*Made with No. 3A Kodak and
Kodak Portrait Attachment*

KODAK

Resourcefulness

EVERY fact established in one line of endeavor is of value in some allied activity. In covering the whole field of photography, the Eastman organization is able to apply its broad knowledge and its manufacturing resources in a manner that would be impossible to a concern working in a narrower groove.

Even the original Kodak itself was a development based on years of previous experience in the manufacture of goods for the professional photographer. Originally the Eastman Company manufactured glass dry plates, then Bromide papers (the kind of paper that is used for enlargements). It entered also into the manufacture of cameras and roll-holders. These roll-holders were simply an attachment to be fitted to the ordinary plate camera, whereby a paper-base film could be used instead of glass plates. Then, instead of making it as an attachment, the roll-holder became a part of the camera itself and we had—the Kodak.

Even in those early days it was a combination of the knowledge gained in the various fields that made the Kodak Idea possible. The company had had a wide experience in making the rapid negative emulsion used on dry plates. It had had experience in coating, in a continuous roll, the slower emulsion on Bromide paper; it had had experience in camera making and in roll-holder making.

Then this knowledge was combined. The fast emulsion was coated on a paper base; the roll-holder, providing for the use of this "film," became a part of the camera, and the Kodak system was complete—ready to make photography easy for everybody.

No mere manufacturer of dry plates or photographic paper or of cameras could have successfully brought this about. It required an interlocking knowledge of all three products and the facilities for making them. These the Eastman Company had, even then, and that was away back in 1888.

But it was obvious to everybody, and particularly to those in the Eastman factories, that the paper film was far from being the perfect thing it should be. What was required was a flexible base that, like a glass plate, was transparent. Such a base was evolved, but it did not merely make the Kodak more efficient; it made the motion picture possible.

Today the Kodak Company serves the world in photography. Its activities are broad and its manufacturing facilities are in keeping with them, while through the work of its Research Laboratory it has become more than a mere manufacturing concern—it is a photographic university, contributing vitally to all science.

It serves, and serves well, with plates and films and papers and cameras and chemicals, the professional photographer. Its orthochromatic and panchromatic plates are now essentials in science and in industry; its X-Ray products have proved of the highest aid in the mending of men, and its special cameras and films and plates and filters and high-power lenses—developed almost over night—were the eyes of our army that detected German troop movements and camouflage, and helped our boys in the great battles that turned back the invading hosts from suffering France.

And it is the very size of the industry, is because its vastness enables it, regardless of expense, to acquire, in chemistry, in optics, in every branch of photographic manufacture, the best talent from the world over that it is able to keep in the forefront of photographic progress. Every department is closely in touch with every other department; every experiment made for one branch of the work is almost certain to be of value in some allied department.

A chemical discovery that adds to the quality of a professional product is made use of in improving a similar amateur product. The organization that perfected the Kodak Anastigmat lenses made it possible to quickly turn out for our aerial forces the mammoth, high-power lenses which, with microscopic definition told, often from an altitude of 20,000 feet, what the enemy was doing—and it was the knowledge of color filters and orthochromatic photography that made it possible to take such pictures through the smoke and haze of battle.

It was a combination of a knowledge of photography in all the branches, with the facilities for applying that knowledge, that made America quickly independent of foreign sources of supply when war came. For years we had been largely dependent upon Germany for fine lenses. Germany has never made a lens that could equal in its work that which has been done for our air men by lenses designed and made in the Eastman factories since April 6th, 1917. We were dependent very largely upon Germany for certain developers. Those developers are not only now made at Kodak Park, but there are also manufactured or purified there a hundred or more organic chemicals, formerly obtained from abroad and so necessary to the research work that is setting America free from the domination of Germany in the chemical industry.

And so even the simple little box Brownies and the films that they contain have back of them the best the world has to offer in scientific knowledge. It may seem a far cry from the Kodak “snap” of Johnny and Towser romping on the front lawn to an astronomical record of the great eclipse or the thousand-time enlargement of a new germ, but the same thought and research is back of both—and a service has been performed for the whole world.

EASTMAN KODAK COMPANY

ROCHESTER, NEW YORK
“The Kodak City”

THE AUTOGRAPHIC FEATURE

EVERY negative worth the taking is worth a date and usually a further title. And it is a simple matter to make this record.

All Folding Kodaks and Folding Brownies have a little door in the back, covering a panel opening through which one may write on the red paper that protects the film. After the title is written on the red paper it is exposed for a few seconds to the light, and after development becomes a photographic part of the negative itself, such title appearing on the blank section between the exposures.

The record is as permanent as the negative itself.

THE KODAK RANGE FINDER

THE Kodak Range Finder gives you the correct focus to a hair, and with little trouble.

Open the Kodak, drawing out the standard to the limit of motion, and holding the Kodak in the horizontal position, look through (not at) the Range Finder at the three mirrors. Select some horizontal line near the center of the subject, and rack the lens back and forth until this line is continuous in the three mirrors. *When the line is continuous, the focus is correct.* It is all very simple and certain.

SHOWING POSITION OF RANGE FINDER
ON 3A Special

The Kodak Range Finder is fitted to the 1A and 3A Specials only.

VEST POCKET *Autographic* KODAK

THE Vest Pocket Kodak is all that its name implies, and just as on a small scale a watch is the counterpart of a clock, so also is the little Vest Pocket the counterpart of its bigger brothers. Like them it makes pictures with real photographic quality.

Its operation is simple. Opening with one movement to a fixed focus, it is instantly ready for service. And with its autographic feature, it is a veritable vest pocket notebook, adding to the photographic record, the memorandum record of all that goes to make every good time a lasting pleasure. It fits into the day and the place unobtrusively, and though made almost entirely of metal to

stand the knocks and bangs, is so light in weight and compact as to make it convenient to carry at any time. There's always an added pleasure and an advantage in the possession of this little instrument.

The Vest Pocket Autographic Kodak is fitted with No. 0 Kodak Ball Bearing shutter, working without jerk or jar, at speeds of $\frac{1}{25}$ and $\frac{1}{50}$ of a second, as well as the time and "bulb" actions. Also fitted with Kodak Auto-time Scale to aid in giving the correct exposure.

It makes pictures $1\frac{5}{8} \times 2\frac{1}{2}$ inches, loading in daylight with eight-exposure Autographic Film Cartridges (No. A127). The Vest Pocket (\$8.00 model) is supplied with tested meniscus achromatic lens, and the \$9.60 model, with carefully tested Rapid Rectilinear lens, both producing excellent pictures under all ordinary conditions.

The three Anastigmat equipments for the Vest Pocket, *Special*, are as perfect as can be found on any fixed focus hand camera. The Kodak Anastigmat, *f.* 7.7 lens, offers the usual advantages of an anastigmat, so far as sharpness, definition and freedom from astigmatism are concerned. The Kodak Anastigmat and Bausch & Lomb Kodak Anastigmat, *f.* 6.9 lenses, give, in addition to these same advantages, an increased lens speed.

VEST POCKET KODAK
(REGULAR) ACTUAL SIZE

The Vest Pocket Kodak has an all-metal body with black enamel finish for the regular model, while the *Special* is covered with finest pin grain Morocco leather.

Details For rectangular pictures, $1\frac{5}{8} \times 2\frac{1}{2}$ inches. Capacity, 8 exposures without reloading. Size of Kodak, $1 \times 2\frac{3}{8} \times 4\frac{3}{4}$ inches. Weight, 9 ounces. Lens, regular model, meniscus achromatic; for *Special*, Kodak Anastigmat, *f.* 7.7, $3\frac{3}{8}$ -inch focus; Kodak Anastigmat, *f.* 6.9, $3\frac{3}{8}$ -inch focus; or Bausch & Lomb Kodak Anastigmat, *f.* 6.9, $3\frac{1}{2}$ -inch focus. Shutter, Kodak Ball Bearing No. 0. Brilliant reversible finder. All metal body, *Special* covered with pin grain Morocco; nickel and black enamel finish and black leather bellows.

