Agricultural salt as a weed destroyer.

Salt is at liberty, and invited, to copy freely, by crediting it as the source. By the way, we have found to be the same as that which in the country is called "singly refined," and is, we believe, the best grade of common salt. The salt from the salt works is coarse-grained, and the so-called "agricultural salt," is of a different order. In the country it is called " coarse-grained salt," and in the city it is termed "coarse-grained agricultural salt," but in either case it is of the same kind. It is true that any substance, even paper, may be used for the purpose of destroying weeds. The most common method is to use the salt from the salt works, and to apply it to the soil in the manner in which it is used for fertilizer. The salt is spread over the surface of the ground, and the weeds are killed by the salt. This method is very effective, and is often used by farmers, but it is not always successful. In some cases, the salt may be blown away by the wind, or it may be washed away by rain, and the weeds may not be killed. In other cases, the salt may be washed into the soil, and the crops may be destroyed. In still other cases, the salt may be washed away by the water, and the weeds may not be killed. In all cases, the salt must be applied in the right manner and in the right quantity, and the weeds must be killed before they grow too large. The salt must be applied in such a way that it will not be washed away by the rain or the wind, and the weeds must be killed before they grow too large.

The salt is applied to the soil in the spring or the fall, before the weeds have grown up, and after the crops have been harvested. The salt is applied in the form of a thick solution, and is spread over the surface of the ground with a hand shovel or a spade. The salt is applied in a thin layer, and is allowed to dry on the surface of the ground. The salt is then mixed with the soil, and the weeds are killed by the salt. The salt is applied in the fall, before the weeds have grown up, and after the crops have been harvested. The salt is applied in the form of a thick solution, and is spread over the surface of the ground with a hand shovel or a spade. The salt is applied in a thin layer, and is allowed to dry on the surface of the ground. The salt is then mixed with the soil, and the weeds are killed by the salt.

Hörner, moores RURAL NEW-YORKER.

HOW TO KEEP COOL.

It was much pleased with a presentation in the last RURAL NEW-YORKER, of a neat little sheep-shearing settle—

In the first place, let him be a good father, to his own thoughts. All his thoughts should be directed to the great end of his existence, to do good to others. His mind should constantly be attracted to the subject of improving his sphere of existence, and to the production of good and useful things. In the second place, let him be a good husbandman, to the soil he tills. He should constantly be employed in improving his own resources, and in the production of good and useful things. In the third place, let him be a good scholar, to the knowledge he possesses. He should constantly be employed in improving his own knowledge, and in the production of good and useful things. In the fourth place, let him be a good artisan, to the art he practises. He should constantly be employed in improving his own art, and in the production of good and useful things. In the fifth place, let him be a good statesman, to the country he governs. He should constantly be employed in improving the prosperity of his country, and in the production of good and useful things.

Rural Spirit of the Farm.

How to Keep Cool.

THE SPECIAL FARMER.

FOOT ROT IN HORSES.—Will the RURAL, or some of its correspondents, please to state what is the treatment for this complaint? I have at present fifteen horses, and about the same number of the undermentioned, all of which are suffering from this complaint.

In the first place, let him be a good father, to his own thoughts. All his thoughts should be directed to the great end of his existence, to do good to others. Meeting of the Fifth Empire Society.

The Fifth Meeting of the Fifth Empire Society was held at the Columbian Institute, on Tuesday, March 14th, 1863. The meeting was opened by the President, Mr. S. W. Holcomb, who gave an account of the state of our city and surrounding counties, and then introduced the first paper of the day, which was read by Mr. H. C. Barlow, on the subject of strawberry culture. Mr. Barlow spoke of the need for more care in the cultivation of strawberries, and recommended the use of mulches, and the early removal of weeds. He also gave some tips on the best varieties of strawberries to grow in the region.

The President then introduced Mr. W. S. Deane, who spoke on the subject of the cultivation of the sweet apple. Mr. Deane gave a detailed account of the history of the apple, and the various methods of cultivation that had been tried. He recommended the use of grafting, and the selection of the best seeds for planting. He also spoke of the importance of good management in the cultivation of the apple.

The meeting then adjourned, and the members went to the Lyceum Hall for the season's opening of the scientific lectures, which was well attended.

Domestic Economy

The Science of Eco-Managing

There is a right way to do any thing, and among the most important of household duties, is knowing how to wash your clothes. Mr. Barry gave an account of his many years experience in washing clothes, and recommended the use of soap, and the proper way to wash clothes. He also gave some tips on the best way to dry clothes, and the importance of good management in the drying process.

