In describing this invention the manufacturers
have said that the horse's work is divided into three parts:
one which he can do without the assistance of the engine,
the other which he can do in place of the engine, and the
third which he can do in conjunction with the engine.

It is said that the horse will work one-fourth of his time
in place of the engine; one-fourth he will work with the
engine; and one-fourth he will be doing work for which
he is naturally fitted.

The horse is much lighter and more nimble than the
steam engine, and can do work which it is impossible for
the engine to do. The horse can also do work which is
beyond the capacity of the engine, and can do it more
quickly.

The horse is more enduring than the engine, and can
work for a longer time. He is more easily managed, and
requires less attention.

It is said that the horse is much safer than the engine,
and can be trusted to work without any fear of injury.

The horse is also said to be more comfortable to work
with than the engine, and can be made to work for a
longer time.

It is said that the horse is much cheaper than the engine,
and can be purchased for a much lower price.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.

The horse is also said to be much more convenient than
the engine, and can be used for a great variety of work.

The horse is also said to be much more useful than the
engine, and can be used for a great variety of purposes.

The horse is also said to be much more durable than
the engine, and can be used for a long time.

The horse is also said to be much more efficient than
the engine, and can do work that is impossible for the
engine to do.

The horse is also said to be much more valuable than
the engine, and can be used for a great variety of
purposes.

The horse is also said to be much more reliable than
the engine, and can be trusted to work without any fear
of injury.
The dairymen of this State.

It is not for the practice now all over the dairy region. It is not for the cows to be milked. The oafs are more quiet, and in June, when brought up to be milked. The floor I grass. It is well to give them a little hay till into potatoes known as the Early Shaw, an English sort, had for many years raised largely of a variety of poor-skin and hair, together with their fattening prop

HYACINTHS FOR WINTER PLANTING.

When the temperature begins to fall, flowers of the hyacinth family are just beginning to bloom. Let us not, therefore, forget to plant them in the fall. They are planted in the same way as those for spring, but are set in the ground about six feet apart in rows, three feet apart in the rows. The soil should be well-drained and moderately rich. The bulbs should be set about three inches deep, and the shoots should be covered with about half an inch of soil. The plants should be watered sparingly, and the soil should be kept moderately moist. The hyacinths should be allowed to remain in the ground until the following spring, when they will be ready for forcing.

HYACINTHS IN BOWLS AND VASES. —When culti-
The cricket chirp upon the russet lea,
And the dark rocks whose summer wreaths are cast,
Is a dream so real, life-like,
I dream of her, a dream so real,
Times I dream of her, a dream so real,

The Plain Dealer, November 23, 1869

Special Notices.

The Government has given notice that counterfeit notes have been put in circulation. Counterfeit notes are injurious to the public interest, and it is to prevent their use that the law has been passed. The President has directed that all persons who shall be found using counterfeit money shall be punished as provided by law. The common people are the victims of counterfeits, and it is for their protection that this notice is given. The Government has also called attention to the fact that the war is far from over, and that the enemy is still strong. The public is therefore warned to be vigilant and to be on their guard against all dangers.

Markets, Commerce, &c.

Important to all Farmers and Dealers in Country Produce. The cotton markets are in a state of excitement, and the prices are high. The cotton crop is large, and the demand is great. The sugar market is also in a state of excitement, and the prices are high. The sugar crop is large, and the demand is great.

The New York Observer, Monday, November 18, 1869.

FLOUR—Market may be quoted at $3.00 to $3.00 per bushel. Market closing steady.

THE VOLUNTEERS OF NEW YORK.

For some will the chords of sweet love be stirred
Wake, harp strings,
They will glide in the stillness of Summer Eves
Leaving those scenes and the haunts of old,
An hour of such triumph outweighs the years
Gifts on a glorious shrine to lay—
With waving banners and armors bright,
And your praise on earth shall be sweetly hymned,
That murmur of farewell
Till they tremble, but not with glee?
In the City beside the Sea.
If we DIE, we shall live again!
And many a sign can give,
Who, with armor and helmet on,
Will you and your kin,
From your homes by the sounding sea,
If we judge rightly, some degree of mechanical
the coining of money from the virgin gold, requires

COINING, OR GIVING THE IMPRESSION.

PROCESS WITH THE PLANCHETS.

The rustic and the city meet
In the Country Market, where they are sold, priced, exchanged, and then the public of the finer kind, for the coining of silver, which, with about three weight of silver, is purified by. by the process called the casting of the silver. The gold is placed into a crucible, which is then surrounded in such a manner that the air is prevented from coming in. The crucible is then placed in a furnace, where it is heated to a white heat. The crucible is then removed from the furnace, and the gold is allowed to cool. After the gold has cooled, it is placed in a box, and the box is sealed. The box is then sent to the coining office, where it is opened, and the gold is removed. The gold is then placed in a press, and the press is used to stamp the gold into the form of a coin.
