(A) Date of Rochester's incorporation as a city. The city charter occupying eighty-seven pages was included in this number.

(B) Decrease.

(C) In 1867 and 1868 there was a very imperfect canvass made.

(D) In 1877-78 the freight yards and division headquarters of the N. Y. C. & H. R. R. were removed to Syracuse, which caused several thousand of the employees of the road and their families to change their residence to that city. Except for this, there would probably have been a slight increase in names in those years notwithstanding the extreme business depression of the time.

(E) Of this increase, 1,249 represented deaths and removals, which were this year given for the first time, leaving the net increase 692.

(F) Enlarged to octavo size, and printed in double columns for the first time.

PREFACE.

THE thirty-fifth volume of the Rochester Directory is placed before the public at a somewhat later date than usual. It was the latter part of June before the last of the street numbering was finished, since which time every effort has been made to push the work forward to completion at the earliest possible date.

Every one in Rochester is well aware that the streets of the city have been very generally renumbered the present season, nearly every street in the old wards (1 to 14) having received new numbers, and a few in the fifteenth and sixteenth wards, the latter being for the most part the thoroughfares running out from the centre of the city. The changes in numbers necessitated, by this really beneficent work, have been the cause, and for a time must continue to be the cause of considerable trouble and annoyance. It will take time as in all changes for things to become adjusted to the new order, but it is a great satisfaction to know that the work has been intelligently done, and that few cities now have a better system of street numbers than has Rochester. The publishers of the Directory are especially pleased in the matter, as it will not only greatly enhance the value of the information which has usually been included in the Directory, but will enable them at an early day to further serve their customers and the public, by adding important improvements to the book, which they have long had in view, but which the wretched condition of the street numbers has rendered impracticable. The large amount of extra labor which has been involved in making the present book can readily be surmised, and it is not necessary to speak of it further here. In changing so many numbers to which people had not yet become habituated,—often not being sure of their own house number—and from the frequent mixing of the old and new numbers, there has been an unusual opportunity for errors to creep in, and though great care has been taken to avoid such, it can hardly be hoped but that some will have occurred.

The last of the renumbering (except for the north side of Clifford street and the west side of Childs street, which were numbered in July after the Directory went to press), was done on the 27th of June, and every name in the Directory is given with its new number, excepting those belonging on the two streets above mentioned, and all on them except names beginning with A, B, C, or D.

On several streets the numbers were again changed after having been put upon the houses, owing to changes made in the plans for renumbering, and on such streets the canvass has been made a second time to secure the latest numbers.

Probably never in the history of the city have there been indications of such great and at the same time solid and permanent growth as appear at the present time on every hand, and it can but be of the liveliest interest to every public spirited citizen to observe how rapidly Rochester is marching forward to the position of a first class city.

The growth of the Directory is so closely connected with that of the city that it may be of interest in this semi-centennial year to notice the changes that have occurred in the book during the past fifty years. On the opposite page is printed a list of the several volumes of the Directory from the beginning of its publication in 1827, with date, pages, number of names, &c., of each, and it is interesting to note the changes from one issue to another, and especially to see how greatly of late years the increase of names has been accelerated. Since the present publishers have made it, a period of sixteen years, the book has trebled in size, having grown from a volume of 240 pages in 1868, to one of 920 pages the present year, the number of names increasing from 14,671 in 1868 to 43,221 the present year.

For Cubic Measure the cube of long measure is used; **ster** is used as a measure of wood in place of cord.

The mill, cent, dime, dollar, and eagle of U. S. money exactly illustrate the decimal system of the metric measures, —the mill, cent, dime, corresponding with the milli, centi, deci of the metric system.

Abbreviations.—For meter, liter, and gram, the small initial letter is used, viz: m. l. g.; each division deci, centi, milli, also is abbreviated by using the small initial letters d. c. m.; but each multiple, deka, hekto, kilo, myria, is abbreviated by using the capital initial letter D. H. K. M.

