Agricultural.

Winter Care of Sheep.

As the period in the agricultural history of our country has arrived when the sheep are to be kept in doors, it is proper to recall the results of the experiences during the winter, which pertain to the care of these animals. The winter is a period of great trial and hardship, during which many losses of life, and others of property, may be the consequence of improper management. In considering the winter care of sheep, we will begin with the health of the flock, and then proceed to the practical topics of feeding and housing.

The health of the flock

The health of the flock is of vital importance, and must be carefully attended to. The first consideration is to prevent the sheep from becoming diseased. This can be done by keeping them clean and dry, and by providing them with wholesome feed. If disease should occur, it must be treated promptly and effectively.

Feeding and housing

The feeding and housing of sheep are equally important. The feed should be of good quality, and should be varied to suit the nutritional needs of the sheep. The housing should be adequate to protect the sheep from the elements, and should be cleaned regularly to prevent the accumulation of dirt and odors.

Sanford, Victor Wright, and other noted breeders of Merinos in the Green Mountain State, so famous for its fine-wooled sheep, Morgan horses, etc.

European Agriculture.

Further Application of Ammonia.

The recent experiments of von Schrader on the application of ammonia to the soil have been of great interest to agriculturists. The results of these experiments have shown that ammonia is a valuable fertilizer, and that it can be applied to the soil in a variety of ways.

The application of ammonia to the soil

The application of ammonia to the soil is a simple process, and can be easily carried out by any farmer. The ammonia should be applied to the soil in the form of a liquid, and should be mixed with the soil thoroughly before planting.

Conclusion

In conclusion, we wish to emphasize the importance of proper management in the care of sheep during the winter. By following the recommendations given in this article, we can ensure the health and prosperity of our sheep, and thus secure a good harvest in the spring.

repose a force equal to a full company to capture the Cape. Arriving before it, they opened fire, forcing the enemy to surrender. A few minutes later, the rebel forces retreated toward the north. The capture of the Cape was considered a significant victory for the Union forces.

On the 14th, Gen. McClellan's troops arrived in front of Mrs. Welcome, marking the beginning of the siege of the city. The regiments were billeted in various parts of the city, including the Nineteenth Connecticut Volunteer Infantry, which was stationed in the northernmost part of the city. The regiment was under the command of Col. Strong and was expected to play a significant role in the upcoming battle.

The rattle of musketry continued for about half an hour, and the enemy gave way, allowing our troops to advance. The battle was fought in the vicinity of Fort Libby, and a number of prisoners were taken during the day, most of them by the 18th Vermont. The surrender of the enemy was caused by the superior force of our troops, and the position of the city was well established.

The position occupied by McClellan seemed to be advantageous. One of his guns seemed to be specially adapted for the purpose, and the enemy was forced to retreat. The loss on either side was severe, and the battle was fought with such violence and rapidity, that the people were amazed. The enemy's loss unknown. The 14th was a day of bloodshed and destruction, and the city is in a blaze of excitement.

MASSACHUSETTS SIXTH IN BALTIMORE.—The Massachusetts Sixth was mustered in service on the 1st of July last, after marching from Washington on the 29th of June. It is a force equal to a full company, and is commanded by Col. Fitchall. The regiment consists of the 8th Illinois cavalry, and Capt. Fitchall's battery, which is a heavy artillery battery, and carries the flag presented to it by the loyal citizens of Baltimore. The city is in a state of excitement, and the troops are well prepared for their work.

A LAST ON THE PLATTERS.—A lady in Wisconsin, who was eating some plums, accidentally swallowed a stone. She was taken to the hospital, where she was operated upon, and the stone was removed. The patient recovered and is now well.

THE ESSEX.—The value and strength of Captain Long's ship, the Essex, have been increased by the capture of a large number of slaves, which was made during the day, most of them by the 18th Vermont. The siege of the city was begun on the 14th of July, and the position of the city was well established.

In the vicinity of Fort Libby, Sibley was inter-rogated, and was ordered to surrender. He got his troops into position, and advanced against the enemy, who abandoned most of their artillery. The loss on either side was severe, and the battle was fought with such violence and rapidity, that the people were amazed. The enemy's loss unknown. The 14th was a day of bloodshed and destruction, and the city is in a blaze of excitement.
