POPULATION OF THE WORLD.

Dr. Behm and Prof. Wagner, German Geographers of standing, who have devoted much attention to the statistics of population, have just issued a new edition of their calculations. They arrive, after great labor, at results which we quote, because they modify materially the estimate popularly current in Great Britain:

Europe	315,929,000
Asia	834,707,000
Africa	205,679,000
America	95,495,500
Australia and Polynesia	4,031,000
Polar Regions	82,000
The World	1,455,923,500

The calculation for Europe, which must be substantially accurate, is much larger than the usual one; but even then the immense bulk of humanity, 10 in 14 of mankind, dwells in Asia and Africa.—*London Spectator.*

CENSUS NOTE.

The tables of population printed in various places in this directory, were taken from the Census of 1880 as far as that had been compiled up to the time of going to press, but when the information was not to be obtained from the new Census, the tables from the Census of 1870 and 1875 have been continued, as being valuable for comparison when the new figures are published. In all cases the returns of the new Census are still subject to possible corrections, when the final footings are made.

For Cubic Measure the cube of long measure is used; **ster** is used as a measure of wood in place of cord.

The mill, cent, dime, dollar, and eagle of U. S. money exactly illustrate the decimal system of the metric measures.—the mill, cent, dime, corresponding with the milli, centi, deci of the metric system.

Abbreviations.—For meter, liter, and gram, the small initial letter is used, viz: m. l. g.; each division deci, centi, milli, also is abbreviated by using the small initial letters d. c. m.; but each multiple, deka, hekto, kilo, myria, is abbreviated by using the capital initial letter D. H. K. M.

Equivalents.—1 inch equals .0254 meter, or about 2 1-2 centimeters; 1 foot equals .3048 meter, or about 30 centimeters; 1 yard equals .9144 meter, or ab. 10-11 of a meter; 1 mile 1609 meters, or ab. 1.6 kilometers.

1 U. S. liquid quart equals .946 liter, or a little less than 1 liter; 1 U. S. dry quart equals 1.101 liters; 1 U. S. gallon equals 3.785 liters, or about 3.8 liters; 1 U. S. bushel equals 35.24 liters, or about 4-11 of a hektoliter.

1 avoirdupois ounce equals .02835 kilogram, or a little less than 30 grams; 1 Troy and apothecaries ounce equals .03110 kilogram, or a little more than 30 grams; 1 avoirdupois pound equals .45359 kilogram, or about 5-11 of a kilogram; 1 long ton—2240 pounds—equals 1016.05 kilograms, or about 1 metric ton.

Basis of the system.—1. The unit of length, the meter, is the ten millionth part of a quadrant of the meridian of Paris, being 39.37 inches, nearly. 2. The unit of surface, the ar, is the square of ten meters, or a hundred square meters. 3. The unit of capacity, the liter, is a cube whose edge is a tenth of a meter. 4. The unit of weight, the gram, is the weight of a cube of rain-water, whose edge is an hundredth of a meter. From these four primary units all others are derived according to the decimal scale.

Where used.—The system is adopted by the following countries: in exclusive use in France, Germany, Austria, Belgium, Holland, Italy, Spain, Portugal, Norway, Switzerland, Roumania, Brazil; in partial use in Denmark, Greece, Argentine Confederation, Venezuela; legalized, but not in general use, in the United States, Great Britian, Russia, Norway, Sweden, Turkey, Mexico, Chili, Costa Rica, Equador, Peru, U. STREET DIRECTORY.

The Street Directory gives the location of each street, and shows what other streets or places run from it or across it, with the number at which they intersect.

From this list the location of any number on a street can be easily ascertained. As, for instance, wishing to know at what part of State street No. 265 comes, look at State street and you find that Brown street runs from 255 left side, and Jay street from 293, showing that No. 265 comes on the left side of State street between Brown and Jay. As many of the streets are not numbered, dashes have been used in the place of the missing numbers, to indicate whether the street runs from the right, left, or crosses.

SOME REASONS WHY NAMES ARE NOT FOUND IN THE DIRECTORY.

Many persons fail to find names on account of not knowing where to look for them. A slight variation in spelling will place names almost exactly alike, far apart. For instance, —such names as Brown, Browne, Braun, though pronounced the same, and really the same name, are found in different places in the directory. So, also, with Connor, Conner, Connors, O'Connor, and many others, each has its own place.

