Foreword

BECAUSE each scene has carried us forward rapidly, because day after day the shifting landscapes are dimmed and foggy, because fond memories fade, the Madisonian flight is placed before our vision in composite form in our year book to unify the passage of our four years through Madison. Safely piloted by principals and teachers, we have been the passengers, but now we have come to the time when each must say good-bye to the mother ship and lay his own course across uncharted skies.

We have enough hours of flying to our credit to face our assignment boldly and unflinchingly without the aid of a pilot to clutch the stick when our nerves give out. Even the eagles of this school can earn their wings. Our stunt flyers keep us in awe, our pilots subdue us by their reports of our flights, and the humor is supplied by the eaglets.

We have yet to receive our pilot's license in order to practice commercial flying, but as June and that time draws near, life offers new skies to conquer and wider opportunities for Amelia Earharts and Colonel Lindberghs of the future.

RECEIVED
JUN 1934
MADISON

THEODORE A. ZORNOW

Dedication

We, the classes of January and June 1934, in the spirit of idealism which characterized your relations with us at Madison High School dedicate to you, our Senior Annual.

Class Tribute

WE, the classes of January and June 1934, have been for twelve terms under the guidance of one whose intensity of purpose and fullness of achievement have taught us the true meaning of our school motto, "Attempt-Accomplish." For twice that time he has served not only our school but also the community with great satisfaction.

Madison, now a full-fledged senior as well as junior high, gained its firm foundation chiefly through the earnest efforts and enthusiasm of its first leader and principal, Mr. Theodore A. Zornow, who has assumed his new duties as assistant superintendent of schools. His scholarly influence has inspired high ideals for our school, and our progress in the future will in no small measure be due to this man who has helped us to be what we are, and who promises to keep the interests of Madison close to his heart in the years to come. Mr. Zornow has always been alive to the needs and possibilities of his students. Our problems have been his problems—problems he has ever solved with foresight and prudence. His sympathy and understanding have never failed us, and his kindly nod or friendly greeting has made us feel that his interest in our affairs was not merely a momentary one.

At the close of our career at Madison—the six years seem short when viewed from this end of the telescope—we look back with pride upon the many improvements that have taken place even while we were within its walls, and we think with love of the man through whom they came about.—Rosemary Seiler.

A Tribute To Mr. T. A. Zornow

In Madison, a class of boys and girls
Were dwelling in that past when Lancelot,
And Gawain, Kay, Sir Gareth and the rest
Loved to serve Arthur of the noble heart
At Camelot. At first the ancient days
Seemed misty, strange, unreal and far away
From busy life in Rochester, New York.
But then a boy suggested that our school
Was present counterpart of Britain old
With man as great and gentle for our guide.
The boys and girls, excited at this thought—
This finding that the kingdom of the heart
Is neither young nor old—proposed to tell
Why glad they followed Madison's great king.
And thus in simple way their reasons gave
As I tell here.

He's liberal with heart in the right place;
He lets us see through things in the bright way;
His having children makes him understand;
Though he is not, he acts an average man;
He buries his responsibility,
Appearing "school-cog", not "big principal",
Showing the greater for humility;
He "hits the target straight" but with the tact
To keep us friends while he is doing it;
He thinks and speaks in noble earnestness,
Nor "goes up in the air" at moments tense;
He never says, "I am your principal,
And these the orders that you must obey."

Thus spoke the boys and girls of Madison,
Sincerely from their own experience,
Of Mr. Zornow. And if students felt
His sympathy, his gentle, kindly heart,
His poise, his tact, his patience to gain ends,
His serious, and grave humility,
What is there left for us—his faculty
Whom he had chosen to dispense with him
Justice and mercy from his Table Round,
Who know him better far than students do,
Who know the heart of him in proved, tried ways—
What is there left for us to say?

—Mary Caragher.

« « PILOT » »

FRANK M. JENNER

An Appreciation

THE Madison plane was running smoothly as usual when all eyes turned to Mr. Frank M. Jenner, our new pilot, who stepped from a smaller craft and with neither confusion nor ostentation steered into the blue the plane which Mr. Zornow had left. We Madisonians have no fears; another experienced pilot is at the controls, guiding our plane with safety into fair skies.

NAVIGATORS

Class Advisers

Appreciation

The January and June classes of Nineteen Hundred Thirty-four express appreciation to navigators who have guided them toward a final happy landing in Madison graduation. Our class advisers have often helped to refuel and repair the skipping motors of wary seniors. The classes will long remember with gratitude the continuous deep interest and sympathetic understanding of Miss Ina Le Roy, Miss Alice Donnelly, Mr. Alexander Roller, and Mr. Robert McLaughlin.