NOS. 1 AND 1A *Autographic* KODAK JUNIORS

FOR anyone who wants a thoroughly reliable camera, easy to operate and so thin and compact as to be pocketed without inconvenience, the Juniors recommend themselves for either the beginner or the experienced, and at a low cost.

Though simple in every detail as focusing cameras, they will be supplied, if desired, as fixed focus cameras for those who prefer this feature. As fixed focus cameras, however, they are supplied only with meniscus achromatic lenses, as listed.

Both cameras are fitted with the Kodak Ball Bearing shutter, with cable release; the No. 1 having speeds of $\frac{1}{25}$ and $\frac{1}{30}$ of a

second, except when supplied with *f.* 7.7 lens, in which case it has the same shutter that is supplied with the No. 1A, with speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second.

The No. 1 Junior makes $2\frac{1}{4} \times 3\frac{1}{4}$ pictures, while the No. 1A makes pictures $2\frac{1}{2} \times 4\frac{1}{4}$ inches, these being the only differences in the two cameras. Both are equipped with the autographic feature for the recording of dates and titles on the film; are well made in every respect, and covered with a good quality of grain leather.

Details For rectangular pictures, No. 1, $2\frac{1}{4} \times 3\frac{1}{4}$ inches; No. 1A, $2\frac{1}{2} \times 4\frac{1}{4}$ inches. Capacity, No. 1, 6 exposures; No. 1A, 12 exposures without reloading. Size of Kodak, No. 1, $1\frac{7}{8} \times 3\frac{5}{8} \times 6\frac{5}{8}$ inches; No. 1A, $1\frac{5}{8} \times 3\frac{3}{4} \times 8$ inches. Weight, No. 1, 23 ounces; No. 1A, 28 ounces. Lenses, meniscus achromatic, Rapid Rectilinear, or Kodak Anastigmat, *f.* 7.7. Shutter, Kodak Ball Bearing with cable release. (See page 36.) Brilliant, reversible, collapsible finders.

No. 2C *Autographic* KODAK JUNIOR

THE 2C Junior is similar, in every way, to the Nos. 1 and 1A Juniors, except in the size of the pictures it makes. It has the same thin, compact form and reliable equipment, but is supplied only as a focusing camera.

The 2C size, which was introduced about three years ago, was designed to retain the same pleasing proportions that have made the 1A and 3A sizes so popular. Its rectangular pictures ($2\frac{7}{8} \times 4\frac{7}{8}$ inches) fit the view, making a pleasing composition in either the horizontal or vertical shapes.

The camera loads in daylight with ten, six or two-exposure Autographic Film Cartridges, permitting the recording of date

and title, or any data that one may desire on the negative. Though regularly supplied with meniscus achromatic lens, the camera, if desired, will be fitted with either Rapid Rectilinear or Kodak Anastigmat, *f.* 7.7 lens, the latter giving the advantages of a fine anastigmat equipment at a low price.

The shutter is the Kodak Ball Bearing with cable release, working at speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second, also for "bulb" and time exposures. The leaves of this shutter, opening in the shape of a star, admit the maximum of light for a given exposure.

The camera has the Kodak characteristics of simplicity, compactness and reliability, and offers the Kodak high standard of efficiency. It has automatic focusing lock, a finder of the new collapsible, reversible type, and two tripod sockets. The back and bed are of aluminum, covered with fine seal grain leather, black leather bellows, and metal parts in nickel and black enamel.

Details For rectangular pictures, $2\frac{7}{8} \times 4\frac{7}{8}$ inches. Capacity, 10 exposures without reloading. Size of Kodak, $1\frac{3}{4} \times 4\frac{3}{8} \times 8\frac{3}{4}$ inches. Weight, 38 ounces. Lens, meniscus achromatic. Also supplied with Rapid Rectilinear or Kodak Anastigmat, *f.* 7.7 lens, $5\frac{3}{4}$ -inch focus, if desired. Shutter, Kodak Ball Bearing with cable release. (See page 36.) Brilliant, reversible, collapsible finder. Two tripod sockets. Black leather bellows.

No. 3A *Autographic* KODAK JUNIOR

HERE is a new camera, which is designed to meet the requirements of those who prefer the simplicity of the Junior line, in the 3A size. It has the same general characteristics as the other Juniors; the same relatively thin, compact form; the same reliable equipment, and like the 2C, is supplied only as a focusing camera.

The No. 3A Kodak Junior makes pictures $3\frac{1}{4} \times 5\frac{1}{2}$ inches—the most popular of amateur sizes—which is adaptable to almost any composition, whether in the vertical or horizontal position. It loads with Autographic Film Cartridges of ten,

six and two exposures, and, of course, has the autographic feature so that the dates and titles may be written on the films at the time of exposure.

The camera is regularly supplied with meniscus achromatic lens, but, if preferred, may be had with either Rapid Rectilinear, or Kodak Anastigmat, *f.* 7.7 lens, the latter a lens of our own manufacture which has given excellent results.

The shutter used is the No. 2 Kodak Ball Bearing with both finger and cable release working automatically, at speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second, also for "bulb" and time exposures.

The camera is carefully constructed throughout, the back and bed are of aluminum, covered with fine seal grain leather, the bellows of black leather and metal parts in nickel and black enamel. The finder is large and of the collapsible, reversible type.

Details For rectangular pictures, $3\frac{1}{4} \times 5\frac{1}{2}$ inches. Capacity, ten exposures without reloading. Size of Kodak, $1\frac{1}{8} \times 5\frac{1}{8} \times 9\frac{3}{4}$ inches. Weight, 35 ounces. Lenses, meniscus achromatic, Rapid Rectilinear, focus $6\frac{5}{8}$ inches, or, if desired, the Kodak Anastigmat, *f.* 7.7 lens, $6\frac{1}{8}$ -inch focus. Shutter, Kodak Ball Bearing No. 2, with cable release. Automatic focusing lock. Two tripod sockets. Brilliant, collapsible, reversible finder. Black leather bellows. Covering, seal grain leather.

No. 1A *Autographic* KODAK

ATHIN, compact camera which will fit in with limited carrying accommodations ; one which will load easily, operate quickly and give every photographic advantage that could be desired by the most exacting amateur, is a desirable companion on any occasion. Such is the 1A Kodak, possessing as it does, many features which add not merely to its efficiency, but its appearance as well.

The back is so cleverly devised as to permit free and instant access to all interior parts ; the finder is large and of the collapsible, reversible, skeleton type, which is easily accessible for cleaning.

The No. 1A makes $2\frac{1}{2} \times 4\frac{1}{4}$ pictures, a shape that is widely adaptable to either horizontal or vertical composition. It has the autographic feature for the recording of data on the film, and loads in daylight with twelve, six and two-exposure Autographic Film Cartridges.

Although regularly supplied with the best quality Rapid Rectilinear lens, it will be fitted, if desired, with Kodak Anastigmat lens, *f.* 7.7, giving the advantages of a fine anastigmat equipment at a low price. The shutter is the Kodak Ball Bearing, with cable release, working at speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second, and time and "bulb" exposures.

It has an improved automatic focusing lock, two tripod sockets, bellows of black leather, back and bed are covered with fine seal grain leather, and metal parts are in nickel and black enamel.

Details For rectangular pictures, $2\frac{1}{2} \times 4\frac{1}{4}$ inches. Capacity, 12 exposures without reloading. Size of Kodak, $1\frac{5}{8} \times 3\frac{3}{4} \times 8$ inches. Weight, $27\frac{1}{2}$ ounces. Lens, double combination, Rapid Rectilinear, $5\frac{5}{16}$ -inch focus, or if desired, Kodak Anastigmat lens, *f.* 7.7, $5\frac{1}{8}$ -inch focus. Shutter, Kodak Ball Bearing with cable release. Automatic focusing lock. Two tripod sockets. Brilliant, collapsible, reversible finder. Black leather bellows.