Equivalents.—1 inch equals .0254 meter, or about 2 1-2 centimeters; 1 foot equals .3048 meter, or about 30 centimeters; 1 yard equals .9144 meter, or ab. 10-11 of a meter; 1 mile 1609 meters, or ab. 1.6 kilometers.

1 U. S. liquid quart equals .946 liter, or a little less than 1 liter; 1 U. S. dry quart equals 1.101 liters; 1 U. S. gallon equals 3.785 liters, or about 3.8 liters; 1 U. S. bushel equals 35.24 liters, or about 4-11 of a hektoliter.

1 avoirdupois ounce equals .02835 kilogram, or a little less than 30 grams; 1 Troy and apothecaries ounce equals .03110 kilogram, or a little more than 30 grams; 1 avoirdupois pound equals .45359 kilogram, or about 5-11 of a kilogram; 1 long ton—2240 pounds—equals 1016.05 kilograms, or about 1 metric ton.

Basis of the system.—1. The unit of length, the meter, is the ten millionth part of a quadrant of the meridian of Paris, being 39.37 inches, nearly. 2. The unit of surface, the ar, is the square of ten meters, or a hundred square meters. 3. The unit of capacity, the liter, is a cube whose edge is a tenth of a meter. 4. The unit of weight, the gram, is the weight of a cube of rain-water, whose edge is an hundredth of a meter. From these four primary units all others are derived according to the decimal scale.

Where used.—The system is adopted by the following countries: in exclusive use in France, Germany, Austria, Belgium, Holland, Italy, Spain, Portugal, Norway, Switzerland, Roumania, Brazil; in partial use in Denmark, Greece, Argentine Confederation, Venezuela; legalized, but not in general use, in the United States, Great Britian, Russia, Norway, Sweden, Turkey, Mexico, Chili, Costa Rica, Equador, Peru, U. S. of Columbia, Uruguay. In Sweden compulsory law will take effect in 1889.

STREET DIRECTORY.

The streets of the city have been renumbered the present year, nearly all of the former numbers being changed. By the system adopted, **even numbers** are invariably upon the north or east side of streets, and **odd numbers** upon the south or west side.

Streets on the east side of the river which run east and west are usually numbered from the **west toward the east**; those on the west side from the **east toward the west.**

Streets north of Main street which run north and south are usually numbered from the **south toward the north**; those south of Main street from the **north toward the south.** In a general way, it may be said that in Rochester, as in all cities, streets usually begin to number from the end of the street nearest the centre of the city.

The Street Directory gives the location of each street, and shows what other streets or places run from it or across it, with the number at which they intersect.

From this list the location of any number on a street can be easily ascertained. As, for instance, wishing to know at what part of State street No. 425 comes: look at State street and you find that Brown street runs from 391 left side, and Jay street from 473, showing that No. 425 comes on the left side of State street between Brown and Jay. When streets are not numbered, dashes are used to indicate whether the street runs from the right, left, or crosses.

INDEX OF STREET NUMBERS.

FROM NEW TO OLD, OR OLD TO NEW.

NEW NUMBER FIRST IN ROMAN; OLD NUMBER FOLLOWS IN ITALIC.

The streets of the City were officially renumbered in April and May of the present year and the following is an index from the new numbers to the old, and also from the old to the new, of all streets in the city as they appear upon the plans in the office of the City Surveyor.

The new number is in all cases given first, and the old number follows it in italic figures. When two roman numbers precede an italic number, the two have been given to the building in place of the one former number. This occurs where there are several entrances to a building, all of which formerly went by one number, but which now have a number given to each entrance, and notably in cases of stairways to blocks which formerly were never numbered but now invariably have a number.

In a few instances two or more new numbers, which have been officially assigned to a lot have been given, although only one of them has actually been placed upon the building.

All old numbers will be found given upon each street, but there were many buildings that formerly were not numbered, and the new numbers to such will not be found in these lists.