Endurance Flyers Make Brilliant Records

Despite the handicaps of little or no material, extreme youthfulness, and inexperience, Madison teams have certainly given the student body and faculty reason to be justly proud of their brilliant records. Perhaps the most success has come in soccer.

Excitement beat high in the breasts of all Madisonians when in the fall of 1932, Coach Elmer Wheeler accepted the invitation of the league salons to replace the Ironquoit High School team which was dropping soccer in favor of football in the inter-high loop. The Madison team that year with comparatively young but gritty players shook down more than one title contender—chief among them West High. However, it lost a few of the games which were conceded to "be in the bag" and thus finished only in the upper division of the league.

The fighting squad of '33, however, will long remain in the memories of Madisonians as the gritty, die-hard eleven which on a clear, cold day in November lost the championship to an inspired Charlotte team in the title contest at the Edgerton Park Paddock. Those among you who saw that tilt will never forget the splendid fight that the Purple and Gold Outfit put up after three goals had been tallied by the unstoppable Charlotte eleven and the Green and White rooters were beginning to leave the stands. And then Madison with bulldog tenacity and morale surged forward, scored two goals and gamely set the ball in a scoring position for a third counter only to have the final whistle blow, leaving a depressed band of Purple rooters and a still shaky but jubilant Green and White eleven.

In the Reserve Loop the Madison teams of '31 and '32 placed well in the upper division of the league with raw, young teams. That of '33 lost the title by but one point falling to John Marshall in a stirring battle on a watersoaked field.

In Baseball Madison has always fared well. Her only Senior team, that of last year, upset the pre-season "dope" by proving to be hard-hitting contender for the pennant. In fact the loop was all Madison for the first few games. After the Purple suffered her first loss, however, it went on the downgrade and never recovered sufficiently to more than merely aspire for the championship.

During the last three years of Reserve Baseball, Purple and Gold Outfits have been both up and down, the nine of '32 taking first place in the Reserve loop and that of '31 placing well up in the first division. The Seconds of '33, having suffered a

severe drain of material by the First nine, did not fare so well.

Madison's one and only track team thus far did far better than was expected. Exceptional strength in the field events outweighed by far her weaknesses in other departments. Coach Remington may well be given a big hand, for track is his specialty, and his first team certainly was successful.

Little information is available about Madison's one and only swimming team. The season was cut short by the closing of all school swimming pools by order of the Board of Education, therefore statistics on the aquatic sport is incomplete.

On the court Madison has been highly successful. Our first Interhigh court team, that of 1932-'33 did not fare well in actual competition. This was in a measure due to the fact that Mr. Murray took over the entire Junior team of the 1931-'32 season and placed it in the struggle. From such a young and inexperienced five much could not be expected. It did, however, fight til the last whistle and not once did a victorious team walk off the floor without a hard struggle.

Mr. Murray's foresight in practically transplanting the Junior team of the '31-'32 season Senior League became obvious this year. With but one change in personnel, this same team played this season and will be together again next season.

This year sports writers shook their heads dubiously when preseason "dope" on the possibilities of the Madison five was dwelt on. Madison stock shot up like wildfire when the team with clever, machine-like passwork won the first four contests. Her defeat by Franklin broke her stride, however, and she never sufficiently recovered to regain her former prestige, ending the season with a smashing victory to take fourth place. Would the team remain intact next season, one can reasonably prophesy a championship for the Purple supporters.

The Reserves did better than the first team. With but two or three exceptions, the personnel of this team remained unchanged during the last two years. With such a combination the expected resulted. The Seconds won the title for the last two years and will undoubtedly repeat the act next year.

In taking all the facts, such as available material, age, weight, experience, and school spirit into consideration, one finds it hard to prophesy anything but continued success in athletics for the future. In fact, even more than in the past, and the Madison coaches agreeably verify this prophecy in agreeing that the future outlook for athletics is certainly optimistic.—Bert Farone.

Diary

Monday, May 15, 1934

Guess what? Miss Schafer has given seven or eight of us permission to visit the after-school clubs to see how they're conducted. What fun! . . . Tonight was the Seventh Grade Games club. If the Youngsters had half as good a time playing as we had watching them, they're "going some"! You should see them come rushing upstairs eager to begin playing. By the time they're as old as we are (O you Senior!), passing the ball with speed and tying yellow teams for first place, will seem trifling—even with Mrs. Baker's or Miss O'Connor's praises; they'll get a far greater "kick", talking down stairs in the locker room about this girl's latest "crush" or that teacher's "slant" on marking. Even so, we sometimes wish we were back in old junior high; the Youngsters make themselves have such a good time.