Nos. 3 AND 3A *Autographic* KODAKS

THE 3A Kodak is the camera that gave pictures of the post-card size ($3\frac{1}{4} \times 5\frac{1}{2}$) their popularity. Pictures of this size and shape are peculiarly adapted to either landscape or portraits and are the largest pictures that can be made with a truly pocket camera. Although the largest of the Kodak series, the 3A may be carried without inconvenience. No detail has been added that is superfluous and none omitted that is essential to the best results in general amateur photography. With its autographic feature, the 3A Kodak fulfills every need of the most advanced amateur.

In lens equipment, this camera is regularly supplied with the finest quality Rapid Rectilinear, with a speed of $f. 8$, or,

if desired, the Kodak Anastigmat, *f.* 7.7 lens, offering the anastigmat advantages at a moderate price. Both the 3 and 3A will accommodate glass plates by the addition of a Combination Back. This back is interchangeable with the regular back, but it should be remembered that autographic records can be made only when the Autographic back is used, and not with Combination back or glass plates. The No. 3 Kodak is practically identical with the 3A, except in size and except that it has a capacity of twelve, six and two exposures, whereas the 3A uses ten, six and two-exposure Autographic Film Cartridges. Both are made of aluminum and covered with best quality seal grain leather.

Details For rectangular pictures, No. 3, $3\frac{1}{4} \times 4\frac{1}{4}$ inches; No. 3A, $3\frac{1}{4} \times 5\frac{1}{2}$ inches. Capacity, No. 3, 12 exposures; No. 3A, 10 exposures without reloading. Size of Kodak, No. 3, $1\frac{3}{4} \times 4\frac{1}{2} \times 7\frac{1}{2}$ inches; No. 3A, $2 \times 4\frac{3}{4} \times 9\frac{1}{2}$ inches. Weight, No. 3, 23 ounces; No. 3A, 41 ounces. Lenses (regular equipment), Rapid Rectilinear, focal length for No. 3, 5 inches; No. 3A, $6\frac{3}{4}$ inches, or, if desired, Kodak Anastigmat, *f.* 7.7 lenses. Shutters, Kodak Ball Bearing with cable release. Two tripod sockets. Black leather bellows. Brilliant, reversible finders with hoods. Rising and sliding fronts. Automatic focusing locks. No. 3A has double focusing scale for films or plates.

No. 1 *Autographic* KODAK, *Special*

EACH series of Kodaks has its distinctive features. In the *Specials*, quality, speed and efficiency have been ingeniously combined with compactness.

Smaller cameras than the No. 1 *Special*, for $2\frac{1}{4} \times 3\frac{1}{4}$ pictures, have been made, but here, photographic results have been considered rather than mere littleness. Its lenses have sufficient length of focus to avoid all violent perspective and at the same time the shutters are large enough to utilize the full speed at which the lenses are listed.

This little Kodak, like any fine piece of mechanism, works with smoothness and precision—a thoroughly capable instrument that is optically correct. The regular equipment is the Kodak Anastigmat lens, *f.* 6.3, and Optimo shutter, with cable release,

highest speed $\frac{1}{300}$ of a second, and variable speeds to one second, in addition to the "bulb" and time actions. Four other high-grade lens equipments are also listed.

It is quickly opened and extended, the focusing scale is easily adjusted for all distances, by a simple lever attachment. It has a brilliant, collapsible, reversible finder with revolving mask for correct composition of pictures in both vertical and horizontal positions.

The camera is beautifully finished throughout and covered with the finest quality long grain calf; black leather bellows and highly nickeled trimmings.

Details For rectangular pictures, $2\frac{1}{4} \times 3\frac{1}{4}$ inches. Capacity, 6 exposures without reloading. Size of Kodak, $1\frac{3}{8} \times 3\frac{3}{8} \times 6\frac{5}{8}$ inches. Weight, $26\frac{1}{2}$ ounces. Lens, Kodak Anastigmat, *f.* 6.3, $4\frac{3}{8}$ -inch focus. Shutter, Optimo with cable release. New brilliant, reversible, collapsible finder. Two tripod sockets and new lever focusing device.

The prices of cameras and film include the Excise War Tax

No. 1A *Autographic* KODAK, *Special*

THE No. 1A *Special*, is typical of the best that is possible in efficiency, beauty in design and finish; in speed and accuracy in hand cameras. For a camera in the $2\frac{1}{2} \times 4\frac{1}{4}$ size, equipped with the finest Anastigmat lenses, and a shutter speed capable of working harmoniously with the high-speed lenses, it meets every amateur requirement for quick, accurate results.

It is beautifully finished and covered with the finest long grain calf, and the best materials are used throughout in its construction.

One of the features of this Kodak is the Kodak Range Finder, permitting accurate focusing without the necessity of

estimating the distances. High-speed lenses require accurate focusing, and the Kodak Range Finder does this simply, quickly, and efficiently.

The 1A *Special* offers a choice of the Kodak Anastigmat, *f.* 6.3 lens, and two other high-grade lenses, and is equipped with the Autographic feature. The shutter is the Optimo, operated either by cable or finger release, and in addition to the usual time and "bulb" actions, has eight variable speeds from one second to $\frac{1}{300}$ of a second.

The fast lenses give the *Specials* a great advantage over the ordinary camera in dull lights, and the high-speed shutters make them second only to cameras having focal plane shutters for photographing rapidly moving objects.

The camera has rising front; brilliant, collapsible, reversible finder with adjustable mask; rack and pinion for focusing, and the usual focusing scale, in addition to the Kodak Range Finder.

Details For rectangular pictures, $2\frac{1}{2} \times 4\frac{1}{4}$ inches. Capacity, 12 exposures without reloading. Size of Kodak, $1\frac{5}{8} \times 3\frac{3}{4} \times 8$ inches. Weight, 32 ounces. Lens, Kodak Anastigmat, *f.* 6.3, $5\frac{1}{16}$ -inch focus. Shutter, Optimo. Two tripod sockets. Brilliant, reversible, collapsible finder with adjustable mask. Rack and pinion for focusing.

Nos. 3 AND 3A *Autographic* KODAKS, *Special*

THE 3A *Special* Kodak has attained and maintained its photographic leadership through perfection in its every detail. It is not merely optically efficient. It is a finished product—a product that shows in its requirements, in its niceties of construction, the master touch.

It has not merely high-speed lenses, but it makes the best use of those lenses because of the Kodak Range Finder, which provides simply and efficiently for accurate focusing—answering almost automatically the question: “How far off is the principal subject?”

All of the lenses listed with these Kodaks are large (fast) and the focal length is long in proportion to the size of the picture, thus avoiding violent perspective.

It offers a choice of the Kodak Anastigmat, *f.* 6.3 lens, and two other high-grade lenses. The shutter is the Optimo, operated either by cable or finger release, and has variable speeds from one second to $\frac{1}{300}$ of a second. The camera is made of aluminum, has rising front, and the usual focusing scale in addition to the Kodak Range Finder. It is richly finished in genuine Persian Morocco, has bellows of selected black leather, and metal parts are highly nickered.

The No. 3 *Special* has the same lenses, shutter equipment and finish, but is not equipped with the Kodak Range Finder.

Details For rectangular pictures, No. 3, $3\frac{1}{4} \times 4\frac{1}{4}$ inches; No. 3A, $3\frac{1}{4} \times 5\frac{1}{2}$ inches. Capacity, No. 3, 12 exposures; No. 3A, 10 exposures without reloading. Size of Kodaks, No. 3, $1\frac{7}{8} \times 4\frac{1}{2} \times 8$ inches; No. 3A, $2 \times 4\frac{3}{4} \times 9\frac{1}{2}$ inches. Weight, No. 3, 32 ounces; No. 3A, 42 ounces. Lenses, Kodak Anastigmat, *f.* 6.3, focal length for No. 3, 5 inches; No. 3A, $6\frac{3}{4}$ inches. Shutters, Optimo with cable release. Two tripod sockets. Brilliant, collapsible, reversible view finders with adjustable window, also Kodak Range Finder for No. 3A. Brilliant, reversible finder with hood and spirit level for No. 3. Rack and pinion for focusing.