After the name of a street, the word street is omitted.

A DESERVED SUCCESS.

OUR NEW LEDGER PATTERN has been adopted by business houses in all parts of the country.

ITS ADVANTAGES CAN BE READILY SEEN.

FIRST—The two columns are in the center of the book side by side. You do not have to look from center of page to the center of book in order to see the difference in the footings, but the footings are side by side and you can see at a glance the difference between them.

SECOND—Both columns are in the center of the page, so that on the credit side you do not have to write in the fold of the book, but both columns lie on a perfectly flat surface. This alone is a very great point to bear in mind.

THIRD—I make all of my books of **Weston's** paper, which, added to good binding and covers, opening flat, and beautiful ruling (no skipped lines), makes about as perfect a ledger as can be found in the **World.**

CHEAPEST AND BEST SECURED LIFE INSURANCE.

NORTHWESTERN

Mutual Life Insurance Co.

M. D. L. HAYES, - General Agent.

Rooms 19 and 20 Elwood Building, - Rochester, N. Y.

ITS CHIEF ADVANTAGES ARE SECURITY AND CHEAPNESS.

1. The Strongest of the Five Largest Mutual Companies—as shown by ratio of surplus to liabilities.

2. The Cheapest of all Companies,—its dividends larger than in any other company, and at present *nearly double those of several of the most prominent ones.*

3. The Safest of all Companies—its location enabling it to make the safest investments, and at a far higher rate of interest than any of its competitors. The company realizing six per cent. interest can return, in the dividend, twice the surplus interest of the companies realizing but five per cent. *This advantage of location has enabled the Northwestern Mutual to pay all its death claims, taxes and expenses for the past ten years from its interest income*—no other company's interest doing this for one year—besides increasing its ratio of surplus to liabilities from 16.6 (N. Y. Reports, 1871-82) to 28.3 during the past eleven years, showing that its immense dividends have in no way impaired its strength—**interest being the chief factor of cheapness as well as safety in life insurance.**

Hemlock Lake Water Ice,

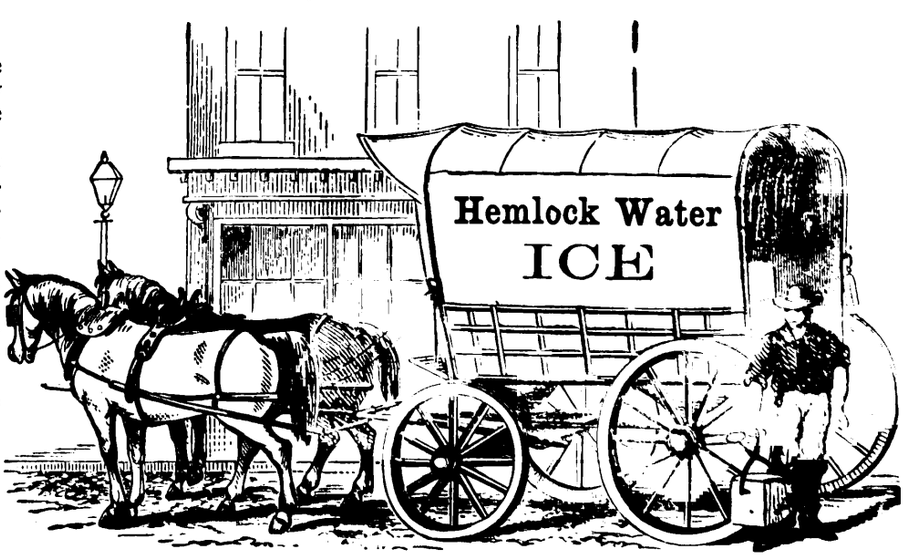

FROM KONDOLF LAKE, MONROE AVENUE.

TO THE PUBLIC.

The Kondolf Lake and Ice Houses were erected at a very large expense, for the purpose of procuring Pure Ice.