Tuesday, May 16, 1934

Tonight after school we watched the eighth graders play volley ball. Boy, oh boy! They're pretty good! . . . Miss Parker asked us if we wanted to join one of the teams. We did. . . . Our team won . . . but it wasn't a walk away victory by any manner or means. No siree! . . . A year ago at this time the White Caps would have been splashing away in the pool. Dash it all. . . . I can just feel that cool water send a tingle up and down my spine . . . It used to be such fun—shutting our eyes and holding our noses the first time in . . . diving the second time . . . scared lest even we "white caps" might go flat.

Wednesday, May 17, 1934

Thrilled tonight to watch the ninth grade basketball club play. It was oodles of fun—it was critical of course. When they are seniors they may be playing a worse game.

Thursday, May 18, 1934

Basketball day. After defeating the red team, we rushed eagerly down to the showers, "squeezing" that our luck or even our skill might last until the honor team could be chosen. Brr—brrr—the cold showers! But we certainly did feel invigorated.

Friday, May 19, 1934

After school, about forty of us armed with books, swinging racquets, and carrying sneakers, made our way over to the West High Field; not many moments later the nets were in place. Zip! Zip! A squeal of delight or chagrin frequently interrupted the sound of racquets, hitting balls. Sometimes just beyond the tennis courts, a game of soccer or baseball, even an occasional home run, offered diversion to us while we waited to play.

After the tennis game, we attended a meeting of the standing committee at which the point system and a plan of awarding emblems were discussed. The girls on the committee were Peggy Rathbun, chairman; Rosemary Seiler, secretary; May Ades, Theda Gerard, Winifred Courtney, and Elizabeth Whitney. The previous athletic committee consisted of Theda Gerard, chairman; Rosemary Seiler, secretary; Esther Powell, Cornelia Guidici, and Peggy Rathbun, publicity manager.

June, 1934

At last I've got my diary caught up. Now I catch myself turning back—remember when we had our first banquet and how thrilled we were—but what an improvement our second banquet was with one hundred fifty girls present and Mr. Zornow, Mr. Jenner, and Mr. Remington speakers. Rosemary Seiler was toastmistress. I can smell yet the fragrant gardenias which Peggy Rathbun presented to the honor basketball team . . . I close the diary and reluctantly prepare to leave Madison forever.

As I walk through the hall on my way out I notice a cup in the trophy case won by the girls' swimming team of Madison—those were the good old days—Madisonians who come after us must be satisfied with gym and clubs—may the depression soon lift.—Theda and Freda Gerard.

 HAPPY LANDING

The Charm School

Before an appreciative audience which filled the auditorium to capacity on the evening of December 8, the members of the Senior Class presented "The Charm School," the first attempt of Madison Senior High students to produce a three-act play.

The play revolved about the difficult and humorous time experienced by a young automobile salesman, Austin Bevans, who inherited a school for girls from his aunt. Although his friends — David, George, the twins, Robert Gordon—were convinced that there was little probability of success if he took over the management of the school, Austin succeeded in winning his aunt's lawyer, Mr. Johns, to his side. Before taking over the school, however, Mr. Johns warned Austin that he would be held to one condition—that he should fall in love with no girl and no girl should fall in love with him. To this he readily agreed.

Mr. Bevans, nevertheless, did not find the school so easy to manage as he had anticipated, for he was confronted with the acting head of the school, Miss Hays, her efficient and well-liked secretary, Miss Curtis, and the very charming president of the Senior Class, Elsie Bennett, and her fellow students. The new principal was informed, moreover, upon his arrival, that the members of the Senior Class had decided to strike and they were all going home. Mr. Bevans tried to give the task of settling it to Miss Hays, but she absolutely refused to have anything to do with it. Finally, he consented to speak to the girls, and they were so astounded at his pleasing appearance that they all made weak excuses for their sudden change of mind and their desire to remain in school. Elsie was more than attracted by Mr. Bevans; she fell desperately in love with him, and although he tried to hide his own emotions in an effort to maintain the school, he finally had to admit he loved her, too.

Austin Bevans was ably played by Ralph Bengtson; that of Mr. Johns, a rather difficult character was very well acted by Sam Cavallaro, as were the parts of Miss Hays, taken by Catherine Caryl, and Miss Curtis, played by Justine Ulp. Much of the humor of the play was created by the twins, Albert Gilbert and Ralph Chamberlain, who did an exceptionally fine job. Then, Austin's friends, played by Warren Rogers, Kenneth Mason, and August Hefner, added much humor to the situation.

