockets over and very near the centre and right of Stansbury's line. The frightened regiments of Schutz and Ragan broke, and fled in the wildest confusion. Winder tried

to rally them, but in vain. Sterett's corps maintained their ground gallantly until the enemy had gained both their flanks, when Winder ordered them and the supporting artillery to retire up the hill. They, too, became alarmed, and the retreat, covered by riflemen, was soon a disorderly flight.

The first and second line of the Americans having been dispersed, the British, flushed with success, pushed forward to attack the third. Peter's artillery annoyed, but did not check them; and the left, under the gallant Colonel Thornton, soon confronted Barney, in the centre, who maintained his position like a genuine hero, as he was. His 18-pounders enfladed the Washington Road, and with them he swept the highway with such terrible effect that the enemy fled off into a field, and attempted to turn Barney's right flank. There they were met by three 12-pounders and marines, under Captains Miller and Seyier, and were badly cut up. They were driven back to the ravine already mentioned as the dueling-ground, leaving several of their wounded officers in the hands of the Americans. Colonel Thornton, who bravely led the attacking column, was severely

Joshua Barney

wounded, and General Ross had his horse shot under him.

Barney wounded, made Prisoner, and paroled.

Biographical Sketch of Barney.

The flight of Stansbury's troops left Barney unsupported in that direction, while a heavy column was hurled against Beall and his militia, on the right, with such force as to disperse them. The British light troops soon gained position on each flank, and Barney himself was severely wounded near a living fountain of water on the estate of the late Mr. Rives, which is still known as Barney's Spring.¹ When it became evident that Minor's Virginia troops could not arrive in time to aid the gallant flotillamen, who were obstinately maintaining their position against fearful odds, and that farther resistance would be useless, Winder ordered a general retreat. The commodore, too severely hurt to be moved, became a prisoner of war,² but was immediately paroled by General Ross, and sent to Bladensburg after his wound was dressed by a British surgeon.³ There he was joined

VIEW AT BARNEY'S SPRING.

by his wife and son, and his own surgeon, and on the 27th was conveyed to his farm at Elkridge, in Maryland. The great body of the Americans who were not dis-

¹ The picture is a view at "Barney's Spring" when I visited and sketched it in December, 1860. It is a little south of the road leading between Washington and Bladensburg, and about two hundred yards southwest from the mansion of the late Mr. Rives. Barney's battery was in the road near by; and the stumps of two cedar-trees, a short distance from the site of the battery, indicate the spot where the commodore's horse, which was shot under him, was buried.

² Joshua Barney was born in Baltimore, Maryland, on the 6th of July, 1759. He went to sea when a small boy, and at the age of fourteen years was second mate of a vessel, and at sixteen was commander.

After many adventures abroad, he arrived in the Chesapeake in October, 1775. The following June he was appointed a lieutenant in the United States Navy, and was the first to unfurl the American flag in Maryland. He was a very active officer during the whole war. He brought the first news of peace with Great Britain, on the 12th of March, 1789. Continuing in service, he was one of the six commanders appointed under the act of 1793, but he declined the honor. He went to France with Monroe, and was the bearer of the American flag to the National Convention. He entered the French service in command of two fine frigates. He resigned his French commission in 1802, and returned home. He again entered the naval service of the United States in 1812, and distinguished himself during the war that ensued. He died of a bilious fever at Pittsburg, Pennsylvania, on the 1st of December, 1818, at the age of fifty-nine years. His remains were interred in the burying-ground of the First Presbyterian Church at Pittsburg, and over them a plain white marble slab was laid by his widow. They were removed to the Alleghany Cemetery on the 12th of May, 1848, where they repose in the shadow of thrifty young trees, without a record there on wood or stone. The bullet which finally caused the death of Commodore Barney was never extracted during his lifetime. In obedience to his orders, it was sought for after his death, and found. It is preserved in a disc of brass, with an inscription, in the archives of the Navy Department at Washington City. The annexed engraving is a representation, the exact size, of the bullet, the disc, and the inscription. The portrait of Barney on the oppo-

³ The page was painted by Joseph Wood, of Washington City, in 1818.

⁴ Dr. Martin, in his MS. Reminiscences, already mentioned, says that when he and other prisoners were going up the hill toward where Barney fell, they met a litter with the wounded commodore on it. He desired his guard to halt, and call the prisoners to him. The leader called out to them, "Coom over here, Yankees, to see your countryman, Barney; he looks like a spread eagle, Yankees!" The prisoners shook hands with the brave old commodore, who gave them words of cheer.

Close of the Battle of Bladensburg. The British march on Washington. An Excuse for burning the City wanted.

persed retreated toward Montgomery Court-house, in Maryland, leaving the battlefield in full possession of the enemy, and their way to the national capital unobstructed except by the burning of the two bridges over the Eastern Branch of the Potomac.¹ The Americans lost twenty-six killed and fifty-one wounded. The British loss was manifold greater. According to one of their officers who was in the battle, and yet living (Mr. Gleig, Chaplain General of the British Army), it was "upward of five hundred killed and wounded," among them "several officers of rank and distinction." The battle commenced at about noon, and ended at four o'clock.

Up to this time the conduct of the British had been in accordance with the rules of modern warfare. Now they abandoned them, and on entering the national capital they performed deeds worthy only of barbarians. In a proclamation issued by the President on the 1st of September he submitted the following indictment: "They wantonly destroyed the public edifices, having no relation in their structure to operations of war, nor used at the time for military annoyance; some of these edifices being also costly monuments of taste and of the arts, and others depositories of the public archives, not only precious to the nation as the memorials of its origin and its early transactions, but interesting to all nations as contributions to the general stock of historical instruction and political science." Let us briefly examine the testimony of history.

When Ross was assured of complete victory, he halted his army a short time on the field of battle, and then, with the fresh Third Brigade, which had not been in the

THE CAPITOL IN 1814, FROM PENNSYLVANIA AVENUE.

conflict, he crossed the Eastern Branch Bridge. Assured of the retreat of the Americans beyond Georgetown, Ross left the main body a mile and a half from the Capitol, and entered the town, then containing about nine hundred buildings. He came to destroy the public property there. It was an errand, it is said, not at all

coincident with his taste or habits, and what was done by him appears to have been performed as humanely as the orders of his superiors would allow.² When, on his arrival in the Chesapeake, he had been informed by Admiral Cochrane that he (the admiral) had been urged by Sir George Prevost, the Governor General of Canada (who was not satisfied with the terrible devastation of the Niagara frontier at the close of 1813),³ to retaliate in kind upon the Americans for the destruction of the government buildings at York⁴ and the village of Newark,⁵ he demurred, saying that they

¹ The lower bridge, near the navy yard, had been left in charge of Captain Creighton, with orders to destroy it on the approach of the enemy. It was fired at four o'clock in the afternoon.

² Hoping to spare the town, Ross had sent an agent to negotiate for a pecuniary ransom. There was no competent authority to meet his agent, and if there was, the proposition would, as the President afterward said, have been treated with contempt.

³ See page 634.

⁴ See page 625.

⁵ See page 627. Evidently ashamed of the barbarism committed by British hands, Vice Admiral Cochrane attempted to palliate it by a pitiful trick. After the destruction of the capital, and the invaders were safely back on their vessels in the Potomac, Cochrane wrote a letter to Secretary Monroe, in which he said to him, "Having been called upon by the Governor General of the Canadas to aid him in carrying into effect measures of retaliation against the inhabitants of the United States for the wanton destruction committed by their army in Upper Canada, it has become imperiously my duty, conformably with the governor general's application, to issue to the naval force under my command an order to destroy and lay waste such towns and districts upon the coast as may be found available." Cochrane then expressed a hope that the "conduct of the executive of the United States would authorize him in staying such proceedings, by making reparation to the suffering inhabitants of Upper Canada," etc. This letter was antedated August 15, or six days before the battle of Bladensburg, so as to appear like a humane suggestion, in the non-compliance with which might be found an excuse for the destruction of the national capital. It did not reach Mr. Monroe until the morning of the 1st of August, a week after Washington was devastated, when that officer, in a dignified reply, reminded the vice admiral that the wanton destruction by the British of Frenchtown, Frederick, Georgetown, and Havre de Grace, and the outrages at Hampton by the same people, had occurred long before the destruction of Newark.

The British enter Washington.

Cockburn in his Element.

Destruction of the Public Buildings.

had carried on the war on the Peninsula and in France with a very different spirit, and that he could not sanction the destruction of public or private property, with the exception of military structures and warlike stores.¹ "It was not," says one of Ross's surviving aids, Sir Duncan McDougall, in a letter to the author in 1861, "until he was warmly pressed that he consented to destroy the Capitol and President's house, for the purpose of preventing a repetition of the uncivilized proceedings of the troops of the United States." Fortunately for Ross's sensibility there was a titled incendiary at hand in the person of Admiral Sir George Cockburn, who delighted in such inhuman work, and who literally became his torch-bearer.

The bulk of the invaders, having crossed the Eastern Branch, halted upon the plain between the Capitol and the site of the Congressional Burying-ground, when General Ross, accompanied by Cockburn and a guard of two hundred men, rode into the city at eight o'clock in the evening. They were fired upon from behind the house of Robert Sewall, near the Capitol, by a single musket, and the horse on which the general was riding was killed. Mr. Sewall's house was immediately destroyed. The same fate awaited the materials in the office of the *National Intelligencer*, the government organ, whose strictures on the brutality of Cockburn had filled that marauder with hot anger.² These, and some houses on Capitol Hill, a large rope-walk, and a tavern, comprised the bulk of private property destroyed, thanks to the restraining power of General Ross. Several houses and stores were also plundered. The unfinished Capitol, in which was the library of Congress, the President's house, a mile distant, the Treasury buildings, the Arsenal, and barracks for almost three thousand troops, were soon in flames, whose light was plainly seen in Baltimore, about forty miles northward. In the course of a few hours nothing of the superb Capitol and the Presidential mansion was left but their smoke-blackened walls.³ Of the public buildings only the Patent-office was saved.

All the glory that the British had won on the battle-field was lost in this barbarian

REMAINS OF THE CAPITOL AFTER THE FIRE.

conflagration. "Willingly," said the London *Statesman* newspaper, "would we throw a veil of oblivion over our transactions at Washington. The Cossacks spared Paris, but we spared not the capital of America." The British *Annual Register* for 1814 denounced the proceedings as "a return to the times of barbarism." It can not be concealed," the writer continued, "that the extent of devastation practiced by the victors brought a heavy censure upon the British character, not only in America, but

¹ Dr. Martin (see note 1, page 925) says: "General Ross was the perfect model of the Irish gentleman, of easy and beautiful manners, humane and brave, and dignified in his deportment to all. He was beloved by all his officers, and his prisoners had no reason to regret falling into such hands."

² Cockburn was about to apply the torch, when he was prevailed upon by the women of adjoining residences not to do so, as it would endanger their dwellings. He caused all the type and other printing materials to be thrown into the street, the printing-presses to be destroyed, and the library, containing several hundred volumes, to be burned. He assisted in this work with his own hands. His companions in the business were some sailors and soldiers.

³ These buildings were fired under the direct superintendence of Lieutenant George Pratt, the second of the *Sea-horse*, who was shot in the gun-boat battle on Lake Borgne, near New Orleans, a few months afterward.

The Barbarities of the British condemned by their Countrymen. The Navy Yard destroyed. The Long Bridge burnt.

REMAINS OF THE PRESIDENT'S HOUSE AFTER THE FIRE.

on the Continent of Europe." Continental writers and speakers condemned the act in unmeasured terms; and yet the government of England, which has seldom represented the sentiments of the *people*, caused the Tower guns to be fired in honor of Ross's victory; thanked the actors through Parliament; decreed a monument to that general in Westminster Abbey at his death; and, making additions to his armorial bearings, authorized his descendants forever to style themselves "Ross of Bladenburg!"¹

While the public buildings in Washington were in flames, the national shipping, stores, and other property were blazing at the navy yard; also the great bridge over the Potomac, from Washington City to the Virginia shore. Commodore Thomas

Thos. Tingey

Tingey was in command of the navy yard, and, before the battle, had received orders to set fire to the public property there in the event of the British gaining a victory, so as to prevent

its falling into the hands of the invaders. Tingey delayed the execution of the order for four hours after the contingency had occurred. When, at half past eight in the evening, he was informed that the enemy was encamped within the city limits, near the Capitol, he applied the torch, and property valued at about a million of dollars was destroyed. The schooner *Lynx* was saved, and most of the metallic work at the navy yard remained but little injured.² The fine naval monument, delineated on page 124, was somewhat mutilated, but whether accidentally at the time of the conflagration, or wantonly by the British, who went there the next day to complete the destructive work, is an unsettled question.³ At the same time, the Long Bridge over the Potomac was fired at both ends. The Americans on the Virginia side thought a large body of British troops were about to pass over, and fired that end to foil them, while the British on the city side, perceiving, as they thought, a large body of Americans about to cross over from the Virginia side, fired the Maryland end of the bridge. The value of the entire amount of property destroyed at Washington by the

¹ The London *Times*, then, as now, the exponent of the principles of the ruling classes in England, and the bitter foe of the American people, gloried in the destruction of the public buildings, and the expulsion of the President and Cabinet from the capital, and indulged in exulting prophecies of the speedy disappearance of the great republic in the West. "That ill-organized association," said the *Times*, "is on the eve of dissolution, and the world is speedily to be delivered of the mischievous example of the existence of a government founded on democratic rebellion." In long after years, when Cockburn died at the age of eighty-two, the *Times* lauded him chiefly for his marauding exploits in this country, and his "splendid achievement" in firing our national capital.

² Letter of Commodore Tingey to the Secretary of the Navy, August 27, 1814. The officers and other persons at the navy yard fled in boats to Alexandria.

³ On the day after the entrance of the British into Washington (August 26), a party of two hundred of them were sent to finish the work of destruction at the navy yard. A large quantity of powder, shot, and shell had been thrown into a well. A British artilleryman accidentally dropped a match into it, when a terrible explosion occurred, and communicated fire to a small magazine of powder near by. That also exploded. Earth, stones, bricks, shot, shells, etc., were thrown into the air, and, falling among the invaders, killed twelve men, and wounded more than thirty others.

Flight of the President and his Cabinet.

Mrs. Madison's Patriotism.¹

Jacob Barker at the President's Home.

British and Americans was estimated at about two million dollars. The walls of the Capitol and President's house stood firm, and were used in rebuilding.

President Madison, and other civil officers who went out to see the fight and give such assistance as they might, remained on the field until Barney fell, when they fled to the city as fast as swift-footed horses could carry them, and were among the first to announce the startling intelligence that the British, victorious, were probably marching on the town.¹ Mrs. Madison² had already been apprised of the danger. When the flight of Congreve rockets caused the panic-stricken militia to fly, the President sent messengers to inform her that the defeat of the Americans and the capture of the city seemed to be promised, and to advise her to fly to a place of safety. These messengers reached her between two and three o'clock. Mrs. Madison ordered her carriage, and sent away in a wagon silver plate and other valuables, to be deposited in the Bank of Maryland. She anxiously waited for her husband, and in the mean time took measures for preserving the full-length portrait of Washington, painted by Stuart, which hung in the presidential mansion.³ Finding the process of unscrewing the frame from the wall too tedious for the exigency, she had it broken in pieces, and the picture removed with the "stretcher," or light frame on which the canvas was nailed. This she did with her own hands. Just as she had accomplished so much, two gentlemen from New York, one of whom was the now (1867) venerable New Orleans banker, Jacob Barker,⁴ entered the room. The picture was lying on the floor. The sounds of approaching troops were heard. They might be the invaders, who would be delighted by the possession of so notable a captive as the beautiful wife of the President. It was time for her to fly. "Save that picture," she said to Mr. Barker and Mr. R. G. L. De Peyster, his companion — "save that picture, if possible; if not possible, destroy it: under no circumstances allow it to fall into the hands of the

D. P. Madison

¹ The Opposition press and speakers were merry over the flight of the President and his Cabinet from the battle-field. A New York paper said: "Should some Walter Scott in the next century write a poem, and call it *Madison, or the Battle of Bladensburg*, we would suggest the following lines for the conclusion, to be put into the mouth of his hero:

"Fly, Monroe, fly! run, Armstrong, run!
Were the last words of Madison."

² Dolley Payne was the maiden name of Mrs. Madison. She was the daughter of Quaker parents, residents of Virginia, and was born on the 20th of May, 1767, while her mother was visiting some friends in North Carolina. Her father manumitted his slaves, and made Philadelphia his residence. There Dolley married a young lawyer named Todd, who was also a Quaker. He died, leaving her a young widow with an infant son; and in 1794 she married Mr. Madison, then a distinguished member of Congress, and Montpelier, in Virginia, became their home. She adorned every station in life in which she was placed. She died in July, 1859, at the age of eighty-three years, having survived her husband fourteen years.

³ Mrs. Madison wrote to her sister at intervals. At three o'clock she wrote: "Mr. Madison comes not. May God protect him! Two messengers, covered with dust, come to bid me fly, but I wait for him. . . . Our kind friend, Mr. Carroll, has come to hasten my departure, and is in a very bad humor with me because I insist on waiting until the large picture of General Washington is secured, and it requires to be unscrewed from the wall."

⁴ Jacob Barker is one of the remarkable men of this country. He was born in Maize on the 17th of December, 1779. His mother was a Quaker, and he has been a member of that Society through life. He entered early into mercantile life, and became largely interested in commerce as an extensive ship-owner. He was a firm and efficient supporter of the administration during the war, and aided the government largely in its financial operations. He was an intimate family friend of President Madison. He became extensively engaged in banking, and his long and active life has been a scene of many vicissitudes for him. He is now (1867), at the age of eighty-nine years, engaged in banking in the city of New Orleans.

The Declaration of Independence saved. Original Object of this British Invasion. Their Fears of the aroused People.

British." Then, snatching up the precious parchment on which was written the Declaration of Independence and the autographs of the signers, which she had resolved to save also, she hastened to the carriage with her sister (Mrs. Cutts) and her husband, and two servants, and was borne away to a place of safety beyond the Potomac.¹

Just as Barker and De Peyster had taken the picture from the stretcher and rolled it up, a portion of the flying American army came up, and halted in front of the President's house. Some refreshments were given to them, when they marched on toward Montgomery Court-house, the appointed place of rendezvous for the broken army, followed by those gentlemen with the picture. They left it in charge of a farmer in whose house they lodged that night, and a few weeks afterward Mr. Barker restored the portrait to Mrs. Madison.² It now

hangs upon the wall in the Blue Room of the Presidential mansion.

It was not the design of the British to hold the territory which they had, unexpectedly to themselves, acquired. Indeed, the whole movement up the Chesapeake was originally intended as a feint—a menace of Baltimore and Washington, to engage the attention of the government and people, and to draw in that direction the military force of the country, while the far more important measure of invading Louisiana with a formidable force, and taking possession of the Mississippi Valley, should be matured and executed. Accordingly, when Winder's forces were defeated and routed, the President and his Cabinet driven from the national capital, and the public buildings were destroyed, the invaders retreated precipitately, evidently in fear of a reactive blow. While the British Cabinet, judging from metropolitan influence in European countries, were disposed to believe that, with the loss of their capital, the Americans would consider all gone, and would yield in despair to their victors, those conquerors, on the spot, saw too well the danger to be apprehended from the spirit of a people aroused to greater exertions, and with more united energy, because of that very misfortune.

¹ The flight of the President from the battle-field, and of Mrs. Madison from the Presidential mansion, formed the subject of many squibs for the Opposition. Among others was a witty parody on *John Gilpin's Ride*, only one stanza of which I can now recall. It is descriptive of Mrs. Madison's directions for the flight of the family, where she says to the President:

"Sister Cutts, and Cutts and I,
And Cutts's children three,
Shall in the coach—and you shall ride
On horseback after we."

According to letters among General Winder's papers, the President and his Cabinet fled to different places. On the 26th, the day after the British withdrew from Washington, the President, with General Mason, the Commissary of Provisions, and Richard Rush, the Attorney General, was at Brookville, in Maryland; the Secretary of the Navy was with the President's family in Loudon County, Virginia; and the Secretary of War and Secretary of the Treasury were at Frederick, in Maryland, on the Monocacy River. As soon as the President was certified of the flight of the invaders to their ships, he summoned his Cabinet to a reunion at Washington. The President, with the Secretary of State, arrived there on the 28th. The reunion took place on the 29th.—Autograph Letters of Monroe and Armstrong, August 26 and 27, 1814.

² Oral statement of Mr. Barker to the author at New Orleans in April, 1861.

British retreat from Washington.

An Account by an Eye-witness.

Effect of the Invasion.

Impressed with a sense of this danger, Ross and Cochrane moved away with their forces with great secrecy on the night of the 25th of August, after ordering every inhabitant of Washington to remain within doors from sunset till sunrise, on pain of death, and increasing their camp-fires, so as to deceive the Americans. It was immediately after the passage of a terrific tempest of wind, lightning, and rain, during which houses were unroofed and trees were uprooted. Softly these victors stole away in the gloom. "No man spoke above his breath," says one of the British officers who was present. "Our very steps were planted lightly, and we cleared the town without exciting observation."¹ At midnight, just as the moon arose and cast a pale light over the scenes, they passed the battle-field and Bladensburg, leaving their dead unburied, and full ninety of their wounded to the humanity of Commodore Barney and his men. It was humiliating to the British troops thus to steal away in the dark from the field of their conquest. They moved sullenly onward, so wearied with fatigue and loss of sleep that, when the columns halted for a few minutes, the roads would be filled with sleeping soldiers. At seven o'clock in the morning, finding themselves but little annoyed by pursuers, they halted for rest and refreshments for several hours. At noon they moved forward, encamped at Marlborough, and, marching leisurely, reached Benedict on the 29th, where they embarked on the transports the next day.²²

G. R. Gleig

The loss of the battle at Bladensburg and of the national capital filled the American people with mortification, and produced the most intense excitement throughout the country.³ Crimination and recrimination kindled widespread anger, that burned intensely while the actors lived. The public were disposed to hold the Secretary of War responsible for the misfortune, because of his alleged obstinacy and inefficiency, and on the 3d of September he left the Cabinet, and retired to private

* August 26,
1814.

¹ Rev. George R. Gleig, now (1867) chaplain general of the British Army. He entered the army at an early age, was in the Peninsular War with Wellington, and served as a subaltern in America at Baltimore, and Washington, and New Orleans. He was severely wounded in the battle of Bladensburg. He has published two works on these campaigns, one entitled *The Subaltern in America*, and the other *Campaigns of Washington and New Orleans*. To these books, written with great candor, I am indebted for much information concerning the movements of the British in these campaigns. Mr. Gleig has been an industrious book-maker. After the war in this country he took orders, and was chaplain of Chelsea Hospital for some time. He was made chaplain general to the forces in 1846. A fine lithographed portrait of him, from which the above picture was copied, and his signature, I received from him through the hands of a gentleman residing in London.

² The chief authorities consulted in the preparation of the narrative of the capture of Washington are the official reports of the commanders; Wilkinson's *Memoirs*; Armstrong's *Notices of the War of 1812*; files of the National Intelligence; Niles's *Register*; Ingraham's *Sketch of the Events which preceded the Capture of Washington*; Jagersoll's *Historical Sketch of the Second War*, etc.; Williams's *History of the Invasion and Capture of Washington*; the *MS. Papers of General Winder and Commodore Barney*; Gleig's *Campaign of Washington*, etc.; *Statements of Survivors*, etc., etc.

³ Intelligence of the disaster reached Cincinnati on the 6th of September. General Harrison was there. Forgetful of the ill treatment which he had received from those in power, and anxious to save his country, he at once addressed a letter to the Governors of Ohio and Kentucky, to whom appeals had never been made in vain, suggesting the propriety of sending a volunteer force of dragoons and mounted riflemen to the aid of the people on the sea-board. Movements for that purpose were set on foot, when the repulse of the British at Baltimore, and their abandonment of expeditions (if ever conceived) against Philadelphia and New York, rendered farther operations in the West unnecessary.—Autograph Letter of General Harrison to Governor Shelby, September 6, 1814.

Who was to blame for the Defeat at Bladensburg.

Slavery the Culprit.

Fort Washington.

life.¹ The government gladly attempted to fix the odium upon the militia of Maryland and the District of Columbia, who were easily panic-stricken, and who, on being driven from the field, fled in disorder to their homes; and General Winder received a full share of blame, how worthily let the preceding narrative determine. Only Barney and his seamen were praised. Historians, puzzled by contemporaneous quarrels, have generally agreed in condemning both the government and the militia—the former for imbecility, and the latter for cowardice. A culprit more culpable than either may be discovered by close research. The late Alvan Stewart, in a letter to Dr. Bailey on the 30th of August, 1845, gives us a clew to the identity of the criminal. He says: "General Smith,² of Georgetown, District of Columbia, told me in 1818, while passing over this very ground [between Bladensburg and the national capital], in a journey I was taking to Washington City, that he commanded a brigade in the fleeing army of ours, and that the secret of our disgraceful flight was, that a story had been circulated through the District and adjacent counties of the two states, that on that day the slaves were to rise and assert their liberty,³ and that *each man more feared the enemy he had left behind, in the shape of a slave in his own house or plantation, than he did any thing else.*"⁴ The officers and soldiers had their minds distracted with the possibility of this insurrection," said General Smith, "and therefore fled to their homes before an inferior force, and left Washington to the mercy of its captors."⁵ Barney's men, having no such fears, fought gallantly and persistently. May we not look for the chief cause of the disaster at Bladensburg, and the loss of the national capital in 1814, to the slave system, which has cursed every thing upon which the blight of its influence has fallen?

While Cochrane and Ross were making their way toward Washington, a portion of the British fleet, consisting of two frigates of thirty-six and thirty-eight guns, two rocket-ships of eighteen guns each, two bomb-vessels of eight guns each, and one schooner of two guns, sailed up the Potomac River, under Commodore Gordon, of the *Sea-horse*, to co-operate with them. The only obstruction to the passage of the fleet on which the Americans might place the least reliance was Fort Washington (late Warburton), on the Maryland side of the Potomac, about twelve miles below the National capital. It was a feeble fortress, but capable of being made strong. So early as May, 1813, a deputation from Alexandria, Georgetown, and Washington waited upon the Secretary of War, and represented the importance of strengthening that post. An engineer (Colonel Decius Wadsworth) was sent to examine it. He reported in favor of additional works in the rear, while he believed that the armament

D. Wadsworth

of the fort, and its elevated situation, would enable a well-managed garrison to repulse any number of ships of war that might attempt to pass up the river. Nothing more was done. In July, 1814, when a British fleet and army were in the Chesapeake, the authorities of Alexandria again called the attention of the Secretary of War to the feeble condition of Fort Washington. The Secretary did not believe the enemy would push for the capital, and nothing was done. The Alexandrians appealed

¹ On the 29th of August President Madison informed General Armstrong that there was a high degree of excitement against him among the militia of the District, and that an officer of a corps had given notice that he would no longer obey any order coming through the then Secretary of War. He told Armstrong that he must so far yield to public clamor as to permit some other person to perform the duties of his office in relation to the defense of the District. Armstrong would not consent to a division of his duties, and resigned. In his letter of resignation, and in a subsequent paper, he offered a vindication of his conduct. In the year 1850 General Armstrong published a still more elaborate vindication, in two small volumes, entitled *Notices of the War of 1812*.

² General Walter Smith. See page 922.

³ On several occasions during the war the British had offered liberty to the slaves if the latter would join them, and on one occasion, as we have seen (page 690), preparations were made, on that account, for a general insurrection in South Carolina.

⁴ See the testimony of John Randolph on this point in a speech on the floor of Congress in the year 1811. See page 214.

⁵ *Writings and Speeches of Alvan Stewart on Slavery*, edited by his son-in-law, Luther R. Marsh, page 372.

Fort Washington neglected.

It is deserted and blown up.

British Ships pass up the Potomac.

to General Winder, who, in a letter to the Secretary of War,¹ recommended the strengthening of the post. Three of the banks of Alexandria offered to loan the government fifty thousand dollars for the construction of more defenses for the District. The money was accepted, but nothing was done to Fort Washington. When the battle of Bladensburg occurred, and the seat of government was left to the mercy of the invaders, Fort Washington was as feebly armed as ever, and its garrison consisted of only about eighty men, under Captain Samuel T. Dyson, who had received orders from General Winder to be very watchful, and, in the event of its being approached by the enemy on land, to blow up the fortification and retreat across the river.

The British squadron appeared before Fort Washington on the 27th of August,

FORT WASHINGTON.¹

three days after the capture of the capital. Captain Dyson either misunderstood General Winder's order, or was influenced by mortal fear, for he blew up and abandoned the fort without firing a gun.² No doubt the British fleet could have been kept below by the heavy cannon of the fort. Dyson chose not to try the experiment, and for his injurious conduct he was dismissed from the service.

The British squadron now had nothing to fear, and without hinderance it sailed on, and was anchored off Alexandria on the evening of the 28th. On the morning of the 29th it assumed a hostile attitude a hundred yards from the wharves, and was well prepared to lay every building in the town in ashes. The citizens had done what they could to protect their city.³ The able-bodied men and their heavy guns had been called to the defense of Washington City, and only exempts and a few others, not more than one hundred in all, were left. When the squadron came they had no effective means to oppose the intruders, and the citizens sent a deputation to Commodore Gordon to ask upon what terms he would consent to spare the town. He replied that all naval stores and ordnance; all the shipping and its furniture; merchandise of every description in the city, or which had been carried out of it to a place of safety; and refreshments of every kind, must be immediately given up to him. Also that the vessels which had been scuttled to save them from destruction must be raised, and delivered up to him. "Do all this," he said, "and the town of Alexandria, with the exception of public works, shall be spared, and the inhabitants

¹ This is a view of Fort Washington from the rear, looking across the Potomac to the Virginia shore, as it appeared in November, 1861. It is on the Maryland shore, about three miles higher up the river than Mount Vernon.

² In a letter to the Secretary of War, dated "Camp at Macon's Island, August 29, 1814," Captain Dyson excused his conduct by saying he had been informed that the enemy had been re-enforced at Benedict by six thousand men, and were marching on Fort Washington to co-operate with the fleet. This was a false rumor. He acted too precipitately to find out the truth, but not until it was too late to be useful.

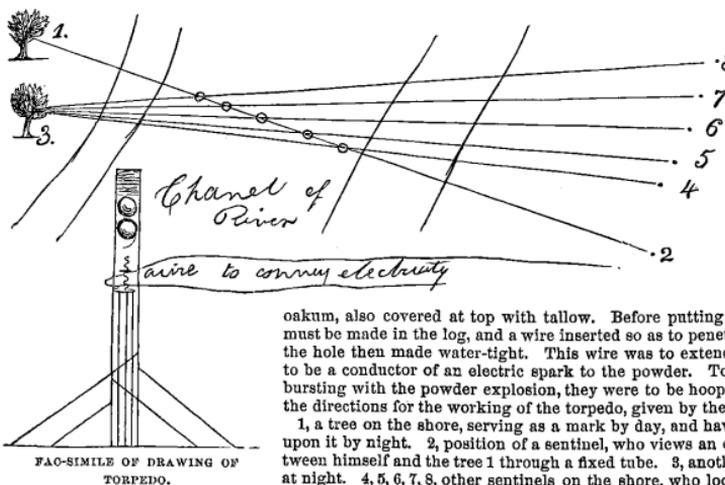

³ At about the time when the British fleet appeared in the Potomac, General Winder received from an unknown hand a sketch of a simple torpedo for blowing up vessels, with a description of its construction and use. The engraving of it on the next page is a fac-simile of the original pen-and-ink sketch found among the Winder papers. General Winder believed it was from General Guy, of Alexandria, who had conversed with him on the subject previously.

The torpedo's construction and use were described as follows: Ascertain the depth of the channel in which a row of torpedoes are to be placed, and cut trees three feet in diameter of such length as will allow ships to pass over them when they stand perpendicular. Bore them out with a pump auger, the hole being large enough for a 12-pound ball,

shall remain unmolested. These were harsh and humiliating terms, and the inhabitants were allowed only one hour for consideration. They were powerless, and were compelled to submit. The merchandise that had been carried from the town and the sunken vessels could not be given up to the invader, so he contented himself by burning one vessel and loading several others, chiefly with flour, cotton, and tobacco. With these in charge, the squadron weighed anchor and sailed down the Potomac.¹

On hearing of the surrender of Alexandria, the government determined to annoy, and, if possible, capture or destroy the British squadron in its descent of the Potomac. The Maryland and District militia could not be rallied in time, so the Secretary of the Navy sent an express to Commodore Rodgers, at Baltimore,² for him to hasten to the Potomac with as large a number of seamen as he could collect. These were placed under the command of Commodores Rodgers, Perry, Porter, and Creighton.³ Armed boats and fire-ships were soon prepared, and the seamen, in conjunction with the Virginia militia, gave the enemy a great deal of trouble. Batteries were erected on the river bank at the "White House," a short distance below Mount Vernon, and on Indian Head, both commanding points on the Virginia side of the stream. Musketeers were stationed on the thickly-wooded shores. Cannon were taken by District Volunteers, and placed in battery with all possible dispatch, and for several days from the

1814. 1st of September they kept the British war and plunder vessels from descending the river. Meanwhile the batteries and the militia were strengthened by accessions of guns sent down from Washington and men from the neighboring country, and at times there was heavy fighting. Finally the war vessels, ten in number, with an aggregate of one hundred and seventy-three guns, brought their concentrated

Then fill the place with hot tallow, so that it will thoroughly enter the pores of the wood, and make it impervious to water. Then bore it out again, and put in powder in flannel cartridges. Over the powder place two balls, and then pour in melted tallow again, so as to completely inclose the powder. Over the balls put a wad of

oakum, also covered at top with tallow. Before putting in the powder, a hole must be made in the log, and a wire inserted so as to penetrate the cartridge, and the hole then made water-tight. This wire was to extend to the shore. It was to be a conductor of an electric spark to the powder. To secure the trees from bursting with the powder explosion, they were to be hooped. The following are the directions for the working of the torpedo, given by the projector:

1, a tree on the shore, serving as a mark by day, and having a lantern hanging upon it by night. 2, position of a sentinel, who views an object on the water between himself and the tree 1 through a fixed tube. 3, another tree, with a lantern at night. 4, 5, 6, 7, 8, other sentinels on the shore, who look through fixed tubes upon tree number 3, their vision crossing that of sentinel number 2 at different positions. The circles in the channel of the river show the position of five tree torpedoes. Thus stationed, the different sentinels would all see a vessel, as it crossed their vision between them and tree 3, at different points. When the sentinel at 4, 5, 6, 7, or 8 sees an object on his line of vision, he will immediately pull a cord to convey information of the fact to number 2, and if, at the same time, that object covers the vision of the sentinel on line 1 and 2, the vessel must be over one of the torpedoes. Then number 2, having in charge the electric wire, will communicate the spark to the powder of the torpedo.

¹ The loss sustained by the Alexandrians by the surrender of the city consisted of three ships, three brigs, several small bay and river craft, 16,000 pounds of flour, 1000 hogsheads of tobacco, 150 bales of cotton, and \$5000 worth of wines and segars.

² Commodore Rodgers was at Philadelphia when the British captured Washington. As early as the 26th he had received an order from the Secretary of the Navy to hasten to Washington with all the force under his command. He started with four hundred seamen and fifty marines armed with muskets, and four pieces of artillery (12-pounders), but before he reached Baltimore he heard of the fall of the capital. At Baltimore he awaited farther orders.—Rodgers to Winder—Autograph Letter among the Winder Papers.

³ Perry and Porter were in Baltimore at the time, and accompanied Rodgers to Washington. The former was in command of the frigate *Java*, recently launched at Baltimore.

British Ships pass American Batteries and escape. Visit to the Battle-ground at Bladensburg. Oak Hill Cemetery.

power to bear upon Porter's battery at the "White House" and its supports, and drove all away. Perry's battery at Indian Head received like attention. His guns were skillfully managed by Lieutenant (late Commodore) George C. Read;¹ but Perry, like Porter, overwhelmed by a vastly superior force, was compelled to retire, and allow the enemy, with his plunder, to pass on to Chesapeake Bay.²

Thus ended the invasion which resulted in the capture of Washington City, the destruction of its public buildings and navy yard, the surrender and plunder of Alexandria, and the profound regret and humiliation of the American people.³

I visited the theatre of many of the events described in this chapter, in the years 1860 and 1861. At the close of the former year I was in Washington City, on my way southward to go over the region of the Creek War in Alabama⁴ from the Tennessee River to the Gulf of Mexico, and to view the grounds of conflict in the vicinity of New Orleans. I was met there by a letter from a distinguished South Carolina author, informing me that on a certain day a Convention would declare that state seceded from the Union,⁵ and advising me to defer my visit on account of the excitement and confusion that must inevitably follow such revolutionary action. On the day after receiving this letter,^a and while conversing with the venerable General Cass (who had lately left Mr. Buchanan's Cabinet in disgust) at his own house, a messenger brought to him the startling intelligence of the passage of the Ordinance of Secession by the South Carolina Convention of politicians.^b I shall never forget the extreme sadness of countenance, voice, and words of the eminent statesman after that announcement. "I hoped," he said, "to leave to my children, as an inheritance from patriotic men, a united, prosperous, and happy country; but all is over! This is but the beginning of the end!"

^a December 20, 1860.

^b December 20.

The political firmament was so cloudy that I concluded to defer my visit to the Gulf region until a more propitious time, and so I spent a week among the public records in the Departments at Washington, and in visiting the battle-ground at Bladensburg. I had the good fortune to go over that field of strife with the late John C. Rives, whose residence, we have observed,⁶ was near the place where Barney fought and fell. Being his guest for a day, we spent nearly the whole time in exploring the battle-ground, and making the sketches on preceding pages. Not long afterward the great Civil War broke out, and it was a year after the visit now considered before I was again in the National capital in the prosecution of this work, when it was filled with soldiery and all the paraphernalia of war. Accompanied by a young kinswoman, I then visited localities of interest connected with the War of 1812 in and around Washington City, at Baltimore, North Point, Havre de Grace, and other places.

It was a bright day in November^c when we rode over to Oak Hill Cemetery, near Georgetown, to visit the graves of General Towson and Commodore Morris. It was a beautiful spot. The burial-places were spread over the slopes of a broad ravine that went down to Piney Branch Creek, where the gentle murmur of a small cascade was heard. The ground was covered with stately oaks, and among them stood many commemorative monuments. I sketched those of Towson and Mor-

¹ Commodore Read died at Philadelphia, where he was Governor of the Naval Asylum, in August, 1868.

² On the 5th of September twenty-six sail passed Point Lookout, and at four o'clock on the afternoon of the 9th twenty-one ships, six brigs, and three smaller vessels were seen beating up the Chesapeake.—Autograph Letters from Thomas Swann, at Point Lookout, among the Winder Papers.

³ The slight resistance offered to the invaders during their operations in the space of twelve days excited great surprise, alarm, and indignation. They had been performed in the midst of a population most interested in the events, and capable of furnishing at least 20,000 able-bodied men for the defense of their homes and the National capital. The national honor required an investigation, and early in the next session of Congress a committee for that purpose was appointed by the House of Representatives. Their report exculpated the President and General Winder, but left Congress and the people to form their own judgment from the facts presented.

⁴ See Chapters XXIII and XXIV.

⁵ The writer was William Gilmore Simms. His letter was dated December 13, 1860. "In ten days more," he wrote, "South Carolina will have certainly seceded; and in reasonable interval after this event, if the forts in our harbor are not surrendered to the state, they will be taken."

slope, at the foot of which was a circular plain of ten or twelve acres, then beaten hard by the tread of troops, for it had been made a camp-ground. On the edge of this plain, overlooking a steep slope covered with oaks, was the family vault of Mr. Barlow,² in which the

BARLOW'S VAULT.

ris,¹ and a small uninscribed stone, with a cross upon it, near the latter, and then we rode back, crossed Piney Creek, and, a mile from Georgetown, entered a pleasant lane shaded with oaks, that led to the beautiful mansion of Kalorama, on the brow of a hill, which was once the residence of the eminent Joel Barlow.² At the time of our visit it was used as a hospital for soldiers sick with small-pox and measles. Before it was a gentle wooded

KALORAMA.

body of Commodore Decatur was laid on the 24th of March, 1820, two days after he fell in a duel with Commodore Barron, near Bladensburg.⁴ It was followed to this tomb by a vast concourse of people, and was placed in it with military honors.⁵

We returned to Washington just as the stars were appearing. Early the next day we rode out to the Congressional Burial-ground, which lies partly upon a plain, and

¹ A picture of Towson's appears on page 809, and Morris's on page 901.

² See page 94.

³ On each side of the entrance door to the vault was a white marble slab, suitably inscribed. Commencing on one, and running across to the other, are the words "Sacred to the repose of the dead and the meditation of the living." On the left-hand slab we read: "Joel Barlow, Patriot, Poet, and Philosopher, lies buried at Zarowitch, Poland, where he died, 26th December, 1812, aged fifty-seven years."

⁴ Judith Baldwin Barlow, his wife, died 29th of May, 1818, aged sixty-two."

⁵ Abraham Baldwin, her brother, died a senator in Congress from Georgia, 4th of March, 1807, aged fifty-two years. His memory needs no marble; his country is his monument; the Constitution his greatest work." Mr. Baldwin was a member from Georgia of the Convention that framed the National Constitution in 1787. On the right-hand side are inscriptions commemorative of the Bomford family.

* General Solomon Van Rensselaer, then in Washington City, wrote as follows to Mrs. Van Rensselaer:

"Washington, March 30, 1820.

"DEAR HARRIET,—I have only time, after writing to several, to say that an affair of honor took place this morning between Commodores Decatur and Barron, in which both fell at the first fire. The ball entered Decatur's body two inches above the hip, and lodged against the opposite side. I just came from his house. He yet lives, but will never see another sun. Barron's wound is severe, but not dangerous. The ball struck the upper part of his hip, and turned to the rear. He is ruined in public estimation. The excitement is very great."

On the following day Van Rensselaer wrote of his death, and said: "His poor wife (they have no children) is distressed beyond expression. She would suffer no one to be in her room, and, strange to say, she did not see him until after his death." General Van Rensselaer was misinformed, for she was present when he died. Mrs. Decatur survived her husband about forty years. She died at Georgetown, in the District of Columbia, in 1860.

² Decatur's remains were taken from his late residence in Washington City at four o'clock in the afternoon, and borne to Kalorama by the following officers: Commodores Tingey, Macdonough, Rodgers, and Porter, Captains Cassin, Ballard, and Chauncey, Generals Brown and Jesup, and Lieutenant M'Pherson. The funeral was attended by nearly all the public functionaries in Washington, American and foreign, and a great number of citizens. While the procession was moving, minute-guns were fired at the navy yard.

Departure from the National Capital.

partly upon an uneven slope toward the Anacostia, or Eastern Branch of the Potomac. It contains many beautiful monuments, and also monotonous rows of small marble cenotaphs erected to the memory of members of Congress who

GERRY'S MONUMENT.

died while representatives of districts, but who were not buried there. Among the most elaborately wrought of the fine monuments is that of Elbridge Gerry, who died

CENOTAPH.

suddenly while he was Vice-President of the United States.¹ It is of white marble, about thirteen feet in height, with a neat iron railing around it.² After sketching this monument and those of several other distinguished public servants, we returned to the city, and passed the evening pleasantly with Colonel C. S. Todd, one of General Harrison's staff in the War of 1812, already mentioned,³ and the late venerable Elisha Whittlesey, Comptroller of the National Treasury, who was also an active participant in the Second War for Independence.⁴

Having procured a special letter of permission from General M'Clellan, we started for old Fort Washington, twelve miles down the Potomac, on the following morning, accompanied by Mr. Samuel Yorke At Lee, Librarian of the Treasury Department. Beyond the Potomac, from Arlington Heights to Alexandria and below, we saw the white tents of

various military encampments. At Fort Washington, which stands upon the high bank of the Potomac, on the Maryland side, at the mouth of the Piscataway Creek, we were courteously received by Major Haskin, the commander of the garrison; and while making the sketch seen on page 939, we heard the heavy guns of the Confederates, who then blockaded the Potomac. It was twilight when we returned to Washington City. At an early hour the next morning we crossed the Long Bridge into Virginia, made a journey of almost twenty miles among camps and forts in the vicinity of the National capital, and returned to Washington at dusk. On Monday morning we departed for Baltimore, to visit places of historic interest there and in its vicinity.

¹ Mr. Gerry was boarding at the house of Mrs. Wilson, and was on his way from there to the Capitol when the death-announcements came to him in the street. At his funeral his body was taken from Mrs. Wilson's to the hall of the House of Representatives in charge of a committee of arrangements. From there it was conveyed to the Congressional Burying-ground by Messrs. Tallmadge, Macon, Brower, Sevier, Wright, Findley, Nelson, and Brigham, chosen pall-bearers, followed by all the public functionaries in Washington, domestic and foreign.

² Mr. Gerry was one of the signers of the Declaration of Independence, and had ever been conspicuous in public life. The following is a copy of the inscription on his monument: *East Side*—"The tomb of ELBRIDGE GERRY, Vice-President of the United States, who died suddenly in this city, on his way to the Capitol as President of the Senate, November 23d, 1814, aged seventy, thus fulfilling his own memorable injunction, 'It is the duty of every citizen, though he may have but one day to live, to devote that day to the good of his country.'" *West Side*—"Erected by order of the Congress of the United States, 1823."

³ See page 548.

⁴ See page 841.

NOTE.—In the smaller section of the map on page 929 are figures which indicate the position of certain troops, as follows: 5, Second Regiment, of Smith's brigade; 6, Major Peter's battery; 7, Major Waring's battalion; 8, Scott's regulars; 9, companies of Stull and Davidson; 10, Ragan's regiment; 11, Schutz's; 12, Fifth Baltimore Regiment; 13, Barch's artillery; 16, militia and riflemen; 17, Baltimore artillery; 20, the British.

CHAPTER XL.

"The gen'ral gave orders for the troops to march down,
To meet the proud Ross, and to check his ambition;
To inform him we have decreed in our town
That here he can't enter without our permission.
And if life he regards, he will not press too hard,
For Baltimore freemen are ever prepared
To check the presumptuous, whoever they be,
That may rashly attempt to evade our decree."—OLD SONG.

BALTIMORE was menaced while Washington was assailed. Indeed, the whole coast of the Chesapeake Bay, from its mouth to the Patapsco, was continually harassed by the invaders during August and September, 1814. "Whenever a favorable opportunity presented itself," wrote a British officer who participated in the capture of Washington, "parties landed, plundered or destroyed the government stores, and brought off all the shipping which could be reached. In a word," he says, with great candor, "the hostilities carried on in the Chesapeake resembled the expeditions of the ancient Danes against Great Britain rather than a modern war between civilized nations." He added, "But these hasty excursions, though generally successful, were not always performed without loss to the invaders."¹ We will here record two events in proof of the truth of the last observation, in which the courage and spirit of the Maryland militia were very conspicuous.

Among other places on the Chesapeake which received special attention from the British was the little village of St. Michael's, in Talbot County, on the eastern shore of the bay. It was founded by ship-builders, and was famous as the place where most of the swift-sailing privateers, called "Baltimore clippers," were constructed. At the time in question seven of these were on the stocks there. Cockburn, the raider, determined to destroy them, the ship-yards, and the town. Intimation of his intentions had been received at the village, and the veteran General Derry Benson, commander of the militia of Talbot County, prepared to receive them. He constructed two batteries, one at the entrance to the harbor or creek, mounting three 6-pounders and one long 9-pounder, and the other on an eminence in front of the town, armed with two 6-pounders.

Two companies from Easton, and two or three from the adjacent country, were called to the defense of St. Michael's, numbering in the aggregate about three hundred souls. They were in readiness for some time, waiting for the invaders. They appeared early in August,² in a small squadron, that entered Eastern Bay between the Talbot County main and Kent Island. Between midnight and the dawn of the 11th, while the darkness was intensified by thick clouds, they made their way in eleven barges (each armed with a 6-pound field-piece), with oars muffled, so secretly that the booming of their cannon was the first intimation the Americans received of their near presence. The Marylanders were a little surprised, yet they behaved most gallantly. They returned the fire with spirit from the lower battery. The 9-pounder was in charge of Captain William Dodson, of St. Michael's, and did terrible execution. He had literally crammed it with grape and canister shot, and

¹ Campaigns of Washington and New Orleans, by the Rev. G. R. Gleig. See page 937.

The Defense of St. Michael's.

Exploits of Sir Peter Parker.

Infamous Conduct of Admiral Cockburn.

being well acquainted with every foot of the locality, he knew precisely, by sounds, where to fire most effectively in the gloom. The invaders, under cover of their heavy guns, had landed in a compact body for the purpose of storming the batteries, and when Dodson opened his great gun upon them, a wide swathe was cut through their line. Nineteen of the British were killed, and many were wounded. The Americans, finding themselves outnumbered, fled to the upper battery, whose guns, worked by Captains Vickers and Auld, kept up a continuous fire on the foe. The fight continued until daylight, when the British fled to their boats and abandoned the enterprise. They had spiked the guns in the lower battery, and this was the principal loss sustained by the Americans.¹ St. Michael's and its ship-yards were saved by the gallantry of a few spirited militia, and no attempt to enter its harbor was ever afterward made by a British armed vessel. It is yet a flourishing town of about eight hundred people, surrounded by fertile land and deep estuaries of the Chesapeake.

Soon after the expulsion of the invaders from St. Michael's, Sir Peter Parker, of the Royal Navy, appeared in the Upper Chesapeake for the purpose of patrolling its waters and blockading the harbor of Baltimore with two vessels under his command, while Cochrane, and Ross, and Cockburn were penetrating the country to Washington. His flag-ship was the frigate *Menelaus*, 38, and his deportment was so haughty, and his acts, under the direction of his superior, Cockburn, were so cruel,² that the Americans became greatly exasperated. He frequently sent parties ashore to plunder and destroy private as well as public property, and he swept domestic commerce from the bay. He boasted to his superiors that during the month of his blockading service not a single American boat crossed the waters of the Chesapeake.

On the fall of Washington Sir Peter was ordered to proceed down the bay. "I must first have a frolic with the Yankees," he said.³ Accordingly, on the night of the 30th of August,⁴ after a jolly dinner with his officers, and indulgence in drinking and dancing, he proceeded to engage in the sport. He had been informed that a body of Maryland militia were encamped at Moorfields, near the Georgetown Cross Roads, on the eastern shore of Maryland (not far from Chestertown), and he prepared to surprise them. They were less than two hundred in number, under the vigilant Colonel Read, who was fully apprised of the movement.

The *Menelaus* ran into one of the numerous estuaries, and at eleven o'clock at night landed a force of seamen and marines, armed with muskets, pikes, and cutlasses.

¹ Communications to the author by Messrs. Dr. Goldsborough, M. Spencer, and William H. Groome, of Easton, Maryland, in March, 1860.

² A British officer, who served with Cockburn and Parker, published some spicy sketches of his experience in marauding expeditions along the shores of the Chesapeake. He relates one, commanded by Cockburn in person, with Parker and General Ross as "amateurs," as he expresses it. The object was, he says, "to destroy a factory village, which was not only the abode of innocent labor, but likewise the resort of some few militiamen guilty of the unnatural sin of defending their own county." Their approach being known, all but women and children had fled from the town. "We therefore," he says, "most valiantly set fire to the unprotected property, notwithstanding the tears of the women, and, like a parcel of savages, as we were, we danced round the wreck of ruin." The excuse was the necessity of retaliation for the destruction of Newark, in Canada. See pages 634 and 932. "Every house," he continues, "which we could by ingenuity vote into the residence of a military man, was burned." He then gives an account of scenes at a dwelling-house near the beach which they surrounded. "Like midnight murderers," he says, "we cautiously approached the house. The door was open, and we unceremoniously intruded ourselves upon three young ladies sitting quietly at tea. Sir George Cockburn, Sir Peter Parker, and myself entered the room rather suddenly, and a simultaneous scream was our welcome." Sir George, he said, was austere, but Sir Peter "was the handsomest man in the navy," and to the latter the ladies appealed. Cockburn told them that he knew their father to be an American officer—a colonel of militia, and that his duty being to burn their house, he gave them ten minutes for removing what they most desired to save. The young women, on their knees, begged the admiral to spare their house. "The youngest, a girl of sixteen, and lovely beyond the general beauty of those parts, threw herself at Sir Peter's feet, and prayed him to interfere. The tears started from his eyes in a moment, and I was so bewildered at the afflicting scene that I appeared to see through a thick mist." Cockburn was unmoved, with his watch on the table, measuring the fleeting minutes. The other girls were in tears, and asking for mercy. Sir Peter had opened his lips to plead for them, when the brutal Cockburn stopped him, and ordered men to bring the fire-balls. "Never shall I forget the despair of that moment. Poor Sir Peter wept like a child, while the girl clung to his knees and impeded his retreat. The admiral walked out with his usual haughty stride, followed by the two elder girls, who vainly implored him to countermand the order. In a moment the house was in flames. "We retreated from the scene of ruin, leaving the three daughters gazing at the work of destruction, which made the innocent houseless and the affluent beggars. . . . By the light of that house we embarked and returned on board. It was a scene which impressed itself upon my heart, and which my memory and my hand unwillingly recall and publish."

³ Niles's *Weekly Register*, vii., 11.

The moon was shining brightly. Stealthily they moved forward, and fell furiously upon the Marylanders, who were in battle order to receive them. A fierce conflict of an hour ensued, when the invaders, repulsed, fled back to their frigate, leaving thirteen dead and three wounded on the field. Among those mortally hurt was the gallant Sir Peter, a brave and generous Irishman, descended from Archbishop Parker and Admiral Byron, and then only twenty-eight years of age. He was at the head of his men, cheering them on, when a musket-ball cut the main artery in his thigh. "They have hit me, Pearce," he said to his first lieutenant, "but it is nothing; push on, my brave boys, and follow me!" He attempted to cheer, but his voice failed him. He fell in the arms of Pearce, and before he could be conveyed to the frigate or receive surgical aid he bled to death.¹ The invaders fled to their ship, and the *Menelaus* sailed down the bay.

