Agricultural.

Michigan farming and pasture.

During our visit to Michigan we made a careful examination of the state's agriculture and pasture. We found that the state is well known for its well-managed farms and the good condition of its livestock. In the vicinity of the villages and cities on the Central and Southern railroads, we had many opportunities to visit some of the finest farms in the state. We were shown over the farm of Mr. E. W. Smith, which is well known for its high yields of corn, wheat, and oats. The farm contains about 70 acres, lying on the southern side of the city, in an oblong square. It is bounded by a good fence, clean fields, numerous handsome flocks of sheep, and well-drained pasture lands. The farm is so well managed that it is a model for other farmers in the state. The farm is not only a profitable business, but it is a good example of sound farming practices.

Our visit to the grazing and stock farm of Dwight M-Bert, an enterprising cultivator, his buildings, lawn, and other improvements, were combined into a beautiful and healthy condition. The farm is situated in a favorable location, and the climate is favorable to the growth of various crops. The farm is one of the most substantial manner, by a regular stone mason, and the structure bids fair to prove the capability of the farm. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose.

The MARSHALL 7-NODEL COW.

Twenty-one of the animals were professed to be first-class cows, and were sold to farmers at various prices. The cows were all well-managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose.

THE MANURE MAKING SEASON.

The season for making manure is now in full swing, and the farmers are busy at work on their farms. The manure is well manure, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose.

TWO DOLLARS PER YEAR.

In conclusion, we would advise farmers to be diligent in the manure making season, and to make the most of it. The manure is well manure, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose. The farm is well managed, and the production of the crops is very high. The farm is well adapted for the operation of a large farm, and the structure is well designed for the purpose.
at one of these forms has 15 or 20 bars, and is furnished with a long spring spring. I have seen some which are over 200 feet long. The longer the bar, the better is the instrument. The spring is wound upon a bar, and should be as tight as possible. It should be wound upon a bar, and should be as tight as possible.

When the bar is wound upon a bar, and should be as tight as possible. It should be wound upon a bar, and should be as tight as possible. The spring should be wound upon a bar, and should be as tight as possible. It should be wound upon a bar, and should be as tight as possible. The spring should be wound upon a bar, and should be as tight as possible. It should be wound upon a bar, and should be as tight as possible. The spring should be wound upon a bar, and should be as tight as possible.
Horticultural.

WINDO\\R GARDENING.

It is in the nature to pursue some studies for the benefit of our gardens. We must have planting-time and some such seasons as give us opportunities for a long time to come. The plants that we have in our gardens are important to us. If we desire to have good and healthy plants, we must be careful not to plant them without due regard to the season. If we neglect the season, they will not grow as well as they should. If we plant too early, the plants will suffer from the cold weather. If we plant too late, they will not have enough time to grow. It is therefore of great importance to be careful about the season when we plant our plants. If we followed the advice of the horticulturist, we should be able to obtain very good results. The horticulturist says, "It is better to plant too late than too early." We should therefore be careful not to plant too early.

DOMESTIC ECONOMY.

CUBES.

Cubes are not the most common of foods in our country. They are, however, very much used in Europe. The reason is, that they are very convenient to carry and eat. They are made of various materials, such as sugar, chocolate, and various other substances. They are very rich in flavor, and are therefore very popular. They are also very nutritious, and are therefore very healthy. It is therefore of great importance to be careful about the season when we plant our plants.

The Rural in the Family.

We are reliably informed that the New-Yorker, among others, is very zealous in the schools, where women are taught. In one session, the board of directors met at night, to hear reports from the principal. There was a large audience present, and the principal proceeded to explain the system of teaching. He said that the school was conducted on the principle of "equality." The parents were required to come to the school, and to assist in the teaching. The children were to be taught reading, writing, and arithmetic. The principal also stated that the school was conducted under the direction of the "spiritual" leaders of the community. The principal concluded by saying that the school was conducted on a "voluntary" basis, and that all who wished to assist in the teaching were free to do so.

The Story-Teller.

OUT OF WORK.

By Stephen C. Foster.

"If I'd of seen him, Mister, I'd a' spied a dozen," said our friend, and offered me the place! The old curmudgeon, for he was a bad-tempered man, said, "I'm glad you've come down just as I was going to start on a tour of the country, because I am in want of a man to take care of the business as you ever see a bar-tender at town."

You may find something to do, if it is only to hold you a bench. I honor 'em all, and they hold me up there."

"Why, first I went to Mrs. Snow's. I knew her, and offered her some work done. Anybody might have done it, but she took it up."

"And I, true sentry, answer: Here! Another camp is near in view! Slow sinking now I see them wave there gleams full many a golden star, and they flash a silent, flickering light. Whence none, alas! for me comes back; I'm not going on guard any more."
