FOREWORD

A generally accepted standard is defined in the State Building Construction Code as a specification, code, rule, guide or procedure in the field of construction, or related thereto, recognized and accepted as authoritative. The Code Manual for the State Building Construction Code indicates acceptable methods of compliance with the performance requirements of the Code and therefore is acceptable as a generally accepted standard.

The standards are identified by symbols representing the name of the issuing or sponsoring organization or the general category of publications, the title of the standard, and its identification number, the last figures of which frequently indicate the year of issue. The names of the organizations, the abbreviations of their names, and the addresses where copies of the standards may be obtained, are listed herein.

The standards are arranged to correspond with parts 1,2,3,4, and 5 of the State Building Construction Code, relating, in that order to general provisions, space requirements, structural requirements, fire-safety requirements and equipment requirements.

This is the nineteenth edition of the Generally Accepted Standards, superseding the edition dated March 13, 1974.