Parker

Sir Peter's body was preserved in spirits and sent to England, and on the 14th of May, 1815, it was deposited in the family vault in St. Margaret's Church, Westminster.²

Let us now observe the movements of the British army and navy, under General Ross and Admiral Cochrane, after the flight of the former from the smoking ruins of Washington City.

We left the invaders re-embarked on their vessels in the Patuxent. They remained there several days to rest, recruit, and make provision for their wounded. These were placed on board vessels, and sent, some to Halifax and others to England, and by the *Iphigenia* dispatches were sent to the home government. Preparations were made in the mean time for other offensive operations. At daybreak on the 6th of September the whole fleet weighed anchor, and stood toward the Chesapeake with a fair wind. Down that bay they sailed, and on the morning of the 7th entered the Potomac. For two days they moved up that stream to assist Gordon in his operations against Fort Washington and Alexandria. Hearing of his success, they turned,³ hastened back to the Chesapeake, and stood for the mouth of the Patapsco,⁴ spreading terror along the entire coasts of the bay. The people fled from their dwellings and the villages with their most valued property that might be carried away, and at every light-house and signal-station alarm guns were fired. On Sunday, the 11th, they entered the Patapsco with fifty

¹ Dallas's *Biographical Memoirs of Sir Peter Parker, Bart.*

² Sir Peter Parker was a son of Admiral Christopher Parker, and first cousin of the eminent poet, Lord Byron. He inherited from his father a love of the naval service, and from his mother much personal beauty. He was educated at Westminster School, and entered the navy at the age of thirteen years, with his grandfather, Sir Peter Parker, who commanded the British fleet at Charleston in the summer of 1776. He rose rapidly in his profession under Lord Nelson, Earl St. Vincent, and others, and in 1810 he was made commander of the *Menelaus*, a new ship, in which he performed gallant service. He accompanied Admiral Malcolm to Bermuda in the spring of 1814, and with him went with his frigate to the Chesapeake, where, as the text relates, he lost his life. His body was first conveyed to Bermuda, and there received the honors of a public funeral. It was afterward conveyed in the same vessel (the *Rebrue*) to England, and was again buried with a public funeral. Lord Byron wrote a poetic eulogy of Sir Peter. His friend, and one of the chief mourners at his funeral, wrote a touching *Biographical Memoir* of him, dedicated to his wife, from which the above portrait, from a painting by Hoppner, of the Royal Academy, was copied.

Baltimore threatened.

Exasperation against it.

General Samuel Smith.

sail of vessels, bearing at least six thousand fighting men, for the purpose of attacking Baltimore. The victorious Ross, elated by his good fortune, had boasted that he would make that fine city of forty thousand inhabitants (one fifth negroes) his winter quarters.

Baltimore stands on the Patapsco River, ten miles from the Chesapeake. The harbor is entered by a narrow strait, commanded by Fort M'Henry, which stood there at the time we are considering. The growth of the city had been extremely rapid.

S. Smith

In 1814 it was the third in population, and fourth in wealth and commerce, in the United States.

Intelligence of the capture of Washington created intense excitement in Baltimore. It was believed that the victorious Ross would fall upon it immediately, either by land or water; and the veteran soldier of the Revolution, General Samuel Smith,¹ renewed his exertions for the defense of the city, and Annapolis, the political capital of Maryland. That vigilant officer had been active ever since the first appearance of danger in the spring of 1813, when a British squadron appeared in the Chesapeake. It was well known that the enemy felt great exasperation toward the Baltimoreans because they had sent out so many swift "clipper-built" vessels and expert seamen to smite terribly the commerce of Great Britain on the high seas. "It is a doomed town," declared Vice-admiral Warren. "The American navy must be annihilated," said a London paper; his arsenals and dock-yards must be consumed, and

¹ Samuel Smith was born in Lancaster County, Pennsylvania, July 27, 1752. His education, commenced at Carlisle, was completed at an academy at Elkton, in Maryland, after his father made Baltimore his place of residence. He was in his father's counting-house five years, and then, in 1772, sailed for Havre in one of his father's vessels as supercargo. Having traveled extensively in Europe, he returned home to aid his countrymen in the midst of the excitement of the opening of the Revolutionary hostilities. The battles of Lexington, Concord, and Bunker Hill had been fought.

Fired with patriotic zeal, he sought to serve his country in the army, and in January, 1776, obtained a captain's commission in Colonel Smallwood's regiment. He was soon afterward promoted to the rank of major, and early in 1777 he received a lieutenant colonel's commission. In that capacity he served with distinction in the battles of Brandywine and Fort Mifflin, suffered at Valley Forge, and participated in the action on the plains of Monmouth. For his gallantry at Fort Mifflin, Congress voted him thanks and a sword. At the close of the war he was appointed a brigadier general of militia, and commanded the Maryland quota of troops in the "Whisky Insurrection" in Pennsylvania. He served as major general in the War of 1812, and commanded the troops assembled for the defense of Baltimore in 1814. At that period he was spending much of his time at his elegant country-seat of *Montebello*, north of Baltimore, which is yet (1867) standing.

MONTABELLO.

During a riot in Baltimore in 1836, when the civil power was inadequate to

the truculent inhabitants of Baltimore must be tamed with the weapons which shook the wooden turrets of Copenhagen."

So early as the 13th of April, 1813, the City Councils of Baltimore appropriated twenty thousand dollars to be used for the defense of the city, under the direction of the mayor, Edward Johnson, and seven other citizens, who were named as a Committee of Supply.¹ The governor of the State (Levin Winder) also called an extraordinary session of the Legislature, to meet at Annapolis on the third Monday in May. Meanwhile a rumor reached the city that the enemy were approaching, and within a few hours at least five thousand armed men were found in their proper places, and several companies of militia from the country came pouring into Baltimore. Several persons were arrested as traitors and spies. These demonstrations of preparation and power undoubtedly saved the city from assault at that time. Very soon afterward, Stricker's brigade, and other military bodies in the city, full five thousand strong, with forty pieces of artillery, were reviewed. At the beginning of June a battery was erected at Fort M'Henry for the marine artillery of Baltimore one hundred and sixty in number, under Captain George Stiles, and composed of masters and master's-mates of vessels there. It was armed with 42-pounders.²

In September^a the British fleet went to sea, and Baltimore enjoyed a season^{* 1813.} of repose. The blockaders, as we have observed, reappeared in the Chesapeake in the spring of 1814, and all the summer and early autumn infested its waters, during which time occurred the destructive invasion recorded in the preceding chapter, when every thing that could be done by vigilant men for the safety of Baltimore was accomplished. A Committee of Vigilance and Safety, of which Mayor Johnson was Chairman, and Theodore Bland was secretary, co-operated unceasingly with General Smith and the military. On the 27th of August, three days after the capture of Washington, that committee called upon the citizens to organize into working parties, and to contribute implements of labor for the purpose of increasing the strength of the city defenses. The city was divided into four sections, and the people of each labored alternately on the fortifications. The exempts from military service and free colored men were required to assemble for labor, with provisions for a day, at Hempstead Hill (equally well known as Loudenslager's Hill), on Sunday, the 28th of September; at Myer Garden on Monday; at Washington Square on Tuesday; and at the intersection of Eutaw and Market Streets on Wednesday. Each portion, comprising a section, was under the command of appointed superintendents. The response of the citizens in men and money was quick, cordial, and ample; and volunteers to work on the fortifications came from Pennsylvania, Maryland, and Virginia. By the 10th of September General Winder was in Baltimore, with all the forces of the Tenth Military District at his command.

The principal fortifications constructed by the people consisted of a long line on Hempstead, or Loudenslager's Hill, now the site of Patterson Park. At proper distances several semicircular batteries were constructed, well mounted with cannon and

quell the violence of the mob, the aged general, then eighty-four years old, appeared in the streets with the United States flag, placed himself at the head of peaceful citizens, and very soon restored order and tranquillity. In the autumn of that year he was elected mayor of the city, which office he held until his death on the 22d of April, 1839, at the age of eighty-seven years. General Smith was elected a representative in Congress in 1793, and served until 1803. He was again elected in 1816, and served six years longer. He was also a member of the United States Senate for a period of twenty-three years. The portrait on the preceding page is from a painting in possession of his son, General John Spear Smith, who was his volunteer aid-de-camp during the defense of Baltimore in 1814. It was painted by Gilbert Stuart when the general was about forty-five years of age. He is in the uniform of a major general of that day (1797), and shows the Order of the Cincinnati suspended from a button-hole.

¹ These were James Mosher, Luke Tiernan, Henry Payson, Dr. J. C. White, James A. Buchanan, Samuel Sterett, and Thordike Chase.

² This corps was celebrated for its gallantry. Dr. Martin (see note 1, page 925) says, in his MS. Reminiscences before me, that when he was at Bladensburg, the British officers, who were expecting re-enforcements for Winder from Baltimore, "were particularly anxious about the marine artillery—the material of which it was composed, the weight of metal, number of men, etc. I exaggerated the condition of its ability to do effective service," he said, "and I confidently believe that, had they been part of our force at Bladensburg, we would have succeeded in driving back the enemy, if not in capturing the whole force, for I never saw men so completely exhausted as were the foe."

ably manned, some of them by volunteer artillery companies of Baltimore, but chiefly by men-of-war's men, about twelve hundred in number, under the general command of Commodore Rodgers. The spaces between these batteries were filled with militia. One of the larger of these bastions, known as Rodgers's Bastion, may now (1867)

RODGERS'S BASTION.¹

be seen, well preserved, on the harbor side of Patterson Park, and overlooking Fort M'Henry and the region about it. Four of the smaller batteries on this line were in charge of officers of the *Guerriere* and *Erie*, the former then lying in Baltimore Harbor.²

A brigade of Virginia Volunteers and of regular troops, including a corps of cavalry under Captain Bird, were placed under the command of General Winder; the City Brigade of Baltimore was commanded by General Stricker; and the general management of the entire military force destined for the defense of the city was intrusted to General Smith. Fort M'Henry was garrisoned by about one thousand men, volunteers and regulars, commanded by Major George Armistead. To the right of it, guarding the shores of the Patapsco, on the Ferry Branch, from the landing of troops who might endeavor to assail the city in the rear, were two redoubts, named respectively Fort Covington, and City, or Babcock Battery. The former was manned by a detachment of seamen under Lieutenant Newcomb, and the latter—a 6-gun battery—by another detachment from Barney's flotilla under Sailing-master John A. Webster. In the rear of these, upon high ground, at the end of Light Street, near the present Fort Avenue, was an unfinished circular redoubt for seven guns, in charge of Lieutenant George Budd. On Lazaretto Point, across the entrance channel to Baltimore Harbor, opposite Fort M'Henry, was also a small battery, in charge of Lieutenant Rutter, of the flotilla. To these several batteries, and to Fort M'Henry, the citizens of Baltimore looked most confidently for defense.³

Such were the most important preparations for the reception of the enemy, when, on Sunday evening, the 11th of September, they were seen at the mouth of the Pa-

¹ This view is from one side of the bastion, looking toward the harbor. On the point on the right is seen Fort M'Henry. The point opposite is Lazaretto Point.

² These were Lieutenant Gamble, the first of the *Guerriere*, Midshipman Field, Sailing-master Ramage, and Midshipman Salter, of the same vessel, and Sailing-master De la Roche, of the *Erie*.

The British land at North Point. Preparations for advancing on Baltimore. General Stricker sent to oppose them.

tapscot, in strong force, preparing to land at North Point, twelve miles from Baltimore by water, and fifteen miles by land. Off that point the fleet anchored that evening. The night was a delightful one. The air was balmy, and the full moon shone brightly in a cloudless sky. The earth was refreshed by the falling of a heavy dew. The fleet lay two miles from the shore. Brief repose was given to its people,

September 12, 1814, for, at two o'clock in the morning,^a the boats of every ship were lowered, and then the land troops and seamen went to the shore, under cover of several gun-brigs anchored within a cable's length of the beach. The boats went in divisions, and the leading one of each was armed with a carronade ready for action.

At about seven o'clock in the morning, General Ross and Admiral Cockburn were on shore, with a force nine thousand strong, composed of five thousand land troops, two thousand marines, and two thousand seamen, led by Captain E. Crofton. They were furnished with cooked provisions sufficient for three days. Each combatant bore eighty rounds of ammunition, and carried as little baggage as possible, for they were to march rapidly and take Baltimore by surprise, where Ross had boasted that he should eat his Sunday dinner. At the same time, a frigate was sent to try the depth and take the soundings of the channel leading to Baltimore, as the navy, under the immediate command of Captain Nourse, of Cockburn's flag-ship *Severn*, was to co-operate with the army. Intelligence of these movements produced great alarm in Baltimore. A large number of families, with portable articles of value, were sent into the interior of the country, and every inn, for almost a hundred miles northward of the city, was crowded with the refugees.

When it was known that the British fleet was anchored off North Point, General Smith, who had about nine thousand troops under his command, sent General Stricker¹ with three thousand two hundred in that direction to watch the movements of the enemy and act as circumstances might warrant. He left the city toward evening, and just before sunset reached a meeting-house (yet

METHODIST MEETING-HOUSE.

John Stricker

stand- ing) almost seven miles from the town, near the junction of the roads leading respectively to North Point and Bear Creek. Meanwhile Major Randall, of the Maryland militia, had been sent with a light corps from General Stansbury's brigade, and the Pennsylvania Volunteers, to the mouth of Bear Creek, to co-operate with Stricker, and to check the debarkation of the enemy, should it be attempted at that point.

Stricker's little army rested until morning at the meeting-house, not far from what was then called Long Log Lane (now the road to North Point), with the exception of a detachment of one hundred and forty horsemen under Lieutenant Colonel Biays, who were ordered forward, three miles, to Gorsuch's farm, and

¹ The above portrait of General Stricker is from a painting in the possession of the Maryland Historical Society. General Stricker died in Baltimore on the 23d of June, 1825.

Disposition of the British Troops.

Preliminary Skirmish.

one hundred and fifty riflemen under Captain Dyer, who were directed to take position at a blacksmith's shop one mile in the rear of the cavalry. So they remained until the morning of the 12th, when information was received from the vedettes that the enemy had landed at North Point, when Stricker immediately sent back his baggage under a strong guard, and disposed his troops for battle in three lines, stretching from a branch of Bear Creek on his right, to a swamp on the margin of a branch of Back River on his left. The several corps were posted as follows: the Fifth Baltimore Regiment, Lieutenant Colonel Sterett, five hundred and fifty strong, were placed on the right, extending from Long Log Lane to a branch of Bear Creek; the Twenty-seventh Maryland Regiment, Lieutenant Colonel Long, numbering the same, were on the left of the Fifth, extending from the Lane to the swamp; and the Union Artillerymen of Baltimore, seventy-five in number, with six 4-pounders, under Captain Montgomery, then Attorney General of the State, were in the Lane. The Thirty-ninth Regiment, four hundred and fifty men, under Lieutenant Colonel Fowler, were posted three hundred yards in the rear of the Twenty-seventh and parallel with it; and on the right of the Thirty-ninth, at the same distance in the rear of the Fifth, were the Fifty-first Regiment, under Lieutenant Colonel Amey. These formed the second line. About half a mile in the rear of this line, near the site of the present (1867) Battle-ground House, was a reserve corps, consisting of the Sixth Regiment (six hundred and twenty men), under Lieutenant Colonel M'Donald. Thus judiciously posted, Stricker awaited the approach of Ross.

The British general disposed his troops as at Bladensburg. A corps composed of the light companies of the Fourth, Twenty-first, and Forty-fourth Regiments, the entire Eighty-fifth, a battalion of "disciplined negroes," and a company of marines, numbering in the aggregate about eleven hundred men, under Major Jones, were sent in advance. These were followed by six field-pieces and two howitzers drawn by horses; and the whole formed the first brigade. The second brigade, under Colonel Brooke, was composed of the Fourth and Forty-fourth Regiments, about fourteen hundred strong, and was followed by more than a thousand sailors led by Captain Crofton. The rear, or third brigade, consisted of the Twenty-first Regiment, and a battalion of marines, numbering in all about fourteen hundred and fifty men, under Colonel Patterson. At the same time, the fleet moved toward Baltimore to attack Fort M'Henry.

Feeling confident of success, Ross and Cockburn rode gayly forward at the head of the troops for about an hour, when they halted at Gorsuch's farm, and spent another hour in resting and careless carousing. The American riflemen in the advance had fallen back in the mean time, with the impression that the British were landing on Back River or Bear Creek to cut them off, and they were placed on the right of Stricker's front line. When the general was informed of the exact position of the invaders, he sent forward to attack them the companies of Captains Levering and Howard from Sterett's Fifth, one hundred and fifty in number, under Major Richard K. Heath, and Asquith's and a few other riflemen, numbering about seventy, with a small piece of artillery and some cavalry under Lieutenant Stiles. They met the British advancing, and a skirmish ensued near the house occupied, when the writer visited the spot in 1861, by Samuel C. Cole as a store and dwelling, seven and a half miles from Baltimore, and about seven from the landing-place of the British. Ross was mortally wounded by one of two young men, natives of Maryland, belonging to Asquith's rifle corps, and who had both fought in the battle at Bladensburg. Their names were Daniel Wells and Henry C. M'Comas. They were concealed in a hollow, and fired the fatal shot when Ross appeared upon a little knoll near them. That commander died in the arms of his favorite aid, the now (1867) venerable Sir Duncan M'Dougall, of London,¹ before his bearers reached the boats at North Point. "He

¹ Sir Duncan M'Dougall, K.C.F., son of Patrick M'Dougall, Esq., of Argyleshire, Scotland, was born in 1789. He entered the army in 1804, and served in several regiments, and on the staff in Portugal, Spain, France, America, Cape of

Death of General Ross.

Advance of the British.

A spirited Battle.

J. Knautougal

lived only long enough," says Gleig, "to name his wife, and to commend his family to the protection of his country." In this skirmish Heath's horse was shot under him, and several Americans were killed or wounded. Among the slain were the two young men whose bullets brought Ross to the earth.¹ The advancing British far outnumbered Heath's detachment, and he ordered them to fall back. Finding the companies of Levering and Howard too fatigued to engage efficiently in the impending battle, Stricker ordered them to the rear to attach themselves to the reserve.

On the fall of Ross the command of the British troops devolved on Colonel A. Brooke, of the Forty-fourth Regiment, and under his direction the entire invading force pressed vigorously forward. At about two o'clock in the afternoon they came within cannon-shot of the American line, and

were immediately formed in battle order. Their first brigade, supported by the Forty-fourth Regiment, the seamen and marines, menaced the entire front of the Americans, and commenced the action by opening a brisk discharge of cannon and rockets upon them. The British Twenty-first remained in column as a reserve; and the Fourth made a circuitous march to turn the left flank of the Americans, against which also artillerists and rocketeers directed their missiles, and were replied to by Captain Montgomery's cannon. General Stricker instantly comprehended the meaning of the flank movement and artillery attack, and brought up the Thirty-ninth Regiment, with two field-pieces, to its support in a line with the Twenty-seventh, which was behaving most gallantly. He also ordered the Fifty-first, under Colonel Amey, to form in line at right angles with the first line, with its right resting on the left of the Thirty-ninth. This movement was productive of some confusion, but Stricker's staff soon brought out order. The battle was continued with great spirit on both sides, in the mean time, with Victory coquetting first with one and then with the other, and the armies swaying backward and forward with mutual pressure.

When the contest had been carried on for about two hours the enemy's right column fell upon and endeavored to turn the American left. The Fifty-first were suddenly struck with dismay, and, after firing a volley at random, broke, and fled in wild disorder, producing a like effect in the second battalion of the Thirty-ninth.

Good Hope, and West Indies. He has the distinction of having received into his arms two eminent British generals when they fell in battle, namely, General Ross, killed near Baltimore, and General Pakenham, slain near New Orleans. He commanded the Seventy-ninth Highlanders for several years. His son and heir, Colonel Patrick Leonard M'Dougall, is commandant of the Royal Staff College. The family is descended, in a direct line, from Somerled, the Prince of the western coast of Argyreshire, and famous "Lord of the Isles." The above portrait of the gallant soldier is from a *carte de visite* likeness, sent to me at my request by Sir Duncan in the summer of 1861.

¹ The remains of these young men were reinterred in a vault in Ashland Square on the 12th of September, 1856, with civic and military honors. The mayor of the city, Thomas Swann, made some remarks, and was followed by Hon. John C. Le Grand, who pronounced an oration. A dirge was executed by the East Baltimore band, and before the remains were laid in the vault, over which a monument is to be erected, the Law Guards fired a volley over them.

BATTLE OF NORTH POINT.

The above engraving is a copy of a drawing belonging to the Maryland Historical Society, made by an eye-witness after the *Battle of North Point*, as the conflict described in the text is called. The following are the names and incidents referred to by numerals: 1. General Stricker, 2. Major G. P. Stevenson, *aid.*, 3. Major James Calhoun, 4. Major William B. Beman, 5. Leonard Fealish, *brigade major*, 6. Robert Goodlin Harpur, 7. John Cook, *trumpeter*, 8. Colonel James Biny, 9. Major William Jackson, 10. Archibald Kerr, *paymaster*, 11. Adjutant Leonard Teyne, 12. Sergeant Major James Blair, 13. Captain James Stewart's *Heavies*, 14. Captain Boutin and Lieutenant Kell's *troop*, 15. Captain Horton's *troop*, 16. Captain Hannah's *troop*, 17. Colonel Joseph Stewart's *5th* Regiment, 18. Colonel Kennedy Long's *Twenty-seventh* Regiment, 19. Colonel Benjamin Fowler, *Thirty-sixth* Regiment, 20. Colonel Arny and Major Young, *Fifty-first* Regiment, 21. Riflemen, 22. Lieutenant G. Andrea, *mortally wounded*, 23. Col-

onel R. K. Heath, 24. Major Standish Barry, 25. Adjutant James Chester, 26. Montgomery's *Artillery*, 27. Major Samuel Munn, 28. Adjutant General James Lowrey Donaldson, *mortally wounded*, 29. Major Joseph Robinson, 30. Adjutant Thomas Baltzell, 31. Major Steger, 32. Lieutenant Stiles, *with two pieces of artillery*, 33. Major Howarth, 34. *Blindon and Haystack*, 35. *Home led by Captain Badier's company of Yagers*, 36. Lieutenant John Boers and Aaron McCullough, *wounded*, 37. Captain Spangler's *company of Volunteers from York, Pennsylvania*, 38. Captain Quastrell's *company of Volunteers from Hagerstown*, 39 and 40. Retreat of the Americans.

The British Fleet approaches Baltimore.

Preparations to attack Fort M'Henry.

BATTLE-FLAG OF THE TWENTY-SEVENTH REGIMENT.¹

and the gallant Twenty-seventh (whose tattered battle-flag, now in the possession of its bearer in the fight, Captain Lester, of Baltimore, attests the severity of their conflict) bravely maintained their position. Finally, at about four o'clock, when the superior force of the enemy could no longer be kept in check, General Stricker ordered a retreat upon his reserved corps. This movement was performed in good order. Some of the wounded and two field-pieces were abandoned. Stricker reformed his brigade, and then fell back toward the city as far as Worthington's Mill, about half a mile in advance of the intrenchments cast up by the citizens. There he was joined by General Winder, with

General Douglass's Virginia Brigade and Captain Bird's United States Dragoons, who took post on his left. The British bivouacked on the battle-field that night, after calling in some pursuers and collecting the stragglers.

M. Bird

While these movements were in operation on the land, the British fleet was preparing to perform a conspicuous part in the drama. Frigates, schooners, sloops, and bomb-ketches had entered the Patapsco early in the morning of the 12th, while Ross was moving from North Point, and anchored off Fort M'Henry (then about one half its present dimensions), beyond the reach of its guns, near the present Fort Carroll.

FORT M'HENRY IN 1861.

During the day and evening the bomb and rocket vessels were so posted as to act upon the fortifications on the hill, commanded by Rodgers, as well as on Fort M'Henry, while the frigates were stationed farther onward, the water being so shallow that they could not approach nearer the city than four or five miles, nor the fort within two and a half miles. The Americans had already sunk some vessels, as we have observed, in the narrow channel at Fort M'Henry, which prevented any passage by the ships of the enemy.² During the night of the 12th the fleet made full preparations for an attack on the fort and hill intrenchments on the morning of the 13th, when Brooke was to move on Baltimore with the British land force from the battle-field of the day before. The fleet prepared for action consisted of sixteen heavy vessels, five of them bomb-ships.

Fort M'Henry was commanded by a brave soldier, and defended by gallant com-

¹ This little picture represents the tattered battle-flag of the *Jefferson Blues*, Twenty-seventh Regiment of the Maryland Militia, who fought gallantly on the 12th of September, 1814. It was in the possession of Captain John Lester, of Baltimore, when I made a sketch of it in 1867. He has presented it to the Maryland Historical Society. It is blue silk, with the designs in gold. Its width is four feet six inches. It is quite tattered. The black spots represent the forms of cannon-ball holes made during the battle. On scrolls are the words *Jefferson Blues* and *Non sibi sed patriæ*.

² General Smith, on the recommendation of Commodore Rodgers, caused twenty-four vessels then lying in the harbor to be sunk in the narrow channel between Fort M'Henry and Lazaratto Point. These were afterward raised at the expense of the United States. The aggregate amount of money paid to the owners afterward was about \$100,000.

panions. The latter were composed of one company of United States Artillery, under Captain Evans; two companies of Sea-fencibles, under Captains Bunbury and Addison; two companies of volunteers from the city, named respectively the "Washington Artillery" and the "Baltimore Independent Artillerists," the former commanded by Captain John Berry, and the latter by Lieutenant Commanding Charles Pennington; the "Baltimore Fencibles," a fine company of volunteer artillerists led by Judge Joseph H. Nicholson;

Joseph H. Nicholson

a detachment of Barney's flotilla-men, commanded by Lieutenant Redman; and detachments of regulars, in all six hundred men, furnished by General Winder from the Twelfth, Fourteenth, Thirty-sixth, and Thirty-eighth Regiments, under the command of Lieutenant Colonel Stewart and Major Lane. The regular artillerists under Captain Evans, and the volunteers under Captain Nicholson, manned the bastions in the Star Fort. The commands of Bunbury, Addison, Redman, Berry, and Pennington were stationed in the lower works; and the infantry, under Stewart and Lane, were placed in the outer ditch, to meet the enemy at his landing, if he should attempt it.

J Lane

The bomb-vessels opened a heavy fire upon the American works at sunrise on Tuesday morning, the 13th, at about seven o'clock, at a distance of two miles, and kept up a well-directed bombardment until three o'clock in the afternoon. Armistead immediately opened the batteries of Fort M'Henry upon them, and kept up a brisk fire for some time from his guns and mortars, when, to his great chagrin, he found that his missiles fell short, and were harmless. The garrison was exposed to a tremendous shower of shells for several hours without power to inflict injury in turn, or even to check the fury of the assault; yet they kept at their posts, and endured the trial with cool courage and great fortitude.

At length a bomb-shell dismounted one of the 24-pounders in the southwest bastion, under the immediate command of Captain Nicholson, killing his second lieutenant (Claggett), and wounding several of his men. The confusion in the

Ge. Armistead

fort produced by this accident was observed by Cochrane, who commanded the fleet, and, hoping to profit by it, he ordered three of his bomb-vessels to move up nearer the fort in order to increase the effectiveness of their guns. This movement delighted Armistead. His turn for inflicting injury had come, and he quickly took advantage of it. He ordered a general cannonade and bombardment from every part of the fort; and so severe was his punishment of the venturesome intruders, that within

Attempt to seize Fort Covington.

The Invaders driven off.

End of the Bombardment.

half an hour they fell back to their old anchorage. The rocket-vessel *Erebus* was so much injured that they were compelled to send a division of small boats to tow her beyond the range of Armistead's guns to save her from destruction. The garrison gave three cheers, and the firing ceased.

After resuming their former stations the vessels kept up a more furious bombardment than before, with slight intermissions, until past midnight, when it was discovered that the enemy had thrown a considerable force up the Patapsco to the right of the fort, and between it and the city, under cover of the darkness, for the purpose of capturing Fort Covington, commanded by Lieutenant Newcomb, of the United States Navy, and the City Battery, in charge of the gallant sailing-master of Barney's flotilla, and assaulting Fort M'Henry in the rear. For this service twelve hundred and fifty picked men were sent in barges, with scaling-ladders and other implements for storming the fort. For the purpose of examining the shores, when near Covington they threw up some small rockets. These gave the alarm, and Fort M'Henry, as well as the two redoubts on the Patapsco, opened a heavy fire upon the invaders. It was kept up for nearly two hours, when the enemy were driven away. The concussion was tremendous. The houses in the city were shaken to their very foundations. Rodgers's men in Fort Covington worked their guns with great effect, but to the continuous and skillful cannonade kept up by Webster with his six-gun battery, nearer the shore, Major Armistead said he was "persuaded the country was much indebted for the final repulse of the enemy." It is not too much to say, I think, that Captain Webster's gallant conduct on that occasion, which frustrated the plans of the British boat expedition, saved Fort M'Henry and Baltimore. Two of the enemy's vessels were sunk, and a large number of his men were slain. Sailing-master (afterward Captain) Webster yet (1867) lives, at the age of eighty years, to enjoy the respect and gratitude of his countrymen. He was in active service until the year 1852.

The bombardment from the vessels was continued until seven o'clock on the morning of the 14th, when it ceased entirely.¹ The night had been passed in the greatest anxiety by the inhabitants of Baltimore, for in the maintenance of Fort M'Henry was their chief hope for the safety of the city. An incident which occurred at that time gave birth to one of the most popular of our national songs, the *Star-spangled Banner*,² in which that anxiety is graphically expressed. It was written by Francis S. Key, who was a resident of Georgetown, in the District of Columbia, and then a volunteer in the light artillery commanded by Major Peter.³

¹ The bombardment of Fort M'Henry lasted twenty-five hours, with two slight intermissions, and it was estimated by Armistead that during that time from 1500 to 1800 shells were thrown by the enemy. A few of them fell short, but a greater number burst over the fort, throwing their fragments among the garrison. About 400 shells fell within the works, some of them, afterward dug up, weighing 210 and 220 pounds. "Wonderful as it may appear," said the commander in his report, "our loss amounts only to four men killed and twenty-four wounded. The latter will all recover." The wife of a soldier, while conversing with her husband before the tents outside of the fort, was cut in two by a cannon-ball. A shell fell into the magazine, but did not explode.

² The fac-simile of the original manuscript of the first stanza of the "Star-spangled Banner," given on the opposite page, was first published, by permission of its owner (Mrs. Howard), daughter of the author, in "Autograph Leaves of our Country's Authors," a volume edited by John P. Kennedy and Alexander Bliss for the Baltimore Sanitary Fair, 1864.

³ On the return of the British to their vessels after the capture of Washington City, they carried with them Dr. Beanes, an influential citizen and well-known physician of Upper Marlborough. His friends begged for his release, but Cockburn refused to give him up, and sent him on board the flag-ship of Admiral Cochrane. Mr. Key, well known for his affability of manner, was solicited to go to Cochrane as a pleader for the release of the doctor. He consented. The President granted him permission, and, in company with the late General J. S. Skinner, he went in the cart-ship *Minden*, under a flag of truce. They found the British fleet at the mouth of the Potomac, preparing to attack Baltimore. Cochrane agreed to release Beanes, but refused to let him or his friends return then. They were placed on board the *Surprise*, where they were courteously treated. The fleet sailed up to the Patapsco, where they were transferred to their own vessel, but with a guard of marines to prevent their landing and communicating information to their countrymen. The *Minden* was anchored in sight of Fort M'Henry, and from her deck the three friends saw the bombardment of that fortress which soon ensued. It ceased, as we have observed in the text, soon after midnight. Having no communication with the shore, these anxious Americans did not know whether the fort had surrendered or not. They awaited the dawn with the greatest solicitude. In the dim light of the opening morning they saw through their glasses that

The Star-spangled Banner.

The Star-spangled Banner.

O say, when you see by the dawn's early light,
That so many a heavily laden sail,
Whose broad stripes and bright stars,
Through the clouds of the night,
Or the rare-faith we mistake,
Were so gallantly steaming;
And the rocket's red glare -
The bomb bursting in air,
In our prophetic eyes,
As if through the night,
That our flag was still there,
O say, that the Star-spangled Banner yet we see
Of the land of the free -
The home of the brave? -

FACSIMILE OF THE ORIGINAL MANUSCRIPT OF THE FIRST STANZA OF "THE STAR-SPANGLED BANNER."

Simultaneously with the movement of the fleet toward Fort M'Henry, on the morn-

"our flag was still there!" To their great joy, they soon learned that the attack on Baltimore had failed, that Ross was killed, and that the British were re-embarking. When the fleet was ready to sail, Key and his friends were released, and returned to the city.

It was during the excitement of the bombardment, and when pacing the deck of the *Minden* with intense anxiety between midnight and dawn, that Key composed that song—"The Star-spangled Banner"—which immortalized him, and whose first stanza expressed the feelings of thousands of eye-witnesses of the scene:

ing of the 13th, was that of the land forces of the British from their smouldering camp-fires on the battle-field, until they arrived at the brow of the slope on which lay Surrey Farm (now the valuable estate of Mrs. Jane Dungan), then the fine residence of Colonel Sterett,¹ of the Fifth Maryland Regiment, who was busily engaged in casting up intrenchments on Loudenslager's Hill, about two miles distant, between them and Baltimore. There they halted to reconnoitre, and Colonel Brooke made his headquarters at the old farm-house of Mr. Ernest, farther in the rear. They were in sight of the American intrenchments, behind which were the brigades of Stansbury and Foreman; the Pennsylvania Volunteers, under Colonels Cobean and Findlay; the marines, under Rodgers; the Baltimore Artillery, under Colonel Harris; and the Marine Artillery, under Captain Stiles, who had spent the night under arms, expecting a vigorous pursuit and attack by the British.

The enemy manœuvred a good deal in the morning toward the left of the American works, and at one time seemed disposed to move upon them by the York and Harford Roads; but they were baffled by countervailing movements on the part of Generals Winder and Stricker. At noon they concentrated in front, and moved to within a mile of the intrenchments, when they made arrangements for an assault that evening. Perceiving this, General Smith ordered Winder and Stricker to move to the right of the enemy, and, in the event of their making an attack, to fall upon their flank and rear. Brooke was cautious and watchful, and clearly saw the peril of his proposed undertaking. He was also aware that the bombardment of Fort M'Henry from morning until evening had produced very little effect upon that work, and that the vessels could not run by it because of the obstructions in the channel. Instead of opening a battle, he sought and obtained a conference with Admiral Cochrane during the evening. The result of the interview was the conclusion that the effort of

"O say! can you see, by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming,
Whose broad stripes and bright stars, through the perilous fight,
O'er the ramparts we watched were so gallantly streaming?
And the rockets' red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there:
O say! does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?"

The rude substance of the song was written on the back of a letter which Key happened to have in his pocket, and he wrote it out in full on the night after his arrival in Baltimore. On the following morning he read it to his uncle, Judge Nicholson, one of the gallant defenders of the fort, and asked his opinion of it. The judge was so pleased with it that he took it to the printing-office of Captain Benjamin Edes, on the corner of Baltimore and Gay Streets, and directed copies of it to be struck off in hand-bill form. Edes was then on duty with the gallant Twenty-seventh Regiment, and his apprentice, Samuel Sands, who, I believe, is yet living in Baltimore, set up the song in type, printed it, and distributed it among the citizens.* It was first sung in a restaurant in Baltimore, next door to the Holiday Street Theatre, by Charles Durang, to an assemblage of the patriotic defenders of the city, and after that, nightly at the theatre. It created intense enthusiasm, and was every where sung in public and in private.

"The Star-spangled Banner" itself, the old garrison flag that waved over Fort M'Henry during that bombardment, is still in existence. I saw it at the house of Christopher Hughes Armistead (a son of the gallant defender of the fort) in Baltimore during the late Civil War. It had eleven holes in it, made there by the shot of the British during the bombardment.

¹ When the British discovered that they were in actual possession, for a day, of the mansion of one of the officers of the American army then confronting them, they made its contents the object of their special attention. The family had fled that morning, leaving the house in charge of only the colored butler and cook. Some British officers took possession of it. In the cellar was found a large quantity of choice wine. It was freely used, and what was not consumed on the premises was carried away as lawful plunder. Wax-candles, bedding, and other things were also carried away, and all the bureau-drawers were broken open in a search for valuables. Among other things prized by the family which the plunderers seized was the Order of the Cincinnati that had belonged to the deceased father of Mrs. Sterett. Finally, after keeping the cook busy, and faring sumptuously, and when they were about to depart, the following good-natured but impudent note was written and left on the sideboard:

"Captains Brown, Wilcox, and M'Namara, of the Fifty-third Regiment, Royal Marines, have received every thing they could desire at this house, notwithstanding it was received at the hands of the butler, and in the absence of the colonel." I saw the original of this note in 1860, in the possession of a daughter of Colonel Sterett, the wife of J. M. Hollis, then a captain in the United States Navy. It was written on a piece of paper on one side of which an epitaph for the tomb-stone of Mrs. Sterett's father had been prepared.

* The words of the song were inclosed in an elliptical border composed of the common type ornaments of that day. Around that border, and a little distance from it, on a line of the same form, are the words "*Bombardment of Fort M'Henry.*" The letters of these words are wide apart, and each one is surrounded by a circle of stars. Around the four edges of the hand-bill is a heavy border of common type ornaments. Below the song, within the ellipse, are the words "Written by Francis S. Key, of Georgetown, D. C."

The British fall back and return to their Ships.

Effect of the Repulse of the Invaders.

The British Programme.

the combined forces to capture Baltimore was already a failure, and that prudence demanded an immediate relinquishment of the enterprise. Brooke hastened back to camp. The rain, which commenced dropping twenty-four hours before, was yet falling copiously, and the night was very dark. In the midst of the gloom, at three o'clock in the morning of the 14th, while the ships kept up the bombardment to divert the attention of the Americans, the British stole off to North Point, and fled in boats to the fleet. The latter also withdrew at an early hour, and Baltimore was saved.

When, at dawn, the retreat of the British was discovered, General Winder, with the Virginia brigade, Captain Bird's dragoons, Major Randall's light corps, and all the cavalry, were immediately detailed in pursuit. But the troops were so exhausted by continued watching and working after the battle and retreat, having been under arms during three days and three nights, a portion of the time drenched by rain, that it was found impossible to accomplish any thing of moment beyond the picking up of a few stragglers of the enemy. The troops were taken on board the fleet on the evening of the 14th, and on the following morning the entire land and naval armament of the enemy went down the bay, crestfallen and badly punished. In the battle of the 12th they had lost their general, a lieutenant, and thirty-seven men killed, and eleven officers and two hundred and forty men wounded. The Americans lost twenty-four men killed, one hundred and thirty-nine wounded, fifty prisoners, and two field-pieces. In the attack on the forts by the shipping the British lost not a man killed or wounded, while the Americans lost four men killed and twenty-four wounded, as we have before observed, chiefly by the explosion of the shell that dismounted Nicholson's 24-pounder.

The successful defense of Baltimore was hailed with great delight throughout the country, and trembling Philadelphia and New York breathed freer. It was a very humiliating blow to the British, for great confidence of success was felt throughout the realm. After the capture of Washington, that of Baltimore seemed but holiday sport; and so well assured of Ross's success there was the Governor General of Canada, that the proposed public rejoicings at Montreal because of the capture of Washington were postponed, so that they might celebrate that of Baltimore at the same time! In England no one seemed to doubt that an army from Canada would meet that of Ross on the Susquehanna or the Schuylkill as conquerors of the country, and that Baltimore would be their base for future operations. "In the diplomatic circles it is rumored," said a London paper as early as the 17th of June, "that our naval and military commanders on the American station have no power to conclude any armistice or suspension of arms. They carry with them certain terms," the supercilious writer continued, "which will be offered to the American government at the point of the bayonet. There is reason to believe that America will be left in a much worse situation, as a naval and commercial power, than she was at the commencement of the war."

This programme, so delightful to British arrogance and British commercial greed, was not carried out. On the very day when Ross and his army anchored off North Point,^a Sir George Prevost, the Governor General of Canada, and his army, making their way toward the Susquehanna, were so smitten at the very beginning of their march—within the sound of cannon-booming of the Canada line—that they fled back toward the St. Lawrence in wild disorder.¹ Instead of mourning as captives, the Americans were jubilant as victors.

The prowess of Colonel Armistead and his little band in defending Fort M'Henry was a theme for praise upon every lip. The grateful citizens of Baltimore presented him with a costly and appropriate testimonial of their appreciation of his services in the shape of an elegant silver vase, in the form and of the size of the largest bomb-

¹ See page 875.

THE ARMISTEAD VASE.

was the gallant defender of Fort M'Henry during the bombardment of the British fleet, 13th September, 1814. He died, universally esteemed and regretted, on the 25th of April, 1818, aged thirty-nine years."¹

The grateful citizens were not contented with bestowing praises upon their defenders, so they devised a memorial as perpetual and enduring as marble could make it. In the now great city of Baltimore, containing (1867) full two hundred and forty thousand souls, may be seen a noble monument designed by Maximilian Godefroy, and wrought in white marble. It was erected in 1815, at a cost of sixty thousand dollars, in commemoration of those who, on the 13th and 14th of Septem-

shell thrown into the fort by the British; also goblets and salver of the same material.¹ These are in the possession of his son, who, as we have observed, has the old "Star-spangled Banner," and also a sword voted to him by the State of Virginia.² After his death a fine marble monument was erected to his memory, on which the following words were written with a pen of steel: "Colonel GEORGE ARMISTEAD, in honor of whom this monument is erected,

ARMISTEAD'S MONUMENT.

¹ The vase was made to answer the purpose of a punch-bowl. The ladle is in the form of a shrapnel shell. The body rests upon four eagles with outspread wings. Upon one side is an engraving, surrounded by military trophies, representing the bombardment of Fort M'Henry. Upon the other side is the following inscription: "Presented by a number of the citizens of Baltimore to Lieutenant Colonel George Armistead, for his gallant and successful defense of Fort M'Henry during the bombardment by a large British force on the 13th and 14th of September, 1814, when upward of 1900 shells were thrown, 400 of which fell within the area of the fort, and some of them of the diameter of this vase." I am indebted to the kind courtesy of Mr. C. Hughes Armistead for the photograph of the vase and enrouddings from which the above picture was engraved.

² That sword was presented to his son, C. Hughes Armistead, and bears the following inscription: "The State of Virginia to Colonel George Armistead, U. S. A. Honor to the brave. Presented by the State of Virginia to the son of Colonel George Armistead, late of the Army of the United States, as an evidence of the high esteem and admiration entertained by his native state of the courage and soldierlike conduct of Colonel Armistead in the cannonade of Fort George by Niagara, and in the gallant defense of Fort M'Henry, September 14, 1814."

³ George Armistead was born at New Market, Caroline County, Virginia, on the 10th of April, 1780, and was related to several of the most distinguished families in that state. He entered the army as second lieutenant in 1799. He was appointed assistant military agent at Fort Niagara in 1802, and assistant paymaster in 1804. He rose to the rank of major of the Third Artillery in 1813, and was distinguished at the capture of Fort George, in May, 1813, where his brother, William Keith Armistead, as chief engineer on the Niagara, was conspicuous in the bombard-

ment of Fort Niagara in November, 1812. For his gallantry at Fort George, the subject of this notice was breveted lieutenant colonel. He had five brothers in the army during the War of 1812, three in the regular service and two in the militia. Lieutenant Colonel Armistead served much among the Indians previous to his marriage with a sister of the eminent Christopher Hughes, in 1810. While in command of Fort M'Henry, after the war, a number of chiefs visited him, and partook of refreshments out of the silver bomb-shell.

Battle Monument in Baltimore.

A Visit to Baltimore.

Services of a valued Friend.

ber, 1814, fell on the field and in the fort. The engraving depicts it as it appeared, with its surroundings, in the autumn of 1861, when the writer sketched it from the steps of Barnum's Hotel.

I visited the theatre of scenes described in the few preceding pages in November, 1861, on my return homeward from Washington, mentioned on page 948. On arriving at the Eutaw House, Baltimore, in the evening, I had the good fortune to meet an esteemed friend, Brantz Mayer, Esq., a resident of that city, and perfectly familiar with the men, events, and localities we have just been considering. To his kind courtesy I am indebted for much valuable information, and for facilities for

BATTLE MONUMENT.

Armistead was in command of Fort M'Henry when the war broke out, and held it until its close. His gallant defense of that position is made more conspicuous from the fact that he, and he alone, knew that the magazine was not bomb-proof when the foe approached. He dared not reveal the fact, for fear his men might refuse to remain in the fort. With these enormous chances against him, he faithfully sustained that siege, and won a victory and a name. The sense of responsibility, and the tax upon his nervous system during that bombardment, left him with a disease of the heart, and three years and a half afterward, or on the 25th of April, 1818, he expired, at the age of thirty-eight years. Colonel Armistead was buried with military honors. There was an immense funeral procession, civil and military, and during the ceremonies artillerymen fired minute-guns on Federal Hill. It was said to have been the largest procession that had ever been seen in Baltimore. The likeness of Lieutenant Colonel Armistead on page 955 is from a miniature in possession of his daughter, Mrs. Mary Bradford, of Westchester, Pennsylvania, to whom I am indebted for much minute and valuable information.

The monument represents a cenotaph surmounted by a short column, and rests upon a pilth, or terrace, of the same material, forty feet square and four feet high. At each angle is placed a cannon erect, having a ball apparently issuing from its mouth. Between the cannon are continuous rows of spear-shaped railing, and eight heavy supporting faces, all of iron. Outside of all is a chain guard. The lower part of the monument is of Egyptian form and ornamentation, composed of eighteen layers of stone, the then number of the states of the republic. At each of four angles of the surmounting cornice is a massive griffin, wrought of marble. The column represents a huge fasces, symbolical of the Union, the rods of which are bound by a fillet, on which, in bronze letters, are the names of the honored dead, whose brave conduct strengthened the bands of that Union. Wreaths of laurel and cypress, emblems of glory and mourning, bind the top of the great fasces; and between them, in bronze letters, are the names of the following officers who perished on the occasion:

JAMES LOWEY DONALDSON, Adjutant Twenty-seventh Regiment; GEORGE ARMBEE, Lieutenant First Rifle Battalion; LEVI CLAGGETT, Third Lieutenant Nicholson's Artillerists. On the fillet are the following names of the slain non-commissioned officers and privates: John Clemm, T. V. Beaton, S. Haubert, John Jephson, T. Wallace, J. H. Marriot of John, E. Marriot, Wm. Ways, J. Armstrong, J. Richardson, Benj. Pond, Clement Cox, Coelins Belt, John Garrett, H. G. M'Comas, Wm. McClellan, John C. Bird, M. Desk, Daniel Wells, Jun., John R. Cop, Benj. Neal, C. Reynolds, D. Howard, Criah Prosser, A. Randall, R. H. Cooksey, J. Gregg, J. Evans, A. Maas, G. Jenkins, W. Alexander, C. Fallier, T. Burnston, J. Dunn, P. Byard, J. Craig.

On the lower part of the fasces are two basso-relievos, one representing the battle of North Point and the death of General Ross, and the other a battery of Fort M'Henry at the moment of the bombardment. On the east and west fronts are lachrymal urns, emblematic of regret and sorrow. On the south part of the square base of the fasces, below the basso-relievos, is the following inscription in bronze letters: "Battle of North Point, 12th September, A. D. 1814, and the independence of the United States the thirty-ninth." On the north front, corresponding to this, is the following: "Bombardment of Fort M'Henry, 13th September, A. D. 1814, and of the independence of the United States the thirty-ninth." That base and fasces together form a column thirty-nine feet in height, to show that the events commemorated occurred in the thirty-ninth year of the independence of the republic. The whole monument, including the exquisitely wrought female figure, representing the City of Baltimore, that surmounts it, rises to the height of almost fifty-three feet. Upon the head of that figure is a mural crown, the emblem of a city. In one hand she holds an antique rudder,

acquiring more. His introduction was a key to the treasures of the Maryland Historical Society. He accompanied me to many places of interest in the city and its vicinity, among others Patterson Park and Rodgers's Battery. There we met the venerable John McLean, the keeper of the park, who was then seventy-eight years of age. He was a member of Captain Benjamin Ringgold's company in the battle of North Point. After listening with pleasure to his reminiscences, we returned to the city, where I was introduced to General John Spear Smith, a son of the chief commander in the defense of Baltimore, and his volunteer aid on that occasion. General Smith subsequently placed in my hands his father's military papers of that period, which I freely used in the preparation of the foregoing narrative.

We went to the pleasant inclosure of the City Spring, to see the monument erected

THE CITY SPRING AND ARMISTEAD'S MONUMENT.¹

there to the memory of Colonel Armistead (delineated on page 960), but found it removed, and the embattled edifice around it, seen beyond the figures in the above picture, nearly demolished. Nor could we find any clue to it. On leaving that shaded spot, where so many Baltimoreans have promenaded during the heats of summer, I was introduced to Captain John Lester, a veteran soldier, seventy-one years of age, who (then an ensign) was the color-bearer of the gallant Twenty-seventh Maryland Regiment in the battle of North Point. He seemed quite too young to claim the patriarchal honors of threescore and ten years. I found in his possession the tattered flag of the Twenty-seventh (delineated on page 954), whose wounds were received while it was borne in his hands forty-seven years before. Twenty-seven years after-

symbolic of navigation, and in the other a crown of laurel; while, with a graceful inclination of the head, she looks in the direction of the theatre of conflict. At her feet, on her right, is an eagle, and near it a bomb-shell, commemorative of the bombardment. This monument, in its conception and execution, is worthy of the great events commemorated.

A few years ago, a thin volume was published in Baltimore entitled *The Citizen Soldiers at North Point and Fort M'Henry, September 12 and 13, 1814*. It contains the names of all the men, officers and privates, who were on duty at that time, and is dedicated to "Major General Samuel Smith, the Hero of two Wars."

¹ This is a view of the City Spring and its surroundings taken from Saratoga Street a short time before the monument was removed. That monument was placed in a recess of the building with battlements, seen toward the left of the picture, with an iron railing in front. The City Spring is under the temple-shaped pavilion in the foreground, which is yet (1867) standing, I believe, with the same lantern hanging beneath its dome.

The Color-bearer of the Twenty-seventh Regiment.

Visit to North Point Battle-ground.

ward^a he bore the same flag at the head of about thirty survivors of the Twenty-seventh, who were in the funeral procession at the burial of President Harrison, the distinguished soldier of the Second War for Independence.

Captain Lester accompanied my traveling companion and myself to the North Point battle-ground on the ^a November, morning of the 20th.^b The ^{1860.} air was very chilling, but

in a covered carriage, with fleet horses and a good postillion, we made the journey comfortably and quickly to the battle-ground, seven miles from the city. On our way, as we approached Long Log Lane, I sketched the Methodist meeting-house, which was used for a hospital after the battle, and where General Stricker bivouacked on the night of the

^c September, 11th^d. A short distance from it, on the corner, where a road leads to Hancock's Pavilion, on Bear

John Lester

Creek, was a place of refreshment called the Battle-ground House. In a field adjoining it we saw a rough-hewn block of granite, with a square hollow in it, which was pointed out as the corner-stone of a monument which it is proposed to erect on the field of strife. This was on the right of Long Log Lane going out. On the opposite side of the lane (which is now the highway to North Point) was the scene of the heaviest of the battle, which was then an open oak wood, as delineated in the accompanying picture of the battle-ground, drawn a few days after the conflict by Thomas

NORTH POINT BATTLE-GROUND.^e

Ruckle, who was in the fight. The view is from the site of the Battle-ground House. The stately oaks which then shaded the ground have disappeared, and it is covered by a new and smaller growth, and in some places by a tangled undergrowth.

We rode on to the house of Richard Brady (occupied at the time of our visit by

^f In this view, copied from Ruckle's picture in the Maryland Historical Society, Long Log Lane is seen over the equestrian figures toward the right, and on the extreme right the head of Bear Creek. The conflict occurred within the spaces included in the picture.

Samuel Cole), in front of which General Ross received his death-wound, as related on page 951. Near that spot, by the side of the road, the soldiers, commanded by Captain Benjamin C. Howard on that occasion, and known as the First Mechanical Volunteers, erected a monument, about eight feet in height, partly in commemoration

MONUMENT WHERE ROSS FELL.

of the action, but specifically, as the inscription declares,¹ "as a tribute of respect for the memory of their gallant brother" in arms, Aquila Randall, who fell there. The view in the engraving was sketched from Mr. Cole's house, in which is seen, toward the left, the venerable oak-tree under which Ross was laid for a few minutes by Captain M'Dougall, and in the centre, over the horseman, a part of Bear Creek. Ross was shot on the gentle rise of ground in the road a few rods eastward of the monument.

We returned to Baltimore at a little past noon, turning off from the direct road to visit the homestead of Colonel Sterett, mentioned on page 958. The mansion was upon a beautiful terraced slope along the old Philadelphia Road. We did not stop in the city, but riding through it to Fort Avenue, which traverses the length of Fell's Point to Fort M'Henry, we passed along that fine stone road a full mile, to the entrance-gate to the outer grounds of the fort. A pass from General Duryée, then in command at Baltimore, opened the portals. We were kindly received by the courteous Colonel (afterward General) W. Morris, the commandant (since dead), and were allowed to visit every part of the venerated fortification. After making the sketch on page 954, we returned, stopping on the way to make a drawing of the circular seven-gun battery mentioned on page 949, and to find the sites of Fort Covington and the City Battery, which was commanded by the gallant Webster. These were

¹ The following are the inscriptions on the monument: *North Side*: "Sacred to the memory of AQUILA RANDALL, who died in bravely defending his country and his home on the memorable 12th of September, 1814, aged 24 years." *East Side*: "In the skirmish which occurred at this spot between the advanced party under Major Richard K. Heath, of the 5th Regt. M. M., and the front of the British column, Major General Ross, the commander of the British forces, received his mortal wound." *West Side*: "The First Mechanical Volunteers, commanded by Captain Benjamin C. Howard, in the 5th Regt. M. M., have erected this monument as a tribute of their respect for the memory of their gallant brother." *South Side*: "How beautiful is Death when earned by Virtue."