STEREO KODAK

THERE is probably no branch of photography more fascinating than that afforded by the Stereo. Pictures which give the full effect of depth, roundness, distance and perspective can be obtained only by the use of twin lenses and when viewed through the stereoscope give the correct visual effect, just as we see with our eyes.

The Stereo Kodak is supplied with carefully matched Kodak Anastigmat, *f.* 7.7 lenses, of the best quality; the shutter is the Stereo No. 2 Ball Bearing for speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$, also "bulb" and time exposures. The camera is equipped with rising front; rack and pinion for focusing, view finder and tripod socket. It is covered with fine seal grain leather and metal parts are in nickel and black enamel.

Details For $3\frac{1}{8} \times 3\frac{3}{16}$ Stereo pictures. Capacity, 6 exposures without reloading. Size of Kodak, $2\frac{3}{16} \times 4\frac{3}{4} \times 10\frac{1}{2}$ inches. Weight, $47\frac{1}{2}$ ounces. Lenses, Kodak Anastigmat, *f.* 7.7, $5\frac{1}{8}$ -inch focus. Shutter, Stereo No. 2 Ball Bearing, with cable release. Finder, tripod socket, rising front, rack and pinion for focusing and black leather bellows.

THE PANORAM KODAKS

THERE are innumerable opportunities for unusual pleasing pictorial effects which can be made with the Panoram Kodak. While they cannot be used successfully indoors, the No. 1, with a scope of 112 degrees, and the No. 4, embracing an angle of 142 degrees, will take beautiful panoramic pictures of outdoor groups, landscapes, mountain views and the like.

The Panorams use the regular daylight loading N. C. Kodak film ; they are carefully made and have genuine leather coverings and nickeled fittings.

Details For rectangular pictures, No. 1, 2¼ x 7 inches ; No. 4, 3½ x 12 inches. Capacity, No. 1, 6 exposures ; No. 4, 4 exposures without reloading. Size of Kodak, No. 1, 3⅜ x 4⅜ x 7⅜ inches ; No. 4, 4¾ x 5⅝ x 10⅛ inches. Weight, No. 1, 24 ounces ; No. 4, 46 ounces. Lenses, specially selected as to quality and focal length. Shutter, Panoram. THE BOX BROWNIES

THERE are thousands of Brownie enthusiasts all over the world, who are making splendid pictures with these little box cameras. The idea of simplicity and reliability combined in an inexpensive camera, has stood the test of years, and they have proved a delight to those who have used them.

While the Brownies are especially popular among children on account of their simplicity, the fact they are so practical has caused them to be taken up by adults who wish to make pictures easily and at the minimum of expense.

NO. 2
BROWNIE

Nos. 0 AND 2 BROWNIES

The No. 0 Brownie makes the popular Vest Pocket size pictures, $1\frac{5}{8} \times 2\frac{1}{2}$ inches, and the No. 2, $2\frac{1}{4} \times 3\frac{1}{4}$ pictures. Both cameras are accurate, reliable, efficient and economical to operate and anybody can make good pictures with them from the start. They have the automatic shutter for snap-shots and time exposures ; the No. 0 with one stop and No. 2 with three

stops. Each has carefully tested meniscus lens and view finders, for vertical and horizontal exposures.

Details Nos. 0 and 2 Brownies. For rectangular pictures, No. 0, $1\frac{5}{8}$ x $2\frac{1}{2}$ inches; No. 2, $2\frac{1}{4}$ x $3\frac{1}{4}$ inches. Capacity, No. 0, 8 exposures; No. 2, 6 exposures without reloading. Size of camera, No. 0, $2\frac{5}{8}$ x $3\frac{3}{8}$ x $4\frac{1}{8}$ inches; No. 2, $3\frac{1}{4}$ x 4 x $5\frac{5}{8}$ inches. Weight, No. 0, 8 ounces; No. 2, 13 ounces. Lenses, meniscus. Shutters, Eastman Rotary. Two finders.

Nos. 2A AND 3 BROWNIES

All the box Brownies are fixed focus and consequently anyone can, with reasonable care, make excellent pictures with them. The No. 2A makes pictures $2\frac{1}{2}$ x $4\frac{1}{4}$ inches, while the No. 3 makes $3\frac{1}{4}$ x $4\frac{1}{4}$ pictures. Each has carefully tested meniscus achromatic lens, Eastman Rotary shutter with three stops, two view finders, and the No. 3 is supplied with two tripod sockets. Both cameras are covered with durable imitation leather covering, with metal parts nicked, and have the daylight-all-the-way feature of the Kodaks.

SHOWING BROWNIE TRIPOD ADAPTER AS USED ON NO. 0 BROWNIE

Details Nos. 2A and 3 Brownies. For rectangular pictures, No. 2A, $2\frac{1}{2}$ x $4\frac{1}{4}$ inches; No. 3, $3\frac{1}{4}$ x $4\frac{1}{4}$ inches. Capacity, 12 exposures without reloading. Size of camera, No. 2A, $3\frac{7}{16}$ x $5\frac{1}{8}$ x $6\frac{1}{8}$ inches; No. 3, $4\frac{3}{8}$ x $5\frac{1}{8}$ x $6\frac{1}{8}$ inches. Weight, No. 2A, 21 ounces; No. 3, 24 ounces. Lenses, meniscus achromatic. Shutters, Eastman Rotary with three stops. Two finders.

No. 2C BROWNIE

BEHIND the Brownie name stands years of practical experience in the best, most usable and most serviceable camera construction. And so, when it became evident that the $2\frac{7}{8} \times 4\frac{7}{8}$ picture was to be one of the most popular amateur sizes, the No. 2C size was added to the box Brownie line.

The 2C has slightly more picture area than the No. 3 size, it fits the view, and its shape is adaptable to almost any composition. But, like the other Brownies, this new camera combines simplicity and reliability with low cost.

Details For rectangular pictures, $2\frac{7}{8} \times 4\frac{7}{8}$ inches. Capacity, 10 exposures without reloading. Size of camera, $3\frac{7}{8} \times 6\frac{1}{4} \times 7\frac{1}{4}$ inches. Weight, 27 ounces. Lens, meniscus achromatic. Shutter, Eastman Rotary, with 3 stops. Two view finders. Two tripod sockets. Covered with durable imitation leather.

No. 2 FOLDING *Autographic* BROWNIE

THIS little Brownie has a host of friends; has the autographic feature, round ends; is efficient, yet simple to operate. It loads in daylight with Autographic Film Cartridges of six exposures. Fitted with meniscus achromatic or Rapid Rectilinear lens as desired. Has Kodak Ball Bearing shutter with variable snap-shot speeds of $\frac{1}{25}$ and $\frac{1}{50}$ of a second; also time and "bulb" actions, and is equipped with Kodak Autotime Scale.

Has reversible finder, automatic focusing lock, two tripod sockets; is made of metal, covered with a fine imitation leather; is well made and carefully finished in every detail.

Details For rectangular pictures, $2\frac{1}{4} \times 3\frac{1}{4}$ inches. Capacity, 6 exposures without reloading. Size of camera, $1\frac{1}{4} \times 3\frac{1}{8} \times 6\frac{1}{2}$ inches. Weight, 19 ounces. Lens, meniscus achromatic. Also supplied with Rapid Rectilinear lens, if desired. Shutter, Kodak Ball Bearing, equipped with Kodak Autotime Scale. Reversible finder, two tripod sockets, automatic focusing lock, black leather bellows.

NOS. 2A AND 2C
FOLDING *Autographic* BROWNIES

THESE two Folding Brownies are identical except in the sizes of the pictures they make. Both are of the same relative compactness; the same simplicity and dependability that have always characterized the Brownie line.

The autographic feature permitting one to date and title the negatives when the exposure is made adds just one more touch of refinement and with the ease and simplicity of operation, these little cameras answer every purpose for the average amateur in the taking of good pictures.

The 2A makes pictures $2\frac{1}{2} \times 4\frac{1}{4}$ inches, loading with twelve, six or two exposure Autographic Film Cartridges

(No. A 116), while the No. 2C picture is $2\frac{7}{8}$ x $4\frac{7}{8}$ inches, in cartridges of ten, six and two exposures (No. A 130).

