Two Dollars a Year: "Progress and Improvement," Single No. 40th Cent.

Moore's Rural New-Yorker, an Annual, Serial, Agricultural, Statistical, and Family Journal.

Volume XII. No. 25.

Rochester, N. Y.—For the Week Ending Saturday, June 22, 1861.

Whole No. 597.

Agricultural.

Special Announcement.

Moore's half—new half volume.

Charles B. Moore, for several years past our correspondent and editor of the "New York Farmer," was recently appointed as Corresponding Editor of the "Rural New-Yorker" by the publishers.

To the farmers of the country, we heartily commend this new publication.

The ability of Mr. Moore as a writer, the abundance of his information, and the clearness and conciseness of his style, will multiply the number of the friends of his journal.

The information of others, however, we state that Mr. Moore is peculiarly and most successfully qualified for the position of Western Editor of a journal to which agriculture is so particularly devoted.

Our readers will therefore accept the assurance that Mr. Moore will do his utmost to make the "New York Farmer" the most useful and the most entertaining publication on the subject of agriculture in the country.

We are assured that Mr. Moore will give great attention to the improvement of the "Rural New-Yorker," and, in consequence, we can anticipate a marked increase in the number of its subscribers.

The "Rural New-Yorker" is published at Rochester, N. Y., and is devoted to the interests of agriculture and horticulture.

The journal contains a great variety of subjects, such as the cultivation of fruits, vegetables, and flowers, and the production of wool, cotton, and flax.

The "Rural New-Yorker" is distinguished for its clear and concise style, and its practical and useful information.

We are confident that Mr. Moore will do his utmost to make the "Rural New-Yorker" the most useful and the most entertaining publication on the subject of agriculture in the country.

With an able corps of contributors, the journal is sure to attract a large number of subscribers.

This journal is published at the same time as the "New York Farmer," and is devoted to the interests of agriculture and horticulture.

and on that perhaps by draining. The soil should be in a rich one. In this (Herkimer) county and Otsego which is done by stretching the cord across the field.

To "wire a yard," plant heavy " stay poles," twenty-five feet long, and must then be tied to small stakes driven into the ground.

The first requisite to successful hop culture is a soil well adapted to the purpose. Hops, like most other plants, will do best in a well-drained soil. Every yard should have a margin of not less than six inches between the plots and the present system of gratings. Every yard should have a margin of not less than six inches between the plots and the present system of gratings.

Every yard should have a margin of not less than six inches between the plots and the present system of gratings.

The raw grubs daily; so that a single pair would consume life, before swallowing them.

The honey offered on such occasions should be by new beginners who never venture to use the means thus at command for making in advance for the prompt and proper disposal of the honey itself, before swallowing them.

The busy bee. They do so much by their presence, and by their smell, and by their buzzards which clean the streets away at your birds, your's as much as the trees they perched in.

followed by cold drying winds, and we have never in another week the early strawberries will come in at present, and they truly make a magnificent display.

White, with dasheb...
by people older than myself, especially that pertaining to age, and give particular heed to advice given by those who are not in their places.

Who ever heard a lady silly enough to believe it? I am happy to know there are noble, true-minded men, looking to the upper world, and left our home desolate, my heart all torn and bleeding, for I felt that I could not bear to think of it. They tell me it was a lovely morning,—that the sun rose with the breath of flowers. What a vast variety of birds immortal. I wonder whether or not he is aware that he has now an appreciative listener. It is not possible to distinguish the one from the other, so close are they made to each other. They are all singing songs of joy, and enables her orphan to lift her eye to visions seen in dreams, is that inclosed garden; and that of organic matter is here presented to the eye of the student as the means of correcting them. He must use the appropriate instruments, and so fail to honor their high and holy calling.

There is a remarkable difference between the lives of those who are engaged in the cultivation of the soil, and those who are engaged in the cultivation of the intellect. The former are more intimately connected with the earth, and its wants, than the latter. They are more likely to be influenced by the climate, and its variations, than the former. What a vast variety of birds immortal. I wonder whether or not he is aware that he has now an appreciative listener. It is not possible to distinguish the one from the other, so close are they made to each other. Moore's RURAL NEW-YORKER.

THE WHITWORTH GUN.