REMAINS OF THE CIRCULAR BATTERY.

situated on the river bank, below the circular battery, and nearly half a mile distant. Webster's battery was on a line with it, in the direction of the river, and Fort Covington was about five hundred yards farther up the stream. The circular battery was at the end of Light Street, that skirts Federal Hill, on which, at the time of my visit, were heavy earth-works, in charge of Duryèe's Zouaves, thrown up as a protection to Fort M'Henry against land attacks by insurgents. The mounds of the old circular battery were six or eight feet high in some places. It was in a commanding position. Our view, taken from within it, comprises the entire theatre of the operations of the British boat expedition on that eventful night. We are looking toward Chesapeake Bay. On the left is seen Fort M'Henry, and in the extreme distance, appearing like a speck near the mouth of the Patapsco, is Fort Carroll.

On the following morning² I made a careful drawing of the Battle Monument, delineated on page 960. We afterward spent several hours in the rooms of the Historical Society, and in the afternoon called on Mr. Armistead, where we were kindly shown the old garrison flag, tattered and faded—the identical *Star-spangled Banner* on which Key and his companions so anxiously gazed “at the twilight's last gleaming.” On the same evening we left Baltimore for Havre de Grace, where, as we have observed on page 943, we passed the night and the following day.

• November 21,
1861.

We have remarked that when the British were driven away from Baltimore, the trembling citizens of Philadelphia and New York breathed freer. Both felt themselves seriously menaced by the heavy British force in the Chesapeake, and both had made such vigorous preparations for attack that the enemy did not deem it prudent to attempt it. Indeed, it was not their intention to do so at that time, and they sailed away to the Bermudas to join in the more important work of invading Louisiana.

When, as we have already observed, the depredations of Cockburn on the shores of the Delaware, in the spring of 1813, were made known at Philadelphia, an intense martial spirit was aroused in that city, and along the shores of the Delaware River and Bay. At the beginning of the war that spirit was almost dormant. The fine corps known as the *M'Pherson Blues*¹ had been disbanded twelve years before the declaration of war, and another, called *Shee's Legion*, was no more. Only three or four volunteer companies of any note then existed in Philadelphia, the oldest of which, a company of cavalry, was called the *First*, or old *City Troop*, Captain Charles Ross, which was formed in the autumn of 1774, and did good service in the Revolution under Captain Morris. They formed a body-guard for General Washington when he traveled from Philadelphia to New York in 1775 to take command of the army at Cambridge. These, with Captain Rush's old *Philadelphia Blues*, and Captain Fottevall's *Independent Volunteers*, both large companies, composed the most of the

¹ See page 111.

uniformed militia of that vicinity. During the summer of 1812 a new uniform company was formed, called the *State Fencibles*, which, like the *City Troop*, is still an organized corps, and until a few years ago was led by Captain James Page, who was elected its commander in June, 1818.¹ The original manuscript, containing the call for the formation of this company, is before me, having been kindly placed in my hands by the veteran Captain Page, of Philadelphia, who was a private in that company during the War of 1812. The first name on the list is that of one of Philadelphia's most honored sons, Hon. Joseph R. Ingersoll, and the third is that of the late Colonel Clement C. Biddle. The latter, who was the originator of the company, was chosen captain, and the former first lieutenant. Captain Page is yet (1867) a vigorous man, nearly eighty years of age, and to him I am indebted for much valuable information concerning military affairs in and around Philadelphia during the war.²

STATE FENCIBLE IN 1814.

When the news of the presence of the British in the Delaware reached Philadelphia, great alarm was felt because of the defenseless state of the city. Fort Mifflin, just below, its only defense on the water, was garrisoned by only eleven recruits, under Captain James N. Barker. Something must be done immediately to strengthen that post. James M. Porter, Secretary of the "Young Men's Democratic Society" of Philadelphia, called a meeting on the 20th of March at Stratton's Tavern. It was fully attended, and about seventy young men who were present formed a volunteer company for artillery service on that very evening. They organized by the election of officers the next day, with the name of *The Junior Artillerists*. They at once tendered their services to General Bloomfield, the commander of the district, to re-enforce the garrison at Fort Mifflin. They were accepted, and within three days after they were organized they marched to Fort Mifflin, under Captain Fidler, each with a cockade in his hat, and wearing a coat with bright buttons, accompanied by Captain Mitchell's volunteer corps of eighty men, dressed in blue and buff, and known as the *Independent Blues*. The latter, with the *Independent Volunteers*, and a newly-organized company called the *Washington Guards*, Captain Raguet—the first *new* company of infantry formed in Philadelphia at that time—left the city for the State of Delaware on the afternoon of the 12th of May, under the command of Colonel Lewis Rush. They proceeded to Staunton, about six miles beyond Wilmington, and near that place formed a camp at a spot selected by General Bloomfield.

At about that time it was rumored that Duponts' powder-mills at Wilmington were about to be attacked. Colonel Rush disposed his troops in that vicinity so as to protect them, and there they remained until the invaders left the neighboring waters. The inhabitants of Delaware, in the mean time, had raised several volunteer companies; and the names of the Duponts, Rodney, Young, Van Dyke, Warren, Wil-

¹ Captain Page was commander of the First Company. When, in April, 1861, the President of the United States called for seventy-five thousand troops to put down the great insurrection of the slaveholders against the government, the Fencibles offered themselves as volunteers, and were mustered into the service of the United States, and formed a part of the Eighteenth Regiment Pennsylvania Volunteers. They served the full term of three months, when they were mustered out of the service, and honorably discharged. Many of them afterward entered the service as volunteers in different corps. The Pennsylvania militia law of May, 1864, dissolved the organization, and the *State Fencibles*, after an honorable career of more than half a century, passed into history as an extinct military association. The last captain was John Miller. Among the brave men of the corps who went into the War for the Union, Captain Hesser, made colonel of the Seventy-second Regiment Pennsylvania Volunteers, deserves honorable mention. He fell at the head of his regiment, at Orange Court-house, Virginia, in November, 1863.

² In 1859 former members of the State Fencibles presented to Captain Page a sword, on which is the following inscription: "Presented to Captain James Page by retired members of the State Fencibles, as a token of their esteem for him as a citizen and soldier, and of their appreciation of his services as commanding officer of that corps for a period of forty years. Philadelphia, December 29, 1859."

Organization of Troops.

Camp Dupont.

Camp at Marcus's Hook.

son, Leonard, and others, are held in grateful remembrance to this day as prominent actors in the business of state defense.

On the receipt of the requisition for troops from the War Department early in July, 1814, Governor Snyder, of Pennsylvania, caused a general order to be issued for the mustering of the militia and the raising of volunteers, in which several military companies of Philadelphia, and elsewhere in the state, who had offered their services to the government in the summer of 1812, were named as accepted volunteers, and as forming a part of the quota of the state.¹ Recruiting went briskly on, and it was greatly promoted by intelligence of the capture of Washington toward the close of August. Volunteers flocked to the standard of General Bloomfield in great numbers.² Kennet Square, in Chester County, thirty-six miles southwest from Philadelphia, was the designated place of rendezvous, and there, at the close of August, a camp was formed, under the direction of Captain C. W. Hunter, and named Camp Bloomfield. On the 7th of September, Lieutenant Colonel Clemson, of the United States Army, assumed the command, and on the 14th he was succeeded by Brigadier General Thomas Cadwalader. The troops were brigaded, and the corps was called *The Advanced Light Guard*.³ Captain Ross, with his First City Troop, took post on Mount Bull, a height overlooking the Chesapeake, thirteen miles below Elkton, to watch the approach of the enemy, and held communication with the camp and Philadelphia by a line of vedettes.

The brigade changed its position several times, but was continually in the vicinity of Wilmington. The last one that it occupied was called Camp Dupont, about three miles west of Wilmington, where it remained until the 30th of November, when, all danger seeming to be distant, the troops were marched back to Philadelphia, and there disbanded on the 3d of January, 1815.⁴

In the mean time a body of almost ten thousand men was assembled near Marcus's Hook, on the Delaware, twenty miles below Philadelphia, which was at first organized by Adjutant General William Duane, under the command of Major General Isaac Worrall. It was composed of Pennsylvania militia and volunteers. Its rendezvous was called Camp Gaines, in honor of General E. P. Gaines, who succeeded Bloomfield in the command of the Department, in September. This camp was broken up on the 5th of December, 1814. Besides these, several companies were organized in the city and county of Philadelphia who did not take the field.⁵ When Gaines left for New Orleans in December, General Cadwalader⁶ succeeded him as chief of the Fourth Military Department.

While the volunteers were hastening to the camps to be enrolled as soldiers, the inhabitants of Philadelphia were vigorously making preparations for the defense of

¹ These were the *Harrisburg Volunteers*, Captain Thomas Walker; *State Fencibles*, Captain C. C. Biddle; three rifle companies, commanded respectively by Captains Andrew Mitchell, Nicholas Beckwith, and Samuel Dunn; *Benevolent Blues*, Henry Reed; and *Light Dragoons*, James Noble.

² "The very flower of the youth and best hopes of the nation," wrote an eye-witness—"citizens of every rank and profession, and of every political name, were there commingled in the ranks, united in a common cause for the defense of their country, and exhibiting to the monarchs of Europe the glorious spectacle of practical equality."—Author of *A Short Sketch of the Military Operations on the Delaware during the late War*, etc. Philadelphia, 1820.

³ The brigade staff consisted of the following officers: Thomas Cadwalader, brigadier general; John Hare Powell, brigade major, in place of Hunter, promoted; Richard McCall and John G. Biddle, aids-de-camp; Henry Sergeant, assistant quartermaster general; David Correy, assistant deputy quartermaster general. The number of officers and privates may be stated as follows: Brigade staff, 7; one company of flying artillery, Captain Richard Bache, 61; two troops of cavalry, 115; one artillery regiment, 589; one infantry regiment, 1203; riflemen, 1179; one militia battalion, 250. Total, 3504.

⁴ Among the gallant officers at Camp Dupont was Captain John Ross Mifflin, of the Washington Guards. He was a nephew of Captain Ross, and died, unmarried, in Philadelphia in 1825. He wrote a series of interesting letters from Camp Dupont, copies of some of which were kindly placed in my hands by Miss Elizabeth Mifflin, of Philadelphia. These give a lively picture of camp life there.

⁵ *A Short Sketch of Military Operations on the Delaware during the late War*, pages 3 to 29 inclusive.

⁶ Son of General John Cadwalader, of the Continental Army. He was born on the 28th of October, 1779. He was admitted to the bar in Philadelphia in 1801. He studied military science intently, and entered the service as captain in 1812. He rose to the rank of brigadier general in 1814. After the war he became major general of Pennsylvania militia. He assisted in forming a system of cavalry tactics in 1826. He died on the 26th of October, 1841.

Public Meeting in Philadelphia.

Committee of Defense.

Citizens construct Fortifications.

the city. When intelligence of the capture of Washington reached them, a public meeting was held, and a committee of defense was appointed, with ample powers to adopt such measures as the exigency seemed to require.¹ "They determined," says Mr. Wescott,² "that, for the safety of the city, field fortifications should be thrown up in the most eligible situations on the western side of the town, and where an attack might be expected. A fort was planned near Gray's Ferry, on the west side of the Schuylkill River, at the junction of the Gray's Ferry and Darby Roads; also a redoubt opposite Hamilton's Grove, another upon the Lancaster Road, and a third upon the site of an old British redoubt on the southern side of the hill at Fairmount, which would command the bridge at Market Street and the roads leading to it.

"To construct these works required much labor, and, under the circumstances, they could not have been built without the voluntary assistance of the citizens. A hearty enthusiasm was shown in the service. Companies, societies, and the artificers of the different trades organized themselves for the purpose. Day after day these parties assembled, and left the city at from five to six o'clock in the morning, and, with knapsacks or handkerchiefs containing a supply of food, marched out to the fortifications to a day of toilsome labor at an occupation to which but few of them were accustomed. Labor commenced on the 3d of September, and from that time until about the 1st of October, when the field-works were finished, the toil was participated in by parties having the following numbers: House carpenters, 62; victualers, 400; the Tammany Society, 400; painters, 70; hatters and brickmakers, 300; Philadelphia Benevolent Society and Fourth Washington Guard, 160; Rev. Mr. Staughton and the members of his church, 60; printers, 200; crew of the *Wasp*, 140; watchmakers, silversmiths, and jewelers (on Monday, September 11), 400; cabinet-makers and joiners, 300; Washington Association, 70; True Republican Society, 70; teachers, 30; friendly aliens, 500; Freemasons, grand and subordinate lodges, 510; Washington Benevolent Society, 500; Sons of Erin, citizens of the United States, 2200; Tammany Society, second day, 130; friendly aliens, second day, 150; German societies, 540; colored men, 650; citizens of Germantown, 400; Scotchmen, 100; Sons of Erin, second day, 350. The colored people also gave a second day to the work. Small bodies, not enumerated, including beneficial societies and social clubs, participated. The physicians and artists of the city also labored at the works. When the fortifications were completed, it was found that about fifteen thousand persons had labored on them. In lieu of work, many who were unable or unwilling to assist in that manner gave money. The collections from this source amounted to about six thousand dollars.

"Arriving at the fortifications, the citizens, having been previously divided into companies, were put to work. At ten o'clock the drum beat for 'grog,' when liquor sufficient for each company was dealt out by its captain. At twelve o'clock the drum

¹ The public meeting was held in the State House Yard, on the 26th of August, 1814. Thomas M'Kean was chairman, and Joseph Reed was secretary. A committee, of which Jared Ingersoll was chairman, was appointed "to consider and report what measures ought, in their opinion, to be adopted for protection and defense." They reported resolutions, the first of which nominated a number of gentlemen as a committee of defense, for the purpose of organizing the citizens of Philadelphia, and of the northern and southern districts, for defense, with power to appoint committees under them, correspond with the state and general governments, make arrangements for supplies, fix on places of rendezvous, etc. This committee consisted of the following named persons: For the city of Philadelphia—Charles Biddle, Thomas Lelper, Thomas Cadwalader, Gen. John Steel, George Latimer, John Barker, Henry Hawkins, Liberty Browne, Charles Ross, Mannel Eyre, John Connelly, Condy Ragnet, Wm. M'Faden, John Sergeant, John Geyer (Mayor), and Joseph Reed. For the Northern Liberties and Penn Township—Colonel Jonathan Williams, John Goodman, Daniel Groves, John Barclay, John Naglee, Thomas Snyder, J. W. Norris, Michael Lieb, Jacob Huff, and James Whitehead. For the district of Southwark and townships of Moyamensing and Passyunk—James Joslah, R. M'ullen, John Thompson, E. Ferguson, James Ronaldson, P. Miercken, R. Palmer, and P. Pitts.

These citizens met on the day of their appointment, at the State House, where they were organized into a committee of defense, with Charles Biddle as chairman, and John Goodman as secretary. The labors of the committee were very useful and important. The organization was continued until the 16th of August, 1815, when, at the eighty-second meeting, their labors ceased. The minutes of the committee, carefully kept by Mr. Goodman, and giving the details of their proceedings, were published in 1867 as the eighth volume of the *Memoirs of the Historical Society of Pennsylvania*, accompanied by brief biographical notices of the members of the committee.

² *History of the City of Philadelphia from 1682 to 1854*, by Thompson Wescott, Esq. This history was in manuscript when Mr. Wescott kindly allowed me to copy the matter quoted in the text.

New York stirred up.

Committee of Defense.

Patriotic Action of the Citizens.

beat for dinner, when more 'grog' was furnished. This was also the case at three and at five o'clock in the afternoon. At six the drum beat the retreat, when it was suggested in General Orders, 'For the honor of the cause we are engaged in, freemen to live or die, it is hoped that every man will *retire sober.*'"

So did Philadelphians prepare for the invader. Happily the enemy did not come, and their beautiful city was spared the horrors of war.

New York was likewise fearfully excited by apprehensions of danger during the summer and autumn of 1814. Like Philadelphia and Boston, its defenses were few and weak at that critical moment. The appearance of the powerful British force in the Chesapeake aroused the citizens to a sense of their immediate danger, and they soon put forth mighty efforts in preparations to repel the invader. The mayor of the city, De Witt Clinton, issued, through the medium of the City Council, a stirring address to the people on the 2d of August, in which he set forth the importance of New York to the enemy on account of its wealth and geographical position, which increased its liabilities to attack. He recommended the militia to hold themselves in readiness for duty, and called upon the citizens to offer their personal services and means cheerfully to the United States officers in command there, to aid in the completion of the unfinished fortifications around the city.

In response to the mayor's appeal, a large meeting of citizens was held in the City Hall Park, on Tuesday, the 9th of August,¹ when a Committee of Defense, chosen from the Common Council, was appointed,² clothed with ample powers to direct the efforts of the inhabitants in the business of protection. On the same morning the officers of General Mapes's brigade, to the number of two hundred, gave the first practical response to the mayor's appeal by crossing the East River from Beekman's Slip, and, with Captain Andrew Bremmer's artillery, marching to the lines traced out for the fortifications on the heights around Brooklyn by General Swift, and taking pick-axes, and shovels, and every other appropriate implement at hand, breaking ground at eight o'clock, and working lustily all day. They were followed the next morning by as many carpenters and cabinet-makers; and only four days after the meeting in the Park, the Committee of Defense announced³ that three thousand persons were at work on the fortifications. They also reported the receipt of * August 13. large sums of money; and on the same day it was announced that "two hundred journeymen printers, one thousand Sons of Erin, thirty pilots, seventy men from the Asbury (African) Church, with one hundred and fifty other colored men, two hundred weavers, and many heads of manufacturing establishments," were at work on the lines. Two days afterward the city newspapers were suspended, that all hands might work on the fortifications; and on the 20th of August five hundred men "left on the Jersey steam-boat for Harlem Heights," to work on intrenchments there; and, at the same time, fifteen hundred "patriotic Sons of Erin" crossed the ferry to Brooklyn for the same purpose. Two days afterward nearly one thousand colored people crossed the Catharine Ferry to work on the fortifications between Fort Greene and Gowanus Creek; and on the 25th the Washington Benevolent Society, an organization opposed to the war, inspired with zeal for the common cause, went over in a body, with their banner bearing the portrait of Washington—the largest number belonging to one society that had crossed over at one time. On the same day the butchers went to the lines to labor, bearing the flag, on which was the figure of an ox prepared for slaughter, which had been used by them in the great "Federal Procession" in honor of the ratification of the National Constitution in 1789. Masonic and other societies went in bodies to the patriotic task; and school-teachers and pupils went together to give their aid. Little boys, too small to handle a spade or pickaxe, carried earth on

¹ The call was signed by Henry Rutgers and Oliver Wolcott. The chief organ of the Opposition—the *Evening Post*—denounced it, and asked, "Has it not a squinting toward the charter election?"

² The committee consisted of Nicholas Fish, Gideon Tucker, Peter Mesier, George Buckmaster, and J. Nitchie.

shingles, and so added their mites in rearing the breastworks. It was a scene like that of cairn-building in the olden time. The infection spread, and every day citizens from neighboring towns on Long Island,¹ on the Hudson, and from New Jersey, proffered their services. Nor were the nights undisturbed by the sound of the patriotic toil. On that of the 31st of August it is recorded that full six hundred men went over to Brooklyn, and worked "by the light of the moon."

Intelligence of the capture of Washington City reached New York on the 27th of August, three days after that sad occurrence. The zeal and patriotism of the citizens were increased there-

by. In General Orders, Daniel D. Tompkins, governor of the State of New York, who had been untiring in his exertions for the public good from the beginning of the war, called on the inhabitants to send arms of every description to the State Arsenal, where all fit for service would be paid for. The call was promptly answered. He also ordered the organization of a battalion of Sea Fencibles, to be commanded by Captain James T. Leonard; and expressed a desire to enroll volunteers for one or two months' service. Already nearly four thousand militia had come down the Hudson in sloops; and Commodore Decatur had been assigned to the command of the naval force in the harbor of New York, with orders to co-operate with the military in defense of the city. On the 1st of September the governor issued a proclamation for an extraordinary session of the Legislature of the State, to commence on the 27th of that month.

On the 31st of August there was a grand military review in the city of New York, when about six thousand men were under arms. On the 2d of September the militia were mustered into actual service, when the division of General Ebenezer Stevens was transferred to the command of Major General Morgan Lewis. Cadwallader D. Colden was appointed to the command of all the uniformed militia companies of the city and county, and every thing pertaining to the military was put upon the war footing of actual service. The citizens continued their zealous labors on the military works all through September and in October, and made the lines of fortifications around New York truly formidable.²

¹ On the 17th of August, the people of Bushwick, Long Island, led by the Rev. Mr. Bassett, repaired to Fort Swift (erected on the old redoubt of the Revolution on Cobble Hill) to labor on that work. The venerable pastor of the flock that followed him opened the operations with prayer, and he remained with them throughout the day, encouraging them and distributing refreshments among them.

² These displays of patriotism inspired Samuel Woodworth, an American poet of considerable eminence, and then the editor and publisher of a weekly record of events entitled *The War*, to write a very popular ballad called *The Patriotic Diggers*, of which the following is a copy:

"Johnny Bull, beware,
Keep at proper distance,
Else we'll make you stare
At our firm resistance;
Let alone the lads
Who are freedom tasting,
Recollect our dads
Gave you once a basting.
Pickaxe, shovel, spade,
Crowbar, hoe, and barrow,
Better not invade,
Yankees have the marrow.
"To protect our rights
'Gainst your flints and triggers,
See on Brooklyn Heights

Our patriotic diggers;
Men of every age,
Color, rank, profession,
Ardently engage,
Labor in succession.
Pickaxe, etc.
"Grandeur leaves her towers,
Poverty her hovel,
Here to join their powers
With the hoe and shovel.
Here the merchant toils
With the patriot sawyer,
There the laborer smiles,
Near him sweats the lawyer.
Pickaxe, etc.

General Swift's Report of the Fortifications around New York.

Earlier than the movements of the public authorities and inhabitants of New York and Philadelphia for the defense of their cities, recorded in the preceding pages, the

"Better not invade;
Recollect the spirit
Which our dads displayed,
And their sons inherit.
If you still advance,
Friendly caution slighting,
You may get, by chance,
A bellyful of fighting.
Pickaxe, shovel, spade,
Crowbar, hoe, and barrow,
Better not invade,
Yaukees have the marrow.

The most authentic account of the fortifications thrown up around New York in the summer and autumn of 1814 may be found in the report of General Joseph Swift, Chief Engineer (see page 638), to the Common Council Committee of Defense, made at the close of the year 1814. I have compiled the following statements from the original manuscript of that report, with its maps, and landscape and topographical drawings, which are now before me.

The city of New York might be approached by an enemy by way of Sandy Hook and the Narrows, Long Island Sound and the East River, and across Long Island. To guard against invasion by either one of these approaches, and to be prepared at all points, old fortifications, built during the Revolution, or when war with France seemed inevitable in 1778 and 1779, were strengthened and new ones were erected. The commanding situations near the dangerous passage in the East River known as Hell Gate, at the mouth of the Harlem River, were occupied by batteries, some of which were covered by towers. The heights overlooking Harlem Plains, and those around Brooklyn, on Long Island, were also covered with military works, within which necessary magazines and barracks were erected. The position of these various works, and those around and in the harbor of New York, may be seen at a glance by reference to the map on the next page.

In the rear of Brooklyn works were erected which completely isolated the town. On the high ground overlooking the Wallabout and the navy yard was Fort Greene, mounting twenty-three heavy cannon, and between it and Gowanus Creek, which ran through a low morass, Redoubts Cummings and Masonic, Washington Battery and Fort Firemen were erected. These were united by lines of intrenchments. In each of these redoubts, as well as at the salient angles of the intrenchments, twelve-pounders were placed. The intervals between them did not exceed half grape-shot distance of guns of that capacity. On a small eminence on the margin of Gowanus

FORT STEVENS AND MILL ROCK.*

Creek, on the right flank of these lines, was a little redoubt, open in the rear, calculated for three heavy guns, to defend the mill-dam and bridge. On a commanding conical hill forming a part of Brooklyn Heights, and nearly on the site of Fort Stirling of the Revolution, was a strong redoubt called Fort Swift; and another, named Fort Lawrence, was constructed at the southwestern extremity of the heights, and overlooking Gowanus Bay and Governor's Island.

On Hallett's Point, Long Island, near Hell Gate, was quite an extensive work called Fort Stevens, in honor of General Ebenezer Stevens, who had been in command of the troops in and around New York. On Lawrence's Hill, in the rear, and commanding an extensive view, was a tower. In front of it, in the middle of the East River, at the mouth of the Harlem River, stood (and yet stands) Mill Rock. On this a very strong block-house and a powerful battery were erected. On the shore of York Island, opposite, at a place known as Rhinelander's Point (Horn's Hook in the Revolution), not far above the present Asto-

TOWER AT HALLETT'S POINT.

towns, especially in the fast-growing commercial city of New York. Among the sci-

Pass, now called Mount St. Vincent, in the northeastern part of the Central Park. Connected with Fort Clinton, and extending like a bridge over M'Gowan's Pass, were a block-house and Nutter's Battery (a sketch of which is given on the following page), the whole joined to and commanded by Fort Fish (a view of the interior of which, with Harlem in the distance, will also be found on the following page), on another eminence westward of the pass, on which five heavy cannon were planted. This pass, on the old Kingsbridge Road (between the present Fifth and Sixth Avenues and One Hundred and Fifth and One Hundred and Eighth Streets), was a very important point, and great efforts were used to make it a Thermopylae

MILL ROCK AND ITS FORTIFICATIONS.

to any foe that might attempt to go through.

Immediately west of Fort Fish, and at the foot of the works, was a deep, rough, wooded valley, which is now within the Central Park, and preserved in all its original rodeness. On the opposite side of this valley was a range of wooded and rocky heights, of difficult ascent excepting in one place, and there for only the lightest troops. On these heights, extending to Manhattanville, several block-houses were erected, mostly of stone, within supporting distance from each other. These extended from near M'Gowan's Pass almost to the Bloomingdale Road. The one nearest that road, and overlooking Manhattanville, was called Fort Laight. All of them had heavy guns mounted *en barbette*, that is, on the top, without embrasures.

From Fort Laight ran a line of in-trenchments westwardly across the Bloomingdale Road, which ended on the high, precipitous bank of the Hudson. Here, near the then residence of Viscount Courtenay (after-

FORT CLINTON AT M'GOWAN'S PASS.

ward the Earl of Devon), was a strong stone tower (see picture on page 975) which commanded Manhattanville, and from which was a fine view of the Palisades of the Hudson, and of the river almost to the Highlands. Such were the fortifications described in General Swift's report,* at the conclusion of which he said:

"The works comprehended in the foregoing

FORT CLINTON AND HARLEM CREEK.

* General Swift's aid-de-camp, Lieutenant Gadsden, of the United States Engineers, superintended the erection of the works at Brooklyn, assisted by Messrs. Nicholls and Mercier. Major Horn superintended those in the vicinity of Harlem. The surveys, maps, and small views presented in the report were furnished by Captain (late Professor in Columbia College, New York) Renwick, of General Mapes's brigade, aided by Lieutenants Gadsden, Craig, Turner, De Russy, Kemble, and Oothout. The larger views were drawn by Mr. Holland.

entific men of that day, John Stevens and Robert Fulton appear most conspicuous in proposing plans for that purpose. Earlier than this (in 1807), Abraham Bloodgood, of Albany, suggested the construction of a floating revolving battery, not unlike, in its essential character, the turret of Captain Ericsson's *Monitor* of 1862.¹ In March,

WORKS AT M'GOWAN'S PASS.

Staten Island Shore at the Narrows, and near there a brigade of two thousand militia from the Hudson River counties were stationed from August to December, 1814. On Governor's Island, very near the city, were Forts Jay and Castle Williams. Of all these works only those on Governor's Island remain, excepting one of the block-houses near M'Gowan's Pass, in the upper part of the Central Park, between Seventh and Eighth Avenues, at One Hundred and Fifth Street, overlooking Harlem Plains. Its massive walls are well preserved, as may be seen from the drawing of it given on page 975. The mounds of Forts Fish and Clinton, at M'Gowan's Pass, were also well preserved as late as 1860, when, from the north, they presented the appearance given in the engraving on the opposite page.

description have been chiefly constructed by the labor of the citizens of the city of New York, Long Island, and of the neighboring towns near the North River, and in New Jersey, all classes volunteering daily working-parties of from five to fifteen hundred men. The fortifications are testimonials of patriotic zeal, honorable to the citizens and to the active and assiduous Committee of Defense."

Besides these works there were old Fort George, at the foot of Broadway; the North Battery (given below), at the foot of Hubert Street; and a partly finished work near the foot of the present Twenty-third Street, called Fort Gansevoort. At Princes Bay, Staten Island, a tower was erected to command the only secure anchorage for the shipping and safe landing-place of a foe. Fortifications were commenced on the

NORTH BATTERY.

VIEW FROM FORT FISH, LOOKING TOWARD HARLEM.

¹ In a volume containing the proceedings of the *Society for the Promotion of Useful Arts in the State of New York*, published at Albany in 1807, is the following account of Mr. Bloodgood's plan, reference being had to accompanying drawings: "The model of this battery was exhibited to the society with a verbal description only. The annexed plate shows an exact profile of its body, the shape of which, as seen above, is circular. It is to be connected at the centre of its bottom with a strong keel, in such a manner that, while the keel is held by cables and anchors in one position, the battery is made to turn round on its centre. This motion may be given to it either by the tide acting on float-boards attached to the body of the battery, by sails raised on its exterior parts, or by manual application. In this last way it may

Description of proposed Revolving Battery.

1814, Thomas Gregg, of Pennsylvania, obtained a patent for a proposed iron-clad

be effected by men in the hold drawing on a lever fastened to a post fixed to the keel and rising through a well-hole in the centre of the battery. The strength of horses might perhaps be applied to the same purpose. The cables by which the keel is held are to be entirely under water, and thus secure from an enemy's shot. The advantages of such a battery would be—1. Its rotary motion would bring all its cannon to bear successively, as fast as they could be loaded, on objects in any direction. 2. Its circular form would cause every shot that might strike it not near the centre to glance. 3. Its motion, as well as its want of parts on which grappling might be fastened, would render boarding almost impossible. 4. The steadiness with which it would lie on the water would render its fire more certain than that of a ship. 5. The guns would be more easily worked than is common, as they would not require any lateral movement. 6. The

COURTENAY'S AND THE HUDSON TOWER.*

REMAINS OF BLOCK-HOUSE OVERLOOKING HARBOR FLAOR IN 1800.†

men would be completely sheltered from the fire of the elevated parts of an enemy's ship. 7. The battery might be made so strong as to be impenetrable to common shot, etc."

* The house in which Viscount Courtenay, son of the Earl of Devon, lived was built by the elder Doctor Post, of New York, and named Clermont. There Joseph Bonaparte resided for a while. It is now (1867) known as Jones's Claremont Hotel, and is a place of great resort in fine weather for pleasure-seekers who frequent the Bloomingdale and Kingsbridge Roads. The appearance of the mansion has been entirely changed by additions.

† This sketch shows the character of the rocky heights on which the line of block-houses was built. In the distance is seen the "High Bridge," or Croton Aqueduct, over Harlem River. The walls of the block-house are twelve or fifteen feet in height, and four feet in thickness.

‡ The remains of Fort Clinton are seen on the left.

Iron-clad Gun-boat.

A Floating Battery authorized by Congress.

Launch of the Battery.

steam vessel of war, resembling in figure vessels used during our late great Civil War. Drawings of it may be seen in the Patent-office, with full specifications.¹ Our little sketch below was copied from one of these drawings.

At about the same time a committee of citizens examined a plan of a floating battery submitted by Robert Fulton, and approved by such tried naval officers as Captains Decatur, Jones, Evans, Biddle, Perry, Warrington, and Lewis. It was to be in the form of a steam-ship of peculiar construction, that might move at the rate of four miles an hour, and furnished, in addition to its regular armament, with submarine guns. The committee memorialized Congress on the subject, and asked the Secretary of the Navy to give it his official favor. It was objected that a discussion in Congress would reveal the matter to the enemy, and also that the President was not authorized to make an appropriation without the special authority of law. To meet these objections, the committee agreed to have the vessel constructed at their own expense and risk, provided assurances should be given that the government, which alone could employ her, would receive and pay for her when her utility should be demonstrated. It was estimated that she would cost nearly as much as a first-class frigate, or about three hundred and twenty thousand dollars. The liberal offer was

accepted, and Congress authorized the President² to have one or more floating batteries built, under the supervision of the Coast and Harbor Defense

A G N Brown

Committee.³ They appointed Mr. Fulton the engineer, and Adam and Noah Brown the architects. The keel was laid at the ship-yard at Corlear's Hook, in the city of New York, on the 20th of June, 1814, and she was launched at 9 o'clock

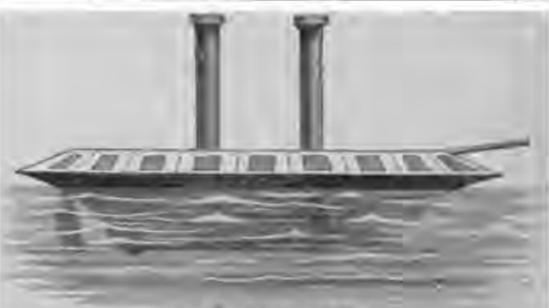

in the morning of the 29th of October following, in the presence of a vast assemblage of people. The scene was described as very exciting. It was a bright autumnal day. Fleets of vessels and crowds of spectators might be seen on every hand; and she went into the water amid the roar of cannon and the shouts of a multitude full twenty thousand in number.³ Her engines were put on board, and her machinery

¹ The following is a portion of the specification :

"The boat is framed on an angle of about eighteen degrees all round the vessel, when the top timbers elevate the hull, and the lower ones direct them under her. The top deck, which glances the ball, may be hung on a mass of hinges near the ports. Said deck is supported by knees and cross-timbers on the lower sides, so that it may be sprung with powder, if required (when boarded by the enemy), to a perpendicular, when the said deck will be checked by stays, while the power of powder will be exhausted in the open air, and then fall or spring to the centre of the deck again. The aforesaid deck will run up and down with the angle, which may be coppered or laid with iron. The gun-deck may be hored at pleasure, to give room, if required, as the men and guns are under said deck. The power is applied between her keels, where there is a concave formed to receive them from the bow to the stern, except a small distance in each end, forming an eddy. The power may be reversed to propel her either way. Said power is connected to upright levers to make horizontal strokes alternately. The elevation of her timbers and gearing will be proportioned by her keel and tonnage."

² That committee consisted of General Dearborn, then commanding the district, Colonel Henry Rutgers, Oliver Wolcott, Samuel L. Mitchell, and Thomas Morris.

³ The New York *Evening Post* published an account of the launching of this vessel, and gave the following as her dimensions and capacity for armament: "She measures one hundred and forty-five feet on deck, and fifty-five feet breadth of beam, draws only eight feet of water, mounts thirty 32-pound carronades, and two columbiads of one hundred pounds each. She is to be commanded by Captain Porter." It may be added that it was a structure resting upon two boats and keels, separated from end to end by a channel fifteen feet wide and sixty-six feet long. One boat cou-

Steam-ship or Floating Battery, *Fulton the First*.

Extravagant Stories concerning her.

tested, in the month of May following,⁸ when Fulton was no more, he having died in February.¹ She made a trial trip to the ocean and back, fifty-three miles, on the 4th of July, at the rate of about six miles an hour by her engines alone. In September she made another voyage to the sea, with her whole armament on board, at the rate of five and a half miles an hour against wind and tide. The vessel was named **FULTON THE FIRST**.

At the close of 1814 active war had ceased in the Northern States. Its chief theatre of operations was in Louisiana and on the ocean, to which we will now turn our attention.

tained the boiler for generating steam, which was made of copper. The machinery occupied the other boat. The water-wheel (A) revolved in the space between them. The main or gun-deck supported the armament, and was protected by a parapet four feet ten inches thick, of solid timber, pierced by embrasures. Through twenty-five port-holes were as many 35-pounders, intended to fire red-hot shot, which could be heated with great safety and convenience. Her upper, or spar-deck, upon which many hundred men might parade, was encompassed with a bulwark, for safety. She was rigged with two stout masts, each of which supported a large lateen yard and sails. She had two bowsprits and jibs, and four rudders, one at each extremity of each boat, so that she might be steered with either end foremost. Her machinery was calculated for an additional engine, which might discharge an immense column of water, which it was intended to throw upon the decks and through the port-holes of an enemy, and thereby deluge her armament and ammunition.—See Colden's *Life of Robert Fulton*, page 229.

SECTION OF THE FLOATING BATTERY.

The most extravagant stories concerning this monster of the deep went forth at about the time of her being launched. In a treatise on steam-vessels, published in Scotland soon afterward, the author said: "Her length is 300 feet; breadth, 200 feet; thickness of her sides, 12 feet, of alternate oak plank and corkwood; carries 44 guns, four of which are 100-pounders; can discharge 100 gallons of boiling water in a few minutes, and by mechanics brandishes 300 cutlasses with the utmost regularity over her gunwales; works, also, an equal number of pikes of great length, darting them from her sides with prodigious force, and withdrawing them every quarter of a minute."²

¹ See page 242.

3 Q

FULTON THE FIRST.

CHAPTER XLI.

"We had sailed out a letter of marque,
Fourteen guns and forty-five men,
And a costly freight our gallant barque
Was bearing home again.
We had ranged the seas the whole summer tide,
Crossed the main and returned once more;
And our sails were spread, and from the mast-head
The look-out saw the distant shore.
A sail! a sail on our weather-bow!
Hand over hand ten knots an hour;
Now God defend it ever should end
That we should fall in the foeman's power."¹—CAROLINE F. ORNE.

OUR story of the operations of the American Navy during the year 1813 closed with the cruise of the *President*, under Commodore Rodgers, and her bold dash through the British blockading squadron off Sandy Hook into the harbor of New York, at the middle of February, 1814, when the broad pennant of Commodore Decatur was unfurled over her deck.

The *Guerriere*, 44, the first frigate built by the United States government on the sea-board since 1804, was launched at Philadelphia on the 26th of June, 1814, in the presence of fifty thousand persons, and was placed under the command of Commodore Rodgers. On the 20th of July, the *Independence*, 74, was launched at Charlestown, amid the roar of cannon and the shouts of a great multitude. She was placed in charge of Commodore Bainbridge. The *Independence* was a two-decker, the first that had ever been built for the service of the United States.² The keels of two others were laid, but they were not put afloat until the war had ceased. The *Java*, 44, was launched at Baltimore on the 1st of August, while twenty thousand people were looking on. She was placed under the command of Commodore Perry. Several new sloops of war were made ready for sea during the summer of 1814; and the *Adams*, 28, had been cut down to a sloop and lengthened the previous autumn at Washington, and armed with the same number of guns, but on a single deck.

On the night of the 18th of January, 1814, the *Adams*, Captain Charles Morris, passed the blockading squadron in Lynnhaven Bay, put to sea, and ran off to the northeast to cross the track of the British West India merchantmen. She made a few prizes. On the 25th of March she captured the Indiaman *Woodbridge*, and, while taking possession of her, observed twenty-five merchant vessels, with two ships of war, bearing down upon her with a fair wind. Morris abandoned his prize, and gave the *Adams* wings for flight from danger. She escaped, sailed down the coast, and entered the harbor of Savannah for supplies in the month of April. On the 5th of May she sailed for the Manilla Reef to watch for the Jamaica convoy. The fleet passed her in the night. She gave chase in the morning, gained upon the fugitives, but was kept at bay by two vessels of war.

The *Adams* now stood to the northward, and on the 3d of July was off the Irish coast, where she was chased by British frigates at different times, but always escaped.

¹ From a spirited poem, in manuscript, written by Miss Orne, of Cambridge, Massachusetts, entitled "The Letter of Marque."
² The *America*, of the same class, was presented to the French government while she was yet on the stocks.

Destruction of the *Adams*.

Cruise of the *Wasp*.

She captures the *Reindeer*.

The weather was cold, damp, and foggy for nearly two months, because the ocean was dotted with icebergs floating down from circumpolar waters. Her crew sickened, and Captain Morris determined to go into port. He entered the Penobscot River, in a somewhat disabled condition, on the afternoon of the 17th of August, and made his way with the *Adams* to Hampden, far up the river, where he was soon afterward compelled to destroy his vessel to prevent its falling into the hands of the British, as we have already observed.¹

J. Blakeley

deal of manœuvring until a little past three o'clock in the afternoon, when the foe was within sixty yards of the *Wasp* and on her weather-quarter, the former opened fire with a 12-pound carronade, and gave four heavy discharges of round and grape shot before her antagonist could bring one of her guns to bear. At about half past three the *Wasp* opened fire, and in a few minutes the action became very severe. Several times the men of the stranger attempted to board the *Wasp*, but were repulsed. Her crew finally boarded the stranger, and at the end of twenty-eight minutes after the combat commenced the latter was a prize to the *Wasp*. The vanquished vessel was the British sloop-of-war *Reindeer*, Captain William Manners. She was terribly shattered. Her people had fought bravely, and her captain and purser (Barton), and twenty-three others, were killed, and forty-two were wounded. The *Wasp* was hulled six times, but was not very seriously damaged. Her loss was five men killed and twenty-two wounded. She was every way the superior of the *Reindeer*. She was new, mounted twenty 32-pound carronades and two long guns, and her complement was one hundred and seventy-three men. That of the *Reindeer* was only one hundred and eighteen. Blakeley put some of his wounded prisoners on a neutral vessel, and with the remainder sailed for L'Orient, where he arrived on the 8th of July. He had burned the wrecked *Reindeer*. For his gallant conduct on this occasion Congress voted him a gold medal.²

Blakeley left L'Orient on another cruise in the *Wasp* on the 27th of August. On the evening of the 1st of September he discovered four sail ahead, two on the larboard and two on the starboard bow of the *Wasp*. He bore down upon them, and at almost half past nine in the evening he was so near one of them that he opened

³ On one side of the medal is a bust of Captain Blakeley in profile, with the words around it "JOHNSTON BLAKELEY BRIG. FED. AM. NAV. WASP DUE." On the other side is represented a naval action, with the legend "SICUT I BIS VICTOR. PATRIA TUA TE LEGIT PLACIDITO." Below, "INTER WASP NAV. AMERIC. ET REINDEER NAV. ANG. DIE XVIII JUNII MDCCCLIV."

BLAKELEY'S MEDAL.

fire upon her with a 12-pound carronade. The shot was promptly returned. The night was intensely dark, the wind was blowing freshly, and the vessels were running at the rate of ten knots an hour. After the exchange of shots, the commanders of both vessels hailed; and soon afterward the *Wasp* opened a broadside upon her antagonist. A severe engagement ensued. Thirty minutes later the fire of the stranger ceased. "Have you surrendered?" inquired Blakeley. He was answered by a few shots, when he gave his foe another broadside, followed by the same question. It was answered in the affirmative, when a boat was lowered from the *Wasp*, with an officer to take possession of the prize. Just then another vessel appeared astern, rapidly approaching; then another, and another. Blakeley felt compelled to abandon his prize, so nearly in his possession. He could not ascertain the name or power of his antagonist, but believed her to be one of the largest brigs in the British Navy. It was afterward ascertained that it was the *Avon*, 18, Captain Arbuthnot, and that the vessel that first came to her aid was the *Castilian*, 18. The *Avon* was so much shattered in the conflict that she sunk almost immediately. The survivors of her people were rescued by their friends in the other vessels.

The *Wasp* continued her cruise, capturing several prizes. Among others, she took the *Atlanta*, near the Azores, on the 21st of September. The prize was so valuable that Blakeley sent her home in command of Midshipman (late Commodore) David Geisinger.¹ She arrived safely at Savannah on the 4th of November. On the 9th of October the *Wasp* was spoken by the Swedish bark *Adonis*, making her way toward the Spanish Main. On that occasion two officers of the *Essex* (Acting Lieutenant McKnight and Master's-mate Lyman), who were passengers in the *Adonis*, left her for the *Wasp*. This was the last that was ever heard of that vessel and of those on board of her at that time. She and all her people perished in some unknown way in the solitudes of the sea.²

In March, 1814, the *Peacock*, 18, Captain Warrington,³ sailed on a cruise from New

¹ Commodore Geisinger died at his residence in Philadelphia on Saturday, the 10th of March, 1860, at the age of about seventy years. He was among the oldest officers of the navy. His commission as captain was dated May 24, 1805. For several years he was stationed at the Naval Asylum in Philadelphia.

² Johnston Blakeley was a native of Ireland, where he was born in the month of October, 1781. His father emigrated to the United States with his family in 1783, and settled in Charleston, South Carolina, and afterward made Wilmington, in North Carolina, his home. He sent Johnston, his only surviving son, to New York to be educated. He finished his education at Chapel Hill, in North Carolina. He entered the navy as a midshipman in the year 1800. He served with faithfulness, and rose to the rank of captain. In 1814 he was appointed to the command of the *Wasp*, in which, as we have observed in the text, he perished toward the close of that year, when he was only thirty-three years of age.

³ Lewis Warrington was born at Williamsburg, in Virginia, on the 2d of November, 1782. He was educated at William and Mary College in that state. He entered the naval service as midshipman in January, 1806, and made his first cruise with Captain Barron in the *Chesapeake*. He was promoted to lieutenant in 1807, and to master-commandant on the 24th of July, 1813. This was the office which he held, by commission, when he started on the cruise in the *Peacock*.

Fight between the *Peacock* and *Epervier*.

Capture of the latter.

Her Escape from Recapture.

York. She went down the coast, and was off the shores of Florida for some time without encountering any conspicuous adventures. Finally, on the 29th of April, Warrington discovered three sail to the windward, under convoy of an armed brig of large dimensions. The merchantmen were an English brig, and a Russian and a Spanish ship. The two war vessels made for each other, and very soon a close and severe battle commenced. The *Peacock* was so badly wounded in the rigging by a broadside from her antagonist, which proved to be the *Epervier*, 18, Captain Wales, that she was compelled to fight "running large," as the phrase is. She could not manœuvre much, and the contest became one of gunnery. The *Peacock* won the game at the end of forty minutes after it began, when the *Epervier* struck her colors. She was extensively injured. No less than forty-five round shot had struck

S. H. Warrington

her hull, and twenty-two of her men were slain or disabled. The hull of the *Peacock* was scarcely bruised, and within an hour after the conclusion of the combat she was in perfect fighting order. Not a round shot had touched her hull, and not a man on board of her was killed. Only two men were wounded.

The *Peacock* was the heavier of the two vessels, fully manned, and in stanch order. The *Epervier* was also fully manned. She was a valuable prize. The vessel sold for fifty-five thousand dollars, and on board of her were found one hundred and eighteen thousand dollars in specie. She was so rich, and the waters of the Southern coast was then so much infested by British cruisers, that Warrington determined to convoy her into Savannah. He placed J. B. Nicholson, his first lieutenant, on board of her, and on the evening of the day of the capture started for port. On the following day, when abreast Amelia Island, on the coast of Florida, they encountered two British frigates. Arrangements were at once made to send the prize into St. Mary's, and to haul to the southward with the *Peacock*. By this means the frigates were separated, and the one in chase of the *Peacock* was led off the coast, and lost sight of her intended victim on the 1st of September. The *Epervier*, while veering along the coast toward Savannah, fell in with the other frigate. The water was shoal in which the prize vessel ran. The boats of the frigate were lowered, filled with armed men, and sent in chase of the *Epervier*, which moved slowly before a very light wind. The boats gained upon her, and her position became critical, for Nicholson had only sixteen officers and men with him. He employed a stratagem successfully. Using the trumpet, as if his vessel was full of men, he summoned them, in a loud voice, to prepare to fire a' broadside. The men in the boats heard the order, and fled. Had they known the real state of affairs, they might have captured the *Epervier* in less than five minutes with little loss. She escaped, and reached Savannah on the 1st of May. The *Peacock* entered the same port on the 4th.

Because of his success, he was promoted to captain in November, 1814. He had served with distinction under Decatur and others. He was a very active and useful officer during the whole of the second War for Independence, and subsequently performed much important service afloat and ashore. For many years he was a member of the Board of Navy Commissioners; and in September, 1842, he was appointed chief of the Bureau of Ordnance and Hydrography, which office he held at the time of his death. That event occurred at Washington City on the 12th of October, 1851.

Barney's Flotilla in Chesapeake Bay.

It is blockaded.

Fight with the Blockaders.

The capture of the *Epervier* produced much exultation throughout the country. The name of Warrington was upon every lip in phrases of honor, and the Congress of the United States ordered a gold medal to be struck and presented to him because of this exploit.¹

WARRINGTON'S MEDAL.

Soon after her return to Savannah the *Peacock* went on another cruise, and entered the Bay of Biscay and the waters on the coast of Portugal. She captured fourteen merchantmen, but had no engagement with a ship of war. She returned to New York at the end of October.

We have alluded to Barney's operations with a flotilla in the Chesapeake in the summer of 1814. The brave and active veteran left the Patuxent on the 1st of June, with the *Scorpion* as his flag-ship, two gun-boats, and several large barges, in chase of two British schooners. By the vigorous use of sweeps he was fast overhauling the fugitives, when a large ship was seen at the southward. The wind commenced blowing freshly, and the great vessel, being to windward, was seen bearing down upon the flotilla. Barney signaled the return of his boats, and all fled back to the Patuxent, followed for a while by the huge enemy, a two-decker, which anchored at the mouth of the river. On the 6th of June this ship was joined by two others, and Barney's flotilla was thoroughly blockaded. On the 8th, the ship of the line, a brig, two schooners, and fifteen barges sailed up the Patuxent with a fair wind, and Barney moved to St. Leonard's Creek, two miles farther up, and there, in battle order, awaited their approach. The heavier British vessels anchored at the mouth of the creek, and the barges advanced, led by a rocket-boat. Barney, with thirteen barges, advanced to meet them, when they retreated. The movement was repeated in the afternoon. Twenty-four hours afterward the enemy sent twenty barges up the creek, which, after a sharp skirmish, fled back to the protection of the large armed vessels. On the 11th, twenty-one barges, and two schooners in tow, renewed the attack, when, after receiving a more severe punishment than at any time before, they were again compelled to fly, with considerable loss.

Barney now caused some small earth-works to be thrown up on the shore to protect his flotilla. These were placed in the command of Captain Miller, of the Marine Corps, and a considerable force of militia, under Colonel Decius Wadsworth, of the Ordnance Corps. The combined force attempted to end the blockade on the 26th. A raking shot ripped a plank from the bottom of the large British ship,² and she was

¹ On one side of the medal is a bust in profile of Captain Warrington, and the words "LUDOVICUS WARRINGTON DUX NAVALIS AMRL." On the other side is a representation of a naval battle, and around it the legend "PRO PATRIA PARATUS SIT VINCERE AUT MORI." Below, "INTER PEACOCK NAV. AMRL ET EPERVIER NAV. ANG. DIE XXIX MARCH MDCCCXIV."

² This was either the *Sesora* or the *Loira*.

Reappearance of the *Constitution*.

She is chased into Marblehead Harbor.

Again puts to Sea.

compelled to run on a sand-bank to avoid sinking. The engagement continued about two hours, during which time Barney lost thirteen men in killed and wounded. The blockade was effectually raised, for the enemy prudently dropped down the Patuxent. Barney and his flotilla remained in that river until about the middle of August, when the British commenced those operations which resulted in the destruction of his vessels by order of its commander,¹ and the capture of Washington City, as recorded in a preceding chapter.

Now the gallant *Constitution*, 44, again appears on the scene of strife. When Bainbridge relinquished the command of her in 1813 she was thoroughly repaired. A greater portion of her crew were sent to the Lakes, and when she was ready for sea a new one was entered, and she was placed under the command of Captain Charles Stewart. She left Boston Harbor for a cruise on the 30th of December, 1813, and for seventeen days did not see a sail. She was on the coast of Surinam at the beginning of February, and on the 14th of that month she captured the British war schooner *Picton*, 16, together with a letter-of-marque which was under her convoy. Returning northward through the West India Islands, she chased^a the British frigate *La Pique*, 36, Captain Maitland, off Porto Rico. Night coming ^{a February 15, 1814.} on, that vessel escaped through the Mona Channel. The *Constitution* continued her way homeward, and early in the morning of Sunday, the 3d of April, when off Cape Anne, discovered two large sail to the southeast standing for her, and nearing her rapidly with a fair breeze. They were two British frigates of great weight, the *Junon* and *La Nymphe*. Boston Harbor was her destination, but she was compelled to seek safety in that of Marblehead. By great exertions, superior skill in management, and lightening her of much of her burden, Stewart succeeded in reaching the harbor of Marblehead in safety. The situation of the *Constitution* was still one of great peril. An express was immediately sent to Commodore Bainbridge, at Boston, who proceeded with all the force at his command to her relief. Several companies of militia, artillery, and infantry hastened to Marblehead. The pursuers kept at a respectful distance, and the *Constitution* was soon afterward safely anchored in the harbor of Salem, from whence she sailed in due time to Boston, where she remained until near the close of the year.