Ruth Harrington was lovely in the part of Elsie. Ann House, as Sally, gave a very clever performance. The other students of "The Charm School" who added to the enjoyment of the play were Rosemary Seiler, Martha Bradford, Catherine West, Betty Mutch, Ann Kelly, Eleanor Reddy, Roberta Leck, Clare Russell, Ruth Vrooman, Ruth Crouch, Freda Gerard, and Theda Gerard.—Clare Russell.

FUEL

Flyers Among Stars

What ecstasy to soar through space on wings manufactured by ourselves from thoughts that transport us to distant lands and harbors of dreams! Flight has been considered throughout the literature of the ages. Even the ancient Greeks had ideas about flying, attempting to explain this strange phenomenon of flight, ever present in their imagination. Though not scientifically founded, a feeling was predominant that some underlying cause could be found on which to base these imaginative claims; but such air castles were often ridiculed because of their very vagueness.

Do you remember the myth of Daedalus and Icarus? Daedalus was an artist, an architect who, when exiled from his own country, fled persecution by escaping with Icarus, on wings of wax, across the sea to safety. Ah, but the moral, Icarus flew too close to the sun and fell into the water. Of course, it's a fantastic tale, these wax wings that overcame all known laws of nature, but we have proof that such a thing was true. Our modern commercial "wings" have little more in their making than that used by the mythical characters.

The artists, authors, and philosophers of the ages have been just such flyers among stars. How much easier to hitch your wagon when so many stars loom around you! Science and mathematics are directly responsible for the advent of the airplane, but the very idea itself was reflected in the mind of the literary artist. Roger Bacon, a fourteenth century author and essayist, wrote in his era, "Machines for navigation are possible without rowers . . . likewise cars may be made so that without draught animals they may be moved . . . and flying machines are possible so that a man may sit in the middle turning some sort of device by which artificial wings may beat the air in the manner of flying birds."

We do owe much to these men of imagination who have dreamed and conjectured, flying ever closer to that beacon that never was on "land or sea."

Although science and mathematics aid us in understanding the mechanics of this complex world in which we live, still have we traveled much in "realms of gold" through Elysian fields on earth that none but literature could have disclosed to our naked eye. It is literature that acts as a stimulant upon our dormant imagination. It is through literature that the most magnificent structures are built, air castles, it's true, but magnificent in their proportion to those of our everyday life.

As the hum of a motor drones loudly overhead, do we ponder about the mathematical elements combined to make this winged masterpiece, or do we, as few do, give some thought to the mystery, the glory, and the power of the minds that have created it? The earliest thoughts of flight came through the minds of the imaginative and literary. We owe much to these men of imagination. Let us not forget when paying tribute to the scientist that although he did build the realities of this dream, someone suggested to him the possibility of a mechanical bird; and it was from these fundamental reveries that the brain-child grew until now, the motor's hum has become so ordinary that people scarcely turn to look up at this winged monster.

—Jane Kelley.

FUEL

Science and Flight

An introduction to science truly opens the door to wonderland. When we look into the future, we see the vista being prepared for us. However, we must not overlook the fact that science has existed since man's first appearance upon the earth. Consulting the dictionary, we find science explained as "the system of knowledge concerning some subject or group of subjects." In other words it combines two main themes: man's desire for knowledge, and a longing to apply this knowledge for practical purposes. In all probability without its help, we should still be in that first barbaric state. It is the essence of all human advancement. A Century of Progress Exposition on Chicago's beautiful lake front offers a comprehensive history of these accomplishments. Passageways flanked with such marvels as the Westinghouse Mechanical Man, the General Electric House of Magic, and the Transportation Pageant meet the eye. With science predominant one may wander through a compact history of man's achievements from the glamorous Hall of Science to the Ancient Mayan Temple.

Since flight is the child of science, and both are the product of the ages, it seems natural to speak of the two simultaneously. When we see the mighty gulls of the air with precious freight in their talons, we visualize the Wright brothers on an isolated sandy cape near Kitty Hawk, North Carolina. But, many people think the airplane merely the product of inventive genius, operating about 1903. They hold a wrong view of the situation. Aviation has grown from science. Long before man ever dreamed of travelling two and three hundred miles an hour, the principles of successful flight had been stated. It needed only the skill of these two pioneers to combine them into fact.

