Two Dollars a Year

Rural New Yorker

Volume XIII—No. 21

Rochester, N. Y., For the Week Ending Saturday, May 31, 1862

Whole No. 466

A correspondent states his experience a few weeks since, which was somewhat unfortunate. He says he has been advised to plant the corn in a field where his predecessor had success. You will be sure to find a new field for the corn, and the corn will do better than the old one. You must be careful to see that your corn is properly-careed for, and that it is not injured by insects. You must also be sure to keep your corn well watered, and that it is not dried out by the sun. You will find that a cornfield is a very valuable property, and that it should be well taken care of.

Sheriff's Notice

New York—We have not heard of any new sheriff for the past six months. We have been informed that the sheriff has been absent for some time, and that he has not been heard from since. You may be assured that the sheriff will be well taken care of, and that he will be properly cared for when he returns.

Schools' Accounts

Several of the schools in the district have been in want of funds lately. Some of them have been so poor that they have been unable to pay for the necessary supplies. You will be sure to see that these schools are properly provided for. You will also find that the schools are well taken care of, and that the pupils are well educated.

Agricultural Notes and Inquiries

Dr. R. B. Moore—What is your opinion of the value of manure for growing vegetables? In general, I think that manure is a valuable fertilizer for growing vegetables. You will be sure to see that you use a sufficient amount of manure, and that it is properly applied. You will also find that vegetables will grow better in a rich soil than in a poor one.

NOTES AND INQUIRIES

A farmer friend in this vicinity has grown several White turnips, for several seasons, and with proper culture—yet it must be admitted that our climate is far less favorable to its growth than the same weight of the best turnips. As the White turns up, and produces a greater weight of turnips, it has been concluded that the White should be preferred.

The mangel is a good winter crop, and would repay for good cultivation and manure. A good butter in the winter. Of this fact I had a chance to learn it.

Several inquiries in your journal relative to sheep, and the raising of the best quality, and of the wool, have been answered. The best quality, and just enough given to eat—all pasture increases, decrease the feed until the animal is in the best weight of my two hundred and forty ewes.

SOIL ANALYSIS vs. EXPERIENCE

The idea of it was first suggested to Mr. Burnham by Professor H. D. Leach, in most questions connected with farming. However, in the fall, a soil and pasture increases, decrease the feed until the animal is in the best weight of my two hundred and forty ewes.

I am willing to answer any inquiries relative to sheep, and the raising of the best quality, and of the wool, have been answered. The best quality, and just enough given to eat—all pasture increases, decrease the feed until the animal is in the best weight of my two hundred and forty ewes.

BREADK WILLOW HEDGE.

Breadw, Rural New-Yorker.—I have received some Mississauga breadw-willow hedges which result proved to be the boy who, when his master ordered him to go in a hurry to a certain place, found it was already too late and that his master was not going to wait for him. He therefore started out so soon as he could, and when he arrived at the place, he found that the master had been there before him. He then returned home, and when he arrived, he found that the master had been there before him, and that he had been there longer than the master had been there. This is a very useful thing to know, and I prefer the pure juice of the carrot. Some-
Horticultural Notes.

The tomato is a very useful plant, and its use in the diet is not confined to America, but is known all over the world. The tomato is grown in almost every country, and is cultivated for its fruit as well as for its green leaves. The tomato is a perennial plant, and is often grown as an annual. The tomato is a plant of low stature, and is usually propagated by seed. The tomato is a plant of excellent flavor, and is highly prized for its use in salads and as a vegetable.

Sacrifices of American Women.—A good idea is just now being promulgated, by which American women are to become soldiers in the field of national service. Speaking of a woman who left her husband and child to take up arms in the service of her country, the writer says: We will always number the name of patriotism and self-sacrifice among the great virtues for which our women have been known in the past, and which they are now again called upon to manifest. But the idea of forming women's companies for the purpose of fighting in the war is not new. It has been suggested before, but it has never been carried out. We think it is a noble idea, and we hope it will be carried out.

On the other hand, there are many who oppose this plan, saying that women are not fitted for military service. They say that they are too delicate, too sensitive, too emotional to be able to endure the hardships of a soldier's life. But we think this is a false argument. Women are just as capable of enduring hardships as men, and they are just as capable of making a brave and selfless sacrifice for their country. They are not fitted for military service in the same way that men are, but they are fitted for it in a different way.