At the close of December,^b the *Constitution*, still commanded by Captain Stewart, put to sea. She went to the Bay of Biscay by way of Bermuda and Madeira, and then cruised some time farther southward off Lisbon. While in sight of the Portuguese capital, Stewart observed a large ship seaward, and immediately gave chase. Stopping to capture and secure a prize, he lost sight of her. She was the *Elizabeth*, 74, on her way to the port of Lisbon. On her arrival there her commander was informed of the presence of the *Constitution* on the coast, and he went out at once in search of her. He was unsuccessful. ^{b 1814.}

Stewart sailed farther southward toward Cape St. Vincent, and on the 20th of February, 1815, he discovered a strange sail and made chase. At about two o'clock in the afternoon a second vessel appeared farther to the leeward. Both were ships, and evidently in company. Toward evening one signaled the other, and they drew together. The *Constitution* still kept up the chase, and crowded all sail to get the nearest of the two under her guns before night should set in. At near sunset she fired a few shots, but they fell short. Stewart found he was slowly gaining on the fugitives, and cleared the *Constitution* for action. At six, being within range, he showed his colors, when the two strangers flung out the British flag.

The position of the three vessels now became very interesting. The *Constitution* shot by, and the three ships were so ranged that they formed the points of an equilateral triangle, Stewart's vessel to windward of the other two. In this advantageous position the *Constitution* commenced the action, the three vessels keeping up an un-

¹ See page 921.

Battle between the *Constitution* and British Vessels *Cyane* and *Levant*.

The *Constitution* captures both.

ceasing and terrific fire for about fifteen minutes, when that of the enemy slackened. An immense volume of heavy smoke hung over the combatants, admitting only an occasional gleam of moonlight. The *Constitution* also became silent; and as the cloud of smoke rolled sullenly away as a very light breeze sprung up, Stewart perceived the leading ship of the enemy to be under the lee-beam of his own vessel, while the sternmost was luffing up as if with the intention of tacking, and crossing the stern of the *Constitution*. The latter delivered a broadside into the ship abreast of her, and then, by a skillful management of the sails, backed swiftly astern, compelling the foe to fill again to avoid being raked.

The leading ship now attempted to tack so as to cross the bow of the *Constitution*. For some time both vessels manœuvred admirably, pouring heavy shot into each other whenever opportunity offered, when, at a quarter before seven, the British vessel fired a gun to leeward and struck her flag. Lieutenant Hoffman was sent to take possession of her. She was the frigate *Cyane*, 36, Captain Falcoln, manned by a crew of one hundred and eighty men.

Stewart now looked after the *Cyane's* consort, which had been forced out of the combat by the crippled condition of her running gear, and to avoid damage from the *Constitution's* heavy cannonading. She was ignorant of the fate of her consort. About an hour after the action had ceased, having repaired damages, she bore up, and met the *Constitution* coming down in search of her. They crossed on opposite tacks, each delivering a broadside as they did so. For a time there was a brisk running fight, the *Constitution* chasing, and her bow guns sending shot that ripped up the planks of her antagonist. The latter was soon overpowered, and at ten o'clock at night she fired a gun to leeward and surrendered. Lieutenant (now Admiral) W. B. Shubrick was sent to take possession of her. She was found to be the *Levant*, 18, Captain Douglass.

The *Constitution* at this time was equipped with fifty-two guns, and her complement of men and boys was about four hundred and seventy. The *Cyane* was a frigate-built ship, mounting twenty 32-pound carronades on her gun-deck, and ten 18-pound carronades, with two chase-guns, on her quarter-deck and fore-castle, making thirty-four in all. Her complement of men was one hundred and eighty-five. The *Levant* was a new ship, mounting eighteen 32-pound carronades, a shifting 18 on her top-gallant fore-castle, and two chase-guns, making twenty-one in all. Her regular complement was one hundred and thirty souls. Both vessels had additional numbers on board, going to the Western Islands to bring away a ship that was being built there. The loss of the *Constitution* in this gallant action was three killed and twelve wounded. That of the enemy, in the two vessels, was estimated at seventy-seven killed and wounded.

The *Constitution* was so little damaged that in three hours after her last conflict she was again ready for action. She had been engaged for three hours with her antagonists, but the actual fighting had not occupied more than forty-five minutes. She had not a single officer hurt. It was a most gallant fight in that moonlit sea by the three vessels; and the commanders of all received, as they deserved to, the highest praise.

Placing Lieutenant Hoffman on the *Cyane*, and Lieutenant Ballard on the *Levant*, as commanders, Captain Stewart proceeded with the *Constitution* and her prizes to Porto Praya, the capital of Santiago, one of the Cape de Verde Islands, where he arrived on the 10th of March, 1815. On the following day, while Lieutenant Shubrick was walking the quarter-deck, he heard one of the prisoners, a midshipman, exclaim, "There's a large ship in the offing!" One of the English captains severely reprimanded him in a low tone. Shubrick's vigilance was aroused. The ocean was covered with a thick fog resting low on the water. Above it, in thick luminous mist, he saw the sails of a large ship, set portward. He immediately reported to Stewart,

The *Constitution* escapes from three British Frigates.

Fate of her Prizes.

Honors to Commodore Stewart.

who was below. That officer coolly replied that it was probably an English frigate, and directed Shubrick to return to the deck, call all hands, and get ready to go out and attack her. Shubrick did so, when he discovered the sails of two other vessels above the fog-bank, and they were evidently those of men-of-war. Again he reported to Captain Stewart, when that officer, perfectly unmoved by what he knew to be imminent peril to his vessel, immediately ordered the cables of the *Constitution* to be cut and signals made for the prizes to follow. He well knew that the English would have no respect for the neutrality of that port, and that he was too feeble to cope with three heavy men of war; and within fifteen minutes after the first ship had been seen, the *Constitution* was making her way out of the roads of Porto Praya, followed by the two prizes. They were chased by the strangers, which were the British frigates *Leander*, 50, Sir George Collier; *Newcastle*, 50, Lord George Stuart; and *Acasta*, 40, Captain Kerr. They pressed hard upon the fugitives. The *Cyane* was falling astern, and must soon become a prey to her pursuers. Stewart signaled for her to tack. Hoffman promptly obeyed, and she was soon lost to view in the fog, under cover of which she escaped, and reached New York on the 10th of April.¹

BILLET-HEAD.

The three ships continued to chase the *Constitution*, and finally the *Newcastle* began to fire her chase-guns, but without effect. Meanwhile the *Levant* had fallen far in the rear, and Stewart signaled for her commander to tack. Ballard obeyed, when the three British ships, abandoning the chase of the *Constitution*, pursued him. He ran the *Levant* back to port, and at four o'clock in the afternoon anchored her within one hundred and fifty yards of the shore, under the shelter of what he supposed to be at least a neutral battery of thirty or forty guns. He was mistaken. The English prisoners, one hundred and twenty in number, whom Stewart had landed there on parole before the British squadron hove in sight, regardless of the neutral character of the port (Portuguese), took possession of the battery and opened it upon the *Levant*. She received the fire of her pursuers at the same time, and was compelled to strike her colors. She was sent to Barbadoes in charge of Lieutenant Jellicoe, formerly of the *Cyane*.

With these exploits, performed after peace had been proclaimed in the United States, ended the career of "Old Ironsides," as the *Constitution* was called, in the War of 1812. Stewart landed many of his prisoners at Maranham, in Brazil; and at Porto Rico he heard of the proclamation of peace. He immediately sailed homeward, and arrived in New York at the middle of May, bringing with him the intelligence of the capture of the *Cyane* and *Levant*. The arrival of the *Constitution* was hailed with delight. The Common Council of New York gave him the freedom of the city in a gold box,² and tendered to him and his officers the hospitalities of the city at a public dinner. The Legislature of Pennsylvania gave him thanks in the name of the state, and voted him a gold-hilted sword; and the Congress of the United States voted him and his brave men the thanks of the nation, and directed a gold medal, commemorative of the capture of the *Cyane* and *Levant*, to be struck and presented to him. His exploits and that of his ship became the theme for oratory and song, and from that day to this the people of the United States have held that vessel in peculiar reverence. She was always fortunate in having skillful commanders, and brave and intelligent men. Her crews were principally men of New England. From the time of the Tripolitan War until she left off cruising and became a school-ship, she always ranked as a "lucky vessel."

¹ The billet-head of the *Cyane*, finely carved, is preserved at the Philadelphia Navy Yard. It is about three feet six inches in height, and has the representation of a dragon carved upon it.

² See note 3, page 841.

STEWART'S MEDAL.¹

COMMODORE STEWART'S RESIDENCE.

The gallant commander of the *Constitution* at the close of the war, who was then a veteran in the service, still (1867) survives, and is often called affectionately by the name given to his vessel — "Old Ironsides." He lives in retirement, with a sufficiency of this world's goods, in an unostentatious dwelling on the banks of the Delaware, at Bordentown, New Jersey, around which are delightful grounds attached to the mansion.²

In the summer of 1814, Commodore Decatur, who had been endur-

¹ The above picture represents the medal, full size. On one side is a bust of Stewart, with the words around it "GABRIELUS STEWART NAVIS AMERIC. CONSTITUTION DEPR." On the other side a representation of the capture of the *Cyane* and *Levant*, and the words "UNA VICTORIAM ERIPUIT RATIBUS MINIS." Below, "INTER CONSTITU. NAV. AMERIC. ET LEVANT ET CYANE NAV. ANG. DIE XX FEBR. MDCCCXV."

² The writer visited Admiral Stewart at his pleasant home, near Bordentown, in the summer of 1863, in company with Dr. Peterson, his neighbor and friend. I was then on my return from the then fresh battle-field at Gettysburg. At that time he was eighty-six years of age, a firm and compactly-knit man, about five feet nine inches in height, and possessed of great bodily and mental vigor. His narrative of adventures on sea and land in the service of his country for more than sixty years were full of romance of the most stirring character. He showed us a plain sword, the blade of which was presented to him by the King of Spain in 1804 because of his services, while in command of the *Experiment*, in the West Indies, in saving from destruction about sixty persons, many of them women, who were flying from insurgent blacks of St. Domingo. He could not constitutionally receive a sword from a foreign potentate, but he might a blade for his defense. He had it plainly mounted, and wore it on the occasion of the combat with the *Cyane* and *Levant*. During that contest the guard was carried away by a cannon-ball that grazed the commander's side. The blacksmith of the *Constitution* constructed a rude guard, and it still remains. He also showed us a dirk, a foot long, with a handle made of a rhinoceros tooth, which was in the hands of the Turk with whom Decatur engaged in mortal struggle on the deck of the *Philadelphia* in the harbor of Tripoli, mentioned on page 122.

Charles Stewart was born in Philadelphia on the 22d of July, 1776. His parents were natives of Ireland. His father, who was a mariner in the merchant service, came to America at an early age. Charles was the youngest of eight children, and lost his father before he was two years of age. He entered the merchant service on the ocean at the age of thirteen years as a cabin-boy, and rose gradually to the office of captain. In March, 1798, he was commissioned a lieutenant in the Navy of the United States, and made his first cruise under Commodore Barney. In 1800 he was appointed to the command of the armed schooner *Experiment*. At the beginning of the autumn of that year he fought and captured the French schooner *Two Friends*, after an action of ten minutes, without incurring loss on his part. From that time the career of Lieutenant Stewart was a most honorable one to himself and the navy of his country. He was conspicuous in the war with Tripoli, and was greatly beloved by the brave Decatur for his

STEWART'S SWORD.

Decatur's Squadron.

He puts to Sea in the *President*.

The *President* chased.

ing inaction for a long time on account of the blockade of his vessels in the Thames above New London, was transferred to the command of the *President*, 44, which Rodgers had left for the new ship *Guerriere*. Captain Biddle, commander of the *Hornet*, which had been long engaged in protecting the *United States* and the *Macedonian* in the Thames, was finally ordered to join Decatur, and, with joyous alacrity, he obeyed. He soon found an opportunity to avoid the blockading squadron, and in November he joined Decatur with his ship at New York, when that commander's squadron, assembled there, consisted of the *President* (the flag-ship); *Peacock*, 18, Captain Warrington; *Hornet*, 18, Captain Biddle; and *Tom Bowline*, store-ship.

Decatur had been engaged all the summer and autumn in the vicinity of New York, watching for the approach of the enemy, who were ravaging the country in the vicinity of the Chesapeake Bay. Ignorant of the real destination of the British when they left those waters, the government detained Decatur so long as there were any apprehensions of an attack on New York. He finally received an order to prepare for a cruise in the East Indies, to spread havoc among the British shipping in that remote quarter of the world. He was ready at the middle of January,^a 1815, and on the night of the 14th^b the *President* dropped down to Sandy Hook,^c January, leaving the other vessels at their anchorage near Staten Island. She grounded on the bar in the darkness of the night, but was floated off by the rising tide in time to clear the coast and the British blockading squadron before morning.

There had been a heavy gale on the 14th, and Decatur, believing that the blockaders had been driven by it to the leeward, kept the *President* close along the Long Island shore for about five hours, when he sailed boldly out to sea in a southeasterly by easterly direction. Two hours after changing his course he discovered by the starlight a strange sail ahead, and within gun-shot distance. Two others soon made their appearance, and at dawn the *President* was chased by four ships of war, two on her quarters and two astern. These were the *Endymion*, 40; *Pomone*, 38; *Tenedos*,

services there, and his generous friendship ever afterward. In the month of May, 1804, he was promoted to the rank of master commandant, and to that of captain in 1806. During that and the following year he was employed in superintending the construction of gun-boats. In 1812 he was appointed to the command of the frigate *Constitution*. He was with her in Hampton Roads in February, 1813, where, by skillful management, he eluded the enemy, and took his ship safely to Norfolk. In June following he was appointed to the command of the *Constitution*, and in her performed the gallant services recorded in the text. After the war he was placed in command (1816) of the *Franklin*, 74, and conveyed the Hon. Richard Rush, American minister, to England. Until very recently he has been employed, afloat or ashore, in the naval service of his country, and on all occasions evincing eminent executive ability and statesmanlike views. The annexed portrait of the venerable admiral is from a photograph taken in 1864.

Admiral Stewart is the only surviving officer in the civil or military service of the United States who holds a commission dated in the last century. He is a most interesting link between the fathers of the Revolution and the patriots and heroes of our day. Our visit with him in his pleasant home was far too short for our own inclination, and we reluctantly parted with one so famous in our annals, and so fluent in speech in the recital of the events of his wonderful experience. We bade the hale old admiral farewell with feelings coincident with those of an anonymous poet, who wrote,

"Oh, oft may you meet with brave Stewart,
The tar with the free and the true heart;
A bright welcome smile, and a soul free from guile,
You'll find in the hero, Charles Stewart.
A commander both generous and brave, too,
Who risked his life others to save, too;
And thousands that roam by his neat Jersey
home
Bless the kind heart of gallant Charles Stewart."

Charles Stewart

Stephen Decatur

38; and *Majestic*, razeed, of the blockading squadron, which had been blown off the coast by the gale, and were now returning to the cruising-ground off Sandy Hook.

The chase continued during the morning, with a light and baffling wind, and the *President*, deeply laden with stores for a long cruise, soon found the *Endymion*, Captain Hope, the nearest vessel, rapidly overtaking her. Decatur at once gave orders for lightening his own ship for the purpose of increasing her speed. It availed but little. At three o'clock in the afternoon the *Endymion* came down with a fresh breeze, which the *President* did not feel, and opened her bow-guns upon the fugitive. The *President* promptly returned the fire in an effort to damage the spars and rigging of her pursuer, but without effect. Her shot moved feebly and fell short, as if propelled by weak powder. On came the *Endymion*, and at five o'clock she gained a position in which she terribly annoyed her antagonist.

The *President* could not bring a gun to bear upon the foe, and was lacerated by every shot of her pursuer. It was evident that the *Endymion* was endeavoring to secure a victory by gradually crippling the *President*, and reducing her to an unmanageable wreck.

Decatur quickly penetrated the design of his enemy, and prepared to frustrate it by boldly running down upon the *Endymion*, carrying her by a hand-to-hand fight, and, abandoning his own vessel, seize his antagonist as a prize, and in her run away from the other pursuers. But the commander of the *Endymion* was as wary as he was skillful, and was not to be caught in that manner. He accommodated the movements of his own ship to those of his antagonist, until at length they were brought abeam of each other, and both opened tremendous broadsides. Every attempt of Decatur to lay the *President* alongside the *Endymion* was foiled by Captain Hope, who adroitly kept his ship a quarter of a mile from his antagonist.

Decatur now determined to dismantle the *Endymion*. The two frigates kept running dead before the wind, head and head, each discharging heavy broadsides upon the other for two hours and a half, when the *Endymion*, having most of her sails cut from the yards, fell astern. The *President*, no doubt, could have compelled her adversary to strike her colors in a few minutes, but just at that moment the other vessels in chase were seen by the dim starlight to be approaching. They had been joined by the *Dispatch*. The *President* therefore kept on her course in efforts to escape. In this she failed. The pursuers closed upon her. At 11 o'clock the *Pomone* got on the weather-bow of the *President*, and gave her a damaging broadside. The *Tenedos* was coming up and closing on her quarter, and the *Majestic* and *Dispatch* were within gun-shot distance astern. They all fell upon her with energy. Farther resistance would have been useless. The *President* struck her colors, and Decatur surrendered his sword to Captain Hayes, of the *Majestic*, which was the first vessel that came alongside of the vanquished frigate.

In the chase and running fight the *President* lost twenty-four men killed and fifty-six wounded. Among the slain were her first, fourth, and fifth lieutenants, Messrs. Babbitt, Hamilton, and Howell. The *Endymion* had eleven killed and fourteen

The rest of Decatur's Squadron puts to Sea.

Biographical Sketch of Decatur.

wounded. It was found that her hull had been struck by many balls which did not penetrate, and this fact confirmed the impressions of Decatur at the beginning of the contest that the powder was inferior.

After the action, the *President*, accompanied by the *Endymion*, sailed for Bermuda. Both vessels were dismantled in a gale before reaching port. Decatur wrote an official account for the Secretary of War on board of the *Endymion* on the 18th. He was soon after paroled, and returned to New York at the beginning of March. A court of inquiry was convened, and he and all of his officers, tried for losing their ship, were honorably acquitted. It was proven, and was admitted by the English, that the *President* was captured by the squadron, and not by a single vessel.¹ And when the details of the combat became known, the heroism of Decatur and his men produced the most profound sensation. Language was too feeble to express the admiration of the American people.²

On the 22d of January³ the *Peacock*, *Hornet*, and *Tom Bowline* followed the *President* to sea. Their commanders were ignorant of her fate. They passed the bar at daylight, regardless of the blockading squadron, and passed out upon the broad ocean unmolested. Each made its way, sometimes alone and sometimes con-sorting with another, for the port of Tristan d'Acunhá, the principal of a group of islands in the South Atlantic, in latitude 37° S., and longitude 12° W. from Wash-ington. That was the place of rendezvous designated by Decatur. The *Peacock* and

¹ The force of the *President* was thirty-two long 24-pounders, one 24-pound howitzer, twenty 32-pound carronades, and five small pieces in her tops. The *Endymion* mounted twenty-six long 24-pounders, twenty-two 32-pounders, one 12-pound carronade, and one long 18. The *Majestic* rated 56 guns; the *Tenidos*, 38; the *Fama*, 35. That of the *Dispatch* is unknown.

² We have noticed on pages 457 and 458 the honors showered upon Decatur on another occasion, when Congress voted him a gold medal. Stephen Decatur was born in Worcester County, Maryland, on the 5th of January, 1779. He entered the navy as a midshipman in the frigate *United States*, Commodore Barry. In 1801 he was promoted to lieutenant, and sailed in the *Essex*, then of Commodore Dale's squadron, to the Mediterranean Sea. On account of an affray with a British officer at Malta, he was suspended, and returned home. An investigation proved him to have been blameless, and he was appointed to the command of the *Argus*, of Preble's squadron, then lying before Tripoli. His services in that field of duty have been noticed in the text. On his return to America he was appointed to superintend the building of gun-boats, and finally succeeded Barron in command of the frigate *Chesapeake*. His services during the Second War for Independence have been recorded in the text. After the peace with England he was sent to the Mediterranean with a squadron to chastise the Algerines, and his vigorous action there caused the discontinuance of the practice of paying tribute to the Barbary powers, not only by the United States, but by the powers of Western Europe. On his return home he was appointed one of the Board of Naval Commissioners, and resided at Kalorama, near Georgetown (see page 942), until his death in March, 1820. He was mortally wounded in a duel with Commodore Barron, fought near Bladensburg (see page 928) on the 20th of that month, and died at Kalorama the same evening. His remains were laid in the family vault of Joel Barlow, where they remained until 1846, when they were reinterred, with appropriate ceremonies, in the burial-ground of St. Peter's Church, Philadelphia, by the side of those of his father and family, and over them a beautiful monument, depicted in the annexed engraving, was erected, bearing the following inscriptions:

North Side: "Stephen Decatur, born January 5, 1779. Entered the navy of the United States as midshipman April 30, 1793. Became lieutenant June 3, 1799. Made captain for distinguished merit, passing over the rank of commander, February 16, 1804. Died March 23, 1820."

East Side: "Devoted to his country by a patriot father, he cherished in his heart, and sustained by his intrepid actions, the inspiring sentiment, 'Our country, right or wrong.' A nation gave him in return its applause and gratitude." *South Side:* "The gallant officer whose prompt and active Valor, always on the watch, was guided by a Wisdom and supported by a Firmness which never tired. Whose exploits in arms reflected the daring features of Romance and Chivalry." *West Side:* "A name brilliant from a series of heroic deeds on the coast of Barbary, and illustrious by achievements against more disciplined enemies; the pride of the Navy, the glory of the Republic."

DECATUR'S MONUMENT.

Tom Bowdoin arrived there together at the middle of March, and were driven away by a storm. The *Hornet*, Captain Biddle, entered the port on the 23d, and was about to cast her anchor, when a strange sail was discovered to the windward. Captain Biddle immediately spread the sails of the *Hornet*, and went seaward to reconnoitre. The stranger soon came running down before the wind, and at a quarter before two o'clock in the afternoon approached the *Hornet* within musket-shot distance, displayed English colors, and fired a gun. The *Hornet* accepted the challenge, and for about fifteen minutes a sharp cannonade was kept up. The fire of the *Hornet* was so severe that her antagonist ran down for the purpose of boarding her. The vessels became entangled, and a good opportunity was offered to the stranger to accomplish her purpose. But her first lieutenant could not induce his men to follow him. Biddle's men, on the contrary, were eager to rush into the British ship for a hand-to-hand fight. His advantage lay with his guns, and he would not allow his people to leave the ship. His broadsides raked the foe terribly, and very soon an officer on board the stranger called out that she had surrendered. Firing ceased, and Captain Biddle sprang upon the taffrail to inquire whether his antagonist had actually surrendered, when two British marines fired at him. One bullet wounded him severely in the neck. The assassins were instantly slain by bullets fired from the *Hornet*. She immediately wore round, after being disentangled from her foe by a lurch given by the sea, and was preparing to fire another broadside, when at least twenty men appeared on her antagonist throwing up their hands and asking for quarter. It was difficult to restrain the indignant Americans, who wanted to avenge the injury done to their commander. It was done, however. The vanquished vessel, after a contest of twenty-three minutes, struck her colors. She was the brig *Penguin*, 18, Captain Dickenson, which had been fitted and manned expressly to encounter the privateer *Young Wasp*, a more powerful vessel than herself. She mounted nineteen carriage-guns, besides guns on her tops, and her size and weight of metal was the same as that of the *Hornet*. Her complement of men was one hundred and thirty-two.

J. Biddle

The *Hornet* lost one man killed and ten wounded. Among the latter were Captain Biddle, Lieutenant (afterward Commodore) Conner, and eight men. Not a round shot marred the hull of the *Hornet*, but her rigging was much cut, while the *Penguin* was terribly riddled. Her foremast and bowsprit were shot away, and her mainmast was so much shattered that it could not be secured for farther use. Among her slain were her commander and boatswain. After taking from her all that was valuable, Captain Biddle scuttled her on the morning of the 25th, and she went to the bottom of the deep South Atlantic Ocean.

The conflict between the *Hornet* and *Penguin* was regarded by naval men as one of the most creditable actions of the war, and the American people testified their appreciation of the services of Captain Biddle by the bestowal of special honors upon him.¹

¹ James Biddle was born in Philadelphia on the 18th of February, 1788. He was educated at the University of Penn-

Honors to Captain Biddle.

Biographical Sketch.

When he arrived in New York a public dinner was given him in that city. Citizens of his native town, Philadelphia, presented to him a beautiful service of silver plate;¹ and the Congress of the United States, in the name of the Republic, gave him thanks, and ordered a gold medal to be struck in commemoration of the victory, and presented to him.

BIDDLE'S MEDAL.²

On the same day,³ and a few hours after the action with the *Penguin*,⁴ Captain Biddle discovered another sail in sight. It proved to be the *Peacock*, having the *Tom Bowline* in company. He converted the latter into a cartel ship, and sent her to Rio de Janeiro with his prisoners. They then continued on their course, after remaining in Tristan d'Acunha the length of time appointed by Decatur (until the 13th of April), and, in the mean time, they had intelligence that the *President* was probably captured.

While sailing onward toward the Indian Seas on the morning of the 27th of April, Captain Warrington, of the *Peacock*, signaled to Captain Biddle that a strange vessel was seen in the distance. Both sloops started in chase with a light wind, and before evening they had rapidly gained on the stranger. She was yet in sight in the morning. The *Peacock* was two leagues ahead of the *Hornet* between two and three o'clock in the afternoon,⁵ and at that time began to show some caution in her movements. It was soon discovered that the stranger was a heavy line-of-battle ship and an enemy, and that she was about to give chase. The *Pea-*

sylvania. He and his brother Edward entered the navy in 1800 as midshipmen in the frigate *President*. James made a cruise in the Mediterranean under Captain Murray, and afterward under Bainbridge. His conduct while in those waters, and especially at Tripoli, was distinguished by great courage and nautical skill. He was a prisoner among the semi-barbarians of that region for nineteen months. On his return in 1805 he was promoted to a lieutenantcy, and was in active service most of the time until the war broke out in 1812, when he sailed in the *Wasp*, Captain Jones, in which he acquired special honor in the fight of that vessel with the *Frolic*. Soon after that affair Lieutenant Biddle was promoted to master commandant, and assigned to the command of the *Hornet*. With her he gained new laurels, as recorded in the text. On his return to the United States in the summer of 1815 he was promoted to post captain. He continued in active service until his death. His special services were important. In 1817 he took possession of Oregon Territory; in 1826 he signed a commercial treaty with Turkey; from 1838 to 1842 he was Governor of the Naval Asylum, Philadelphia; and in 1846, while in command of a squadron in the East Indies, he exchanged the ratifications of the first American treaty with China. He was at Japan, and, crossing the Pacific, he engaged in some of the scenes in the war with Mexico on the coast of California. He returned here in March, 1848, and died at Philadelphia on the 1st of October following. The portrait of Commodore Biddle on the opposite page was copied from one in the possession of the Navy Department at Washington.

¹ He had already received from his townsmen and friends a beautiful testimonial of their esteem the previous year. See page 453.

² The above picture represents the medal, the exact size. On one side is a bust of Captain Biddle, and the words "THE CONGRESS OF THE U.S. TO CAPT. JAMES BIDDLE FOR HIS GALLANTRY, GOOD CONDUCT, AND SERVICES." On the other side is represented a naval action, with the Peak of Tristan d'Acunha in sight beyond the smoke. Around this are the words "CAPTURE OF THE BRITISH SHIP PENGUIN BY THE U.S. SHIP HORNET. Below, "OFF TRISTAN D'ACUNHA, MARCH XXIII. MDCCXV."

cock and the *Hornet* spread their sails for flight. The latter was more particularly in peril, as she was a slower sailer than her consort. The huge Englishman was gaining upon her. Biddle began to lighten her, and the chase became intensely interesting during the entire night of the 28th and early morning of the 29th. At dawn the enemy was within gun-shot distance of the *Hornet* on her lee quarter. At seven o'clock English colors and a rear admiral's flag was displayed by the stranger, and she commenced firing. On sped the *Hornet*, casting overboard shot, anchors, cables, spars, boats, many heavy articles on deck and below, and all of her guns but one. At noon the pursuer was within a mile of her, and again commenced firing, three of the balls striking the *Hornet*. Still on she sped, her gallant commander having resolved to save his ship at all hazards. He did so. By consummate seamanship and prudence, he soon took the *Hornet* out of harm's way, and with her single gun, and without boat or anchor, she made her way to New York, where she arrived on the 9th of June. Biddle's skill in saving his vessel elicited the unbounded praise of his countrymen. It was afterward ascertained that the pursuer of the *Hornet* was the *Cornwallis*, 74, on her way to the East Indies, and bearing the flag of an officer in that service.

Warrington continued his cruise in the *Peacock*, and on the 30th of June,^a when off Anjer, in the Straits of Sunda, between Borneo and Sumatra, he fell in with the East India Company's cruiser *Nautilus*, 14, Lieutenant Charles Boyce. Broadships were exchanged, when the *Nautilus* struck her colors. She had lost six men killed and eight wounded. The *Peacock* lost none. This event occurred a few days after the period set by the treaty of peace for the cessation of hostilities. Warrington was ignorant of any such treaty, but, being informed of its ratification on the next day, he gave up the *Nautilus*, and did every thing in his power to alleviate the sufferings of her wounded people. He then returned home, bearing the honor of having fired the last shot in the Second War for Independence. The combat between the *Hornet* and *Penguin* was the last regular naval battle, the affair between the *Peacock* and *Nautilus* being only a rencounter.

When the *Peacock* reached America, every cruiser, public and private, that had been out against the British had returned to port, and the war was over. "The navy," says Cooper, "came out of this struggle with a vast increase of reputation. The brilliant style in which the ships had been carried into action, the steadiness and rapidity with which they had been handled, and the fatal accuracy of their fire on nearly every occasion, produced a new era in naval warfare. Most of the frigate actions had been as soon decided as circumstances would at all allow; and in no instance was it found necessary to keep up the fire of a sloop of war an hour when singly engaged. Most of the combats of the latter, indeed, were decided in about half that time. The execution done in these short conflicts was often equal to that made by the largest vessels of Europe in general actions, and in some of them the slain and wounded comprised a very large proportion of the crews. It is not easy to say in which nation this unlooked-for result created the most surprise. . . . The ablest and bravest captains of the English fleet were ready to admit that a new power was about to appear on the ocean, and that it was not improbable the battle for the mastery of the seas would have to be fought over again."¹

It now remains for us only to consider the principal exploits of the American privateers, whose services appear in most admirable conspicuousness at every period of the war, from the month after it was proclaimed until some time after peace was assured by solemn treaty. Although privateering is nothing less than legalized piracy, it has ever been sanctioned by the laws of nations since such codes were first established, and the foremost of the American statesmen at the period we are considering advocated it as a just and expedient measure for a nation so feeble as ours in mari-

Privateers commissioned.

The first Cruisers of that Class.

Privaterring approved.

time strength when contending with one so powerful as Great Britain.¹ So regarding it, Congress, in the act declaring war, sanctioned it, by authorizing the President to "issue to private-armed vessels of the United States commissions, or letters of marque and reprisal," as they were termed, in such manner as he should think proper.

The President was not tardy in issuing such commissions under a specific act of Congress passed on the 26th of June,² and very

soon swift-sailing brigs and schooners, and armed pilot-boats, were out upon the high seas in search of plunder from the common enemy. Of these the clipper-built schooner represented in the engraving was the favorite. The most noted of these were built at Baltimore. They generally carried from six to ten guns, with a single long gun, called "Long Tom," mounted on a swivel in the centre. They were usually

CLIPPER-BUILT PRIVATEER SCHOONER.

manned with fifty persons, besides officers, all armed with muskets, cutlasses, and boarding-pikes, commanded to "burn, sink, and destroy" the property of an enemy wherever it might be found, either on the high seas or in British ports.

Into the port of Salem, Massachusetts, which became famous as the home of privateers during the contest, the first prize captured on the ocean after the declaration of war was taken. On the 10th of July the private-armed schooner *Fame*, Captain Webb, took into that harbor two British ships, one laden with timber and the other with tar. On the same day the privateer *Dash*, Captain Carroway, of Baltimore, entered Hampton Roads and captured the British government schooner *Whiting*, Lieutenant Maxey, who was bearing dispatches from London to Washington.

On the 14th of July, a staunch privateer of Gloucester, Massachusetts, named the *Madison*, fell in with a British transport ship from Halifax bound to St. John's. She had been under convoy of the *Indian*, a British sloop of war, which had just given chase to the *Polly* and *Dolphin*, two American privateers. The *Madison* pounced on and captured the transport, which, with the cargo, was valued at \$50,000. She was sent into Gloucester. On the following day the *Indian*, after chasing the *Polly* for some time, manned her launch and several boats, and sent them to capture the fugitive. The *Polly* turned, and resisted so gallantly that she caused the launch to strike her colors. By this time the *Indian* was almost within gun-shot, when the *Polly* took to her sweeps and escaped. The *Madison* soon afterward captured a British ship of twelve guns, name not given, and the brig *Eliza*, of six guns.

On the 18th of July the letter of marque schooner *Fulton*, of Baltimore, armed

¹ Immediately after the declaration of war, Thomas Jefferson wrote on the subject (July 4, 1812), and after asking "What is war?" answered, "It is simply a contest between nations of trying which can do the other the most harm." Again he asked and answered as follows: "Who carries on the war? Armies are formed and navies manned by individuals. What produces peace? The distress of individuals. What difference to the sufferer is it that his property is taken by a national or private-armed vessel? Did our merchants, who have lost 917 vessels by British captures, feel any gratification that most of them were taken by his majesty's men-of-war? Were the spoils less rightly enforced by a 24-gun ship than by a privateer of four guns, and were not all equally condemned? . . . In the United States every possible encouragement should be given to privateering in time of war with a commercial nation. We have tens of thousands of seamen that without it would be destitute of the means of support, and useless to their country. Our national ships are too few in number to give employment to one twentieth part of them, or retaliate the acts of the enemy. By licensing private-armed vessels, the whole naval force of the nation is truly brought to bear on the foe; and while the contest lasts, that it may have the speedier termination, let every individual contribute his mite, in the best way he can, to distress and harass the enemy, and compel him to peace." So argued Mr. Jefferson, the founder of the Democratic party, then administering the national government, and which was a unit in favor of war with Great Britain.

with four guns and sixteen men, fought the British cutter *Hero*, five guns and fifty-five men, on the coast of France, for two hours and a half, and drove her off. On the following day the *Falcon* was attacked by a British privateer of six guns and forty men. She resisted for an hour and a half, when, her captain having been killed and several of her crew wounded, she struck her colors, and was taken into a Guernsey port. The first prize that arrived at Baltimore was a British schooner laden with a cargo of sugar, valued at \$18,000. She was captured by the *Dolphin*. This was on the 26th of July. A little more than a month had elapsed since the declaration of war, yet within that time such displays of American valor had been made on the sea that the British began to feel some respect for their new foe on that element. During the month of July more than fifty vessels were taken from the British by American privateers, and taken into the harbors of the United States.

Toward the middle of July seven privateers sailed from Baltimore on a cruise. One of them was the swift clipper-built schooner *Rossie*, fourteen guns and one hundred and twenty men, commanded by the veteran Commodore Barney. His manuscript journal of that and a second cruise lies before me, and bears evidence that it was one of the most exciting voyages on record. He sailed from Baltimore on the 12th of July,^a and cruised along the eastern coast of the United States for forty-five^b days without entering port. He was almost daily capturing English vessels, chasing and being chased, and informing all American vessels that fell in his way of the beginning of war.

Nine days after he left Baltimore^b Barney fell in with the brig *Nymph*,^c of Newburyport, and seized her for violating the Non-importation Act. On the following day the *Rossie* was chased by a British frigate, which hurled twenty-five shots after her, but without effect. The *Rossie* outsailed the frigate, and escaped.^d Six days afterward^e she was chased by another frigate, and again outsailed the pursuer. On the following day Barney took and burned the ship *Princess Royal*, and the day following^d took and manned the ship *Kitty*. On the 2d of August he took and burned the brigs *Flame* and *Devonshire*, and schooner *Squid*; and on the same day he captured the brig *Two Brothers*, put on board of her sixty of his prisoners, and ordered her as a cartel to St. John's, New Brunswick, to effect an exchange for as many American prisoners. Barney sent his compliments to Admiral Sawyer, the British commander on the Halifax station, desired him to treat the prisoners well, and assured him, very coolly, that he should soon send him another shipload of captives for exchange. On

the next day he took and sunk the brig *Henry*, and schooners *Race-horse* and *Halifax*, captured and manned the brig *William*, and added forty prisoners to the number on board the *Two Brothers*. On the 9th of August he captured the ship *Jenny*, of twelve guns, after a brief action; and on the following day he seized the brig *Rebecca*, of Saco, from London, for a breach of the non-importation law. On the 28th he seized the *Euphrates*, of New Bedford, for the same reason; and on the 30th he ran into Narraganset Bay, and anchored off Newport. During his cruise of forty-five days he seized and captured fourteen vessels, nine of which he destroyed. Their aggregate capacity amounted to two thousand nine hundred and fourteen tons, and they were manned by one hundred and sixty-six men. The estimated value of his prizes was \$1,289,000.

Barney remained in Newport until the 7th of September,^g when the *Rossie*^h started on another cruise. On the 9th she was chased by three British ships of war, but by superior speed she soon left them out of sight. On the 12th she was chased by an English frigate for six hours, when she, too, was left so far behind that she gave up the pursuit. Four days afterwardⁱ she fell in

Cruise of the *Rossie*.

First Prize in Baltimore.

Cruise of the *Globe*.

with and captured the British armed packet *Princess Amelia*. They had a severe engagement for almost an hour, at pistol-shot distance most of the time. Mr. Long, Barney's first lieutenant, was severely wounded; and six of the crew were injured, but not so badly. The *Princess Amelia* lost her captain, sailing-master, and one seaman killed; and the master's mate and six seamen were wounded. The *Rossie* suffered in her rigging and sails, but not in her hull, while the *Princess Amelia* was terribly cut up in all.

Barney had just secured his prize when he fell in, on the same day,^a with three ships and an armed brig. From the latter the *Rossie* received an eighteen-pound shot through her quarter, which wounded a man and lodged in the pump. She dogged the three vessels for four days in hopes of seeing them separated, and thus affording an opportunity to pounce on one of them. They kept together, and he gave up the game. On the 23d he spoke the privateer *Globe*, Captain Murphy, of Baltimore, and the two went in search of the three ships, but could not find them. On the 8th of October, while they were sailing together, they captured the British schooner *Jubilee*, and sent her into port. On the 22d Barney seized the ship *Merrimack* for a violation of law. She was laden with a valuable cargo. On the 10th of November^b he returned to Baltimore. The result of his two cruises in the *Rossie* since he left that city was 3698 tons of shipping, valued at \$1,500,000, and two hundred and seventeen prisoners.

^a September 12, 1812.

^b 1812.

The *Dolphin*, of Baltimore, Captain Stafford, was a successful privateer. She carried twelve guns and one hundred men. The first prize sent into Baltimore after the declaration of war was hers, as we have observed on the opposite page; and other ports received her captives. She entered Salem, Massachusetts, on the 23d of July, after a cruise of twenty days, during which time she had taken six vessels without receiving the least injury. She was repeatedly chased by British cruisers, but always outsailed them. Captain Stafford was remarkable for kindness of manner toward his prisoners. Such was its power, that on several occasions, when he was compelled to use sweeps to escape from the English men-of-war, they volunteered to man them.

The privateer *Globe*, of Baltimore, Captain Murphy, carrying eight guns and about eighty men, went to sea on the 24th of July in company with the letter of marque *Cora*. On the 31st of that month she chased a vessel about three hours, when she was within gun-shot, and commenced firing. The fugitive hoisted British colors, and returned the shots from her stern-chasers, consisting of two long 9-pounders. The *Globe* could only bring a long nine amidships to bear during an action of about forty minutes, for it was blowing very fresh, and the enemy crowded all sail. The *Globe* finally gained on her, and commenced firing broadsides. Her antagonist returned broadside for broadside, until the *Globe*, getting within musket-shot distance, fired deadly volleys of bullets. After a brisk engagement of an hour and a half at close quarters, the British vessel struck her colors. She proved to be the English letter of marque *Boyd*, from New Providence for Liverpool, mounting ten guns. No person was injured on either ship. The *Boyd's* boats were destroyed, and she suffered much in hull and rigging. The *Globe* suffered in sails and rigging, but was able, after sending her prize to Philadelphia, to proceed on her cruise. On the 14th of August she captured a British schooner of four guns, laden with mahogany; and, a few days afterward, she arrived at Hampton Roads, accompanied by a large British ship carrying twenty-two guns, richly laden, and bound for Glasgow, which she captured not far from the Bermudas. Having secured her prize in port, the *Globe* started immediately on another cruise.¹

¹ While cruising off the coast of Portugal, the *Globe* had a severe engagement with an Algerine sloop of war, which lasted three hours, at half gun-shot distance. The Algerine shot high. The *Globe* received no less than eighty-two shot through her sails, but had not a man killed, and only two wounded. It was a drawn battle.

The *Highflyer*, Captain Gavit, of Baltimore, was another successful cruiser on private account. She was armed with eight guns, and manned by one hundred men. She left Baltimore early in July, and on the 26th captured the British schooner *Harriet*, in ballast, but with \$8000 in specie on board. On the 19th of August, while in the Gulf of Mexico, Captain Gavit discovered the Jamaica fleet of merchantmen, and gave chase. He soon observed that they were convoyed by a British frigate. That vessel gave chase to the *Highflyer*. The latter outsailed her, and on the 21st pounced upon the *Diana*, one of the fleet, and captured her. She was of three hundred and fifty tons burden, and laden with a valuable cargo of rum, sugar, coffee, etc. Gavit took out her crew, and sent her as a prize to the United States. On the following day the *Highflyer* fell in with and engaged two other British vessels at half gun-shot distance, giving them about sixty shot. The breeze was too stiff to allow safety in boarding them, and so he hauled off and left them. These were the *Jamaica*, of Liverpool, and the *Mary Ann*, of London, the former carrying seven guns and twenty-one men, and the latter twelve guns and eighteen men. On the 23d the *Highflyer* fell upon the vessels again, the wind having moderated. Her people, after a severe cannonading and musket firing from both sides, boarded the *Jamaica*, and captured her. The *Mary Ann* struck her colors at the same time. During the action Captain Gavit was shot through his right arm by a musket-ball, and one of his seamen was wounded in the cheek. These were the only casualties, excepting the damage (which was considerable) done to the sails and rigging of the *Highflyer*. Her antagonists were severely bruised. Several of their seamen were wounded. Both ships were richly laden with the products of the West Indies.

On the 1st of August, the privateer *Yankee*, carrying ten guns, while cruising off the coast of Nova Scotia, fell in with the letter of marque *Royal Bounty*, also carrying ten guns. She was a fine vessel of six hundred and fifty-eight tons, and manned by twenty-five men. The *Yankee* had the advantage of wind, and, bearing down upon the weather quarter of the *Royal Bounty*, gave her a division broadside, which made her quake in every fibre. Making a quick movement, she gave her an entire broadside, which was returned with spirit. The mariners of the *Yankee* were mostly sharpshooters, and their execution was terribly galling. At the same time the ship was well managed, and her great guns were making havoc with her enemy's sails and rigging. The *Royal Bounty's* helmsman was killed, and she became so unmanageable that, after fighting an hour, she was compelled to surrender. She was terribly wounded. All her boats were stove, and no less than one hundred and fifty round shot of various kinds went through her rigging and sails, or lodged in her hull and spars.

The schooner *Shadow*, Captain Taylor, of Philadelphia, had a severe encounter with the British letter of marque *May*, Captain Affleck, from Liverpool bound to St. Lucia, carrying fourteen guns and fifty men. At noon on the 4th of August the *Shadow* discovered the *May*, and gave chase. It continued until almost sunset, when an action was fought. At six o'clock, when the vessels were within gun-shot of each other, the *May* commenced firing from her stern guns. The action commenced at seven, and at half past seven the *May* hoisted a light in her mizzen rigging. The *Shadow* then hailed her, and Captain Taylor ordered her to send her papers on board of his vessel that he might examine them. This was only partially complied with. Taylor immediately sent a boat's crew to the *May* with a demand for the instant surrender of all her papers. The British captain refused. He sent a note to this effect to Captain Taylor, stated the character and force of his vessel, and informed him that a change of ministry had taken place in England, and that the Orders in Council had been rescinded. Again Captain Taylor demanded Affleck's papers, and again they were refused. At half past eight o'clock the action was renewed. The night was squally and dark. The vessels kept near each other, occasionally exchanging shots, and in

the morning early they commenced a severe fight. Captain Taylor was shot through the head and instantly killed, and the *Shadow* was so much damaged that she withdrew, and by superior sailing escaped, and returned to Philadelphia.

On the 3d of August, the schooner *Atlas*, Captain David Maffit, attacked two British armed ships at the same time. After an engagement of about an hour the smaller vessel of the foe surrendered, and the fire of the *Atlas* was wholly directed upon the larger one. Suddenly the smaller one, notwithstanding her colors were down, again opened her fire; but the *Atlas* soon silenced her, and in less than an hour and a half from the time of the attack both vessels were captured. They proved to be the ship *Pursuit*, sixteen guns and a complement of thirty-five men, and the ship *Planter*, twelve guns and fifteen men. They were both stored with valuable cargoes from Surinam, and bound to London. They were sent to the United States. The *Atlas* was badly damaged in the contest.

At about this time the privateer *John*, Captain Benjamin Crowninshield, of Salem, returned to that port after a cruise of three weeks, during which time she made eleven captures. All along the coasts of the United States and the West Indies the American privateers were now exceedingly active. None were more so than the *Paul Jones*, Captain Hazard, of New York. Within a very short space of time she captured fourteen vessels near the island of Porto Rico, some of them of considerable value; and she obtained a crowning glory by the capture, early in August, of the British ship *Hassan*, fourteen guns and twenty men, sailing from Gibraltar for Havana with wines and dry goods valued at \$200,000. This was accomplished after a contest of only half an hour.

One of the boldest of the privateersmen was Captain Thomas Boyle, of Baltimore, who sailed the *Comet*, of fourteen guns and one hundred and twenty men. One of his earliest exploits in the *Comet* was the capture, in August, 1812, of the British ship *Hopewell*, carrying fourteen guns and twenty-five men. She was bound from Surinam for London with a cargo valued, with the ship, at \$150,000. The two vessels had an obstinate combat, but the *Comet* was the victor. The prize was sent into Baltimore. Of the *Comet* and her captain we shall have more to say hereafter.

Another active and successful Baltimore privateer was the *Nonsuch*, Captain Leveley, armed with twelve guns, and carrying about one hundred men. She was one of the famous "Baltimore clippers." On the 27th of September, when cruising near the island of Martinique, she fell in with a British ship mounting sixteen guns, with about two hundred troops on board, and a schooner mounting six 4-pounders, and manned with a crew of about fifty or sixty men. The *Nonsuch* ran in between the two vessels, within pistol-shot of each, and commenced a hot contest which lasted three hours and twenty minutes. It was a fierce fight. The guns of the *Nonsuch* (carronades) became much heated by continual firing. Their bolts and breaching were carried away, and they were all dismantled. Captain Leveley now determined to board his antagonists; but the damage done to the rigging of the *Nonsuch* so disabled her that he was not able to bring her alongside for the purpose. In consequence of this disability the two vessels escaped, but not without severe punishment. The larger ship was much damaged in hull and rigging, and lost twenty-three of her men killed and wounded. The schooner was also much damaged.¹ The performance of the *Nonsuch* was called, by the journals of the day, "gallant, but unprofitable conduct." The British spoke of the attack upon them as "exceedingly brave." Several persons of distinction in these ships were injured.

The privateer *Saratoga*, of New York, Captain Riker, armed with eighteen guns and one hundred and forty men, was a successful cruiser. In the autumn of 1812 she captured the ship *Quebec*, sixteen guns, from Jamaica, with a cargo valued at \$300,000. In December following she had a desperate fight off Laguaira, Venezuela. It was on

¹ Log-book of the *Nonsuch*, quoted in *The War*, i., 92; and *Niles's Register*, iii., 172.

the 11th of that month, and she was then in command of Captain Charles W. Wooster. She entered the port of Laguirra the 10th, but was warned off, the authorities being neutrals. Going out of the bay, she captured a vessel with goods worth \$20,000, and at nine in the morning on the following day,^a after the clearing up of the fog, she fell in with the brig *Rachel*, from Greenock, Scotland, which mounted twelve guns and carried sixty men. They were in sight of the town, and almost the entire population, from the beggar to the commander, turned out to see the conflict from the house-tops. The combat was quick and furious. It resulted in victory for the *Saratoga*, whose loss was only one man slightly wounded. The *Rachel* suffered much. The second mate was the only officer alive after the action.¹

Such is a brief record of some of the most prominent events in the history of American privateering, from the declaration of war in June, 1812, until the close of the year. The record is of a small portion of the swarm of private-armed vessels which were out at the beginning of 1813. These were harassing British commerce in all directions, and affording powerful and timely aid to the little navy of the republic. The business was recognized as legitimate, useful, and practically patriotic. Merchants and other citizens of the highest respectability engaged in it,² and Congress passed laws to encourage it by the allowance of liberal privileges, making provisions for pensions for those engaged in the service, and for the families of those who might be lost on board private-armed vessels, etc.

The history of American privateering in 1813 opens with a letter from Captain Shaler,³ of the schooner *Governor Tompkins*, which was armed with fourteen caronades and one "Long Tom," and manned by about a hundred and forty men. She was built in New York, and was first commanded by Captain Skinner. Shaler wrote on the 1st of January that on the 25th of December he chased three British vessels, which appeared to be two ships and a brig. The larger he took to be a transport, and ran down to attack her, when he found himself within a quarter of a mile of a large frigate, which had been completely masked. He boldly opened fire upon her, and received a terrible response. Of course he could not sustain a contest with such overwhelming odds, so he spread his sails to fly. He was successful. "Thanks to her heels," he said, "and the exertions of my brave officers and crew, I still have the command of her." He got out all his sweeps, threw overboard all the lumber on his decks, and about two thousand pounds of shot from the after-hold, and at half past five o'clock in the evening had the pleasure of seeing his pursuer far behind, heaving about. The *Tompkins* lost two men killed and six wounded. One of the former, a black man named Johnson, "ought to be registered on the book of fame," Captain Shaler wrote, "and remembered with reverence as long as bravery is considered a virtue. A 24-pound shot struck him in the hip, and took away all the lower part of his body. In this state the poor brave fellow lay on the deck, and several times exclaimed to his shipmates, "Fire away, boys; neber haul de color down!" The other man killed was also colored, and was wounded in a similar manner. "Several times," says Shaler, "he requested to be thrown overboard, saying he was only in the way of the others. While America has such sailors she has little to fear from the tyrants of the ocean."

We have already spoken of the *Comet*, of Baltimore, and her brave commander, Captain Boyle. She sailed from that port late in December, 1812, passed through the British blockading squadron on a dark night, and went on a cruise toward the

¹ Letter from Laguirra, quoted in Coggeshall's *History of the American Privateers*, etc., page 70.

² Washington and other patriots were speculators in the profits of privateering during the Revolution. In a letter before me, written to John Parke Custis, and dated at Whitemarsh, November 14, 1777, in answer to one from that gentleman on the subject of a sale of a portion of a privateer ship, Washington said: "It is perfectly agreeable, too, that Colonel Baylor should share part of the privateer. I have spoken to him on the subject. I shall therefore consider myself as possessing one fourth of your full share, and that yourself, Baylor, Lund Washington, and I are equally concerned in the share you at first held."—*MS. Letter*.

³ Quoted by Coggeshall in his *History of the American Privateers*, page 140.

coast of Brazil. On the 9th of January, 1813, she was off the harbor of Pernambuco, and Boyle was informed by a coaster that some British vessels were about to sail from that port. The *Comet* watched until the 14th, when, at a little past noon, four sail appeared. Boyle waited until they were well clear of the land, and then gave chase. The *Comet* was a swift clipper, and soon overhauled them; and at seven in the evening, having prepared for action, she hoisted her colors, and made for the larger of the four vessels, which proved to be a Portuguese brig, mounting twenty heavy guns (32-pounders), and manned by one hundred and sixty-five men. She was convoying three English merchant ships laden with wheat, and warned Captain Boyle not to molest them. To this injunction Boyle replied that his commission authorized him to capture them if he could, and that the Portuguese warrior had no right to interfere.

All the vessels were now crowding sail with a stiffening breeze. The *Comet* shot past the others, when Boyle summoned the Englishmen to heave to, with a threat that if they did not he would open a broadside upon them. The Portuguese gave chase to the *Comet*. The latter tacked, came alongside of the merchantmen at half past eight o'clock in the evening, and so distributed a heavy fire that she wounded all three. The Portuguese suffered severely in the contest which followed, for the quick movements of the clipper gave the latter great advantages of position. The combat continued until an hour past midnight, when the moon went down, and the night became dark and squally. In the mean time the merchantmen had surrendered, and one of them was taken possession of by Boyle. At dawn, the Portuguese brig, with the other two English vessels, fled for Pernambuco, while the *Comet* and her prize, the *Bowes*, proceeded homeward. Boyle soon afterward captured the Scotch ship *Adelphi*, and outsailed the famous British frigate *Surprise*, that gave chase.

On the 6th of February the *Comet* captured, first, the brig *Alexis*, of Greenock, and soon afterward an armed brig which formed part of a convoy for nine merchantmen from Demerara. At the same time another man-of-war, called the *Swaggerer*, appeared. Boyle was anxious to get his prizes off, and he amused the brig until that desired end was accomplished. In the mean time he added the *Dominica*, a Liverpool packet, to his list of prizes. When these were fairly on their way he turned his heels upon the *Swaggerer*, and soon outsailed his pursuer. At three o'clock in the afternoon he captured the schooner *Jane*, and before sunset he lost sight of the *Swaggerer* entirely.

