The Brotlue Nose Pear.

We should before this have acknowledged the beauty and excellence of the new Brotlue Nose Pear from a hybrid and very successful series of crosses, but delay has checked us. To be sure, we have been long in preparing a notice of this variety, but, after all, it is a new one, and we wish to make it as complete as possible. We have several specimens of it, and we believe it to be a distinct species, well worth growing.

The Brotlue Nose Pear is remarkable for its great size, beauty of color, and the perfection of its form. It is a large pear, with a very thick, firm, and glossy skin, of a rich, deep, bluish-purple color, with a slight hue of green. The stalk is short, and the fruit is almost round, with a slight indentation at the top, which is slightly concave. The fruit is very firm, with a rich, sweet, and invigorating flavor, and it is very free from blemishes.

The Brotlue Nose Pear is a hardy variety, and it is said to be productive, with a yield of from ten to twenty bushels per acre. It is particularly adapted to the colder climates, and it is suitable for planting in all parts of the country. It is a new and promising variety, and we strongly recommend its cultivation.

Horticultural Notes.

An interesting fact is that the Brotlue Nose Pear is a new variety, and it is a distinct species, well worth growing. It is a large pear, with a very thick, firm, and glossy skin, of a rich, deep, bluish-purple color, with a slight hue of green. The stalk is short, and the fruit is almost round, with a slight indentation at the top, which is slightly concave. The fruit is very firm, with a rich, sweet, and invigorating flavor, and it is very free from blemishes.

NOV. 28. MOORE'S RURAL NEW-YORKER.

THE EDUCATOR.

The Educator.\footnote{Written for Moore's Rural New-Yorker.}

THE RESPONSIBILITY OF EDUCATION.

To the majority of parents, the question of education is a very practical and personal one; but, from the standpoint of the public, it is more than a question of personal convenience.

The school is a social institution, and as such, it should be subject to the control of the people, who are the ultimate source of all power. The government is the agent of the people, and it is the responsibility of the government to provide for the education of its citizens.

The education of children is a matter of public concern, and it should be conducted in a manner that will benefit the whole community. The schools are places where the youth of the country are trained for citizenship, and it is the duty of the government to see that they are properly educated.

The school should be open to all children, regardless of their race, color, or religion. The schools should be supported by the taxpaying public, and the funds should be used for the purpose of education, and not for the support of religious institutions.

The education of children is a matter of national importance, and it is the duty of the government to see that it is properly conducted. The government should see that the schools are well supported, and that the teachers are properly trained and paid.

The government should see that the schools are properly equipped, and that the children are given a proper education. The government should see that the schools are open to all children, and that they are taught the necessary subjects.

The government should see that the schools are well supported, and that the teachers are properly trained and paid. The government should see that the schools are properly equipped, and that the children are given a proper education.

The government should see that the schools are open to all children, and that they are taught the necessary subjects. The government should see that the schools are well supported, and that the teachers are properly trained and paid.

The government should see that the schools are properly equipped, and that the children are given a proper education.

The Army in Virginia.

The President's dispatch direct headquarters of the Army of the Potomac, Nov. 28.—A field of operations as large as the eastern portion of the State was prepared for them. The enemy crossed the river at several points, and kept a little rise of ground between the pickets and themselves, but was prepared for them. The enemy approached in a line of great length, and was brought to battle. This was fought on the 17th, and the rebel force was broken up, and our men in possession of the ground.