In the utilization of any phase of man's new-found wings one sees the beauty of a living being as well as the cold product of science. These great birds seem to come from another world. One observes the sheen of the whirling propeller heightened by an azure sky or the elusive phantom-like shadow-now clear, now faint-jeering at the mists of a frowning destiny. He visualizes the outstretched symmetry of a lone sea-gull, wheeling slowly about on a pleasant day, or, as the scene changes, tirelessly pursuing "his solitary way" through a storm-tossed atmosphere.

But without science there would be no such valuable imitations of nature. Long ago a lone observer sat on a hillside and watched the flight of winged creatures. He saw the manner in which the little beings alighted on a twig, only to spread their wings again and soar upward into the blue. Men called him insane, but he merely smiled tolerantly and continued his study. Little he dreamed that some day his recorded principles would be transformed into those dynamic monsters, roaring over green field and smoky metropolis today. Thus was the obscure beginning of man's conquest of the air.

Some spring day, when sauntering across the aromatic green of Wilson Park, observe the vibrant grandeur of the kite. Steadied by a long and writhing tail, the flimsy mass of sticks and parchment floats majestically above. It seems to flout this lowly earth and to fight its master, the string. The wind changes. Look at it now! Diving suddenly, it swings its tail in a mighty arc. The beholder catches his breath. After a moment's show of its independence, however, the kite resumes its untroubled, heavenly position with the rest of those immortal beings that disdain our sphere.

Replacing plaything, twine, and wind resistance with wings, stabilizers, and propeller, the builder develops another kite, the kind that, carrying its human cargo, at the close of the day fades into the bright aurora of a setting sun. Such are the direct contributions the great science of physics makes to man's emulation of his feathered friends.

One ventures into an aquarium. Here he sees the denizen of the sea disport themselves. Scorning rest, they dart noiselessly hither and yon. Their multi-colored scales glisten brightly as the fins lazily propel their symmetrical forms between the transplanted rocks and weeds of the deep. Oftentimes they stand motionless and seem to be suspended in a position, disdaining gravity. As a matter of fact they are suspended. Centuries before Christ, a Greek scholar, fired by the will to know, chanced upon a reason for this alleged infraction of nature's laws. In science the reason holds true today as it did then. Like huge fish those great shining mammoths of the air: The Los Angeles, the Macon, and the Graf Zeppelin glide smoothly through the infinite ocean that surrounds Mother Earth. Upon perceiving one of these creatures

FUEL

after nightfall, one thrills to the power of the apparently slow-moving shadow with its blinking, transitional signal lights.

Nature provides for her children. Hovering above in ever widening circles, the gull finally descends to rest. It feels no apprehension for safety; its strength and craft are inborn. But not so with man's creations. The bone and sinew of his gull he tests thoroughly before he sets its great power to beating that which he cannot see, but which he knows possesses the might to waft aloft his crude imitation of nature. As the gulls play in the sunshine, one is inclined to believe them immortal; but these beautiful things possess something to force power into their wings. The throbbing heart of man's invention, the internal combustion motor, pumps heated blood through the veins of those gulls that carry humans on their backs.

At the close of the day the nighthawk comes abroad. Some evening, watch his opaque silhouette swoop down on an unsuspecting prey; watch him bank as he curves upward again into the fast darkening twilight. There, he swoops a second time, so close one can almost hear the beat of his wings. As he wheels sharply to avoid the uncompromising wall of a neighboring house, his outstretched wings take a position nearly perpendicular to the ground. Some three hundred years ago the English gentleman, who became famous through the incident of the falling apple and the laws of gravity, discovered the cause for this. When one sees the giant transport act in the same manner; when he sees it sometimes blending with the blue, roaring tirelessly on, sometimes gliding from the heights, seeking a moment's rest, he realizes the importance of science to the actual.

Even now, one has but the skeleton of the bird. It has no eyes, no flesh, no blood, no brains. Supply these and distribute a few feathers over the body, and the creation is finished. There is an inexhaustible source of energy upon this earth. It lives in the roaring waterfall; it emanates from the radiant steam boiler. I refer to electricity. Unlike its counterpart in nature the aeroplane has no instinct to conduct it to a safe landing, but happily, the scientist, with his inventive genius, provides a way to overcome the deficiency. Electricity controls the beacons that safeguard the evening pathways of the sky. Lacking this guidance, our system of transport planes would be an impossibility. At the turn of the century man began a second new

venture, wireless telegraphy. Lately, through the use of intricate and well-nigh unexplainable apparatus, he endeavors to send his voice in pursuit of the gleaming birds that thunder above in the firmament. Succeeding, at least in part, he makes flying safer. To protect himself, his passengers, and his cargo against stormy skies, the pilot grasps tightly the single thread, binding him to the ground.