Soon after this encounter Boyle turned his face homeward, and on the way met and fought a terrible battle for eight hours with the British ship *Hibernia*, eight hundred tons, twenty-two guns, and a full complement of men. The *Comet* lost three killed and sixteen wounded. The *Hibernia* lost eight killed and thirteen wounded. The *Comet* put into Porto Rico for repairs, and the *Hibernia* into St. Thomas. Both were much injured. The *Comet* arrived at Baltimore on the 17th of March.

Boyle was not long on land. His next cruise was in the beautiful *Chasseur*, a privateer brig, elegant in model, and formidable in men and arms. She was the fleetest of all vessels, and the story of her cruises is a tale of romance of the most exciting kind. She seemed as ubiquitous as the "Phantom Ship." Sometimes she was in the West Indies; then on the coasts of Spain, Portugal, and France; and then in the Irish and British Channels, spreading the wildest alarm among England's commercial marine. So much was she feared in the West Indies and the islands of the Caribbean Sea, that the merchants there implored Admiral Dunham to send them "at least a heavy sloop of war" to protect their property. The admiral immediately sent them the frigate *Barrossa*, which the fleet *Chasseur* delighted to tease.

The *Chasseur* captured eighty vessels, of which thirty-two were of equal force with herself, and eighteen her superior. Many of the prizes were of great value. Three of them alone were valued at \$400,000. She seemed to sweep over the seas with im-

punity, and was as impudent as he was bold. On one occasion, while in the British Channel, he issued a proclamation, as a burlesque on those of Admirals Warren and Cochrane concerning the blockade of the ports of the United States, in which he declared "all the ports, harbors, bays, creeks, rivers, inlets, outlets, islands, and sea-coast of the United Kingdom of Great Britain and Ireland in a state of rigorous blockade." He assured the world that he possessed a sufficient force (the *Chasseur*) to compel obedience. This proclamation he caused to be sent in a cartel to London, with a request to have it posted up at Lloyd's Coffee-house!

We have already noticed some of the earlier operations of the *Dolphin*, Captain Stafford. On the 25th of January, 1813, she fell in with a large ship and a brig off Cape St. Vincent, and, as was common with the more daring American privateers, engaged them both. After a severe fight they were captured, and sent to the United States. They were richly laden, and were valuable prizes. The wounded Captain Brigham, of the British ship (*Hebe*, 16), thought his capture "extrordinary." He did "not expect to find a damned Yankee privateer in that part of the world!" and when assured by Stafford that they would appear in the Thames by-and-by, his eyes dilated with mute wonder. Stafford's kind good-nature won Brigham's heart; and in a card, published on his arrival in Boston in February, he thanked the commander of the *Dolphin* and his associates for their attentions, saying, "Should the fortune of war ever throw Captain Stafford or any of his crew into the hands of the British, it is sincerely hoped he will meet a similar treatment."¹

We again find the *Saratoga*, Captain Woolsey, on her destructive errand in February, 1813. On the 9th of that month she captured the *Lord Nelson*, of six hundred tons, and one of the finest vessels in the British merchant service. She was sent into New Orleans. At about the same time the *Saratoga* captured the British packet *Morgiana*, eighteen guns. The *Saratoga* had just been chased by a British frigate, and had been compelled, in order to lighten her to increase her speed, to throw overboard twelve of her guns. She had only four to attack the *Morgiana* with. Her armory was replenished with several of the fine brass pieces of the captive, and the prize was sent to Newport with her captain. The kindness of the prize-master was so conspicuous that the captain of the *Morgiana* thanked him in the Newport newspapers.

On the 15th of February² the letter of marque *Lottery*, of Baltimore, armed with six guns and manned by thirty-five men, had a desperate fight in Chesapeake Bay with nine British barges containing two hundred and forty men. She fought them an hour and a half, during which time it was believed that more of the foe were killed than the number of the whole crew of the letter of marque. At length Captain Southeote, commander of the schooner, was severely wounded, and the enemy, in overwhelming numbers, boarded the vessel, hauled down the colors, and made her a prize.

At about this time we find the privateer *Yankee*, whose exploits we have already observed, entering the harbor of Newport after a cruise of one hundred and fifty days, during which time she had scoured the whole western coast of Africa, taken eight prizes, made one hundred and ninety-six prisoners, and secured as trophies sixty-two cannon, five hundred muskets, and property worth almost \$300,000.

The merchants of New York fitted out no less than twenty-six fast-sailing privateers and letters of marque within a hundred and twenty days after the declaration of war, carrying almost two hundred pieces of artillery, and manned by over two thousand seamen. Among the most noted of these privateers was a moderate-sized schooner, mounting a Long Tom 42-pounder, and eighteen carronades.³ Her complement was one hundred and forty men, and her first commander was Captain Barnard.

¹ *History of American Privateers and Letters of Marque*, by George Coggeshall, page 129.

² See table of New York privateers in Niles's *Register*, lii., 129.

Cruises of the *General Armstrong*, *Ned*, and *Scourge*.Valuable Prizes taken by the *Yankee*.

Early in March, 1813, the *General Armstrong* was in command of Guy R. Champlin, and cruising off the Surinam River, on the coast of South America. Early in the morning of the 11th she gave chase to the *Coquette*, a British sloop of war mounting twenty-seven guns, and manned by one hundred and twenty-one men and boys. Between nine and ten o'clock the vessels were within gun-shot, and commenced a brisk engagement. Convinced by observation that his antagonist was a British letter of marque, Champlin and his men agreed to board her, and for this purpose they ran the *Armstrong* down upon her, when, too late to retreat, they discovered her to be a much heavier vessel than they imagined. The two vessels poured heavy shot into each other, and for a while the fight was fierce and obstinate, within pistol-shot distance for almost an hour. The *Armstrong* was severely injured, and her captain received a ball in his shoulder, but continued some time on duty after the wound was dressed, and from the cabin gave orders until his vessel was fairly out of the clutches of the enemy. By the vigorous use of sweeps the *Armstrong* escaped, under a heavy fire from the *Coquette*. For his gallant conduct on this occasion, and his skill in saving his vessel, the stockholders, at a meeting held at Tammany Hall on the 14th of April, presented Captain Champlin an elegant sword, and voted thanks to his companions in the combat. We shall meet the *Armstrong* hereafter.

The *Ned*, Captain Dawson, a New York letter of marque, arrived at that port ten days after the sword-presentation to Champlin, and brought with her the British letter of marque *Malvina*, of Aberdeen, mounting ten guns. The *Ned* captured her after an action of almost an hour. Her captain was killed, and in the combat the *Ned* had seven men badly wounded. The *Malvina* was laden with wine from the Mediterranean, and was a valuable prize.

Another successful privateer, owned in New York, was the *Scourge*, Captain Nicoll. She mounted fifteen guns, and sailed from port in April, 1813, for a long cruise in European waters, and was frequently in consort with the *Rattlesnake*, of Philadelphia, Captain David Maffit. This commander went into the business at the beginning of the war, with the *Atlas*, and continued its pursuit until the close of the contest in 1815. The *Rattlesnake* was a fast-sailing brig of fourteen guns.

Captain Nicoll was often absent from the *Scourge* while on the coast of Norway, because he found it more profitable to remain on shore and attend to the sale of prizes brought or sent in, while his first officer skillfully commanded her in cruises. The *Scourge* made a large number of captures on the coast of Norway, and these were nearly all sent into Drontheim and disposed of there. The aggregate tonnage of prizes then and there disposed of, captured by the *Scourge* and *Rattlesnake*, was 4500. The trophies were sixty guns. On her homeward passage from Norway the *Scourge* made several captures. She arrived at Cape Cod in May, 1814, having been absent little more than a year. During her cruise she had made four hundred and twenty prisoners. Her deeds made her name an appropriate one, for she scourged British commerce most severely.

The *Yankee*, already mentioned, left Newport on a cruise on the 23d of May, 1813. A month afterward, when off the coast of Ireland, she captured the British cutter sloop *Earl Camden*, valued at \$10,000. Eight days afterward^a she captured the brig *Elizabeth*, valued at \$40,000, and the brig *Watson*, laden with cotton, valued at \$70,000. On the 2d of July she took the brig *Mariner*, with a cargo valued at \$70,000. All of these prizes, worth in the aggregate about \$200,000, were sent to French ports for adjudication and sale. The work was accomplished in the space of about six weeks. The *Yankee* returned to Providence, Rhode Island, on the 19th of August, without having lost a man during the cruise either killed or wounded.

The records of privateering during the summer of 1813 present one, dark chapter in the deed of a desperate wretch named Johnson, who commanded the *Teaser*, a lit-

^a June 30.

Destruction of the *Teaser*.Capture of the *Eagle*.Cruise of the *Decatur*.

tle two-gun vessel, that went out from New York with fifty men. When that vessel was captured by one of Admiral Warren's fleet, Johnson was released on his parole. Soon afterward, without waiting to be exchanged, he entered as first lieutenant on board another privateer named the *Young Teaser*, Captain Dawson. In June, 1813, she was closely pursued by an English man-of-war. She was likely to be overtaken, and Johnson knew that death would be his fate should he be caught. Dawson called his officers aft in consultation, and while they were deliberating on the subject one of the sailors called out to the captain that Lieutenant Johnson had just gone into the cabin with a blazing fire-brand. The next instant the *Teaser* was blown into fragments. Only six of all her people escaped destruction. The captain, Johnson, and all the others, had perished in a moment.

Toward midsummer, 1813, an affair occurred off Sandy Hook, New York, which created a great sensation. It properly belongs to the history of privateering. Commodore Lewis was then in command of a flotilla of gun-boats on that station, and the British man-of-war *Poictiers*, 74, was cruising in those waters. She had for tender the sloop *Eagle*, and on the 5th of July Lewis sent out a little fishing-smack named *Yankee*, which he borrowed at Fly Market, in New York, to capture this tender by stratagem. With a calf, a sheep, and a goose secured on deck, and between thirty and forty well-armed men below, the smack stood out for sea with only three men in sight, in fishermen's garb, as if going to the fishing-banks. The *Eagle* gave chase, overhauled her, and, seeing live-stock on board, ordered her to go to the commodore. The watchword "Lawrence" was then given, when the armed men rushed to the deck, and delivered a volley of musketry which sent the crew of the *Eagle* below in dismay. Sailing-master Percival, who commanded the expedition, ordered the firing to cease, when one of the *Eagle's* company came up and struck her colors. The surprise was so complete that her heavy brass howitzer, loaded with canister-shot, remained undischarged. Her crew consisted of her commander, a midshipman, and eleven seamen. The two former and a marine were slain. The *Eagle* and prisoners were taken to the city in view of thousands of the inhabitants, who were on the Battery celebrating the anniversary of the National Independence.¹ They were received with shouts, salvos of artillery, the waving of hats and handkerchiefs, and the ringing of bells.

A month after the capture of the *Eagle*, the privateer schooner *Commodore Decatur*, Captain Diron, of Charleston, South Carolina, carrying seven guns and a little over a hundred men, had a desperate encounter with the British war schooner *Dominica*, Lieutenant Barrette, carrying sixteen guns and eighty-eight men. The *Decatur* was cruising in the track of the West India traders on their return to England, and on the morning of the 5th of August^a gave chase to a ship and a schooner.

^a 1813. At about one o'clock in the afternoon they were so near each other that the schooner fired a shot at the *Decatur*. The latter was immediately prepared for action, not with heavy guns alone, but with implements for boarding. Diron intended to run down near his adversary, discharge all his guns, great and small, and then board her under cover of the smoke. This was not immediately accomplished, for the *Dominica* was on the alert, and manœuvred so as to give the *Decatur* some damaging broadsides. Twice her crew attempted to board her antagonist, but failed, and the contest was kept up with cannon and musketry. Finally, at about half past three o'clock, the *Decatur* forced her bowsprit over the stern of the *Dominica*, and her jib-boom penetrated the Englishman's mainsail. In face of a murderous fire of musketry, the *Decatur's* men, led by First Prize-master Safith and Quartermaster Wasborn, rushed from her bow along the bowsprit, boarded the enemy, and engaged in a most sanguinary fight, hand-to-hand, with swords, pistols, and small-arms. Both parties fought with the greatest courage and determination. The decks were cov-

¹ It fell on Sunday in 1813, and the event was celebrated on Monday, the 5th.

Cruise of the *David Porter*, *Globe*, and *Harpy*.

ered with the dead and wounded. The colors of the *Dominica* were hauled down by the boarders, and she became the *Decatur's* prize. The *Dominica* lost sixty-five killed and wounded. Among the former were the captain, sailing-master, and purser. The *Decatur* lost twenty killed and wounded. Diron started with his prize for Charleston, and on the following day captured the *London Trader*, bound from Surinam to London with a valuable cargo. She reached Charleston in safety with both prizes.¹

In the autumn of 1813, Captain George Coggeshall, whose *History of the American Privateers* has been alluded to, commanded the letter of marque schooner *David Porter*, of New York. Late in October she was lying at Providence, Rhode Island, where the *President*, Commodore Rodgers, was blockaded. In a thick snow-storm on the 14th of November, and under the cover of night, the *Porter* passed the blockading squadron and put to sea. She reached Charleston, her destined port, in safety, where she was freighted for France with Sea Island cotton, and sailed for "Bordeaux, or a port in France," on the 20th of December. In the Bay of Biscay she encountered a terrible and damaging gale, but weathered it, and on the 20th of January entered the port of La Teste. Coggeshall sent his vessel home in charge of his first officer, and remained in France some time. The *Porter* captured several prizes on her way to the United States.

We have noticed the arrival at Hampton Roads, with a large British ship as a prize, the privateer *Globe*, of Baltimore, and her departure on another cruise.² She was successful in the capture of prizes, but did not meet with any fair tests of her sailing qualities, or the valor and skill of her men, until November, 1813. On the 1st of that month, while cruising off the coast of Madeira, she fell in and exchanged shots with a large armed brig, but considered it prudent to keep at a respectful distance from her. She then proceeded to the offing of Funchal, where, on the 2d, she chased two vessels in vain, for night came on dark and squally, and she lost sight of them. On the 3d the *Globe* again chased two vessels, and at eleven o'clock were so near that the larger of the fugitives opened her stern guns on her pursuer. A severe action ensued, when, at noon, the crew of the *Globe* attempted to board her adversary. They failed. Their vessel was much damaged, and while in this condition the other vessel came up and gave the *Globe* a terrible raking fire, which almost disabled her. Yet they fought on at close quarters, and at half past three o'clock the larger vessel was compelled to strike her colors. The other one poured in broadside after broadside within half pistol-shot distance. The *Globe* was reduced to an almost sinking condition, yet she managed to give her second antagonist such blows that she, too, struck her colors. She then hauled to windward to take possession of the first prize, when that vessel hoisted her colors and gave the *Globe* a tremendous broadside. She was compelled to haul off for repairs, and the two vessels, believed to be severely injured, sailed slowly away. They were packet brigs, one mounting eighteen and the other sixteen cannon, mostly brass. The *Globe* lost eight men killed and fifteen wounded in this desperate encounter.

During the first eight or nine months of the year 1814, although the American private-armed ships were active and successful, there seems not to have been any performance by them that deserves the name of a naval action. This monotony of quiet business was broken in September, when the privateer *Harpy* fell in with the British packet *Princess Elizabeth*, and captured her after a short but sharp conflict. The *Elizabeth* was armed with ten guns, and manned by thirty-eight men. She had on board a Turkish ambassador for England, an aid-de-camp to a British general, a lieutenant of a 74 line of battle ship, and \$10,000 in specie. This specie, with several pipes of wine and some of the cannon, were transferred to the *Harpy*. The remainder of her armament was thrown overboard, and the ship was ransomed for \$2000, when she was allowed to proceed on her voyage.

¹ Coggeshall's *History of American Privateers*, page 172.

² See page 995.

The most desperate and famous combat recorded in the history of privateering during the war was that maintained by the *General Armstrong*, of New York, Captain Samuel C. Reid (whose earlier exploits we have already noticed), in the harbor of Fayal, one of the Azores islands of that name belonging to Portugal. It occurred on the 26th of September, 1814. While she lay there at anchor, in a neutral port, she was attacked by a large British squadron under the command of Commodore Lloyd. The attacking vessels consisted of the flag-ship *Plantagenet*, 74; the frigate *Rota*, 44, Captain Somerville; and the brig *Carnation*, 18, Captain Bentham, each with a full complement of men. The *Armstrong* carried only seven guns and ninety men, including her officers.

In flagrant violation of the laws and usages of neutrality, Lloyd sent in, at eight o'clock in the evening,² four large and well-armed launches, manned by about forty men each. At that time Reid, suspecting danger, was warping his vessel under the guns of the castle. The moon was shining brightly. These and the privateer opened fire almost simultaneously, and the launches were driven off with heavy loss. The first lieutenant of the *Armstrong* was wounded, and one man was killed.

Another attack was made at midnight with fourteen launches and about five hundred men. A terrible conflict ensued, which lasted forty minutes. The enemy were repulsed with a loss of one hundred and twenty killed, and one hundred and thirty wounded. At daybreak a third attack was made by the brig of war *Carnation*. She opened heavily, but was very soon so cut up by the rapidly-delivered and well-directed shots of the *Armstrong* that she hastily withdrew. The privateer was also much damaged. It was evident that she could not maintain another assault of equal severity, so Captain Reid, who had coolly given orders from his quarter-deck during the attacks, directed her to be scuttled, to prevent her falling into the hands of the enemy. She was then abandoned, when the British boarded her and set her on fire. It is a curious fact that, while the British lost over three hundred in killed and wounded during ten hours, the Americans lost but two killed and seven wounded.³

In addition to the glory won by the bravery of this resistance to the British squadron, Captain Reid and his gallant men deserve the just credit of having thereby saved the city of New Orleans from capture. This squadron was part of the expedition then gathering at Jamaica for the purpose of seizing New Orleans, and the object of their attack on the *Armstrong* was to capture her, and make her a useful auxiliary in the work. She so crippled her assailants that they did not reach Jamaica until full ten days later than the expedition expected

Sam. Reid

¹ For a detailed account of this affair, see *American State Papers*, xiv., Naval Affairs, page 493, and Coggeshall's *History of the American Privateers*, page 370. The Portuguese government demanded and received from that of England an apology for this violation of neutrality; also restitution for the destruction of Portuguese property at Fayal during the action. That government also demanded satisfaction and indemnification for the destruction of the American vessel in their neutral port. This England refused, and from that day to this the owners of the privateer and their heirs have never been able to procure indemnification for their losses either from England or Portugal, or from their own government.

Honors to Captain Reid.

The American Flag.

Cruise of the *Prince de Neufchâtel*.

to sail from there. That expedition waited for Commodore Lloyd; and when it finally approached New Orleans,^a General Jackson was hastening to make competent arrangements for its defense. Had the fleet arrived ten days sooner, that city would have been an easy prey to the British, for it was utterly defenseless until that general's arrival with his troops. December 6,
1814.

The defense made by the *Armstrong*, and the circumstances of the attack, produced a great sensation throughout the United States. Captain Reid was justly praised as one of the most daring of American naval commanders, and he received various honors in abundance. The State of New York gave him thanks and a sword, and he was every where received with the greatest enthusiasm on his return to the United States.¹

The New Yorkers sent out a splendid vessel of seventeen guns and one hundred and fifty men, called the *Prince de Neufchâtel*, in command of Captain Ordranax. She was a very fortunate privateer. During a single cruise she was chased by no less than seventeen armed British vessels, and escaped them all; and she brought to the United States goods valued at \$300,000, with much specie. On the 11th of October, 1814, she encountered five armed boats from the British frigate *Endymion* off Nantucket. The *Neufchâtel* was then very light handed, having, when the fierce battle that ensued commenced, only thirty-six men at quarters. Early in the forenoon the engagement began. The boats were arranged for the assault one on each side, one on each bow, and one under the stern. Within the space of twenty minutes the assailants cried for quarter. It was granted. One of the boats had gone to the bottom with forty-one out of forty-three of her crew. The whole number of men in the five boats was one hundred and eleven, a larger portion of whom were killed, wounded, or made prisoners. The privateer lost seven killed and twenty-four wounded. She returned to Boston on the 15th of October. The *Neufchâtel* was afterward captured and sent to England.

At this time the terror inspired by the doings of the American privateers was intense. The British began to seriously contemplate the probabilities of the complete destruction of their commerce. Fear magnified the numbers, powers, and exploits of

¹ On his return to the United States Captain Reid landed at Savannah, and made his way north by land. At Richmond he was invited to a public dinner by members of the Virginia Legislature, at which were seated the governor, members of his council, judges of the Supreme Court, and other distinguished men. It was the first opportunity the Virginians had enjoyed of paying their personal respects to a hero of the war, and they did it with enthusiasm. The speaker of the House of Burgesses presided, and William Wirt was vice-president. When Captain Reid retired, the chairman gave as a sentiment, "Captain Reid—his valor has shed a blaze of renown upon the character of our seamen, and won for himself a laurel of eternal bloom."

On the 11th of April, 1815, the Legislature of New York voted the thanks of the state and a sword to Captain Reid. At Tammany Hall, in New York, he was presented, in the name of the citizens, with a handsome service of plate.

Samuel Chester Reid was born at Norwich, Connecticut, on the 25th of August, 1783. He went to sea at the age of eleven years, and was captured by a French privateer and taken to Guadaloupe. He was a midshipman with Commodore Truxton. The occasion in his public life which gave him most fame was this defense of the *General Armstrong* at Fayal. After the War of 1812 Captain Reid was appointed a sailing-master in the United States Navy, and held that office until his death. He was port-warden at New York for some time, and a weigher of customs. He was about being made collector of the customs there, in place of Swartwout, by Secretary Duane, when that officer was removed by President Jackson. He invented and erected the signal telegraphs at the Battery and the Narrows, and is also distinguished as the designer of the present arrangement of the stripes and stars on our national standard.* Captain Reid was simple in his habits and manners, upright in conduct, and honest in all his ways. He was the chosen social companion of many of the best and most distinguished American citizens, and his memory is sweetest to those who knew him best. He died in the city of New York on the 28th of January, 1861. His funeral took place at Trinity Church, and was largely attended. His remains were escorted to their last resting-place in Greenwood Cemetery by the marines of the navy yard at Brooklyn.

* Our flag originally bore thirteen stars and thirteen stripes. As new states came in, the number of the stars and stripes was correspondingly increased, pursuant to an act of Congress passed in 1794. This was found to be impracticable; for, as the states increased, the width of the stripes had to be lessened. Besides, there was nothing in the device to recall the original confederacy of thirteen states. To return to the use of only thirteen stars and stripes would be inappropriate, because the device would give no hint of the growth of the republic. Captain Reid proposed to retain the original thirteen stripes as a memento of the original Union, and to add a new star whenever a new state was admitted, as indicative of the growth of the states. This suggestion was adopted. A flag with this new arrangement was first raised over the Hall of Representatives at Washington on the 4th of April, 1818, at two o'clock in the afternoon. At that time the Senate Chamber and Hall of Representatives of the Capitol were separated, the centre of the building not being completed. Resolutions of thanks to Captain Reid "for having designed and formed the present flag of the United States" were offered in Congress.

the privateers. Meetings of merchants were held to remonstrate against their depredations. It was asserted that one of these "sea-devils" was rarely captured, and that they impudently bid defiance alike to English privateers and stately seventy-fours. Insurance was refused on most vessels, and on some the premium was as high as thirty-three per cent. "Thirteen guineas for one hundred pounds," said a London journal, "was paid to insure vessels across the Irish Channel! Such a thing never happened, we believe, before." The Board of Admiralty and the Prince Regent were petitioned for aid in checking these depredations; and the government was compelled, because of the state of public feeling, to give assurances (which they had no power to support) that ample measures should be taken for the protection of British commerce.

We have referred to the impudence, as well as boldness, of the American privateers. A small one belonging to Charleston, mounting six carriage guns and a Long Tom, appropriately named *Saucy Jack*, affords an illustration. She was every where, and, being clipper-built and skillfully managed, was too fleet for the English cruisers. On one occasion, when cruising off the west end of St. Domingo, she chased two vessels. It was on the 31st of October, 1814, at midnight; and when near enough, at one in the morning, she fired upon them. On coming up, it was ascertained that one of them carried sixteen, and the other eighteen guns. Nothing daunted by this discovery, she boarded one of them at seven in the morning, when it was found that she was full of men, and a war vessel. The boarders fled back to the *Saucy Jack*, and the little privateer made haste to get away. The two ships chased her, pouring grape and musket-balls upon her, but within an hour she was out of reach of even their great guns. She lost eight men killed and fifteen wounded. Her chief antagonist was the British bomb-ship *Volcano*, with the transport *Golden Fleece*. One of the lieutenants and two of the men of the *Volcano* were killed and two were wounded. On Sunday, the 1st of May, the *Saucy Jack* captured the fine English ship *Pelham*, carrying ten guns and thirty-eight men. She was bound from London for a West India port, and had a cargo valued at \$80,000.

The schooner *Kemp*, of Baltimore, was a very successful privateer. She was commanded by Captain Jacobs. At the close of November, 1814, she sailed on a cruise in the West Indies from Wilmington, North Carolina. On the 1st of December she chased a squadron of eight merchant ships in the Gulf Stream under convoy of a frigate. The frigate, in turn, gave chase, but the *Kemp* dodged her in the darkness of the ensuing night, and the next morning again gave chase to the merchantmen. At noon the following day^a she found them drawn up in battle line, and at two o'clock they bore down upon the privateer, each giving her some shots as they passed. She reserved her fire until, by a skillful movement, she broke through the line, and discharged her whole armament into the enemy. This produced the greatest confusion, and within an hour and a half four of the eight vessels were the prizes of the *Kemp*. She would have taken the whole of them, but she had not men enough to man them. The other four proceeded on their voyage. The convoy frigate all this time was absent, vainly looking for the saucy privateer! These prizes, which gave an aggregate of forty-six cannon and one hundred and thirty-four men, were all sent into Charleston. It was a profitable cruise of only six days. The *Monmouth* privateer, of Baltimore, at about the same time was dealing destruction to British commerce off Newfoundland. She had a desperate encounter with an English transport ship with over three hundred troops on board. Her superior speed saved her from capture. Another successful Baltimore privateer was the *Lawrence*, of eighteen guns and one hundred and eleven men. During a single cruise, which terminated at New York on the 25th of January, 1815, a month before the proclamation of peace, she captured thirteen vessels. She took one hundred and six prisoners, and the aggregate amount of tonnage seized by her was over three thousand tons.

^a December 3.

Cruise of the *Macdonough* and *Amelia*.

Close of the War.

The American Privateers and their Doings.

One of the original crew of the *Lawrence* was a colored man named Henry Van Meter, mentioned on page 912.

The *Macdonough*, of Rhode Island, had a severe fight with a British ship, whose name is not recorded, on the 31st of January, 1815. The action commenced at musket-shot distance at half past two o'clock in the afternoon. The tremendous musket-fire of the enemy caused the people of the *Macdonough* to suspect her of being a troop-ship. Such proved to be the case. She had at least three hundred soldiers on board besides her crew. The *Macdonough* suffered terribly in sails, and rigging, and loss of men, for her antagonist, in addition to the overwhelming number of men, carried eighteen 9-pounders. She succeeded in escaping from the British vessel, and reached Savannah on the 7th of March.

The war ended early in 1815, but it was some time after the proclamation of peace had been promulgated before all of the fifty privateers then at sea were apprised of it, and many captures were made after the joyful event had occurred. One of the latest arrivals of successful privateers was that of the *Amelia*, of Baltimore, in April, 1815. She had a full cargo of valuable goods. During her cruise she had captured ten British vessels. Some she destroyed, others she sent into port, and one she gave up as a cartel for her prisoners. She carried only six guns and seventy-five men. The vessels she captured amounted in the aggregate to about two thousand three hundred tons, and her prisoners numbered one hundred and twelve. Her trophies in arms were thirty-two cannon and many muskets. She was frequently chased by English cruisers, but her fleetness allowed her to escape.

In this outline sketch of American privateering¹ during the Second War for Independence, notice has been taken of only the most prominent of the vessels which actually sustained a conflict of arms on the ocean of sufficient importance to entitle the act to the name of a naval engagement. The record shows the wonderful boldness and skill of American seamen, mostly untaught in the art of naval warfare, and the general character of the privateering service. Nothing more has been attempted. The full history of the service as it lies, much of it ungarnished, in the newspapers of the day and the manuscript log-books of the commanders, exhibits marvelous actions and results.

After the first six months of the war the bulk of naval conflicts was carried on upon the ocean, on the part of the Americans, by private-armed vessels, which "took, burned, and destroyed" about *sixteen hundred* British merchantmen, of all classes, in the space of three years and nine months, while the number of American merchant vessels destroyed during the same period did not vary much from *five hundred*. The American merchant marine was much smaller than that of the British, and, owing to embargo acts and apprehensions of war several months before it was actually declared, a large proportion of it was in port. When war was declared many vessels were taken far up navigable rivers for security against British cruisers and marauding soldiers, while others were dismantled in safe places.

The American private-armed vessels which caused such disasters to British commerce numbered two hundred and fifty.² Of these, forty-six were letters of marque, and the remainder were privateers. Of the whole number, one hundred and eighty-four were sent out from the four ports of Baltimore, New York, Salem, and Boston alone. The aggregate number sent out from Philadelphia, Portsmouth (N. H.), and Charleston was thirty-five. Large fortunes were secured by many of the owners, and some of them are enjoyed by their descendants at the present day.

¹ The materials for this sketch have been gathered from official documents, the newspapers of the day, Coggeshall's *History of American Privateers*, and personal and written communications to the author.

² This was 115 less than were commissioned while there were difficulties with France in the years 1798 and 1799. The number of private-armed vessels then commissioned was 365. Their tonnage was 66,991. Number of guns, 2728; and of men, 6847.

CHAPTER XLII.

"Brave sons of the West, the blood in your veins
At danger's approach waited not for persuaders;
You rushed from your mountains, your hills, and your plains,
And followed your streams to repel the invaders."

OLD SONG.

LET us now take a glance at some prominent civil affairs during the year 1814, before proceeding to consider the great and decisive military events in the vicinity of New Orleans with which the war on the land closed.

From the beginning of the contest, as we have seen, there was an active and influential body in the Federal party known as the Peace Faction, many of whom were selfish and unpatriotic politicians, and who, by their endeavors to thwart the government in its efforts to provide means for carrying on the war, brought discredit upon the great and patriotic party to which they belonged, and deeply injured their country. These politicians were chiefly confined to New England, whose commercial interests had been ruined by the war, and Boston was their head-quarters. Embargo acts had closed all American ports against the legal admission of goods from abroad, and these could only be obtained through contraband trade. Such trade was carried on extensively at the New England capital, where, as we have seen, the magistrates were not zealous in the maintenance of the restrictive laws. Smuggling became almost respectable in the eyes of many because of its prevalence,¹ and foreign goods, shut out from other sea-ports, found their way there. Many valuable British prizes were taken into that port, and upon Boston the merchants of other cities became dependent for a supply of foreign goods. For these they paid partly in bills of the banks of the Middle and Southern States, and partly in their own promissory notes. By this means Boston became a financial autocrat, having in its hands despotic power to control the money affairs of the country. This fact suggested to the leaders of the Peace Faction in New England a scheme for crippling the government financially, and thereby compelling it to abandon the struggle with Great Britain with dishonor. They were quick to act upon the suggestion and to put the scheme into operation.

From the beginning of the war the government was compelled to ask for loans, and the Peace Faction made such persistent opposition, for the purpose of embarrassing the administration, that in every case a bonus was paid for all sums borrowed. In January, 1813, a loan of \$16,000,000 was authorized. It was obtained principally from individuals at the rate of \$88 for a certificate of stock for \$100, by which lenders received \$2,100,377 as a bonus on that small loan. In August the same year a further loan of \$7,500,000 was authorized; and in March, 1814, a loan of \$25,000,000 was authorized. This was the darkest hour of the war, and then it was that the Peace Faction at political meetings, through the press, and even from the pulpit, cast every obstacle in the way of the government. That opposition now assumed the form of

¹ One of the most eminent members of the Federal party (Harrison Gray Otis) charged the administration and the war with the authorship of that "monstrous depreciation of morals" and "execrable course of smuggling and fraud," and said that a class of citizens, "encouraged by the just odium against the war, sneer at the restraints of conscience, laugh at perjury, mock at legal restraints, and acquire ill-gotten wealth at the expense of public morals, and of the more sober, conscientious part of the community."

The Weakness of the Government a Reason for rejoicing.

The public Credit assailed.

virtual treason. The government was weak and in great need, and its internal enemies knew it, and in proportion to its wants they became bolder and more outspoken. Their denunciations of the government, and those who dared to lend it a helping hand, were violent and effective. By inflammatory and threatening publications and personal menaces, they intimidated many capitalists.¹ The result was, that only \$11,400,000 of the proposed loan were raised in the spring of 1814, and this by paying a bonus of \$2,852,000, terms so disastrous that only one more attempt was made to borrow money during the war, the deficiency being made up by the issue of treasury notes to the amount of \$18,452,000. Over this failure of the government these unpatriotic men rejoiced. One of them, writing from Boston in February, 1815, said, exultingly, "This day \$20,000 six per cent. stock was put up at auction, \$5000 of which only was sold for want of bidders, and that at forty per cent. under par. As for the former war loan, it would be considered little short of an insult to offer it in the market, it being a very serious question who is to father the child *in case of national difficulties*." The last expression referred to the hopes of the conspirators that a dissolution of the Union would be brought about by the body known in history as the Hartford Convention, which had adjourned, to meet again if necessary—a body of men inspired by motives and actions too lofty to be comprehended by the vulgar politicians who were the leaders of the Peace Faction of that day.

But these machinations failed to produce the full effect desired. Patriotic men in New England of the Opposition party subscribed to the loan; and in the Middle States they did so openly and liberally, to the disgust of the Peace Faction, who now resorted to a more reprehensible scheme for embarrassing the government. We have observed that, for reasons named, Boston became the centre of financial power. These men determined to use that power to embarrass the administration, and they did it in this wise: The banks in the Middle and Southern States were the principal subscribers to the loan, and measures were adopted to drain them of their specie, and thus produce an utter inability to pay their subscriptions. Some of the Boston banks became parties to the scheme. The notes of those in New York and cities farther south held by these banks were transmitted to them, with demands for specie, and at the same time drafts were drawn on the New York banks for the balances due the

¹ "Will Federalists subscribe to the loan? Will they lend money to our national rulers?" a leading Boston paper significantly asked. "It is impossible, first, because of the principle, and, secondly, because of *principal and interest*. If they lend money now, they make themselves parties to the violation of the Constitution, the cruelly oppressive measures in relation to commerce, and to all the crimes which have occurred in the field and in the cabinet. . . . Any Federalist who lends money to the government will be called *infamous!*" The people were then adroitly warned that money loaned to the government would not be safe. "How, where, and when," asked this disloyal newspaper, "are the government to get money to pay interest?" Then, in language almost the same as that of a distinguished leader of a Peace Faction of our day, a threat of future *reputation* was thrown out, to create distrust in the government securities. "Who can tell," said the writer above alluded to, "whether *future rulers may think the debt contracted under such circumstances, and by men who lend money to help out measures which they have loudly and constantly condemned, ought to be paid!*"

Another newspaper said of the Boston merchants: "They will lend the government money to retrace their steps, but none to persevere in their present course. Let every highwayman find his own pistols." And a doctor of divinity shouted from the pulpit at Byfield: "If the rich men continue to furnish money, war will continue till the mountains are melted with blood—till every field in America is white with the bones of the people;" while another said, "Let no man who wishes to continue the war by active means, by vote or lending money, dare to prostrate himself at the altar on the fast-day, for such are actually as much partakers in the war as the soldier who thrusts his bayonet, and the judgment of God will await them."

These extracts give but a faint idea of the violence of the leaders of that faction. Many capitalists were intimidated, and were afraid to negotiate for the loan openly, a fact which brokers at that time have placed on record. Gilbert and Dean advertised that the "names of all subscribers shall be known only to the undersigned." Another made it known that "the name of every applicant shall, at his request, be known only to the subscriber." Another assured the people that he had made arrangements "for perfect secrecy in the transaction of his business."

These advertisements excited the venom of the Peace party exceedingly, and they poured abuse upon the subscribers and the government together. "Money," said one of the most prominent among them, with great bitterness, "is such a drug (the surest signs of the former prosperity and present insecurity of trade), that men, against their consciences, their honor, their duty, their professions and promises, are willing to lend it secretly to support the very measures which are both intended and calculated for their ruin." Another said, "How degraded must our government be, even in her own eyes, when they resort to such tricks to obtain money, which a common Jew broker would be ashamed of. They must be well acquainted with the fabric of the men who are to loan them money when they offer that if they will have the goodness to do it their names shall not be exposed to the world."

Conduct of Boston Bankers.

Effects of the Conspiracy against the public Credit.

Boston corporations, to the amount, in the course of a few months, of about \$8,000,000. The New York bankers were compelled to draw largely on those of Philadelphia, and the latter on those of Baltimore, and so on. A panic was created. No one could predict the result. Confidence was shaken. Wagons were seen, loaded with specie, leaving bank doors with the precious freight, going from city to city, to find its way finally into the vaults of those of Massachusetts.¹ The banks thus drained were compelled to curtail their discounts. Commercial derangement and bankruptcies ensued. Subscribers to the loan were unable to comply with their promises, and, so uncertain was the future to the minds of many who intended to subscribe, that they hesitated. The effect of the conspiracy against the public credit was potent and ruinous, and for a while it was thought impossible for the government to sustain its army and navy. The banks out of New England were compelled to suspend specie payments, and the effect upon the paper currency of the country was most disastrous.²

Nor was this all. To make the blow against the public credit still more effectual, the conspirators made arrangements with agents of the government authorities of Lower Canada whereby a very large amount of British government bills, drawn on Quebec, were transmitted to New York, Philadelphia, and Baltimore, and offered on such advantageous terms to capitalists as induced them to purchase.³ By this means an immense amount of gold was transmitted to Canada, placed beyond the reach of the government of the United States, and put into the hands of the enemy, to give succor to the war they were waging against the independence of the republic. Had the conspirators fully succeeded, the national armies must have been disbanded, and the country reduced to a dependency of Great Britain.

It was during the despondency incident to the gloomy aspect of financial affairs, the capture of Washington and the destruction of the public buildings and archives, the utter prostration of business, the certainty that a very large British force would be speedily sent to our shores, and the neglect and discourtesy with which the British government had treated the American ministers sent to Europe to negotiate a treaty of peace, that a convention of representatives of the Opposition party in New

¹ When, in deference to public opinion, the Boston bankers attempted to explain their movement in this matter, they made the specious plea of their right to the balances due them from other banks. This was not satisfactory. Matthew Carey, one of the ablest publicists of the day, says that the demand was made at a season of the year when freight on the specie, on account of the bad state of the roads, was from twenty to thirty per cent. more than it would have been had they waited a few weeks. That they could have waited without detriment to any interest is made manifest by the following statement of the condition of the banks in Massachusetts in January, 1814, just before the movement was made:

	Specie.	Notes in Circulation.
Massachusetts Bank	\$2,114,164.	\$682,708
Union.....	657,795.	283,225
Boston.....	1,182,572.	369,908
State.....	659,066.	509,000
New England.....	284,456.	161,170
Mechanics'.....	47,391.	44,595
	\$4,945,444	\$2,000,601

By this statement it appears that they had in their vaults about \$250 in specie for every \$100 of their notes in circulation: "a state of things," says Carey, "probably unparalleled in the history of banking from the days of the Lombards to the present time."

² The injurious effects upon the paper currency of the country may be seen by the following price current, published on the 7th of February, 1815:

	Below Par.		Below Par.
All the banks in New York State,		Philadelphia City Banks.....	24 per cent.
Hudson and Orange excepted... 19 to 20 per cent.		Baltimore Banks.....	30 "
Hudson Bank..... 20 "		Treasury Notes..... 24 to 25 "	
Orange Bank..... 24 "		United States six per cents.....	80 "

³ These transactions with the public were made so boldly that advertisements like the following appeared in the Boston papers:

"1 bill for..... £300 1 do. 250 1 do. 203 £1,253	}	British Government Bills, For sale by CHARLES W. GREEN, No. 14 India Wharf."
---	---	---

So great was the drain caused by the transmission of gold to Canada, and the demand for specie to pay for smuggled goods brought from Canada and Nova Scotia, that the specie in the Massachusetts banks was reduced in the course of six months nearly \$3,500,000—the amount being \$5,468,604 on the 1st of July, 1814, and only \$1,999,308 on the 1st of January, 1815.

Cabinet Changes.

New financial Measures proposed.

Revival of the public Credit.

England, to consider public affairs, was conceived, not by the factious politicians we have just noticed, but by thoughtful and earnest patriots of the Federal party.

After the invasion of Washington there were some changes in President Madison's Cabinet. Mr. Monroe continued in the office of Secretary of State, and was Acting

J. Armstrong

Secretary of War after the close of September, 1814, when Mr. Armstrong had resigned.¹ George W. Campbell, of Tennessee, the Secretary of the Treasury, was succeeded by Alex-

ander J. Dallas—a man of courage, energy, and decision—early in Octo-^{* October 4, 1814.} ber.^a The new secretary entered upon his duties with a determination to

revive the public credit, if possible, and he did it. The prospect was unpromising. Campbell's report of the condition of the Treasury immediately preceding his resignation was a deplorable picture of the national finances. So great was the general distrust that, when an attempt was made to borrow \$6,000,000,^b there were^{* August, 1814.} not bids for one half the amount; and so great were the government needs, that, in order to procure \$2,500,000, the secretary had been compelled to issue stock to the amount of \$4,265,000. There were \$8,000,000 treasury notes outstand-

ing, one half of which would fall due the next year. The entire amount to be paid within the fiscal year was not less than \$25,000,000, while the new revenues, already provided for, including new taxes, could not be expected to produce above \$8,000,000, owing to the total destruction of commerce. Yet Dallas was not dismayed, nor even discouraged. He proposed methods which startled Congress and the people. The crisis demanded immediate and effective measures, so he proposed new and increased taxes; and, as a means for furnishing a circulating medium and immediate resources in the way of loans, he recommended the establishment of a national bank, the government to be a large and controlling stockholder, and the bank to be compelled to loan to the government \$30,000,000.² Congress considered the propositions favorably; and such was the confidence which the character and

A. J. Dallas

¹ John Armstrong was born at Carlisle, in Pennsylvania, on the 25th of November, 1758. He was a student at Princeton College when the old War for Independence broke out, when he joined the army, and soon became a member of the staff of General Mercer. He was afterward on the staff of General Gates, and was for a while adjutant general of the Southern Army under that leader. He remained with that officer until the close of the war. Young Armstrong was the author of the celebrated *Newburg Addresses* just at the close of hostilities. While their tendency was most dangerous to the public welfare, Washington bore testimony to the patriotic motives of the writer. Armstrong was Secretary of State of Pennsylvania. After marrying the sister of Chancellor Livingston, of New York, he settled on the Hudson, in that State, near Red Hook, where he resided until his death on the 1st of April, 1833. He was United States senator in the year 1800, and in 1804 President Jefferson appointed him minister to France, where he performed his duties with ability. He was appointed brigadier general when the war broke out in 1812, and the following year he was called to the office of Secretary of War, which he reluctantly accepted. When he retired from that post he left public life forever.

² Dallas's proposition contemplated a national bank with a capital of \$20,000,000, one tenth in specie and the remainder in government stocks; the government to subscribe two fifths of the capital, and to have the appointment of the president and a third of the directors, and power also to authorize the suspension of specie payments. A bill chartering a national bank was passed in 1815, but was vetoed by the President of the United States. Finally, in April, 1816, an act incorporating a national bank became a law. This was the famous United States Bank, whose existence terminated in 1836.

Alexander J. Dallas was born in the island of Jamaica in 1759. His father was a Scotchman, and an eminent physician there. This son was educated at Edinburg and Westminster. After the death of his father he settled in Philadel-

immediate acts of Dallas inspired, that the loan vainly attempted to be made in August was favorably negotiated in October; and treasury notes, which then "none but necessitous creditors, or contractors in distress, or commissaries, quartermasters, and navy agents, acting as it were officially, seemed willing to accept," were, early in January following, sold at par, with the interest added.

Mr. Monroe, as acting Secretary of War, proposed vigorous measures for giving strength to the army. Volunteering had ceased, and he proposed to raise, by conscription or draft, sufficient men to make the existing army number nearly sixty-three thousand, and to provide forty thousand men as a regular force, to be locally employed in the defense of the frontiers and the sea-coast. Bills for this purpose were ^{October 27,} introduced in Congress;^{1814.} and this and other war measures were more favorably received than usual, because of the waning prospects of peace with Great Britain excepting on terms humiliating to the United States. Negotiations for peace were then in progress at Ghent, in Belgium; but the unfair demands and denials of Great Britain, through her commissioners, gave very little promise of satisfactory results. That haughty power would not consent to make peace excepting on very humiliating terms for the Americans; and yet there were those who could not value national independence, nor comprehend their duty to posterity, who thought that peace would be cheaply purchased even on such terms. While the Legislature of New York called them "extravagant and disgraceful," and that of Virginia spoke of those terms as "arrogant and insulting," the New England Legislatures had no word of condemnation.

The proposition to raise a large force by conscription brought matters to a crisis in New England. In some of the other states the matter of local defenses had been left almost wholly to the discretion of the respective governors. But the President, made suspicious of the loyalty of New England because of the injurious action of the Peace Faction, insisted upon the exclusive control of all military movements there. Because the Massachusetts militia had not been placed under General Dearborn's orders, the Secretary of State, in an official letter to Governor Strong, refused to pay the expenses of defending Massachusetts from the common enemy. Similar action for similar cause had occurred in the case of Connecticut, and a clamor was instantly raised that New England was abandoned to the enemy by the National Government. A joint committee of the Massachusetts Legislature made a report on the state of public affairs, which contained a covert threat of independent action on the part of the people of that section, saying that, in the position in which that state stood, no choice was left it between submission to the enemy, which was not to be thought of, and the appropriation to her own defense of those revenues derived from the people, but which the General Government had hitherto thought proper to expend elsewhere. The committee recommended a conference of sympathizing states to consider the propriety of adopting "some mode of defense suited to the circumstances and exigencies of those states," and to consult upon a radical reform in the National Constitution.

The administration minority protested against this action, and denounced it as a disguised movement to prepare the way for a dissolution of the Union. Their protest was of no avail. The report of the committee was adopted by a vote of three to one, and the Legislature addressed a circular letter to the governors of the other New England States, inviting the appointment of delegates, to meet in Convention at an early day, it said, "to deliberate upon the dangers to which the states in the eastern section of the Union are exposed by the course of the war, and which there is too much reason to believe will thicken round them in its progress; and to devise, if practicable, means of security and defense which may be consistent with the pres-

phia in 1783, and studied law. He was fond of literary pursuits, and at one time edited the *Columbian Magazine*. In 1801 President Jefferson appointed him United States Attorney for the Eastern District of Pennsylvania. In October, 1814, he was appointed Secretary of the Treasury, and in March, 1815, assumed the additional duties of Secretary of War. In November, 1816, he resigned, and returned to the practice of his profession. He died on the 16th of January, 1817.

A Convention called at Hartford.	Composition of the Convention.	Its proposed Work.
----------------------------------	--------------------------------	--------------------

ervation of their resources from total ruin, and adapted to their local situation, mutual relations and habits, and not repugnant to their obligations as members of the Union." They also proposed a consideration of some amendments to the Constitution on the subject of slave representation, that might secure to the New England States equal advantages with others.

The proposition of the Massachusetts Legislature was acceded to, and on Thursday morning, the 15th of December, 1814, a Convention, composed of twenty-six delegates, representing Massachusetts, Connecticut, Rhode Island, New Hampshire, and Vermont, assembled at Hartford, in Connecticut, then a town of four thousand inhabitants, and organized by the appointment of George Cabot, of Boston, as president of that body, and Theodore Dwight as secretary.¹

The sessions of the Convention continued three weeks, and were held with closed doors. The movement had created much alarm at the seat of government, especially because at about that time the Legislature of Massachusetts appropriated a million dollars toward the support of ten thousand men to relieve the militia in service, and to be, like that militia, exclusively under state control. All sorts of wild rumors and suggestions were put afloat, and the government found it convenient to have Major (afterward General) T. S. Jesup at Hartford, with his regiment, at the opening of the Convention, nominally for the purpose of recruiting for the regular army, but really under instructions, no doubt, to watch the movements of the supposed traitorous conclave.

On the second day of the session, a committee, appointed for the purpose, submitted a series of topics proper for the consideration of the Convention, which were as follows: "The powers claimed by the Executive of the United States, to determine conclusively in respect to calling out the militia of the states into the service of the United States; and the dividing of the United States into military districts, with an officer of the army in each thereof, with discretionary authority from the executive of the United States to call for the militia, to be under the command of such officer. The refusal of the executive of the United States to supply or pay the militia of certain states, called out for their defense, on the grounds of their not having been called out under the authority of the United States, or not having been, by the Executive of the state, put under the command of the commander over the military district. The failure of the government of the United States to supply and pay the militia of the states, by them admitted to have been in the United States service. The report of the Secretary of War to Congress on filling the ranks of the army, together with a bill or act on that subject. A bill before Congress providing for classifying and drafting the militia. The expenditure of the revenue of the nation in offensive operations on the neighboring provinces of the enemy. The failure of the government of the United States to provide for the common defense, and the consequent obligations, necessity, and burdens devolved on the separate states to defend themselves, together with the mode, and the ways and means in their power for accomplishing the object." Such was the work which the Convention, at the outset, proposed for itself.

On the 20th of December a committee was appointed to "report a general project of such measures" as might be proper for the Convention to adopt; and, four days afterward, they adopted a report that it would be expedient for the Convention to

prepare a general statement of the unconstitutional attempts of the executive government of the United States to infringe upon the rights of the individual states in regard to the military, etc.; and to recommend to the Legislatures of the states the adoption of the most effectual and decisive measures to protect the militia and the states from the usurpations contained in those proceedings. Also to prepare a statement concerning the general subject of state defenses, and a recommendation that an application be made to the national government for an arrangement with the states by which they would be allowed to retain a portion of the taxes levied by Congress, to be devoted to the expenses of self-defense, et cetera. They

FAC-SIMILE OF THE SIGNATURES TO THE REPORT OF THE HARTFORD CONVENTION.

also proposed amendments to the Constitution.¹

¹ They proposed, by amendments to the Constitution, to accomplish the following results: 1. The restriction of the power of Congress to declare and make war. 2. A restraint of the exercise of unlimited power by Congress to make new states and admit them into the Union. 3. A restraint of the powers of Congress in laying embargoes and restrictions on commerce. 4. A stipulation that a President of the United States shall not be elected from the same state two consecutive terms. 5. That the same person shall not be elected President a second time. 6. That alterations be made concerning slave representation and taxation.

Adjournment of the Hartford Convention,

Suspensions respecting its Work,

The Substance of that Work.

The labors of the Hartford Convention ended on the 4th of January, 1816, with a report and resolutions, signed by the delegates present, to be laid before the Legislatures of the respective states represented in the Convention. The report and resolutions were adopted as expressions of the sentiments of the Convention.¹ On the following morning,² at nine o'clock, after prayer by the Rev. Dr. Strong, the Convention adjourned, but with the impression on the part of the members that circumstances might compel it to reassemble. For that reason the seal of secrecy was not removed from the proceedings. This gave wide scope for conjecture concerning them, some declaring that they were patriotic, and others that they were treasonable in the extreme. Because the members of that Convention were of the political party to which the Peace Faction belonged, they incurred much odium. They and the party became the target at which the shafts of sharpest wit, as well as bitter denunciations, were hurled; and at the next election in Massachusetts, the ad-

January 5,
1815.

ministration, or Democratic party, issued a hand-bill, with a wood-cut indicative of the character of the opposing parties, a copy of which, on a reduced scale, is given in the annexed cut.

He who will take pains to inquire, without prejudice, will be satisfied that the twenty-six eminent men who composed the Hartford Convention were as wise, as loyal, and as patriotic as the average of the legislators and politicians of that day or since. They represented the conservative sentiment of discontented New England during a season of great trial.²

¹ The report, moderate but firm, able in construction, and forcible though heretical in arguments and conclusions, was immediately published, and extensively circulated throughout the country. It was read with the greatest avidity. It disappointed the expectations of the radical Federalists and the suspicious Democrats. The few disunionists of New England found in it no promise of a separation, and the administration party perceived in it no signs of sedition or treason. It presented a concise view of the current and past policy of the government, and summed up the sentiments of the Convention in the following resolutions, which were recommended for adoption to the state Legislatures:

² Resolved, That it be and hereby is recommended to the Legislatures of the several states represented in this Convention to adopt all such measures as may be necessary effectually to protect the citizens of said states from the operation and effects of all acts which have been or may be passed by the Congress of the United States, which shall contain provisions subjecting the militia or other citizens to forcible drafts, conscriptions, or imprisonments not authorized by the Constitution of the United States.

³ Resolved, That it be and hereby is recommended to the said Legislatures to authorize so immediate and earnest application to be made to the government of the United States, requesting their consent to some arrangement whereby the said states may, separately or in concert, be empowered to assume upon themselves the defense of their territory against the enemy; and a reasonable portion of the taxes collected within said states may be paid into the respective treasuries thereof, and appropriated to the payment of the balance due said states, and to the future defense of the same. The amount so paid into the said treasuries to be credited, and the disbursements made as aforesaid to be charged, to the United States.

⁴ Resolved, That it be and it hereby is recommended to the Legislatures of the aforesaid states to pass laws (where it has not already been done) authorizing the governors or commanders-in-chief of their militia to make detachments of the same, or to form voluntary corps, as shall be most convenient and conformable to their Constitutions, and to cause the same to be well armed, equipped, and disciplined, and held in readiness for service; and, upon the request of the governor of either of the other states, to employ the whole of such detachments or corps, as well as the regular force of the state, or such part thereof as may be required, and can be spared consistently with the safety of the state, in assisting the state making such request, to repel any invasion thereof which shall be made or attempted by the public enemy.