The regular equipment includes, for either camera, a fine quality meniscus achromatic lens, or, if desired, the Rapid Rectilinear lens. The shutter is the Kodak Ball Bearing, automatic in action; the No. 2A supplied with finger release only, while the No. 2C has both finger and cable release. The snap-shot speeds, however, are the same for both cameras, $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second in addition to the regular time and "bulb" actions.

Both cameras are made of metal covered with durable imitation leather; have black leather bellows; nickel and black enamel fittings; are small in size, neat in appearance, and thoroughly efficient.

Details For rectangular pictures, $2\frac{1}{2}$ x $4\frac{1}{4}$ inches for the No. 2A, and $2\frac{7}{8}$ x $4\frac{7}{8}$ inches for the No. 2C. Capacity, No. 2A, twelve exposures without reloading, and for the No. 2C, ten exposures. Size of cameras, No. 2A, $1\frac{7}{8}$ x $3\frac{3}{8}$ x $7\frac{7}{8}$ inches; No. 2C, $1\frac{3}{4}$ x $3\frac{3}{4}$ x $8\frac{1}{8}$ inches. Weight, No. 2A, 24 ounces; No. 2C, 25 ounces. Lenses, meniscus achromatic, or, if desired, the Rapid Rectilinear. Shutters, Kodak Ball Bearing, equipped with Autotime Scale. Reversible finders, two tripod sockets, automatic focusing locks, and black leather bellows.

NO. 3A FOLDING *Autographic* BROWNIE

LIKE all the other Folding Brownies, this camera has the autographic feature for the recording of the dates and titles on the film; is quick to operate, may be loaded almost instantly and is cleverly constructed and well made throughout.

The 3A is a thoroughly efficient camera and is sure to delight anyone who desires to make pictures the post-card size ($3\frac{1}{4} \times 5\frac{1}{2}$ inches). There is a characteristic Brownie simplicity about it, and with the round ends and its present compactness, may be carried on any occasion, without inconvenience.

It has a fine quality meniscus achromatic lens, or if desired, will be equipped with Rapid Rectilinear lens. The shutter is the Brownie Ball Bearing with cable release; has time and "bulb" actions and snap-shot speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second, and is supplied with Kodak Autotime Scale as an aid to correct exposure.

The camera loads in daylight with ten, six or two-exposure Autographic Film Cartridges (No. A 122); has an automatic focusing lock which permits the quick focusing of objects at any distance. Has reversible finder, two tripod sockets, carrying handle; is constructed of metal, covered with a fine quality imitation leather, bellows of black leather, nickel and black enamel fittings and is carefully made and finished throughout. The No. 3A Folding Autographic Brownie is so simple to operate that anyone, without experience, can secure good results with it from the very start.

Details For rectangular pictures, $3\frac{1}{4} \times 5\frac{1}{2}$ inches. Capacity, 10 exposures without reloading. Size of camera, $1\frac{1}{16} \times 4\frac{5}{16} \times 9\frac{5}{8}$ inches. Weight, 38 ounces. Lens, meniscus achromatic. Also supplied with Rapid Rectilinear lens if desired. Shutter, Brownie Ball Bearing with cable release, also equipped with Kodak Autotime Scale. Reversible finder, two tripod sockets, automatic focusing lock, black leather bellows.

KODAK BALL BEARING SHUTTER

THIS shutter is automatic in its action and does not require setting. Its leaves work on ball bearings, giving it a smooth and reliable action, and as they open and close in a star-shape aperture, the maximum of light is admitted. It is operated by cable release or finger release and has the iris diaphragm.

The No. 0 Ball Bearing shutter, as supplied with the Vest Pocket Kodak and No. 2 Folding Brownie, operates with finger release only, has speeds of $\frac{1}{25}$ and $\frac{1}{50}$ of a second and Autotime Scale. Fitted to the No. 1 Kodak Junior with meniscus achromatic and Rapid Rectilinear lenses, the No. 0 has cable release and not Autotime Scale.

The No. 1 shutter has variable indicated speeds of $\frac{1}{25}$, $\frac{1}{50}$ and $\frac{1}{100}$ of a second, and is regularly fitted to the No. 1A Kodak Junior, No. 2A Folding Brownie and Nos. 1A and 3 Kodaks, and with No. 1 Kodak Junior, when equipped with *f.* 7.7 lens.

The No. 2 shutter is fitted to Nos. 2C and 3A Kodak Juniors, No. 2C Folding Brownie and No. 3A Kodak. This has the same speeds as the No. 1 shutter but is larger. All have "bulb" and time actions.

OPTIMO SHUTTER

THE Optimo is one of the best and most accurate shutters for use with fast Anastigmat lenses. It has remarkable precision, smoothness, ease in action and sufficient speed to photograph rapidly moving objects. The Optimo is now supplied with all the *Specials*. In making an exposure, its five leaves revolve—opening and closing as well—in a star-shaped aperture. In addition to the usual "bulb" and time actions, the Optimo has eight indicated speeds varying from one second to $\frac{1}{300}$ of a second. This thoroughly reliable shutter is of the setting type; has cable and finger release, and is beautifully finished in nickel and black enamel, with the engraving in gold.

KODAK LENSES

THE meniscus achromatic and Rapid Rectilinear lenses supplied with the regular models of the Kodaks and Brownie Cameras, are perfectly adapted to the everyday requirements of the average amateur, producing exceedingly good results under all normal conditions of light. They are the best lenses of their respective types that can be secured.

Since the introduction of the Kodak Anastigmat, *f.* 7.7 lenses, the use of Anastigmats has become very general. These *f.* 7.7 lenses are inexpensive, but they produce Anastigmat results. They are speedier than the fastest rectilinear lenses; in quality, depth, definition (sharpness) and flatness of field, they equal the best Anastigmats made. Their popularity is responsible for the Kodak Anastigmat, *f.* 6.3 lenses, which have the same high quality, and still greater speed.

For Kodak use, you cannot obtain better lenses than the Kodak Anastigmats, at any price.

AUTOGRAPHIC BACKS

THE Autographic feature may be added to the Kodak not originally equipped with this improvement. There is no extra charge for the Autographic Film and with the Autographic feature incorporated in the old Kodak, one may keep an authentic record of each exposure on the negative, to determine at any time, when and where each picture was made.

Autographic backs will be supplied for the Kodaks listed, at the following prices:

No. 1 Kodak Junior	\$2.50
No. 1A Kodak Junior	3.00
No. 1A Folding Pocket Kodak, Rapid Rectilinear Type	3.50
No. 3 Folding Pocket Kodak	3.50
No. 3A Folding Pocket Kodak	3.75

No. 4A Folding Kodak	4.50
No. 1A Special Kodak	4.00
No. 3 Special Kodak	4.00
No. 3A Special Kodak.	4.25

KODAK PORTRAIT ATTACHMENT

EVERYTHING has its limitations. Pocket cameras are not made to work close up to the subject. If they were so made they would have to have a long bellows draw, which would mean a long front board, or an extension to the front board, all of which would mean extra bulk and they

simply wouldn't be pocket cameras any more.

This is where the Kodak Portrait Attachment comes in. It so alters the focus of the lens that the camera can be placed close to the subject and a large *image* (in proportion to the size of the picture) secured. It is invaluable on the hand camera—not merely for making portraits, but for photographing any small objects, such as flowers, or fruits.

The attachment is simply an extra lens, which fits over the barrel of the regular lens. This does not alter the exposure nor affect the operation of the instrument in any way, except to make the lens cut sharply when close to the subject, thereby giving a larger image.

Please order by number, or if required for older models or cameras with special equipments, specify shutter and size of camera.

KODAK SKY FILTERS AND COLOR FILTERS

The Sky Filter is intended to equalize the great difference of light between the sky and foreground in landscape photography. Only the upper half of the filter is stained a yellow color to relieve the brightness from the sky, while the lower half of the filter being colorless, permits a normal exposure for the foreground.

The Kodak Color Filters are of great value in outdoor photography, and for all subjects embracing colors which act weakly on the sensitive film, as they hold back the strong blue and violet rays, affording the weaker colors time to record.

