ROCHESTER REALSCHULE,
GERMAN-AMERICAN INSTITUTE,
7 and 9 Mortimer Street,

HERMANN PFAEFFLIN, Principal.

The principle on which the School is based requires a simultaneous study of the German and English languages. With this end in view, the Elementary classes in German and English will be combined, experience having proved, that thus a knowledge of both languages is most easily acquired. To facilitate the admission of older pupils, there will be a Special German Course, in which the English pupils will receive instruction apart, at the same time sharing with the rest the English lessons, presided over by competent American teachers.

Having acquired sufficient knowledge of German, these pupils will be incorporated with the German Classes.

For younger pupils there is established a "**Kindergarten**" Course. Children from four to seven are admitted.

Pupils not living in the city will be received as boarders on the most reasonable terms.

Applications will be received at the School, Nos. 7 and 9 Mortimer Street.

TO CONSUMERS.

The following explanations will enable any person to understand the process of ascertaining the Registry of the Gas Meter, and by making observations every day, or at short intervals, to satisfy himself that the meter registers with uniform accuracy the amount of gas that passes through it. The following diagrams show the "Indexes" seen on the front of every meter.

EXPLANATION OF INDEX.

The figure or division on the different faces of the index indicates as follows, viz: On the Right Hand Face, *Hundreds*, as 100, 200, 300 cubic feet, &c.; on the Middle Face, *Thousands*, as 1,000, 2,000, 3,000 cubic feet, &c.; on the Left Hand Face, *Tens of Thousands*, as 10,000, 20,000, &c., and in this way multiplying by 10 for every additional face.

TO TELL THE STATE OF THE METER.—Look at the *left hand* face of the Index, and set down the figure of *least* value next the hand, which on the diagram is 1. Next look at the *middle* face, and as before set down the figure of the *least* value next the hand, which on the diagram is 3. Next upon the *right hand* face, take the same relative figure, which is 5, and you have the figures 1, 3, 5, to which last figure add two ciphers to represent hundreds, and the sum, 13,500, is shown to be the present state of the meter. If a previous observation has been taken, subtract the state of the meter at *that* time from the *present* state, and you have the amount consumed in the interval.

 In case of the failure of the gas from any cause, immediate notice of the fact should be left at the Company's Office.