There were other resolutions, but they referred to amendments of the Constitution already alluded to. The most that can be said against the resolutions just quoted is, that they abandon the doctrine of a consolidated nation formed by the ratification of the Constitution by the people, for which the Washingtonian Federalists so strenuously contended, and are deeply tinged with the fatal heresy of state supremacy, or, at least, state independence, which has produced fearful effects in our day.

² The author is indebted to the kindness of Messrs. E. B. and E. C. Kellogg, of Hartford, Connecticut, for a careful copy of the signatures of the members of the Convention, printed on the opposite page, precisely as they are attached

Sketches of the Members of the Hartford Convention.

While the country was agitated by the political events just recorded, and the people were despondent because of the seeming remoteness of peace and the gloomy aspect of public affairs in general, other events of great importance, and having a most powerful influence in the direction of peace, were occurring on the southwestern borders of the republic. Let us consider them.

We have seen how the Creek Indians in Alabama were led into war, and thereby to the ruin of their nation, by white enemies of the republic and the influence of Te-

to the address and resolutions. The following brief notices of those members, compiled from sketches made by Mr. Dwight, the secretary of the Convention, will give the reader some idea of the dignity of that body:

George Cabot, the president of the Convention, was a descendant of one of the discoverers of the American continent of that name. He was a warm Whig during the Revolutionary struggle, and, soon after the adoption of the National Constitution, was chosen a senator in Congress by the Legislature of Massachusetts. He was a pure-hearted, lofty-minded citizen, a sound statesman, and a man beloved by all who knew him.

Nathan Dane was a lawyer of eminence, and was also a Whig in the days of the Revolution. He was a representative of Massachusetts in Congress during the Confederation, and was specially noticed for his services in procuring the insertion of a provision in the famous Ordinance of 1787, establishing territorial governments over the Territories northwest of the Ohio, which forever excluded slavery from those regions. He was universally esteemed for his wisdom and integrity.

William Prescott was a son of the distinguished Colonel Prescott, of the Revolution, who was conspicuous in the battle of Bunker Hill. He was an able lawyer, first in Salem, and then in Boston. He served with distinction in both branches of the Massachusetts Legislature.

Harrison Gray Otis was a native of Boston, and member of the family of that name distinguished in the Revolution. He was a lawyer by profession, and served the public in the Massachusetts Legislature and in the National Congress. He was an eloquent speaker, and as a public man, as well as a private citizen, he was very popular.

Timothy Bigelow was a lawyer, and for several years was speaker of the Massachusetts House of Representatives.

Joshua Thomas was judge of Probate in Plymouth County, Massachusetts, and was a man of unblemished reputation in public and private life.

Joseph Lyman was a lawyer, and for several years held the office of sheriff of his county.

George Bliss was an eminent lawyer, and distinguished for his learning, industry, and integrity. He was several times a member of the Massachusetts Legislature.

Daniel Waldo was a resident of Worcester, where he established himself in early life as a merchant. He was a state senator, but would seldom consent to an election to office.

Samuel Sumner Wilde was a lawyer, and was raised to a seat on the bench of the Supreme Court of Massachusetts.

Hodijah Baylies was an officer in the Continental Army, in which position he served with reputation. He was for many years judge of Probate in the county in which he lived, and was distinguished for sound understanding, fine talents, and unimpeachable integrity.

Stephen Longfellow, Jr., was a lawyer of eminence in Portland, Maine, where he stood at the head of his profession. He was a representative in Congress.

Chauncey Goodrich was an eminent lawyer, and was for many years a member of the Legislature of Connecticut in both of its branches. He was also a member of both houses of Congress, and lieutenant governor of Connecticut. His reputation was very exalted as a pure statesman and useful citizen.

John Treadwell was in public stations in Connecticut a greater part of his life, where he was a member of both legislative branches of the government, was a long time a judge of the Court of Common Pleas, and was both lieutenant governor and governor of the state. He was a Whig in the Revolution, and a politician of the Washington school.

James Hillhouse was a man of eminent ability, and widely known. He was a lawyer of celebrity, served as a member of the Legislature of Connecticut, and was for more than twenty years either a senator or representative in Congress. He fought bravely for his country in the old War for Independence, and was always active, energetic, and public-spirited.

Zephaniah Swift was a distinguished lawyer. He served as speaker of the Connecticut Assembly, and was a member of Congress, a judge, and for a number of years chief justice of the Supreme Court of Connecticut.

Nathaniel Smith was an extraordinary man. He was a lawyer by profession, and for many years was considered as one of the most distinguished members of his profession in Connecticut. He was a member of Congress, and a judge of the Supreme Court of Connecticut. His whole life was marked by purity of morals and love of country.

Calvin Goddard was a native of Massachusetts, but studied and practiced law in Connecticut, and became a distinguished citizen of that state. He arose to great eminence in his profession, and was in Congress four years. He was repeatedly elected a member of the General Assembly, and was appointed a judge of the Supreme Court of that state.

Roger Minot Sherman was another distinguished lawyer of Connecticut, and was for a long time connected with the government of that state. He was a man of highest reputation as the possessor of the qualities of a good citizen.

Daniel Lyman was a soldier of the Revolution, and rose to the rank of major in the Continental Army. After the peace he settled as a lawyer in Rhode Island, where he became distinguished for talents and integrity. He was chief justice of the Supreme Court of that state.

Samuel Ward was a son of Governor Ward, of Rhode Island, and at the age of eighteen years was a captain in the Continental Army. He was with Arnold in his expedition to Quebec in 1776. At that city he was made a prisoner. Before the close of the war he rose to the rank of colonel. He was elected a member of the Convention held at Annapolis, in Maryland, in 1786, which was the inception of the Convention which framed the National Constitution.

Benjamin Hazard was a native of Rhode Island, and a lawyer, in which profession he was eminent. He served for many years in the Legislature of his state.

Edward Manton was a native of Rhode Island, and rarely mingled in the political discussions of his day. He was a man of sterling worth in every relation in life.

Benjamin West was a native of New Hampshire, and a lawyer by profession, in which he had a good reputation.

Mills Olcott was a native of New Hampshire, and a son of Chief Justice Olcott, of that state. He was a lawyer by profession.

William Hall, Jr., was a native of Vermont. His business was that of a merchant, and he was frequently a member of the State Legislature. He was universally esteemed and respected by all good men.

General Jackson recalled into active Service.

His Vigilance.

Hostile Movements at Pensacola.

cumtha, the Indian ally of the British;¹ and we left General Jack-

son,² who had been the chief instrument in the destruction of that nation, resting at "The Hermitage," his mansion and estate, a few miles from Nashville, in Tennessee. From that pleasant retreat he was soon recalled to active duty, having been appointed a major general in the army of the United

States,³ and

"THE HERMITAGE" IN 1861.²

the Seventh Military District, with his head-quarters at Mobile, which post the Americans had taken possession of as early as April, 1812,³ when the Spaniards retired to Pensacola. Jackson was instructed to stop on his way to Mobile to make a definitive treaty with the remnant of the Creek nation, which he did at Fort Jackson⁴ on the 14th of August.⁵

1814.
Jackson's vigilance was sleepless. It was in marked contrast with the slumbering apathy or indifference at the War Department. He was promptly informed of what was occurring not only in his own department, but in the whole region around him, for he had trusty spies, pale and dusky, every where. He had observed with indignation and alarm that the authorities at Pensacola, with usual Spanish duplicity, while professing neutrality, were in practical alliance with the British and Indians. Of this the government was promptly informed; but Jackson received no responses to his warnings. He continued to receive evidences of gathering danger at Pensacola, and finally, late in August, the mask of Spanish neutrality was removed. Nine British ships of war then lay at anchor in the harbor there. Marines were landed from them and allowed to encamp on the shore. Their commander, Lieutenant Colonel Edward Nichols, was made a welcome guest of the Spanish governor, and the British flag was unfurled over one of the forts. Indian runners were sent on swift errands among the neighboring Creek and Seminole Indians to invite them to Pensacola, there to be enrolled in the service of the British crown. The response to their call was the speedy gathering of almost a thousand savages at that Spanish post, where they received arms and ammunition in abundance from the British officers. Then went forth a general order from Nichols to his soldiers, followed soon afterward by a proclamation to the inhabitants of Louisiana and Kentucky, both of which revealed hostile intentions. To his troops Nichols spoke of their being called upon "to perform long and tedious marches through wildernesses, swamps, and water-courses," and he exhorted them to conciliate their Indian allies, and to "never give them just cause for offense." In his proclamations he addressed the most inflammatory appeals to the prejudices of the French and the discontents of the Kentuckians, which a seeming neglect by their government and the arts of politicians had engendered.⁶ In fact,

¹ See Chapter XXXIII.

² This was the appearance of *The Hermitage* when the writer visited and sketched it in the spring of 1861.

³ See page 742.

⁴ See page 783.

⁵ The British counted largely upon the passive acquiescence, if not actual assistance, of the French and Spanish in-

Nichols, with a strange imprudence, seemed to take particular pains to proclaim that the land and naval forces at Pensacola were only the van of far more formidable ones composing an expedition for the seizure of New Orleans and the subjugation of Louisiana.

There was another revelation of impending danger made to the Americans at this time, and this, with the proceedings at Pensacola, aroused the people of the Southwest, and the civil and military authorities, to the greatest vigilance and speedy preparations to meet an invasion. This was an attempt on the part of the British to obtain the aid of a community of outlaws on the borders of the Gulf. These were privateersmen and smugglers, whose head-quarters were on a low island called Grand Terre, six miles in length and one and a half in breadth, which lies at the entrance to Barataria Lake or Bay, from the Gulf of Mexico, little less than sixty miles southwest from New Orleans in a direct line. From that island there is a water communication for small vessels through lakes and bayous to within a mile of the Mississippi River, just above New Orleans. Toward the Gulf is a fine beach, and to it inhabitants of the "Crescent City" resort during the heats of the summer months. The bay forms a sheltered harbor, in which the privateers of the Baratarians (as the smugglers were called) and those associated with them lay securely from the besom of the "Norther" that sweeps occasionally over the Gulf, and also from the cannon of ships of war, for the bay was inaccessible to such ponderous and bulky craft as were then used. The community of marauders there formed a regularly organized association, at the head of which was Jean Lafitte, a shrewd Frenchman and blacksmith from Bordeaux, and late resident of New Orleans. He had caused a battery of heavy guns to be pointed seaward for the protection of his company; and there might be seen at all times shrewd and cautious men from New Orleans, having "honorable mention" in that community, purchasing at cheap rates for profitable sales the rich booty of the sea-robbers, and thereby laying broadly the foundations of the fortunes of many a wealthy family living in the Southwest when the Civil War broke out in 1861. Lafitte became known in history, romance, and song as the "Pirate of the Gulf," of whom Byron erroneously said he

"Left a corsair's name to other times,
Linked with one virtue and a thousand crimes."

He was not a corsair in the meaning of the law of nations; and his crimes, such as they were, were not against humanity, but were violations of the revenue and neutrality laws of the United States. "I may have evaded the payment of duties at the custom-house, but I have never ceased to be a good citizen," said Lafitte, on one occasion; and then, with the usual plea of a culprit, he added, "All the offenses I have ever committed have been forced upon me by certain vices in the laws."

The fact that the United States government had, by legal proceedings, made the Baratarians outlaws, and, as a natural consequence, it was supposed, the bitter enemies of that government, caused the British to seek an alliance with them, not doubting that it would gladly be afforded. Accordingly, on the 1st of September,^a the British sloop of war *Sophia*, Captain Lockyer, sailed from Pensacola with dispatches for Jean Lafitte, among which was an invitation from Lieutenant Colonel Nichols, already mentioned, inviting that leader and his band to enter the British service, and a letter from Captain W. H. Percy, a son of Lord Beverly, the commander of the British squadron at Pensacola, in which Lafitte's fears were appealed to.¹ Lafitte took the offered documents, and was assured by Lockyer that his vessels and

habitants of Louisiana, who had been opposed to the rule of the United States government, and also upon the aid of the slaves, whose freedom was to be proclaimed when the British should obtain a sure foothold on the borders of the Mississippi River or the Gulf of Mexico.

¹ The package contained, besides these two letters, Nichols's proclamation to the inhabitants of Louisiana, and a copy of Captain Percy's orders to Captain Lockyer, in which the latter was directed, if successful in his mission, to "concert measures for the annoyance of the enemy, having an eye to the juncture of the small armed vessels" of the Baratarians with those of the British "for the capture of Mobile," etc.

A Leader of Smugglers turns Patriot.

Jackson perceives Mischief.

Mobile and its Defense.

men would be received into the honorable service of the Royal Navy. These documents Lafitte sent to William C. C. Claiborne, then governor of Louisiana, with a letter, saying, "Though proscribed in my adopted country, I will never miss an occasion of serving her, or of proving that she has never ceased to be near to me."¹

Before these revelations were made, Jackson's sagacity and forecast, when considering rumors and positive information that reached him from time to time, had made him suspicious that such hostile movements were in preparation; and, while a handful of men were trampling upon the national capital, he was planning a scheme for crushing at one blow the triple alliance of British, Spanish, and Indians at Pensacola, and ending the war in the Southwest. Now, with positive testimony of danger before him (copies of the documents furnished by Lafitte having been sent to him), he resolved to act promptly, without the advice or sanction of his government.² He squarely accused Manriquez, the Spanish governor at Pensacola, with bad faith, when a spicy correspondence ensued. This Jackson ended by saying to the governor, "In future I beg you to withhold your insulting charges against my government for one more inclined to listen to slander than I am; nor consider me any more a diplomatic character unless so proclaimed from the mouth of my cannon." Then he sent his adjutant general, Colonel Robert Butler, into Tennessee to beat up for volunteers, with a determination to give tangible shape to the threat contained in the last clause of his letter. In a very short time no less than two thousand of the sturdy young men of Tennessee were ready for the field.

WILLIAM C. C. CLAIBORNE.

Meanwhile, hostilities had actually commenced in that quarter. When Jackson reached Mobile, late in August, he was satisfied that an attempt would be made to seize that post as soon as the great expedition of which he had rumors should be prepared to move. Mobile was then only a little village of wooden houses, with not a thousand inhabitants, with no defenses against artillery, and scarcely sufficient to withstand an attack from the rifles of Indians. At the entrance to Mobile Bay, thirty miles from the village, was Fort Bowyer (now Fort Morgan), occupying the extremity of a narrow sand cape on the eastern side of that entrance, and commanding the entire channel between it and Dauphin Island. It was a small work, semicircular in form toward the channel, and of redan shape on the land side. It was weak, being without bomb-proofs, and mounting only twenty guns, and all but two of these were 12-pounders and less. And yet this was the chief defense of Mobile; for, the enemy once inside of the bay, there would be no hope for holding the post with the troops then at hand. So, when Jackson perceived, early in September, that a speedy movement against Mobile from Pensacola was probable, he threw into Fort Bowyer one hundred and thirty of the Second regular infantry, under Major William Lawrence,

¹ Lafitte had amassed a large fortune by his lawless pursuits, and perceived the danger that menaced his trade, his possessions, and his liberty. Already his brother, who had been his chief agent in New Orleans, was in prison for his offenses, and the authorities of the United States were preparing to strike a withering blow at Barataria. Lafitte, willing to save himself and his possessions, and preferring to be called a patriot rather than a pirate, asked the British messengers to allow him a few days for consideration. When Lockyer departed Lafitte sent the documents up to New Orleans, as mentioned in the text.

² An order was actually issued from the War Department authorizing Jackson to seize Pensacola, but it did not reach him until six months afterward, when the war had ceased.

one of the most gallant officers in the service. At the same time, he sent orders for Colonel Butler to call out the enrolled Tennessee Volunteers, and have them led immediately to Mobile.

Major Lawrence made vigorous preparations to resist the enemy by strengthening the fort as much as possible, and providing against attacks upon it from cannon that might be planted upon sand-hills near, which commanded it. These preparations were not completed when, on the morning of the 12th of September, Lieutenant Colonel Nichols appeared on the peninsula, in rear of the fort, with one hundred and thirty marines and six hundred Indians, the latter led by Captain Woodbine, who had been attempting to drill them at Pensacola. Toward evening four British vessels of war hove in sight, and anchored within six miles of Mobile Point. These were the *Hermes*, 22; *Sophia*, 18; *Caron*, 20; and *Anaconda*, 18, the whole under Captain Percy, the commander of the squadron of nine vessels in Pensacola Bay, already mentioned, of which these were a part. In the presence of these formidable forces, the little garrison slept upon their arms that night.

ANDREW JACKSON.

On the following morning Nichols reconnoitred the fort from behind the sand-hills in its rear, and, dragging a howitzer to a sheltered position within seven hundred yards of the work, threw some shells and a solid shot upon it without much effect. Responses from Major Lawrence were equally harmless; but when, later in the day, Percy's men attempted to cast up intrenchments, Lawrence's guns quickly dispersed them. Meanwhile several light boats, engaged in sounding the channel nearest the fort, were dispersed in the same way.

The succeeding day^a was similarly employed; but early on the morning of the 15th it was evident to the garrison that an assault was about to be made from land and water. The forenoon wore away, while a stiff breeze was blowing, and when it slackened to a slight one from the southeast, toward noon, the ships stood out to sea. They tacked at two o'clock, and bearing down upon the fort in order of "line ahead," the *Hermes* (Percy's flag-ship) leading, took position for attack. The *Hermes* and *Sophia* lay nearly abreast the northwest face of the fort, while the *Caron* and *Anaconda* were more distant. Lawrence then called a council of officers, when it was determined to resist to the last, and not to surrender, if finally compelled to, unless upon the conditions that officers and privates should retain their arms and private property, be protected from the savages, and be treated as prison-

^a September 14,
1814.

Attack on Fort Bowyer.

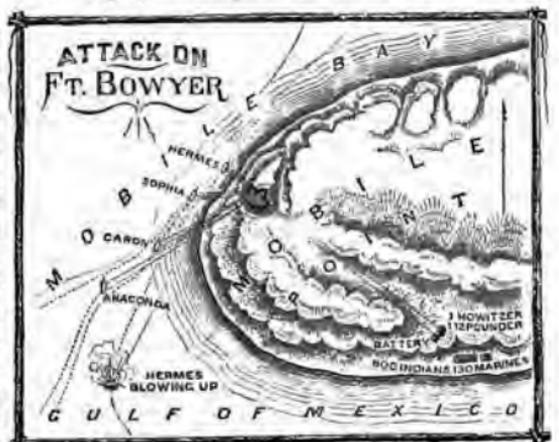

The British repulsed.

Effect of the Repulse.

ers of war. This being their resolution, the words "*Don't give up the fort*" were adopted as the signal for the day.¹

The *Hermes* drew nearer the fort, and when within range of its guns the two 24-pounders were opened upon her without much effect. She made a faint reply, and anchored within musket range of the work, while the other three vessels formed in battle line under a heavy fire. It was now half past four in the afternoon. The four vessels simultaneously opened fire, and the engagement became general and fierce, for broadside after broadside was fired upon the fort by the ships, while the circular battery was working fearfully upon the assailants. Meanwhile Captain Woodbine opened fire from a howitzer and a 12-pounder from behind a sand dune seven hundred yards from the opposite side of the fort. The battle raged until half past five, when the flag of the *Hermes* was shot away, and Lawrence ceased firing to ascertain whether she had surrendered. This humane act was followed by a broadside from the *Caron*, and the fight was renewed with redoubled vigor. Very soon the cable of the *Hermes* was severed by a shot, and she floated away with the current, her head toward the fort, and her decks swept of men and every thing else by a raking fire. Then the flag-staff of the fort was shot away and the ensign fell, when the ships, contrary to the humane example of the garrison, redoubled their fire. At the same time, Woodbine, supposing the garrison had surrendered, approached with his Indians, when they were driven back in great terror by a storm of grape-shot. Both sailors and marines found the garrison in full vigor, and only a few minutes after the flag fell it was seen floating over the fort at the end of a sponge-staff to which Major Lawrence had nailed it.

The attacking vessels, battered and in peril, soon withdrew, excepting the helpless *Hermes*, which grounded upon a sand-bank, when Percy fired and abandoned her. At almost midnight the magazine of the *Hermes* exploded. So ended, in a repulse of the British, the attack on Fort Bowyer, upon which ninety-two pieces of artillery had been brought to bear, and over thirteen hundred men had been arrayed against a garrison of one hundred and thirty. The latter lost only eight men, one half of whom were killed. The assailants lost two hundred and thirty-two men, of whom the unusual proportion of one hundred and sixty-two were killed.

The result of the strife at Mobile Point was very mortifying to the British. It was wholly unexpected. Percy had declared that he should allow the garrison only twenty minutes to capitulate. That garrison—that handful of men—had beaten off his ships and his co-operating land force with ease. The repulse was fatal to the prestige of the British name among the Indians, and a large portion of them deserted their allies and sought safety from the wrath of Jackson, whom they feared, by concealment in the interior of their broad country. The result was most gratifying to the Americans, and gave an impetus to volunteering for the defense of New Or-

¹ Latour says that the officers of the garrison took an oath not to recede from this determination in any case, nor on any pretext, and that in the event of the death of one of them all the others should adhere to it.—*Historical Memoir of the War in West Florida and Louisiana*, by Major A. La Carriere Latour.

Reception of the British at Pensacola.

Jackson marches on that Place.

Violation of a Flag of Truce.

leans. Jackson wrote a commendatory letter to Major Lawrence, and that officer received one also from Edward Livingston, chairman of the Defense Committee of New Orleans, assuring him of the joy and gratitude felt by the inhabitants of that city when they heard of his gallant defense of Fort Bowyer. At the same time it was resolved to present to Major Lawrence an elegant sword in the name of the citizens of New Orleans.¹

When the discomfited British returned to Pensacola they were publicly received as friends and allies. This circumstance, the attack on Fort Bowyer, and the revelations just made concerning an attempt by the British to engage a band of outlaws to assist them in an attempt to capture New Orleans, which we shall consider presently, kindled the hottest indignation in the minds of Jackson and the inhabitants of the Southwest. The general issued^a a fiery proclamation to the inhabitants of Louisiana as a counterblast to that of Nichols, in which he set forth the conduct of the British and the perfidy of the Spaniards, calling them to arouse in defense of their threatened country. He also put forth an address on the same day to the free colored people of Louisiana, inviting them to unite with the rest of their fellow-citizens in defending their common country from invaders. The people were already much excited by the threatening aspect of affairs, and these appeals aroused them to vigorous action.

Jackson had determined to march on Pensacola as soon as the Tennessee Volunteers should arrive, and break up that rendezvous of the enemies of the republic. The time for such movement was looked for with great impatience. It was even weeks remote, for it was the beginning of November before Jackson had his forces on hand for the purpose. These were assembled at Fort Montgomery, due north from Pensacola, four thousand strong,² and marched for the doomed fort on the 3d,^b some Mississippi dragoons in advance. The whole army encamped within two miles of Pensacola on the evening of the 6th, when Jackson sent Major Pierre with a flag of truce to the governor, with an assurance that the expedition was not to make war upon a neutral power, nor to injure the town, but to deprive the enemies of the republic of a place of refuge. He was instructed, also, to demand the surrender of the forts. But when the flag approached it was fired upon by a 12-pounder at Fort St. Michael, which was garrisoned by the British, and over which the Spanish and British flags had been conjointly waving until the day before. When Pierre reported these facts, Jackson sent a Spanish prisoner, whom he had captured on the way, to the governor, with a message demanding an explanation. Manriquez denied all knowledge of the outrage, and gave an assurance that if another flag should be sent it would be respected. Pierre went again at midnight, and submitted to the governor a proposal from Jackson that American garrisons should be admitted into Forts St. Michael and Barancas until the Spanish government could procure a sufficient force to enable it to maintain its neutrality against violations of it by the British, who had possessed themselves of the fortresses, notwithstanding the alleged remonstrances and protests of the Spanish governor; also that the American troops should be withdrawn as soon as such a respectable force should arrive.

Jackson's proposition was rejected by the governor after consultation with his chief officers. The consequence was, that, before dawn, troops were marching upon Pensacola, three thousand in number,³ for Jackson had resolved to have no farther

¹ William Lawrence was a native of Maryland. He entered the service as second lieutenant of infantry in June, 1801. He was adjutant in 1807, captain in 1810, major in April, 1814, and was breveted lieutenant colonel for his gallant services at Fort Bowyer. He was made full lieutenant colonel in 1818, and in 1824 was breveted colonel for ten years' faithful services. He was made full colonel in 1828, and resigned in July, 1831.

² These consisted of about one thousand regulars, composed of the Third, Thirty-ninth, and Forty-fourth Infantry, the Tennessee Volunteers, and a battalion of volunteer dragoons from the Mississippi Territory.

³ The right of the column consisted of Tennessee Volunteers, under General Coffee; the centre, of the Thirty-third and Forty-fourth regulars, under Major Woodruff; and the left, of the Tennessee militia and Choctaw Indians, under Majors Blue and Kennedy, with a battalion of Mississippi dragoons commanded by Major Hinds.

parley with the authorities. They took a direction, under the mask of some mounted men, to avoid the fire of Fort St. Michael and the ships in the harbor. Their course lay along the beach, toward the east part of the town, but the sand was so heavy that they could not drag the cannon through it. Then the centre of the column was ordered to charge into the town. This was gallantly done, and in the principal street they were met by a two-gun battery, which opened upon them with balls and grape-shot, while a shower of musketry was poured upon them from the gardens and houses. Captain Laval and his company charged the battery and captured it, when the frightened governor appeared with a white flag, and made promises to comply with any terms Jackson might propose if he would spare the town. An instant surrender of all the forts was demanded and promised, and after some delay this was done. But Fort Barancas, six miles distant, and commanding the harbor, in which the British ships lay (the most important of all the fortifications), was yet in the hands of the enemy. This Jackson determined to march suddenly upon the next morning, and, seizing it, turn its guns on the British ships, and capture or greatly injure them before they could escape. But before morning the fort was abandoned and blown up, and the British squadron had left the port, bearing away Lieutenant Colonel Nichols, Captain Woodbine, and a considerable number of Indians, with the Spanish commandant of the fort, and its garrison of about four hundred men.

Jackson suspected that the British, who had so suddenly left Pensacola, had returned to make another attempt against Mobile while he was absent, so he immediately withdrew, and hastened with his troops in the same direction by way of Fort Montgomery, leaving Manriquez indignant because of the flight of his British friends, and the Indians deeply impressed with a feeling that it would be very imprudent to again defy the wrath of Andrew Jackson. That leader had, by this expedition, accomplished three important results, namely, the expulsion of the British from Pensacola; the scattering of the Indians through the forests, alarmed and dejected; and the punishment of the Spaniards for much perfidy. He was denounced by the Opposition, and was not fully sustained by his government, in thus invading the territory of a neutral without orders; but the people of the West and South, and the Democratic newspapers, applauded his act, which the circumstances of the case seemed to justify.

Jackson reached Mobile on the 11th of November,^a where he found mes-
sages urging him to hasten to the defense of New Orleans. The revelations
made by Lafitte had not been accepted as true by the government officials; but the
people believed them, and held a large meeting, in consequence, at the St. Louis Ex-
change, in New Orleans, on the 16th of September. They were eloquently addressed
by the late Edward Livingston, then a leading citizen of Louisiana, who urged the
inhabitants to make immediate preparations to repel the contemplated invasion.
They appointed a Committee of Safety,¹ composed of the most distinguished citizens
of New Orleans, with Livingston as chairman, who sent forth a stirring address to
the people. Governor Claiborne, who, like Livingston, believed the statements of
Lafitte, sent copies of the British papers to General Jackson, then at Mobile. Then
it was that the latter issued his vigorous counter-proclamation, and proceeded to the
prosecution of measures for breaking up the nest of enemies at Pensacola, as just re-
corded.

Jackson departed for New Orleans on the 21st of November, and arrived there on
the 2d of December, making his head-quarters at what is now 86 (formerly 104)
Royal Street (see engraving on next page). He found the city utterly defenseless,
and the councils of the people distracted by petty factions. The patriotic Governor
Claiborne had called the Legislature together as early as the 5th of October. The

¹ This committee consisted of Edward Livingston, Pierre Foucher, Dussau de la Croix, Benjamin Morgan, George Ogden, Dominique Boulligny, J. A. Destrehan, John Blaque, and Augustine Macarté.

The Weakness of New Orleans.

Jackson's Arrival hailed with Joy.

Approach of the Invaders.

members were divided into several factions, and there was neither union, nor harmony, nor confidence to be found. The people, alarmed and distrustful, complained of the Legislature; that body, in turn, complained of the governor; and Claiborne complained of both the Legislature and the people. Money and credit were equally wanting, and arms and ammunition were very scarce. There was no effective naval force in the adjacent waters; and only two small militia regiments, and a weak battalion of uniformed volunteers, commanded by Major Plauché, a gallant Creole, constituted the military force of the city.¹ The store-houses were filled with valuable merchandise, and it would be natural

JACKSON'S CITY HEAD-QUARTERS.

MAJOR PLAUCHÉ.

for the owners to prefer the surrender of the city at once to a seemingly invincible foe, to incurring the risk of the destruction of their property by a resistance that should invite a fiery bombardment. In every aspect the situation was most gloomy when Jackson arrived, worn down with sickness, fatigue, and anxiety. His advent was hailed with great joy by the citizens, for he was regarded as a host in himself; and the cry of "Jackson's come! Jackson's come!" went like an electric spark in eager words from lip to lip, giving hope to the desponding, courage

to the timid, and confidence to the patriotic.

Jackson did not rest for a moment. He organized the feeble military force in the city; took measures for obstructing the large bayous, whose waters formed convenient communications between the Mississippi near New Orleans and the Gulf of Mexico, and proceeded to inspect and strengthen the fortifications in the vicinity and to erect new ones. Fort St. Philip, below the city, was the object of his special care, for on that he mainly relied for preventing the passage of the river by the vessels of the invaders.

The expected enemy soon appeared. The army that captured Washington and was repulsed at Baltimore had left the Chesapeake toward the middle of October, three thousand strong, and sailed away for the West Indies in the fleets of Admirals Cochrane and Malcoln. These were soon joined by over four thousand troops under General Keane, a gallant young Irish officer, who had sailed from Plymouth in September. The combined forces were assembled in Negril Bay, Jamaica, and in over fifty vessels of all sizes more than seven thousand land troops were borne across the Gulf of Mexico in the direction of New Orleans. They left Negril Bay on the 26th of November, and first saw the northern shore of the Gulf, off the Chandeleur Islands,

¹ This battalion numbered three hundred and eighty-five men, and was composed of the companies named respectively *Hulans*, or foot dragoons, under Captain St. Geure; *Frans*, Captain Hudry; *Louisiana Blues*, Captain Maunsel White; and *Chasseurs*, Captain Guilbert.

The British deceived. Preparations to receive the Invaders. The British prepare for a Fight on Lake Borgne.

between the mouth of the Mississippi and Lake Borgne, in the midst of a furious storm, on the 9th of December. Music, dancing, theatrical performances, and hilarity of every kind had been indulged in during the passage of the Gulf, for every man felt confident that an easy conquest of Louisiana awaited them. The wives of many officers accompanied them, and were filled with the most delightful anticipations of pleasure in the beautiful New World before them.

The British supposed the Americans to be profoundly ignorant of their expedition. They anchored the fleet in the deep channel between Ship and Cat Islands, near the entrance to Lake Borgne, and prepared small vessels for the transportation of troops over the shallow waters of that region with great expedition, hoping to surprise and capture New Orleans before their presence should be fairly suspected. They were disappointed. The revelations of Lafitte had made officers and people vigilant; and early in December, Commander Daniel T. Patterson,¹ then commanding the naval station at New Orleans, was warned by a letter from Pensacola of the approach of a powerful British land and naval armament. That vigilant officer immediately sent out five gun-boats, a tender, and a dispatch-boat toward the passes of Mariana and Christian, as scouts to watch for the enemy. They were commanded by Lieutenant (late Commodore) Thomas Ap. Catesby Jones, who sent two gun-boats, under the respective commands of Lieutenant M'Keever and Sailing-master Ulrick, to Dauphin Island, at the entrance to Mobile Bay, to catch the first intelligence of the foe. They discovered the great fleet on the 10th of December, and hastened to report the fact to Lieutenant Jones. Patterson had ordered that officer to take such position as would enable him, in the event of the enemy making their way into Lake Borgne, to cut off their barges and prevent the landing of troops. If Jones should be hard pressed, he was to fall back to the mud fort of Petites Coquilles, near the mouth of the Rigolots, between Lakes Borgne and Pontchartrain, and shelter his vessels under its guns.

When, on the afternoon of the 10th, the fog that succeeded the storm had cleared away, and the British fleet were in full view, Jones made for the Pass Christian with his little flotilla, where he anchored, and waited the approach of the invaders. He was discovered by the enemy on the 13th, much to their astonishment. It was evident that the Americans were acquainted with the intentions of the British, and had made preparations to meet them. Cochrane immediately gave orders for a change in the plan of operations. It would not do to attempt the landing of troops while American gun-boats were patrolling the waters of Lake Borgne. So he prepared a flotilla of almost sixty barges, the most of them carrying a carronade in the bow and an ample number of armed volunteers from the fleet, and sent them, in command of Captain Lockyer, to capture or destroy the American vessels. These were observed by Jones at four o'clock in the afternoon, when, in obedience to orders, he proceeded with his flotilla toward the Rigolots. A calm, and adverse water currents would not allow him to pass the channel between Point Clear of the main and Malheureux Island, and there he anchored at two o'clock on the morning of the 14th. Jones's flagship was a little sloop of eighty tons, and the other vessels of his tiny squadron were commanded respectively by Sailing-masters Ferris and Ulrick, and Lieutenants M'Keever and Speddon. The total number of men was one hundred and eighty-two, and of guns twenty-three.

¹ Daniel T. Patterson was born in the State of New York, and entered the navy as a midshipman in 1806, under Commodore Bainbridge, and was with that officer as a captive in Tripoli. He was promoted to lieutenant in 1807, and to master commandant in 1813. After his valuable services near New Orleans he was promoted to captain, in February, 1815. From 1808 to 1812 he served as navy commissioner, and from 1812 to 1835 commanded a squadron in the Mediterranean. He died while in command of the navy yard at Washington on the 16th of August, 1839, and was buried in the Congressional Burial-ground near that city, where a small, neat monument marks his grave.

PATTERSON'S MONUMENT.

Battle of Barges and Gun-boats. Capture of the American Flotilla. Preparations to attack New Orleans.

With a cool morning breeze, the British barges, containing twelve hundred men, bore down upon Jones's flotilla, while the tender, *Alligator*, was in the distance, vainly endeavoring to join the Americans. The barges, with six oars on each side, formed a long, straight line, and in that order swept rapidly forward, while Jones reserved his fire until they were within close range. Then M'Keever hurled a 32-pound ball over the water, and a shower of grape-shot, which broke the British line and made great confusion. But the invaders pushed forward, and at half past eleven o'clock the engagement became general and desperate. At one time Jones's boat was attacked by no less than fifteen barges. The *Alligator* was captured early, and, by the force of

overwhelming numbers, the British, after a combat of almost an hour, gained a complete victory. It was at the cost of several of their barges, that were shattered and sunk, and about three hundred men killed and wounded. The Americans lost only six men killed and thirty-five wounded. Among the latter were Lieutenants Jones, M'Keever, Parker, and Speddon. The British commander (Lockyer) was severely wounded; so also was Lieutenant Pratt, who, under the direction of Cockburn, had fired the national buildings of Washington City a little more than a hundred days before.

The capture of the American gun-boats gave the British complete control of Lake Borgne, and the lighter transports, filled with troops, immediately entered it. Ship after ship got aground, until at length the troops were all placed in small boats and conveyed about thirty miles to the Isle des Pois (or Pea Island), at the mouth of the Pearl River, and that desert spot was made the place of general rendezvous. There they landed between the 16th and 20th of December, and there General Keane organized his army for future operations.

Cochrane had been informed by some former Spanish residents of New Orleans that at the northwestern extremity of Lake Borgne there was a bayou (Bienvenu) navigable for large barges to within a short distance of the Mississippi River, just below New Orleans. He sent a party to explore it. They followed this bayou, and a canal across Villeré's plantation, to a point half a mile from the Mississippi and nine miles below the city, and, hastening back, reported that the transportation of troops through that bayou was feasible. Vigorous measures were immediately adopted for an advance upon New Orleans, where the British troops were assured that wealth and ease awaited them. They were encouraged by ex-officials of the old Spanish government of Louisiana, who went to the British camp from New Orleans and represented Jackson as an ignorant tyrant, detested by the people, and void of any efficient means for defending the city.

Jackson was informed of the capture of the American gun-boats early on the 15th,

when returning from a tour of observation in the direction of the River Chef Menteur, northeastward of the city. He at once perceived the importance of securing the passage of the Chef Menteur Road, that crosses the plain of Gentilly in that direction from the city to the strait between Lakes Borgne and Pontchartrain, and he ordered Major Lacoste, with his militia battalion of colored men and the dragoons of Feliciana, to proceed at once with two pieces of artillery, take post at the confluence of Bayou Sauvage and the River Chef Menteur, guard the road, cast up a redoubt at its terminus, and watch and oppose the enemy. He also proceeded to fortify and strengthen every point of approach to the city; sent messengers to Generals Coffee, Carroll, and Thomas, urging them to hasten to New Orleans with their commands as quickly as possible, and forwarded a dispatch to General Winchester, in command at Mobile, directing him to be on the alert. Then he appointed the 18th of December for a grand review of all the remaining troops in New Orleans, in front of the old Cathedral of St. Louis, in the Place d'Armes (now Jackson Square), one of the yet remaining relics of the Spanish dominion in Louisiana. It was a memorable day in

THE CATHEDRAL OF ST. LOUIS, AND GOVERNMENT HOUSE.

New Orleans. The whole population were out to witness the spectacle. The impending danger was great, while the military force was small and weak. Strength and resolution were communicated to it by stirring sentences from the lips of Jackson, and a thrilling and eloquent appeal which was read by his aid-de-camp, Edward Livingston.² The enthusiasm of the soldiers and citizens was intense; and Jackson, taking advantage of that state of public feeling, silenced the distracting voices of faction by declaring martial law and the suspension of the privilege of the writ of habeas corpus.

When the review was over, Major Plauché was sent with his battalion to the Bayou St. John, northward of the city; and at its mouth, on Lake Pontchartrain, Major Hughes was in command of Fort St. John. The Baratarians, on the urgent solicitation of their chief, Lafitte, were accepted as volunteers, mustered into the

¹ This is from a sketch made by the author in April, 1861, from Jackson Square. The Government House is seen on the right.

² Edward Livingston was born on the Livingston manor, on the Hudson, in 1764. He was graduated at Princeton College in 1781, and was admitted to the bar in 1788. He was elected to a seat in Congress in 1794, to which he was re-elected until 1801, when President Jefferson appointed him United States District Attorney for New York. He made New Orleans his residence. He was the author of the penal code of Louisiana, adopted in 1824. He was again in Congress in 1823, and in the National Senate in 1829. He was appointed American minister to the French Court in 1823. He died at his residence in Dutchess County, New York, on the 23d of May, 1837.

Temper of the People.

The British approach the Mississippi.

They capture a Picket-guard.

FORT ST. JOHN IN 1861.

ranks, and drilled to the performance of important services, under the command of Captains Dominique You, Beluche, Songis, Lagaud, and Colson, at Forts Petites Coquilles, St. Philip, and St. John. The people cheerfully submitted to martial law; and, in the languages of England, France, and Spain, the streets were made to resound with "Yankee Doodle," the "Marseillaise Hymn," and the "Chant du Départ." The women were as enthusiastic as the men, and at windows, on balconies, in the streets,

and public squares, they applauded the passing soldiers by waving of scarfs and handkerchiefs and uttering cheering words. Martial music was continually heard, and New Orleans appeared more like a military camp than a quiet mart of commerce. Business was mostly suspended, and the Legislature passed a law for prolonging the term of payment on all contracts until the first of the ensuing May. Military rule was complete. Able-bodied men of every age, color, and nationality, excepting British, were pressed into the service; suspicious persons were sent out of the city, and no one was allowed to pass the chain of sentinels around it without a proper official permission.

While these preparations for the reception of the invaders were in progress, the British were making unceasing efforts to press forward and take New Orleans by surprise. They had determined to make use of the Bayou Bienvenu and Villeré's Canal for the purpose; but with all their exertions, and after pressing the captured gun-boats into the service, they could not muster vessels enough fitted to navigate that bayou to carry more than one third of the army. Keane felt so confident of success, even with a small part of his force, that he could not brook farther delay; and on the morning of the 22d of December—a rainy, chilly, cheerless morning—a flotilla filled with troops set out, the advance, comprising eighteen hundred men, commanded by Lieutenant Colonel Thornton, who had been wounded at Bladensburg. These were accompanied by General Keane and his staff and other important officers, and were followed by the remainder. Admiral Cochrane was in a schooner, at a proper distance to watch and direct the squadron. All day and all night they were out upon the lake in open boats. A clear sky and biting frost came at sunset, and the wet clothing of the soldiers was stiffened into iciness by the cold night air. Their discomforts ended in a measure at dawn, when they reached the Fisherman's Village (inhabited by Spaniards and Portuguese, who were spies and traitors), at the mouth of the Bayou Bienvenu. They were only twelve miles from New Orleans, and not a soul in that city suspected their approach.

Yet there were vigilant eyes, wide open, watching the invaders. At the head of the Bayou Bienvenu was the plantation of General Villeré, the commander of the first division of Louisiana militia. Jackson had instructed his son, Major Gabriel Villeré, to watch that bayou with a competent picket-guard. He did so, faithfully; but when the British landed at Fisherman's Village they captured the most of them. It proved to be a fortunate circumstance, for these men so magnified the number of Jackson's troops, and the strength of the defenses around New Orleans, that they

The British at Villeré's.

Jackson warned of Danger.

The Response to his Call for Troops.

moved cautiously, and failed to surprise the vigilant hero in the city. They moved slowly up the bayou; but when they reached Villeré's Canal the active Thornton pushed forward with a detachment, surrounded the mansion of the plantation, which is in sight of the Mississippi, and succeeded in capturing Major Villeré. He soon es-

VILLERÉ'S MANSION.¹

caped, fled to the house of his neighbor, the gallant Colonel De la Ronde, and in a boat they hastened across the Mississippi. There, at the stables of M. De la Croix, one of the Committee of Public Safety of New Orleans, they procured fleet horses, and with that gentleman rode swiftly up the levee on the right bank of the river, and crossed again at New Orleans to warn Jackson of the approach of the foe. Augustus Rousseau, an active young Creole, who had been sent by Captain Ducros, was already there. He had reached Jackson's head-quarters in Royal Street with the startling intelligence at about one o'clock, and a few minutes afterward Major Villeré and his party entered. "Gentlemen," said Jackson to the officers and citizens around him, "the British are below; we must fight them to-night!" He then ordered three discharges of cannon to give the alarm, and sent marching orders to several of the military commanders.

Jackson's call upon Coffee, Carroll, and others had been quickly responded to. Coffee came speedily over the long and tedious route from Fort Jackson, on the Alabama River, to Baton Rouge, and was now encamped, with his brigade of mounted riflemen, on Avart's plantation, five miles above New Orleans. The active young Carroll, who had left Nashville in November with Tennessee militia, arrived in flat-boats and barges at about the same time, and brought into camp a regiment of young, brave, well-armed, but inexperienced soldiers, expert in the use of the rifle, and eager for battle. They landed on the 22d of December, and were hailed by Jackson with great joy. A troop of horse, under the dashing young Hinds, raised in Louisiana, came at about the same time.

When, in the afternoon of the 23d, Jackson issued his marching orders, Coffee's brigade was five miles above the city; Plauché's battalion was at Bayou St. John, two miles distant; the Louisiana militia and half of Lacoste's colored battalion were three miles off, on the Gentilly Road; and the regulars (Forty-fourth) under Colonel Ross,

¹ This is from a sketch made by the author in April, 1861. The buildings seen in the distance, beyond the avenue of trees, were the sugar-works of the plantation.

Jackson moves against the invaders. Their Camp broken up by the *Carolina*. American Troops hasten to the Scene.

with Colonel M'Rea's artillery, a little more than eight hundred strong, were at Fort St. Charles, on the site of the present United States Branch Mint in New Orleans, and in the city barracks. Within an hour after Jackson was informed that the invaders were on the direct road to the city, along the river, and only nine miles distant, these troops were all in motion under special orders. Carroll and his Tennesseans were dispatched to the upper branch of the Bayou Bienvenu; farther up the Gentilly Road Governor Claiborne was stationed with the Louisiana militia; and Coffee's brigade, Plauché's and D'Aquin's battalions, Hinds's dragoons, the New Orleans Rifles, under Captain Beale, and a few Choctaw Indians, commanded by Captain Jugeat, were ordered to rendezvous at Montreuil's plantation, and hasten to Canal Rodriguez, six miles below the city, and there prepare to advance upon the foe. Commodore Patterson was directed to proceed down the Mississippi to the flank of the British at Villeré's with such armed vessels as might be in readiness. Such was the scanty force with which Jackson proceeded to fight a foe of unknown numbers and strength.

While Jackson was assembling his troops, the invaders were making ready to march on New Orleans that night and take it by surprise. They sent forward a negro to distribute a proclamation, signed by General Keane and Admiral Cochrane, printed in French and Spanish, which read thus:

"*Louisianians!* remain quietly in your homes; your slaves shall be preserved to you, and your property respected. We make war only against Americans."

The British were bivouacked on the highest part of Villeré's plantation, at the side of the levee and on the plain; and in the court between Villeré's house (in which Keane and some of his officers made their head-quarters) and his sugar-works! they had mounted several cannon. They were in fine spirits. Full one half of the invading troops had been brought to the banks of the Mississippi, only nine miles from New Orleans, without firing a gun after capturing Jones's flotilla, and they believed their near approach to be wholly unknown, and not even suspected, in the city. They were soon undeceived.

At seven o'clock in the evening, the schooner *Carolina*, the only vessel in readiness at New Orleans, commanded by Captain Henley, dropped down the river, and anchored off Villeré's, within musket-shot distance of the centre of the British camp. At half past seven she opened a tremendous fire from her batteries, and in the course of ten minutes killed or wounded at least a hundred men. The British extinguished their camp-fires, and poured upon the *Carolina* a shower of bullets and Congreve rockets, but with no serious effect. In less than half an hour the schooner drove the enemy from their camp, and produced great confusion among them. The American troops in the mean time, startled by the concerted signal of the *Carolina's* cannonade, were moving on, guided by Colonel De la Ronde, who was a volunteer with Beale's riflemen, and Major Villeré, who accompanied the commander-in-chief. The right, under Jackson, was composed of the

DENNIS DE LA RONDE.

The British Alarmed and Confused.

A Night Battle.

regulars, Plauché's and D'Aquin's brigades, M'Ren's artillery, and some marines, and moved down the road along the levee; while the left, under Coffee, composed of his brigade, Hinds's dragoons, and Beale's rifles, skirted the edge of a cypress swamp for the purpose of endeavoring to cut off the communications of the invaders with Lake Borgne. Such was the simple plan of the battle, on the part of the Americans, on the night of the 23d of December, 1814.

The alarm and confusion in the British camp, caused by the attack of the *Carolina*, had scarcely been checked when they were startled by the crack of musketry in the direction of their outposts. Keane now gave full credence to the tales of his prisoners about the large number of troops—"more than twelve thousand"—in New Orleans, and gave the dashing Thornton full liberty to do as he liked. Thornton at once led a detachment, composed of the Eighty-fifth and Ninety-fifth Regiments, to the support of the pickets, and directed the Fourth, five hundred strong, to take post on Villeré's Canal, near head-quarters, to keep open the communication with Lake Borgne. Thornton and his detachment were soon met by a resolute column under the immediate command of Jackson. He had made the Canal Rodriguez, which connected the Mississippi with the cypress swamp, his base of operations. He advanced with about fifteen hundred men and two pieces of artillery, perfectly covered with the gloom of night. Lieutenant McClelland, at the head of a company of the Seventh, filing through De la Ronde's gate, advanced to the boundary of Lacoste's plantation, where, under the direction of Colonel Piatt, the quartermaster general, he encountered and attacked the British pickets, who were posted in a ditch behind a fence, and drove them back. These were speedily re-enforced, and a brisk engagement ensued, in which Piatt received a wound, and McClelland and a sergeant were killed.

In the mean time the artillerists advanced up the Levee Road with the marines, when the British made a desperate attempt to seize their guns. There was a fierce struggle. Jackson saw it, and hastening to the spot, in the midst of a shower of bullets, he shouted, "Save the guns, my boys, at any sacrifice!" They did so, when the Seventh Regiment, commanded by Major Pierre, advanced, and, being joined by the Forty-fourth, the engagement became general between them and Thornton's detachment. Plauché and D'Aquin soon joined their comrades, and the tide of success turned in favor of the Americans. The British, hard pressed, fell sullenly back to their original line unmolested, for the prudent Ross, commanding the regulars, would not allow a pursuit. Had it been permitted, it would have resulted, as was afterward discovered, most disastrously for the invaders. This conflict occurred not far from De la Ronde's garden.

General Coffee in the mean time had advanced to the back of De la Ronde's plantation, where his riflemen were dismounted, and their horses placed in charge of a hundred men at the canal that separated De la Ronde's from Lacoste's farm, the latter now the property of D. and E. Villeré. The ground was too much cut up with ditches to allow successful cavalry movements, and Major Hinds and his men remained at one of them, near the middle of Lacoste's. Coffee's division extended its front as much as possible, and moved in silence, while Beale and his riflemen stole around the enemy's extreme left, on Villeré's plantation, and by a sudden movement penetrated almost to the very heart of the British camp, killing several, and

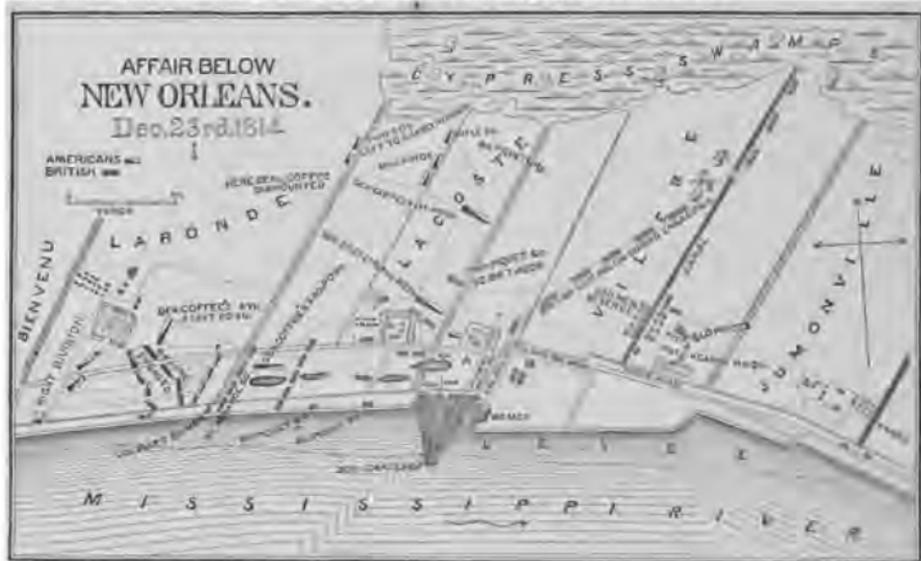

LACOSTE'S MANSION.

The British fall back to shelter.

Sir De Lacy Evans.

making others prisoners. By a blunder, made in consequence of the darkness, a number of Beale's men were captured. In the mean time, Thornton, with the Eighty-fifth, fell heavily on Coffee's line, and for some time a battle raged fiercely, not in regular order, but in detachments, squads, and often duels. In the darkness friends fought each other, supposing each to be a foe. The Tennesseans and British riflemen were almost equally expert as sharpshooters; but the short weapons of the English were not so efficient as the long ones of the American backwoodsmen. The Tennesseans also used long knives and tomahawks vigorously. At last the British fell back, and took shelter behind the levee, more willing to incur the danger of shots from the *Carolina* than bullets from the rifles of the Tennesseans.¹

¹ The loss of the Americans in the affair on the night of the 23d of December was twenty-four killed, one hundred and fifteen wounded, and seventy-four prisoners; in all, two hundred and thirteen. Among the killed was the brave Lieutenant Colonel Lauderdale, of Coffee's brigade of mounted riflemen. The British loss was about four hundred men. According to the most careful estimates, the number of Americans engaged in the battle was about eighteen hundred, while that of the invaders, including the re-enforcements that came during the engagement, was about twenty-five hundred. The *Carolina* gave the Americans a great advantage, and made the effective power about equal to that of the foe.

One of the distinguished British officers wounded in this engagement, and who yet (1867) survives, was Sir De Lacy Evans. He was also wounded in the battle nearer New Orleans, which occurred a little more than a fortnight later. Sir De Lacy was born in Ireland in 1787. He entered the British Army in the East Indies as ensign, and served there from 1807 to 1810 in the war against Ameer Khan. He also served with distinction in Spain. In 1814 he became brevet lieutenant colonel of a West India regiment, and was with General Ross in the battle of Bladensburg, where he had two horses shot under him. He led the column into Washington City. He was active also in the movement on Baltimore. After his second wound before New Orleans he was sent home, and was afterward with Wellington at Quatre Bras. When the Crimean War broke out he was appointed lieutenant general, and commanded the second division of the British Army. He greatly distinguished himself in that war. For his services there he received the Grand Cross of the Bath, and Louis Napoleon made him grand officer of the Legion of Honor.

SIR DE LACY EVANS.

The Americans Withdraw.

A Skirmish on Jumonville's Plantation.

A Memento of the Battle.