Observing the flight of a gull, one wonders concerning its destination. Is it wandering aimlessly in its boundless home, or has it truly a place of rest? When one looks into a cozy nest, built among the rocks, he holds the latter true and credits it with a pair of good eyes and a intellect. So it is with the streamlined child of man's craft. Like a homing pigeon streaking for its nest, the plane seems to follow a pencil line drawn across the heavens. Its brain is the instrument board, the creation of science.

The energy of all life depends on the blood, the rich fluid carrying subsistence to the heart. To me it seems impossible that the darkly outlined masters of the heavenly wastes should need subsistence. Gliding along with no perceived connection to the earth, they seem ethereal. Notwithstanding these qualities, however, they require food. Gasoline, the life-blood of glorious flight, bears the stamp of the chemists' laboratory.

Meteorology, like radio, makes flight safer. According to the meteorologist, the country is imposed upon by a crazy quilt of high and low pressure areas. But enough of this. It suffices to say that through a study of these, he predicts the weather and thus adds to the aviator's peace of mind.

Mathematics, cold steel in any form, ties all the foregoing sciences into one trunk and adds a new one. In the vast uncharted expanse of the atmosphere, no route markers present themselves. Realizing this, one sees the fate of the solitary wanderer in the blue, resting entirely upon the solid rock of accurate navigation.

Continued progress in science means an advancement in flight beyond man's widest dreams. Perusing the daily paper, one finds evidence that these dreams are coming true. If we can fly around the world in eight days now, after only twenty-five years of progress, we may well expect some startling developments in the future. Science will be heard as long as man remains upon the earth.

—August Hefner.

FUEL

Aviation and Mathematics

A comparatively new mode of travel, aviation, has become indispensable to business and to nations of today. Perhaps you have had the experience of watching a plane hesitatingly leave the ground and soar into the air, a beautiful and perfect example of man's inventive genius. Perhaps you have seen the passengers, comfortably reclining or reading as they were speeding along the ground at seventy-five miles an hour before they were lifted hundreds of feet into the air to continue on their voyage at a high altitude. Have you ever considered the amount of work connected with such a flight other than the actual directing of the plane?

In designing ships for the air, builders have applied the principles of mathematics to the construction of almost every part of the plane. Continuing on its advancing road, science has encountered problems that must be solved; mathematics has nobly answered the call. Because the weight of the plane must not exceed a certain amount, mathematicians have determined the weight of supplies that can be safely carried, and still allow the plane to rise. In designing, the force of the wind, the buoyancy power, and the weight of the material used must be considered. The material must be light enough to allow the plane to fly, and heavy enough to withstand the force of the wind and to carry the supplies.

As the plane wings its way on the voyage with no harm to its occupants, no lack of fuel, and no divergence from its course, one is compelled to ponder on the power behind the venture. At stations along the route operators, aided in their work by complex mathematical formulae strive to keep the plane on its course by the use of radio. It is due to mathematics that the pilot still has a proper supply of gasoline for the remainder of the voyage, and also it is due to the exact measurements established through mathematics that the joints of the plane still remain together. In mapping out the trip, mathematics had already determined the altitude the plane might achieve at any point in its course without discarding any of the required supplies. Passengers, enjoying a trip, may well thank mathematics for giving them comfortable living quarters during the voyage with the greatest amount of safety and comfort.

When the journey is finished, and the plane comes to rest on the earth again, even here one must not forget that mathematics has its role. As you know, wind is a driving power, the wings of the airship being shaped with mathematical precision to take advantage of this force. Details of the airport, the most important of which is the runway, are planned mathematically to give the plane the proper landing space. Formulae have determined what the landing speed of a plane is and the distance it must travel before it comes to rest.

I hope I have been able to make you realize that aviation is not sufficient unto itself, but depends for its existence upon many other fields of knowledge. The pilot of a plane is not the only one to be commended. There are many other persons working hard to help him. As you glance at the huge crowd waiting to cheer a pilot for some unusual feat, remember the hundreds of other people responsible for his success, the mathematicians, contractors, scientists, and radio operators.—Ann Kelly.

FUEL

In 1966

Mr. Johns, a rather successful business man, came home early one afternoon to find his home deserted. He rejoiced, for the solitude would afford him opportunity to read some of the neglected volumes in his library. He relaxed in a favorite chair, but his weariness and dejection caused his mind to wander from the book in his hand to thoughts of the future, changing conditions, and modernity. He thought how different the childhood of perhaps his grandchild might be in comparison with his own. He fell asleep to dream of himself talking with his granddaughter in the year 1966.

"Grandfather, please tell me a story," pleaded petite Helen.