The Kodak Sky Filters and Color Filters are mounted in the same manner as the Kodak Portrait Attachments.

KODAK FILM TANK

ANYBODY can get as correctly developed negatives by developing films in the Kodak Film Tank as an expert can by any known method of development. All that is necessary is to use the developer recommended for use in the tank, and develop for the length of time the tank instructions require for the temperature at which the developer is used. And experience has demonstrated that the tank method of development gets the utmost out of correctly exposed, under-exposed and over-exposed negatives.

It requires experience to know when to stop development by the tray method, but with the tank it is not a matter of guess work, for the experience is in the tank. By consulting the table of temperatures you will know how long your film should be developed. But one of the greatest advantages of the tank is that it may be used in broad daylight, eliminating the dark room entirely.

The Kodak Film Tank consists of a winding box, a light-proof apron, and a heavily nickeled brass solution cup with cover. In the Brownie Film Tank, however, no cover is necessary as the film roll itself is turned. All articles can be packed in the box, making the entire outfit self-contained.

The film to be developed is placed upon a reel in the winding box, the cover is placed on the box and the film is wound around an axis in combination with the apron, in such fashion that, when completely wound, the apron protects the film effectually from

light, and may be removed from the winding box safely at any time. It is then lowered into the cup of developer, the cover attached and the film left to develop for about twenty minutes. After development the film is removed for fixing.

Especial attention is called to the $3\frac{1}{2}$ -inch size, for the development of the 2C size films.

Those who wish to develop more than one roll at a time can do so without purchasing extra tanks complete, by securing duplicating outfits as listed below.

No. 2 BROWNIE DEVELOPING BOX

THE Brownie Developing Box is a simplified and modified form of the Kodak Film Tank, offering the same assurance of perfectly developed film, and at the same time is so simple that any boy or girl can readily understand and operate it.

It consists of a metal box with cover, just long enough to accommodate a roll of No. 1 or No. 2 Brownie Film in one loop.

To develop, the roll of film is inserted in the spool carrier, and by means of a cord and winding shaft the film is unrolled and carried around a roller bearing, thus exposing the film to the action of the developer.

Before unrolling the film, the developer is poured in the box and the cover put in place; all these operations being performed in daylight. The film is then unrolled by turning the crank, when the box is rocked on its standard for six minutes. The developer is then poured off and box filled with water to wash out developer, after which film is removed and fixed in daylight.

It provides an excellent means for those who have Nos. 0, 1 or 2 Brownie Cameras, of developing their films simply and accurately.

EASTMAN PLATE TANK

WHAT the film tank has done for films, the plate tank does for plates. The idea of the two tanks is based upon the same time and temperature system of development, with, of course, such differences in actual construction of the tanks as are required by the physical differences between films and plates. And as plates must be unloaded in a dark room, the plate tank cannot offer the advantage of daylight quite all the way, but it takes only a few moments in the dark room to load this tank, after which it may be brought out

into any light for development.

The device consists of a metal solution cup with cover, a cage for holding 12 or less plates, and a loading fixture for loading the plates in the cage.

The exposed plates are loaded into the cage and placed in the tank, which has been filled with developer, in the dark room and the tank cover fastened in place. On the front of the tank is a dial for registering time. Development is allowed to continue for fifteen minutes, the tank being reversed several times. After development, the developer is washed out of the plates, and the fixing and washing are done in the usual manner.

Price

Eastman Plate Tank, for 4 x 5, 3 1/4 x 5 1/2, and smaller plates, includes solution cup, plate cage, loading fixture and adjustable kit . . .	\$4.00

DEVELOPING AND PRINTING OUTFITS

FOR those who wish to develop by the dark room method we offer complete developing and printing outfits containing everything necessary for the work. By combining a variety of different articles and making up the outfits in large quantities, we furnish them at a much lower price than if the articles were purchased separately. The Eastman 3A Outfit contains every requisite for finishing twenty-four $3\frac{1}{4} \times 5\frac{1}{2}$ or smaller pictures, and includes the following:

One Kodak Candle Lamp	\$0.25
One Printing Frame30
One Glass for Frame05
One 4-ounce Graduate20
One Stirring Rod05
Four Developing Trays40
Five tubes Eastman Special Developer25
One-half pound Kodak Acid Fixing Powder15
One package Potassium Bromide10
Two dozen $3\frac{1}{4} \times 5\frac{1}{2}$ Velox Paper30
Two ounces Nepera Solution for developing Velox10
Instruction Book (free)	

EASTMAN 3A OUTFIT, COMPLETE, NEATLY PACKED, **\$1.65** \$2.15

EASTMAN A B C OUTFIT, similar to above but providing for 4×5 or smaller pictures \$1.65

No. 0 BROWNIE Developing and Printing Outfit, complete, for developing and printing 24 pictures $1\frac{5}{8} \times 2\frac{1}{2}$. Price, complete 1.00

KODAK AMATEUR PRINTER

THE Printer consists of a box with a removable top, and in it a glass window through which the printing is done. Prints may be made with white margins, any size from $1\frac{5}{8} \times 2\frac{1}{2}$ to $4 \times 5\frac{1}{2}$ inches, by a simple automatic masking device, which holds the negatives firmly until released. Within the box is a small red electric bulb to permit the adjustment of negative and paper, and provision is made for a 60 Watt Mazda lamp, which is automatically turned on when the hinged frame is closed to make the exposure.

In the side of the box is a removable window, covered with orange fabric, serving as a dark-room lamp for developing-out and bromide papers.

It is supplied complete, without lamp, but including $5\frac{1}{2}$ feet of electric light cord and plug.

The Kodak Amateur Printer \$7.50

KODAK AUTO-MASK PRINTING FRAME

The new Auto-mask is the most convenient and useful thing in printing frames that has yet been produced. It is adaptable to the printing of negatives of any amateur size, from 4 x 5, $3\frac{1}{4}$ x $5\frac{1}{2}$ and smaller, using the same simple masking device employed on Kodak Amateur Printer. The negative is held firmly in place

by the mask and is as readily released, when desired, by a slight pressure on the thumb lever.

Any number of uniformly masked prints may be made without changing the position of the negative, and if desired, prints may be so made that white space is left at the side or bottom for writing as, for example, with post-cards. The graduated scales attached to the stationary guides, aid in sizing and holding exact dimensions of mask openings.

Kodak Auto-mask Printing Frame \$1.25

MASKIT PRINTING FRAME

The Kodak Maskit Printing Frame is designed to overcome the difficulty of the negative and mask slipping on the glass, and to secure prints with a uniform white margin. Both negative and mask are held firmly, thus obviating the necessity of gumming.

Kodak Maskit, $3\frac{1}{4}$ x $4\frac{1}{4}$, opens two-thirds . .	\$0.45
Kodak Maskit, $3\frac{1}{4}$ x $5\frac{1}{2}$, opens two-thirds . .	.50
Kodak Maskit, 5 x 7, opens two-thirds . .	.60

KODAK SERIAL PRINTING FRAME No. 2

The Serial Printing Frame will be found a great convenience for printing from Vest Pocket Kodak negatives. After development, the film is left in a continuous strip (without cutting), and the frame is so designed as to permit the film to slide easily through the frame from exposure to exposure. The film and paper are firmly held during printing, by a tension spring.

Kodak Serial Printing Frame No. 2 for V. P. negatives only . . . \$0.50

EASTMAN AND BROWNIE PRINTING FRAMES

Eastman $3\frac{1}{2} \times 12$, for No. 4 Panoram Kodak, opens in three sections . . .	\$0.90	Ditto, for $2\frac{1}{2} \times 4\frac{1}{4}$, film negatives or smaller . . .	\$0.30

For 3A Frames, 8 masking sizes, each . . .	\$0.06
For 4×5 Frames, 7 masking sizes, each06
For 5×7 Frames, 6 masking sizes, each10

KODAK ENLARGING OUTFIT

THE Kodak Enlarging Outfit is just what the amateur needs, who is doing his own enlarging. Although it is small in size and so compact as to be easily stored, it is a thoroughly practical instrument and capable of almost unlimited results.