During the engagement the second division of the British arrived from Bayou Bienvenu, and were in the thickest of the fight with Coffee for a while; but the fear of being cut off from communication with the lake and their ships made the enemy too cautious and timid to achieve what their superior numbers qualified them to perform. They kept within the lines of their camp, and by concentration presented a strong front. Jackson perceived that in the darkness, intensified by a fog that suddenly appeared, he could not follow up his victory with safety, so he led the right division back to the main entrance to De la Ronde's plantation, while Coffee encamped near De la Ronde's garden.¹

It was about half past nine when the conflict ceased, and at half past eleven, when all was becoming quiet in the respective camps, musket-firing was heard in the direction of Jumonville's plantation, below Villeré's. It was caused by the advance of some Louisiana drafted militia, stationed at a sharp bend of the Mississippi called the English Turn, under General David Morgan, who had insisted upon being led against the enemy when they heard the guns of the *Carolina* early in the evening. They met some British pickets at Jumonville's, exchanged shots with them, encamped there for the night, and at dawn returned to their post at the English Turn.

¹ In the room of the Historical Society of Tennessee, in the Capitol at Nashville, may be seen an interesting memento of the battle on the night of the 23d of December, 1814. It is a tattered flag that was borne through that battle by a company from Shelbyville, Tennessee, commanded by Captain James Moore. It was presented to that company by the women of Bedford County. It is of silk, of the pattern of the national flag, on which was painted a gray eagle bearing a national shield, and a ribbon inscribed LIBERTY AND INDEPENDENCE. Its appearance when the writer made a sketch of it in the spring of 1861 is indicated in the picture below.

CHAPTER XLIII.

"America's glory, which dazzled the world
When the toils of our sires had achieved independence,
Was brightened when Jackson her banners unfurled
To protect the dear boon for their grateful descendants—
When the conquerors of Spain
Crossed the bolisterons male,
Boldly threat'ning to rivet our fetters again;
But a happy new year for Columbia begun
When our Jackson secured what our Washington won."

SAMUEL WOODWORTH.

"White-winged Peace, the dove from heaven's portal,
Brought with its olive-branch a song immortal,
That filled all hearts with melody supernal,
While yet was heard the battle din infernal."

PROMPTNESS and vigor marked the whole conduct of General Jackson at the critical moment we are considering. By his advance to meet the invaders he had saved New Orleans from capture, and Louisiana and the Mississippi Valley from conquest. The whole country blessed him for the act. But his full task was not accomplished, and he knew it. A host of veteran soldiers, fresh from the battle-fields of Continental Europe, were before him, and they were not likely to relinquish the footing they

had gained on American soil without a desperate struggle, so he' prepared for it. Leaving the regulars and some dragoons at De la Ronde's to watch the enemy, he fell back with the remainder of his army to Rodriguez's Canal, and set his soldiers to work casting up intrenchments along its line from the river to the cypress swamp. All day they plied the implements of labor with the greatest vigor. At sunset a breast-

DE LA RONDE'S MANSION.¹

work three feet in height appeared along the entire line of Jackson's army; and the soldiers spent that Christmas eve in much hilarity, for the events of the previous evening had given them the confidence of veterans. In the mean time, Latour, the chief engineer, had cut the levee in front of Chalmette's plantation, so as to flood the plain between the two armies, and two 6-pounders were placed in battery at the

¹ This is from a sketch made by the author in April, 1861.

Effect of cutting the Levee.	A gloomy Day.	Arrival of General Pakenham.	Destruction of the <i>Carolina</i> .
------------------------------	---------------	------------------------------	--------------------------------------

levee to command the road. The river was so low that the overflow was of little account. Behind these intrenchments, of which each worker was proud, Jackson's little army spent the Christmas day of 1814 in preparations for a determined defense of New Orleans and their common country.¹ On the same day General Morgan received orders to evacuate the post at English Turn, place his cannon and a hundred men in Fort St. Leon, and take position with the remainder on Flood's plantation, opposite Jackson's camp, on the right bank of the Mississippi. The cutting of the levee at Chalmette's and Jumonville's helped the enemy more than it did the Americans, for it caused the almost dry canals and bayous to be filled with sufficient water to allow the British to bring up their heavy artillery. Had the Mississippi been full, the invaders would have been placed on an island.

That Christmas day dawned gloomily for the invaders. The events of the 23d^d had greatly depressed their spirits, and the soldiers had lost confidence in Keane, their commander. The sky was clouded, the ground was wet, and the atmosphere was chilly, and shadowing disappointment was seen in every face. The gloom was suddenly dispelled by an event which gave great joy to the whole army. It was the arrival at camp on that gloomy morning of Lieutenant General Sir Edward Pakenham, the "Hero of Salamanca," then only thirty-eight years of age, who came to assume the chief command of the invading army. He was a true soldier and an honorable man; and the charge (which might be justly brought against some of the subordinate commanders in that army) that he offered his soldiers, as a reward for their services, in the event of their capturing New Orleans, "the beauty and booty" of the city, is doubtless wholly untrue, for his character was the very opposite of the infamous Cockburn's. There is proof on record that some of the officers made calculations of personal profit from the spoils that New Orleans would afford. Pakenham came fresh from Europe, with the prestige of eminent success as a commander, and his advent at Villere's mansion² was hailed with delight by officers and soldiers. He, too, was delighted when he perused the list of the regiments which he was to command, for those troops, excepting the Ninety-third and the colored regiments, had fought all through the war on the Spanish Peninsula.

While Jackson was intrenching, the British were not idle. They were employed, day and night, in preparing a heavy battery that should command the *Carolina*. It was completed on the morning of the 27th, and at seven o'clock a heavy fire was opened from it upon the little schooner from several twelve and eighteen pounders, and a howitzer. They hurled hot shot, which fired the *Carolina*, when her crew abandoned her, and she blew up with a tremendous explosion. The schooner *Louisiana*, commanded by Lieutenant Thompson, had come down to aid her, and was in great peril. She was the only armed vessel in the river remaining to the Americans. By great exertions she was towed beyond the sphere of danger, and was saved to play a gallant part in events the following day. She was on the opposite side of the river, anchored nearly abreast of the American camp.

The destruction of the *Carolina* gave fresh confidence to the invaders, and Pakenham issued orders for his whole army, then eight thousand strong, to move forward and carry the American intrenchments by storm. He had arranged that army into two columns. One was commanded by General Keane, and the other by General Gibbs, a good and experienced soldier, who came with Pakenham as his second in command. Toward evening the entire force moved forward, driving in the American pickets and outposts, and at twilight they halted on the plantations of Bienvenu and Chalmette, within a few hundred yards of the American lines. There a part sought repose, while others commenced the construction of batteries near the river. Sleep was denied them, for all night long Hinds's troopers and other active Americans an-

¹ The common impression that Jackson's breastworks were constructed chiefly of cotton bales is an erroneous one. A few were used at the end next the river, but they were not useful, and were rejected.

Seat of War in Louisiana and Florida.

noyed their flanks and rear with quick, sharp attacks, which the British denounced as "barbarian warfare."

Jackson prepared to receive the British.

They advance to an Attack.

A severe Battle.

Jackson, in the mean time, had been preparing to receive them. He was aware of the arrival of Pakenham, and expected vigorous warfare from him. His head-quarters were at the spacious chateau of M. Macarté, a wealthy Creole, and from its wide gallery and a dormer window, seen in the accompanying picture, aided by a telescope, he had a full view of the whole field of operations. From that chateau, which is yet standing, he sent forth his orders. They were numerous and prompt; for that night

MACARTÉ'S, JACKSON'S HEAD-QUARTERS.¹

of the 27th of December, when a flushed foe in his immediate front was ready to pounce with tiger-like fierceness upon him at dawn, was an exceedingly busy one for the commander-in-chief. He had caused Chalmette's buildings to be blown up when the enemy advanced, that the sweep of his artillery might not be obstructed, and he had called to the line some Louisiana militia from the rear. He also planted heavy guns; and by the time that the couchant foe was ready for his murderous leap, Jackson had four thousand men and twenty pieces of artillery to receive him, while the *Louisiana* was in position to use her cannon with signal effect in co-operation with the great guns on land.

The 28th dawned brightly, and as soon as the light fog of early morning had passed away a battle began. The enemy approached in two columns. Gibbs led the right, which kept near the great swamp, throwing out a skirmish line to meet those of the left column, commanded by Keane, who kept close to the river, with artillery in his front. There was also a party of skirmishers and light infantry detailed from Gibbs's command, under Colonel Robert Rennie, a very active officer, who was ordered to turn the American left flank and gain the rear of their camp. Pakenham and his staff rode nearly in the centre of the line. At this moment Jackson saw, with great satisfaction, a band of rough-looking armed men coming down the road from the direction of the city. They were Baratarians, under You and Beluche, who had run all the way from Fort St. John. They were immediately placed in charge of one of the 24-pounders, and performed excellent service. They were followed by the escaped crew of the *Carolina*, under Lientenants Norris and Crawley, who were placed in the line as managers of a howitzer on the right.

The British under Keane advanced in solid column, in the face of a galling fire of musketry, when they were suddenly checked by the opening of some of Jackson's heavy guns and the batteries of the *Louisiana*, which swept their line obliquely with terrible effect. More than eight hundred shots were hurled from her guns with deadly power. One of them killed and wounded fifteen men. At the same time the British rocketeers were busy, but their missiles did very little damage, and the Americans soon became too familiar with their harmless noise to be much affected by them.

For a short time Keane's men endured the terrible storm that was thinning their

The American Lines of Defense.

ranks, when the maintenance of their position became mere fool-hardiness, and they were ordered to seek shelter in the little canals. Away they ran, pell-mell, to these places of refuge, and in mud and water almost waist-deep they "leaned forward," as one of their companions wrote, "concealing themselves in the rushes which grew on the banks of the canal." It was a humiliating position for "Wellington's veterans" in the face of a few rough backwoodsmen, as they regarded Jackson's troops. Their batteries were half destroyed, and were abandoned, and the shattered column, thoroughly repulsed, fell back to a shelter behind the ruins of Chalmette's buildings and the perfect ones of Bienvenu.

Gibbs in the mean time was actively engaged on the British right. The gallant Rennie dashed into the edge of the swamp to flank the American left, and, driving in the pickets, approached within a hundred yards of the line behind which lay Carroll and his Tennesseans. The movement was observed by Carroll, who sent Colonel Henderson, with two hundred Tennesseans, to gain Rennie's rear and cut him off from the main body. Advancing too far, Henderson encountered a large British force, and he and five of his men were killed, and several were wounded. The remainder retraced their steps. Rennie was then pressing Carroll's left very severely, when Gibbs, observing the fierceness of the fight on the part of Keane's column, ordered the dashing colonel to fall back on the main line. Rennie reluctantly obeyed, and was compelled to be an idle spectator of Keane's disaster. At length Pakenham ordered a general retrograde movement, and he retired to his head-quarters at Villeré's deeply mortified by the failure of his plans, of whose success he had not allowed himself to doubt. In this repulse the *Louisiana*, which was stationed near the right bank of the Mississippi, played the most efficient part, and lost but one man killed. The loss of the Americans was nine killed and eight wounded. The British loss was about one hundred and fifty.

Pakenham called a council of war, when it was resolved to bring forward heavy siege-guns from the navy before making another serious attempt to carry Jackson's lines. The British established their hospital on Jumonville's plantation, next below Villeré's, and prepared for heavy work. The experience of the 28th had given Pakenham a test of the spirit of his opposers, and he was convinced that the task before him was not only difficult, but dangerous, and that the very salvation of his army depended upon cautious movements, courage, and perseverance.

Jackson was busy at the same time strengthening his position at Rodriguez's Canal, over which not a single British soldier had passed except as a prisoner. He placed two 12-pounders on his extreme left, near the swamp, in charge of General Garrigue Flauzac, a veteran French soldier who had volunteered; and also a six and an eighteen pounder under Colonel Perry. His line of intrenchments was extended into the swamp, so as to prevent a flank movement. He ordered a line of similar structure to be established on the opposite side of the Mississippi; and Commander Patterson, pleased with the effects of the guns of the *Louisiana* from the same side, established a battery behind the levee on Jourdan's plantation, which he armed with heavy guns from the schooner, and manned with sailors enlisted or pressed into the service in New Orleans. It commanded the front of Jackson's lines, and soon compelled the British to abandon Chalmette's plantation and fall back to the line between Bienvenu's and De la Ronde's. A brick-kiln on the bank opposite New Orleans was converted into a square battery, which was armed with two heavy guns that commanded the city and the river road, and placed in charge of Captain Henley, of the *Carolina*. At Jackson's head-quarters, at Macarté's, was a company of young men from the best families in the city, under Captain Ogden, who constituted his body-guard, and were subservient to his immediate orders alone. These were posted in Macarté's garden. There was incessant activity every where among all his troops, for his own spirit was infused into them. The Tennessee riflemen, in particular, de-

Redoubts secretly constructed by the British. A heavy fire from them. Jackson driven from his Head-quarters.

CHALMETTE'S PLANTATION.¹

lighted in going on "hunts," as they called them—that is to say, expeditions alone, to pick off sentinels and annoy the enemy. This was carried to such an extent on Jackson's extreme left that the British dared not post sentinels very near the swamp. They contented themselves with throwing up a strong redoubt in that direction, which Captain You and Lieutenant Crawley continually battered with heavy shot from their cannon. The enemy persevered, and at the close of the month had several great guns mounted on the redoubt.

On the 31st the guns of the new redoubt opened vigorously on Jackson's left; and that night the whole British army moved rapidly forward, took position within a few hundred yards of the American lines, and in the gloom commenced vigorous work with pickaxe and spade. They had brought up heavy siege-guns from the lake, and all night long that army labored in the construction of redoubts for them, under the superintendence of Colonel Sir John Burgoyne, with the intention of making an immediate effort to break the American line. Before dawn they had completed three solid demi-lunettes, or half-moon batteries, right, centre, and left, six hundred yards from the American lines, at nearly equal distances apart. They were constructed of earth, hogsheads of sugar, and every thing that might produce resistance; and upon them were placed thirty pieces of heavy ordnance, manned by picked gunners of the fleet, who had served under Nelson, Collingwood, and St. Vincent.

These works were hidden by a heavy fog on the morning of the 1st of January, which hung thickly over the belligerent armies until after eight o'clock. When it was lifted by a gentle breeze the British opened a brisk fire, not doubting that in a few minutes the contemptible intrenchments of the Americans would be scattered to the winds, and that the army, placed in battle order for the purpose, would find it an easy matter to rush forward and take them. Every moment their cannonade and bombardment became heavier, and the rocketeers sent an incessant shower of their fiery missiles into the American lines. Jackson's head-quarters at Macarté's was a special target. In the course of ten minutes more than a hundred balls, shells, and rockets struck the building, and compelled the commander-in-chief and his staff to evacuate it. The marks of that furious assault may be seen in all parts of the house to this day.²

• 1867.

¹ This is from a sketch made by the author in April, 1860, from the foot of the shaft of the unfinished monument, near Jackson's head-quarters and line of intrenchments. This shows the principal field on which the battles in December and January, 1815, were fought. The plain is a dead level. In the distance is seen the line of the swamp which flanked both armies.

The British again vanquished and repulsed.

New Arrangements for Attack.

The British re-enforced.

opposite side; and in them were kept in readiness red-hot shot for the destruction of the *Louisiana*, if she should come within range of the guns. Pakenham also sent a detachment of infantry to attempt the turning of the American left, in the swamp; but they were driven back in terror by Coffee's Tennesseans; so only the battle of the batteries went on.

Toward noon the fire of the British visibly slackened, while that of the Americans was unceasing. The demi-lunes of the foe were crushed and broken. The sugar hogsheads had been converted into splinters, and their contents, mingling with the moist earth, soon lost their volume. The guns not dismantled were careened, and were worked with great difficulty; and by the time their voices ceased altogether the batteries on the Levee were nearly demolished. The invaders abandoned their works at meridian, and fled in inglorious haste, helter-skelter, to the ditches, in search of safety; and, under cover of the ensuing night, they crawled sullenly back to their camp, dragging with them over the spongy ground a part of their heavy cannon, and leaving five of them a spoil for the Americans. Their disappointment and chagrin were intense, and it was equally shared by officers and men. Their New-Year's Day was a far gloomier one than that of Christmas. They had been without food or sleep for nearly sixty hours. They all cast themselves down on the damp ground, too wearied for thought, and their troubles were soon ended for the time by deep slumber. Pakenham was in his old quarters at Villeré's, which he had left in the morning with the confident expectation of sleeping in New Orleans that night as a conqueror.¹ In the American camp there was great joy that night. It was intensified in the morning by the arrival of Brigadier General John Adair with intelligence of the near approach of more than two thousand drafted militia from Kentucky, under Major General John Thomas. They arrived in the city on the 4th of January, and seven hundred of them were sent to the front under Adair.

Pakenham was disheartened, but he by no means despaired of success. He conceived the bold and hazardous plan of carrying Jackson's lines on both sides of the river by storm. Those on the right bank had been strengthened, but were feebly manned, and were under the chief command of General Morgan. Pakenham resolved to send over fifteen hundred infantry, with some artillery, and, under the cover of night, attack Morgan, carry the works, occupy them, and, from batteries there, enfilade Jackson's line, while the main army should be engaged in storming it. The transportation of these men to the other side of the river was confided to Admiral Cochrane, who, in opposition to the opinions and wishes of the army officers, set the wearied soldiers and sailors to work widening, and deepening, and prolonging to the Mississippi, Villeré's Canal, for the purpose of bringing over boats from the Bayou Bienvenu, instead of dragging them on rollers as they had heavier cannon. The labor was completed on the 7th, when the army was in fine spirits because of the arrival, the day before, of a considerable body of re-enforcements under Major General John Lambert, a young officer of Wellington's army, who had sailed from England toward the close of October. Pakenham's own regiment (Seventh Fusileers) was among them; and the army that confronted Jackson now consisted of ten thousand of the finest soldiers in the world. These were divided into three brigades, and placed under the respective commands of Generals Lambert, Gibbs, and Keane.

Pakenham's plan of operations for the new attack was simple. Colonel Thornton was to cross the Mississippi on the night of the 7th with the Eighty-fifth and one

¹ The forlorn condition of these troops, as a body, was such that Jackson was at a loss to determine whether their presence should be considered fortunate or unfortunate for the cause. They had come with the erroneous belief that an ample supply of arms and clothing would be furnished them at New Orleans, and a large number of them were sadly deficient in these. Of the seven hundred sent to the front, only five hundred had weapons of any kind. The commiseration of the citizens was excited, and by an appropriation by the Legislature and the liberal gifts of the citizens the sum of sixteen thousand dollars was speedily raised, with which goods were purchased and placed in the willing hands of the women of New Orleans. Within a week these were converted by them into blankets, garments, and bedding. The men constituted excellent raw material for soldiers, and they were very soon prepared for efficient service.

The British Plan of Attack.

The American Line of Intrenchments.

Disposition of Forces on it.

West India regiment, marines and sailors, and a corps of rocketeers, and fall upon the Americans before the dawn. The sound of his guns was to be the signal for General Gibbs, with the Forty-fourth, Twenty-first, and Fourth regiments, to storm the American left; while General Keane, with the Ninety-third, Ninety-fifth, and two light companies of the Seventh and Forty-third, with some West India troops, should threaten the American right sufficient to draw their fire, and then rush upon them with the bayonet. Meanwhile the two British batteries near the Levee, which the Americans destroyed on the 1st, were to be rebuilt, well mounted, and employed in assailing the American right during Keane's operations. Keane's advance corps were furnished with fascines to fill the ditches, and scaling ladders to mount the embankments. Such was the substance of Pakenham's General Order issued on the 7th of January, 1815.

Jackson penetrated Pakenham's design on the 8th, and prepared to meet and frustrate it. His line of defense, extending, as we have observed, from the Mississippi to an impassable cypress swamp, a mile and a half in length, along the line of the half-choked Rodriguez's Canal, was very irregular. In some places it was thin, in others thick; in some places the banks were high, in others very low. They had been cast up, not by the soldiery alone, nor by the slaves, but by the hands of civilians

REMAINS OF RODRIGUEZ'S CANAL.¹

from the city, including merchants and their clerks, lawyers and physicians and their students, and many young men who never before had turned a spadeful of earth. Along this line artillery was judiciously placed. On the edge of the river a redoubt was thrown up and mounted with cannon, so as to enfilade the ditch in front of the American lines. Besides this there were eight batteries, placed at proper distances from each other, composed of thirteen guns carrying from six to thirty-two pound balls, a howitzer, and a carronade. Across the river was Patterson's marine battery for auxiliary service in the defense of this line, mounting nine guns; and the *Louisiana* was prepared to perform a part, if possible, in the drama about to open.

Jackson's infantry were disposed as follows: Lieutenant Ross, with a company of Pierre's Seventh Regiment, guarded the redoubt on the extreme right, in which tents were pitched. Between Humphrey's battery and the river, on the right, Beale's New Orleans riflemen were stationed. From their left the Seventh Regiment extended so as to cover another battery, and connected with a part of Plauché's² battalion and the colored corps under Colonel Lacoste, which filled the interval between

¹ This is a view of the choked canal at the wood that skirts the levee, sketched by the author in April, 1861. There is a lane, near the end of which stands the unfinished monument to be erected in commemoration of the battles here fought and the victory won by the Americans. The partly-finished shaft is seen on the left. It is made entirely of marble from Westchester County, New York, and is to be one hundred and fifty feet in height. It is erected by the State of Louisiana.

² Jean B. Plauché was a native of New Orleans, and was born there when it was a Spanish colony. He was a French Creole, and through life bore the character of one of the most esteemed citizens of New Orleans. After the war he re-

Batteries Nos. 3 and 4 (see map on page 1040), the guns of the latter being covered by D'Aquin's free men of color. Next to D'Aquin was the Forty-fourth Regiment, which extended to the rear of Battery No. 5. The remainder of the line (full two thirds of its entire length) was covered by the commands of Carroll¹ and Coffee.² The former had been re-enforced that day (7th) by a thousand Kentuckians under General Adair, and with him, on the right of Battery No. 7, were fifty marines under Lieutenant Bellevue. Coffee, with five hundred men, held the extreme left of the line, on the edge of the swamp, where his men were compelled to stand in the water, and to sleep on floating logs which they lashed to the trees. Captain Ogden, with cavalry (Jackson's body-guard), was at head-quarters, yet at Macarté's chateau; and on De Lerey's plantation, in the rear of it, Hinds was stationed with one hundred and fifty mounted men. Near Pierna's Canal a regiment of Louisiana militia, under Colonel Young, were encamped as reserves.

Jackson's whole force on the New Orleans side of the river on the 7th was about five thousand in number, and of these only two thousand two hundred were at his line. Only eight hundred of the latter were regulars, and most of them were new recruits commanded by young officers. His army was formed in two divisions, the right commanded by Colonel Ross, acting as brigadier, and the left by Generals Carroll and Coffee, the former as major general and the latter as brigadier general. A mile and a half in the rear of his main line another intrenchment had been thrown up, behind which the weaker members of his army were stationed with pickaxes and spades. This line was prepared for a rallying-point in the event of disaster following the impending conflict. Jackson also established a third line at the lower edge of the city. General Morgan, on the opposite side of the river, prepared to defend his lines with only eight hundred men, all militia, and indifferently armed. On his left were two 6-pounders, in charge of Adjutant Nixon, of the Louisiana militia, and a 12-pounder under Lieutenant Philibert, of the navy. Patterson's battery, in Morgan's

sumed his vocation as merchant. He generally declined public offices, yet he was induced to take that of Lieutenant Governor of Louisiana. He died in January, 1860, and in an elegant temple-shaped tomb in St. Louis Cemetery in New Orleans his remains rest. The annexed picture of the tomb is from a sketch made by the author in April, 1861. It is built of white marble, with black inscription tablets in front. On one of these is the following: "Général J. B. PLAUCHÉ, né à la Nouvelle Orléans le 28 Janvier, 1788, décédé le 2 Janvier, 1860. En 1814-'15 major commandant le bataillon d'Orléans. En 1850 lieutenant gouverneur de l'état de Louisiane. Homme vertueux, bon père et bon citoyen, il a bien mérité de sa patrie et legue à sa famille un nom honorable."

DOMINIQUE YOU'S TOMB.

In the same cemetery, and not far from the tomb of the Plauché family, was that of Dominique You, mentioned in these pages as a noble defender of New Orleans. On his tomb, made of brick and stuccoed, the writer found the following inscription written on a clouded marble

élab: "DOMINIQUE YOU. Intrépide guerrier sur la terre et sur l'onde, il au danc cent combats signaler sa valeur; et ce nouveau Bayard, sans reproche et sans peur, aurait pu, sans trembler, voir s'écroquer le monde."

¹ William Carroll was born in Pittsburg, Pennsylvania, in 1778. In 1813 he became inspector general of the Tennessee Militia and Volunteers under Jackson. He was commissioned a colonel, and served with distinction in the war with the Creek Indians. He left the service at the close of the war. He was Governor of Tennessee from 1821 to 1827, and from 1830 to 1835. He died on the 22d of March, 1844.

² John Coffee was a native of Nottaway County, Virginia, and entered the military service under Jackson in 1812. He was active with him in the Creek War, and in the attack on Pensacola in the autumn of 1814. He was distinguished in the battles near New Orleans. In March, 1817, he was appointed surveyor of public lands. He died near Florence, in Alabama, on the 7th of July, 1844.

PLAUCHÉ'S TOMB.

Thornton crosses the River to attack Morgan.

Advance of the British Line.

Opening of Battle.

of his first orders was for General Adair¹ to send over five hundred Kentuckians to re-enforce Morgan.

Let us observe the movements in the British camp on that memorable night.

According to the plan already mentioned, Colonel Thornton proceeded to cross the Mississippi for the purpose of attacking Morgan. He marched to the levee, at the end of the newly-cut canal in extension of Villerés's, and there waited with the greatest impatience the arrival of the boats that were to carry him and his troops over. The banks of the ditch had caved in in some places, and the falling of the water in the river had made that of the canal so shallow that the sailors were compelled to drag the boats through thick mud in many places. It was three o'clock in the morning before even a sufficient number of vessels to convey one half of the detachment had arrived. Farther delay would be fatal to the enterprise; so, with Pakenham's sanction, Thornton dismissed half of his force, embarked the remainder, and crossed the river in a flotilla commanded by Captain Roberts, of the Royal Navy. Ignorant of the fact that the Mississippi was flowing with a quiet, powerful current, at the rate of five miles an hour, and making no provisions for this obstacle to a quick and direct passage, they were landed, after great fatigue, at least a mile and a half below their intended point of debarkation. Before they had all left the boats the day dawned, and the roar of cannon was heard on the plain of Chalmette.

Pakenham and his officers had passed an almost sleepless night, and at the time when Jackson aroused his slumbering staff the divisions of Gibbs and Keane were called up, formed into line, and advanced to within four hundred and fifty yards of the American intrenchments. Lambert's division was left behind as a reserve. There stood the British soldiers in the darkness and the chilly morning air, enveloped in a thick fog, and anxiously listening for the booming of Thornton's guns in his attack on Morgan. He was yet battling with the current of the Mississippi. Tediouly the minutes and the hours passed, and yet that signal-gun remained silent.

Day dawned and the mist began to disperse, and as the dull red line of the British host was dimly seen in the early morning light through the veil of moisture, Lieutenant Spotts, of Battery No. 7, opened one of his heavy guns upon it. It was the signal for battle. As the fog rolled away the British line was seen stretching two thirds across the plain of Chalmette. From its extreme left and right rockets shot high in air, and, like a dissolving view, that red line almost disappeared as it was broken into columns by companies.

Gibbs now advanced obliquely toward the wooded swamp, with the Forty-fourth in front, followed by the Twenty-first and Fourth, terribly pelted by the storm that came from Batteries Nos. 6, 7, and 8, and vainly sought shelter behind a bulging projection of the swamp into the plain. These batteries poured round and grape shot incessantly into Gibbs's line, making lanes through it, and producing some confusion. This was heightened by the fact that the Forty-fourth, with whom had been intrusted fascines and scaling-ladders, had advanced without them. To wait for these to be brought up was impossible in the focus of that cannonade. So Gibbs ordered them forward, the Twenty-first and Fourth in solid and compact column, covered in front by blazing rockets and cheered by their own loud huzzas. Whole platoons were prostrated, when their places were instantly filled by others, and the column pressed on, without pause or recoil, toward the batteries on the left, and the long and weaker line covered by the Tennesseans and Kentuckians.

By this time all the American batteries, including Patterson's on the right bank

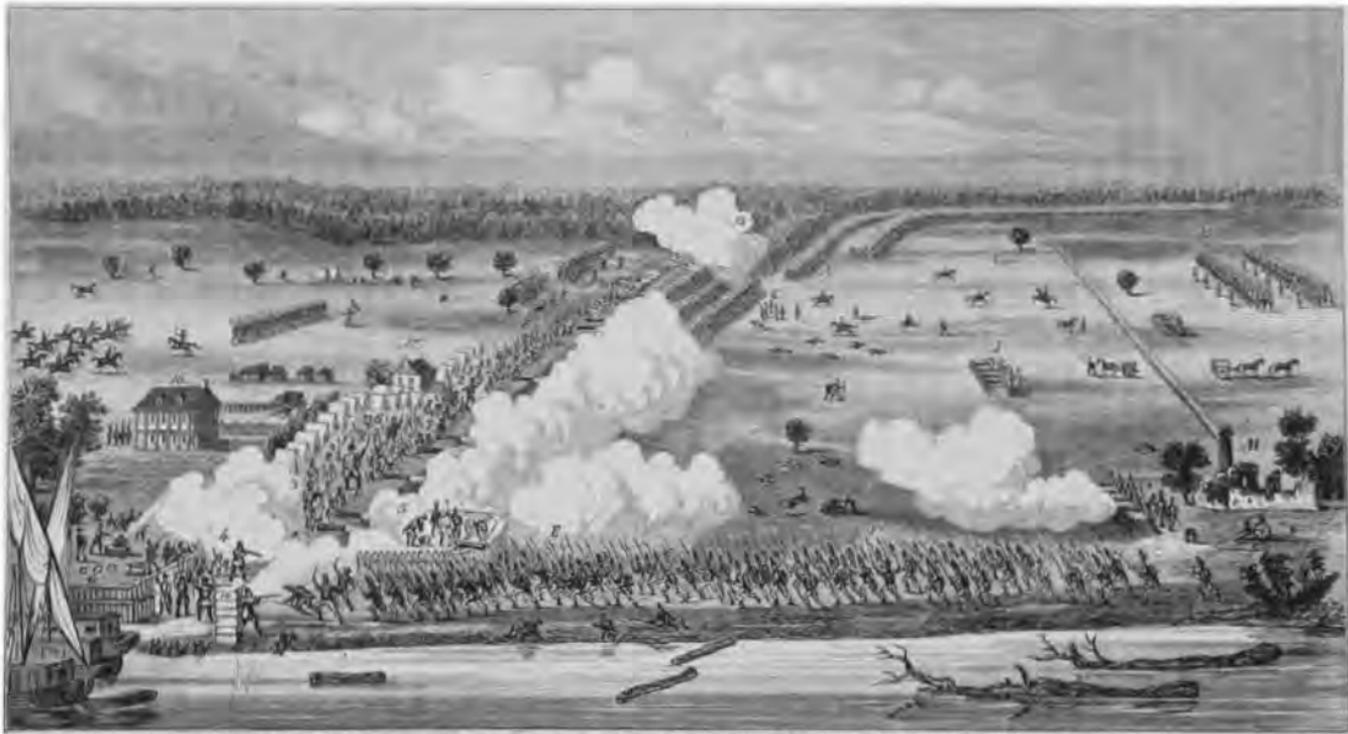

¹ John Adair was born in South Carolina in 1757, and entered the military service under General St. Clair. He served under Wilkinson in the Northwest, and was lieutenant colonel in Scott's division in 1793. He was for two years United States Senator from Kentucky, where he had made his home. He was volunteer aid to Governor Shelby in the battle of the Thames, and in 1814 was brigadier general of Kentucky militia. He left the service at the close of the war. He was Governor of Kentucky from 1820 to 1824, and representative in Congress from 1831 to 1835. He died at Harrodsburg, Kentucky, on the 19th of May, 1840.

of the river, were in full play. Yet steadily on marched Wellington's veterans, stepping firmly over the dead bodies of their slain comrades until they had reached a point within two hundred yards of the American line, behind which, concealed from the view of the invaders, lay the Tennesseans and Kentuckians four ranks deep. Suddenly the clear voice of General Carroll rang out, *Fire!* His Tennesseans arose from cover, and, each man taking sure aim, delivered a most destructive volley on the foe, their bullets cutting down scores of the gallant British soldiery. The storm ceased not for a moment; for when the Tennesseans had fired they fell back, and the Kentuckians took their places, and so the four ranks, one after another, participated in the conflict. At the same time round, grape, and chain shot went crashing through the ranks of the British, making awful gaps, and appalling the stoutest hearts. The line began to waver, and would have broken but for the cool courage and untiring energy of the officers, and the inspiring cry, "Here comes the Forty-fourth with the fascines and ladders!"

A detachment of the Forty-fourth had indeed come with scaling implements, and Pakenham at their head, who encouraged them by stirring words and bold deeds for a few minutes, when his bridle-arm was made powerless by a bullet, and his horse was shot under him. He at once mounted the black Creole pony of his favorite aid, the now (1867) venerable Sir Duncan M'Dougall, of London.¹ Other officers fell, until there were not enough to command, and the column began to break up into detachments, a greater part of them falling back to the shelter of the projecting swamp. There they were rallied, and, throwing away their knapsacks, they rushed forward to scale and carry the works in front of Carroll and his sharpshooters. At the same time, Keane, contrary to instructions, but with zealous concern for the cause, wheeled his column into line and led a portion of it to the assistance of the right wing. They were terribly scourged by the enfilading fire of the American batteries as they strode across the plain. Among them was the Ninety-third Regiment, composed of nine hundred sinewy Highlanders, who had won victories on many a field in Continental Europe, and were now unmoved by the storm that poured in such fury upon them. Their presence and example encouraged the broken column of the right, which, with these Highlanders, rushed into the very heart of the tempest from Carroll's rifles, having Gibbs on their right and Pakenham on their left. In a few minutes the right arm of the latter was disabled by a bullet, and as he was riding to the rear on the led pony, shouting huzzas to the troops, there came a terrible crashing of round and grape shot through the ranks, that scattered dead men all around him. One of the balls passed through the general's thigh, killed his horse, and brought both to the ground. Pakenham was caught in the arms of his faithful aid, Captain M'Dougall, who had performed a similar service for General Ross when he fell, mortally wounded, near Baltimore a few months before.² The commander was conveyed to the rear in a dying condition, and placed under a venerable live-oak tree, which disappeared only a few years ago. There he soon expired in the arms of M'Dougall.

General Gibbs was also mortally wounded, and died the next day; and Keane was so severely shot through the neck that he was compelled to leave the field. The command was then assumed by Major Wilkinson, the officer of highest grade left in the saddle. Under his leadership the broken battalions endeavored to scale the breastworks. They were repulsed, and Wilkinson fell on the parapet mortally wounded. His discomfited men fell back, and all of the assailants withdrew in wild confusion. Of the gallant nine hundred Highlanders, with twenty-five officers, of the Ninety-third Regiment who went into the fight, only one hundred and thirty men and nine officers could be mustered at its close. The Twenty-first Regiment lost five hundred men, and every company came out of the terrible conflict a mere skeleton in numbers.

¹ See page 952.² See page 951.

BIRD'S-EYE VIEW OF THE BATTLE NEAR NEW ORLEANS, JANUARY 8, 1815.—FROM A SKETCH BY LATOUR, JACKSON'S CHIEF ENGINEER.

The author of this volume is indebted to the late General Palfrey, of New Orleans, who was a participant in the battle, for the privilege of copying Major Latour's interesting drawing, above given. The following explanations, by means of the reference figures, were made in the drawing by Major Latour: *American Army*—1. General Jackson and his staff; 2. Major Pinchebe; 3. Captain Humphrey; 4. Beale's riflemen and a company of the Seventh Regiment; 5. Redoubt on the bank of the river; 6. Captains Dominique You and Beluche, of Major La Cote's bat-

talion; 7. Lieutenants Crawley and Ross; 8. Colonel Perry; 9. General Garrigue; 10. Lieutenant Spotts; 11, 12. Divisions of Generals Carroll and Adair, and, farther to the left, General Coffee's; 13. Cavalry and dragoons; 14, 15. Line of intrenchments; 16. Masarie's, Jackson's headquarters; 17. Rodriguez's house. *British Army*—A, B. The British Army in two columns; C. The right column making the principal attack, under the command of Pakenham; E, F. Left column, commanded by Colonel Renais; I. Battery; M. Ruins of Chalmette's buildings.

While this sanguinary work was in progress on the British right, a more successful movement, for a time, was made by them on their left. Keane's whole division moved when he led the Highlanders to the right. Nearly a thousand men, under the active

Colonel Rennie, composed of the Ninety-fifth Rifles, companies of the Seventh, Ninety-third, and Forty-third Infantry, and some West India troops, had pushed rapidly forward near the river in two columns, one on the road, and the other nearer the water, under shelter of the levee, and, driving in the American pickets, succeeded in taking possession of the unfinished redoubt on Jackson's extreme right. They drove out the Americans, but they did not hold it long. The invaders on the road were terribly smitten by Humphrey's batteries and the Seventh Regiment, and were kept in check. At the same time Rennie led the column along the water's edge, where they were greatly annoyed by Patterson's battery, and, with several other officers, scaled the parapet of the American redoubt. The New Orleans Rifles, under Beale, now poured upon these officers and the inmates of the redoubt such a terrible fire that nearly every man was killed or mortally wounded. Rennie had just exclaimed "Hurrah, boys, the day is ours!" when he fell to rise no more.

This attacking column also fell back in great disorder under cover of the levee, and, like those on the British right, sought shelter in the plantation ditches from the terrible storm that came from Jackson's lines. General Lambert, with his reserves, had come forward on hearing of the disasters to Pakenham, Gibbs, and Keane; but he was in time only to cover the retreat of the battered and flying columns, and not

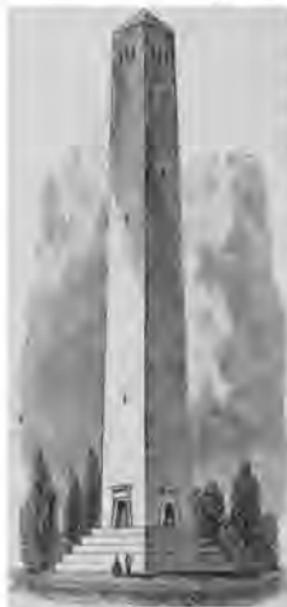

to retrieve the fortunes of the day. The fire of the musketry had ceased by half after eight in the morning, but the artillery kept up their fire until about two o'clock in the afternoon. It is worthy of note that, from the flight of the first signal rocket of the British to the close of the contest, the New Orleans Band (stationed near the centre of the line, and not far from the spot where the monument now stands, and where the American standard was kept flying during the struggle), played incessantly, cheering the troops with national and military airs. The British, on the contrary, had no other musical instrument than a bugle, and as their columns advanced no drum was heard in their lines, nor even the stirring tones of the trumpet. From their first landing at the Fisherman's Village, the experience of that army had been almost unbroken dreariness.¹

Let us now turn our attention to the movements on the right bank of the Mississippi.

We left Colonel Thornton and his men just debarked, after battling with the current of the Mississippi for some time. Morgan had sent forward his advance of less than three hundred men (one third of whom were Arnaud's Louisiana militia) under Major Tessier, and the remainder, fatigued and poorly-armed Kentuckians under Colonel Davis, chosen from those sent over on the 7th by General Adair, were directed to take position on Mahew's Canal, about a mile in advance of Morgan's line, near which it was supposed the British would land. The line which this small force was expected to hold extended from the river to the swamp, a distance of a mile, and required at least a thousand men and several pieces of artillery to give it respectable strength. Davis's troops were placed on the left, resting on the levee, and Tessier's were on their right, extending

¹ Latour says it was reported that there were divisions in the councils of the British officers concerning the point of attack, and that Admiral Cochrane, with a feeling of contempt for the American militia, declared he would undertake to storm Jackson's lines with two thousand sailors, armed only with swords and pistols. This confidence in the invincibility of the British on this occasion contributed largely to their disaster.

² This monument, between the site of Jackson's lines and his head-quarters (Macartie's), was unfinished when the writer visited the spot in April, 1861. Work upon it had then ceased. The stones had been laid to the height of about seventy feet. See note 1, page 1042.

MONUMENT.²

Battle of New Orleans.

Its Results.

to the swamp. Both watched vigilantly for signs of the coming of the invaders. Their vigilance was vain, for Thornton landed a mile below them under cover of three gun-boats under the command of Captain Roberts.

Pushing rapidly up the road, Thornton encountered Morgan's advance, when he divided his superior force, sending a part to attack Tessier, while with the remainder, and aided by Roberts's carronades, he assailed Davis. Both commands were soon put to flight, and fell back in confusion on Morgan's line. Tessier's men could not gain the road, and many of them took refuge in the swamps, where they suffered much for several hours.

When Thornton gained the open fields in front of Morgan's line he extended his force, and with the sailors in column on the road, and the marines placed as a reserve, he advanced upon the American works under cover of a flight of rockets, and with the aid of Captain Roberts's carronades. As the sailors rushed forward they were met by volleys of grape-shot from Philibert which made them recoil. Seeing this, Thornton dashed forward with the Eighty-fifth, and, handling the men with great skill and celerity, soon put the Kentuckians to flight, who ran in wild confusion, and could not be rallied. Following up this advantage, Thornton soon drove the Louisianians from the intrenchments, and gained possession of Morgan's line after that general had spiked his cannon and cast them into the river. He next made for Patterson's battery, three hundred yards in the rear. Its guns, which had been playing effectually on the British in front of Jackson's lines, were now trailed on the nearer foe on the river road. But Patterson, threatened by a flank movement, was compelled to give way; so he spiked his guns, and fled on board the *Louisiana*, while his sailors assisted in getting her into the stream, out of the reach of the enemy.

A large number of the troops were rallied and formed on the bank of the Boisgervais Canal, and prepared to make a stand there. But the British did not advance beyond Patterson's battery. There Thornton was informed of the terrible disasters on the opposite side of the river, and soon afterward received orders from General Lambert to rejoin the main army. Jackson, in the mean time having heard of Morgan's disaster, sent over General Humbert (a gallant Frenchman who was acting as a volunteer) with four hundred men to re-enforce him. Their services were not needed. Thornton had withdrawn, and at twilight re-embarked his troops. That night the Americans repossessed their works, and before morning Patterson had restored his battery in a better position, and announced the fact to Jackson at dawn by discharges of heavy cannon at the British outposts at Bienvenu's.¹

After the conflict had ceased, Jackson, accompanied by his staff, passed slowly along his whole line, addressing words of congratulation and praise to the officers and men every where. Then the band struck up "Hail, Columbia," and cheer after cheer for the hero went up from every part of the line. These were echoed from the lips of excited citizens who had been watching the battle at a distance with the greatest anxiety. Then the soldiers, after partaking of some refreshments, turned to the performance of the sad duty of caring for the wounded and the bodies of the dead, which thickly strewed the plain of Chalmette for a quarter of a mile back from the front of Jackson's lines. These were the maimed and slain of the British army. No less than twenty-six hundred were lost to the enemy in that terrible battle, of whom seven hundred were killed, fourteen hundred were wounded, and five hundred were made prisoners. The Americans lost only eight killed and thirteen wounded! The history of human warfare presents no parallel to this disparity in loss. The Americans were thoroughly protected by their breastworks, while the British fought in front of them on an open level plain.

¹ The loss of the British on this occasion, in killed and wounded, was a little more than one hundred. The Americans lost one man killed and five wounded. On that side of the Mississippi the British acquired their sole trophy during their efforts to capture New Orleans. It was a small flag, and now [1867] hangs conspicuously among other war trophies in Whitehall, London, with the inscription, "Taken at the battle of New Orleans, January 8, 1815."

After the battle General Lambert sent a flag of truce asking for an armistice in order to bury his dead. Jackson granted it on the condition that it should not be extended to operations on the right bank of the river. The result of this exception was, as we have observed, the immediate withdrawal of Thornton from Morgan's line. On the following morning detachments from both armies were drawn up three hundred yards in front of the American lines, when the dead bodies between that point and the intrenchments were carried and delivered to the British by the Kentuckians and Tennesseans on the very scaling-ladders left by the enemy when driven back. The British then carried their dead to a designated spot on Bienvenu's plantation which had been marked out as the cemetery of "the Army of Louisiana." There they were buried, and to this day that consecrated "God's Acre" has never been disturbed. It is distinguished in the landscape by a grove of small cypress-trees, and is a spot regarded with superstitious awe by the negroes in that neighborhood.

The wounded, who were made prisoners, were carefully conveyed to New Orleans, where they were placed in the barracks, and tenderly cared for by the citizens.

The bodies of the dead British officers were carried to Villeré's, the head-quarters, in whose garden some of them were buried by torch-light that night with solemn ceremonies. Those of Pakenham, Gibbs, Rennie, and one or two other officers, were disemboweled, placed in casks of rum, and sent to their friends in England. Their viscera were buried beneath a stately pecan-tree, which, with another quite as stately, seen in the annexed sketch, was yet standing in vigorous health on the lawn a few yards from Villeré's house when the writer sketched the two in April, 1861. It is said to be a notable fact that this tree, fruitful before its branches were made to overshadow the re-

PECAN-TREES.

mains of the invaders, has been barren ever since. The tree nearest the figure of the man is the historic one.

While the armies were burying their dead on the field of strife, a portion of the British were seeking to secure the free navigation of the Mississippi below New Orleans for themselves by capturing Fort St. Philip, at a bend of the stream seventy or eighty miles below the city in a direct line, and which was considered by both parties as the key of Louisiana. It contained at that time a garrison of three hundred and sixty-six men, under Major Overton,¹ of the Rifle corps, and the crew of a gun-boat which had been warped into the bayou at its side. On the morning of the 9th, at about the time when disposition was being made of the British dead in front of Jackson's lines, a little squadron of five hostile vessels appeared near the fort. They consisted of a sloop of war, a gun-brig, and a schooner (*Herald*, *Sophia*, and *Tender*),

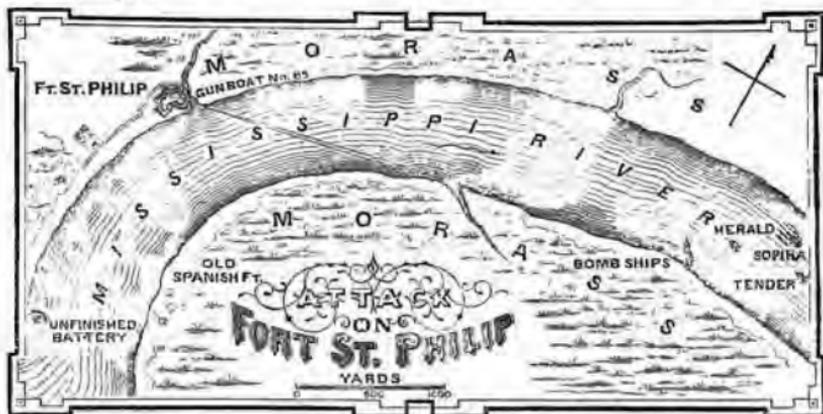

¹ Walter H. Overton, of Tennessee, entered the army in 1808, and was commissioned a major in February, 1814. For his gallantry in defending Fort St. Philip he was breveted lieutenant colonel. He resigned in 1815. He was a member of Congress from Louisiana from 1829 to 1831.

Attack on Fort St. Philip.

Capture of Fort Bowyer.

Jackson's Army enters New Orleans.

and two bomb vessels. They anchored out of range of the heavy guns of the fort, the bomb vessels with their broadsides toward St. Philip. At three o'clock in the afternoon they opened fire, and, finding they had the range of the fort, continued the bombardment, with little interruption, until daybreak of the 18th, casting more than a thousand shells, with the expenditure of twenty thousand pounds of powder, besides many round and grape shot. For nine days the Americans were in their battery (five days without shelter), exposed to cold rain part of the time. The proceeds of this expenditure secured by the British consisted of two Americans killed and seven wounded. The assailants withdrew on the 18th without gaining either the fort, spoils, or glory.¹

On the 18th of January, in accordance with an arrangement made the previous day, a general exchange of prisoners took place; and on the 19th the British, under Lambert, were wholly withdrawn from the Mississippi, having stolen noiselessly away under cover of darkness the previous night. They reached Lake Borgne at dawn on the 19th, but they were yet sixty miles from their fleet, exposed to quite keen wintry air, and considerably annoyed by mounted men under Colonel De la Ronde, who hung upon their rear. There they remained until the 27th, when they embarked, and two days afterward reached the fleet in the deep water between Cat and Ship Islands. The vigilant Jackson, in the mean time, had made such disposition of his forces as to guard every approach to the city, for he thought the foiled enemy, enraged by disappointment, might attempt to strike a sudden blow at some other quarter.

When the British departed from the vicinity of New Orleans they proceeded to invest Fort Bowyer,² yet in command of Major Lawrence.³ They besieged it for nearly two days, when the gallant Lawrence was compelled to surrender⁴ to a superior force. Mobile was then at the mercy of the foe; but their farther conquests were arrested by news of peace, brought directly to General Lambert by a ship sent from England for the purpose.

On the 21st of January, Jackson, with the main body of his army, entered New Orleans. They were met in the suburbs by almost the entire population of all ages and sexes, who greeted the victors as their saviors; and they entered the town in triumphal procession, with far more honest pride than ever swelled the bosoms of victorious conquerors or emperors of other centuries of time.⁵

¹ The chief sources from which the materials for the account of the battles near New Orleans were drawn were the official reports of the officers engaged in them; Latour's *Memoir of the War in West Florida and Louisiana*; Judge Walker's *Jackson and New Orleans*; the several histories of the War of 1812; and numerous statements to the author, oral and written, by actors in the scenes. ² See page 1021.

³ Two days afterward New Orleans was the theatre of a most imposing spectacle. At the request of Jackson, the Abbé Du Bourg, Apostolic Prefect for Louisiana, appointed that day for the public offering of thanks to Almighty God for his interposition in behalf of the American people and nationality. The dawn was ⁴ February 9, 1815. ⁵ February 12.

The news of the gallant defense of New Orleans produced a thrill of intense joy throughout the land. State Legislatures and other public bodies thanked the hero who commanded the victorious little army. A small medal was struck and extensively circulated among the people. Congress voted him the thanks of the nation, and ordered a commemorative gold medal to be given him.

GOLD MEDAL PRESENTED TO JACKSON.¹

greeted by the booming of cannon. It was a bright and beautiful winter morning on the verge of the tropics. The religious ceremonies were to be held in the old Spanish Cathedral, which was decorated with evergreens for the occasion.

In the centre of the public square, in front of the Cathedral, where the equestrian statue of Jackson now stands, was erected a temporary triumphal arch, supported by six Corinthian columns, and festooned with flowers and evergreens. Beneath the arch stood two beautiful little girls, each upon a pedestal, and holding in her hand a civic crown of laurel. Near them stood two damsels, one personifying *Liberty* and the other *Justice*. From the arch to the church, arranged in two rows, stood beautiful girls, all dressed in white, and each covered with a blue gauze veil and bearing a silver star on her brow. These personified the several States and Territories of the Union. Each carried a flag with the name of the state which she represented, upon it. Each also carried a small basket trimmed with blue ribbon and filled with flowers; and behind each was a lance stuck in the ground bearing a shield on which was inscribed the name and legend of the state or territory which she represented. These were linked by evergreen festoons that extended from the arch to the door of the Cathedral.

STATUE OF JACKSON IN FRONT OF THE CATHEDRAL.

At the appointed time, General Jackson, accompanied by the officers of his staff, passed through the gate of the Grand Square fronting the river, amid the roar of artillery, and was conducted between lines of Planché's New Orleans battalion of Creoles (which extended from the gate to the church) to the raised floor of the arch. As he stepped upon it the

¹ On one side of the medal is a profile of the bust of Jackson, and on the other a figure of *Victory* seated, supporting a tablet before her with her left hand, in which is also a laurel wreath. She is making a record of the triumph on the 8th of January. She has written the word "Orleans," when she is interrupted by another figure, personating *Peace*, who holds an olive-branch in her right hand. With her left she points to the tablet, as if directing *Victory* to record the peace which had already been agreed upon by the belligerents. *Victory* is in the act of listening. The inscriptions on the medal are simple—"MAJOR GENERAL ANDREW JACKSON. BATTLE OF NEW ORLEANS, JANUARY 8, 1815. RESOLUTION OF CONGRESS, FEBRUARY 27, 1815."

Rumors of Peace disregarded.

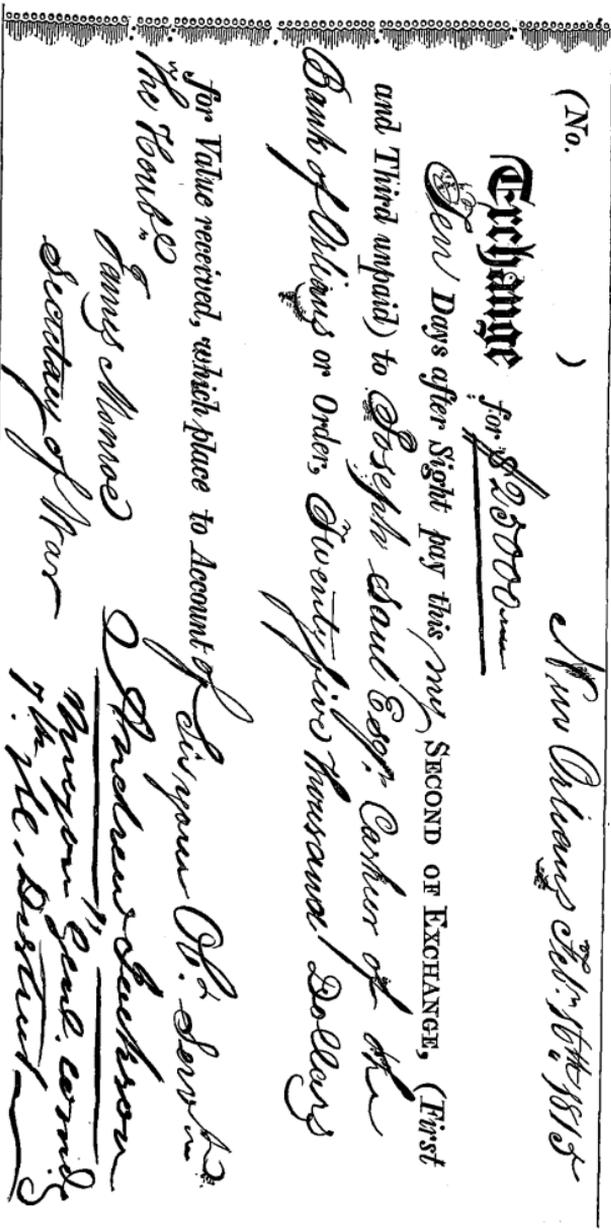

Martial Law and military Discipline continued.

Although no one supposed the British would return, Jackson, like a true soldier, did not relax his vigilance and discipline. Martial law was rigorously maintained after rumors of peace reached New Orleans through seemingly reliable sources. He did not feel bound to be governed by rumors. He retained all the troops; kept up the regular discipline of the camp; made drafts and bills of exchange on his government as usual for funds to prosecute hostilities (a fac-simile of one of which is given in the annexed engraving), and in every way acted as if war was in full career. Finally a messenger arrived from Washington^a with

^a March 6, 1815. an official announcement of peace.

Jackson was then involved in a contention with the civil authorities. This culminated in great public excitement.¹ It soon ended, and on the 30th of March the "Hero of New Orleans," as Jackson was ever afterward called, departed from that city for his humble home in Tennessee, a log house in the forest.

I visited the theatre of war around New Orleans, with a young kins-

two little girls leaned gently forward and placed the laurel crown upon his head. At the same moment a charming Creole girl (Miss Kerr), as the representative of Louisiana, stepped forward, and with modesty supreme in voice and manner addressed a few congratulatory words to the chief, eloquent with expressions of the most profound gratitude. To these words Jackson made a brief reply, and then passed on toward the church, his pathway strewn with flowers by the sweet representatives of the states.

At the Cathedral entrance the honored hero was met by the Abbé Du Bourg in his pontifical robes, and supported by a college of priests in their sacerdotal garments. The abbé addressed the general with eloquent and patriotic discourse, after which the chief was conducted to a conspicuous seat near the great altar, when the *Te Deum Laudamus* was chanted by the choir and people. When the imposing pageant was over, the general retired to his quarters to resume the stern duties of a soldier; and that night the city of New Orleans blazed with a general illumination.

¹ The story of Jackson's difficulties with the civil authorities may be told in a few words. In the Legislature of Lou-

woman as a traveling companion, in the month of April, 1861. We left New York on the 28th of March for Baltimore, from which city we passed over the Baltimore and Ohio Railway to Parkersburg, in Virginia, on the Ohio River, stopping over night at Harper's Ferry, where, three weeks later, the torch of civil war, then just lighted, made sad devastation. We crossed the Ohio River at Parkersburg, and journeyed by railway to Cincinnati. There we again crossed that stream to Cov-

isiana was a powerful faction personally opposed to Jackson—so powerful that, when the officers and troops were thanked by that body on the 2d of February, the name of their chief leader was omitted. This conduct highly incensed the people. Their indignation was intensified by a seditious publication, put forth by one of the members of the Legislature, which was calculated to produce disaffection in the army. This was a public matter, and Jackson felt bound to notice it. He ordered the arrest of the author, and his trial by martial law. Judge Dominic A. Hall, of the Supreme Court of the United States, issued a writ of habeas corpus in favor of the offender. Jackson considered this a violation of martial law, and ordered the arrest of the judge and his expulsion beyond the limits of the city. The judge, in turn, when the military law was revoked on the 13th of March, in consequence of the official proclamation of peace, required Jackson to appear before him and show

Dominic A. Hall
District Judge

cause why he should not be punished for contempt of court. He cheerfully obeyed the summons, and entered the crowded court-room in the old Spanish-built court-house, 209 Royal Street, in citizen's dress. He had almost reached the bar before he was recognized, when he was greeted with huzzas by a thousand voices. The judge was alarmed, and hesitated. Jackson stepped upon a bench, procured silence, and then, turning to the trembling judge, said, "There is no danger here—there shall be none. The same hand that protected this city from outrage against the invaders of the country will shield and protect this court, or perish in the effort. Proceed with your sentence." With quivering lips the judge pronounced him guilty of contempt of court, and fined him a thousand dollars. The act was greeted by a storm of hisses. Jackson immediately drew a check for the amount, handed

THE OLD COURT-HOUSE.

it to the marshal, and then made his way for the court-house door. The excitement of the people was intense. They lifted Jackson upon their shoulders, bore him to the street, and then the immense crowd sent up a shout that blanched the cheeks of Judge Hall, and gave evidence of the unbounded popularity of the heroic soldier who was so prompt in his obedience to the mandates of the civil law. He was placed in a carriage, from which the people released the horses and dragged it themselves to Maspero's house, where he addressed the populace, urging them to show their appreciation of the blessings of liberty and free government by a willing submission to the authorities of their country. In the mean time a thousand dollars had been collected by voluntary subscriptions and placed to his credit in a bank. Jackson politely refused to accept it, and begged his friends to distribute it among the relatives of those who had fallen in the late battles. Nearly thirty years afterward Congress refunded the sum, with interest, amounting in all to two thousand seven hundred dollars.

Andrew Jackson was born in Mecklenburg County, North Carolina, on the 15th of March, 1767. He was designed by his mother for the Christian ministry, but his studies were interrupted by the old War for Independence, whose tumults were loud in the region where the boy resided, his home then being in the northern part of South Carolina. He went into the service a mere lad, and was made a prisoner in 1781. His mother, his only surviving parent, died at that time, and he was left alone. He studied law, and was admitted to the bar in 1786. He settled in Tennessee, and at Nashville, which he made his home in 1790, he was married to an excellent woman. In 1795 he assisted in forming a State Constitution for Tennessee. He was the first-elected Congressman from that state, and represented it in the Senate of the United States in 1797. He was soon appointed Judge of the Supreme Court of Tennessee, and for many years he

Clay's Monument.

Jackson's Tomb.

ington, and traveled southward through a beautiful region of Kentucky to Lexington, where we tarried a day and a night. We rode out to Ashland, the residence of Henry Clay, a short distance from the town, for the purpose of seeing the dwelling-place of that eminent man for many years before his death, and tendering our respects to his venerable widow, then residing there. We were met by disappointment. The venerated mansion had been demolished by a son of the statesman (James B. Clay), and upon its site stood a pretentious brick dwelling—so pretentious that persons living long distances from it went to see it. Mrs. Clay

ASHLAND.

BODLEY'S GRAVE.²

was too feeble to receive strangers;¹ and after a brief interview with the proprietor of the estate we turned with sadness from the shadows of the grand old trees under which the former master delighted to loiter in his retirement from public life. It is to be regretted that his son did not comply with the desires of the people of Kentucky that the mansion at Ashland should belong to that state, and be preserved as a perpetual memorial of her honored son.

We returned to Lexington, and rode out to the public cemetery wherein lie the remains of Henry Clay and his family, and where, on the verge of a plain, stands a beautiful monument (a sketch of which is given on the next page) erected to the memory of the statesman.

JACKSON'S TOMB.

was chief military commander in that section. His services in the War of 1812 are recorded in this volume. He remained in the service some time after the war. In 1821 he was appointed Governor of the Territory of Florida, and in 1824 he was an unsuccessful candidate for president of the Republic. He was elected to that office in 1828, and served two consecutive terms. In 1837 he retired from public life forever, and passed the remainder of his days at the "Hermitage" (see page 1016), where he died on the 8th of June, 1846. Beneath the roof of a little temple-like structure in the garden of the "Hermitage" rested the remains of General Jackson, by the side of those of his wife, when the author visited the place in the spring of 1861.

¹ Mrs. Lucretia Hart Clay was the daughter of Colonel Hart, of Lexington, and sister of Captain Hart, who was killed at Frenchtown (see page 359), on the Raisin River. Mrs. Clay had eleven children, of whom only three now (1867) survive. She died at the residence of her son, John M., near Lexington, on the evening of the 6th of April, 1864, at the age of eighty-three years.

² The slab bears these few words: "GENERAL THOMAS BODLEY. BORN 4th July, 1772. Died 11th June, 1833."

Frankfort and its Cemetery.

Graves of Daniel Boone and his Wife.

OLAY'S MONUMENT.¹

His body was laid by the side of the remains of his mother, in the western part of the cemetery; and not far from them were the grave and modest little monument of General Thomas Bodley (see preceding page), who was the deputy quartermaster general to the Kentucky Volunteers under General Harrison in 1813, with the rank of major.

From Lexington we journeyed by railway through the rich "blue-grass region" to Frankfort, the capital of the state. It is on the Kentucky River, and is the centre of a theatre of romantic events in the early history of Kentucky, in which Daniel Boone and his companions were so conspicuous.

There we were favored with the company and kind offices of General Leslie Combs, whose gallant services in the War of 1812 are recorded in this volume. With him we visited the Frankfort Cemetery, on the high right bank of the Kentucky River, a

short distance from the city, where, side by side, under the shadows of magnificent sycamore-trees that stood there when the pioneers were fighting the Indians, were the graves of Daniel Boone and his wife, with nothing to mark their place of sepulchre but little mounds covered with green grass and wild flowers of the woods.² Not far from these humble graves we found the fine monument erected to the

GRAVES OF DANIEL BOONE AND HIS WIFE.

memory of Colonel Richard M. Johnson, delineated on page 496; and in its vicinity

¹ This monument is of white marble. It is composed of an Egyptian cénôthaph, upon which stands a Corinthian capital bearing a statue of the statesman.

² These graves were near the steep bank of the river, which the Indians in Boone's time called Kain-tuck-ee. The bank was here about one hundred and fifty feet in height. Near the graves and covering a slope were stumps, stones, shrubbery, and vines, purposely left with rude aspect as appropriate to the resting-place of the remains of the pioneer. The tall shaft seen beyond the trees in the picture is that of the Soldiers' Monument given on the next page.

Louisville and Nashville.

Dr. Felix Robertson.

stands a lofty and elegant white marble shaft, upon a rich pedestal, and with more elaborated surmountings, that was erected by the State of Kentucky in commemoration of its deceased soldiers who had served in any war.¹ We spent much of the day in that "city of the dead," and on the following morning went by railway to Louisville, at the "Falls of the Ohio," so often spoken of by the early voyagers on that stream. Thence we traveled by the same means to Nashville, on the Cumberland River, where we spent the Sabbath, and on Monday rode out to the "Hermitage," the home of Andrew Jackson,² about twelve miles from the city. It was a spacious brick mansion, built in 1835, after the earlier one was burned. There we were hospitably entertained by Mrs. Jackson, wife of the adopted son of the President, who permitted me to copy from the original the portrait of General Coffee seen on page 759. There we saw two of the general's old house-servants—Aaron and Hannah—the former nearly eighty, and the latter

KENTUCKY SOLDIERS' MONUMENT.

almost seventy years of age. Hannah went with us to the tomb of the patriot in the garden, where I made the sketch seen on page 1055. She gave us many interesting incidents of the latter days of her old master, and pointed to two thrifty willows near the tomb which she saw him plant with his own hand a few evenings after his wife was buried there.

On our return to Nashville toward evening, I passed an hour with the late venerable Dr. Felix Robertson, a portrait of whom is given on the next page, whose resemblance to Jackson was very remarkable. He was the son of General James Robertson (see page 747), and was the first white child born on the site of Nashville, his mother then being in the little log fort there. On the following morning we departed by railroad for New Orleans, going by way of Decatur, in Northern Alabama, then westward to Grand Junction, and then southward to the "Crescent City." We arrived in New Orleans at noon on the 11th of April, took rooms at the St. Charles, and remained there nearly a week, visiting places of historic interest in and around the city, and gathering materials, by the use of pen and pencil, for the narrative of the events of the war there, given in this and the preceding chapter. For much information, and for facilities for acquiring more, I am greatly indebted to the kindness

¹ This monument stands upon a mound. Upon the bands which are seen embracing the square shaft are the names of battles, and beneath each are the names of soldiers who fell in those battles. The shaft is a single piece of marble. Upon a tablet on the south front of the pedestal is a group in relief, composed of two feminine figures, one on each side of an altar. One, with an open book in her hand, represents History; the other, with a short Roman sword and olive wreath, represents Victory. The other hands of the two figures are employed in holding a wreath over the altar. At each corner of the top of the pedestal is an eagle. The shaft is surmounted with a figure of Fame, with arms extended, and holding a wreath in each hand.

² See page 1017.

of Judge Walker, author of *Jackson and New Orleans*; the late General H. W. Palfrey, who was a participant in the battle; and especially to Alfred Henner, Esq. (a leading lawyer in New Orleans), who was one of Jackson's mounted life-guard, and was engaged in active and perilous duty on the memorable 8th of January, 1815.¹ It was chiefly under the direction of Mr. Henner that we found the various localities of interest in the city and its suburbs.

* April 12, 1861. On the morning after our arrival² we rode down to the battle-ground in a pleasant barouche. General Palfrey had made arrangements to accompany us, but on that morning news had arrived of the attack of insurgents on Fort Sumter, in Charleston Harbor, and he was too busy with public matters to go with us. That outbreak of the Great Rebellion absorbed all minds. Our driver had been over the battle-ground often, and was a competent guide, so we rode down alone

Felix Robertson

along the Levee, the water in the brimful Mississippi being quite four feet higher than our roadway, with only twenty-five feet thickness of earth between us and the flood. It was a clear and very warm day. The gardens were full of blooming roses, and the orange hedges around them were bright with the golden fruit. We were kindly entertained by Madame Macarté, at Jackson's head-quarters,² and we found a cordial welcome at the Villeré mansion by the family of the grandson of Governor Villeré, where we were regaled with orange sherbet and the delicious *elfe*, or Japan plum, trees of which, full of the fruit, formed a grove near the house.³ After making drawings of that mansion, the pecan-trees,⁴ and the dwellings of

ALFRED HENNER.

Lacoste⁵ and De la Ronde,⁶ we returned to Macarté's, and while seated on the base

¹ Captain Ogden was the commander of the Life-guard. The officers alone were uniformed. Mr. Henner was one of only three survivors of that guard at the time of my visit, the other two being Ex-Governor Henry Johnson and James Hopkins. He became a resident of New Orleans in 1806, when the city contained about 14,000 inhabitants. He was there in 1801, having been sent by his father on a flat-boat with the first bales of cotton ever taken to that city. He placed them in the Jesuits' warehouse, on the site of the St. Charles Hotel, above Canal Street. It was in the fields outside of the palisades, which then occupied the line of the present broad Canal Street. ² See page 1087.

³ See page 1029. This fruit grows in clusters like cherries, on trees about the size of cherry-trees, and averages the size given in the engraving at the head of the opposite page. Some are larger. When ripe it is of a yellow color, and is filled with a bountiful supply of delicious acid juice.

latter place for the meeting. The ancient city of Ghent, in Southern Netherlands (now in Belgium), was afterward substituted.¹ There the American commissioners assembled in the summer of 1814. These consisted of John Quincy Adams, James A. Bayard,² Henry Clay,³ Jonathan Russell, and Albert Gallatin.⁴ There they were joined* by the British com- * August 6, 1814.
missioners, Lord Gambier, Henry Goulburn, and William Adams; and Christopher Hughes, Jr., one of the most attractive of men in social life, and a diplomat without a rival, who was then our chargé d'affaires at Stockholm, was appointed secretary to the American commissioners.

Negotiations were speedily opened, when a wide difference in the views of the commissioners of the respective nations threat-

1817, in which office he remained until he took the chair of President of the United States in 1825. In 1831 he was elected a member of the National House of Representatives, which position he held by re-election until his death, which occurred in the Speaker's Room at the Capitol on the 22d of February, 1848, in the eighty-first year of his age. His last

words were, "This is the end of earth." His remains were buried on the family estate at Quincy. In the accompanying picture are representations of the birthplace, the later residence, and the tomb of John Quincy Adams.

¹ Ghent is the capital of the province of East Flanders, in Belgium; is situated at the confluence of the Scheldt and Lys, and is one of the most interesting localities in the ancient Netherlands.

² James A. Bayard was born in Philadelphia on the 26th of July, 1767. He was graduated at Princeton in 1784, became a lawyer of eminence, and took a seat in Congress in 1797, to which he had been elected by the Federalists. He held that position until 1804, when he was elected to the National Senate, in which he became a leader. He was opposed to the War of 1812, but cheerfully acceded in the action of the majority. After assisting in the negotiation of the treaty of peace he went to Paris, where he became seriously ill. When he arrived in England, on his way home, he was met with the commission of minister to Russia. He declined the honor, hastened home, and five days after his arrival (August 6, 1816) he died.

³ Henry Clay (see page 211) was born near Hanover Court-house, in Virginia, on the 12th of April, 1777. He was educated in inferior district schools. He began the study of the law at the age of nineteen years, and at the age of twenty he was admitted to its practice. He went over the mountains into Kentucky, and settled at Lexington in 1799. With a display of remarkable talents, he entered upon the practice of his profession, and as a politician, with vigor. At that early period he worked for measures for the emancipation of the slaves, and through life was an advocate of the abolition of slavery in some form. He was chosen a member of the Kentucky Legislature in 1806, and was sent to the National Senate in 1806. He entered the House of Representatives as a member in 1811, and almost immediately afterward was elected its speaker. He remained in Congress, as a member of one branch or the other of that body (with the exception of four years, when he was John Quincy Adams's Secretary of State, and a brief retirement thereafter), until his death, which occurred at Washington City on the 29th of June, 1852.

⁴ Albert Gallatin was born on the 29th of January, 1761, in the city of Geneva, Switzerland. He was graduated at the University of Geneva in 1779, came to America in 1780, and entered the military service in Maine. After the Revolution he was a tutor in Harvard College for a while, and finally settled in Western Pennsylvania. He was a member of the Convention to revise the Constitution of that state in 1789, and was elected to the State Legislature. He was chosen a member of the National Senate in 1793, but, being ineligible, he was elected a member of the other house, and became

ened the most formidable obstructions to agreement. At times it seemed as if the effort to negotiate a treaty would be fruitless. The discussions continued several

VIEW OF THE CITY OF GHENT, FROM THE SCHELDT.

months. The leading citizens of Ghent (whose sympathies were with the Americans¹) took great interest in the matter, and mingled their rejoicings with the commissioners when their work was ended.² That result was reached on the 24th of December, 1814, when a treaty was signed by the respective commissioners.³ It was immediately transmitted to London by the hands of Mr. Baker, secretary to Lord

the Republican leader of it. Jefferson appointed him Secretary of the Treasury in 1801, which office he held until 1814, when he was sent to St. Petersburg as a commissioner to treat for peace. His communications from Europe on public affairs at that time were mostly written in cipher, composed of numbers, of which (copied from one of them in the State Department at Washington) a fac-simile is here given from a letter dated at London, June 23, 1814. Each number rep-

resents a word or sentence, perfectly intelligible to a person with a key. Mr. Gallatin assisted in negotiating the treaty at Ghent. He remained in Europe, and from 1816 until 1823 he was our resident minister at the French court, and was employed in other diplomatic services. He declined offices of high honor at home, and remained abroad until 1828, when he returned to the United States, and fixed his residence in the city of New York, where he engaged in the business of banking. He took an active part in literary pursuits, and at the time of his death, which occurred at Astoria, Long Island, on the 12th of August, 1840, he was President of the New York Historical Society.

¹ On the 27th of October, 1814, the Academy of Sciences and Fine Arts at Ghent invited the American commissioners to attend their exercises, when they were all elected honorary members of the Academy. A sumptuous dinner was given, at which the Intendant, or chief magistrate of Ghent, offered the following sentiment:

² *"Our distinguished guests and fellow-members, the American ministers—may they succeed in making an honorable peace to secure the liberty and independence of their country."* The band then played "Hail, Columbia." The British commissioners were not present.

³ After the treaty was concluded the American commissioners gave a dinner to the British commissioners, at which Count H. Von Steinbnyse, the Intendant of the Department, was a guest. Sentiments of mutual friendship were offered. A few days afterward the Intendant gave an entertainment to the commissioners of both nations.

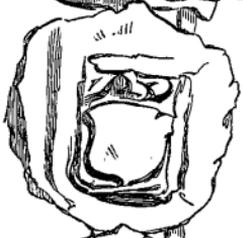

⁴ On the next two pages is a fac-simile of the last paragraph of the treaty, with the signatures of the respective commissioners, and representations of the seals set opposite their names. These were carefully copied by the writer from the original in the Department of State at Washington City. The impressions of all the seals on the red wax were imperfect, as the engravings represent them.

Ratification of the Treaty of Peace.

Arrival of the News in New York and Washington.

W. Clay

Jon^a Russels

Albert Gallatin

There it was ratified on the 28th of the same month by the Prince Regent, and then sent to America by the same messengers. They sailed in the British sloop of war *Favorite* on the 2d of January, 1815. She arrived at New York on the evening of Saturday, the 11th of February. Mr. Hughes left Ghent with a copy of the treaty at the same time the other messengers did, proceeded to the Texel, and there embarked for the Chesapeake in the schooner *Transit*. She arrived at Annapolis two days after the *Favorite* reached New York, and Mr. Hughes¹ was at Washington City with his copy of the treaty before the ratified copy arrived there.

News of the arrival of the *Favorite* soon spread over the city. The glad tidings of peace which she brought were wholly unexpected, and produced the most intense satisfaction. No one inquired what were the terms of the treaty; it was enough to know that peace had been secured. The streets

C Hughes W.

¹ Mr. Hughes is represented as a man of very attractive personal appearance, exceedingly active in body and mind, and more widely known personally during his long residence in Europe than almost any other man. A writer, in speak-

Rejoicings because of Peace.

How the News was spread over the Country.

Rejoicings in Great Britain.

were soon filled with people, and a placard issued from one of the newspaper offices¹ and thrown out of the window, was eagerly caught up and read by the multitude, who made the night air vocal with huzzas. Cannon thundered, bells rang, and bonfires and illuminations lighted up the city until after midnight. Expresses were sent in various directions with the glad news.² The newspapers were filled on Monday³ morning⁴ with shipping advertisements and commercial announcements of every kind. Government stocks advanced,⁵ and coin and merchandise rapidly declined.⁶ There was joy all over the land, and especially along the whole maritime frontier. Banquets and illuminations marked the public satisfaction in towns and cities.⁷ There were also great rejoicings in the Canadas because of the deliverance of the provinces from the terrors of invasion by which they had been disturbed for almost three years; and the British government, appreciating the loyalty of the inhabitants of those provinces, as manifested in their gallant defense of their territory during the war, caused a medal to be struck in testimony of its gratitude.⁸ There was rejoicing also in Great Britain because of peace, especially among the manufacturing and mercantile classes, for it promised returning prosperity; and a medal was struck in commemoration of the great event, which bore upon one side the words, "TREATY OF PEACE AND AMITY BETWEEN GREAT BRITAIN AND THE UNITED STATES OF AMERICA, SIGNED AT GHENT DECEMBER 24, 1814," and upon the other a fem-

ing of him said, "He is the best known man in the world, from New York to Kamtschatka," and was remarkable for "saying more wise things, strange things, droll things, than ever tongue uttered or mind conceived." His personal popularity made him a most skillful diplomat. He obtained a knowledge of the most profound state secrets, John Quincy Adams said, "by no improper acts, and at no cost of secret service money, but by the art of making friends by his social qualities wherever he goes."—Adams's speech in Congress, September 4, 1841. Mr. Hughes was a native of Baltimore, and was a brother-in-law of Colonel Armistead, the gallant defender of Fort M'Henry. He died in Baltimore on the 18th of September, 1849.

¹ It was issued from the office of the *Mercantile Advertiser*, on a slip of paper five by six inches in size, and was posted and scattered all over the city. The following is a copy of one of these placards, in the possession of John B. Moreau, Esq., of New York City:

"New York, Saturday Evening, 9 o'clock, February 11, 1815.

"P E A C E.

"The great and joyful news of PEACE between the United States and Great Britain reached this city this evening by the British sloop of war *Favorite*, the Hon. J. U. Mowatt, Esq., commander, in forty-two days from Plymouth.

"Henry Carroll, Esq., Secretary of the American Legation at Ghent, is the welcome bearer of the treaty, which was signed at Ghent on the 24th December by the respective commissioners, and ratified by the British government on the 28th December. Mr. Baker, late Secretary to the British Legation at Washington, has also arrived in the sloop of war with a copy of the treaty ratified by the British government."

² Mr. Goodhue, an eminent merchant, sent an express at his own expense (\$225) to Boston in thirty-six hours, which scattered the glad tidings along the way. Jacob Barker (see page 936) sent an express in like manner to Governor Tompkins at Albany in twenty-four hours. Mr. Carroll, on his way to Washington with a copy of the treaty, gave the first news of peace to Philadelphia. Hughes had already gladdened Baltimore with the tidings.

³ Six per cents rose from 76 to 86, and treasury notes from 92 to 98.

⁴ Coin, which was twenty-two per cent. premium, fell to two per cent. in the course of forty-eight hours. Within the same time sugar fell from \$26 per cwt. to \$12.50; tea from \$2.25 per lb. to \$1; tin from \$80 a box to \$25. These are mentioned, among scores of articles, as specimens of the sudden effect of the news on commercial values.

⁵ Philadelphia was the first to illuminate. It took place on Wednesday evening, the 15th of February. Robert Wharton, the mayor, in his proclamation concerning it, suggested that, as the religious principles of the Quakers would not permit them to illuminate, the police should see to it that they should be protected "in their peaceful rights." The mayor directed all the lights to be extinguished at ten o'clock. On that occasion brilliant lights were exhibited from the top of a shot-tower one hundred and sixty feet in height. The illumination in New York took place on the 22d of February. On the evening of the 16th of March a "superb ball," as the newspapers of the day said, was given at Washington Hall, the dancing-room of which was sixty by eighty feet in size. The "number of ladies and gentlemen was six hundred." The room was so arranged as to present the appearance of a beautiful pavilion, or temple, with eighteen pillars, on each of which was the name of a state. It was called the Temple of Concord. On one side of the room, under a canopy composed of flags, was the Bower of Peace, surrounded with orange and lemon trees covered with fruit. The *Evening Post* of the 21st of March said of the scene in the hall, "It was a picture of female beauty, fashion, and elegance not to be surpassed in any city in the Union." Among the most active women at this entertainment were those who composed the managers of the Association for the Relief of the Soldiers in the Field, formed in 1814. These consisted of Mrs. General Lewis, Mrs. William Few, Mrs. David Gelston, Mrs. Phillip Livingston, Mrs. Colonel Laight, Mrs. Thomas Morris, Mrs. Marinus Willet, Mrs. William Ross, Mrs. Nathan Sanford, Mrs. Daniel Smith, Mrs. L. Bradish, Miss M. Bleecker, Miss H. Lewis, and Miss H. E. G. Bradish.

⁶ The device on one side of the medal is emblematic of the United States and Canada. On one side of a river and lake (St. Lawrence and the Lakes) is the eagle, representing the sovereignty of the republic, threatening to fly over into Canada, whose emblem is the beaver. There the British lion couchant is seen, emblematic of the protecting sovereignty of Great Britain. The device on the other side explains itself. The medal was made by Thomas Wyon, Jr., a young engraver, then only twenty-three years of age. He died in 1817, at the age of twenty-five years, when he was at the head of his profession. Copies of the three medals here mentioned are in the rare numismatic collection of Chas. I. Bushnell, Esq., of New York, to whose courtesy I am indebted for the privilege of having two of them engraved for this work.

Medals and Pictures in Commemoration of Peace.

Ratification of the Treaty by the United States Senate.

MEDAL OF GRATITUDE.

ine figure standing on the segment of a globe, bearing the cornucopia of plenty, and holding in one hand the olive-branch of peace. Partly inclosing the figure were the words, "PEACE SPREADS HER INFLUENCE O'ER THE ATLANTIC SHORE." On the other side was a dove surrounded with light, and descending toward a wreath of palm leaves in-

MEDAL COMMEMORATIVE OF THE TREATY OF PEACE.

closing the words "CONCORD BETWEEN GREAT BRITAIN AND AMERICA." A fine allegorical picture was painted and engraved in this country commemorative of the war and the treaty of peace, a copy of which is given on the next page.¹

The treaty of peace was ratified by the unanimous vote of the Senate of the United States on the 17th of February, 1815, and it was promulgated the next day by proclamation of President Madison. It did not, as the text of the treaty given in the Appendix shows, secure to the Americans that immunity from Search and Impressment for which they went to war, and for this reason it was pointed to exultingly by the Opposition as a proof of the wisdom of their prophecies, the patriotism of their

¹ This picture, entitled *The Peace of Ghent, 1814, and Triumph of America*, was drawn by William Planton and engraved by Chataignier. It was published by P. Price, Jr., Philadelphia. The design is thus described: "Minerva represents the wisdom of the United States, Mercury their commerce, Hercules their force. Minerva dictates their conditions of peace, which Mercury presents to Britannia, and Hercules forces her to accept them. On the shield of Minerva are the names of those who signed the treaty: on the obelisk, those of the braves. On the other side America passes in triumph through the arch on her way to the Temple of Peace. She is attended by Victory, and followed by a numerous train. Several trophies are seen, and in the background are the ruins of the Capitol." Below the picture, in a circle composed of links, on each of which is the name of a state, is the following inscription: "Under the presidency of Madison. Monroe, Secretary of State."

Allegorical Picture of the Treaty of Peace and Triumph of America.

course, and the truth of their declarations that the war was a failure—"waged to no

|------------------------|---|-----------------------------------|

end."¹ It by no means secured all that the Administration hoped for; yet, in addition to the boon of peace, it gave to the Americans advantages to be derived from a final settlement of boundaries and the exclusive right to the navigation of the Mississippi River, while it took from them the important privilege, which the mariners of New England had always enjoyed, of catching and curing fish on the shores of the Gulf of St. Lawrence.² It also secured, in the interest of our common humanity, the co-operation of the two nations in efforts to suppress the inhuman and un-Christian traffic in slaves.

But far more important to this country and the world than the security of incidental advantages was the establishment, by the war, of the positive and permanent independence of the United States, and with it a guarantee to the posterities, of the perpetuation and growth of free institutions. Great Britain had been taught, by the lessons of the war, that the young republic, the offspring of her oppressions,³ growing more lusty every hour, would no longer tolerate an insult, or suffer its sovereignty to be questioned without resenting the offense; and she was compelled to sign a bond, as it were, to keep the peace, in the form of an acknowledgment that she had, in that republic, a formidable rival for the supremacy of the seas, which she was bound to respect. Her aristocracy, as a rule, and the public writers in their interest, remained, as before, the bitter enemies of the Republic. They condemned the treaty because it yielded too much to what they were pleased to call the "insolent Yankees,"⁴ and omitted no opportunity to disparage and libel the American people and the American Republic. It was, perhaps, a natural exhibition of the weakness and selfishness of human nature. That Republic, with its free institutions and equality in acknowledged citizenship, was and is a perpetual menace against the existence of privileged classes, and a silent but potential champion of the rights of man enunciated in its prime political creed, that "all men are created equal." Hence it is that the privileged classes of the Old World are its natural enemies, and are willing to disparage its institutions and people in the estimation of the toiling millions who are struggling for the light and air of a better human existence.

When the treaty of peace was ratified, the government of the United States took measures immediately for the adjustment of national affairs in accordance with the new order of things. An appropriation was made for rebuilding the public edifices.⁵ Plans were considered for the maintenance of the public credit and the extinguishment of the national debt, then amounting, in round numbers, to \$120,000,000. The

¹ The Opposition newspapers contained some well-pointed epigrams, keen satires, and genuine wit, aimed at the friends of the war, and in illustration of the shortcomings of the treaty; and there was also an abundance of coarse abuse poured out, through the same channels, upon the Administration. The usually dignified *Evening Post* had some severe criticisms, and justified the following stanza in its *New Year's Address*, printed a few weeks before:

"Your commerce is wantonly lost,
Your treasures are wasted and gone;
You've fought to no end, but with millions of cost,
And for rivers of blood you've nothing to boast
But credit and nation undone."

² The treaty provided for the appointment of commissioners, and such were the final results of their labors.

³ Half a century before (1765), when Charles Townshend, in an eloquent speech in the British House of Commons, spoke of the "ungrateful Americans" as "children planted by our care," Colonel Barré, in an indignant reply, exclaimed, "They planted by your care! No! your oppression planted them in America; they fled from your tyranny to a then uncultivated and inhospitable wilderness, exposed to all the hardships to which human nature is liable."

⁴ The London *Public Advertiser*, at that period, furnished many illustrations of the feeling against the treaty. The following will suffice:

"ADVERTISEMENTS EXTRAORDINARY.

"Wanted.—The spirit which animated the conduct of Elizabeth, Oliver, and William.

"Lost.—All idea of national dignity and honor.

"Found.—That every insignificant state may insult THAT which used to call herself MISTRESS OF THE SEAS."

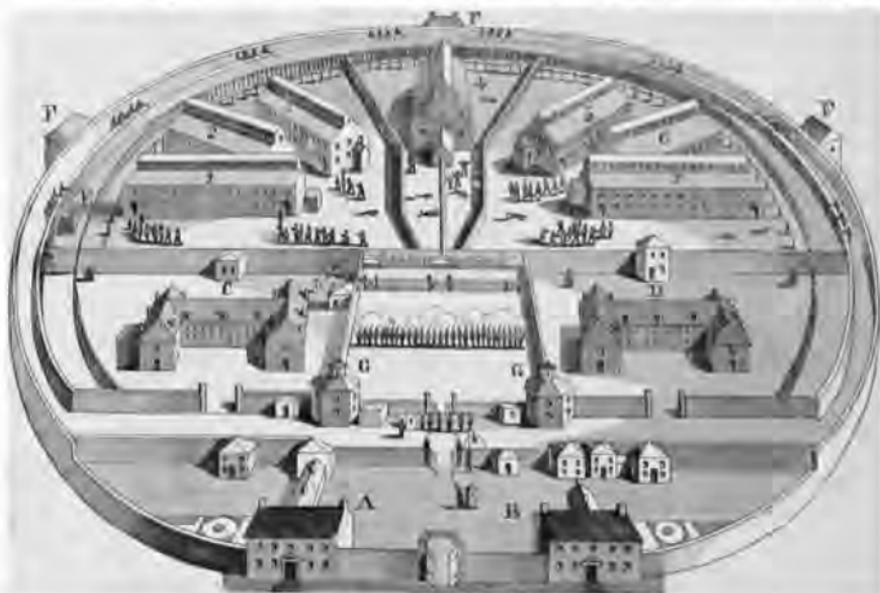

⁵ The value of the public buildings destroyed was estimated as follows: The Capitol, original cost, alterations, etc., \$787,163.28; President's house, including all costs, \$334,334; public offices, Treasury, State, War, and Navy, \$9,613.82; making a total of \$1,215,111. The walls of the Capitol and of the President's house (see pages 938 and 934) remained strong, and only needed repairs. It was estimated that \$400,000 would restore them to their condition before the fire. No estimate was made of the value of the public library that was burned. The estimated cost of rebuilding the navy yard was \$62,370. The value of property destroyed at that establishment was estimated at \$609,174.04, of which \$417,745.51 was movable property. See page 934.

Reduction of the Army. The Navy. Privateers. Captives released. Dartmoor Prisoners.

army was placed on a peace footing, and was reduced to 10,000 men, by which reduction about 1800 officers were compelled to leave the service. The navy was left where it stood, with an additional appropriation, for its gradual increase, of \$200,000 annually for three years. The national vessels and privateers were drawn from the ocean as speedily as possible,¹ and prisoners in the hands of both parties were released as quickly as proper arrangements could be made for their enlargement.

In connection with the release of captives, a circumstance occurred at a *dépôt* for prisoners in England which caused great exasperation on the part of the American people. That *dépôt* was situated on Dartmoor, a desolate region in Devonshire, where it was constructed in 1809 for the confinement of French prisoners of war. It comprised thirty acres, inclosed within double walls, with seven distinct prison-houses, with inclosures. At the time of the ratification of the treaty of peace, there were about six thousand American prisoners there, including twenty-five hundred impressed American seamen, who had refused to fight in the British Navy against their countrymen, and were there when the war broke out in 1812. Some had been there ten or eleven years. The place was in charge of Captain T. G. Shortland, with a military guard. That officer was charged with much unfeeling conduct toward the prisoners, accounts of which reached America, from time to time, and produced great irritation in the public mind.

There was much delay in the release of the Dartmoor prisoners. It was nearly three months after the treaty of peace had been signed before they were permitted to know the fact. From that time² they were in daily expectation of release. Delay caused uneasiness and impatience, and there was evidently a disposition to attempt an escape. Symptoms of insubordination appeared on the 4th of April, when the prisoners demanded bread instead of hard biscuit, and refused to receive the latter. On the evening of the 6th,³ so reluctantly did the prisoners obey orders to retire to their quarters, that, when some of them, with

DARTMOOR PRISON IN 1815.²

¹ The whole number of British vessels of every class captured by Americans during the war was estimated at 1750. An official British return stated that, during the same time, British ships had captured and destroyed 1658 American vessels of every class, manned by upward of 18,000 seamen. See page 1067.

² This is a careful copy of an engraving attached to a *Journal of a Young Man of Massachusetts, late a Surgeon on board an American Privateer*, who was a prisoner there at the time of the massacre, and an eye-witness of much of

Sad Event at the Dartmoor Prisons.

Prosperity of the Republic.

Its Relations to the Nations.

the appearance of mutinous intentions, not only refused to retire, but passed beyond the prescribed limits of their confinement, they were fired upon, by orders of Captain Shortland, for the purpose of intimidating all. This firing was followed up by the soldiers without the shadow of an excuse, according to an impartial report made by a commission appointed to investigate the matter.¹ Five prisoners were killed and thirty-three were wounded. The act of the soldiers was regarded by the Americans as a wanton massacre; and when the British authorities pronounced the act "justifiable homicide," the hottest indignation was excited. But Time, the great healer, has interposed its balm, and the event appears in history as one of the inevitable cruelties of ever-cruel war.

At the close of the SECOND WAR FOR INDEPENDENCE, the events of which are recorded in this volume, our Republic had achieved, as we have observed, the most important of all its triumphs, and was still wealthy with the fruits of a wonderful progress in the space of twenty-five years since its nativity.² It then started afresh upon a grand career of prosperity, with marvelous resources developed and undeveloped—known and unknown. The rulers and privileged classes in other lands persisted in calling it an experiment, and were ever prophesying the failure of the republican principle in government, of which it was a notable example. Recent events have silenced all cavil, and dispelled all doubts on that point.

Fifty years after the close of its last struggle for independence, our Republic emerged^a from the fiery furnace of a Civil War unparalleled in proportions and operations hitherto, purified and strengthened by the ordeal. The most skeptical observer of that trial and its results can no longer consider our Government an experiment. It is a demonstration. Its history is an affirmative answer to the question whether republican institutions have elements of vitality and power sufficient for the demands of every exigency of national life. Henceforth it will stand before the nations a trusted oracle for the guidance and encouragement of all aspirants in other lands for the privileges of free thought and action.

what he recorded. The following is a description of the picture: A. Surgeon's House; B. Captain Shortland's Quarters; C. Hospital; D. Barracks; E. Cachot, or Black-hole; F, F, F. Guard-houses; G, G. Store-houses. The Arabic numerals refer to the numbers of the prisons as they were alluded to in narratives and official documents. The outward of the two encircling walls of stone (of which the prisons were built) was a mile in circumference. The inner wall was used as a military walk for the sentinels. Within this wall were iron palisades, ten feet in height. The guard was composed of a little more than two thousand well-disciplined militia, and two companies of Royal Artillery. The picture not only gives a bird's-eye view of the post, but the position of the guards at the time they fired, and of the killed where they fell.

¹ The American commissioners to negotiate the treaty of peace, then in London, appointed the late Charles King, president of Columbia College (then a young man, who was on a visit to England), a commissioner on the part of the Americans, and the British authorities appointed Francis Seymour Larpent to act with him.

² John Bristed, in his admirable work on *The Resources of the United States*, published in 1813, gives the following summary of the real and personal capital, and the income of the people of the Republic, at about the time of the close of the war:

Real Property.—Public lands, 500,000,000 acres, at \$2 an acre, \$1,000,000,000; cultivated lands, 300,000,000 acres, at \$10 an acre, \$3,000,000,000; dwelling-houses of all kinds, \$1,000,000,000. Total of real property, \$5,000,000,000.

Personal Property.—Capital to the holders of government stocks, who were American citizens, \$100,000,000; banking stocks, \$100,000,000; slaves, 1,500,000, at \$150 each, \$225,000,000; shipping of all kinds, \$225,000,000; money, farming stock and utensils, manufactures, household furniture and plate, carriages, and every other species of personal property not above enumerated, \$1,550,000,000. Total of personal property, \$2,200,000,000. Grand total of American capital, in real and personal property, \$7,200,000,000.

APPENDIX.

TREATY OF PEACE AND AMITY

BETWEEN HIS BRITANNIC MAJESTY AND THE UNITED STATES OF AMERICA.

His Britannic Majesty and the United States of America, desirous of terminating the war which has unhappy subsisted between the two countries, and of restoring, upon principles of perfect reciprocity, peace, friendship, and good understanding between them, have for that purpose appointed their respective Plenipotentiaries—that is to say: His Britannic Majesty, on his part, has appointed the Right Honorable James Lord Gambier, late Admiral of the White, now Admiral of the Red squadron of His Majesty's Fleet, Henry Goulburn, Esq., a member of the Imperial Parliament, and Under Secretary of State, and William Adams, Esq., Doctor of Civil Laws; and the President of the United States, by and with the advice and consent of the Senate thereof, has appointed John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell, and Albert Gallatin, citizens of the United States—who, after a reciprocal communication of their respective full powers, have agreed upon the following Articles:

ARTICLE THE FIRST.

There shall be a firm and universal peace between His Britannic Majesty and the United States, and between their respective countries, territories, cities, towns, and people, of every degree, without exception of places or persons. All hostilities, both by sea and land, shall cease as soon as this treaty shall have been ratified by both parties, as hereinafter mentioned. All territory, places, and possessions whatsoever, taken by either party from the other during the war, or which may be taken after the signing of this treaty, excepting only the islands hereinafter mentioned, shall be restored without delay, and without causing any destruction or carrying away any of the artillery or other public property originally captured in said forts or places, and which shall remain therein upon the exchange of the ratifications of this treaty, or any slaves or other private property. And all archives, records, deeds, and papers, either of a public nature or belonging to private persons, which in the course of the war may have fallen into the hands of the officers of either party, shall be, as far as may be practicable, forthwith restored and delivered to the proper authorities and persons to whom they respectively belong. Such of the islands in the Bay of Passamaquoddy as are claimed by both parties shall remain in the possession of the party in whose occupation they may be at the time of the exchange of the ratifications of this treaty until the decision respecting the title to the said islands shall have been made in conformity with the fourth article of this treaty. No disposition made by this treaty as to such possession of the islands and territories claimed by both parties shall in any manner whatever be construed to affect the right of either.

ARTICLE THE SECOND.

Immediately after the ratifications of this treaty by both parties, as hereinafter mentioned, orders shall be sent to the armies, squadrons, officers, subjects, and citizens of the two powers to cease from all hostilities. And to prevent all causes of complaint which might arise on account of the prizes which may be taken at sea after the said ratifications of this treaty, it is reciprocally agreed that all vessels and effects which may be taken after the space of twelve days from the said ratifications, upon all parts of the coast of North America, from the latitude of twenty-three degrees north to the latitude of fifty degrees north, and as far eastward in the Atlantic Ocean as the thirty-sixth degree of west longitude from the meridian of Greenwich, shall be restored on each side; that the time shall be thirty days in all other parts of the Atlantic Ocean north of the equinoctial line or equator, and the same time for the British and Irish Channels, for the Gulf of Mexico, and all parts of the West Indies; forty days for the North Seas, for the Baltic, and for all parts of the Mediterranean; sixty days for the Atlantic Ocean south of the equator as far as the latitude of the Cape of Good Hope; ninety days for every part of the world south of the equator; and one hundred and twenty days for all other parts of the world, without exception.

ARTICLE THE THIRD.

All prisoners of war taken on either side, as well by land as by sea, shall be restored as soon as practicable after the ratifications of this treaty, as hereinafter mentioned, on their paying the debts which they may have contracted during their captivity. The two contracting parties respectively engage to discharge, in specie, the advances which may have been made by the other for the sustenance and maintenance of such prisoners.

ARTICLE THE FOURTH.

Whereas it was stipulated by the second article in the treaty of peace of one thousand seven hundred and eighty-three, between His Britannic Majesty and the United States of America, that the boundary of the United States should comprehend all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries, between Nova Scotia on the one part and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting such islands as now are or heretofore have been within the limits of Nova Scotia; and whereas the several islands in the Bay of Passamaquoddy, which is part of the Bay of Fundy, and the Island of Grand Menan, in the said Bay of Fundy, are claimed by the United States as being comprehended within their aforesaid boundaries, which said islands are claimed as belonging to His Britannic Majesty, as having been at the time of and previous to the aforesaid treaty of one thousand seven hundred and eighty-three within the limits of the province of Nova Scotia: In order, therefore, finally to decide upon these claims, it is agreed that they shall be referred to two Commissioners, to be appointed in the following manner, viz.: One

Commissioner shall be appointed by His Britannic Majesty, and one by the President of the United States, by and with the advice and consent of the Senate thereof; and the said two Commissioners so appointed shall be sworn impartially to examine and decide upon the said claims according to such evidence as shall be laid before them on the part of His Britannic Majesty and of the United States respectively. The said Commissioners shall meet at St. Andrew's, in the Province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall, by a declaration or report under their hands and seals, decide to which of the two contracting parties the several islands aforesaid do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three. And if the said Commissioners shall agree in their decision, both parties shall consider such decision as final and conclusive. It is farther agreed, that in the event of the two Commissioners differing upon all or any of the matters so referred to them, or in the event of both or either of the said Commissioners refusing or declining, or willfully omitting to act as such, they shall make, jointly or separately, a report or reports, as well to the government of His Britannic Majesty as to that of the United States, stating in detail the points on which they differ, and the grounds upon which their respective opinions have been formed, or the grounds upon which they, or either of them, have so refused, declined, or omitted to act. And His Britannic Majesty and the Government of the United States hereby agree to refer the report or reports of the said Commissioners to some friendly sovereign or state, to be then named for that purpose, and who shall be requested to decide on the differences which may be stated in the said report or reports, or upon the report of one Commissioner, together with the grounds upon which the other Commissioner shall have refused, declined, or omitted to act, as the case may be. And if the Commissioner so refusing, declining, or omitting to act shall also willfully omit to state the grounds upon which he has so done, in such manner that the said statement may be referred to such friendly sovereign or state, together with the report of such other Commissioner, then such sovereign or state shall decide *ex parte* upon the said report alone. And His Britannic Majesty and the Government of the United States engage to consider the decision of such friendly sovereign or state to be final and conclusive on all the matters so referred.

ARTICLE THE FIFTH.

Whereas neither that point of the highlands lying due north from the source of the River St. Croix, and designated in the former treaty of peace between the two powers as the northwest angle of Nova Scotia, nor the northwesternmost head of Connecticut River has yet been ascertained; and whereas that part of the boundary-line between the dominions of the two powers which extends from the source of the River St. Croix directly north to the above-mentioned northwest angle of Nova Scotia, thence along the said highlands which divide those rivers that empty themselves into the River St. Lawrence from those which fall into the Atlantic Ocean to the northwesternmost head of Connecticut River, thence down along the middle of that river to the forty-fifth degree of north latitude, thence by a line due west on said latitude until it strikes the River Iroquois or Cataraguy, has not yet been surveyed, it is agreed that for these several purposes two Commissioners shall be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in the present article. The said Commissioners shall meet at St. Andrew's, in the Province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall have power to ascertain and determine the points above mentioned, in conformity with the provisions of the said treaty of peace of one thousand seven hundred and eighty-three, and shall cause the boundary aforesaid, from the source of the River St. Croix to the River Iroquois or Cataraguy, to be surveyed and marked, according to the said provisions. The said Commissioners shall make a map of the said boundary, and annex to it a declaration, under their hands and seals, certifying it to be the true map of the said boundary, and particularizing the latitude and longitude of the northwest angle of Nova Scotia, of the northwesternmost head of Connecticut River, and of such other points of the said boundary as they may deem proper. And both parties agree to consider such map and declaration as finally and conclusively fixing the said boundary. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or willfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or state shall be made, in all respects, as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

ARTICLE THE SIXTH.

Whereas by the former treaty of peace that portion of the boundary of the United States from the point where the forty-fifth degree of north latitude strikes the River Iroquois or Cataraguy to Lake Superior was declared to be "along the middle of said river into Lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and Lake Erie, thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication into Lake Huron, thence through the middle of said lake to the water communication between that lake and Lake Superior:" and whereas doubts have arisen what was the middle of the said river, lakes, and water communications, and whether certain islands lying in the same were within the dominions of His Britannic Majesty or of the United States: In order, therefore, finally to decide these doubts, they shall be referred to two Commissioners, to be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in this present article. The said Commissioners shall meet, in the first instance, at Albany, in the State of New York, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall, by a report or declaration under their hands and seals, designate the boundary through the said river, lakes, and water communications, and decide to which of the two contracting parties the several islands lying within the said river, lakes, and water communications do respectively belong, in conformity with the true intent of the said treaty of one thousand seven hundred and eighty-three. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or willfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or state shall be made, in all respects, as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

ARTICLE THE SEVENTH.

It is farther agreed that the said two last-mentioned Commissioners, after they shall have executed the duties assigned to them in the preceding article, shall be, and they are hereby authorized, upon their oaths, impartially to fix and determine, according to the true intent of the said treaty of peace of one thousand seven hundred and eighty-three, that part of the boundary between the dominions of the two powers which extends from the water communication between Lake Huron and Lake Superior to the most northwestern point of the Lake of the Woods, to decide to which of the two parties the several islands lying in the lakes, water communications, and rivers forming the said boundary do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three, and to cause such parts of the said boundary as require it to be surveyed and marked. The said Commissioners shall, by a report or declaration under their hands and seals, designate the boundary aforesaid, state their decision on the

points thus referred to them, and particularize the latitude and longitude of the most northwestern point of the Lake of the Woods, and of such other parts of the said boundary as they may deem proper. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or willfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or state shall be made, in all respects, as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

ARTICLE THE EIGHTH.

The several boards of two Commissioners mentioned in the four preceding articles shall respectively have power to appoint a secretary, and to employ such surveyors, or other persons, as they shall judge necessary. Duplicates of all their respective reports, declarations, statements, and decisions, and of their accounts, and of the journal of their proceedings, shall be delivered by them to the agents of His Britannic Majesty and to the agents of the United States, who may be respectively appointed and authorized to manage the business on behalf of their respective governments. The said Commissioners shall be respectively paid in such manner as shall be agreed between the two contracting parties, such agreement being to be settled at the time of the exchange of the ratification of this treaty. And all other expenses attending the said Commissioners shall be defrayed equally by the two parties. And in the case of death, sickness, resignation, or necessary absence, the place of every such Commissioner respectively shall be supplied in the same manner as such Commissioner was first appointed, and the new Commissioner shall take the same oath or affirmation, and do the same duties. It is farther agreed between the two contracting parties that in case any of the islands mentioned in any of the preceding articles which were in the possession of one of the parties prior to the commencement of the present war between the two countries should, by the decision of any of the boards of Commissioners aforesaid, or of the sovereign or state so referred to, as in the four next preceding articles contained, fall within the dominions of the other party, all grants of land made previous to the commencement of the war by the party having had such possession shall be as valid as if such island or islands had by such decision or decisions been adjudged to be within the dominions of the party having had such possession.

ARTICLE THE NINTH.

The United States of America engage to put an end, immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom they may be at war at the time of such ratification, and forthwith to restore to such tribes or nations respectively all the possessions, rights, and privileges which they may have enjoyed or been entitled to in 1811, previous to such hostilities: *Provided always*, that such tribes or nations shall agree to desist from all hostilities against the United States of America, their citizens and subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly. And His Britannic Majesty engages, on his part, to put an end, immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom he may be at war at the time of such ratification, and forthwith to restore to such tribes or nations respectively all the possessions, rights, and privileges which they may have enjoyed or been entitled to in 1811, previous to such hostilities: *Provided always*, that such tribes or nations shall agree to desist from all hostilities against His Britannic Majesty and his subjects upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly.

ARTICLE THE TENTH.

Whereas the traffic in slaves is irreconcilable with the principles of humanity and justice, and whereas both His Majesty and the United States are desirous of continuing their efforts to promote its entire abolition, it is hereby agreed that both the contracting parties shall use their best endeavors to accomplish so desirable an object.

ARTICLE THE ELEVENTH.

This treaty, when the same shall have been ratified on both sides, without alteration by either of the contracting parties, and the ratifications mutually exchanged, shall be binding on both parties, and the ratifications shall be exchanged at Washington in the space of four months from this day, or sooner if practicable.

In faith whereof, we, the respective plenipotentiaries, have signed this treaty, and have hereunto affixed our seals. Done in triplicate, at Ghent, the twenty-fourth (24th) day of December, one thousand eight hundred and fourteen.