"All right," he agreed, "I'll tell you about Little Red Riding Hood."

He began, "Once upon a time, a little girl, dressed all in red, was walking through the forest with a basket of food for her poor old grandmother, when a big bad wolf . . ."

"No, no," interrupted Helen, "that isn't the way we learned it in kindergarten."

"No? Then perhaps you should tell the story to me," suggested Grandfather Johns, as Helen began.

"In the days when aeroplanes were fashionable, a girl named Miss Hood mounted the hill behind her home-of-tomorrow, boarded her latest sports-model glider, and after placing a parcel in the rumble seat, took off in the direction of her grandmother's penthouse.

Before she had flown far, she operated her television equipment in time to see a strange plane flying dangerously near her grandmother's house. Miss Hood was dismayed by the slowness of her glider when she was overtaken by a former motorcycle policeman, who was now in command of a large dirigible.

"Pull over to the side of that airpocket," he gruffly commanded.

After a very airy discussion of the situation, he agreed to tow her as fast as possible to her destination. On arrival, she rushed in to warn her grandmother, but discovered the plane contained only a reporter, photographing the penthouse.

"My, what a large house you have," exclaimed Helen.

"All the better to entertain you in, my dear. And what is that large package you have?"

"It is five years' supply of dehydrated food, which mother sent to you for . . ."

"Oh! Ah! I must have dozed off," mumbled the business man hurriedly glancing at the calendar. "I'm certainly glad it is still 1934."

—Elsa Marie Reith.

FLYING STUNTS

Ralph Chamberlain certainly went into a tail-spin during the rehearsals and presentation of the last act of the "Charm School" when "his" leading lady and the leading man were "forced" to follow the script.

Miss Cosgrove, the illustrious, immediately put Walter Ash's plane into a stall when she found out that Walter was the proud possessor of a bit of news. I wish I "news" what it was.

Ann House, the beau jeune fille, who can hold her own in a talkfest with anybody, sure has a number of boys doing ground-loops around the bookstore during the past two years. How about it, Benny?

Seems as if Martha "Mumps-Garbo" Bradford has taken off with two lucky (?) persons, but the trouble is her plane has no dual controls. Sum fun, eh?

One of our quaint misses, Helen Peake, certainly landed on the goose that lays the golden eggs. Her "Certain someone" can furnish her with all the ice cream she wants. "I scream", Lucky Helen.

Throughout the past two years, Charles Higbie's chief delight has been to put a wrench in the motor of Mr. Woolston's theories about the economic revolution, prices, governments, etc.

The home-room basketball team of 12A2 has been trying its best all term to wreck the ship of the faculty with varied success. The old boys still hit for the atmosphere—in sports.

Rosemary "Ruz" Sciler, after taking three years of Latin, still persists in trying a non-stop flight through the fourth year. Can she "take" it?

Jimmy Moore and several other aspirators took severe nose dives when certain Madison students went to West High.

It was a hard job for Ruth Harrington to pilot her way through the "forest" after Madison's 1934 basketball team lost three successive games. Don't mention whiskers to her.

For the past two years and during the production of the "Charm School" Cay West has been gaining a "rep" (?) as a piano player. She's so good now that she actually knows the first two bars of "Stormy Weather", a 1933 piece on which she has been practicing for two terms. More power, Cay.

On March 19, 1934, Old Morpheus caught up to Bob Corbett and he swooped into the land of dreams. Miss Cosgrove, talking about essays at the time, was greatly surprised to see Robert almost fall out of his seat when his elbow slipped.

Conversing about crimson countenances, did Ed Heilgenthaler scorch when, out for a spin one Saturday night, he sailed merrily up on a porch and banged heartily on the door to find out where a certain sorority meeting was being held. After just about tearing down the door and breaking a window in his hurry, imagine his embarrassment when a petite miss came timidly to the door and informed him that that was the right place.

Frank Rowe certainly has had a splendid time these last two terms, racing around in his Ford, and, like a good sport, taking various pupils to the school games. He'll be "taking off" in a short time.

If you wish to see an exhibition of ground loops, barrel rolls, and other daring feats, just mention "marines" to Ina Baker, another bookstore barker.

For his entire Madison career, Herb Houghton has believed in and followed the saying, "Go West, young man, go West."

Even after graduating, Frank Duncan will remember the many times he has "flown" up to pass out the English books for his "dear" English teacher.

Congrats to August Heffner. In the capacity of head of the corridor squad for the past two terms, he has kept pupils of the school from banking their corners too close.