Everybody is aware that nearly all the ice sold in Rochester, is from the Canal, Widewaters, Quarries, Stagnant Ponds and River Waters.

This Lake is supplied with Hemlock Lake Water, by a pipe which is continually running, and there is in consequence a constant overflow at the outlet, on the opposite side of the Lake, which keeps it as pure as the water in the Reservoir at Mt. Hope. Therefore we ask your patronage, as the ice is sold and delivered as cheap as other ice.

Orders received at 170 Oak St., and at E. McSweeney's, 123 East Main St., by Mail and Telephone.

Respectfully Yours,

KONDOLF BROTHERS.

The Rochester Brewing Co.

Has been in existence but eight years, and is provided with all the latest improvements known in the manufacture of

LAGER BEER.

The Company is now selling OVER 75,000 BBLS. PER ANNUM, and as a matter of fact is the only Brewery which can show such progress in so short a time. The great and growing increase in its sales is the best evidence of the excellent quality and purity of its product. Recognizing its worth, Physicians, almost without exception, recommend its use to their patients, and as a consequence family trade has grown to immense proportions.

In connection with our Brewery, we have established a

BOTTLING DEPARTMENT

And are ready to promptly fill orders for our

EXPORT, BOHEMIAN, BAVARIAN, AND STANDARD LAGER BEERS.

Our uptown depot is at

Mr. E. H. HIGGINS', 6 and 8 State Street,

And orders left with Mr. Higgins will receive the same prompt attention as if sent direct to the Bottling Works.

Our goods can also be had at the East Side Establishment of

Mr. GEO. J. LUTT, cor. CLINTON and EAST MAIN STS.

Knowing that the superior quality of our goods is our best advertisement, and assuring our customers of their getting only a pure, healthful and nutritious article we hope for a a liberal share of public patronage.

Very Respectfully,

We are manufacturing a pipe that is indestructible from the action of all the elements, impervious to the action of acids, gases and steam, all of which are found in corporation sewers These pipes are made from a combination of superi or clays, which, by powerful machinery, are rendered uniform throughout—pressed from a steam press, under a pressure of *sixty-three tons* upon each pipe, it is made very compact; and burned in close kilns at a very intense heat, it becomes a thoroughly vitrified and iron like body. All prominent architects, builders, and all those who have investigated the subject of sewerage, have become convinced that properly burned clay pipe is the only material suitable for underground drainage, and that the sewer and drain pipe manufactured from cement, carbonated stone, and other similar materials, are liable to and do *decay*, *disintegrate*, and become *worthless*, as has been many times proved by the officials in many cities.

These vitrified pipe are suitable for well tubing; are *better than stone or brick*, because cheaper, more durable, and can be made perfectly tight.

☞ We deliver our pipe within the city limits Free of Charge, and in good condition.

Some of the points necessary to call attention to, are: First, a movable back and front, which throws off the spring in the leg. Second, it has an advantage in the use of the foot, hanging or unhanging, i. e., it can be used with a hanging foot, and it can be used the old way by putting the foot into the boot and then into the toe. Third, it is simple, durable, solid and easy to work.

What the People say who Have Used the Shipman Engine.

GRANT, N. Y., July 8th, 1884.

Mr. A. H. Shipman:

DEAR SIR:—The No. 2 Engine is a perfect little giant. I run a turning lathe, scroll saw and drilling machine one at a time with 55 lbs. of steam. Two gallons of oil runs it ten hours.

A. G. MILLER, Grant, N. Y.

MR. GEO. D. REED, ATTORNEY AT LAW, 6 ATWATER BLOCK, CANANDAIGUA, N. Y., says in his letter of June 29th:—"You may refer any of your customers to me and give them the facts that I have a row boat that I have decked over and put an awning on; boat is 17 feet long over all, 4 feet 3 inch beam, and I can carry 4 in it and run it 5 miles an hour and keep it up."

PROSPECT, OHIO, July 10th, 1884.