Films and plates of any size up to 4 x 6 inches, may be enlarged up to the size of the easel (14 x 17 inches), or even larger if desired.

The outfit includes Enlarging Camera, lens and diaphragm, (largest stop U. S. 4) easel, lamphousing, light cord and plug, but does not include the 60 Watt Mazda electric light bulb.

Kodak Enlarging Outfit	\$16.00
Lantern Slide Block75
Portrait Attachment No. 550

BROWNIE ENLARGING CAMERA

The Brownie Enlarging Camera consists of a light-tight cone, made in two sections, with an attachment at the small end to hold the negative, and another at the large end for the paper. The lens is supported between negative and paper at just the proper focal distance.

The cameras, with the exception of the No. 2 Brownie Post-card, are collapsible, so that they fold flat and may be conveniently carried in a suitcase.

No. 2 Brownie Post-card Enlarging Camera, for 3¼ x 5½ enlargements from 2¼ x 3¼ negatives	\$2.67
No. 2 Brownie Enlarging Camera, for 5 x 7 enlargements from 2¼ x 3¼ negatives	3.20
No. 3 Ditto, for 6½ x 8½ enlargements from 3¼ x 4¼ negatives	4.27
No. 4 Ditto, for 8 x 10, 6¾ x 10 and 5¾ x 9¾ enlargements from 4 x 5, 3¼ x 5½ and 2¾ x 4¾ negatives, respectively	4.80

V. P. KODAK ENLARGING CAMERA

This is made upon the same principle as the Brownie Enlarging Camera, excepting that being small in itself, it is not made collapsible and is in one section only.

It offers the simplest means for making 3¼ x 5½ enlargements from 1⅝ x 2½ negatives.

Vest Pocket Kodak Enlarging Camera	\$2.67

The prices on this page include the Excise War Tax

VELOX PAPER

Velox is a developing-out paper that prints in any light, requires no dark room and permits the amateur to utilize his evening hours in print making. Its simplicity of manipulation, and variety of grades and surfaces, make it especially suitable for all amateur requirements.

Velox is divided broadly into three kinds of paper, called "Contrast," "Regular" and "Special," each division containing a variety of surfaces. "Contrast" and "Regular" papers develop quickly and are best suited for negatives lacking contrast. "Special" papers develop slowly, and give soft effects from hard negatives.

Velox "Contrast" is made in Carbon (matte) single weight and Velvet (semi-gloss) both single and double weight. Contrast Velox will secure the best possible results from extremely thin or from dense flat negatives.

Velox "Regular" has the following surfaces: Carbon (matte), Glossy, Glossy double weight, Velvet, Velvet double weight. Velvet is recommended for very flat negatives and gives semi-gloss prints of exceptional quality.

In the "Special" class, the surfaces are Carbon (matte), Portrait (smooth matte), Portrait double weight, Rough, Glossy, Glossy double weight, Velvet, and Velvet double weight. Special Velvet Velox has a greater range than any of the other "Special" papers.

Royal Velox is coated on an India tint stock in "Regular" and "Special," in one surface, and just rough enough to produce soft, mellow-tinted prints.

KODAK VELVET GREEN

Effects heretofore to be had only by the carbon process can be secured by any amateur photographer with this paper.

For landscapes, for marine scenes, and in fact, for the majority of outdoor amateur negatives, the rich green of prints on Kodak Velvet Green produces most beautiful and harmonious effects, with an indescribable "atmosphere" of nature itself.

And to use this paper the amateur has to learn no new processes, nor possess extraordinary skill. Anyone who can print on Velox paper can print just as successfully on Kodak Velvet Green, as the two processes after exposure are identical, and the developing solution is only slightly changed.

The surface—a smooth semi-matte—brings out detail fully, and the paper is supplied in both single and double weights.

Kodak Velvet Green Post-cards are very appropriate for use at vacation time.

Prices same as for Velox. (See page 49.)

Extra leaves, package of 512

EASTMAN FILM NEGATIVE ALBUMS

These albums afford a safe, convenient and efficient way of keeping film negatives. Each leaf is, itself, an envelope, and the negatives do not come in contact with each other.

The index furnishes a ready reference.

Price

For 100 negatives, 1½ x 2½	\$0.75
For 100 negatives, 2½ x 4¼, or smaller75
For 100 negatives, 3¼ x 4¼, or 4 x 5	1.00
For 100 negatives, 3¼ x 5½, or smaller	1.00
For 100 negatives, 5 x 7, or smaller	1.50

TRIPODS

KODAK METAL

The Kodak Metal Tripods have telescoping legs of brass tubing—the three lower ones nickel—the upper, black enamel. They are light in weight, compact and exceptionally rigid.

The Nos. 1 and 2 have revolving heads permitting the camera to swing so as to take in the desired view without moving the tripod. They also have straps for holding the legs in place when closed. The Nos. 1C and 2C have solid heads and are without straps for holding legs. The No. 6 has an improved folding head, permitting the legs to fold flat.

	Sections	Length		Weight	Price
		Closed	Extended		
Kodak Metal Tripod No. 0	3	15½ inches	39½ inches	15 ounces	\$2.75
Kodak Metal Tripod No. 1C	4	15¼ inches	48⅞ inches	25½ ounces	3.75
Kodak Metal Tripod No. 1	4	15 inches	48½ inches	24½ ounces	4.00
Kodak Metal Tripod No. 2C	5	13¼ inches	49⅞ inches	26 ounces	4.25
Kodak Metal Tripod No. 2	5	13½ inches	49½ inches	25 ounces	4.50
Kodak Metal Tripod No. 6	6	11⅜ inches	40 inches	24 ounces	6.50
Leatherette Case, for Nos. 0 and 1					1.00
Leather Carrying Case, for Nos. 0 to 2, inclusive					2.50
Ditto, for No. 6					3.00
Rubber Tips for Metal Tripod Spurs (per set of 3)					.10

THE BULL'S-EYE

Two sections. Aluminum revolving head. Made of maple, with brass fittings. For 4 x 5 cameras, or smaller. Length, extended, 42½ inches; folded, 24 inches. The only two-section tripod that will go into a suitcase.

Price, \$2.00

THE FLEXO

Two sections. Fixed, non-detachable head. Only clear, straight-grained wood is used in its construction.

Price, \$1.25

THE STANDARD

The feature of this tripod is the automatic locking of the sections when they are extended. Light, compact and rigid. Fixed, non-detachable head. Length, folded 21 inches, extended $53\frac{1}{2}$ inches. Weight, 18 ounces. Cherry finish, brass trimmings.

Price, \$3.00

VEST POCKET KODAK TRIPOD ADAPTER

The adapter simply slips over the front standard of the Vest Pocket Kodak and by attaching to a tripod, may be used in either the vertical or horizontal positions. It may be instantly detached when not in use.

Price, \$0.50

THE OPTIPOD

The new Optipod is a combined tripod head and clamp which may be used effec-

tively as a tripod when clamped to a chair, table, automobile, motorcycle, or any substantial object. It is small and light, slipping readily into the pocket and may be carried without inconvenience.

When used in connection with a tripod, the Optipod gives the advantage of its ball and socket joint, permitting the camera to be tilted to any desired angle. This feature is especially desirable when photographing objects at close range and when it is impossible to place a tripod alone, in the desired position.

Price, \$1.00

THE KODAPOD

The little Kodapod—which is carried easily in the pocket—takes the place of a tripod, when a tree, fence, or similar object is near at hand. Its jaws have a bulldog grip that holds the wood like a vise, and likewise the Kodak, firmly in position. By means of a clamping screw, the camera may be adjusted to the correct vertical or horizontal position. It fits any standard tripod socket.

The Kodapod \$1.50

KODAK SELF TIMER

The Kodak Self Timer “presses the button” and permits the one who takes the picture to be one of the group. It has no influence on the shutter speeds, it being simply a means of automatically releasing the shutter in intervals of one-half second to three minutes (according to adjustment), after the Timer is released.