Mr. Barry then introduced Mr. Holcomb, who spoke on the subject of the care of the home. Mr. Holcomb gave a detailed account of the various parts of the house, and the best way to manage them. He recommended the use of good ventilation, and the proper care of furniture. He also spoke of the importance of good management in the care of the home.

The meeting then adjourned, and the members went to the Lyceum Hall for the season's opening of the scientific lectures, which was well attended.
from your brow? Do men look coldly and scornfully an erring one; and half its loveliness. When this departs, one of the earth,—the purest, holiest feeling that barns within you a sister's ardent love. Have* you ever spoken who will never forsake. Does something "whisper you. Has the breeze of fortune chanced to bear to You know not the wound sister's that harsh word, -and she weeps to think that you

How lovely is the bond that unites two sisters; but beautiful, elevated, sublime, Remember your heart should be a fountain, whence the thrills of life, but the sharing with the poor among us enriching the intellect with adornings that would

AN old man sat before the fire

The thrilling cry of freedom rung,

Pealed far away the startling Bound

When his life was young and bright.

The Telephonic Signal Service of the War Department has grown a very graphic description of movement in the South. The little but vital wire extending from Richmond to the West Point of the plains is a nervous and quick current of great strength which can carry news from the frontier to the capital in a few minutes. This wire is a marvel of efficiency and speed, capable of carrying the most important dispatches in the shortest possible time. It is a perfect system of telegraphic communication, and in the hands of men of great ability and experience, it has become a powerful weapon in the hands of the Government. The wire is constantly kept in a state of readiness and efficiency, and its use is rapidly increasing with the extension of the telegraph service throughout the country.

The wire is constantly kept in a state of readiness and efficiency, and its use is rapidly increasing with the extension of the telegraph service throughout the country.

The President of the United States, in his message to Congress, has expressed the highest satisfaction with the progress of the telegraph service and has recommended the extension of it to all parts of the country. The war telegraph is a formidable instrument of war, and it is to be hoped that it will be used to the utmost extent in the coming war. The President has taken this step in order to give the Government full control of the telegraph service, and to enable it to use it for the purposes of war and defense. The war telegraph is a formidable instrument of war, and it is to be hoped that it will be used to the utmost extent in the coming war. The President has taken this step in order to give the Government full control of the telegraph service, and to enable it to use it for the purposes of war and defense. The wire is a perfect system of telegraphic communication, and in the hands of men of great ability and experience, it has become a powerful weapon in the hands of the Government. The wire is constantly kept in a state of readiness and efficiency, and its use is rapidly increasing with the extension of the telegraph service throughout the country.
Capitulation of a Rebel Privateer.

The commissioners of the Confederate States of America, having, at the request of the Government of the United States, at Washington, at two o'clock of this day, come to terms with the officers of the privateer Savannah, two hundred and fifty tons, in a vessel under the command of Captain T. Harrison Baker, of North Carolina, and have agreed with them that the vessel shall be surrendered to the officers of the United States, and that the..

DECLARATION OF AMERICAN INDEPENDENCE

AUGUST 4, 1776.

WON, in the course of human events, it becomes necessary for us, the people, to dissolve the political bands which have connected us with another nation, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute new Government, laying its foundaions on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such Government, and to provide new guards for their future security. Such has been the patient suffering of these colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object their establishment and invention. He had called together legislative bodies at places elsewhere than where they were appointed by the people, for the sole and express purpose of redressing complaints which they were solemnly recommended by that people. He has endeavored to prevent the population of our neighboring provincies, establishing therein an arbitrary tax. In every stage of these oppressions, we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A Prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.
The United States have warned them from time to time of their dangerous situation and the necessity of immediate attention. They have warned them not to expect support from us; that we had sent other American officers to pay a visit to the King of Great Britain. He has endeavored to prevent the population of our neighboring provincies, establishing therein an arbitrary tax. In every stage of these oppressions, we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A Prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

He has endeavored to prevent the population of our neighboring provincies, establishing therein an arbitrary tax. In every stage of these oppressions, we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A Prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

We, therefore, the Representatives of the United States of America, in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, and multifarious advantages, are, on the one side, and the United States, on the other, have entered into a convention, and are, and shall be bound by the same. The convention contains the following articles:
