SNOW SQUASH.

This is an excellent fall squash, being sweeter, firmer, and richer flavored when ripe than the Summer Squash. It keeps through the winter excellently both for soup and the table. The fruit is round and somewhat flattened, with a skin of a rich brown color, with a fine, good, soft, fit it well with measure, then mark off the level soil, not allowing it to touch the skin, as it causes decay. It is a hardy, tough, solid, reliable variety of great value, and so well established in each hill (such as superphosphate, or guano,) as to be in every respect a good old sort. Tree of remarkably vigorous and beautiful growth, and a prolific producer. I would say that the Gravenstein has proved the best kind of productive, yielded with me last year 220 bushels' worth of large, red, luscious fruit, $2.00 per dozen; $15 per 100.

Reading for the Young.

THE CURIOUS BOY.

Mark Abraham was an orphan, in his own opinion, a very curious boy. His mother had died when he was very young, and his father had died in the field of battle.

One day, while Mark was playing near the schoolhouse, he found a small book. The book had a gold cover and a red ribbon bookmark. The title was "The Curious Boy." Mark was intrigued and decided to read the book.

Mark discovered that the book was about a young boy named Peter. Peter was curious about everything and loved to ask questions. He was always looking for answers and never satisfied with the explanations he received.

Mark decided that he wanted to be like Peter. He wanted to be curious about the world and always seek knowledge. From that day on, Mark made it a point to learn as much as he could about the world around him.

The book taught Mark that curiosity is a valuable trait, and he learned to appreciate the world in a new way. He became more observant and began to notice things that he had never noticed before.

In conclusion, "The Curious Boy" taught Mark that curiosity is a key to learning and discovery. By reading this book, Mark was inspired to be more curious and to seek knowledge.

For his next book, Mark decided to read "The Man Who Never Needed a Railroad." He was curious about trains and how they worked, and he wanted to learn more about the history of rail transportation.

He went to the library and found a copy of the book. As he read, he learned about the early days of railroads and the challenges faced by those who built them. He was amazed by the ingenuity of the people who created these marvels of engineering.

Mark realized that he had never thought about the history of railroads before. He was grateful for the opportunity to learn about something new. He decided that he would continue to seek out new knowledge and to be curious about the world around him.

Mark decided that he would start a book club with his friends. They would read books on different topics and discuss the ideas presented in each book. They would learn from each other and continue to broaden their horizons.

Mark's curiosity was sparked, and he knew that he would always be seeking new knowledge. He was grateful for the book "The Curious Boy" and for the inspiration it had given him.

THE NEW BOOK

OF

THE CULTIVATION OF FLOWERS.

Beginning with the names of flowers, alphabetically arranged, the plants are described as to their uses, varieties, the season of flowering, and the soil and mode of raising. The flowers are divided into two classes, annuals and biennials, the former being the chief object of gardeners, and the latter being distinguished by their beauty and durability. The annuals are further divided into the following classes: the hardy annuals, adapted to cool climates; the tender annuals, adapted to warm climates; and the half-hardy annuals, adapted to intermediate climates. The biennials are also divided into the hardy biennials, adapted to cool climates, and the tender biennials, adapted to warm climates. The book contains a large number of illustrations, and is intended for the use of gardeners and florists.