A. H. Shipman, Rochester, N. Y.:

DEAR SIR:—In regard to the engine I received from you I have been testifying in its favor ever since I got it to going in my office. Mr. J. C. Titus, a practical machinist, came from Marion last week and he and I opened the engine to see the inside of it, and found it entirely satisfactory, more so than either of us expected, as to strength and workmanship. I have been using the engine every week since I got it, and the more I use it and become acquainted with it, the better I like it. I would not take double the money and do without one.

Yours respectfully, H. R. CLOWES,
Editor and proprietor of the *Prospect Monitor.*

SPECIAL } July 7, J. C. Titus, of Marion, Ohio, mentioned in Mr. Clowes' letter, ordered from us 3 engines, and requested us to draw on him with Bill of Lading.

THE
JOHNSTON HARVESTER CO.,
OF BATAVIA, N. Y.

THIS COMPANY have for many years built and put upon the markets of the world their peculiar MACHINES FOR CUTTING GRASS and HARVESTING GRAIN, which have from the beginning taken the FIRST place among all those manufactured for that purpose. They have been tested by Scientific Machinists, by casual observers, and by Practical Farmers, and always with one and the same result, namely:

The First Award for Excellence of Workmanship and Quality of Work Done in the Field.

This Company can show probably the greatest display of ***Gold Medals*** and ***First Prizes*** of any establishment in the trade; on account of the Excellent Workmanship of their Machines and their Universal Success in the field against all their competitors, and before the most experienced Committees and Societies under Royal auspices in foreign countries, and the most Competent Judges in America.

In addition to their regular line of Harvesting Machinery, the JOHNSTON HARVESTER COMPANY now offer the most Complete and Successful ***Self-Binder*** in the Market. It took the ***Grand Prize*** at the Great Trial before the Royal Agricultural Society of England at Derby, in August, 1881. A cut of this Machine is herewith shown, and so great is the demand for it, that with all the immense capacities of the Company, they are unable to supply half their orders.

Farmers desiring this Excellent Machine need to send their orders early for 1885, to insure their supply.

Our Binders use ***Twine*** only, the advantages of which over wire, are obvious to all.

Every pains taken to please our customers.

Send for Circulars, and address

The aragon School Desks are the **Latest Improved and Best Desks now Manufactured.** They are the only ones having "Solid Backs" and "Solid Seats," made so by being **Double-Tongued, Grooved and Glued Together,** and **are finished as one piece** by machinery, and are not shipped as **"bundles of loose slats."**

The wood work is fastened to the iron by the Patent "Expanding Iron-wedge Dove-tail," and can never get rickety by the action of heat or cold, nor by school usage.

The seat cannot "fall with a slam," being sustained by a friction STEEL SPRING.

No Rubber in the Hinges! No Screws or Bolts to get loose! No loose slats to warp and get rickety, nor no loose slat dovetails to split off!

The following diagrams show the "Indexes" seen on the front of every meter.

EXPLANATION OF INDEX.

The figure or division on the different faces of the index indicates as follows, viz: On the Right Hand Face, *Hundreds*, as 100, 200, 300 cubic feet, &c.; on the Middle Face, *Thousands*, as 1,000, 2,000, 3,000 cubic feet, &c.; on the Left Hand Face, *Tens of Thousands*, as 10,000, 20,000, &c., and in this way multiplying by ten for every additional face.

TO TELL THE STATE OF THE METER.—Look at the *left hand* face of the Index and set down the figure of *least* value next the hand, which on the diagram is *1*. Next look at the *middle* face, and as before set down the figure of the *least* value next the hand, which on the diagram is *3*. Next upon the *right hand* face, take the same relative figure, which is *5*, and you have the figures 1, 3, 5, to which last figure add two ciphers to represent hundreds, and the sum 13,500 is shown to be the present state of the meter. If a previous observation has been taken, subtract the state of the meter at *that* time from the *present* state, and you have the amount consumed in the interval.
