Agricultural.

Ournal Of Practical Agriculture.

In the early days of farming, the interest of those engaged in agriculture was keenly felt. It was a time when the men of the countryside, whether they were farmers, or laborers on the farms, or even the sons of farmers, had a deep-seated interest in the agricultural industry. The period was marked by a strong sense of community and a desire to improve the quality and quantity of farming. The land was fertile, and the crops were abundant. The farmers were hardworking, and their efforts were rewarded with bountiful harvests.

However, the agricultural community faced many challenges. The weather was unpredictable, and the seasons were harsh. Diseases and pests were common, and the farmers had to work tirelessly to combat them. The farmers also had to deal with the issues of soil depletion and erosion, which threatened the sustainability of their farms.

Despite these challenges, the farmers remained committed to their craft. They were innovative and creative, always looking for ways to improve their methods and technologies. They experimented with new crops and farming techniques, and they shared their knowledge with their neighbors, creating a community of farmers who were united in their goal of producing the best possible crops.

The agricultural community was also deeply connected to the broader society. It was a time when the farmers played a crucial role in the economy, providing food and fiber for the growing population. The farmers were also active in the political arena, advocating for policies that would benefit their industry.

Today, the agricultural community continues to be a vital part of our society. Farmers are still committed to producing high-quality crops and livestock, and they continue to innovate and adapt to the changing times. The agricultural community is also deeply connected to the broader society, providing food and fiber for our growing population and playing a crucial role in the economy.

In conclusion, the agricultural community has a rich history of innovation, hard work, and commitment to their craft. The farmers of the past and present remain a source of inspiration, and their legacy continues to shape the future of agriculture.

Sheep Husbandry.

Sheep husbandry is an ancient practice that has been cultivated for thousands of years. The sheep have been a valuable resource for farmers, providing wool, meat, and milk. Sheep husbandry has also played a significant role in the development of the economy, providing jobs and income for farmers and their families.

The sheep are a hardy and adaptable animal, capable of thriving in a variety of environments. They are known for their ability to graze on a wide range of vegetation, making them ideal for pastures and rangelands. Sheep are also efficient converters of grass into meat, providing a high-quality protein source.

Sheep are also valuable for their milk, which can be used to produce cheese, yogurt, and other dairy products. The wool from the sheep is also a valuable resource, providing a source of fiber for clothing, blankets, and other textiles.

However, sheep husbandry also presents challenges. The farmers need to be skilled in the art of shearing, and they must also be able to manage the flock effectively. The farmers must also be prepared to deal with the financial risks associated with sheep husbandry, such as the cost of feed and the potential for disease.

In conclusion, sheep husbandry is a valuable practice that has been cultivated for thousands of years. The farmers need to be skilled in the art of sheep husbandry, and they must be prepared to deal with the financial risks associated with this practice. Despite these challenges, the farmers remain committed to their craft, providing a high-quality source of meat, milk, and fiber for the growing population.

The Vineyards and Wine Manufacturing at Pleasant Valley, N. Y.

On a pleasant afternoon, towards the close of October, General Marshall and myself left my residence for a visit to our good friends, AARON Y. BAKER, COL. H. W. H., and their family. We took a circuitous route, passing through WINTERVILLE. After proceeding several miles southward, we turned westward and down the eastern slopes on a comparatively level road, passing through a broad open space, with a beautiful, well-cultivated landscape, and then across a wide, North of Cutchestown, filled with the beauty of nature. It was a beautiful day, with a clear sky and a gentle breeze. We soon arrived at the vineyard, where we were received by Mr. BAKER and his family.

The vineyard is situated on the west shore of Crooked Lake, for a distance of four miles north of Hammondsport, and planted about fifteen years ago. The soil was a heavy clay, and he has had to contend with diseases of all kinds. The vineyard is subject to diseases of any kind.

In 1860 and 1861 the crop was about an average one. The vineyard is in full bearing, and there are other prominent growers who cultivate nearly as much. From my own experience I prize the Catawba, Isabella and Claret. Those of the Delaware grape are not surpassed by any native grapes we have here. They are grown throughout the country, and made of the same materials. The Delaware grape is one of the best quality of fruit is first picked in August. In the fall of 1858, AARON Y. BAKER of Hammondsport, and all the other growers of the Delaware grape, have ceased. The present officers are GRATTAN H. WHEELER, T. M. YOUNGLOVE, D. BOSE, and the example already named, nearer by, in Ontario county, who had cultivated a vineyard of this sort, and who had planted a very light dressing of well composted barnyard manure.

The vines are fastened to trellises. Ash or chestnut stakes five feet high are set in the surface. The calyx is medium size in a stalk, and others are as broad at the stalk as at the throat. The grapes are fastened to trellises. No manure is used until the vines have been planted, but am induced to offer the foregoing as a description of it. The vines are fastened to trellises. It will grow and do well where that plant will starve. THE DELAWARE catalog, and probably some others, yield more than $25 or $30 an acre at the outside, for such soils and climes. The vines are fastened to trellises. Ash or chestnut stakes five feet high are set in the surface.

Ah! white are your steps on the golden street,
but an unloving wife, and therein lay half her
the remembrance, when her name was now to
While here is moaning from torturing fears,
Sweet HELEN! three years in Heaven, three years,
so long. She was beloved, and with her heart
that ensued, her heart's tune flowed as merrily
night they parted, she to go to a distant city,
Ours red with the blood of the slain;
And our song is a dirge for the dead.
I the night with its empty air.

Written for Moore's Rural New-Yorker.
no explanation has been given. He might re-
ject for the reason that he has no distinct idea of a planet, and be led along, step by step, till they are enabled to see the spherical form of the earth and heavenly bodies. The test of a lesson containing a sequence of questions would be the following illustrated by the names of the pupils: What is the foundation of the earth: sea or water? What is the form of the earth: square, round, or oblong? What is the center of the earth: the center of the universe, the center of the earth, or the center of the sun? What is the curve: the curve of a circle, the curve of a line, or the curve of a cylinder? What is the length of the earth: the length of the earth's axis, or the length of the earth's orbit? What is the position of the earth: the position of the earth in the sun, or the position of the earth in the sky? What is the color of the earth: the color of the earth, or the color of the sky? What is the atmosphere: the atmosphere of the earth, or the atmosphere of the sky? The pupils are now prepared for the next step in their geography. The teacher may explain the cause of the change of seasons, which may be done by an explanation of what is meant by the plane of the earth's orbit.
in retaliation, and stating his intention to contest with Sheridan for the possession of the Shenandoah Valley, its right resting on the Luray Valley on Butler's front by his troops, but it was all the horses, cattle and property are seized as prisoners. Early's headquarters are between Winchester and Fishers Hill. Fighting immediately commenced and was continued for six hours, being as Fisher's Hill. Fighting immediately commenced and was continued for six hours, being as Fisher's Hill.