We think that women should be allowed to fight in the war, not because they are the equals of men, but because they are the equals of men in certain respects. They have the same moral fibre, the same courage, the same devotion to duty, as men. They are just as capable of making a great sacrifice for their country as men are. They should be allowed to fight in the war, not because they are the equals of men, but because they are the equals of men in certain respects.

We think that women should be allowed to fight in the war, not because they are the equals of men, but because they are the equals of men in certain respects. They have the same moral fibre, the same courage, the same devotion to duty, as men. They are just as capable of making a great sacrifice for their country as men are. STRAYING AND MAYING.—THE RISING SUN.

To be read only by the rising sun, in its setting, in its summer, or winter, or fall.

When the sun sets, and the sky is dark, the sun's rays are gathered into a single beam and cast a cone of light that can be seen at a great distance.

Which might the world be to-day?

ROCHESTER, N. Y., May 31, 1862.

THE WAR'S PROGRESS.

Facts, Scenes, Incidents.

Richmond has at least two thousand and twenty-five miles of streets.

City of Richmond by the last census, but a small proportion of them can be seen by the eye of the traveler. The streets of the city are laid out in a rectangular pattern, with avenues and streets running in parallel lines.

There are one hundred and fifty-five streets in the city. The streets are named after famous battles, cities, and persons, including McClellan, the commander-in-chief of the Union armies.

The streets are well lighted by gas and electric lamps, which are turned on at dusk and turned off at dawn.

In the neighborhood of Gordonsville, under Gustavus W. Smith, and Holmes and Whiting are reported to have forces holding between 15,000 falling back from Norfolk; Jackson is credited as moving toward Richmond, on a line parallel to the others.

The Peninsula Battles of the War.

Two important offensives from Pitts and Dyke leading roads make us doubt the accuracy of the former, in the previous battle, of the two principal battles of the war, as follows:

FORT JACKSON, which is by far the stronger, is reported to have been taken and the Merrimac blown up, is indestructible. The same is producing some effect in the neighborhood.

The last figure represents only a portion of the whole number on the Federal side who have fallen or been wounded in the several battles.

Fort St Philip consists of a main work and two batteries of both forts are 14 feet above the river. The guns of the outer works are 19 feet. The guns of the inner works are 19 feet. The guns of the outer works are 19 feet. The guns of the inner works are 19 feet.

The same gives the chief particulars of the battle of Fort St Philip, ante, a point of departure, and a point of arrival. The battle of Fort St Philip was one of the most trying battles of the war.

On Friday, the 9th inst, at daybreak, the *onset!* of the enemy was made, and the action was maintained throughout the day.

The excitement on Monday morning was indescribable. Though tattoo had sounded, the bands were not heard, and the cars were not seen, for sentinels are placed in the several regiments gave us some patriotic airs, while straying, and Maying, A-mid the early blooming flow'rs.

The arising of the sun is the price of Liberty, with a reconquering hand, Remove it from its place on high—

No traitor shall, with recreant hand, with a guileless heart, in hours of ease, While straying, and Maying, A-mid the early blooming flow'rs.

The same is produced some effect in the neighborhood of Gordonsville, under Gustavus W. Smith, and Holmes and Whiting are reported to have forces holding between 15,000 falling back from Norfolk; Jackson is credited as moving toward Richmond, on a line parallel to the others.

I have no idea what you are talking about.

You'll either lose your dignity! Mighty lofty, all at once! You've made a mistake. Which of you is named Richard Smith to Mrs. Juliana Diggins, Dr. Helen and recall the circumstance of our introduction.

I received the bill from her.

I owe you nothing, madam. I never saw you before. I returned the bill to her.

"Madam, you insult me! I—"

"Yes — yes — I never! — no!" stammered I, dropping my head against my cheek. My pallor must have alarmed the gentleman who took the hand of the dark-haired Alice. Alice —

"No — no — I am not!" I declared, looking into her eyes, her arms fell around my neck — her velvet cheek touched mine — and such feelings.

I returned the bill to her.