The pronunciation of foreign names usually varies from the pronunciation of such names in English. For instance,—if an Irishman gives his name as Agan, it is probably spelled Egan or Eagan. So, Mar, spelled Meagher or Maher; Fay, spelled Fahy, &c. In names of nearly all European languages the sounds of the vowels are usually as follows:—a is ah, e is ā, i is ē, o is o, u is ōō. In German names ei and ai are pronounced like i, ie like ē, au like ow, eu like oi; j is pronounced like y, w nearly like v, dt and th like t, &c. Thus, a name which is pronounced Yack, is spelled Jack; Young, Jonge; Roiter, Reuter; Keefer, Kiefer; Line, Lein.

Owing to the difficulty which foreigners find in getting their names properly pronounced by the Americans with whom they come in contact, they frequently make very decided changes in them, taking sometimes an English name which sounds similar to theirs; as Gilbert for Gebhardt, Rice for Reis, Cole for Kohl, &c.; sometimes translating their names, as Blanc changed to White, Stein to Stone, &c.

Frequently, members of the same family, both foreign and American, will spell their names in two or three different ways, as Ballantyne, Ballantine, Ballintine; sometimes men bear two or three names, being known by one in their family, another in the shop, and perhaps still another among their associates.

No. 4 South Clinton Street, - - Close to East Main,

ROCHESTER, N. Y.,

Where they are permanently established for the treatment (by the various modifications of ELECTRICITY) of the various forms of disease that flesh is heir to. From 1846 to 1859 the Doctor was a regular practitioner of medicine, during which time he discovered the great immutable laws that govern this most wonderful agent—ELECTRICITY—in its application to the body, both in health and disease. During the last twenty years he has taught thousands to use Electricity in the cure of disease with safety and great success, but no person is competent to teach his theory but himself. The Doctor keeps on sale his guide,

EXECUTIVE COMMITTEE.

LOUIS CHAPIN, Chairman, *DON A. WATSON,*
THOS. C. MONTGOMERY, *PATRICK BARRY.*

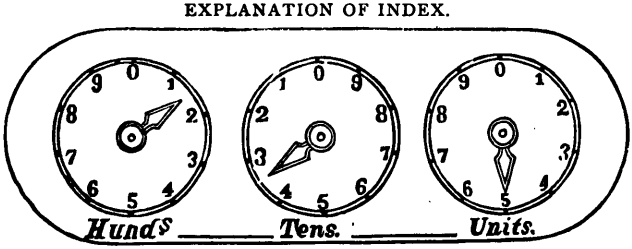

The Rochester Gas Light Co. supplies all the Coal Gas used on the WEST side of the Genesee River.

PRICE, $1.35 per thousand feet; or if paid before the 10th of the month, $1.25.

TO CONSUMERS.

The following explanations will enable any person to understand the process of ascertaining the Registry of the Gas Meter, and by making observations every day or at short intervals, to satisfy himself that the meter registers with uniform accuracy the amount of gas that passes through it. The following diagrams show the "indexes" seen on the front of every meter.

EXPLANATION OF INDEX.

The figure or division on the different faces of the index indicates as follows, viz: On the Right Hand Face, *Hundreds*, as 100, 200, 300 cubic feet, &c.; on the Middle face, *Thousands*, as 1,000, 2,000, 3,000 cubic feet, &c.; on the Left Hand Face, *Tens of Thousands*, as 10,000, 20,000, &c., and in this way multiplying by 10 for every additional face.

TO TELL THE STATE OF THE METER.—Look at the *left hand* face of the Index and set down the figure of *least* value next the hand, which on the diagram is 1. Next look at the *middle* face, and as before set down the figure of the *least* value next the hand, which on the diagram is 3. Next upon the *right hand* face, take the same relative figure, which is 5, and you have the figures 1, 3, 5, to which last figure add two ciphers to represent hundreds, and the sum 13,500 is shown to be the present ttate of the meter. If a previous observation has been taken subtract the state of the meter at *that* time from the *present* state, and you have the amount consumed in the interval.

☞ In case of the failure of the gas from any cause, immediate notice of the fact should be left at the Company's office.