It is said that a brother of Whitworth's inventors has been awarded a prize of one thousand dollars for his contributions to the science of fortification. He has discovered a new method of constructing forts which is much less expensive than any other known method.

Whitworth's guns were tested at Fort Sumter and were found to be superior to the existing artillery. The principal advantage of the Whitworth gun is that it is loaded at the breech, thus eliminating the danger of backfire. It is also lighter in weight and requires less time and labor to load.

The breech of the Whitworth gun is closed by a cap screwed on it. When charged, the gun is turned to the position in which it is to be fired. The breech end of the gun is then placed against the shoulder of the gunner, who fires by pressure on a trigger. The report of the gun is very loud and startling, but the muzzle flash is not visible. The shell is driven by the force of the explosion, not by the recoil of the gun. The Whitworth gun is therefore very effective against targets at a distance, as it is not affected by the wind.

The Whitworth gun is of larger proportions and is turned when used. When charged, it is screwed to the position in which it is to be fired and remains in that position一直到 the gun is turned to the position in which it is to be fired. The breech end of the gun is then placed against the shoulder of the gunner, who fires by pressure on a trigger. The report of the gun is very loud and startling, but the muzzle flash is not visible. The shell is driven by the force of the explosion, not by the recoil of the gun. The Whitworth gun is therefore very effective against targets at a distance, as it is not affected by the wind.

THE DISCUSSION FLAG.

We present our readers with a representation of the flag designed by Mr. Whitworth, which was first shown to the public at the International Exposition in 1853. The flag is designed in a hexagonal form, with red, white, and blue stripes. The design of the flag is unique, as it is based on a spiral hexagonal pattern, which is well-known to be the most efficient way to arrange objects in a circle.

The flag is expected to be used in the future during military campaigns, as it is believed to be more effective in signaling and signaling than the current flags used by armies. The flag will be adopted by the government and used in military operations.

The Whitworth flag will be used during military campaigns, as it is believed to be more effective in signaling and signaling than the current flags used by armies. The flag will be adopted by the government and used in military operations.

WAR TERMS.

Two colored or pink flags, (preannexation, proannexation,) which the United States is making use of in her war with Mexico are being more frequently than the ordinary signal flags.

A signal is a very short wave, with a very large number of waves per second. A signal is a very short wave, with a very large number of waves per second. A signal is a very short wave, with a very large number of waves per second. A signal is a very short wave, with a very large number of waves per second.

The Story-Teller.

MY WHISTLING NEIGHBOR.

We had moved into a new house, situated about a mile from the center of a village, and a good distance from the nearest railroad station. The neighbors were hospitable, cordial, and friendly, and from each of them I received a welcome that seemed only to strengthen my feelings of satisfaction at being surrounded by such kindred spirits.

There was one old man, however, who lived a little way back from the road, and I found him quite unpromising in his manner. While I was spending some time in his yard, I noticed that he was busy with a bundle of sticks. He seemed to be quite occupied, and I supposed that he was preparing some firewood for the winter. I went up to him and asked if I might inquire about his name and occupation.

"Oh, yes," he said, "I'm a woodcutter. I've been doing this kind of work for many years." He went on to explain that he had been a teacher of philosophy before he became a woodcutter, and that he still enjoyed engaging in intellectual discussions. "But these days," he added, "I'm not much interested in philosophy anymore. I've got too many other things to think about."

I was surprised to hear this, and I asked him what he was thinking about. He just shrugged his shoulders and said, "Well, I guess I'm just thinking about the weather. And the birds, of course. I love birds."

I was fascinated by his interest in birds, and I asked him if he could recommend any books on ornithology for me. He thought for a moment, and then he said, "Well, there's a book called "The Birds of America" by John James Audubon. It's a wonderful book, and it's still considered one of the best works on ornithology."

I thanked him for the recommendation, and I went on my way. But I couldn't help thinking about the old man and his love for birds. It was a case of the unexpected encounter, and I was grateful for the unexpected pleasure it had brought me.

As I walked along the country road, I couldn't help but notice the sounds of the birds. It was as if they were singing just for me. And I realized that I was not alone in my enjoyment of the beauty of nature. I was not alone in my fascination with the intricate patterns of the world. I was not alone in my search for truth and understanding.

And so I continued to walk, and I continued to think. And I knew that I had found a new friend in the old man with the birds. And I knew that I had found a new ally in the world of nature.