The Timer is made in but one size, and may be used on any camera fitted with cable release, but cannot be used with “bulb” release.

Kodak Self Timer \$1.25

KODAK TRIMMING BOARDS

Made of hard wood, with natural finish, have fine quality steel blades and are fitted with rule.

No. 1, capacity, 5 x 5
inches \$0.50

No. 2, capacity, 7 x 7

Transparent Trim-
ming Gauge (ex-
tra). For No. 1 .35

Ditto, for No. 2 . .35

EASTMAN VISIBLE GRADUATE

This new moulded graduate, as its name implies, may be easily read in the dark room under the rays of the ruby light.

The graduations are opaque, not translucent as is the case with most graduates.

2-ounce	\$0.25	8-ounce	\$0.50
4-ounce35	16-ounce75

EASTMAN THERMOMETER

Especially valuable in tank or tray development. Has hook from which it can be suspended and has curved back to fit inside of tank.

Eastman Thermometer	\$0.75
-------------------------------	--------

THERMOMETER STIRRING ROD

A combined stirring rod and thermometer. Carefully tested and accurate. Has flat end for pulverizing. The rod is $\frac{1}{4}$ inch in diameter and $9\frac{1}{4}$ inches long.

Thermometer Stirring Rod	\$1.00
------------------------------------	--------

EASTMAN PHOTO PASTE

A solid, first quality white paste that will not discolor print or mount.

4-ounce jar	\$0.15	3-ounce tube	\$0.15
8-ounce jar25	5-ounce tube25
2-ounce tube			\$0.10

FLEXO PRINT ROLLER

A thoroughly practical roller for mounting. Has 4-inch rubber roller and black enamel frame.

Flexo Print Roller	\$0.25
------------------------------	--------

KODAK PRINT ROLLER

The best roller constructed for amateur use. Has two 6-inch rubber rollers and finely nicked frame.

Kodak Print Roller	\$0.90
------------------------------	--------

KODAK CANDLE LAMP

This clever little lamp is collapsible and can be packed into very small space when not in use. It is made of special, tested ruby fabric, bound in metal frames and gives a strong, safe light for the dark room.

Kodak Candle Lamp	\$0.25
Extra Candles for same, per dozen40

KODAK DARK ROOM LAMP

The Kodak Dark Room Lamp is oil burning and is fitted with both orange and ruby glass. It has an unusually broad wick regulated from the outside and gives a soft, steady light for the dark room.

No. 2 Kodak Dark Room Lamp	\$1.00
--------------------------------------	--------

BROWNIE SAFELIGHT LAMP

But little larger than the electric bulb it holds, the Brownie Safelight Lamp screws into an electric socket which may be conveniently situated close to the place where the work is to be done.

The lamp is made of metal, neatly japanned; has circular safelight in the end and side safelight as well. Both safelights are the regular Series 1, and removable so that other series may be used, if desired. A 15 Watt Mazda lamp is used, but is not supplied.

The Brownie offers a most satisfactory means for dark room lighting where electricity is available.

Brownie Safelight Lamp	\$1.50
Extra Circular End Safelight (any series), each20
Extra Side Safelight (any series), each30

KODAK SAFELIGHT LAMP

The Kodak Safelight Lamp is ideal for all dark room uses, whether that be the work of the beginner, the advanced amateur, or the professional.

The lamp is supplied with a 5 x 7, Series 1, safelight for use with films or plates, not color sensitive. Safelights of other series may be obtained, if desired, for more advanced work. It is made of metal; neatly finished in a warm tone of brown and the inside is enameled white to intensify the force of the reflected light from the electric bulb in the top.

The lamp is supplied complete, with electric fittings, excepting electric bulb, including besides the safelight, 4½ feet of electric light cord.

Kodak Safelight Lamp	\$3.50
--------------------------------	--------

SAFELIGHTS FOR KODAK SAFELIGHT LAMP

Series 00—Yellow light, for use with gaslight papers.

Series 0—Bright orange light, for use with bromide paper and lantern plates.

Series 1—Orange safelight, for use with films or plates not color sensitive.

Series 2—Safelight, for extra rapid orthochromatic plates sensitive to green but not red.

Series 3—Green safelight, for use with red-sensitive panchromatic plates.

Series 4—Bright green safelight, for use with ordinary plates, for those who cannot use a red light. Not safe for orthochromatic plates.

Size, 5 x 7 (any series), each \$0.60

FLASH LIGHT MATERIAL

The simplest and safest method of making flash light pictures is by means of the Eastman Flash Sheets and Kodak Flash Sheet Holder. The sheets burn slowly, giving a broad, soft light, and not so startling to the subject as to give a staring effect to the eyes.

The holder is provided with a saw tooth for holding the sheet in proper position, and is lighted from the back, through an aperture provided in the center for the purpose. In this manner the holder is always between the operator and the flash sheet, and it may be held in the hand or supported on a tripod, a socket being provided for the purpose.

*No. 1 Flash Sheets, per package of ½ dozen sheets 3 x 4	\$0.35
*No. 2 Flash Sheets, per package of ½ dozen sheets 4 x 556
*No. 3 Flash Sheets, per package of ½ dozen sheets 5 x 784
Kodak Flash Sheet Holder	1.00

Flash cartridges are recommended only where absolutely instantaneous exposures are required.

*Eastman Spreader Flash Cartridges, for use with pistol or fuse (price includes both fuse and cap), per package of ½ dozen	\$0.50
Eastman Spreader Flash Cartridge Pistol75
*Eastman No. 1 Flash Cartridges, per package of ½ dozen	1.00
Ditto, No. 270
Ditto, No. 345

*Prices subject to change without notice.

VELOX TRANSPARENT WATER COLOR STAMPS

The making of beautifully colored prints or lantern slides, by the use of Velox Transparent Water Color Stamps, will be found an interesting and highly enjoyable diversion.

Each book of stamps includes twelve sheets of colors and each sheet is divided by perforations into twenty-two stamps. To use any color, tear off a stamp, place in a small saucer or palette supplied with the outfit, and cover with about a teaspoonful of water.

The Velox Transparent Water Color Stamp Outfit offers the greatest convenience in coloring prints, as it includes the book of stamps, three brushes and a white enameled mixing palette, put up in a neat cardboard case.

Velox Transparent Water Color Stamps, complete booklet, 12 colors	\$0.25
Separate Color Leaves, two sheets05
Set of 3 Special Brushes, per set50
Mixing Palette25
Velox Transparent Water Color Stamp Outfit, including book, three brushes and palette75

KODAK JUNIOR FILM CLIP No. 1

The No. 1 clip is the most practical for tray development or drying of films. Has two jaws to prevent film from slipping. One size only.

Kodak Junior Film Clip No. 1, each \$0.12

KODAK JUNIOR FILM CLIP No. 2

This new film clip is similar to the No. 1 but on account of being wider, may be used with wider film and will hold the film flat.

It is particularly adapted for use with 3A film, but may be used as well with larger or smaller film. Has jaws to prevent the wet film from slipping. Furnished in one size only, 3 inches wide.

Kodak Junior Film Clip No. 2, each \$0.25

EASTMAN FILM CLIP

A thoroughly dependable clip. Made in two sizes and nickel-plated.

3½-inch, per pair \$0.25
5-inch, per pair40

TERMS

The prices in this catalogue are strictly net, except to regular dealers who carry our goods in stock. THESE PRICES, OWING TO UNSETTLED CONDITIONS, ARE, HOWEVER, SUBJECT TO CHANGE WITHOUT NOTICE. For the convenience of our customers we recommend that they make their purchases from a dealer in photographic goods, as by so doing they can save both time and transportation charges.

EASTMAN KODAK CO.

ROCHESTER, N. Y.

“KODAK”

IS the registered and common-law Trade Mark of the Eastman Kodak Company and cannot be rightfully applied except to goods of their manufacture. When a dealer tries to sell you under the Kodak name, a camera or films or other goods not of their manufacture, you can be sure that he has an inferior article that he is trying to market on the Kodak reputation.

*If it isn't an Eastman
it isn't a Kodak*