We are manufacturing a pipe that is indestructible from the action of all the elements, impervious to the action of acids, gases and steam, all of which are found in corporation sewers. These pipes are made from a combination of superior clays, which, by powerful machinery, are rendered uniform throughout—pressed from a steam press, under a pressure of *sixty-three tons* upon each pipe, it is made very compact; and burned in close kilns at a very intense heat, it becomes a thoroughly vitrified and iron-like body. All prominent architects, builders, and all those who have investigated the subject of sewerage, have become convinced that properly burned clay pipe is the only material suitable for underground drainage, and that the sewer and drain pipe manufactured from cement, carbonated stone, and other similar materials, are liable to and do *decay*, *disintegrate* and become *worthless*, as has been many times proved by the officials in many cities.

These vitrified pipe are suitable for well tubing; are *better than stone or brick*, because cheaper, more durable, and can be made perfectly tight.

☞ We deliver our pipe within the city limits Free of Charge and in good condition.

THE JOHNSTON HARVESTER COMPANY,

OF BROCKPORT, N. Y.

THIS COMPANY have for many years built and put upon the markets of the world their peculiar MACHINES FOR CUTTING GRASS and HARVESTING GRAIN, which have from the beginning taken the FIRST place among all those manufactured for that purpose. They have been tested by Scientific Machinists, by casual observers, and by Practical Farmers, and always with one and the same result, namely:

The First Award for Excellence of Workmanship and Quality of Work Done in the Field. At the Centennial Exhibition at Philadelphia, in 1876, they were awarded the Highest Honors.

They stand ***at the head*** of the whole family of Harvesting Machines, and although attempts have been made to copy them by many other manufacturers, still the ORIGINAL stands superior to all and cannot he displaced.

In 1874, they took ***TWENTY GOLD MEDALS,*** and nearly as many MEDALS OF HONOR, from fields in foreign countries alone, and the FIRST AWARD, being a Gold Medal, at the Cincinnati Exposition.

In 1875 they were equally successful in bringing home Gold Medals, besides the far better encomiums of the ROYAL AGRICULTURAL SOCIETY OF FRANCE, which ordered one of them tested through the ***whole season,*** instead of a short trial for a few days, and then examined by expert machinists, who pronounced it the BEST MADE, MOST DURABLE and MOST EFFICIENT MACHINE IN THE FIELD.

In 1876 they won TWENTY-FOUR Gold Medals as First Prizes at actual trials in the field. In 1877 they swept the field on prizes, and obtained the most flattering testimonials wherever tried.

In 1878 they were awarded TWO GRAND GOLD MEDALS for the excellence of their exhibit at the Paris Exposition, and also the ONLY PRIZE given for excellence of work in the field, against 35 competitors, representing six different nations, at the Great Paris Trial. This prize was a BEAUTIFUL AND COSTLY VASE. This great trial was held under the auspices of the Paris Exposition of 1878.

In 1879 they won FORTY-THREE FIRST PRIZES against all their competitors, making from the harvest of 1877 to 1879, ***126 Prizes*** (including Gold and Silver Medals, Cups, and Diplomas of Honor), and over $800 in prize money.

In 1880 the success of these Machines was still greater and spread over a much larger territory than ever before.

Every pains taken to please our customers, and all our Machines WARRANTED.

The "Light Running"

"HOUSEHOLD,"

Family Sewing Machine,

THE BEST OF ALL MADE.

We Only Ask a Call to Convince You.

Read what Mr. Sargent, of the Firm of Sargent & Greenleaf, has to say about the "HOUSEHOLD."

TO WHOM IT MAY CONCERN.

Some three months ago I purchased of Mr. William Davis, Manager, one of the "Light-Running Household Sewing Machines," to be used both in the Manufacture of Insoles and for Domestic Purposes. After unusual tests, we find that it works equally well on thick and thin material, and satisfactorily on both. I have carefully examined the mechanism and find it simple in construction and superior in workmanship; in fact, we are so well pleased with the machine and its working, that I have since purchased two more—one for my wife and another for a friend. I think them to be exceedingly free from the usual liabilities to disarrangement of parts and perplexity to the operator, and in all respects fully entitled to the name they bear, with "Eureka" added.
