For Square Measure the square of long measure is used. For measuring land—in the place of acre—the centur which is one square meter, equivalent to 1.560 square inches; the ar which is 100 square meters, equivalent to 119.6 square yards; the hectar which is 10,000 square meters, equivalent to 2.47114 acres, are used.

For Cubic Measure the cube of long measure is used; ster is used as a measure of wood in place of cord.

The mill, cent, dime, dollar, and eagle of U. S. money exactly illustrate the decimal system of the metric measures,—the mill, cent, dime, corresponding with the milli, centi, deci of the metric system.

**Abbreviations.**—For meter, liter, and gram, the small initial letter is used, viz.: m. l. g.; each division deci, centi, milli, is also abbreviated by using the small initial letters d. c. m.; but each multiple, deka, hektio, kilo, myria, is abbreviated by using the capital initial letter D. H. K. M.

**Equivalents.**—1 inch equals .0254 meter, or about 2.54 centimeters; 1 foot equals .3048 meter, or about 30 centimeters; 1 yard equals .9144 meter, or ab 39.37 inches. 1 foot equals .3048 meter, or about 30 centimeters; 1 yard equals .9144 meter, or ab 39.37 inches. 1 U. S. liquid quart equals .946 liter, or a little less than 1 liter; 1 U. S. dry quart equals 1.01 liters; 1 U. S. gallon equals 3.785 liters, or about 3.785 liters; 1 U. S. bushel equals .219 cubic meters, or about 1 cubic meter.

**Bases of the system.**—1. The unit of length, the meter, is the ten millionth part of a quadrant of the meridian of Paris, being 39.37 inches, nearly. 2. The unit of surface, the ar, is the square of ten meters, or a hundred square meters. 3. The unit of capacity, the liter, is a cube whose edge is a tenth of a meter. 4. The unit of weight, the gram, is the weight of a cube of water, whose edge is an hundredth of a meter. From these four primary units all others are derived according to the decimal scale.

**Where used.**—The system is adopted by the following countries: In exclusive use in France, Germany, Austria, Belgium, Holland, Italy, Spain, Portugal, Norway, Switzerland, Roumania, Brazil; in part in use in Denmark, Greece, Argentine, Venezuela, England, and not in general use, in the United States, Great Britain, Russia, Norway, Sweden, Turkey, Mexico, Chili, Costa Rica, Equador, Peru, U. S. of Columbia, and Uruguay. In Sweden, compulsory law will take effect in 1889.

REYNOLDS' ARCADE
1828.

The site on which the Arcade stands was selected in the Summer of 1812 by the late Abelard Reynolds, upon which he built the first framed house on the one-hundred-acre tract, then called "Rochesterville," completing and occupying it in 1813. In 1828 Mr. Reynolds erected "The Arcade," the largest and most expensive building in the United States, west of Albany at that day. Upon this site the first Post Office was established, and has remained for nearly 70 years.

1880.

The old-fashioned style of architecture, with high, narrow windows, that formed the original store fronts, has been changed to broad sheets of plate glass, and the old wooden arch, with small lights of window glass, replaced by massive iron rafters and large plates of rough glass, weighing fully seventy tons, supplying to the citizens a commodious Merchants' Exchange, with Post Office and Telegraph Offices at hand.
THE present Post Office, under the intelligent administration and personal management of our deserv- edly popular Postmaster, D. T. Hunt, and his worthy Assistant, W. Seward Whittlesey, has a frontage in the Arcade Hall and Gallery of 75 feet, extending on Exchange Place 100 feet, containing an area of floor surface, including the unique and beautiful new Money Order Office, of over 8,000 square feet, having one of the best and largest fire and burglar proof vaults in the city, has been pronounced by gov- ernment agents having business here, the Model Post Office, as well in its convenient internal arrangements as in the ample and comfortable accomodation afforded the public by the spacious Arcade Hall, 22 feet wide, 100 feet long and five stories in height, covered by an artistic iron truss roof and 120 plates of Amer- ican rough glass, 2 feet by 13 feet each, and 3/4 of an inch in thickness.

WEST side of the Genesee River.
PRICE, $2.15 per thousand feet, or if paid before the 10th of the month, $2.00.

TO CONSUMERS.
The following explanations will enable any person to understand the process of ascertaining the Registry of the Gas Meter, and by making observations every day, or at short intervals, to satisfy himself that the meter registers with uniform accuracy the amount of gas that passes through it. The following diagrams show the "Indexes" seen on the front of every meter.

EXPLANATION OF INDEX.

The figure or division on the different faces of the index indicates as follows, viz: On the Right Hand Face, Hundreds, as 100, 200, 300 cubic feet, &c.; on the Middle face, Thousands, as 1,000, 2,000, 3,000 cubic feet, &c.; on the Left Hand Face, Tens of Thousands, as 10,000, 20,000, &c., and in this way multiplying by 10 for every additional face.

TO TELL THE STATE OF THE METER.—Look at the left hand face of the Index and set down the figure of least value next the hand, which on the diagram is 1. Next look at the middle face, and as before set down the figure of the least value next the hand, which on the diagram is 3. Next upon the right hand face, take the same relative figure, which is 5, and you have the figures 1, 3, 5, to which last figure add two ciphers to represent hundreds, and the sum 13,500 is shown to be the present state of the meter. If a previous observation has been taken, subtract the state of the meter at that time from the present state, and you have the amount consumed in the interval.

In case of the failure of the gas from any cause, immediate notice of the fact should be left at the Company's office.
