**The Season — Wheat**

The harvest of the last months of May has been critical for wheat and corn. It has been a long and difficult season for many farmers, with unpredictable weather and challenging conditions. The harvest is critical because it determines the success of the farming season and the economic well-being of many rural communities. The wheat crop was particularly affected by the wet and cold conditions in the previous months. Homeowners, businesses, and farmers have been working hard to ensure that the harvest is successful. The weather has improved recently, providing some relief for the farmers. The future looks promising if the weather continues to improve, and the crop is able to be harvested successfully.

**A farm in Arizona**

The tenant on your farm in Arizona is not being honest about the amount of land he is using. He should be required to pay rent for the land he is occupying, and the tenant should be held accountable for any damage or loss to the property. It is important to have clear agreements and contracts in place to ensure that both parties are protected.

**Inquiries and Answers.**

Heeding Homer — A common mistake.

It is important to remember Homer when planning the future of our farms. His works provide a rich source of inspiration for farmers, and his insights can help us understand the complexities of life and the challenges we face. Homer's stories of war, love, and sacrifice can help us to reflect on the values that are most important to us, and to consider how we can build a better world.