Everybody in Madison waits expectantly for Winter to come so they can see Ralph Bengston "zoom up" with his frozen ears, looking for all the world like sails on each side of his head.

Although he has graduated, Jim Farrell still sticks by his school. Every noon, in the capacity as head of the traffic squad, he puts the blocks on the cars that are speeding too fast past the corners.

We miss seeing Frank and Ray Taylor speeding (?) up to school in their old model T, and amusing several Madison students before the bell rang. Wonder how much they paid to get rid of it?

One of the happiest (?) couples we have seen in our entire Madison career is the partnership of Warren Rogers and Lillian Walker. In fact Warren has been seen arriving late to many a class after pursuing Lillian all around the school. Some day he might catch up to her—who knows?

John Bozza, the famous maestro of Madison's orchestra, and dance orchestra, almost tore the wings off his plane when Mr. Robert Moore, esteemed director, sent him home to learn C sharp minor on his violin.

Everybody often wonders if Mr. Woolston's sixth period History class could "stay in the air" if Betty Coyne and Ruth Sweeny didn't hold a regular "old ladies' sewing circle" over in the corner.

Claire Russell, another fine frauline, almost had the people in the aisles when she sang those songs in the "Charm School". Sign her up, Callo-way!

After working in the school bookstore since its existence Marion Smith will probably wake up six months from now saying, "No, we have no Geometry books today."

Robert Leek's dramatic "Give me liberty or give me love," in the "Charm School", will probably "fly" through Madison's corridors for years to come.

—Kenneth Mason.

FLYING STUNTS

Days and Daze

●

HOMEROOM PERIOD

Oh last bell please don't ring until we're
inside the homeroom.
It seems to me that you are always ringing
much too soon.
But if we do happen to get to school
before you ring,
That homeroom period goes so fast we
can't do anything.
But I think there's one person who is glad
when it is through.
Ask the homeroom teacher and she'll tell
you who!

●

STUDY HALL

Oh Study Hall, what a kind and precious
friend you are.
Without you, I fear our homework would
not get very far.
When we have French, Chemistry, history
and English to do,
We would not last long in this school, if it
were not for you;
But if by some mistake or chance our
homework is complete,
We can lie down and take a snooze and
catch up on our sleep.

●

ASSEMBLY

Hurrah for the Assembly! For that's one
time in the week
That we watch other people work while
we can rest our feet.
Sometimes we have speakers who have so
much to discuss
They hold assembly over, about which we
make no fuss.
But when the programs are short, and we
have nothing to do,
We stand with great gusto, sing our
"Alma Mater tried and true."

●

SEVENTH PERIOD

Oh Seventh Period, you're the one whom
no one cares about.
You are not popular with us, of that there
is no doubt.
We do not want to let you in, we have
no room for you.
So go away, don't bother us, we have too
much to do,
For if we do our homework well, then we
shall all be glad
That we are not a bit afraid of the
wolf so bad!

●

LUNCH PERIOD

Lunch period! Hurry! Run! Push!
Scramble, dart and dash.
If we can make the lunchroom, we may get
a plate of hash.
The noise in the lunchroom is like a
threshing machine,
And if you wish to say something you have
to fairly scream!
Gulp and swallow your food whole, never
bite or chew,
For if you take your time, the bell will
ring before you're through.

CONCLUSION

As we gayly stride along and homeward
wend our way,
We relate to each other the happenings
of the day.
We never thought we'd live to tell about
that French exam,
But now that it is all over we can breathe
again,
And let's all say to ourselves as our
lessons we censure,
"Every day that we are facing is a new
adventure!"—Justine Ulp.

Far Landing

Fast comes the hour upon which we must fly—
With winged speed it mocks our little stay
And bids us leave this spot where we have tarried
And seek a new and now unlighted field.

Our flight shall be the upward soaring of the mind
Above all base and lowly things—
Scorning that which seeks to pull us down.
We shall take off
Across a dark as yet uncharted sky
Whose inky blackness now no beacon pierces.
Each one alone, as pilot seeks his course
Across a midnight sky.

Some may, in solo flight
Above this brave expanse of time
Make records not alone of courage but of doing,
For victory comes unheralded through unknown skies
Like some bright piercing shaft of light
Whose goal is rest, whose purpose peace.

Others, in restless darting hither, yon,
May find in some far sky
Their glorious paths
Outlined on either side the soaring eagle,
Rising from height to height in glorious ascent,
Finds haven in achievement of his goal.

Thus time will lead us on—and we shall go,
Turning back to look once more upon this place
From whence we earlier flew.
And may those beacons shine undimmed
Until this flight is done.

—Martha Bradford.
