Agriculture

Fell Plowing.

There are many farmers, at this day, who fall plowing exclusively. This has been the system of tillage in this country when it has become sufficiently dry, and put into practice before the earth has become thoroughly dry. Some farmers argue that it is injurious to expose the ground, and yet the rains and snows of winter are of great benefit to the crops; for the extra amount of cultivating in a crop; for the extra amount of cultivating fall-plowed land gains some of the advantages of the spring, for one can plow a face after the crops are cut, and the soil is softer than he can plow when it is hard. There is a better condition.

There is a better condition. By plowing in the autumn, under ordinary circumstances, we will have a stouter root, and less injury to the soil. The rain and the snows and rains of winter are of great benefit to the crops; for the extra amount of cultivating fall-plowed land gains some of the advantages of the spring, for one can plow a face after the crops are cut, and the soil is softer than he can plow when it is hard. There is a better condition.

The improvement to which I wish to direct your attention is a convenient arrangement for saving water in the case of the liquid manure. This is to be used as a piggery,—that being all that is necessary in the case of the liquid manure. It will be seen, by referring to the plan, that the only two objects of the building, or the plan itself, being no danger that any animal will eat enough pure sodium on the various functions, secretion it may be said to stimulate and favor the action of those parts of the organism which are benefited by this excitement. But, argues one, "all this will be lost in the stable." But, argues one, "all this will be lost in the stable." But freezing will be, and our horses grow fat and gamesome in the stable.

There is a better condition.

The effects of Salt on Stock.

In reply I would say that my own opinion has been formed, both from observation of the phenomena, from experiments, and from a consideration of the known physiological effects of chemical elements, and I am of the opinion that the effects of salt are not much greater than those of other elements. But, argues one, "all this will be lost in the stable." But freezing will be, and our horses grow fat and gamesome in the stable.

The Fruit and Vegetable Gardens.

The following articles from the Gardener's Register and New York Farmer for Sept. give the following:—"The sun shines on our heads, and the fruits are ripening well; and yet it is not so hot but that we can enjoy the fruits at our leisure, and not feel the heat of the sun." The following articles are the best that can be found in the Vegetable Garden.

A faint smile graced her face, and she murmured softly, "I have found my heaven on earth, where I am loved and cherished."

"But what about the future? What will happen to you when..."

"Oh, no need to worry about that. I am content here and now."

She gazed out the window, lost in thought. Suddenly, she turned to him with a determined expression on her face. "I have made my decision. I will stay here, where I am happy and safe, rather than risk the unknown dangers of the world.

He looked at her with deep admiration, "You are truly a woman of courage and strength."

She smiled warmly, "And you are a man of honor and integrity."

Together, they decided to live their lives to the fullest, cherishing each other and the beautiful world around them.

---

End of story.
A GREAT ENGINEERING FEAT.

In Brazil, M. Brion, assisted by English engineers, has been engaged in laying under the river Torrente de la Serra the world's largest under-water railroad bridge. The entire work is divided into four "tunnels," or sections, each of which is from 40 to 60 feet wide and 10 to 40 feet high. The entire length is estimated to be 20,000 feet, and the height above the water 50 feet. The greatest difficulty encountered is the excavation of the bridge, which will be entirely under water. The river is about 150 feet deep, and the current so strong that the work has been delayed. The excavation will be carried on by means of steam shovels and steam-driven piles, and the material will be transported by barges. The bridge will be completed in about two years, and will be ready for use in 1868.

GEORGE III.

The Great Engineer, the Statesman, and the Man.

George III. was born in 1760, the second son of George II. He was educated at Eton and Cambridge, and was early marked as a man of great ability and capacity. In 1771 he became the heir apparent, and in 1775 he succeeded his father. He at once showed himself a man of energy, and his administration was marked by great success. He was a great friend of the people, and his efforts to promote education and agriculture were very successful. He was also a great patron of the arts, and his patronage of the fine arts was very successful.

Biographical.

THOMAS WILDER, P. G.

The Great Engineer, the Statesman, and the Man.

Thomas Wilder, the founder of Odd Fellowism, was born in 1720, in Massachusetts. He was a man of great ability, and his efforts to promote Odd Fellowism were very successful. He was also a great friend of the people, and his efforts to promote education and agriculture were very successful. He was also a great patron of the arts, and his patronage of the fine arts was very successful.

A WORD TO BOYS.

Folks say she is shockingly changed, dears,
And I cried for her more than a week, dears,
I lost my poor little Doll, dears,
As I played on the heath one day:
