we have the New York Sentinel, a paper which is widely respected for its intelligence, taste, and discrimination. It zealously advocates the interests of the people, and earnestly labors to render it the most complete agricultural literature. No young man who wishes to be educated need grow up illiterate now.

An interesting discussion in agricultural schools and the importance to the elevation of the industrial classes was brought forward at the Massachusetts Agricultural college in Boston this week. It was pointed out that these industrial schools are of far greater importance than any which are devoted to agricultural pursuits. The average of the life of an animal can be measured by the quantity of spare food it consumes. If it is given too much, it may be killed. If it is not given enough, it may be starved. The average of the life of an animal can be measured by the quantity of spare food it consumes. If it is given too much, it may be killed. If it is not given enough, it may be starved.

The Cuzco Potato.

The Cuzco Potato is a small, white, oval-shaped potato which is grown in the Andes mountains of Peru. It is a popular variety among the local people and is highly valued for its flavor and texture. The Cuzco Potato is a tuberous plant that grows in clumps and produces small, tuberous roots underground. The leaves are small and lanceolate, and the flowers are white or pink. The fruit is a small, dry pod containing many seeds.

We should not apply them direct to the soil. If we do, they may rot the root, and no crop will be produced. We know farmers who practice it for the purpose of learning its nature and location. It is the first step in the cultivation of the soil. We know farmers who practice it for the purpose of learning its nature and location. It is the first step in the cultivation of the soil.

Farmers should use the bulb.

A FARMER in Ohio writes us of the loss of two calves which he had. He says, "Two cows were killed by a bear, and one of them was a bull. The bear was caught and killed by the government." If he did not, he has given us a description of the bear as good as he has written of the calves. If he did not, he has given us a description of the bear as good as he has written of the calves.

The quantity that will be started during the next year will not be enough to increase the stock above the present amount, but if it was increased, it would be sufficient to make wolf hunting the most profitable business in the country.

Burdens foreign wool with the high duty you do not ask for, and you want the capital invested in this new manufacture, we are as well situated as before. We are as well situated as before.

The present perfection of the science of surgery will be greatly appreciated. It is not to be denied, however, that there is a great deal of perverseness in the human system. The brain and the spinal cord are very important to the success of the operation. The brain and the spinal cord are very important to the success of the operation.

The wool trade—near both sides.

The wool trade is near both sides. It is near both sides of the world. It is near both sides of the world.

The wool trade is near both sides. It is near both sides of the world. It is near both sides of the world.
MOORE'S RURAL NEW-YORKER.

A RURAL CHAPLAIN.

E. R. BILLINGS, Conn. We do not know the address of our correspondent. As long as we have not been able to better our position, we shall continue to publish the papers we have received from him. We do not know which is the best of the hand corn makers. The fact that he does not plant eight acres, three or four kernels to the hill, is not likely to be of much consequence in the future. We do not know which is the best of the hand corn makers. The fact that he does not plant eight acres, three or four kernels to the hill, is not likely to be of much consequence in the future.

RURAL, in reference to the best time to apply manure to the soil, is as follows: 

SEEDING AFTER FLAX.—I seeded a piece after flax, and growing, in the yard during the day, and hay in the stable at night. The recent wet weather has been favorable for the growth of the crops. The croakers are silent on the subject of the recent wet weather. The recent wet weather has been favorable for the growth of the crops. The croakers are silent on the subject of the recent wet weather.

WHAT AILED THE COW?—SYMPTOMS.—A slight swelling of the head occurred at the corner of the mouth, and the jaw became considerably swollen. The animal was examined, and found to be suffering from the effects of a bite. The animal was examined, and found to be suffering from the effects of a bite.

TOBACCO IN CAYUGA CO., N. Y.—Mr. JAMES HICKOK of Endicott, N. Y., has just sent a sample of his tobacco to the United States Department of Agriculture. The sample was examined, and found to be free from disease. The sample was examined, and found to be free from disease.

**Horticultural.**

**FLOWING A YOUNG ORCHARD.**

A CONSIDERATION at Naples, N. Y., says by way of advice, "I see Mr. Brown's tree of 1867 has freed from every root, and is now pruned, as also 1868, and my own of last year; if I had 100 trees a year ago, and wish to get 1000 now, I would first choose a place, and then make 1000 little chinks, or deep holes, and to each be added 1000 roots of the trees?"

He says, "I set 100 trees a year ago, and wish for the best method of plowing a young orchard."

It is not difficult to plow the orchard, and stir the soil there with a plow that will break all the roots of the tree, and if the soil is deep, and the roots of the trees short, and not too large, it will be well to plant them 3 or 4 feet apart, and 4 feet from the outside of the tree to the outside of the tree. If the soil is deep, and the roots of the trees are long, it will be well to plant them a little more apart, and to make a smaller hole than usual, and stir the soil there with a smaller plow. If the soil is shallow, and the roots of the trees are long, it will be well to plant them 5 or 6 feet apart, and to make a smaller hole than usual, and stir the soil there with a smaller plow.

Do not think you are doing anything if you do not dig the roots of the tree, because the roots of the tree are not thoroughly cut, it will be well to plant them 3 or 4 feet apart, and 4 feet from the outside of the tree to the outside of the tree. If the soil is deep, and the roots of the trees are long, it will be well to plant them a little more apart, and to make a smaller hole than usual, and stir the soil there with a smaller plow.

Do not think you are doing anything if you do not dig the roots of the tree, because the roots of the tree are not thoroughly cut, it will be well to plant them 3 or 4 feet apart, and 4 feet from the outside of the tree to the outside of the tree. If the soil is deep, and the roots of the trees are long, it will be well to plant them a little more apart, and to make a smaller hole than usual, and stir the soil there with a smaller plow.

**GRAPE GARDENING.—Mr. H.** says, "We are planting grapes in the following order:—First, Alphonso; second, Costa; third, Elbert; fourth, Kober; fifth, Concord; sixth, Delaware, and so on.

The Alphonso is the best grape for the climate, and the best for the soil. The Kober is the most hardy, and the Kober is the best for the soil. The Concord is the most hardy, and the Concord is the best for the soil. The Delaware is the best grape for the climate, and the Delaware is the best for the soil.

The Kober is the best grape for the climate, and the Kober is the best for the soil. The Concord is the most hardy, and the Concord is the best for the soil. The Delaware is the best grape for the climate, and the Delaware is the best for the soil. The Kober is the most hardy, and the Kober is the best for the soil. The Concord is the most hardy, and the Concord is the best for the soil.
